BEEVES (בקר *Bakar*, in Arabic, *al-bakar*), cattle, herds, applicable to all Ruminantia, the camels alone excepted; but more particularly to the Bovidæ and the genera of the larger antelopes.

Ox or beeve, אלוף, *aluph*, the most important of all clean beasts (Ps. viii. 7; cxliv. 14; Jer. xi. 19). Bull, שור, *shor*; Chaldee, *taur*; Arabic, *al-taur*; Latin, *taurus*; Celtic, *tor*. Young bull, פר, *phar*; Belgic, *veir* (Job xxi. 10; 1 Sam. vi. 7, 10; Ps. lxix. 31). Heifer, פרה, *pharah*. Calf, עגל, *égel*; Arabic, *idgl*; but theô, תאו, although the hunched ox occurs on Egyptian monuments, we take to refer to an oryx, as well as *Beker-el-wash*, unless it be the Antilope defassa of Wilkinson, a species not yet scientifically described.—C. H. S.

BEGGARS. [ALMS.]

BEHEADING. [PUNISHMENTS.]

BEHEMOTH (בהמות, Job xl. 15; in Coptic, according to Jablonski, *Pehemout*) is regarded as the plural of behemah, בהמה, but commentators are by no means agreed as to its true meaning. A number of learned men, with

[Hippopotamus.]

Bochart and Calmet at their head, understand the word in the singular number as a specific name, denoting the hippopotamus, seeking, by somewhat forced interpretations of the beautiful poetical allusions in Job xl. 15-24, to prove the exactness of the description when compared with the species. In some respects, however, it is more applicable to the elephant, while in others it is equally so to both animals. Hence the term behemoth, taken intensively (for in some places it is admitted to designate cattle in general), may be assumed to be a poetical personification of the great Pachydermata, or even Herbivora, wherein the idea of hippopotamus is predominant. This view accounts for the ascription to it of characters not truly applicable to one species; for instance, the tail is likened to a cedar (provided זנב really denotes the tail, which the context makes

very doubtful. See Zeddel, *Beitr. z. Bibl. Zoologie*), which is only admissible in the case of the elephant; again, 'the mountains bring him forth food;' 'he trusteth that he can draw up Jordan,' a river which elephants alone could reach; 'his nose pierceth through snares,' certainly more indicative of that animal's proboscis with its extraordinary delicacy of scent and touch, ever cautiously applied, than of the obtuse perceptions of the river-horse. Finally, the elephant is far more dangerous as an enemy than the hippopotamus, which numerous pictorial sculptures on the monuments of Egypt represent as fearlessly speared by a single hunter standing on his float of log and reeds. Yet although the elephant is scarcely less fond of water, the description referring to manners, such as lying under the shade of willows, among reeds, in fens, &c., is more directly characteristic of the hippopotamus. The book of Job appears, from many internal indications, to have been written in Asia, and is full of knowledge, although that knowledge is not expressed according to the precise technicalities of modern science; it offers pictures in magnificent outline, without condescending to minute and laboured details. Considered in this light, the expression in Ps. l. 10, 'For every beast of the forest is mine, and the cattle (behemoth) upon a thousand hills,' acquires a grandeur and force far surpassing those furnished by the mere idea of cattle of various kinds. If, then, we take this plural noun in the sense here briefly indicated, we may, in like manner, consider the leviathan, its counterpart, a similarly generalized term, with the idea of crocodile most prominent; and as this name indicates a twisting animal, and, as appears from various texts, evidently includes the great pythons, cetacea, and sharks of the surrounding seas and deserts, it conveys a more sublime conception than if limited to the crocodile, an animal familiar to every Egyptian, and well known even in Palestine.—C. H. S.

BEKAH, half a shekel. [WEIGHTS.]

BEL (בֵּל, contracted from בְּעֵל, the Aramaic form of בַּעַל; Sept. Βὴλ and Βῆλος), is the name under which the national god of the Babylonians is cursorily mentioned in Isa. xlvi. 1; Jer. l. 2; li. 44. The only passages in the Bible which contain any further notice of this deity are Bar. vi. 40, and the apocryphal addition to the book of Daniel, in the Sept., xiv. 1, *sq.*, where we read of meat and drink being daily offered to him, according to a usage occurring in classical idolatry, and termed *Lectisternia* (Jer. li. 44?). We, therefore, turn to the testimonies of profane writers. A particular account of the pyramidal temple of Bel, at Babylon, is given by Herodotus, i. 181-183. It is there also stated that the sacrifices of this god consisted of adult cattle (πρόβατα), of their young, when sucking (which last class were the only victims offered up on the golden altar), and of incense. The custom of providing him with Lectisternia may be inferred from the table placed before the statue, but it is not expressly mentioned. Diodorus (ii. 9) gives a similar account of this temple; but adds that there were large golden statues of Zeus, Hera, and Rhea on its summit, with a table, common to them all, before them. Gesenius, in order to support his own theory, endeavours to show that this statue of Zeus must have been that of *Saturn*, and that that of Rhea represented the sun. Hitzig, however, in his note to Isa. xvii. 8, more justly observes that Hera is the female counterpart to Zeus-Bel, that she is called so solely because it was the name of the chief Greek goddess, and that she and Bel are the moon and sun. He refers for confirmation to Berosus (p. 50, ed. Richter), who states that the wife of Bel was called *Omorca*, which means *moon;* and to Ammian. Marcell. xxiii. 3, for a statement that the moon was, in later times, zealously worshipped in Mesopotamia. The classical writers generally call this Babylonian deity by their names, *Zeus* and *Jupiter* (Herod. and Diod. *l. c.*; Plin. *Hist. Nat.* vi. 30); by which they assuredly did not mean the *planet* of that name, but merely the chief god of their religious system. Cicero, however (*De Nat. Deor.* iii. 16), recognises *Hercules* in the Belus of India, which is a loose term for Babylonia. This favours the identity of Bel and Melkarth.

The question whether the sun or the planet Jupiter was the power of nature adored under the name of Bel, is discussed under the article BAAL.

The following engraving, taken from a Babylonian cylinder, represents, according to Münter, the sun-god and one of his priests. The triangle on the top of one of the pillars, the star with eight rays, and the half moon, are all significant symbols.—J. N.

BEL and DRAGON. [DANIEL, APOCRYPHAL ADDITIONS TO.]

BELA. [ZOAR.]

BELL. The first bells known in history are those small golden bells which were attached to the lower part of the blue robe (the robe of the ephod) which formed part of the dress of the high-priest in his sacerdotal ministrations (Exod. xxviii. 33, 34: comp. Ecclus. xlv. 11). They were there placed alternately with the pomegranate-shaped knobs, one of these being between every two of the bells. The number of these bells is not mentioned in Scripture; but tradition states that there were sixty-six (Clem. Alex. *Stromata*, p. 563). We need not seek any other reason for this rather singular use of bells than that which is assigned: 'His sound shall be heard when he goeth into the holy place before the Lord, and when he cometh out, that he die not' (Exod. xxviii. 35); by which we may understand that the sound of the bells manifested that he was properly arrayed in the robes of ceremony which he was required to wear when he entered the presence-chamber of the Great King; and that as no minister can enter the presence of an earthly potentate abruptly and un-

announced, so he (whom no human being *could* introduce) was to have his entrance harbingered by the sound of the bells he wore. This sound, heard outside, also notified to the people the time in which he was engaged in his sacred ministrations, and during which they remained in prayer (Luke i. 9, 10).

'BELLS OF THE HORSES' are mentioned in Zech. xiv. 20, which were probably such as were attached to the bridles or foreheads, or to belts around the necks of horses trained for war, that they might thereby be accustomed to noise and tumult, and not by their alarm expose the riders to danger in actual warfare. Hence a person who had not been tried or trained up to anything was by the Greeks called ἀκωδώνιστος, 'one not used to the noise of a bell,' by a metaphor taken from horses. The mules employed in the funeral pomp of Alexander had at each jaw a golden bell. We incline to think, however, that the use of horse-bells with which the Jews were most familiar, and which the prophet had in view, was that which at present exists in the East, and in other countries where carriage by pack-horses and mules is common. The laden animals, being without riders, have bells hung from their necks, that they may be kept together, in traversing by night the open plains and deserts, by paths and roads unconfined by fences or boundaries; that they may be cheered by the sound of the bells; and that if any horse strays, its place may be known by the sound of its bell, while the general sound from the caravan enables the traveller who has strayed or lingered, to find and regain his party, even in the night.

That the same motto, HOLINESS TO THE LORD, which was upon the mitre of the high-priest, should, in the happy days foretold by the prophet, be inscribed even upon the bells of the horses, manifestly signifies that all things, from the highest to the lowest, should in those days be sanctified to God.

It is remarkable that there is no appearance of bells of any kind in the Egyptian monuments.

BELLOWS. This word only occurs in Jer. vi. 29, and is there employed with reference to the casting of metal. As fires in the East are always of wood or charcoal, a sufficient heat for ordinary purposes is soon raised by the help of fans, and the use of bellows is confined to the workers in metal. Such was the case anciently; and in the mural paintings of Egypt we observe no bellows but such as are used for the forge or furnace. They occur as early as the time of Moses, being represented in a tomb at Thebes which bears the name of Thothmes III. They consisted of a leathern

bag, secured and fitted into a frame, from which a long pipe extended for carrying the wind to the fire. They were worked by the feet, the operator standing upon them with one under each foot and pressing them alternately, while he pulled up each exhausted skin with a string he held in his hand. In one instance it is observed from the painting, that when the man left the bellows they were raised as if filled with air, and this would imply a knowledge of the valve (Wilkinson's *Anc. Egyptians*, iii. 338).

BELLY. Among the Hebrews and most ancient nations, the belly was regarded as the seat of the carnal affections, as being, according to their notions, that which first partakes of sensual pleasures (Tit. i. 2; Phil. iii. 9; Rom. xvi. 18). It is used likewise symbolically for the heart, the innermost recesses of the soul (Prov. xviii. 8; xx. 27; xxii. 18). The expression *embittering* of the belly signifies all the train of evils which may come upon a man (Jer. iv. 19; ix. 15; comp. Num. xviii. 27).

BELOMANCY. [DIVINATION.]

BELSHAZZAR (בלשאצר; Sept. Βαλτάσαρ) is the name given in the book of Daniel to the last king of the Chaldees, under whom Babylon was taken by the Medes and Persians. Herodotus calls this king, and also his father, *Labynetus*, which is undoubtedly a corruption of *Nabonnedus*, the name by which he was known to Berosus, in Joseph. *Contr. Apion.* i. 20. Yet in Joseph. (*Antiq.* x. 11. 2) it is stated that Baltasar was called *Naboandel* by the Babylonians. *Nabonadius* in the Canon of Ptolemy, *Nabonedus* in Euseb. *Chron. Armen.* i. p. 60 (from Alexander Polyhistor.), and *Nabonnidochus* in Euseb. *Prep. Evan.* ix. 41 (from Megasthenes), are remarked by Winer as other varieties of his name. Winer (*Simon. Lex.*) conjectures that in the name Belshazzar the element *shazzar* means 'the principle of fire' سرازر.

Nothing is really known of this king except from the book of Daniel, the authenticity and credibility of which will be treated under the article DANIEL. That which is told of Nabonnedus by Berosus does not agree with the Scriptural account, viz., that losing a pitched battle against Cyrus in the open plain, Nabonnedus was shut up in the city Borsippa on the Euphrates, below Babylon, and soon forced to surrender his person. Cyrus received him kindly, sent him into Caramania, and settled him on an estate, where he ended his life peaceably. No hypothesis will reconcile this account with the other, since it is certain that Nabonnedus is the *last* king in the one narrative, as Belshazzar in the other. Some of the older critics in vain endeavoured to remove the difficulties, by making Belshazzar the same as Laborosoarchod, who preceded Nabonnedus. Xenophon (*Cyrop.* vii. 5, 30) agrees with the book of Daniel as to the fate of Belshazzar.—F. W. N.

BELTESHAZZAR. [DANIEL.]

BELUS, TEMPLE OF. [BABEL.]

BEN (בֵּן, *son*) is often found as the first element of proper names; in which case the word which follows it is always to be considered dependent on it, in the relation of our genitive. The word which follows *Ben* may either be of itself a proper name, or be an appellative or abstract, the principle of the connection being essentially the same in both cases. As for the first

class, as the Syro-Arabian nations are all particularly addicted to genealogy, and as they possess no surnames, nor family names in our sense, they have no means of attaching a definite designation to a person, except by adding some accessory specification to his distinctive, or, as we would term it, *Christian*, name. This explains why so many persons, both in the Old and New Testaments, are distinguished by the addition of the names of their father. The same usage is especially frequent among the Arabs; but they have improved its definiteness by adding the name of the person's child, in case he has one. In doing this they always observe this arrangement—the name of the child, the person's own name, and the name of his father. Thus the designation of the patriarch Isaac would, in Arabic, run thus—Father of Jacob, Isaac, son of Abraham (Abû Ja'qûb, Ishâq, ben Ibrahîm). As for the latter class, there is an easy transition from this strict use of *son* to its employment in a figurative sense, to denote a peculiar dependence of derivation. The principle of such a connection not only explains such proper names as Ben Chésed (son of mercy), but applies to many striking metaphors in other classes of words, as sons of the bow, a son of seventeen years (the usual mode of denoting age), a hill, the son of oil (Isa. v. 2), and many others, in which our translation effaces the Oriental type of the expression. All proper names which begin with Ben belong to one or the other of these classes. Ben Aminadab, Ben Gaber, and Ben Chesed (1 Kings iv. 10, 11) illustrate all the possibilities of combination noticed above. In these names, Ben would, perhaps, be better not translated, as it is in our version; although the Vulgate has preserved it, as the Sept. also appears to have once done in ver. 8, to judge by the reading there.

These remarks apply also in part to Bar, the Aramaic synonyme of Ben, as in the name Bar-Abbas.—J. N.

BENAIAH (בְּנָיָהוּ or בְּנָיָה; Sept. Βαναίας), son of Jehoiada, and commander of David's guard (the Cherethites and Pelethites, 2 Sam. viii. 18). His exploits were celebrated in Israel. He overcame two Moabitish champions ('lions of God'), slew an Egyptian giant with his own spear, and went down into an exhausted cistern and destroyed a lion which had fallen into it when covered with snow (2 Sam. xxiii. 21). Benaiah (doubtless with the guard he commanded) adhered to Solomon when Joab and others attempted to set up Adonijah; and when that attempt failed, he, as belonged to his office, was sent to put Joab to death, after which he was appointed commander in chief in his place (1 Kings i. 36; ii. 29). Some persons named Benaiah returned from the exile with Ezra (x. 25, 30, 35, 43).

BENHADAD (בֶּן־הֲדַד, *son of Hadad*; Sept. υἱὸς Ἄδερ), the name of three kings of Damascene-Syria. As to the latter part of this name, Hadad, there is little doubt that it is the name of the Syrian god Adad. The expression *son of* Hadad, which denotes dependence and obedience, not only accords with the analogies of other heathen names, but is also supported by the existence of such terms as 'sons of God' among the Hebrews (cf. Ps. lxxxii. 6).

1. BENHADAD, the king of Syria who was subsidised by Asa king of Judah to invade Israel, and thereby compel Baasha (who had invaded Judah) to return to defend his own kingdom (1 Kings xv. 18). [Asa.] This Ben-hadad has, with some reason, been supposed Hadad the Edomite who rebelled against Solomon (1 Kings xi. 25).

2. BENHADAD, king of Syria, son of the preceding. His earlier history is much involved in that of Ahab, with whom he was constantly at war [Ahab]. He owed the signal defeat in which that war terminated to the vain notion which assimilated Jehovah to the local deities worshipped by the nations of Syria, deeming Him 'a God of the hills,' but impotent to defend his votaries in 'the plains' (1 Kings xx. 1-30). Instead of pursuing his victory, Ahab concluded a peace with the defeated Benhadad, which was observed for about twelve years, when the Syrian king declared war against Jehoram the son of Ahab, and invaded Israel: but all his plans and operations were frustrated, being made known to Jehoram by the prophet Elisha (2 Kings vi. 8, *ad fin.*). After some years, however, he renewed the war, and besieged Jehoram in his capital, Samaria, until the inhabitants were reduced to the last extremities and most revolting resources by famine. The siege was then unexpectedly raised, according to a prediction of Elisha, through a panic infused into the besiegers, who concluding that a noise which they seemed to hear portended the advance upon them of a foreign host procured by Jehoram, thought only of saving themselves by flight. The next year Benhadad, learning that Elisha, through whom so many of his designs had been brought to nought, had arrived at Damascus, sent an officer of distinction named Hazael with presents, to consult him as to his recovery from an illness under which he then suffered. The prophet answered, that his disease was not mortal, but that he would nevertheless die. This was accomplished a few days after by this very Hazael, who smothered the sick monarch in his bed, and mounted the throne in his stead, B.C. 884 (2 Kings viii. 7-15). [Elisha; Hazael; Jehoram.]

3. BENHADAD, king of Syria, son of the Hazael just mentioned. He was thrice defeated by Jehoash, king of Israel, who recovered from him all the territories beyond the Jordan which Hazael had rent from the dominion of Israel (2 Kings xiii. 3, 24, 25).

BENJAMIN (בִּנְיָמִין; Sept. Βενιαμίν), youngest son of Jacob, by Rachel (Gen. xxxv. 18). His mother died immediately after he was born, and with her last breath named him בן עוני (Ben-Oni, '*Son of my pain*'), which the father changed into Benjamin, a word of nearly the same sound, but portending comfort and consolation, '*Son of my right hand.*' probably alluding to the support and protection he promised himself from this, his last child, in his old age. This supposition is strengthened when we reflect on the reluctance with which he consented to part with him in very trying circumstances, yielding only to the pressure of famine and the most urgent necessity (Gen. xlii.).

In Gen. lvi. 21, *sq.*, the immediate descendants of Benjamin are given to the number of *ten*,

whereas in Num. xxvi. 38-40, only seven are enumerated, and some even under different names. This difference may probably be owing to the circumstance that some of the direct descendants of Benjamin had died either at an early period or at least childless.

The tribe of Benjamin, though the least numerous of Israel, became nevertheless a considerable race in process of time. In the desert it counted 35,400 warriors, all above twenty years of age (Num. i. 36; ii. 22); and, at the entrance of Israel into Canaan, even as many as 45,600. The portion allotted to this tribe was in proportion to its small number, and was encompassed by the districts of Ephraim, Dan, and Judah, in central Palestine. In Josh. xviii. 11-20, the northern and southern boundaries are minutely described; from ver. 12 to 16 is sketched the northern boundary-line, and from 16 to 20, the southern. Within the boundaries described in these eight verses lay a district rather small, but highly-cultivated and naturally fertile (Joseph. *Antiq.* v. 1. 22; Reland, p. 637), containing thirty-six towns (with the villages appertaining to them), which are named in Josh. xviii. 21-28; and the principal of which were Jericho, Bethagla, Bethel, Gibeon, Ramah, and Jebus or Jerusalem. This latter place subsequently became the capital of the whole Jewish empire; but was, after the division of the land, still in possession of the Jebusites. The Benjamites had indeed been charged to dispossess them, and occupy that important town; but (Judg. i. 21) the Benjamites are reproached with having neglected to drive them from thence, that is, from the *upper*, well-fortified part of the place *Zion*, since the *lower* and less fortified part had already been taken by Judah (Judg. i. 8), who in this matter had almost a common interest with *Benjamin*. *Zion* was finally taken from the Jebusites by David (2 Sam. v. 6, *sq.*).

In the time of the Judges, the tribe of Benjamin became involved in a civil war with the other eleven tribes, for having refused to give up to justice the miscreants of Gibeon who had publicly violated and caused the death of a concubine of a man of Ephraim, who had passed with her through Gibeon. This war terminated in the almost utter extinction of the tribe; leaving no hope for its regeneration from the circumstance, that, not only had nearly all the women of that tribe been previously slain by their foes, but the eleven other tribes had engaged themselves by a solemn oath not to marry their daughters to any man belonging to Benjamin. When the thirst of revenge, however, had abated, they found means to evade the letter of the oath, and to revive the tribe again by an alliance with them (Judg. xix. 20, 21). This revival was so rapid, that, in the time of David, it already numbered 59,434 able warriors (1 Chron. vii. 6-12); in that of Asa, 280,000 (2 Chron. xiv. 8); and in that of Jehoshaphat, 200,000 (2 Chron. xvii. 17).

This tribe had also the honour of giving the first king to the Jews, Saul being a Benjamite (1 Sam. ix. 1, 2). After the death of Saul, the Benjamites, as might have been expected, declared themselves for his son Ishbosheth (2 Sam. ii. 8, *sq.*); until, after the assassination of that prince, David became king of all Israel. David having at last expelled the Jebusites from Zion, and made it his own residence, the close alliance that seems previously to have existed between the tribes of Benjamin and Judah (Judg. i. 8) was cemented by the circumstance that, while Jerusalem actually belonged to the district of Benjamin, that of Judah was immediately contiguous to it. Thus it happened, that, at the division of the kingdom after the death of Solomon, Benjamin espoused the cause of Judah, and formed, together with it, a kingdom by themselves. Indeed, the two tribes stood always in such a close connection, as often to be included under the single term Judah (1 Kings xi. 13; xii. 20). After the exile, also, these two tribes constituted the flower of the new Jewish colony in Palestine (comp. Ezr. xi. 1; x. 9).—E. M.

BEREA (Βέροια), Acts xvii. 10, a city of Macedonia, which Pliny (*Hist. Nat.* iv. 10) places in the northern part of that province; and Ptolemy (*Geog.* iii. 13) in that part of it called Æmathia. It was on the river Astræus, not far from Pella, towards the south-west, and near Mount Bermius. It was afterwards called Irenopolis, and is now known by the name of Boor. Paul and Silas withdrew to this place from Thessalonica; and the Jewish residents are described as more ingenuous, and of a better disposition (not 'more noble,' as in the Authorized Version) 'than those of Thessalonica' (*οὗτοι δὲ ἦσαν εὐγενέστεροι τῶν ἐν Θεσσαλονίκῃ*), in that they diligently searched the Scriptures to ascertain the truth of the doctrines taught by the Apostles.

BERENICE (Βερνίκη), eldest daughter of Herod Agrippa I., and sister of the younger Agrippa (Acts xxv. 13, 23; xxvi. 30). She was married to her uncle Herod, king of Chalcis; and after his death, in order to avoid the merited suspicion of incest with her brother Agrippa, she became the wife of Polemon, king of Cilicia. This connection being soon dissolved, she returned to her brother, and afterwards became the mistress of Vespasian and Titus (Joseph. *Antiq.* xix. 5. 1; xx. 7; 2, 3; Tacit. *Hist.* ii. 81; Suet. *Tit.* 7).

BERODACH-BALADAN. [MERODACH-BALADAN.]

BEROSH (בְּרוֹשׁ) occurs in several passages of Scripture, as in 2 Sam. vi. 5; 1 Kings v. 8; vi. 15 and 34; ix. 11; 2 Kings ix. 23; 2 Chron. ii. 8; iii. 5; Ps. civ. 17; Isa. xiv. 8; xxxvii. 24; xli. 19; lv. 13; lx. 13; Ezek. xxvii. 5; xxxi. 8; Hos. xiv. 8; Nah. ii. 3; Zech. xi. 2), and BEROTH (ברות), which is said to be only the Aramæan pronunciation of the same word, in Cant. i. 17, 'the bearers of our house are cedar, and the rafters of fir' (Beroth). So in most of the other passages Eres and Berosh, translated Cedar and Fir in the Auth. Vers., are mentioned together, as 1 Kings v. 8, 'And Hiram sent to Solomon saying, I will do all thy desire concerning timber of cedar, and concerning timber of fir;' Isa. xiv. 8, 'Yes, the fir-trees rejoice at thee, and the cedars of Lebanon.' But Rosenmüller says, 'In most of the passages where the Hebrew word occurs, it is by the oldest Greek and the Syriac translators rendered *Cypress*.' Celsius, on the contrary, is of opinion that *Berosh* indicates the cedar of Lebanon, and that *Eres*, which is usually considered to have the same meaning, is

the common pine (pinus sylvestris), apparently because he conceives Berosh to be changed from *sherbin*, the Arabic name of *pine*. Others have thought that Berosh is the box, ash, juniper, &c.

The word *berosh* or *beroth* is slightly varied in the Syriac and Chaldee versions, being written *berutha* in the former, and *berath* in the latter. All these are closely allied to *bruta*, a name of the Savine plant, which is the *βράθυ*, *βράθυν*, and *βαραθους* of the Greeks, and which the Arabs have converted into *burasee* and *buratee*. By them it is applied to a species of juniper, which they call *abhul* and *arus* or *orus*. It appears to us that many of these terms must be considered generic, rather than specific in the modern sense, when so much care is bestowed on the accurate discrimination of one species from another. Thus *arus*, applied by the Arabs to a juniper, indicates a pine-tree in Scripture, whether we follow the common acceptation and consider it the cedar, or adopt the opinion of Celsius, that the pinus sylvestris is indicated. So *buratee* may have been applied by the Arabs, &c. not only to the Savine and other species of juniper, but also to plants, such as the cypress, which resemble these. In many of those cases, therefore, where we are unable to discover any absolute identity or similarity of name, we must be guided by the nature of the trees, the uses to which they were applied, and the situations in which they are said to have been found. Thus, as we find Eres and Berosh so constantly associated in Scripture, the former may indicate the cedar with the wild pine-tree, while the latter may comprehend the juniper and cypress tribe.

163. [Cypress—Cupressus sempervirens.]

The different species of juniper have by some botanists been ranked under Cedrus, the true species being distinguished by the title of Cedrus baccifera, and the pines by that of Cedrus conifera. Of *Juniperus*, the *ἄρκευθος* of the Greeks and *abhul* of the Arabs, there are several species in Syria. Of these J. communis, the common juniper, is a very widely diffused species, being found in Europe and Asia, in the plains of northern and in the mountains of southern latitudes; usually forming a low shrub, but in some situations being 15 feet, and even 30 feet high. J. Oxycedrus, the sharp or prickly, or brown-berried juniper, closely allied to the common juniper, is an evergreen shrub, from 10 to 12, but sometimes even 20 feet high. It was found by M Boué on Mount Lebanon. J. drupacea or large-fruited juniper is a species which was introduced into Europe from the East under the Arabic name *Habhel*. This name, however, is applied rather to all the species than to any one in particular. It is a native of Mount Cassius, and is thought to be the same as the greater juniper found by Belon on Mount Taurus, which he describes as rising to the height of a cypress. J. Phœnicea, or Phœnician juniper, is the great juniper of Dioscorides, and is a native of the south of Europe, Russia, and Syria. It has imbricated leaves, bears some resemblance to the cypress, and attains a height of from 20 to 30 feet. J. Lycia, or Lycian juniper, is a dwarf species, and J. Sabina, or the common Savine, is usually a low spreading shrub, but sometimes rises to the height of 10 or 12 feet. It is a native of the south of Europe and Syria. Of these species J. Oxycedrus and J. Phœnicea are the only species which could have been the Berosh of Scripture. Some are of opinion that the wood of J. Oxycedrus, rather than that of the so-called cedar of Lebanon, is the cedar-wood so famed in ancient times for its durability, and which was therefore employed in making statues. It is to the wood of certain species of juniper that the name of cedar-wood is now specially applied.

Cupressus, the *κυπάρισσος* of the Greeks and the *suroo* of the Arabs, called also by them *shujrut-al-hyat*, or tree of life, is the *Cupressus sempervirens*, or the evergreen cypress of botanists. This tree is well known as being tapering in form, in consequence of its branches growing upright and close to the stem, and also that in its general appearance it resembles the Lombardy poplar, so that the one is often mistaken for the other when seen in Oriental drawings. In southern latitudes it usually grows to a height of 50 or 60 feet. Its branchlets are closely covered with very small imbricated leaves, which remain on the tree for 5 or 6 years. Du Hamel states that he has observed on the bark of young cypresses small particles of a substance resembling gum tragacanth, and that he has seen bees taking great pains to detach these particles, probably to supply some of the matter required for forming their combs. This cypress is a native of the Grecian Archipelago, particularly of Candia (the ancient Crete) and Cyprus, and also of Asia Minor, Syria, and Persia. It may be seen on the coast of Palestine, as well as in the interior, as the Mahomedans plant it in their cemeteries. That it is found on the mountains of Syria is evident from the following passage, which with others is quoted and translated by Celsius, *Hierobot.* i. p. 133: Cyrillus Alexandr. *in Esaiam*, p. 848—'Mons est Phœnices Libanus, cedris, cupressis ac pinis densus, et ipsis thuris fruticibus.' So Jerome, *Comment. in Hos.* xiv. 6—'Crebræ hic crescunt cedri. Rectæ quoque et electæ abietes, odoriferæ cupressi, seu cyparissi, pingues olivæ, pini, buxi,' &c. The cypress being so common, we should expect it to be frequently mentioned in Scripture; but this does not appear to be the case, if we judge by the Auth. Vers., as it occurs there only once, in Isa. xliv. 14, 'He heweth him down cedars and taketh the cypress and the oak,' for the

purpose of making idols. The word here translated 'cypress' is *tirza*, which there does not appear to be any other authority for identifying with the cypress. But the cypress is expressly mentioned in the Apocrypha (Ecclus. xxiv. 13), where it is described as growing upon the Mountains of Hermon; and it has been observed by Mr. Kitto, that if this be understood of the great Hermon, it is illustrated by Pococke, who tells us that it is the only tree which grows towards the summit of Lebanon. In Ecclus. l. 10, the high-priest is compared to a 'cypress towering to the clouds,' on account of his tall and noble figure. 'The wood of the cypress is hard, fragrant, and of a remarkably fine close grain, very durable, and of a beautiful reddish hue, which Pliny says it never loses.' As to the opinion respecting the durability of the cypress-wood entertained by the ancients, it may be sufficient to adduce the authority of Pliny, who says 'that the statue of Jupiter, in the Capitol, which was formed of cypress, had existed above 600 years without showing the slightest symptom of decay, and that the doors of the Temple of Diana at Ephesus, which were also of cypress, and were 400 years old, had the appearance of being quite new.' This wood was used for a variety of purposes, as for wine-presses, poles, rafters, and joists. Horace says, that whatever was thought worthy of being handed down to remote posterity was preserved in cypress or cedar wood: and Virgil refers to it in these lines (*Georg.* ii. 442),

——— 'dant utile lignum
Navigiis pinos, domibus cedrumque cupressosque.'

In all the passages of Scripture, therefore, the cypress will be found to answer completely to the descriptions and uses of the Berosh; for it is well adapted for building, is not subject to destruction, and was therefore very likely to be employed in the erection of the Temple, and also for its gates and flooring; for the decks of ships, and even for musical instruments and lances. J. E. Faber, as quoted by Rosenmüller, conjectures that the Hebrew name Berosh included three different trees which resemble each other, viz. the evergreen cypress, the thyine, and the savine. The last, or Juniperus Sabina, is so like the cypress, that the ancients often called it by that name, and the moderns have noticed the resemblance, especially as to the leaves. 'Hence, even among the Greeks, both trees bore the old Eastern names of Berosh, Beroth, Brutha, or Brathy' (Rosenmüller, *Bot. of Bible*, Trans. p. 260).—J. F. R.

BERYL. [SHOHAM.]

BESHA (בְּאֹשׁ) occurs in the singular form in Job xxxi. 40, 'Let thistles grow instead of wheat, and *cockle* (besha) instead of barley;' and in the plural form in Isaiah v. 2, 'He (Jehovah) planted it with the choicest vine, and also made a wine-press therein; and he looked that it should bring forth grapes, and it brought forth *wild grapes*' (באשים *beushim*). So also in verse 4 of the same chapter. It is probable that the same plant is referred to in these two passages; but difficulties have here, as elsewhere, been experienced in ascertaining the precise plant intended. All, however, are agreed that some useless, if not noxious, herb must be understood in both cases. Some have supposed that it was a plant with offensive odour, as the word implies a bad smell; others, that it was a thorny plant, a bramble, darnel, &c. In addition to these conjectures we may infer, that, if not a general term for weeds, the word denoted a plant which sprung up in cultivated ground. Celsius seeks in Arabic for the name of some noxious plant similar to *besha*, and he finds it in the *besh* or *bish*, which has long been known as one of the most powerful of poisons. This name seems to have been adopted by the Arabs from the Hindoos, among whom the *bish* is likewise celebrated as a poison, and is pointed out as a product of the Himalayan mountains. Celsius refers it to the Hebrew verb באש, but it is no doubt derived from the Sanscrit *visha*, signifying poison; and the plant is the *Aconitum ferox* of Dr. Wallich (*Pl. Asiat. Rar.* i. 2. 41) and Royle (*Illustr. Himalayan Bot.* p. 46). The Latin translators of Avicenna consider the *bish* to be the Napellus, or an Aconite, proving that in some cases a considerable approximation to correctness was attained in ascertaining the kind of plants yielding drugs which were formerly in use in medicine. *Bish* having thus been ascertained to be an Aconite, and to be the same word as *besha*, the latter has in consequence been thought to indicate *Aconitum album*, the only species which appears to be found in Syria. It is not anywhere very common, but is most likely to occur on the sides of hills, the situations usually selected as the sites for vineyards.

But as we have seen that *bish* is probably derived from the Sanscrit *visha*, the correspondence of the Arabic *bish* with the Hebrew *besha* is accidental, and does not prove them to be even allied. The Aconite, moreover, is not very likely to have sprung up instead of barley in a vineyard of Palestine, and still less so in a more southern latitude, to which the passage in Job must refer, the scene of that book being thought to have been Idumæa, a part of Arabia Petræa, on the south-east of the tribe of Judah. Hence other plants have been sought for; some being in favour of the ἄμπελος ἀγρία of the Greeks and *labrusca* of the Romans, which is considered to be the wild variety of *Vitis vinifera*. Of this Dioscorides 'genera duo fecit: alterius enim uva non maturescit, sed florem tantum profert οἰνάνθην nominatum; altera fructum perficit, ex parvis acinis nigris subastringentibus.' In the neighbourhood of Tripoli, Rauwolf found wild vines, called *labruscæ*, on which nothing appeared, but only the flower (*œnanthe*).

Others, not satisfied with this determination, have endeavoured to find some plant which, resembling the vine in some respects, should yet be strongly contrasted with it in its properties. Thus, the Hebrew name of the grape being *haneb*, there can be no doubt that it is the same word as the Arabic *'anab*, which also signifies the grape. But in Arabia it is rather used generically than specifically, as, besides the common grape, there are also *anab-al-salib*, or ox's grape, and *anab-al-dub*, or wolf-grape. The former name we have found applied in India to the var. *indicum* of *Solanum nigrum*, which is a common weed in Europe, and even in India, especially in the neighbourhood of cultivated ground. This, which somewhat resembles the grape in the form of its berried fruit, is very different in its properties, being narcotic and poisonous. Hasselquist came nearly to the same conclusion, for in reference to the passage of Isaiah, he says, 'I am inclined to believe

that the prophet here means the hoary nightshade (*Solanum incanum*), because it is common in Egypt and Palestine, and the Arabian name agrees well with it. The Arabs call it *anib-el-dib*, *i. e.* wolf-grape. The prophet could not have found a plant more opposite to the vine than this, for it grows much in the vineyards, and is very pernicious to them, wherefore they root it out: it likewise resembles a vine by its shrubby stalk' (Hasselquist, *Travels*, p. 289). This plant appears better entitled than the Aconite to be contrasted with the grape-vine, and it is not unworthy of notice that either it or the *Solanum nigrum* will suit the passage of Job equally well.—J. F. R.

BESOR (בְּשׂוֹר; Sept. Βοσόρ), a brook mentioned in 1 Sam. xxx. 9. Sanutus derives its course from the interior Carmel, near Hebron, and states that it enters the sea near Gaza (*Liber Secretorum*, p. 252). It is without doubt the same that Richardson crossed on approaching Gaza from the south, and which he calls Oa di Gaza (Wady Gaza). The bed was thirty yards wide, and its stream was, early in April, already exhausted, although some stagnant water remained.

BETH (בַּיִת *house*) is often found as the first element of proper names of places in the Bible. It is only necessary to observe that, in all such compounds, as Bethel, &c., the latter part of the word must be considered, according to our Occidental languages, to depend on the former in the relation of the *genitive*; so that Bethel can only mean 'house of God.' The notion of *house* is, of course, capable of a wide application, and is used to mean temple, habitation, place, according to the sense of the word with which it is combined.—J. N.

BETHABARA (Βηθαβαρά) or BETHBARAH. This name means *place of the ford*, *i. e.* of or over the Jordan; and is mentioned in John i. 28, as the place where John baptized. The best manuscripts and recent editions, however, have Βηθανία (Bethany): the reading Βηθαβαρὰ appears to have arisen from the conjecture of Origen, who in his day found no such place on the Jordan as Bethany, but knew a town called Bethabara, where John was said to have baptized, and therefore took the unwarrantable liberty of changing the reading (Orig. *Opp.* ii. p. 130, ed. Huet; Kuinoel, *Comment. in Joh.* i. 28).

BETHANY (Βηθανία, from the Heb. בֵּית הִינֵי, *place of dates*). 1. The place near the Jordan where John baptized, the exact situation of which is unknown. Some copies here read Bethabara, as stated in the preceding article. 2. BETHANY, a town or village about fifteen furlongs east-south-east from Jerusalem, beyond the Mount of Olives (John xi. 18), so called, probably, from the number of palm-trees that grew around. It was the residence of Lazarus and his sisters Mary and Martha, and Jesus often went out from Jerusalem to lodge there (Matt. xxi. 17; xxvi. 6; Mark xi. 1, 11, 12; xiv. 3; Luke xix. 29; xxiv. 50; John xi. 1, 18; xii. 1). The place still subsists in a shallow wady on the eastern slope of the Mount of Olives. Dr. Robinson reached Bethany in three-quarters of an hour from the Damascus gate of Jerusalem; which gives a distance corresponding to the fifteen furlongs (stadia) of the evangelist. It is a poor village of about twenty families. The only marks of antiquity are some hewn stones from more ancient buildings, found in the walls of some of the houses. The monks, indeed, show the house of Mary and Martha, and of Simon the leper, and also the sepulchre of Lazarus, all of which are constantly mentioned in the narratives of pilgrims and travellers. The sepulchre is a deep vault, like a cellar, excavated in the limestone rock

164. [Bethany.]

in the middle of the village, to which there is a descent by twenty-six steps. Dr. Robinson (ii. 101) alleges that there is not the slightest probability of its ever having been the tomb of Lazarus. The form is not that of the ancient sepulchres, nor does its situation accord with the narrative of the New Testament, which implies that the tomb was not in the town (John xvi. 31, 38). The present Arab name of the village is el-Azirezeh, from el-Azir, the Arabic form of Lazarus.

BETH-ARBEL (בֵּית אַרְבֵאל), a place mentioned only in Hos. x. 14; and as it seems to be there implied that it was an impregnable fortress, the probability is strengthened of its being the same as the Arbela of Josephus. This was a village in Galilee, near which were certain fortified caverns. They are first mentioned in connection with the march of Bacchides into Judæa, at which time they were occupied by many fugitives, and the Syrian general encamped there long enough to subdue them (*Antiq.* xii. 11. 1; 1 Macc. ix. 2). At a later period these caverns formed the retreats of banded robbers, who greatly distressed the inhabitants throughout that quarter. Josephus gives a graphic account of the means taken by Herod to extirpate them. The caverns were situated in the midst of precipitous cliffs, overhanging a deep valley, with only a steep and narrow path leading to the entrance: the attack was therefore exceeding difficult. Parties of soldiers being at length let down in large boxes, suspended by chains from above, attacked those who defended the entrance, with fire and sword, or dragged them out with long hooks and dashed them down the precipice. In this way the place was at length subdued (Joseph. *Antiq.* xiv. 15. 4, 5; *De Bell. Jud.* i. 16. 2-4). These same caverns were afterwards fortified by Josephus himself against the Romans during his command in Galilee. In one place he speaks of them as the caverns of Arbela, and in another as the caverns near the lake of Gennesareth (Joseph. *Vita*, § 37; *De Bell. Jud.* ii. 20. 6). According to the Talmud, Arbela lay between Sepphoris and Tiberias (Lightfoot, *Chorog. Cent.* c. 85). These indications leave little doubt that Arbela of Galilee, with its fortified caverns, may be identified with the present Kulat ibn Maan and the adjacent ruins now known as Irbid (probably a corruption of Irbil, the proper Arabic form of Arbela). This latter is the site which Pococke (ii. 58) supposed to be that of Bethsaida, and where he found columns and the ruins of a large church, with a sculptured doorcase of white marble. The best description of the neighbouring caves is that of Burckhardt (p. 331), who calculates that they might afford refuge to about 600 men.

BETH-AVEN, a nickname for the town of Bethel, applied to it after it became the seat of the worship of the golden calves [Bethel]. There was, however, a town of this name not far from Bethel eastward (Josh. vii. 2; 1 Sam. xiii. 5), the existence of which, perhaps, occasioned the transfer of the name to Bethel. The Talmudists confound it with Bethel. There was also a desert of the same name (Josh. xviii. 12).

BETHEL (בֵּית אֵל; Sept. Βαιθήλ), originally Luz (לוּז; Sept. Λουζά), an ancient town which Eusebius places 12 R. miles north of Jerusalem, on the right hand of the road to Shechem. Jacob rested here one night on his way to Padan-Aram, and commemorated the vision with which he was favoured by erecting and pouring oil upon the stone which had served him for a pillow, and giving to the place the name of Bethel (*place* or *house of God*), which eventually superseded the more ancient designation of Luz (Gen. xxviii. 11-19). Under that name it is mentioned proleptically with reference to the earlier *time* of Abraham (Gen. xii. 18; xiii. 3). After his prosperous return, Bethel became a favourite station with Jacob: here he built an altar, buried Deborah, received the name of Israel (for the second time), and promises of blessing; and here also he accomplished the vow which he had made on his going forth (Gen. xxxv. 1-15; comp. xxxii. 28, and xxviii. 20-22). It seems not to have been a town in those early times; but at the conquest of the land, Bethel is mentioned as a royal city of the Canaanites (Josh. xii. 16). It became a boundary town of Benjamin toward Ephraim (Josh. xviii. 22), and was actually conquered by the latter tribe from the Canaanites (Judg. i. 22-26). At this place, already consecrated in the time of the patriarchs, the ark of the covenant was, apparently for a long while, deposited [Ark], and probably the tabernacle also (Judg. xx. 26; comp. 1 Sam. x. 3). It was also one of the places at which Samuel held in rotation his court of justice (1 Sam. vii. 16). After the separation of the kingdoms Bethel was included in that of Israel, which seems to show, that although originally in the formal distribution assigned to Benjamin, it had been actually possessed by Ephraim in right of conquest from the Canaanites—which might have been held by that somewhat unscrupulous tribe to determine the right of possession to a place of importance close on their own frontier. Jeroboam made it the southern seat (Dan being the northern) of the worship of the golden calves; and it seems to have been the chief seat of that worship (1 Kings xii. 28-33; xiii. 1). The choice of Bethel was probably determined by the consideration that the spot was already sacred in the estimation of the Israelites, not only from patriarchal consecration, but from the more recent presence of the ark; which might seem to point it out as a proper seat for an establishment designed to rival that of Jerusalem. This appropriation, however, completely desecrated Bethel in the estimation of the orthodox Jews; and the prophets name it with abhorrence and contempt—even applying to it, by a sort of *jeu de mot*, the name of Bethaven (*house of idols*) instead of Bethel (house of God) (Amos v. 5; Hos. iv. 15; v. 8; x. 5, 8). The town was taken from Jeroboam by Abijah, king of Judah (2 Chron. xiii. 19); but it again reverted to Israel (2 Kings x. 28). After the Israelites were carried away captive by the Assyrians, all traces of this illegal worship were extirpated by Josiah, king of Judah, who thus fulfilled a prophecy made to Jeroboam 350 years before (2 Kings xiii. 1, 2; xxiii. 15-18). The place was still in existence after the Captivity, and was in the possession of the Benjamites (Ezra ii. 28; Neh. vii. 32). In the time of the Maccabees Bethel was fortified by Bacchides for the king of Syria (Joseph. *Antiq.* xiii. 1. 13). It is not named in the New Testament; but it still existed and was taken by Vespasian (Joseph. *De*

Bell. Jud. iv. 9. 9). It is described by Eusebius and Jerome as a small village (*Onomast.* s. vv. *Aggai* and *Luza*); and this is the last notice of it as an inhabited place. Bethel and its name were believed to have perished until within these few years; yet it has been ascertained by the Protestant missionaries at Jerusalem that the name and a knowledge of the site still existed among the people of the land. The name was indeed preserved in the form of Beitin—the Arabic termination *in* for the Hebrew *el* being not an unusual change. Its identity with Bethel had been recognised by the Oriental Christian priests, who endeavoured to bring into use the Arabic form *Beitil*, as being nearer to the original; but it had not found currency beyond the circle of their influence.

The situation of Beitin corresponds very exactly with the intimations afforded by Eusebius and others; the distance from Jerusalem, 3¾ hours, being equal to the 12 Roman miles assigned in the *Onomasticon*. The ruins lie upon the point of a low hill, between the heads of two shallow wadys which unite below, and run off into a deep and rugged valley. The spot is shut in by higher land on every side. The ruins are more considerable than those of a 'large village,' as the place was in the time of Jerome; and it is therefore likely that, although unnoticed in history, it afterwards revived, and was enlarged. The ruined churches upon the site and beyond the valley evince that it was a place of importance even down to the middle ages. Besides these, there yet remain numerous foundations and half-standing walls of houses and other buildings: on the highest part are the ruins of a square tower, and in the western valley are the remains of one of the largest reservoirs in the country, being 314 feet in length by 217 in breadth. The bottom is now a green grass plat, having in it two living springs of good water.

BETHER (בֶּתֶר). The Mountains of Bether are only mentioned in Cant. ii. 17; viii. 14; and no place called Bether occurs elsewhere. The word means, properly, *dissection*. The mountains of Bether may therefore be *mountains of disjunction*, of *separation*, etc., that is, mountains cut up, divided by ravines, etc. In the Authorized Version the same words that are rendered 'mountains of Bether' in Cant. ii. 17, are rendered 'mountains of spices' in viii. 14. It is an objectionable mode of disposing of two different interpretations, to adopt sometimes the one and sometimes the other. The second interpretation is reached by considering that the mountains derived their name from the growth of trees, from *incisions* (with reference to the etymology) in which odorous gums distilled. This is after the Sept.—ὄρη τῶν ἀρωμάτων; which version also sets the example of a difference in rendering by giving ὄρη κοιλωμάτων, *hollow* mountains, in the previous passage. As the word is found nowhere else as a proper name, it is doubtful if it should be so taken in the Canticles.

BETHESDA (Βηθεσδά; from Heb. בֵּית חִסְדָּא *house* or *place of mercy*), a pool (κολυμβήθρα) at the Sheep-gate of Jerusalem, built round with porches for the accommodation of the sick who sought benefit from the healing virtues of the water, and upon one of whom Christ performed the healing miracle recorded by St. John (v. 2-9). That which is now, and has long been pointed out as the Pool of Bethesda, is a dry basin or reservoir outside the northern wall of the enclosure around the Temple Mount, of which wall its southern side may be said to form a part. The east end of it is close to the present gate of St. Stephen. The pool measures 360 feet in length, 130 feet in breadth, and 75 in depth to the bottom, besides the rubbish which has accumulated in it for ages. Although it has been dry for above two centuries, it was once evidently used as a reservoir, for the sides internally have been cased over with small stones, and these again covered with plaster; but the workmanship of these additions is coarse, and bears no special marks of antiquity. The west end is built up like the rest, except at the south-west corner, where two lofty arched vaults extended westward, side by side, under the houses that now cover this part.

166. [Pool of Bethesda.]

Dr. Robinson was able to trace the continuation of the work in this direction under one of these vaults for 100 feet, and it seemed to extend much farther. This gives the whole a length of 160 feet, equal to one-half of the whole extent of the sacred enclosure under which it lies: and how much more is unknown. It would seem as if the deep reservoir formerly extended farther westward in this part; and that these vaults were built up, in and over it, in order to support the structures above. Dr. Robinson considers it probable that this excavation was anciently carried quite through the ridge of Bezetha, along the northern side of Antonia to its N.W. corner, thus *forming the deep trench which separated the fortress from the adjacent hill* (*Bib. Researches*, i. 433, 434). The mere appearance of the place, and its position immediately under the wall of the sacred enclosure, strongly support this conjecture, so that we are still left to seek the Pool of Bethesda, if indeed any trace of it now remains. Dr. Robinson himself, without having any definite conviction on the subject, asks whether the Pool of Bethesda may not in fact be the 'Fountain of the Virgin'? The question was suggested to his mind by the exceedingly abrupt and irregular plan of that fountain. He remarks—'We are told that an angel went down at a certain season into the pool and troubled the water;' and then whosoever first stepped in was made whole (John v. 2-7). There seems to have been no special me-

dicinal virtue in the water itself, and only he who first stepped in after the troubling was healed. Does not this troubling of the water look like the irregular plan of this fountain? And as the Sheep-gate seems to have been situated not far from the Temple (Neh. iii. 1, 32), and the wall of the ancient Temple probably ran along this valley; may not that gate have been somewhere in this part, and the Fountain of the Virgin correspond to Bethesda? the same as the 'King's Pool' of Nehemiah, and the 'Solomon's Pool' of Josephus? (*Bibl. Researches*, i. 508). For an account of the Fountain to which these inquiries relate, we must refer to the article on the Fountain, with which that of the Virgin is closely connected [SILOAM, POOL OF].

BETH-HORON (בֵּית חוֹרוֹן; Sept. Βαιθωρών): two places of this name are distinguished in Scripture as the Upper and Nether Beth-horon (Josh. xvi. 3, 5; xviii. 13; 1 Chron. vii. 24). The Nether Beth-horon lay in the N.W. corner of Benjamin; and between the two places was a pass called both the ascent and descent of Beth-horon, leading from the region of Gibeon (el-Jib) down to the western plain (Josh. xviii. 13, 14; x. 10, 11; 1 Macc. iii. 16, 24). Down this pass the five kings of the Amorites were driven by Joshua (Josh. x. 11). The upper and lower towns were both fortified by Solomon (1 Kings ix. 17; 2 Chron. viii. 5). At one of them Nicanor was attacked by Judas Maccabæus; and it was afterwards fortified by Bacchides (1 Macc. vii. 39, *seq.*; ix. 50; Joseph. *Antiq.* xii. 10. 5; xiii. 1. 3). Cestius Gallus, the Roman proconsul of Syria, in his march from Cæsarea to Jerusalem, after having burned Lydda, ascended the mountain by Beth-horon and encamped near Gibeon (Joseph. *De Bell. Jud.* ii. 19. 1). Dr. Robinson collects from these intimations that in ancient times, as at the present day, the great road of communication and of heavy transport between Jerusalem and the sea-coast was by the pass of Beth-horon (*Bibl. Researches*, iii. 61).

In the time of Eusebius and Jerome the two Beth-horons were small villages; and, according to them, the Upper Beth-horon was 12 Roman miles from Jerusalem: according to Josephus, it was 100 stadia from thence, and 50 stadia from Gibeon. From the time of Jerome the place appears to have been unnoticed till 1801, when Dr. E. D. Clarke recognised it in the present Beit-Ur (*Travels*, vol. i. pt. ii. p. 628); after which it appears to have remained unvisited till 1838, when the Rev. J. Paxton, and, a few days after, Dr. Robinson, arrived at the place. The Lower Beit-Ur is upon the top of a low ridge, which is separated by a wady, or narrow valley, from the foot of the mountain upon which the Upper Beit-Ur stands. Both are now inhabited villages. The lower is very small, but foundations of large stones indicate an ancient site—doubtless that of the Nether Beth-horon. The Upper Beit-Ur is likewise small, but also exhibits traces of ancient walls and foundations. In the steep ascent to it the rock is in some parts cut away, and the path formed into steps, indicating an ancient road. On the first offset or step of the ascent are foundations of huge stones, the remains perhaps of a castle that once guarded the pass.

It is remarkable that the places are still distinguished as Beit-Ur el-Foka (the Upper), and Beit-Ur el-Tahta (the Lower), and there can be no question that they represent the Upper and Lower Beth-horon. 'In the name,' remarks Dr. Robinson (iii. p. 59), 'we find the rather unusual change from one harsh Hebrew guttural to one still deeper and more tenacious in Arabic; in all other respects the name, position, and other circumstances agree.'

BETH-LEHEM (בֵּית לֶחֶם, *house or place of bread*, i. q. *Bread-town*; now بيت لحم, *house of flesh*; Sept. Βηθλεέμ), a city of Judah (Judg. xvii. 7), six miles southward from Jerusalem, on the road to Hebron. It was generally called Bethlehem-Judah, to distinguish it from another Bethlehem in Zebulun (Josh. xix. 15; Judg. xii. 10). It is also called Ephratah (the fruitful), and its inhabitants Ephratites (Gen. xlviii. 7; Mic. v. 2). Bethlehem is chiefly celebrated as the birth-place of David and of Christ, and as the scene of the Book of Ruth. It was fortified by Rehoboam (2 Chron. xi. 6); but it does not appear to have been a place of much importance; for Micah, extolling the moral pre-eminence of Bethlehem, says, 'Thou, Bethlehem Ephratah, *though thou be little among the thousands of Judah*,' &c. (Mic. v. 2). Matthew quotes this as—'and thou, Bethlehem of Judah, *art not the least* of the cities of Judah,' &c. (Matt. ii. 6). which has the appearance of a discrepancy. But it is answered that a city may be *little*, without being the *least*; or that the evangelist may have quoted from memory, and hence the slight difference in expression, while the sense remains the same.

There never has been any dispute or doubt about the site of Bethlehem, which has always been an inhabited place, and, from its sacred associations, has been visited by an unbroken series of pilgrims and travellers. It is now a large village, beautifully situated on the brow of a high hill, which commands an extensive view of the surrounding mountainous country, and rises in parterres of vineyards, almond-groves and fig plantations, watered by gentle rivulets that murmur through the terraces; and is diversified by towers and wine-presses. It is a straggling village, with one broad and principal street. The houses have not domed roofs like those of Jerusalem and Rumla, they are built for the most part of clay and bricks; and every house is provided with an apiary, the beehives of which are constructed of a series of earthen pots, ranged on the house-tops. The inhabitants are said to be 3000, and were all native Christians at the time of the most recent visits; for Ibrahim Pasha, finding that the Moslem and Christian inhabitants were always at strife, caused the former to withdraw, and left the village in quiet possession of the latter, whose numbers had always greatly predominated (Wilde's *Narrative*, ii. p. 411). The chief trade and manufacture of the inhabitants consist of beads, crosses, and other relics, which are sold at a great profit. Some of the articles, wrought in mother-of-pearl, are carved with more skill than one would expect to find in that remote quarter; and the workmanship in some instances would not discredit the artists of Britain. The people are said to be remarkable for their ferocity

and rudeness, which is indeed the common character of the inhabitants of most of the places accounted holy in the East.

At the farthest extremity of the town is the Latin convent, connected with which is the Church of the Nativity, said to have been built by the empress Helena. It has suffered much from time, but still bears manifest traces of its Grecian origin; and is alleged to be the most chaste architectural building now remaining in Palestine. It is a spacious and handsome hall, consisting of a central nave amid aisles separated from each other by rows of tall Corinthian pillars of grey marble. As there is no ceiling, the lofty roof is exposed to view, and although composed of the cedars of Lebanon, is still in good preservation, and affords a fine specimen of the architecture of that age. Two spiral staircases lead to the cave called the 'Grotto of the Nativity,' which is about 20 feet below the level of the church. This cave is lined with Italian marbles, and lighted by numerous lamps. Here the pilgrim is conducted with due solemnity to a star inlaid in the marble, marking the exact spot where the Saviour was born, and corresponding to that in the firmament occupied by the meteor which intimated that great event; he is then led to one of the sides, where, in a kind of recess, a little below the level of the rest of the floor, is a block of white marble, hollowed out in the form of a manger, and said to mark the place of the one in which the infant Jesus was laid. His attention is afterwards directed to the 'Sepulchre of the Innocents;' to the grotto in which St. Jerome passed the greater portion of his life; and to the chapels dedicated to Joseph and other saints. There has been much controversy respecting the claims of this grotto to be regarded as the place in which our Lord was born. Tradition is in its favour, but facts and probabilities are against it. It is useless to deny that there is much force in a tradition regarding a locality (more than it would have in the case of an historical fact), which can be traced up to a period not remote from that of the event commemorated; and this event was so important as to make the scene of it a point of such unremitting attention, that the knowledge of the spot was not likely to be lost. This view would be greatly strengthened if it could be satisfactorily proved that Adrian, to cast odium upon the mysteries of the Christian religion, not only erected statues of Jupiter and Venus over the holy sepulchre and on Calvary, but placed one of Adonis over the spot of the Nativity at Bethlehem. This part of the evidence is examined under another head [Calvary]. Against tradition, whatever may be its value in the present case, we have to place the utter improbability that a *subterranean* cavern like this, with a steep descent, should ever have been used as a stable for cattle, and, what is more, for the stable of a khan or caravanserai, which doubtless the 'inn' of Luke ii. 7 was. Although therefore it is true that cattle are, and always have been, stabled in caverns in the East; yet certainly not in such caverns as this, which appears to have been originally a tomb. Old empty tombs often, it is argued, afford shelter to man and cattle; but such was not the case among the Jews, who held themselves ceremonially defiled by contact with sepulchres. Besides, the circumstance of Christ's having been born in a cave would not have been less remarkable than his being laid in a manger, and was more likely to have been noticed by the evangelist, if it had occurred: and it is also to be observed that the present grotto is at some distance from the town, whereas Christ appears to have been born *in* the town, and whatever may be the case in the open country, it has never been usual in towns to employ caverns as stables for cattle. To this we may add the suspicion which arises from the fact, that the local traditions seem to connect with caverns almost every interesting event recorded in Scripture, as if the ancient Jews had been a nation of troglodytes [Caves]. Under all these circumstances, perhaps the most solid interest connected with the so-called 'Cave of the Nativity,' is to be found in the long abode in the convent of so eminent a father as the learned Jerome; and in the fact that there most of his great and useful works were composed.

On the north-east side of the town is a deep valley, alleged to be that in which the angels appeared to the shepherds announcing the birth of the Saviour (Luke ii. 8). In the same valley is a fountain, said to be that for the water of which David longed, and which three of his mighty men procured for him at the hazard of their lives (2 Sam. xxiii. 15-18). Dr. Clarke stopped and drank of the delicious water of this fountain, and from its correspondence with the intimations of the sacred historian and of Josephus, as well as from the permanency of natural fountains, he concludes that there can be no doubt of its identity.

There are accounts of Bethlehem in nearly all books of travels in Palestine. The best of modern date are those of Clarke, Wittman, Richardson, Buckingham, Hardy, Elliot, Wilde, Robinson, Paxton, Olin, Prokesch, Richter, Schubert (see also Raumer's *Palästina*, pp. 307-313).

BETH-NIMRA (בֵּית נִמְרָה; Sept. Βαινθαναβρά; or simply Nimra, נִמְרָה; Sept. Ναμρά), a town in the tribe of Gad (Num. xxxii. 3, 36; Josh. xiii. 27), which Eusebius (who calls it Bethnabris, Βηθναβρίς) places five Roman miles north of Livias. This leaves no doubt of its being the same ruined city called Nimrin, south of Szalt, which Burckhardt mentions (*Syria*, p. 355) as situated near the point where the Wady Shoeb joins the Jordan. Dr. Robinson understood that there was here a fountain corresponding to 'the waters of Nimra' (Isa. xv. 6; Jer. xlviii. 34).

BETHPHAGE (Βηθφαγή; Syr. ܒܝܬ ܦܓܐ; Heb. בֵּית פַּגָּא, *house of figs*; comp. Cant. ii. 13), a small village, which our Lord, coming from Jericho, appears to have entered before reaching Bethany (Matt. xxi. 1; Luke xix. 29); it probably, therefore, lay near the latter place, a little below it to the east. The site usually assigned to it *beyond* Bethany in the same direction, and between it and the Mount of Olives, cannot be correct, nor does any trace of Bethphage now exist (Robinson, ii. 103). The name occurs often in the Talmud; and the Jewish glossarists induced Lightfoot (*Chorog. Cent.* ch. xli.) and Otte (*Lex. Rabb.* p. 101, *sq.*) to regard it as a district extending from the foot of the Mount of Olives to the precincts of Jerusalem, and including the village of the same name.

BETH-REHOB. [Rehob.]

BETHSAIDA (Βηθσαϊδά; Syr. ܒܝܬ ܨܝܕܐ *Fishing-Town*), a town (πόλις, John i. 45; κώμη, Mark viii. 23) in Galilee (John xii. 21), on the western side of the sea of Tiberias, towards the middle, and not far from Capernaum (Mark vi. 45; viii. 22). It was the native place of Peter, Andrew, and Philip, and the frequent residence of Jesus. This gives some notion of the neighbourhood in which it lay; but the precise site is utterly unknown, and the very name has long eluded the search of travellers. The last historical notice of it is by Jerome, but he affords no more information than may be derived from the intimations in the New Testament. It is true that Pococke (ii. p. 99) finds Bethsaida at Irbid; Seetzen at Khan Minyeh (Zach's *Monath. Corresp.* xviii. 348); Nau at Mejdel (*Voyage*, p. 578; Quaresmius, tom. ii. 866), apparently between Khan Minyeh and Mejdel; and others at Tabighah—all different points on the western shore of the lake. But Dr. Robinson expresses his deliberate persuasion that these identifications can have no better foundation than the impression of the moment. He inquired perseveringly among the natives along the western border of the lake; but no Moslem knew of any such name, or any name that could be moulded into a resemblance to it. The Christians of Nazareth and Tiberias are indeed acquainted with the name, as well as that of Capernaum, from the New Testament; and they have learned to apply them to different places according to the opinions of their monastic teachers, or as may best suit their own convenience in answering the inquiries of travellers. It is thus that Dr. Robinson (*Bibl. Researches*, iii. 295) accounts for the fact that travellers have sometimes heard the names along the lake. Whenever this has not been the consequence of direct leading questions, which an Arab would always answer affirmatively, the names have doubtless been heard from the monks of Nazareth, or from the Arabs in a greater or less degree dependent upon them.

2. BETHSAIDA. Christ fed the 5000 'near to a city called Bethsaida' (Luke ix. 10); but it is evident from the parallel passages (Matt. xiv. 13; Mark vi. 32-45), that this event took place not in Galilee, but on the eastern side of the lake. This was held to be one of the greatest difficulties in sacred geography (Cellar. *Notit. Orb.* ii. 536), till the ingenious Reland afforded materials for a satisfactory solution of it, by distinguishing *two* Bethsaidas; one on the western, and the other on the north-eastern border of the lake (*Palæstina*, p. 653). The former was undoubtedly 'the city of Andrew and Peter;' and, although Reland did not himself think that the other Bethsaida is mentioned in the New Testament, it has been shown by later writers that it is in perfect agreement with the sacred text to conclude that it was the Bethsaida near which Christ fed the five thousand, and also, probably, where the blind man was restored to sight. This, and not the western Bethsaida (as our English writers persist in stating), was the Bethsaida of Gaulonitis, afterwards called Julias, which Pliny (*Hist. Nat.* xv.) places on the eastern side of the lake and of the Jordan, and which Josephus describes as situated in lower Gaulonitis, just above the entrance of the Jordan into the lake (*De Bell. Jud.* ii. 9. 1; iii. 10. 7). It was originally only a village, called Bethsaida, but was rebuilt and enlarged by Philip the Tetrarch not long after the birth of Christ, and received the name of Julias in honour of Julia the daughter of Augustus (Luke iii. 1; Joseph. *Antiq.* xviii. 2. 1). Philip seems to have made it his occasional residence; and here he died, and was buried in a costly tomb (*Antiq.* xviii. 4. 6). At the northern end of the lake of Gennesareth, the mountains which form the eastern wall of the valley through which the Jordan enters the lake throw out a spur or promontory, which extends for some distance southward along the river. This is known by the people on the spot by no other name than el Tell (the hill). On it are some ruins, which were visited by the Rev. Eli Smith, and proved to be the most extensive of any in the plain. The place is regarded as a sort of capital by the Arabs of the valley (the Ghawarineh), although they have lost its ancient name, and now occupy only a few houses in it as magazines. The ruins cover a large portion of the Tell, but consist entirely of unhewn volcanic stones, without any distinct trace of ancient architecture (Robinson, *Bibl. Researches*, iii. 308; Winer, *Bibl. Realwört.* s. v. 'Bethsaida').

BETH-SHAN (בֵּית שְׁאָן, *house of rest*, or *Rest-Town*; Sept. Βαιθσάν), a city belonging to the half-tribe of Manasseh, west of the Jordan, and situated in a valley of that river, where it is bounded westward by a low chain of the Gilboa mountains. It is on the road from Jerusalem to Damascus, and is about two miles from the Jordan, eighteen from the southern end of Lake Gennesareth, and twenty-three from Nazareth. It also bore the name of Scythopolis, perhaps because Scythians had settled there in the time of Josiah (B.C. 631), in their passage through Palestine towards Egypt (Herod. i. 205; comp. Pliny, *Hist. Nat.* v. 16, 20; Georg. Syncellus, p. 214). This hypothesis is supported by 2 Macc. xii. 30, where mention is made of 'Jews who lived among the Scythians (in Bethshan'); and by the Septuagint version of Judg. i. 27; Βαιθσάν, ἥ ἐστι Σκυθῶν πόλις. In Judith iii. 2, the place is also called Σκυθῶν πόλις, and so likewise by Josephus and others. The supposition that these were descendants of the Scythians in Palestine, renders more intelligible Coloss. iii. 11, where the Scythian is named with the Jew and Greek; and it also explains why the ancient Rabbins did not consider Scythopolis as a Jewish town, but as one of an unholy people (Havercamp, *Observat. ad Joseph. Antiq.* v. 1. 22). On coins the place is called Scythopolis and Nysa, with figures of Bacchus and the panther (Eckhel, pp. 438-440; comp. Reland, p. 993, *sq.*). As Succoth lay somewhere in the vicinity, east of the Jordan, some would derive Scythopolis from Succothopolis (Reland, p. 992, *sq.*; Gesenius in Burckhardt, p. 1053, German edit.). It is also not improbably supposed to be the same as Beth-Sitta (Judg. vii. 22).

Josephus does not account Scythopolis as belonging to Samaria, in which it geographically lay; but to Decapolis, which was chiefly on the other side of the river, and of which he calls it the largest town (*De Bell. Jud.* iii. 9. 7).

Although Bethshan was assigned to Manasseh

(Josh. xvii. 11), it was not conquered by that tribe (Judg. i. 17). The body of Saul was fastened to the wall of Bethshan by the Philistines (1 Sam. xxxi. 10); Alexander Jannæus had an interview here with Cleopatra (Joseph. *Antiq.* xiii. 13. 3); Pompey marched through it on his way from Damascus to Jerusalem (xiv. 3. 4); and in the Jewish war 13,000 Jews were slain by the Scythopolitans (*De Bell. Jud.* ii. 18. 3). In the middle ages the place had become desolate, although it still went by the name of *Metropolis Palæstinæ tertia* (Will. Tyr. pp. 749, 1034; Vitriacus, p. 1119). We find bishops of Scythopolis at the councils of Chalcedon, Jerusalem (A.D. 536), and others. During the Crusades it was an archbishopric, which was afterwards transferred to Nazareth (Raumer's *Palästina*, pp. 147-149).

The ancient native name, as well as the town itself, still exists in the Beisan of the present day. It stands on a rising ground somewhat above the valley of the Jordan, or in the valley of Jezreel where it opens into the Jordan valley. It is a poor place, containing not more than sixty or seventy houses. The inhabitants are Moslems, and are described by Richardson and others as a set of inhospitable and lawless fanatics. The ruins of the ancient city are of considerable extent. It was built along the banks of the rivulet which waters the town and in the valleys formed by its several branches, and must have been nearly three miles in circumference. The chief remains are large heaps of black hewn stones, with many foundations of houses and fragments of a few columns (Burckhardt, p. 243). The principal object is the theatre, which is quite distinct, but now completely filled up with weeds; it measures across the front about 180 feet, and has the singularity of possessing three oval recesses half-way up the building, which are mentioned by Vitruvius as being constructed to contain the brass sounding-tubes. Few theatres had such an apparatus even in the time of this author, and they are scarcely ever met with now. The other remains are the tombs, which lie to the north-east of the Acropolis without the walls. The sarcophagi still exist in some of them; triangular niches for lamps have also been observed in them; and some of the doors continue hanging on the ancient hinges of stone in remarkable preservation. Two streams run through the ruins of the city, almost insulating the Acropolis. There is a fine Roman bridge over the one to the south-west of the Acropolis, and beyond it may be seen the paved way which led to the ancient Ptolemais, now Acre. The Acropolis is a high circular hill, on the top of which are traces of the walls which encompassed it (Irby and Mangles, *Travels*, pp. 301-303).

BETH-SHEMESH (בֵּית שֶׁמֶשׁ, *house of the sun*, i. q. *Sun-town*; Sept. Βαιθσαμύς), a sacerdotal city (Josh. xxi. 16; 1 Sam. vi. 15; 1 Chron. vi. 59) in the tribe of Judah, on the (south-east) border of Dan (Josh. xv. 10), and the land of the Philistines (1 Sam. vi. 12), probably in a low-land plain (2 Kings xiv. 11); and placed by Eusebius ten Roman miles from Eleutheropolis, in the direction of the road to Nicopolis. It belonged at an early date to the Philistines, and they had again obtained possession of it in the time of Ahaz (1 Kings iv. 9; 2 Chron. xxviii. 18). It was to this place that the ark was taken by the milch kine from the land of the Philistines, and it was here that, according to the present text, 'fifty thousand and threescore and ten men' were miraculously slain for irreverently exploring the sacred shrine (1 Sam. vi. 19). This number has occasioned much discussion. It appears likely that the text has been corrupted in transcription by an erroneous solution of an arithmetical sign. The Syriac and Arabic have 5070 instead of 50070 (עָ̈ instead of עָ̈), and this statement agrees with 1 Cod. Kennicott (comp. Gesenius *Gesch. der Hebr. Sprache*, p. 174). Even with this reduction, the number, for a provincial town like Beth-Shemesh, would still be great. The fact itself has been accounted for on natural principles by some German writers, in a spirit at variance with that of Hebrew antiquity, and in which the miraculous part of the event has been explained away by ungrammatical interpretations.

At the distance, and in the vicinity indicated by Eusebius and Jerome, a place called Ain Shems was found by Dr. Robinson, and, with great probability, identified with Beth-Shemesh. The name is applied to the ruins of an Arab village constructed of ancient materials. To the west of the village, upon and around the plateau of a low swell or mound, are the vestiges of a former extensive city, consisting of many foundations and the remains of ancient walls of hewn stone. With respect to the exchange of Beth for Ain, Dr. Robinson remarks (iii. 19):—'The words Beit (Beth) and Ain are so very common in the Arabic names of Palestine, that it can excite no wonder there should be an exchange, even without an obvious reason. In the same manner the ancient Beth-Shemesh (Heliopolis, of Egypt) is known in Arabian writers as Ain Shems.' The Ir-Shemesh of Joshua (xix. 4) is supposed to be the same as this Beth-Shemesh. 2. There was another Beth-Shemesh in Naphtali (Judg. i. 33). 3. Another in Issachar (Josh. xix. 22). 4. And the Egyptian Beth-Shemesh is named in Jer. xliii. 13; although usually called On.

BETHUEL (בְּתוּאֵל; Sept. Βαθουήλ), son of Abraham's brother Nahor, and father of Laban and of Rebecca, whom Isaac married (Gen. xxii. 22, 23). His name only occurs incidentally (Gen. xxiv. 50) in the account of the transactions which led to that marriage, in which Laban takes the leading part. This has given occasion to a number of uncertain conjectures. Josephus concludes that he was then dead; and that the Bethuel here mentioned was a younger brother, named after the father (*Antiq.* i. 16. 1).

BETHULIA (Βετυλοῦα; Heb. בְּתוּלְיָה), a place mentioned only in the Apocryphal book of Judith (iv. 5; vii. 1, 3), and which appears to have lain near the plain of Esdraelon on the south, not far from Dothaim, and to have guarded one of the passes towards Jerusalem. Modern ecclesiastical tradition identifies Bethulia with Safed, near the lake of Gennesareth. Travellers prior to the seventeenth century usually give the name of Bethulia to the Frank Mountain in Judæa and to the ruins at its foot. Raumer has lately offered a conjecture in favour of Sanur (*Paläst.* p. 149). But Dr. Robinson has intimated the inapplicability

of all these identifications (*Bibl. Researches*, ii. 172; iii. 152, 325), and we must be content to regard the site of Bethulia as still undetermined.

BETH-ZUR (בֵּית צוּר; Sept. Βηθσούρ), a town in the tribe of Judah (Josh. xv. 58), twenty Roman miles from Jerusalem, on the road to Hebron (*Onomast.* s. v. 'Beth-sur'), and consequently two miles from the latter city. It was fortified by Rehoboam (2 Chron. xi. 7). The inhabitants assisted in building the walls of Jerusalem (Neh. iii. 16). Lysias was defeated in the neighbourhood by Judas Maccabæus, who fortified the place as a stronghold against Idumæa (1 Macc. iv. 29, 61; 2 Macc. xi. 5; comp. 1 Macc. vi. 7, 26). It was besieged and taken by Antiochus Eupator (1 Macc. vi. 31, 50), and fortified by Bacchides (ix. 52), whose garrison defended themselves against Jonathan Maccabæus (x. 14); but it was taken and fortified by his brother Simon (xi. 65, 66; xiv. 7, 33). Josephus calls Beth-zur the strongest fortress in Judæa (*Antiq.* xiii. 5. 6). Its site has not been ascertained. The traditional Beth-zur, near Bethlehem, where the fountain (of St. Philip) at which the Ethiopian eunuch was baptized is pointed out (Cotovic, p. 247; Pococke, ii. 67; Maundrell, p. 116), cannot be the real place: for, as we have seen, Eusebius places it much more to the south, and is in this supported by its history, which shows that it lay on what was the southern border of the Jordan, in the time of the Maccabees, when the Idumæans had taken possession of the southernmost part of the country and made Hebron their chief town. In those times, indeed, Beth-zur, or Bethsaida, appears to have been the corresponding fortress on the Jewish side of the fountain to that of Hebron on the side of Idumæa, standing at a short distance, and probably over against it, as many similar fortresses are found to do at the present day.

BETROTHING. [MARRIAGE.]

BETULIA, anointed stones. [STONES.]

BETZAL (בָּצָל, in the plural בְּצָלִים *betzalim*) occurs in Numbers xi. 5, where the Israelites 'murmur for the leeks, and the onions (*betzalim*), and the garlick' of Egypt. Though the identification of many Biblical plants is considered uncertain, there can be no doubt that Betzal means the common onion, the Allium Cepa of botanists. This is proved by its Arabic name, and its early employment as an article of diet in Egypt. In the present day the onion, distinguished from other species of Allium by its fistular leaves and swelling stalks, is well known to be cultivated in all parts of Europe and in most parts of Asia. Its native country is not known; but it is probable that some part of the Persian region may have first produced it in a wild state, as many species of Allium are found in the mountainous chain which extends from the Caspian to Cashmere, and likewise in the Himalayan Mountains. It is common in Persia, where it is called *piaz*, and has been long introduced into India, where it receives the same name. By the Arabs it is called بصل *basl* or *bassal*, under which name it is described in their works on Materia Medica, in which the description of κρόμμυον given by Dioscorides (ii. 181) is adopted. The Arabic is too similar to the Hebrew name to allow us to doubt that both were originally the same word.

That the onion has long been cultivated in the south of Europe and in the north of Asia, is evident from the different kinds enumerated by Theophrastus, which, he states, derived their names chiefly from the places where they were reared. Among these, probably, some other species may have been included; but no doubt several were varieties only of the onion. Pliny (*Hist. Nat.* xix. 6) also enumerates these, as well as others cultivated in Italy, and notices the superstition of the Egyptians in regard to them: 'Where, by the way, I cannot overpasse the foolish superstition of the Ægyptians, who use to swear by garlick and onions, calling them to witness in taking their othes, as if they were no less than some gods' (Holland's transl.). Juvenal (*Sat.* xv. 9) in like manner ridicules the Egyptians for their superstitious veneration of onions, &c.:

'Porrum et cæpe nefas violare et frangere morsu.
O sanctas gentes, quibus hæc nascuntur in hortis
Numina!'

This, however, must be an exaggerated statement, as it is unlikely that the Israelites should have been allowed to regale themselves upon what was considered too sacred for, or forbidden, to their task-masters. It is probable, as suggested by Dr. Harris, that the priests only refrained from what was freely partaken of by the rest of the people. This may be observed in the present day among the Brahmins of India. It has also been supposed that some particular kind of onion may have been held sacred, from its utility as a medicine, as the sea onion, or squill (Scilla maritima), which grows in abundance on the sea-coast in the neighbourhood of Pelusium, whose inhabitants are said by Lucian to have especially worshipped the onion. But it is evident that the Israelites in the desert did not long for this acrid bulb, as they did for the melons and cucumbers.

It may, moreover, be remarked, that the onions of warm dry countries grow to a considerable size, and, instead of being acrid and pungent in taste, are comparatively bland, and mild and nutritious articles of diet. This is particularly conspicuous in the Portugal onions, which are largely imported into this country. Other celebrated varieties are those of Spain and Tripoli; but Egypt itself is famed for the production of fine onions, as stated by Hasselquist: 'Whoever has tasted onions in Egypt, must allow that none can be had better in any part of the universe. Here they are sweet; in other countries they are nauseous and strong. Here they are soft; whereas in the northern and other parts they are hard, and their coats are so compact, that they are difficult of digestion. Hence they cannot in any place be eaten with less prejudice and more satisfaction than in Egypt.'—J. F. R.

BEZEK (בֶּזֶק; Sept. Βεζέκ), a city over which Adoni-bezek was king (Judg. i. 4, *sq.*), and where Saul mustered his army to march to the relief of Jabesh-Gilead (1 Sam. xi. 8). Eusebius and Jerome mention two towns of this name close together, seventeen miles from Neapolis in Shechem, on the road to Bethshan.

BEZER (בֶּצֶר; Sept. Βοσόρ), a city beyond the Jordan, in the tribe of Reuben, and one of the

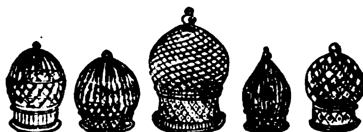
six cities of refuge (Deut. iv. 43; Josh. xx. 8). The site is unknown.

BEZETHA. [Jerusalem.]

BIBLE, βιβλία, *libelli* (the small books), a name supposed to have been first applied in the fifth century to denote the collective volume of the sacred writings. The word occurs in the Prologue to Ecclesiasticus, 'the Law, the Prophets, and the rest of the books' (βιβλία), and 2 Tim. iv. 13, 'and the books' (βιβλία). Before the adoption of this name the more usual terms in the Christian Church by which the sacred books were denominated were, the Scripture or writing (γραφή), the *Scriptures* (γραφαί), the sacred writings (γραφαὶ ἅγιαι), and the *sacred letters* (ἱερὰ γράμματα). These names are thus frequently applied to the sacred books of the Old Testament by Josephus and Philo, as well as by the writers of the New Testament (2 Pet. i. 20; Matt. xxii. 29; Rom. i. 2; 2 Tim. iii. 15). Jerome substitutes for these expressions the term *Bibliotheca Divina* (see Hieronymi *Opera*, ed. Martianay, vol. i. Proleg.), a phrase which this learned father probably borrowed from 2 Maccabees, ii. 13, where Nehemiah is said, in 'founding a library' (βιβλιοθήκη), to have 'gathered together the acts of the kings, and the prophets, and of David, and the epistles of the kings concerning the holy gifts.' But although it was usual to denominate the separate books in Greek by the term *Biblia*, which is frequently so applied by Josephus, we first find it simply applied to the entire collection by St. Chrysostom in his *Second Homily*, 'The Jews have the *books* (βιβλία), but we have the treasure of the books; they have the letters (γράμματα), but we have both spirit and letter.' And again *Hom.* ix. *in Epist. ad Coloss.*, 'Provide yourselves with *books* (βιβλία), the medicine of the soul, but if you desire no other, at least procure the new (καινή), the Apostolos, the Acts, the Gospels.' He also adds to the word βιβλία the epithet *divine* in his *Tenth Homily on Genesis*: 'Taking before and after meals the divine books' (τὰ θεῖα βιβλία), or, as we should now express it, the Holy Bible. This name, in the course of time, superseded all others both in the Eastern and Western Church, and is now everywhere the popular appellation. The sacred books were denominated by the Jews the *writing* (chetib or mikra), a name of the same character as that applied by the Mahometans (korawn) to denote their sacred volume.

The Bible is divided into the Old and New Testaments, ἡ παλαιά, καὶ ἡ καινὴ διαθήκη. The name Old Testament is applied to the books of Moses by St. Paul (2 Cor. iii. 14), inasmuch as the former covenant comprised the whole scheme of the Mosaic revelation, and the history of this is contained in them. This phrase, 'book of the covenant,' taken probably from Exod. xxiv. 7; 1 Macc. i. 57 (βιβλίον διαθήκης), was transferred in the course of time by a metonymy to signify the writings themselves. The word διαθήκη, which we now translate *testament*, signifies either a testament or a covenant, but the translators of the old Latin version have by a Grecism always rendered it, even when it was used as a translation of the Hebrew *Berith* (covenant), by the word *Testamentum*. The names given to the Old Testament were, the Scriptures (Matt. xxi. 42), Scripture (2 Pet. i. 20), the Holy Scriptures (Rom. i. 2), the sacred letters (2 Tim. iii. 15), the holy books (*Sanhed.* xci. 2), the law (John xii. 34), the law, the prophets, and the psalms (Luke xxiv. 44), the law and the prophets (Matt. v. 17), the law, the prophets, and the other books (Prol. Ecclus.), the books of the old covenant (Neh. viii. 8), the book of the covenant (1 Macc. i. 57; 2 Kings xxiii. 2).

The other books (not in the canon) were called apocryphal, ecclesiastical, and deuterocanonical. The term New Testament has been in common use since the third century, and is employed by Eusebius in the same sense in which it is now commonly applied (*Hist. Eccles.* iii. 23). Tertullian employs the same phrase, and also that of 'the Divine Instrument' in the same signification. For detailed information on subjects connected with Bible, see Scripture, Holy.—W. W.



BIER. [Burial.]

BIGTHAN (בִּגְתָן), an eunuch in the court of king Ahasuerus, whose conspiracy against that monarch was frustrated through the disclosures of Mordecai (Esth. ii. 21).

BILDAD (בִּלְדַּד; Sept. Βαλδάδ), the Shuhite, one of the friends of Job, and the second of his opponents in the disputation (Job ii. 11; viii. 1; xviii. 1; xxv. 1). The Shuah, of which the Septuagint makes Bildad the prince, or patriarch (Βαλδὰδ ὁ Σαυχέων τύραννος), was probably the district assigned to Shuah, the sixth son of Abraham by Keturah, and called by his name. This was doubtless in Arabia Petræa, if Shuah settled in the same quarter as his brothers, of which there can be little doubt; and to this region we are to refer the town and district to which he gave his name, and in which Bildad was doubtless a person of consequence, if not the chief [Shuah]. Wemyss (*Job and his Times*, p. 111) remarks:—'Bildad attacks the poor sufferer with more keenness than Eliphaz, but with less acerbity than Zophar. He renews the charge which Eliphaz had advanced, but with less eloquence and less delicacy. His second address is full of imagery, and wrought up to a high pitch of terror. He is filled with resentment against Job, merely because the latter defends himself from their criminations; and he uses provoking and taunting expressions. His denunciations are furious and awful; yet he is rather elevated than sublime, and more passionate than energetic.'

BILHAH (בִּלְהָה; Sept. Βαλλά), the handmaid whom the childless Rachel bestowed upon her husband Jacob, that through her she might have children. Bilhah became the mother of Dan and Naphtali (Gen. xxx. 1-8).

BIRD-CAGES are named in Jer. v. 27; Rev. xviii. 2; and are perhaps implied in Job xli. 5, where 'playing with a bird' is mentioned. This just suffices to show that the ancient Israelites kept birds in cages; but we have no further information on the subject, nor any allusions to the singing of birds so kept. The cages were probably of the same forms which we still observe in the

166.

East, and which are shown in the annexed engraving. It is remarkable that there is no appearance of bird-cages in any of the domestic scenes which are portrayed on the mural tablets of the Egyptians.

BIRD-CATCHING. [Fowling.]

BIRDS may be defined oviparous vertebrated animals, organized for flight. The common name צִפּוֹר *tsippor* is used of small birds generally, and of the sparrow in particular; עוֹף *'oph*, translated 'fowl' (Gen. i. 21), properly means flyer; עַיִט *ait*, a bird of prey; ΑΕΤΟΣ, *an eagle;* in Gen. xv. 11, Job xxviii. 7, and Isa. xviii. 6, rendered 'fowls;' in Jer. xii. 9, 'bird;' and in Isa. xlvi. 11, and Ezek. xxxix. 4, 'ravenous birds.' ברברים *barburim* denotes fatted gallinacea; it occurs only in 1 Kings iv. 23, and is there translated 'fowls,' though it may be questioned whether domestic fowls are mentioned in any part of the Hebrew bible [Cock]. Gesenius applies the word to geese.

In the Mosaic law birds were distinguished as clean and unclean: the first being allowed for the table, because they fed on grain, seeds, and vegetables; and the second forbidden, because they subsisted on flesh and carrion. The birds most anciently used in sacrifice were, it seems, turtle-doves and pigeons. In Kitto's *Physical History of Palestine* there is a more complete notice than exists elsewhere of the actual ornithology of the Holy Land.—C. H. S.

BIRDS'-NESTS. The law in Deut. xxii. 6, 7, directs that if one falls in with a bird's-nest with eggs or young, he shall allow the dam to escape, and not take her as well as the nest. The reason Maimonides (*More Nevochim*) gives for this is, 'The eggs on which the dam is sitting, or the young ones which have need of her, are not, in general, permitted to be eaten; and when the dam is allowed to escape, she is not distressed by seeing her young ones carried off. It thus frequently happens that all are untouched, because that which might be taken may not be lawfully eaten.' He adds, 'If the law then be thus careful to prevent birds and beasts (for he had been alluding to the instances of this humanity of the law) from suffering pain and grief, how much more mankind!'

BIRTH. In Eastern countries child-birth is usually attended with much less pain and difficulty than in our northern regions; although Oriental females are not to be regarded as exempt from the common doom of woman, 'in sorrow shalt thou bring forth children' (Gen. iii. 16). It is however uncertain whether the difference arise from the effect of climate or from the circumstances attending advanced civilization; perhaps both causes operate, to a certain degree, in producing the effect. Climate must have *some* effect; but it is observed that the difficulty of child-birth, under any climate, increases with the advance of civilization, and that in any climate the class on which the advanced condition of society most operates finds the pangs of child-birth the most severe. Such consideration may probably account for the fact that the Hebrew women, after they had long been under the influence of the Egyptian climate, passed through the child-birth pangs with much more facility than the women of Egypt, whose habits of life were more refined and self-indulgent (Exod. i. 19). There were, however, already recognised Hebrew midwives while the Israelites were in Egypt; and their office appears to have originated in the habit of calling in some matron of experience in such matters to assist in cases of difficulty. A remarkable circumstance in the transaction which has afforded these illustrations (Exod. i. 16) has been explained under Abnaim.

The child was no sooner born than it was washed in a bath and rubbed with salt (Ezek. xvi. 4); it was then tightly swathed or bandaged to prevent those distortions to which the tender frame of an infant is so much exposed during the first days of life (Job xxxviii. 9; Ezek. xvi. 4; Luke ii. 7, 11). This custom of bandaging or swathing the new-born infant is general in Eastern countries. It was also a matter of much attention with the Greeks and Romans (see the citations in Wetstein, at Luke ii. 7), and even in our own country was not abandoned till the last century, when the repeated remonstrances of the physicians seem to have led to its discontinuance.

It was the custom at a very ancient period for the father, while music celebrated the event, to clasp the new-born child to his bosom, and by this ceremony he was understood to declare it to be his own (Gen. l. 23; Job. iii. 3; Ps. xxii. 11). This practice was imitated by those wives who adopted the children of their handmaids (Gen. xvi. 2; xxx. 3-5). The messenger who brought to the father the first news that a son was born unto him was received with pleasure and rewarded with presents (Job iii. 3; Jer. xx. 15), as is still the custom in Persia and other Eastern countries. The birth of a daughter was less noticed, the disappointment at its not being a son, subduing for the time the satisfaction which the birth of any child naturally occasions.

Among the Israelites, the mother, after the birth of a son, continued unclean seven days; and she remained at home during the thirty-three days succeeding the seven of uncleanness, forming altogether forty days of seclusion. After the birth of a daughter the number of the days of uncleanness and seclusion at home was doubled. At the expiration of this period she went into the tabernacle or temple, and presented a yearling lamb, or, if she was poor, two turtle doves and two young pigeons, as a sacrifice of purification (Lev. xii. 1-8; Luke ii. 22) [Children].

BIRTH-DAYS. The observance of birth-days may be traced to a very ancient date; and the birth-day of the first-born son seems in particular to have been celebrated with a degree of festivity proportioned to the joy which the event of his actual birth occasioned (Job i. 4, 13, 18). The birth-days of the Egyptian kings were celebrated with great pomp as early as the time of Joseph (Gen. xl. 20). These days were in Egypt looked upon as holy; no business was done upon them, and all parties indulged in festivities suitable to the occasion. Every Egyptian attached much importance to the day, and even to the hour of his birth; and it is probable that, as in Persia (Herodot. i. 133; Xenoph. *Cyrop.* i. 3. 9), each individual kept his birth-day with great rejoicings, welcoming his friends with all the amusements of society, and a more than usual profusion of delicacies of the table (Wilkinson, v. p. 290). In the Bible there is no instance of birth-day celebrations among the Jews themselves. The example

of Herod the tetrarch (Matt. xiv. 6), the celebration of whose birth-day cost John the Baptist his life, can scarcely be regarded as such, the family to which he belonged being notorious for its adoption of heathen customs. In fact, the later Jews at least regarded birth-day celebrations as parts of idolatrous worship (Lightfoot, *Hor. Hebr. ad Matt.* xiv. 6); and this probably on account of the idol atrous rites with which they were observed in honour of those who were regarded as the patron gods of the day on which the party was born.

BIRTH-RIGHT (בְּכוֹרָה; Sept. πρωτοτόκια). This term denotes the rights or privileges belonging to the first-born among the Hebrews. The particular advantages which these conferred were the following:—

1. A right to the priesthood. The first-born became the priest in virtue of his priority of descent, provided no blemish or defect attached to him. Reuben was the first-born of the twelve patriarchs, and therefore the honour of the priesthood belonged to his tribe. God, however, transferred it from the tribe of Reuben to that of Levi (Num. iii. 12, 13; viii. 18). Hence the first-born of the other tribes were redeemed from serving God as priests, by a sum not exceeding five shekels. Being presented before the Lord in the temple, they were redeemed immediately after the thirtieth day from their birth (Num. xviii. 15, 16; Luke ii. 22). It is to be observed, that only the first-born who were *fit for the priesthood* (*i. e.* such as had no defect, spot, or blemish) were thus presented to the priest.

2. The first-born received a double portion of his father's property. There is some difficulty in determining precisely what is meant by a double portion. Some suppose that half the inheritance was received by the elder brother, and that the other half was equally divided among the remaining brethren. This is not probable. The Rabbins believe that the elder brother received twice as much as any of the rest; and there is no reason to doubt the correctness of this opinion. When the first-born died before his father's property was divided, and left children, the right of the father descended to the children, and not to the brother next of age.

3. He succeeded to the official authority possessed by his father. If the latter was a king, the former was regarded as his legitimate successor, unless some unusual event or arrangement interfered.

After the law was given through Moses, the right of primogeniture could not be transferred from the first-born to a younger child at the father's option. In the patriarchal age, however, it was in the power of the parent thus to convey it from the eldest to another child (Deut. xxi. 15-17; Gen. xxv. 31, 32).

It is not difficult to perceive the reason why the first-born enjoyed greater privileges than the rest of the children. The peculiar honour attaching to them is easily accounted for. They are to be viewed as having reference to the Redeemer, the first-born of the Virgin. Hence in the epistle to the Romans, viii. 29, it is written concerning the Son, 'that he might be the *first-born* among many brethren;' and in Coloss. i. 18, 'who is the beginning, the *first-born* from the dead; that in all things he might have the pre-eminence' (see also Heb. i. 4, 5, 6). As the first-born had a double portion, so the Lord Jesus, as Mediator, has an inheritance superior to his brethren; he is exalted to the right hand of the Majesty on high, where he reigns until all his enemies shall be subdued. The universe is his rightful dominion in his mediatorial character. Again, he alone is a true priest: he fulfilled all the functions of the sacerdotal office; and the Levites, to whom, under the law, the priesthood was transferred from all the first-born of Israel, derived the efficacy of their ministrations from their connection with the great high priest (Jahn's *Biblical Archæology*, § 165).—S. D

BISHOP. The active controversy in which the subject of episcopacy has been involved, although it has not reconciled conflicting opinions, has brought out the historical facts in their fullest clearness. The able and candid on opposite sides can scarcely be said to differ as to the facts themselves; but they differ in their estimate of them.

The Apostles originally appointed men to superintend the spiritual, and occasionally even the secular wants of the churches (Acts xiv. 23; xi. 30; see also 2 Tim. ii. 2), who were ordinarily called πρεσβύτεροι, *elders*, from their age, sometimes ἐπίσκοποι, *overseers* (bishops), from their office. They are also said προΐστασθαι, to *preside* (1 Thess. v. 12; 1 Tim. v. 17), never ἄρχειν, to *rule*, which has far too despotic a sound. In the Epistle to the Hebrews (xiii. 7, 17, 24) they are named ἡγούμενοι, *leading men* (comp. Acts xv. 22); and, figuratively, ποιμένες, *shepherds* (Ephes. iv. 11). But that they did not always teach is clear from 1 Tim. v. 17; and the name Elders proves that originally age, experience, and character were their most necessary qualifications. They were to be married men with families (1 Tim. iii. 4), and with converted children (Tit. i. 6). In the beginning there had been no time to train teachers, and teaching was regarded far more in the light of a gift than an office; yet St. Paul places 'ability to teach' among episcopal qualifications (1 Tim. iii. 2; Titus i. 9; the latter of which passages should be translated, 'that he may be able both to exhort men by sound teaching, and also to refute opposers). That teachers had obtained in St. Paul's day a fixed official position, is manifest from Gal. vi. 6, and 1 Cor. ix. 14, where he claims for them a right to worldly maintenance: in fact, that the *shepherds* ordered to 'feed the flock,' and be its 'overseers' (1 Pet. v. 2), were to feed them with knowledge and instruction, will never be disputed, except to support a hypothesis. The *leaders* also, in Heb. xiii. 7, are described as 'speaking unto you the word of God.' Ecclesiastical history joins in proving that the two offices of teaching and superintending were, with few exceptions, combined in the same persons, as, indeed, the nature of things dictated.

That during St. Paul's lifetime no difference between elders and bishops yet existed in the consciousness of the church, is manifest from the entire absence of distinctive names (Acts xx. 17-28; 1 Pet. v. 1, 2). The mention of bishops and deacons in Phil. i. 1, and 1 Tim. iii., without any notice of elders, proves that at that time no difference of *order* subsisted between bishops and elders. A formal ceremony, it is generally believed, was employed in appointing elders, al-

though it does not appear that as yet any fixed name was appropriated to the idea of ordination. (The word *ordained* is inexcusably interpolated in the English version of Act i. 22. In Tit. i. 5 the Greek word is *καταστήσῃς*, *set*, or *set up;* and in Acts xiv. 23 it is *χειροτονήσαντες*, *having elected*, properly, by a show of hands; though, abusively, the term came to mean simply, *having chosen* or *nominated* (Acts x. 41); yet in 2 Cor. viii. 19, it seems to have its genuine democratic sense). In 1 Cor. xvi. 15 we find the house of Stephanas to have volunteered the task of 'ministering to the saints;' and that this was a ministry of 'the word,' is evident from the Apostle's urging the church 'to submit themselves to such.' It would appear then that a formal investiture into the office was not as yet regarded *essential*. Be this as it may, no one doubts that an ordination by laying on of hands soon became general or universal. Hands were first laid on not to bestow an office, but to solicit a spiritual gift (1 Tim. iv. 14; 2 Tim. i. 6; Acts xiii. 3; xiv. 26; xv. 40). To the same effect Acts viii. 17; xix. 6;—passages which explain Heb. vi. 2. On the other hand, the absolute silence of the Scriptures, even if it were not confirmed, as it is, by positive testimony, would prove that no idea of consecration, as distinct from ordination, at that time existed at all; and, consequently, although individual elders may have really discharged functions which would afterwards have been called episcopal, it was not by virtue of a second ordination, nor, therefore, of episcopal rank.

The Apostles themselves, it is held by some, were the real *bishops* of that day, and it is quite evident that they performed many episcopal functions. It may well be true, that the only reason why no bishops (in the modern sense) were then wanting was, because the Apostles were living; but it cannot be inferred that in any strict sense prelates are *co-ordinate in rank with the Apostles*, and can claim to exercise their powers. The later 'bishop' did not come forward as a successor to the Apostles, but was developed out of the presbyter; much less can it be proved, or alleged with plausibility, that the Apostles took any measures for securing substitutes for themselves (in the high character of Apostles) after their decease. It has been with many a favourite notion that Timothy and Titus exhibit the episcopal type even during the life of Paul; but this is an obvious misconception. They were attached to the person of the Apostle, and not to any one church. In the last Epistle written by him (2 Tim. iv. 9) he calls Timothy suddenly to Rome, in words which prove that the latter was not, at least as yet, bishop, either of Ephesus or of any other church. That Timothy was an *evangelist* is distinctly stated (2 Tim. iv. 5), and that he had received spiritual gifts (i. 6, &c.); there is then no difficulty in accounting for the authority vested in him (1 Tim. v. 1; xix. 22), without imagining him to have been a bishop; which is in fact disproved even by the same Epistle (i. 3). That Titus, morever, had no local attachment to Crete, is plain from Titus iii. 13, to say nothing of the earlier Epistle, 2 Cor. *passim*. Nor is it true that the episcopal power developed itself out of wandering evangelists any more than out of the Apostles.

On the other hand it would seem that the bishop began to elevate himself above the presbyter while the Apostle John was yet alive, and in churches to which he is believed to have peculiarly devoted himself. The meaning of the title *angel*, in the opening chapters of the Apocalypse, has been mystically explained by some; but its true meaning is clear from the nomenclature of the Jewish synagogues. In them, we are told, the minister who ordinarily led the prayers of the congregation, besides acting as their chief functionary in matters of business, was entitled שליח הצבור [Synagogue], a name which may be translated literally *nuncius ecclesiæ*, and is here expressed by the Greek *ἄγγελος*. The substantive מלאכה also (which by analogy would be rendered *ἀγγελία*, as מלאך is *ἄγγελος*) has the ordinary sense of *opus*, *ministerium*, making it almost certain that the 'angels of the churches' are nothing but a harsh Hebraism for 'ministers of the churches.' We therefore here see a single officer, in these rather large Christian communities, elevated into a peculiar prominence, which has been justly regarded as episcopal. Nor does it signify that the authorship of the Apocalypse is disputed, since its extreme antiquity is beyond a doubt; we find, therefore, the germ of episcopacy here planted, as it were, under the eyes of an Apostle. (Neander, *Pflanzung und Leitung*, ii. 468.)

Nevertheless, it was still but a germ. It is vain to ask, whether these angels received a second ordination and had been promoted from the rank of presbyters. That this was the case is possible, but there is no proof of it; and while some will regard the question as deeply interesting, others will think it unimportant. A second question is, whether the angels were overseers of the congregation only, or of the presbyters too; and whether the church was formed of many local unions (such as we call parishes), or of one. Perhaps both questions unduly imply that a set of fixed rules was already in existence. No one who reads Paul's own account of the rebuke he uttered against Peter (Gal. ii.), need doubt that in those days a zealous elder would assume authority over other elders, officially his equals, when he thought they were dishonouring the Gospel; and, *à fortiori*, he would act thus towards an official inferior, even if this had not previously been defined or understood as his duty. So again, the Christians of Ephesus or Miletus were probably too numerous ordinarily to meet in a single assembly, especially before they had large buildings erected for the purpose; and convenience must have led at a very early period to subordinate assemblies (such as would now be called 'chapels-of-ease' to the mother church); yet we have no ground for supposing that any sharp division of the Church into organic portions had yet commenced.

Episcopalians, Presbyterians, and Congregationalists agree in one point, viz. that (because of its utility and general convenience) it is lawful for Christians to take a step for which they have no clear precedent in the Scripture, that of breaking up a church, when it becomes of unwieldy magnitude, into fixed divisions, whether parishes, or congregations. The question then arises, whether the organic union is to be still retained at all. To this (1) Congregationalists reply in the negative, saying that the congrega-

tions in different parts of a great city no more need to be in organic union, than those of two different cities; (2) Presbyterians would keep up the union by means of a synod of the elders; (3) Episcopalians desire to unite the separate churches by retaining them under the supervision of a single head—the bishop. It seems impossible to refer to the practice of the Apostles as deciding in favour of *any one* of these methods; for the case had not yet arisen which could have led to the discussion. The city churches had not yet become so large as to make subdivision positively necessary; and, as a fact, it did not take place. To organize distant churches into a fixed and formal connection by synods of their bishops, was, of course, quite a later process; but such unions are by no means rejected, even by Congregationalists, as long as they are used for deliberation and advice, not as assemblies for ruling and commanding. The *spirit* of Episcopacy depends far less on the episcopal form itself, than on the size and wealth of dioceses, and on the union of bishops into synods, whose decisions are to be authoritative on the whole church: to say nothing of territorial establishment and the support of the civil government. If, under any ecclesiastical form, either oppression or disorder should arise, it cannot be defended; but no form is a security against such evils. Our experience may, in these later times, possibly show us which of these systems is on the whole preferable; but the discussion must belong to ecclesiastical history, and would be quite out of place here.—F. W. N.

BITHRON (2 Sam. ii. 29). This name has the same meaning as Bether. It probably denotes a region of hills and valleys, and not any definite place.

BITHYNIA (Βιθυνία), a province of Asia Minor, on the Euxine Sea and the Propontis; bounded on the west by Mysia, on the south and east by Phrygia and Galatia, and on the east by Paphlagonia. The Bithynians were a rude and uncivilized people, Thracians who had colonized this part of Asia, and occupied no towns, but lived in *villages* (κωμοπολεῖς, Strabo, p. 566). That Christian congregations were formed at an early period in Bithynia, is evident from the Apostle Peter having addressed the first of his Epistles to them (1 Pet. i. 1). The Apostle Paul was at one time inclined to go into Bithynia with his assistants Silas and Timothy, 'but the Spirit suffered him not' (Acts xvi. 7).

BITTER, BITTERNESS. Bitterness (Exod. i. 14; Ruth i. 20; Jer. ix. 15) is symbolical of affliction, misery, and servitude. It was for this reason that, in the celebration of the Passover, the servitude of the Israelites in Egypt was typically represented by *bitter herbs*.

On *the day of bitterness* in Amos viii. 10, comp. Tibullus, ii. 4. 11—

'Nunc et amara dies, et noctis amarior umbra est.'

In Habakk. i. 6 the Chaldæans are called 'that bitter and swift nation;' which Schultens illustrates by remarking that the root *Merer* in Arabic (answering to the Hebrew word for *bitter*) is usually applied to strength and courage.

The gall of bitterness (Acts viii. 23) describes a state of extreme wickedness, highly offensive to God, and hurtful to others.

A root of bitterness (Heb. xiii. 15) expresses a wicked or scandalous person, or any dangerous sin leading to apostacy (Wemyss's *Clavis Symbolica*, &c.).

BITTER HERBS (מְרֹרִים; literally *bitters*; Sept. πικρίδες; Vulg. *lactucæ agrestes*). There has been much difference of opinion respecting the kind of herbs denoted by this word. On this subject the reader may consult Carpzov, *Apparat.* p. 404, *sq.*

It however seems very doubtful whether any particular herbs were intended by so general a term as *bitters*; it is far more probable that it denotes whatever bitter herbs, obtainable in the place where the Passover was eaten, might be fitly used with meat. This seems to be established by the fact that the first directions respecting the Passover were given in Egypt, where also the first Passover was celebrated; and as the esculent vegetables of Egypt are very different from those of Palestine, it is obvious that the bitter herbs used in the first celebration could scarcely have been the same as those which were afterwards employed for the same purpose in Canaan. According to the Mishna (*Pesachim*, ii. 6), and the commentators thereon, there were five sorts of bitter herbs, any one or all of which might be used on this occasion. There were—1. חזרת *chazeroth*, supposed to be wild lettuce, which the Septuagint and Vulgate make stand for the whole. 2. עולשין *'ulshin*, endives; or, according to some, wild endives. 3. תמכה *thamca*, which some make the garden endive, others horehound, others tansy, others the green tops of the horse-raddish, while, according to De Pomis, in *Zemack David*, it is no other than a species of thistle (*carduus marrubium*). 4. חרחבינה *charchabina*, supposed to be a kind of nettle. 5. מרר *maror*, which takes its name from its bitterness, and is alleged by the Mishnic commentators to be a species of the most bitter coriander. All these might, according to the Mishna, be taken either fresh or dried; but not pickled, boiled, or cooked in any way.

BITTERN. [Kippod.]

BITUMEN. [Asphaltum.]

BLACK. Although the Orientals do not wear black in mourning, they, as did the ancient Jews, regard the colour as a symbol of affliction, disaster, and privation. In fact, the custom of wearing black in mourning is a sort of visible expression of what is in the East a figure of speech. In Scripture blackness is used as symbolical of afflictions occasioned by drought and famine (Job xxx. 30; Jer. xiv. 2; Lam. iv. 8; v. 10). Whether this be founded on any notion that the hue of the complexion was deepened by privation, has not been ascertained; but it has been remarked by Chardin and others, that in the periodical mourning of the Persians for Hossein many of those who take part in the ceremonies appear with their bodies blackened, in order to express the extremity of thirst and heat which Hossein suffered, and which, as is alleged, was so great that *he turned black*, and the tongue swelled till it protruded from his mouth.

In Mal. iii. 14 we read, 'What profit is it that we keep his ordinances, and that we have walked in blackness (Authorized Version 'mournfully') before the Lord of Hosts;' meaning that they had fasted in sackcloth and ashes. 'Black' occurs as a symbol of fear in Joel ii. 6—'All

faces shall gather blackness,' or *darken* with apprehension and distress. This use of the word may be paralleled from Virgil, *Æn.* ix. 719, 'Atrumque timorem;' and *Georg.* iv. 468,

'Caligantem nigra formidine lucum.'

The same expression which Joel uses is employed by Nahum (ii. 10) to denote the extremity of pain and sorrow.

In connection with this subject it may be remarked that black is studiously avoided in dress by all Orientals, except in certain garments of hair or wool, which are naturally of that colour. Black is also sometimes imposed as a mark of humiliating distinction by dominant nations upon subject or tributary tribes, the most familiar instance of which is the obligation laid upon the Jews in Turkey of wearing black turbans.

BLAINS. The word אֲבַעְבֻּעֹת, which, in the only places where it occurs, is in our version rendered *blains*, strictly means *eruptions*. The roots בעה and נבע, which are the cognate forms of the root from which the word is derived, have the primary sense of ebullience and efflorescence; and the specific kind of eruption here intended cannot, on account of the vague term by which it is described, be determined with any accuracy. The Septuagint renders it by φλυκτίδες, which is also a general term for pustules and vesicles [DISEASES].—J. N.

BLASPHEMY (נָקַב שֵׁם יְיָ; Sept. βλασφημία). The Greek word βλασφημία is *generic*, denoting verbal abuse proceeding from an evil disposition. It is equivalent to *defamation* or *slander*, involving an attempt to lessen the character of others, with the intention of doing them injury. All kinds of abusive language, whether called *imprecation*, *calumny*, or *reviling*, come under the term.

The English word *blasphemy* is more restricted in its signification. It refers to God only. In like manner when βλασφημία is directed against the Supreme Being, or when Jehovah is the object of it, it is specific. In these circumstances it corresponds to the English *blasphemy*. The Greek βλασφημία is employed in reference to the defamation of men or angels equally with the Deity; but it is proper to use the term *blasphemy* only when God is spoken against. Thus the Greek and English words are not coextensive in import.

Our English translators have not adhered to the right use of the term. They employ it with the same latitude as the Greek; but it is generally easy to perceive, from the connection and subject of a passage, whether *blasphemy*, properly so called, be meant, or only defamation. It would certainly have been better to have employed *detraction* or *calumny* rather than *blasphemy* where man is the object; reserving the latter for that peculiarly awful slander which is directed against the ever-blessed God.

Blasphemy signifies a false, irreverent, injurious use of God's names, attributes, words, and works. Whenever men *intentionally* and *directly* attack the perfections of Jehovah, and thus lessen the reverence which others entertain for him, they are *blasphemers*. If the abusive language proceed from ignorance, or if it be dishonouring to the majesty of Heaven only in the consequences deduced from it by others, *blasphemy* has no existence. It is *wilful* calumny directed against the name or providence of God that alone constitutes the crime denoted by the term.

Examples of the general acceptation of βλασφημία in the New Testament are common, where the objects of it are men, angels, or the devil, as in Acts xiii. 45; xviii. 6; Jude 9. The restricted sense is found in such passages as Luke v. 21; John x. 36.

By the Mosaic law *blasphemy* was punished with death (Lev. xxiv. 10-16); and the laws of some countries still visit it with the same punishment. Fines, imprisonment, and various corporal inflictions are annexed to the crime by the laws of Great Britain. It is matter, however, of sincere satisfaction, that there are very few instances in which these enactments require to be enforced.

Much has been said and written respecting *the blasphemy* against the Holy Ghost, usually but improperly denominated *the unpardonable sin* against the Holy Ghost. Some refer it to continued opposition to the Gospel, *i.e.* obstinate impenitence or final unbelief. In this view it is unpardonable, not because the blood of Christ is unable to cleanse from such a sin, nor because there is anything in its own nature which separates it from all other sins and places it beyond forgiveness, but because, as long as man continues to disbelieve, he voluntarily shuts himself out from the forgiving mercy of God. By not receiving the Gospel, he refuses pardon. In the same manner, *every* sin might be styled unpardonable, as long as an individual continues to indulge in it.

But we object to this opinion, because it generalises the nature of the sin in question. On the contrary, the Scripture account narrows it to a particular sin of a special kind, discountenancing the idea that it is of frequent occurrence and marked by no circumstances of unwonted aggravation. Besides, all the notices which we have refer it not so much to a state of mind, as to the outward manifestation of a singularly malignant disposition *by the utterance of the lips*.

The occasion on which Christ introduced his mention of it (Matt. xii. 31, &c.; Mark iii. 28, &c.), the subsequent context, and, above all, the words of Mark iii. 30 ('because they said, He hath an unclean spirit') indicate, with tolerable plainness, that the sin in question consisted in attributing the miracles wrought by Christ, or his apostles in His name, to the agency of Satan. It was by the power of the Holy Ghost, given to the Redeemer without measure, that he cast out devils; and whoever maligned the Saviour, by affirming that an unclean spirit actuated and enabled him to expel other spirits, maligned the Holy Ghost.

There is no connection between the description given in the Epistle to the Hebrews, vi. 4-6, and this unpardonable blasphemy. The passages in the Gospels which speak of the latter are not parallel with that in the Epistle to the Hebrews: there is a marked difference between the states of mind and their manifestations as described in both. The sins ought not to be identified: they are altogether dissimilar.

It is difficult to discover the 'sin unto death,' noticed by the apostle John (1 John v. 16), although it has been generally thought to coincide

with the blasphemy against the Holy Spirit; but the language of John does not afford data for pronouncing them one and the same. The first three gospels alone describe the *blasphemy* which shall not be forgiven: from it the 'sin unto death' stands apart (See Lücke's *Commentar über die Briefe des Evangelisten Johannes*, Zweyte Auflage, pp. 305-317; Campbell's *Preliminary Dissertations to the Gospels*, Dissertat. ix. part ii.; Olshausen's *Commentar*, Dritte Auflage, pp. 306-7).—S. D.

BLASTUS (Βλάστος), a man who was *cubicularius* to king Herod Agrippa, or who had the charge of his bed-chamber (Acts xii. 20). Such persons had usually great influence with their masters, and hence the importance attached to Blastus's favouring the peace with Tyre and Sidon.

BLEMISHES. There were various kinds of blemishes, *i. e.* imperfections or deformities, which excluded men from the priesthood, and animals from being offered in sacrifice. These blemishes are described in Lev. xxi. 17–23; xxii. 19–25; Deut. xv. 21. We learn from the Mishna (*Zebachim*, xii. 1; *Becoroth*. vii. 1), that temporary blemishes excluded a man from the priesthood only as long as those blemishes continued. The rule concerning animals was extended to imperfections of the inward parts: thus if an animal, free from outward blemish, was found, after being slain, internally defective, it was not offered in sacrifice. The natural feeling that only that which was in a perfect condition was fit for sacred purposes, or was a becoming offering to the gods, produced similar rules concerning blemishes among the heathen nations (Conf. Pompon. Læt. *De Sacerdot.* cap. 6; Herodot. ii. 38; *Iliad*, i. 66; Servius *ad Virg. Æn.* ii. 4).

BLESSING. The terms 'blessing' and 'to bless' occur very often in the Scriptures, and in applications too obvious to require explanation or comment. The patriarchal blessings of sons form the exception, these being, in fact, prophecies rather than blessings, or blessings only in so far as they for the most part involved the invocation and the promise of good things to come upon the parties concerned. It has been thought by many, in all nations, that the departing soul has unusual keenness of perception with respect to the past and the future, and in a particular manner receives strong inspirations of things to come. How far this may be generally true no one can with certainty affirm or deny. But that a faculty of this sort existed in the leading members of the chosen family of Abraham is beyond all question. The most remarkable instances are those of Isaac 'blessing' Jacob and Esau (Gen. xxvii.); of Jacob 'blessing' his twelve sons (Gen. xlix.); and of Moses 'blessing' the twelve tribes (Deut. xxxiii.). On the first of these transactions Professor George Bush remarks—'It cannot be doubted that from such a father as Isaac a common blessing was to be expected on all his children; but in this family there was a peculiar blessing pertaining to the first-born—a solemn, extraordinary, prophetical benediction, entailing the covenant blessing of Abraham, with all the promises temporal and spiritual belonging to it, and by which his posterity were to be distinguished as God's peculiar people' (*Notes on Genesis*). This was the blessing which Isaac intended to bestow upon his first-born Esau, but which was secured for Jacob.

With regard to the blessing bestowed by Jacob upon his twelve sons, the same author prefaces his valuable commentary thereon with these remarks —'1. That the blessings or *announcements* have respect mainly to the *posterity* and not to the *persons* of the twelve sons of Jacob; 2. That consequently, the materials of a just interpretation are to be sought in the subsequent history of these tribes. It is only from the documents furnished in the sacred record that the leading characteristic traits and the most important events related of each tribe can be determined; 3. That the fulfilment of these blessings is to be traced not in any one event or in any single period of time, but in a continuous and progressive series of accomplishments, reaching down to the latest era of the Jewish polity; 4. That the peculiar phraseology in which the blessings are couched has in most cases a verbal allusion to the names bestowed upon the twelve phylarchs, or princes of tribes—a circumstance not, indeed, obvious to the English reader, but palpable to one who consults the original.' Most of these latter observations apply equally to the blessing pronounced by Moses, which is in fact a magnificent prophetic poem, characterized by the finest attributes of the class of Hebrew poetry to which it belongs.

BLESSING, VALLEY OF (עֵמֶק בְּרָכָה; Sept. Κοιλὰς Εὐλογίας), a translation of the name Valley of Berachah (benediction), which was borne by the valley in which Jehoshaphat celebrated the miraculous overthrow of the Moabites and Ammonites. It was from this circumstance it derived its name; and from the indications in the text, it must have been in the tribe of Judah, near the Dead Sea and Engedi, and in the neighbourhood of Tekoa (2 Chron. xx. 23-26).

BLINDING. [PUNISHMENTS.]

BLINDNESS. The frequent occurrence of blindness in the East has always excited the astonishment of travellers. Volney says that, out of a hundred persons in Cairo, he has met twenty quite blind, ten wanting one eye, and twenty others having their eyes red, purulent, or blemished (*Travels in Egypt*, i. 224). This is principally owing to the Egyptian ophthalmia, which is endemic in that country and on the coast of Syria. This disease commences with such a violent inflammation of the conjunctiva, that, in a few hours, the whole of that membrane, which lines the anterior surface of the eye and the internal surface of the eyelids, is covered with red fleshy elevations, resembling granulations, and secreting a purulent discharge. The inflammation spreads rapidly over the eyeball; the delicate internal tissues are destroyed and converted into pus; the outer coats ulcerate through; and the whole contents of the eye are evacuated. In its acute and most virulent form, the disease runs its course in 3-7 days; otherwise it may continue for as many weeks or months. It is to be ascribed to those peculiar conditions of the atmosphere which are termed miasmatic, of which, however, nothing is known, except that they exert a specific influence on the body, different from the ordinary effects of cold and damp. The variety of causes assigned by travellers for this disease, such as the suspension of fine dust and saline particles in the

atmosphere, the custom so prevalent amongst the inhabitants of all Eastern countries of sleeping on the roofs of the houses, southerly winds, bad diet, shaving the head, &c., can only be regarded as secondary or occasional causes; and amongst these bad diet, great fatigue, and exposure to the night dews are the most important. The Egyptian ophthalmia is contagious; but it is not often communicated from one individual to another. It is not confined to the East, but appears here and there throughout Europe; and during the last war, probably on account of the practice of bivouacking in the open air, and the great hardships to which the troops were often exposed, it was a dreadful scourge to most of the European armies, more particularly to the Prussians during the campaigns of 1813 and 1814, although that army had never left Europe (Jüngken's *Augenkrank.* p. 336). The French and English suffered greatly from it while they were in Egypt, and subsequently.

Small-pox is another great cause of blindness in the East (Volney, *l. c.*).

In the New Testament, blind mendicants are frequently mentioned (Matt. ix. 27; xii. 22; xx. 30; xxi. 14; John v. 3). The blindness of Bar Jesus (Acts xiii. 6) was miraculously produced, and of its nature we know nothing. Winer (s. v. *Blindheit*) infers that it was occasioned by specks on the cornea, which were curable, because the same term, ἀχλύς, is made use of by Hippocrates (Προῤῥητικόν, ii. 215, ed. Kühn), who says that ἀχλύες will disappear, provided no wound has been inflicted. Before such an inference can be drawn, we must be sure that the writers of the New Testament were not only acquainted with the writings of Hippocrates, but were also accustomed to a strict medical terminology. The haziness implied by the expression ἀχλύς may refer to the *sensation* of the blind person, or to the *appearance* of the eye, and, in both cases, the cause of the haziness may have been referrible to any of the other transparent media, as well as to the cornea. Tobit's blindness (Tobit ii. 10) was attributed to sparrows' dung having fallen into his eyes. If the story be considered true (which we are by no means required to believe), his cure must be regarded as altogether miraculous. Though the gall of a fish was an old remedy for diseases of the eyes (Plin. *Hist. Nat.* xxxii. 24), and has been frequently used in modern times (Richter, *Anfangsgr. d. Wundarzneik.* iii. p. 130), it cannot be supposed to have had any medicinal effect in Tobit's case; for not only was the cure instantaneous, but the specks which impeded vision were seen to escape from the corners of his eyes; which plainly shows that the whole process, if not the disease itself, was of a kind which does not fall under the province of science [MEDICINE]. Examples of blindness from old age occur in Gen. xxvii. 1; 1 Kings xiv. 4; 1 Sam. iv. 15. The Syrian army that came to apprehend Elisha was suddenly smitten with blindness in a miraculous manner (2 Kings vi. 18); and so also was St. Paul (Acts ix. 9). The Mosaic law has not neglected to inculcate humane feelings towards the blind (Lev. xix. 14; Deut. xxvii. 18). Blindness is sometimes threatened in the Old Testament as a punishment for disobedience (Deut. xxviii. 28; Lev. xxvi. 16; Zeph. i. 17).—W. A. N.

BLOOD. There are two respects in which the ordinances of the Old and New Testaments concerning blood deserve notice here—the prohibition of its use as an article of food, and the appointment and significance of its use in the ritual of sacrifice; both of which appear to rest on a common ground.

In Gen. ix. 4, where the use of animal food is allowed, it is first absolutely forbidden to eat 'flesh with its soul, its blood;' which expression, were it otherwise obscure, is explained by the mode in which the same terms are employed in Deut. xii. 23. In the Mosaic law the prohibition is repeated with frequency and emphasis; although it is generally introduced in connection with sacrifices, as in Lev. iii. 7; vii. 26 (in both which places blood is coupled in the prohibition with the *fat* of the victims); xvii. 10-14; xix. 2; Deut. xii. 16-23; xv. 23. In cases where the prohibition is introduced in connection with the lawful and unlawful articles of diet, the reason which is generally assigned in the text is, that 'the blood is the soul,' and it is ordered that it be poured on the ground like water. But where it is introduced in reference to the portions of the victim which were to be offered to the Lord, then the text, in addition to the former reason, insists that 'the blood expiates by the soul' (Lev. xvii. 11, 12).* This strict injunction not only applied to the Israelites, but even to the strangers residing among them. The penalty assigned to its transgression was the being 'cut off from the people;' by which the punishment of death appears to be intended (cf. Heb. x. 28), although it is difficult to ascertain whether it was inflicted by the sword or by stoning. It is observed by Michaelis (*Mos Recht.* iv. 45) that the blood of *fishes* does not appear to be interdicted. The words in Lev. vii. 26 only expressly mention that of birds and cattle. This accords, however, with the reasons assigned for the prohibition of blood, so far as fishes could not be offered to the Lord; although they formed a significant offering in heathen religions. To this is to be added, that the Apostles and elders, assembled in council at Jerusalem, when desirous of settling the extent to which the ceremonial observances were binding upon the converts to Christianity, renewed the injunction to abstain from blood, and coupled it with things offered to idols (Acts xv. 29). It is perhaps worthy of notice here, that Mohammed, while professing to abrogate some of the dietary restrictions of the Jewish law (which he asserts were imposed on account of the sins of the Jews, Sura iv. 158), still enforces, among others, abstinence from blood and from things offered to idols (*Qurân*, Sur. v. 4, vi. 146, ed. Flügel).

In direct opposition to this emphatic prohibition of blood in the Mosaic law, the customs of uncivilized heathens sanctioned the cutting of slices from the living animal, and the eating of the flesh while quivering with life and dripping with blood. Even Saul's army committed this barbarity, as we

* We can only for brevity refer the reader to Bähr's *Symbolik*, ii. 207, for the philological reasons for this rendering. He there shows that בַּנֶּפֶשׁ, which is generally rendered as the mere *object* of the verb, must, instead, be the instrument; so that the sense is, in that the soul is in the blood, therefore the blood atones; or, the blood atones by means of the soul, *its* soul.

read in 1 Sam. xiv. 32; and the prophet also lays it to the charge of the Jews in Ezek. xxxiii. 25.* This practice, according to Bruce's testimony, exists at present among the Abyssinians. Moreover, pagan religions, and that of the Phœnicians among the rest, appointed the eating and drinking of blood, mixed with wine, as a rite of idolatrous worship, and especially in the ceremonial of swearing. To this the passage in Ps. xvi. 4 appears to allude (cf. J. D. Michaelis, *Critisch. Colleg.* p. 108, where several testimonies on this subject are collected).

The appointment and significance of the use of blood in the ritual of sacrifice belongs indeed to this head; but their further notice will be more appropriately pursued in the art. SACRIFICE.—J. N.

BLOOD AND WATER (John xix. 34) are said to have issued from our Lord's side when the soldier pierced him on the cross. The only natural explanation that can be offered of the fact is to suppose that some effusion had taken place in the cavity of the chest, and that the spear penetrated below the level of the fluid. Supposing this to have happened, and the wound to have been inflicted shortly after death, then, in addition to the water, blood would also have trickled down, or, at any rate, have made its appearance at the mouth of the wound, even though none of the large vessels had been wounded. It is not necessary to suppose that the pericardium was pierced; for, if effusion had taken place there, it might also have taken place in the cavities of the pleura; and, during health, neither the pericardium nor the pleura contains fluid, but are merely lubricated with moisture on their internal or opposing surfaces, so as to allow of free motion to the heart and lungs.

It may be objected to this view of the question, that, according to the longest computation, our Lord died in six hours, and that this is too short a time to occasion effusion. Indeed, reasoning from experience alone, it is very difficult to understand the *physical* cause of our Lord's death. The crucifixion is quite inadequate to account for it; for, even if the impression produced by this torture on a weak nervous system was sufficient to annihilate consciousness and sensibility, the death of the body, or what physiologists have termed *organic* death, could not have taken place in so short a time, as long as the brain, lungs, and circulation, the so-called *atria mortis*, had sustained no material injury. In other words, the functions of respiration, circulation, secretion, and nutrition must have continued for a far longer time. In fact, we learn from Eusebius (*Hist. Eccles.* viii. 8) that many of the Egyptian martyrs perished from hunger on the cross, although they were crucified with their heads downwards. According to Richter, some survive on the cross for three, four, and even for *nine* days (Winer's *Bibl. Realwört.* s. v. *Jesus*). Our Lord's death could not have been occasioned by tetanus, or else it would have been mentioned; and even this disease, though the sufferer be racked with the most frightful convulsions without intermission, most rarely puts an end to life in less than twelve hours. Nor can we attribute it to the wound inflicted by the soldier; for although, when it is said he 'expired, and the soldiers saw that he was dead,' our Lord might have merely fainted, yet it is impossible to suppose that the soldier would not have perceived his error the moment he inflicted the wound, provided it was mortal; for then would have commenced the death-struggle, which, in cases of death by asphyxia and hæmorrhage, is very severe, and would have struck the most careless spectator.

Schuster (in Eichhorn's *Bibl. Biblioth.* ix. 1038) is of opinion that, as blood is known to separate into a red coagulum and a watery fluid, the expression 'blood and water' is to be understood as an hendiadys, meaning nothing more than blood. To this it must be objected that blood is only observed to separate in that way when it is allowed to coagulate in a vessel, and that therefore the opportunities for observing it must have been a great deal too rare to allow of such figurative language being employed and understood. That it certainly was not so understood is clear; for some of the fathers (Orig. *Contr. Cels.* ii. 82) interpreted the expression literally, and looked upon the fact as a miracle, and a proof of our Lord's divine nature. According to Strauss (*Leben Jesu*, ii. 571), the evangelist recollected that dead blood separates in the manner just mentioned, and, as he wished to bring forward the strongest proof of our Lord's death, he asserted that blood and water issued from the wound, meaning thereby that our Lord's blood had already undergone that change which is only observed when it is removed from the body and deprived of its vitality. This hypothesis is wholly untenable; for, if we suppose the evangelist so well acquainted with the separation of blood, he would have known that the coagulum, which, according to the hypothesis, is designated by the term *blood*, could not, on account of its solidity, have issued from the wound. Moreover, St. John must have known, what every one knows, that the fact of no blood at all being seen would have been a far better proof of our Lord's death. Indeed, the appearance of blood and water could not have been regarded as a proof of death, but rather as something wonderful and inexplicable; for the words of Origen, *τῶν ἄλλων νεκρῶν σωμάτων τὸ αἷμα πήγνυται, καὶ ὕδωρ καθαρὸν οὐκ ἀποῤῥεῖ* (*l. c.*), express a fact which every one in those days must have known from personal experience. St. John then must have entirely failed in his object, and merely from his ignorance of the most vulgar opinions.

It has been asserted by some (as by Winer) that, when deep incisions are made in the body after death, the blood will be found separated into cruor and serum. This is incorrect. Even in the heart and large vessels the serum cannot be distinguished, because it readily transudes, and is imbibed by the surrounding tissues. In many

* The use of the preposition על in this passage has been entirely misunderstood by Spencer, who (*De Leg. Hebr.* ii. 11) adduces much testimony from profane sources for the existence of the rite of feasting *over* the blood of the victim. Nevertheless, that this preposition also has the sense of *with, in addition to, insuper*, is established by Gen. xxxii. 12; Exod. xii. 9 (Ewald's *Hebr. Gram.* § 524); as well as by the recurrence of the whole phrase in 1 Sam. xiv. 32. Deyling has refuted Spencer in a special dissertation (*Observ. Sacr.* ii. 25).

cases coagulation takes place very imperfectly after death.

It must not be supposed that the fact of blood coming from the wound at all militates against the idea that our Lord was dead at the moment he was pierced. This argument is, indeed, made use of by Strauss (*l. c.*); but it can be refuted by the most ordinary experience. It is well known that, even many days after death, blood will trickle from deep incisions, especially where any of the large veins have been wounded. The popular opinion that blood will not flow from a corpse, must be taken in a relative, and not absolute sense. It certainly will not flow as it does from a living body; and, when the wound is small and superficial, sometimes not a drop will be seen.

The three other evangelists do not mention the circumstance.—W. A. N.

BLOOD, ISSUE OF (Matt. ix. 20). The disease here alluded to is hæmorrhagia; but we are not obliged to suppose that it continued unceasingly for twelve years. It is a universal custom, in speaking of the duration of a chronic disease, to include the intervals of comparative health that may occur during its course; so that when a disease is merely stated to have lasted a certain time, we have still to learn whether it was of a strictly continuous type, or whether it intermitted. In the present case, as this point is left undecided, we are quite at liberty to suppose that the disease did intermit; and can therefore understand why it did not prove fatal even in twelve years.

Bartholinus (*De Morb. Bibl.* p. 61) quotes a case in which hæmorrhage is said to have occurred for upwards of two years without cessation; but the details necessary to render such an extraordinary case credible are not given.—W. A. N.

BLOOD-REVENGE, or revenge for bloodshed, was regarded among the Jews, as among all the ancient and Asiatic nations, not only as a right, but even as a duty, which devolved upon the nearest relative of the murdered person, who on this account was called גואל הדם (*goël hadâm*), the *reclaimer of blood*, or one who demands restitution of blood, similar to the Latin *sanguinem repetere*.

The Mosaical law (Num. xxxv. 31) expressly forbids the acceptance of a ransom for the forfeited life of the murderer, although it might be saved by his seeking an asylum at the altar of the Tabernacle, in case the homicide was accidentally committed (Exod. xxi. 13; 1 Kings i. 50; ii. 28). When, however, in process of time, after Judaism had been fully developed, no other sanctuary was tolerated but that of the Temple at Jerusalem, the chances of escape of such an homicide from the hands of the avenger, ere he reached the gates of the Temple, became less in proportion to the distance of the spot where the murder was committed from Jerusalem, six *cities of refuge* (עָרֵי מִקְלָט *oreh miklot*) were in consequence appointed for the momentary safety of the murderer, in various parts of the kingdom, the roads to which were kept in good order to facilitate his escape (Deut. xix. 3). Thither the avenger durst not follow him, and there he lived in safety until a proper examination had taken place before the authorities of the place (Jos. xx. 6, 9), in order to ascertain whether the murder was a wilful act or not. In the former case he was instantly delivered up to the *Goël*, against whom not even the altar could protect him (Exod. xxi. 14; 1 Kings ii. 29); in the latter case, though he was not actually delivered into the hands of the *Goël*, he was notwithstanding not allowed to quit the precincts of the town, but was obliged to remain there all his lifetime, or until the death of the high-priest (Num. xxxv. 6; Deut. xix. 3; Josh. xx. 1-6), if he would not run the risk of falling into the hands of the avenger, and be slain by him with impunity (Num. xxxv. 26; Deut. xix. 6). That such a voluntary exile was considered more in the light of a punishment for manslaughter than a provision for the safe retreat of the homicide against the revengeful designs of the גואל, is evident from Num. xxxv. 32, where it is expressly forbidden to release him from his confinement on any condition whatever. That the decease of the high-priest should have been the means of restoring him to liberty was probably owing to the general custom among the ancients, of granting free pardon to certain prisoners at the demise of their legitimate prince or sovereign, whom the high-priest represented, in a spiritual sense, among the Jews. These wise regulations of the Mosaical law, as far as the spirit of the age allowed it, prevented all family hatred, persecution, and war from ever taking place, as was inevitably the case among the other nations, where any bloodshed whatever, whether wilful or accidental, laid the homicide open to the *duteous* revenge of the relatives and family of the slain person, who again in their turn were then similarly watched and hunted by the opposite party, until a family-war of extermination had *legally* settled itself from generation to generation, without the least prospect of ever being brought to a peaceful termination. Nor do we indeed find in the Scriptures the least trace of any abuse or mischief ever having arisen from these regulations (comp. 2 Sam. ii. 19, *sq.*; iii. 26, *sq.*).

That such institutions are altogether at variance with the spirit of Christianity may be judged from the fact that revenge, so far from being counted a right or duty, was condemned by Christ and his apostles as a vice and passion to be shunned (Acts vii. 60; Matt. v. 44; Luke vi. 28; Rom. xii. 14, *sq.*; comp. Rom. xiii., where the power of executing revenge is vested in the authorities alone).

Of all the other nations, the Greeks and Romans alone seem to have possessed such *cities of refuge* (Serv. *ad Æn.* viii. 342; Liv. i. 8; Tac. *Ann.* iii. 60), of which Daphne, near Antioch, seems to have been one of the most prominent (2 Macc. iv. 34; comp. Potter's *Greek Archæol.* i. 480), and to have served as a refuge even for wilful murderers. The laws and customs of the ancient Greeks in cases of murder may be gathered from the principle laid down by Plato on that head (*De Legib.* ix. in t. ix. p. 28, *sq.*): 'Since, according to tradition, the murdered person is greatly irritated against the murderer during the first few months after the perpetration of the deed, the murderer ought therefore to inflict a punishment upon himself, by exiling himself from his country for a whole year,

and if the murdered be a foreigner, by keeping away from his country. If the homicide subjects himself to such a punishment, it is but fair that the nearest relative should be appeased and grant pardon; but in case he does not submit to that punishment, or dares even to enter the temple while the guilt of blood is still upon his hands, the avenger shall arraign him before the bar of justice, where he is to be punished with the infliction of a double fine. But in case the avenger neglects to proceed against him, the guilt passes over to him (the avenger), and any one may take him before the judge, who passes on him the sentence of banishment for five years.'

The high estimation in which *blood-revenge* stood among the ancient Arabs may be judged of from the fact that it formed the subject of their most beautiful and elevated poetry (comp. the *Scholiast. Taurizi* to the 16th poem in Schulten's *Excerp. Hamas*). Mahomet did not abolish, but modify, that rigorous custom, by allowing the acceptance of a ransom in money for the forfeited life of the murderer (*Koran*, ii. 173-175), and at the worst, forbidding the infliction of any cruel or painful death (*Ibid.* xvii. 35).

In Europe the custom of blood-revenge is still prevalent in Corsica and Sardinia, where, however, it is more the consequence of a vindictive character than of an established law or custom. A Corsican never passes over an insult without retaliation, either on the offender or his family, and this cruel and un-Christian custom (*vendetta traversa*, mutual vengeance) is the source of many assassinations. The celebrated General Paoli did his best to eradicate this abominable practice, but his dominion was of too short duration for the effective cure of the evil, which has gained ground ever since the first French revolution, even among the female sex. It is calculated that about four hundred persons yearly lose their lives in Sardinia by this atrocious habit (Simonot, *Lettres sur la Corse*, p. 314).—E. M.

BLOODY SWEAT. According to Luke xxii. 44, our Lord's sweat was 'as great drops of blood falling to the ground.' Michaelis takes the passage to mean nothing more than that the drops were as *large* as falling drops of blood (*Anmerk. für Ungelehrte*, ad loc.). This, which also appears to be a common explanation, is liable to some objection. For, if an ordinary observer compares a fluid which he is accustomed to see colourless, to blood, which is so well known and so well characterized by its colour, and does not specify any particular point of resemblance, he would more naturally be understood to allude to the colour, since it is the most prominent and characteristic quality.

There are several cases recorded by the older medical writers, under the title of bloody sweat. With the exception of one or two instances, not above suspicion of fraud, they have, however, all been cases of general hæmorrhagic disease, in which blood has flowed from different parts of the body, such as the nose, eyes, ears, lungs, stomach, and bowels, and, lastly, from various parts of the skin. When blood oozes from the skin, it must reach the external surface through orifices in the epidermis, which have been produced by rupture, or, we must suppose that it has been extravasated into the sweat-ducts. But, even in this latter case, we must no more consider hæmorrhage of the skin to be a modification of the function of sweating, than bleeding from the nose to be a modification of the secretion of mucus. The blood is simply mixed with the sweat, precisely in the same way as, when spit up from the lungs, it is mixed with mucus and saliva in passing through the air-tubes and mouth. It is, therefore, incorrect to suppose that hæmorrhage from the skin indicates a state of body at all analogous to that which occasions sweating. If this distinction had been clearly understood, and clearly stated by medical writers, it would have been seen at once how far their experience went to illustrate the case before us.

The greater number of cases described by authors were observed in women and children, and sometimes in infants. Mental anxiety we have only found mentioned as a cause or as a concomitant symptom, in one case, which will be noticed below. The case of a young lady who was afflicted with cutaneous hæmorrhage is detailed by Mesaporiti in a letter to Valisneri. She is noticed to have been cheerful, although she must have suffered greatly from debility and febrile symptoms (*Phil. Trans.* No. 303, p. 2114). The case of an infant, only three months old, affected with the same disease, is related by Du Gard (*Phil. Trans.* No. 109, p. 193). A similar case is described in the *Nov. Act. Acad. Nat. Cur.* tom. iv. p. 193. See also *Eph. Acad. Nat. Cur.* obs. 41; and, for other references, Copeland's *Dict. of Med.* ii. p. 72. Where hæmorrhagic diathesis exists, muscular exertion is a powerful exciting cause of all kinds of hæmorrhage, and must likewise give rise to the cutaneous form of the disease. A most remarkable case of the kind, occurring in a horse, is mentioned by Dr. Copeland. His friend Dr. W. Hutchinson had a fine Arabian horse, whose sweat was sanguineous after moderate exertion, and almost pure blood upon violent exertion (*Dict. of Med.*, l. c.).

Bloomfield (*Greek Test.* note on Luke xxii. 44) says that Aristotle adduces a case of bloody sweat from extreme agitation, in his *Hist. Anim.* iii. 19. This statement, however, is incorrect. Aristotle is merely speaking of the blood in a general way; and says, 'si sanguis immodice humescit, morbus infestat: sic enim in speciem saniei diluitur et adeo serescit, ut jam nonnulli sudore cruento exundarint.' There is no allusion made to any case, nor a word said about extreme agitation. There is, however, a case of this kind recorded by Durius, a German physician (*Miscell. cur. Ephemerid.* p. 354, obs. 179). A student was put into prison, 'propter *insolentias nocturnas et alia tentata*,' when he was seized with such fear and agitation that drops of blood burst forth, here and there, from his hands, chest, and arms. Durius was ordered by the magistrate, who was informed of the circumstance, to visit the prisoner; and he witnessed all that had been related to him. The prisoner was of course immediately released, and was restored to his former state of health as soon as the cause of his anxiety had been removed. If this was really a fact, the student must have been affected with hæmorrhagic disease, or have had a very strong tendency to it; but the story does not deserve the slightest credence. The author does not appear to have imagined, for a moment, that it was a case of impo-

sition, or that it might be afterwards suspected to be such. His account is, therefore, confined to the bare statement of the fact, and affords no evidence of the correctness of his observation. It is highly improbable that a student of such habits should feel great alarm at being put in prison; while nothing is more conceivable than that he should attempt to impose on the credulity of his attendants, in order to obtain his release, and that he should even succeed in deceiving a physician. Medical experience abounds in cases of successful imposition of a far more extraordinary nature (Bartholinus, *Hist. Anat. rar.*, cent. i. hist. 52).

While, then, on the one hand, experience teaches that cutaneous hæmorrhage, when it does occur, is the result of disease, or, at any rate, of a very peculiar idiosyncracy, and is in no way indicative of the state of the mind, we have, on the other, daily experience and the accumulated testimony of ages to prove that intense mental emotion and pain produce on the body effects even severer in degree, but of a very different nature. It is familiar to all that terror will blanch the hair, occasion momentary paralysis, fainting, convulsions, melancholy, imbecility, and even sudden death. Excessive grief and joy will produce some of the worst of these. Sweat is caused by fear, and by bodily pain; but not by sorrow, which excites no secretion except tears.

It is very evident, then, that medical experience does not bear at all upon the words of St. Luke. The circumstances connected with our Lord's sufferings in the garden must be considered by themselves, without any reference to actual observation; otherwise, we shall be in danger of rendering a statement, which may be easily received on its own grounds, obscure and contradictory.

It may be remarked that the passage in question only occurs in St. Luke, and is omitted in five MSS. of that Gospel.—W. A. N.

BLUE. [Purple.]

BOANERGES (*Βοανεργές*, explained by *υἱοὶ Βροντῆς, sons of thunder*, Mark iii. 17), a surname given by Christ to James and John, probably on account of their fervid, impetuous spirit (comp. Luke ix. 54, and see Olshausen thereon). The word *boanerges* has greatly perplexed philologists and commentators. It seems agreed that the Greek term does not correctly represent the original Syro-Chaldee word, although it is disputed what that word was. Many, with Jerome, think that the true word is *βενερεεμ*, from the Hebrew בני רעם *bene-ra'am*, as in Hebrew רעם constantly denotes thunder. But this varies too much from the *vestigia literarum*. Others derive it from the Hebrew בני רעש *bene-ra'ash*, which deviates still further, and only signifies—sons of tumult or commotion. Recent interpreters therefore incline to the derivation of Caninius, De Dieu, and Fritzsche, who take it from בני רגש *bene-reges*, for *reges* in Syriac and Arabic signifies 'thunder.' Thus the word *boan-erges* would seem to be a slight corruption from *boane-reges*, the *boane* being very possibly the Galilæan pronunciation instead of *bene* (comp. Bloomfield's *New Test.* on Mark iii. 17; and Robinson's *Gr. Lex.* s. v. *Βοανεργές*).

BOAR (חזיר *hazir* or *chazir*, in Arabic *chizron*). Occurs in Lev. xi. 7; Deut. xiv. 8; Ps. lxxx. 13; Prov. xi. 22; Isa. lxv. 4; lxvi. 3, 17. The Hebrew, Egyptian, Arabian, Phœnician, and other neighbouring nations abstained from hog's flesh, and consequently, excepting in Egypt, and (at a later period) beyond the Sea of Galilee, no domesticated swine were reared. In

167. [Wild Boar.

Egypt, where swineherds were treated as the lowest of men, even to a denial of admission into the temples, and where to have been touched by a swine defiled the person nearly as much as it did a Hebrew, it is difficult to conjecture for what purpose these animals were kept so abundantly, as it appears by the monumental pictures they were; for the mere service of treading down seed in the deposited mud of the Nile when the inundation subsided, the only purpose alleged, cannot be admitted as a sufficient explanation of the fact. Although in Palestine, Syria, and Phœnicia hogs were rarely domesticated, wild boars are often mentioned in the Scriptures, and they were frequent in the time of the Crusades; for Richard Cœur-de-Lion encountered one of vast size, ran him through with his lance, and while the animal was still endeavouring to gore his horse, he leaped over its back and slew it with his sword. At present wild boars frequent the marshes of the Delta, and are not uncommon on Mount Carmel and in the valley of Ajalah. They are abundant about the sources of the Jordan, and lower down where the river enters the Dead Sea. The Koords and other wandering tribes of Mesopotamia and on the banks of both the great rivers hunt and eat the wild boar, and it may be suspected that the half human satyrs they pretend sometimes to kill in the chace, derive their cloven-footed hind-quarters from wild boars, and offer a convenient mode of concealing from the women and public that the nutritive flesh they bring home is a luxury forbidden by their law. The wild boar of the East, though commonly smaller than the old breeds of domestic swine, grows occasionally to a very large size. It is passive while unmolested, but vindictive and fierce when roused. The ears of the species are small, and rather rounded, the snout broad, the tusks very prominent, the tail distichous, and the colour dark ashy, the ridge of the back bearing a profusion of long bristles. It is doubtful whether this species is the same as that of Europe, for the farrow are not striped: most likely it is identical with the wild hog of India.—C. H. S.

1. BOAZ (בֹּעַז, *alacritas*; Sept. Βοόζ), a wealthy Bethlehemite, and near kinsman of the first husband of Ruth, whom he eventually espoused under the obligations of the Levirate law, which he willingly incurred. The conduct of Boaz—his fine spirit, just feeling, piety, and amenity of manners

—appears to great advantage in the book of Ruth, and forms an interesting portraiture of the condition and deportment of what was in his time the upper class of Israelites. By his marriage with Ruth he became the father of Obed, from whom came Jesse, the father of David. He was thus one of the direct ancestors of Christ, and as such his name occurs in Matt. i. 5. There are some chronological difficulties respecting the time of Boaz and his genealogical connections; but as these are involved in the considerations which determine the time of the book of Ruth, they will be more advantageously examined in connection with that larger subject [RUTH; GENEALOGY].

2. BOAZ, the name given to one of the two brazen pillars which Solomon erected in the court of the Temple [JACHIN AND BOAZ].

BOCHIM (בֹּכִים, *weepings*), the name given to a place (probably near Shiloh, where the tabernacle then was) where an 'angel of the Lord' reproved the assembled Israelites for their disobedience in making leagues with the inhabitants of the land, and for their remissness in taking possession of their heritage. This caused the bitter weeping among the people for which the place took its name (Judg. ii. 1). 'Angel' is here usually taken in the ordinary sense of 'messenger,' and he is supposed to have been a prophet, which is strengthened by his being said to have come from Gilgal: for it was not usual to say that an angel came from another place, and Gilgal was a noted station and resort of holy men [GILGAL]. Most of the Jewish commentators regard this personage as Phinehas, who was at that time the high-priest. There are many, however, who deny that any man or created angel is here meant, and affirm that no other than the Great Angel of the Covenant is to be understood—the same who appeared to Moses in the bush, and to Joshua as the Captain of Jehovah's host. This notion is grounded on the fact that 'the angel,' without using the usual formula of delegation, 'thus saith the Lord,' says at once '*I* made you to go up out of Egypt,' &c.

BOHAN (בֹּהַן, *a thumb*; Sept. Βαιών), a Reubenite, in whose honour a stone was erected which afterwards served as a boundary-mark on the frontier between Judah and Benjamin (Josh. xv. 6; xviii. 17). It does not appear from the text whether this stone was a sepulchral monument, or set up to commemorate some great exploit performed by this Bohan in the conquest of Canaan. Bunting (*Itinerar. tot. S. Script.* p. 144), mentioning Bahurim, says that near to it, in the valley, is a stone called *Bohan*, of extraordinary size, and shining like marble. This wants confirmation, and no authority is given.

BOND, BONDAGE. [SLAVERY.]

BOOK. [WRITING.]

BOOK OF LIFE. In Phil. iv. 3 Paul speaks of Clement and other of his fellow-labourers, 'whose names are written in the *book of life*.' On this Heinrichs (*Annotat. in Ep. Philipp.*) observes that as the future life is represented under the image of a πολίτευμα (citizenship, community, political society) just before (iii. 20), it is in agreement with this to suppose (as usual) a catalogue of the citizens' names, both natural and adopted (Luke x. 20; Rev. xx. 15; xxi. 27), and from which the unworthy are erased (Rev. iii. 5). Thus the names of the good are often represented as *registered in heaven* (Matt. iii. 5). But this by no means implies a certainty of salvation (nor, as Doddridge remarks, does it appear that Paul in this passage had any particular revelation), but only that at that time the persons were *on the list*, from which (as in Rev. iii. 5) the names of unworthy members might be erased. This explanation is sufficient and satisfactory for the other important passage in Rev. iii. 5, where the glorified Christ promises to 'him that overcometh,' that he will not blot his name out of the book of life. Here, however, the illustration has been sought rather in *military* than in *civil* life, and the passage has been supposed to contain an allusion to the custom according to which the names of those who were cashiered for misconduct were erased from the muster-roll.

When God threatened to destroy the Israelites altogether, and make of Moses a great nation—the legislator implored forgiveness for them, and added—'if not, blot me, I pray thee, out of the book which thou hast written' (Exod. xxxii. 34). By this he meant nothing so foolish or absurd as to offer to forfeit eternal life in the world to come—but only that he, and not they, should be cut off from the world, and brought to an untimely end. This has been regarded as an allusion to the records kept in the courts of justice, where the deeds of criminals are registered, and hence would signify no more than the purpose of God with reference to future events; so that to be cut off by an untimely death is to be blotted out of this book.

A sealed book (Isa. xxix. 11; Rev. v. 1-3) is a book whose contents are secret, and have for a very long time been so, and are not to be published till the seal is removed.

A book or roll written within and without, i.e. on the back side (Rev. v. 1), may be a book containing a long series of events; it not being the custom of the ancients to write on the back side of the roll, unless when the inside would not contain the whole of the writing (comp. Horace, *Ep.* i. 20, 3).

To eat a book signifies to consider it carefully, and digest it well in the mind (Jer. xv. 16; Rev. x. 9). A similar metaphor is used by Christ in John vi., where he repeatedly proposes himself as 'the Bread of Life' to be eaten by his people.

BOOTH (סֻכָּה *succah*; pl. *succoth*), a hut made of branches of trees, and thus distinguished from a tent properly so called. Such were the booths in which Jacob sojourned for a while on his return to the borders of Canaan, whence the place obtained the name of Succoth (Gen. xxxiii. 17); and such were the temporary green sheds in which the Israelites were directed to celebrate the Feast of Tabernacles (Lev. xxiii. 42, 43). As this observance was to commemorate the abode of the Israelites in the wilderness, it has been rather unwisely concluded by some that they there lived in such booths. But it is evident from the narrative, that, during their wanderings, they dwelt in *tents*; and, indeed, where, in that treeless region, could they have found branches with which to construct their booths? Such structures are only available in well-wooded regions; and it is obvious that the direction to celebrate the feast in booths, rather than in tents, was given because, when the Israelites became a settled people in Pales-

time, and ceased to have a general use of tents, it was easier for them to erect a temporary shed of green branches than to provide a tent for the occasion.

BOOTY. [Spoil.]

BORITH (בֹּרִית) occurs in two passages of Scripture—first, in Jerem. ii. 22, 'For though thou wash thee with nitre, and take thee much sope (borith), yet thine iniquity is marked before me, saith the Lord God;' and again, in Malachi iii. 2, 'But who may abide the day of his coming? and who shall stand when he appeareth? for he is like a refiner's fire, and like fullers' sope (borith).' From neither of these passages does it distinctly appear whether the substance referred to by the name of borith was obtained from the mineral or from the vegetable kingdom. But it is evident that it was possessed of cleansing properties; and this is confirmed by the origin and signification of the word, which is thus illustrated by Celsius: 'à verbo ברר Barar, *purificavit*, quæ vox etiam apud Chaldæos, Syros, Arabes in usu fuit, descendit nomen בר *Bor, puritas*' (*Hierobot.* i. p. 449). So Maimonides, on the Talmud, tract *Shemittah*, 'Species ablutionibus aptæ, uti sunt Borith et Ahal.'

The word *borith* is very similar to the *boruk* of the Arabs, written *baurakh* in the Latin translations of Serapion and Avicenna; and translated nitrum—that is, natron, or carbonate of soda. Boruk appears, however, to have been used in a generic rather than in a specific sense, as in the Persian works on Materia Medica, derived chiefly from the Arabic, which we have collated, we find that no less than six different kinds of boruk (Persian *booreh*) are enumerated; of which some are natural, as the Armenian, the African, &c.; others artificial, as that obtained from burning the wood of the poplar; also that employed in the preparation of glass. Of these it is evident that the two last are, chemically, nearly the same, being both carbonates of alkalis; the incineration of most plants, as well as of the poplar, yield the carbonate of potash (commonly called potash, or pearlash); while carbonate of soda, or barilla, is the alkali used in the preparation of glass. Previous to the composition of bodies having been definitely ascertained by correct chemical analysis, dissimilar substances were often grouped together under one general term; while others, although similar in composition, were separated on account of some unimportant character, as difference of colour or of origin, &c. It is unnecessary for our present purpose to ascertain the other substances included by the Arabs under the general term of *boruk*, and which may have been also included under the nitrum of the Greeks. It is evident that both the carbonate of soda and of potash were comprehended under one name by the former. It would be difficult, therefore, to distinguish the one from the other, unless some circumstances were added in addition to the mere name. Thus in the above passage of Jeremiah we have *neter* (nitre) and *borith* (sope) indicated as being both employed for washing, or possessed of some cleansing properties; and yet, from occurring in the same passage, they must have differed in some respects. The term natron we know was, in later times, confined to the salt obtained chiefly from the natron-lakes of Egypt, and *neter* may also have been so in earlier times. Since therefore the natural carbonate of soda is mentioned in one part of the verse, it is very probable that the artificial carbonates may be alluded to in the other, as both were in early times employed by Asiatic nations for the purposes of washing. The carbonate of potash, obtained from the burning of most plants growing at a distance from the sea or a saline soil, might not have been distinguished from the carbonate of soda, produced from the ashes of plants growing on the shores of the sea or of salt-water lakes.

Hence it is probable that the ashes of plants, called boruk and boreh by Asiatic nations, may be alluded to under the name of borith, as there is no proof that soap is intended, though it may have been known to the same people at very early periods. Still less is it probable that borax is meant, as has been supposed by some authors, apparently from the mere similarity of name.

Supposing that the ashes of plants are intended by the word borith, the next point of inquiry is, whether it is to be restricted to those of any particular plants. The ashes of the poplar are mentioned by Arabian authors, and of the vine by Dioscorides; those of the plantain and of the *Butea frondosa* by Sanscrit authors: thus indicating that the plants which were most common, or which were used for fuel, or other purposes, in the different countries, had also their ashes, that is, impure carbonate of potash, employed for washing, &c. Usually the ashes only of plants growing on the sea-shore have been thought to be intended. All these, as before mentioned, would yield barilla, or carbonate of soda. Many of them have been burnt, for the soda they yield, on the coasts of India, of the Red Sea, and of the Mediterranean. They belong chiefly to the natural family of the Chenopodeæ and to that of the Mesembryanthemums. In Arabic authors, the plant yielding soda is said to be called *ishnan*, and its Persian name is stated to be *ghasool*, both words signifying 'the washer' or 'washing-herb.' Rauwolf points out two plants in Syria and Palestine which yield alkaline salts. Hasselquist considered one of them to be a Mesembryanthemum. Forskål has enumerated several plants as being burned for the barilla or soda which they afford: as *Mesembryanthemum geniculatum* and *nodiflorum*, both of which are called *ghasool*. Salsola kali, and his Suæda monoica, called asul, are other plants, especially those last named, which yield sal-alkali. So on the coasts of the Indian Peninsula, *Salicornia Indica* and *Salsola nudiflora* yield barilla in great abundance and purity, as do Salsola sativa, Kali, Soda, and Tragus; and also Salicornia annua, on the coasts of Spain and of the South of France.—J. F. R.

BORROWING. On the general subject, as a matter of law or precept, see Loan.

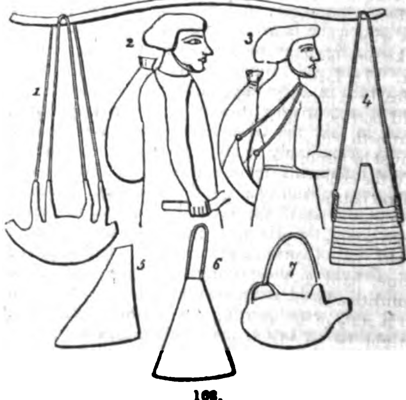
In Exod. xii. 35 we are told that the Israelites, when on the point of their departure from Egypt, 'borrowed of the Egyptians jewels of silver, and jewels of gold, and raiment;' and it is added, that 'the Lord gave the people favour in the sight of the Egyptians, so that they lent unto them such things as they required. And they spoiled the Egyptians.' This was in pursuance of a Divine command which had been given to them through Moses (Exod. iii. 22; xi. 2). This has suggested a difficulty, seeing that the Israelites had certainly no intention to

return to Egypt, or to restore the valuables which they thus obtained from their Egyptian 'neighbours.' The removal of this difficulty has been sought in various modes. The first is to question the accuracy of the present translation. It is admitted that the general acceptation of the word rendered *borrow* (שָׁאַל) is to *request* or *demand*; although there are places (Exod. xxii. 14; 1 Sam. i. 28; 2 Kings vi. 5) where *borrowing* is certainly denoted by it. The real question, therefore, is, which of these significations agrees best with the context and the circumstances of the transaction. Those who would at all hazards disconnect the Divine name from a transaction resting on this basis, allege that the Israelites did not *borrow* the valuables, but *demanded* them of their Egyptian neighbours, as an indemnity for their services, and for the hard and bitter bondage which they had endured. But this does not appear to us to mend the matter much; for the Israelites had been public servants, rendering certain onerous services to the state, but not in personal bondage to individual Egyptians, whom, nevertheless, they, according to this account, mulcted of much valuable property in compensation for wrongs committed by the state. These individual Egyptians also were selected not with reference to their being implicated more than others in the wrongous treatment of the Israelites: they were those who happened to be their 'neighbours,' and as such open more than others to the exaction. This mode of extorting private and partial compensation for public wrong will not stand the test of our rules of public morality, any more than that of borrowing without the intention to restore. As so little is to be gained by the proposed change, we incline to adhere to the old interpretation, that the Israelites actually did *borrow* the valuables of the Egyptians, with the understanding, on the part of the latter, that they were to be restored. This agrees with the fact that the professed object of the Hebrews was not to quit Egypt for ever, but merely to withdraw for a few days into the desert, that they might there celebrate a high festival to their God. At such festivals it was usual among all nations to appear in their gayest attire, and decked with many ornaments; and this suggests the grounds on which the Israelites might rest the application to their Egyptian neighbours for the loan of their jewels and rich raiment. Their avowed intention to return in a few days must have made the request appear very reasonable to the Egyptians; and in fact the Orientals are, and always have been, remarkably ready and liberal in lending their ornaments to one another on occasions of religious solemnity or public ceremony. It would seem also as if the avowed intention to return precluded the Hebrews from any other ground than that of borrowing; for if they had *required* or *demanded* these things as compensations or gifts, it would have amounted to an admission that they were quitting the country altogether. It is therefore best to take these things together—the *borrowing* as a necessary result of the professed intention to return; and, although the borrowing without the intention to restore, looks more unjustifiable than the avowed intention to return, when the real intention was to withdraw altogether—both facts must be tried by the same general doctrine of public morals, and must be explained with reference to the same general principles. Turn which way we will in this matter, there is but a choice of difficulties; and this leads us to suspect that we are not acquainted with all the facts bearing on the case, in the absence of which we spend our strength for nought in labouring to explain it. One of the difficulties is somewhat softened by the conjecture of Professor Bush, who, in his Note on Exod. xi. 2, observes, 'We are by no means satisfied that Moses was required to *command* the people to practise the device here mentioned. We regard it rather, as far as *they* were concerned, as the mere *prediction* of a fact that should occur.'

BOSOM. It is usual with the western Asiatics to carry various sorts of things in the bosom of their dress, which forms a somewhat spacious depository, being wide above the girdle, which confines it so tightly around the waist as to prevent anything from slipping through. Aware of this, Harmer and our other Biblical illustrators rather hastily concluded that they had found an explanation of the text (Luke vi. 38), 'Good measure, pressed down, and shaken together, and running over, shall men give into your bosom.' All these expressions obviously apply, in the literal sense, to *corn*; and it is certain that corn and things measured in the manner described never are carried in the bosom. They could not be placed there, or carried there, or taken out without serious inconvenience, and then only in a small quantity. The things carried in the bosom are simply such as Europeans would, if in the East, carry in their pockets. Yet this habit of carrying valuable property may indicate the origin of the image, as an image, *into the bosom*, without requiring us to suppose that everything described as being given *into the bosom* really was deposited there.

To have one in our bosom implies kindness, secrecy, intimacy (Gen. xvi. 5; 2 Sam. xii. 8). Christ is *in the bosom of the Father*; that is, possesses the closest intimacy with, and most perfect knowledge of, the Father (John i. 18). Our Saviour is said *to carry his lambs in his bosom*, which touchingly represents his tender care and watchfulness over them.

BOSSES, the thickest and strongest parts, the prominent points of a buckler [ARMS, ARMOUR].



BOTNIM (בָּטְנִים) occurs only in Gen. xliii. 11, where Jacob, wishing to conciliate the ruler of Egypt, desires his sons on their return to 'take of the best fruits in the land in their vessels and carry down the man a present,' and along with other articles mentions '*nuts* and almonds.' Here the word rendered nuts is *botnim*. Among the various translations of this term Celsius enumerates walnuts, hazel-nuts, pine-nuts, peaches, dates, the fruit of the terebinth-tree, and even almonds; but there is little doubt that *pistachio-nuts* is the true rendering. From the context it is evident that the articles intended for presents were the produce of Syria, or easily procurable there. Hence they were probably less common in Egypt, and therefore suitable for such a purpose.

The Hebrew word *botnim*, reduced from its plural form, is very similar to the Arabic بطم *batam*, which we find in Arabian authors, as Rhases, Serapion, and Avicenna. It is sometimes

written baton, boton, botin, and albotin. The name is applied specially to the terebinth-tree, or Pistacia terebinthus of botanists, the τέρμινθος or τερέβινθος of the Greeks. This is the turpentine-yielding pistacia, a native of Syria and of the Greek Archipelago, which has already been described in the article ALAH. The tree, as there mentioned, is remarkable for yielding one of the finest kinds of turpentine, that usually called of Chio or of Cyprus, which, employed as a medicine in ancient times, still holds its place in the British pharmacopœias. From being produced only in a few places and from being highly valued, it is usually adulterated with the common kinds of turpentine. In many places, however, where the tree grows well, it does not yield turpentine, which may account for its not being noticed as a product of Palestine; otherwise we might have inferred that the turpentine of this species of pistacia formed one of the articles sent as a present into Egypt. This seems to have been the view of the translators of the Sept., who render botnim by τερέβινθος. The name batam is applied by the Arabs both to the turpentine and to the tree. It appears, however, to be sometimes used generically, as in some Arabic works it is applied to a tree of which the kernels of the seeds are described as being of a green colour. This is the distinguishing characteristic of another species of pistacia, the *P. vera* of botanists, of which the fruit is well known to the Arabs by the name of fistuk, which seems to be derived from the Persian *pisteh*. This, no doubt, gave origin to the Greek πιστάκια, said by Dioscorides to be produced in Syria and to be like pine-nuts. Besides these edible kernels, the pistacia-tree is described in the Arabic works on Materia Medica as yielding another product somewhat similar to the turpentine of the battam, but which is called '*aluk-al-anbat*, a resin of the *anbat*, as if this were another name for the pistacia-tree. This brings it much nearer the botnim of Scripture. The *Botna* of the Talmud is considered by annotators to be the pistacia (Celsius, *Hierobot.* i. p. 26). Bochart for this and other reasons considered botnim to be the kernels of the pistacia-tree.

The pistachio-nut-tree is well known, extending as it does from Syria to Affghanistan. From the latter country the seeds are carried as an article of commerce to India, where they are eaten in their uncooked state, added to sweetmeats, or as a dessert fried with pepper and salt, being much relished by Europeans for the delicacy of their flavour. The pistacia-tree is most common in the northern, that is, the cooler parts of Syria, but it is also found wild in Palestine in some very remarkable positions, as Mount Tabor, and the summit of Mount Attarous (Nebo?), (*Physical Palestine*, p. 323). This tree is said to have been introduced from Syria into Italy by Lucius Vitellius in the reign of Tiberius. It delights in a dry soil, and rises to the height of 20, and sometimes 30 feet. As it belongs to the same genus as the terebinth-tree, so like it the male and female flowers grow on separate trees. It is therefore necessary for the fecundation of the seed that a male tree be planted among the female ones. It is probably owing to the flowers of the latter not being fecundated, that the trees occasionally bear oblong fruit-like but hollow bodies, which are sometimes described as galls, sometimes as nuts, of little value. The ripe seeds are inclosed in a woody but brittle whitish-coloured shell, and within it is the seed-covering, which is thin, membranous, and of a reddish colour. The kernel is throughout of a green colour, abounds in oil, and has a sweetish agreeable taste. Pistachio-nuts are much eaten by the natives of the countries where they are grown, and, as we have seen, they form articles of commerce from Affghanistan to India—a hot country like Egypt. They are also exported from Syria to Europe in considerable quantities. They might therefore have well formed a part of the present intended for Joseph, notwithstanding the high position which he occupied in Egypt.—J. F. R.

BOTTLE. Natural objects, it is obvious, would be the earliest things employed for holding and preserving liquids; and of natural objects those would be preferred which either presented themselves nearly or quite ready for use, or such as could speedily be wrought into the requisite shape. The skins of animals afford in themselves more conveniences for the purpose than any other natural product. When an animal had been slain, either for food or sacrifice, it was easy and natural to use the hide for enveloping the fat or other substances, and with very little trouble the parts of the skin might be sewed together so as to make it hold liquids. The first bottles, therefore, were probably made of the skins of animals. Accordingly, in the fourth book of the Iliad (l. 247) the attendants are represented as bearing wine for use in a bottle made of goat's skin, Ἀσκῷ ἐν αἰγείῳ. In Herodotus also (ii. 121) a passage occurs by which it appears that it was customary among the ancient Egyptians to use bottles made of skins; and from the language employed by him it may be inferred that a bottle was formed by sewing up the skin and leaving the projection of the leg and foot to serve as a cock; hence it was termed ποδεών. This aperture was closed with a plug or a string. In some instances every part was sewed up except the neck; the neck of the animal thus became the neck of the bottle. This alleged use of skin-bottles by the Egyptians is confirmed by the monuments, on which such various forms as the following occur. Fig. 1 is curious as showing

168.

the mode in which they were carried by a yoke; and as it balances a large bottle in a case, this skin

may be presumed to have contained wine. Fig. 7 is such a skin of water as in the agricultural scenes is suspended from the bough of a tree, and from which the labourers occasionally drink. Figs. 2 and 3 represent two men with skins at their backs, belonging to a party of nomades entering Egypt. This party has been with some plausibility supposed to represent the sons of Jacob—a point elsewhere considered [JOSEPH].

The Greeks and Romans also were accustomed to use bottles made of skins, chiefly for wine. Some interesting examples of those in use among the Romans are represented at Herculaneum and Pompeii, and are copied in the annexed engraving.

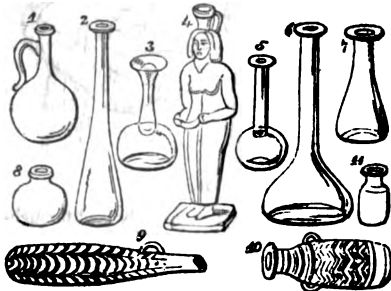
169.

Skin-bottles doubtless existed among the Hebrews even in patriarchal times; but the first clear notice of them does not occur till Joshua ix. 4, where it is said that the Gibeonites, wishing to impose upon Joshua as if they had come from a long distance, took 'old sacks upon their asses, and wine-bottles *old and rent and bound up*.' So in the 13th verse of the same chapter: 'these bottles of wine which we filled were new; and behold, they *be rent*; and these our garments and our shoes are become old by reason of the very long journey.' Age, then, had the effect of wearing and tearing the bottles in question, which must consequently have been of skin. To the same effect is the passage in Job xxxii. 19, 'My belly is as wine which hath no vent; it is ready to burst, like new bottles.' Our Saviour's language (Matt. ix. 17; Luke v. 37, 38; Mark ii. 22) is thus clearly explained: 'Men do not put new wine into old bottles, else the bottles break and the wine runneth out, and the bottles perish;' 'New wine must be put in new bottles, and both are preserved.' To the conception of an English reader who knows of no bottles but such as are made of clay or glass, the idea of bottles breaking through age presents an insuperable difficulty; but skins may become 'old, rent and bound up;' they also prove, in time, hard and inelastic, and would in such a condition be very unfit to hold new wine, probably in a state of active fermentation. Even new skins might be unable to resist the internal pressure caused by fermentation. If, therefore, by 'new' is meant 'untried,' the passage just cited from Job presents no inconsistency.

As the drinking of wine is illegal among the Moslems who are now in possession of Western Asia, little is seen of the ancient use of skin-bottles for wine, unless among the Christians of Georgia, Armenia, and Lebanon, where they are still thus employed. In Georgia the wine is stowed in large ox-skins, and is moved or kept at hand for use in smaller skins of goats or kids.

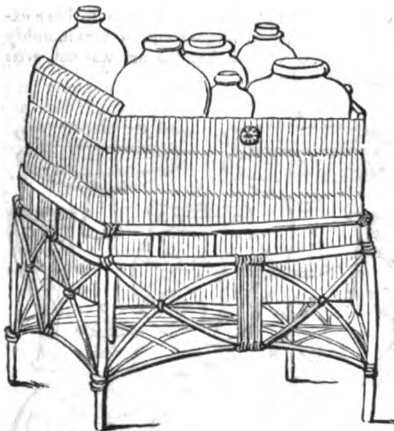
170.

But skins are still most extensively used throughout Western Asia for water. Their most usual forms are shown in the above cut (170), which also displays the manner in which they are carried. The water-carriers bear water in such skins and in this manner.



It is an error to represent bottles as being made exclusively of dressed or undressed skins among the ancient Hebrews (Jones, *Biblical Cyclopædia*, in voc.). Among the Egyptians ornamental vases were of hard stone, alabaster, glass, ivory, bone, porcelain, bronze, silver or gold; and also, for the use of the people generally, of glazed pottery or common earthenware. As early as Thothmes III., assumed to be the Pharaoh of the Exodus, B.C. 1490, vases are known to have existed of a shape so elegant and of workmanship so superior, as to show that the art was not, even then, in its infancy.

171. — 1, 2. Gold. 3. Cut glass. 4. Earthenware. 5, 7. Porcelain. 6. Hard stone. 8. Gold, with plates and bands. 9. Stone. 10. Alabaster, with lid.



Many of the bronze vases found at Thebes and in other parts of Egypt are of a quality which cannot fail to excite admiration, and which proves the skill possessed by the Egyptians in the art of working and compounding metals. Their shapes are most various—some neat, some plain, some grotesque; some in form not unlike our cream-

jugs, others as devoid of taste as the wine-bottles of our cellars or the flower-pots of our conservatories. They had also bottles, small vases, and pots, used for holding ointment or for other purposes connected with the toilet, which were made of alabaster, glass, porcelain, and hard stone. The reader is here presented with a view of some of these vases and bottles, from actual specimens in the British Museum.

172.—1, 3. Earthenware. 2, 5, 6, 7. Green glass. 4. Blue glass. 8, 11. Alabaster. 9, 10. Porcelain.

The subjoined representation of a case containing bottles, supported on a stand, is among the Egyptian antiquities in the Berlin Museum, and is supposed to have belonged to a medical man or to the toilet of a Theban lady (Wilkinson, ii. 217). It forms a suitable conclusion to this set of illustrations.

173.

The perishable nature of skin-bottles led, at an early period, to the employment of instruments of a more durable kind; and it is to be presumed that the children of Israel would, during their sojourn in Egypt, learn, among other arts practised by their masters, that of working in pottery-ware. Thus, as early as the days of the Judges (iv. 19; v. 25), bottles or vases composed of some earthy material, and apparently of a superior make, were in use; for, what in the fourth chapter is termed 'a bottle,' is in the fifth designated 'a lordly dish.' Isaiah (xxx. 14) expressly mentions 'the bottle of the potters,' as the reading in the margin gives it, being a literal translation from the Hebrew, while the terms which the prophet employs show that he could not have intended any thing made of skin—'he shall *break it* as the *breaking* of the potter's vessel that is *broken* in pieces, so that there shall not be found in the bursting of it *a sherd* to take fire from the hearth, or to take water out of the pit.' In the nineteenth chap. ver. 1, Jeremiah is commanded, 'Go and get a potter's earthen bottle;' and (ver. 10) 'break the bottle;' 'Even so, saith the Lord of Hosts (ver. 11), will I break this people and this city as one breaketh a potter's vessel, that cannot be made whole again' (see also Jer. xiii. 12-14). Metaphorically the word bottle is used, especially in poetry, for the clouds considered as pouring out and pouring down water (Job xxxviii. 37), 'Who can stay the bottles of heaven?' The cut already given in p. 278 affords an illustration of a passage in the Psalms (lvi. 8), 'Put thou my tears in a bottle'—that is, 'treasure them up —' have a regard to them as something precious.' It was, as appears from the cut at p. 278, customary to tie up in bags or small bottles, and secure with a seal, articles of value, such as precious stones, necklaces, and other ornaments.—J. R. B.

BOUNDARIES. [LANDMARKS.]

BOW. [ARMS.] The bow is frequently mentioned symbolically in Scripture. In Ps. vii. 12 it implies victory, signifying judgments laid up in store against offenders. It is sometimes used to denote lying and falsehood (Ps. lxiv. 4; cxx. 4; Jer. ix. 3), probably from the many circumstances which tend to render a bow inoperative, especially in unskilful hands. Hence also 'a deceitful bow' (Ps. lxxviii. 57; Hos. vii. 16); with which compare Virgil's 'Perfidus ensis frangitur.'

The bow also signifies *any kind* of arms. The bow and spear are the most frequently mentioned, because the ancients used these most (Ps. xliv. 6; xlvi. 9; Zech. x. 4; Josh. xxiv. 12).

In Habakk. iii. 9 'thy bow was *made bare*,' means that it was drawn out of its case. The Orientals used to carry their bows in a case hung on their girdles.

In 2 Sam. i. 18 the Authorized Version has 'Also he (David) bade them teach the children of Judah the use of the bow.' 'Here,' says Professor Robinson (*Addit. to Calmet*), 'the words "the use of" are not in the Hebrew, and convey a sense entirely false to the English reader. It should be "teach them the bow," i. e. *the song of* THE BOW, from the mention of this weapon in verse 22. This mode of selecting an inscription to a poem or work is common in the East; so in the Korân the second Sura is entitled *the cow*, from the incidental mention in it of the red heifer: comp. Num. xix. 2. In a similar manner, the names of the books of the Pentateuch in the Hebrew Bibles are merely the first word in each book.'

BOWELS are often put by the Hebrew writers for the internal parts generally, the inner man, and so also for *heart*, as we use that term. Hence the bowels are made the seat of tenderness, mercy, and compassion; and thus the Scriptural expressions of the bowels being moved, bowels of mercy, straitened in the bowels, &c. By a similar association of ideas, the bowels are also sometimes made the seat of wisdom and understanding (Job xxxviii. 36; Ps. li. 10; Isa. xvi. 11).

BOWING. [ATTITUDES.]

BOX-TREE. [TEASHUR.]

BOZRAH (בָּצְרָה; Sept. Βοσόρ), an ancient city, known also to the Greeks and Romans by the name of BOSTRA. In most of the passages of the Old Testament where it is mentioned, it appears as a chief city of the Edomites (Isa. xxxiv. 6; lxiii. 1; Amos i. 12; Jer. xlix. 13, 22). In Jer. xlviii. 24 Bozrah is named among the cities of Moab: but it does not hence follow, as Raumer and others contend, that we should regard them as different cities; for, in consequence of the continual wars, incursions, and conquests which were common among the small kingdoms of that region, the possession of particular cities often passed into different hands. Thus Selah, *i. e.* Petra, the capital of the Edomites, taken from them by Amaziah, king of Judah (2 Kings xiv. 7), is also mentioned by Isaiah (xvi. 1) among the Moabitish cities. Since Bozrah lay not in the original territory of the Edomites, *i. e.* south-east of Judah, but north of the territory of the Ammonites, in Auranitis, or Hauran, we must suppose that the Edomites had become masters of it by conquest, and that it was afterwards taken from them by the Moabites, who for a time retained it in their possession. This is upon the whole more satisfactory than the conclusion of Raumer (*Palästina*), who makes Bostra to be the Bozrah of Moab, and seeks the Bozrah of Edom in the present Besseyra, *i. e.* little Bozrah, so called, he conjectures, to distinguish it from the Bozrah of Moab. His principal argument, that Edom is described as dwelling in 'the clefts of the rocks' (Jer. xlix. 16), is of little weight, seeing that it is very possible for the dwellers in rocks and mountains to have possessions in the neighbouring plains.

174. [Bozrah.]

Bozrah lay southward from Edrei, one of the capitals of Bashan, and, according to Eusebius, 24 Roman miles distant from it. The Romans reckoned Bozrah as belonging to Arabia Deserta (Amm. Marcell. xiv. 27). Alexander Severus made it the seat of a Roman colony. In the acts of the Nicene, Ephesian, and Chalcedonian councils mention is made of bishops of Bozrah; and at a later period it became an important seat of the Nestorians (Asseman, *Biblioth. Orient.* tom. iii. pt. 2, pp. 595, 730). Abulfeda makes it the capital of the Hauran, in which, according to Burckhardt, it is still one of the most important towns. Although the place has been since visited by Laborde (from whom our engraving is taken), Lord Lindsay, and other later travellers, the account which Burckhardt gives of Bozrah is still the best that we possess. 'Bozrah is situated in the open plain, and is at present the last inhabited place in the south-east extremity of the Hauran. It was formerly the capital of *Arabia Provincia*, and is now, including the ruins, the largest town in the Hauran. It is of an oval shape, its greatest length being from east to west; its circumference is three quarters of an hour. It was anciently enclosed by a thick wall, which gave it the reputation of a place of great strength. Many parts of this wall, especially on the west side, still remain; it is constructed with stones of a moderate size, strongly cemented together. The principal buildings of Bozrah were on the east side, and in a direction thence towards the middle of the town. The south and south-east quarters are covered with the ruins of private dwellings, the walls of many of which are still standing, but most of the roofs have fallen in. The style of building seems to be similar to that observed in all the other ancient towns of the Hauran. On the west side are springs of fresh water, of which I counted five beyond the precincts of the town and six within the walls; their waters unite with a rivulet, whose source is on the north-west side, within the town, and which loses itself in the southern plain at several hours' distance. On the eastern quarter of the town is a large birket, or reservoir, almost perfect, 190 paces in length, 153 in breadth, and enclosed by a wall seven feet in thickness, built of large square stones; its depth may be about 20 feet. A staircase leads down to the water, as the basin is never completely filled. This reservoir is a work of the Saracens, made for watering the pilgrims' caravans to Mecca, which as late as the seventeenth century passed by Bozrah.... Just beyond the walls is a large castle of Saracenic origin, probably of the time of the Crusades; it is one of the best-built castles in Syria, and is surrounded by a deep ditch. Its walls are very thick, and in the interior are alleys, dark vaults, subterraneous passages, &c. of the most solid construction. This castle is a most important post to protect the harvests of the Hauran against the hungry Bedouins.... Of the vineyards for which Bozrah was celebrated, and which are commemorated in the Greek medals of the *Colonia Bostræ*, not a vestige remains. There is scarcely a tree in the neighbourhood of the town, and the twelve or fifteen families who now inhabit it cultivate nothing but wheat, barley, horse-beans, and a little dhourra (Indian corn). A number of fine rose-trees grow wild among the ruins of the town, and are just beginning (April 28th) to open their buds' (Burckhardt's *Syria*, pp. 224-236).

The same writer gives a very ample description of the various ruins, the extent and importance of which are alone sufficient to evince the ancient consequence of the place. They are of various kinds, Greek, Roman, and Saracenic, with traces of the native works in the private dwellings.

These monuments of ancient grandeur serve but to heighten the impression which is created by the present desolation and decay.—'Bozrah,' says Lord Lindsay, 'is now for the most part a heap of ruins, a most dreary spectacle: here and there

the direction of a street or alley is discernible, but that is all. The modern inhabitants — a mere handful — are almost lost in the maze of ruins. Olive-trees grew here within a few years, they told us—all extinct now, like the vines for which the Bostra of the Romans was famous. And such, in the nineteenth century, and under Moslem rule, is the condition of a city which even in the seventh century, at the time of its capture by the Saracens, was called by Caled "the market-place of Syria, Irak, and the Hedjaz." "I have sworn by myself, saith the Lord of Hosts, that Bozrah shall become a desolation and reproach, a waste and a curse; and all the cities thereof shall be perpetual wastes!" (Jer. xlix. 13.) And it is so.'

BRACELET. This name, in strict propriety, is as applicable to circlets worn on the upper part of the arm as to those worn on the wrist; but as it has been found convenient to distinguish the former as ARMLETS, the term bracelet must be restricted to the latter. These are, and always have been, much in use among Eastern females. Many of them are of the same shapes and patterns as the armlets, and are often of such considerable weight and bulk as to appear more like manacles than ornaments. Many are often worn one above another on the same arm, so as to occupy the greater part of the space between the wrist and the elbow. The materials vary according to the condition of the wearer, but it seems to be the rule that bracelets of the meanest materials are better than none. Among the higher classes they are of mother-of-pearl, of fine flexible gold, and of silver, the last being the most common. The poorer women use plated steel, horn, brass, copper, beads, and other materials of a cheap description. Some notion of the size and value of the bracelets used both now and in ancient times may be formed from the fact that those which were presented by Eliezer to Rebecca weighed ten shekels (Gen. xxiv. 22). The bracelets are sometimes flat, but more frequently round or semicircular, except at the point where they open to admit the hand, where they are flattened. They are frequently hollow, giving the show of bulk (which is much desired) without the inconvenience. Bracelets of gold twisted rope-wise are those now most used in Western Asia; but we cannot determine to what extent this fashion may have existed in ancient times.

BRAMBLE. [THORN.]

BRANCH. As trees, in Scripture, denote great men and princes, so branches, boughs, sprouts, or plants denote their offspring. In conformity with this way of speaking, Christ, in respect of his human nature, is styled a rod from the stem of Jesse, and a branch out of his roots (Isa. xi. 1), that is, a prince arising from the family of David. This symbol was also in use among the ancient poets (Sophocles, *Electra*, iv. 18; Homer, *Iliad*, ii. 47, 170, 211, 252, 349; Pindar, *Olymp.* ii. 6, &c.). 'And so even in our English tongue (remarks Wemyss), the word *imp*, which is originally Saxon, and denotes a plant, is used to the same purpose, especially by Fox, the martyrologist, who calls King Edward the Sixth an imp of great hope; and by Thomas Cromwell, Earl of Essex, in his dying speech, who has the same expression concerning the same prince.'

A branch is the symbol of kings descended from royal ancestors, as branches from the root (Ezek. xvii. 3, 10; Dan. xi. 7). As only a vigorous tree can send forth vigorous branches, a branch is used as a general symbol of prosperity (Job viii. 16).

From these explanations it is easy to see how a *branch* becomes the symbol of the Messiah (Isa. xi. 1; iv. 2; Jer. xxiii. 15; Zech. iii. 8; vi. 12; and elsewhere).

Branch is also used as the symbol of idolatrous worship (Ezek. viii. 17), probably in allusion to the general custom of carrying branches as a sign of honour.

An *abominable branch* (Isa. xiv. 19) means a tree on which a malefactor has been hanged. In Ezek. xvii. 3 Jehoiachim is called the *highest branch* of the cedar, as being a king.

BRASS. This word occurs in the Authorized Version. But brass is a factitious metal, not known to the early Hebrews, and wherever it occurs, *copper* is to be understood [COPPER]. That copper is meant is shown by the text, 'Out of whose hills thou mayest dig brass' (Deut. viii. 9), it being of course impossible to dig a factitious metal, whether brass or bronze, out of mines. That compound of copper and zinc which forms our brass does not appear to have been known to the ancients; but we have every evidence that they knew and used *bronze arms*, implements of that metal having been found in great abundance among ancient tombs and ruins. This, instead of pure copper, is probably sometimes, in the later Scriptures, meant by the word נחשׁ [COPPER].

Brass (to retain the word) is in Scripture the symbol of insensibility, baseness, and presumption or obstinacy in sin (Isa. xlviii. 4; Jer. vi. 28; Ezek. xxii. 18). Brass is also a symbol of strength (Ps. cvii. 16; Isa. xlviii. 4; Mic. iv. 13). So in Jer. i. 18 and xv. 20, brazen walls signify a strong and lasting adversary or opponent.

The description of the Macedonian empire as a *kingdom of brass* (Dan. ii. 39) will be better understood when we recollect that the arms of ancient times were mostly of bronze; hence the figure forcibly indicates the warlike character of that kingdom. The *mountains of brass*, in Zech. vi. 1, are understood by Vitringa to denote those firm and immutable decrees by which God governs the world, and it is difficult to affix any other meaning to the phrase (comp. Ps. xxxvi. 6).

BREAD. The word 'bread' was of far more extensive meaning among the Hebrews than with us. There are passages in which it appears to be applied to all kinds of victuals (Luke xi. 3); but it more generally denotes all kinds of baked and pastry articles of food. It is also used, however, in the more limited sense of bread made from wheat or barley, for rye is little cultivated in the East. Barley being used chiefly by the poor, and for feeding horses [BARLEY], *bread*, in the more limited sense, chiefly denotes the various kinds of cake-like bread prepared from *wheaten* flour.

Corn is ground daily in the East [MILL]. After the wheaten flour is taken from the hand-mill, it is made into a dough or paste in a small wooden trough. It is next leavened; after which it is made into thin cakes or flaps, round or oval, and then baked.

The *kneading*-troughs, in which the dough is prepared, have no resemblance to ours in size or shape. As one person does not bake bread for many families, as in our towns, and as one family does not bake bread sufficient for many days, as in our villages, but every family bakes for the day only the quantity of bread which it requires, only a comparatively small quantity of dough is prepared. This is done in small wooden bowls; and that those of the ancient Hebrews were of the same description as those now in use appears from their being able to carry them, together with the dough, wrapped up in their cloaks, upon their shoulders without difficulty. The Bedouin Arabs, indeed, use for this purpose a leather, which can be drawn up into a bag by a running cord along the border, and in which they prepare and often carry their dough. This might equally, and in some respects better answer the described conditions; but, being especially adapted to the use of a nomade and tent-dwelling people, it is more likely that the Israelites, who were not such at the time of the Exode, then used the wooden bowls for their 'kneading-troughs' (Exod. viii. 3; xii. 34; Deut. xxviii. 5, 7). It is clear, from the history of the departure from Egypt, that the flour had first been made into a dough by water only, in which state it had been kept some little time before it was leavened; for when the Israelites were unexpectedly (as to the moment) compelled in all haste to withdraw, it was found that, although the dough had been prepared in the kneading-trough, it was still unleavened (Exod. xii. 34; comp. Hos. vii. 4); and it was in commemoration of this circumstance that they and their descendants in all ages were enjoined to eat only unleavened bread at the feast of the Passover.

The dough thus prepared is not always baked at home. In towns there are public ovens and bakers by trade; and although the general rule in large and respectable families is to bake the bread at home, much bread is bought of the bakers by unsettled individuals and poor persons; and many small households send their dough to be baked at the public oven, the baker receiving for his trouble a portion of the baked bread, which he adds to his day's stock of bread for sale. Such public ovens and bakers by trade must have existed anciently in Palestine, and in the East generally, as is evident from Hos. vii. 4 and Jer. xxxvii. 21. The latter text mentions the bakers' street (or rather bakers' place or market), and this would suggest that, as is the case at present, the bakers, as well as other trades, had a particular part of the bazaar or market entirely appropriated to their business, instead of being dispersed in different parts of the towns where they lived.

For their larger operations the bakers have ovens of brick, not altogether unlike our own; and in large houses there are similar ovens. The ovens used in domestic baking are, however, usually of a portable description, and are large vessels of stone, earthenware, or copper, inside of which, when properly heated, small loaves and cakes are baked, and on the outer surface of which thin flaps of bread, or else a large wafer-like biscuit, may be prepared.

Another mode of baking bread is much used, especially in the villages. A pit is sunk in the middle of the floor of the principal room, about four or five feet deep by three in diameter, well lined with compost or cement. When sufficiently heated by a fire kindled at the bottom, the bread is made by the thin pancake-like flaps of dough being, by a peculiar knack of hand in the women, stuck against the oven, to which they adhere for a few moments, till they are sufficiently dressed. As this oven requires considerable fuel, it is seldom used except in those parts where that article is somewhat abundant, and where the winter cold is severe enough to render the warmth of the oven desirable, not only for baking bread, but for warming the apartment.

Another sort of oven, or rather mode of baking, is much in use among the pastoral tribes. A shallow hole, about six inches deep by three or four feet in diameter, is made in the ground: this is filled up with dry brushwood, upon which, when kindled, pebbles are thrown to concentrate and retain the heat. Meanwhile the dough is prepared; and when the oven is sufficiently heated, the ashes and pebbles are removed, and the spot well cleaned out. The dough is then deposited in the hollow, and is left there over night. The cakes thus baked are about two fingers thick, and are very palatable. There can be little doubt that this kind of oven and mode of baking bread were common among the Jews. Hence, Hezel very ingeniously, if not truly, conjectures (*Real-Lexicon*, art. 'Brod') comes the סלי חורי of Gen. xl. 16, which he renders, or rather paraphrases, 'baskets full of bread baked in holes,' not 'white baskets,' as in the Authorized Version, nor 'baskets full of holes,' as in our margin; nor 'white bread,' as in most of the continental versions, seeing that all bread is white in the East. As the process is slower and the bread more savoury than any other, this kind of bread might certainly be entitled to the distinction implied in its being prepared for the table of the Egyptian king. That the name of the oven should pass to the bread baked in it, is not unusual in the East, just as the modern *tadsheen* (*pan*) gives its name (say *pan*-cake) to the cake baked by it. Hezel's conjecture that the oven in question is called a hole, חור in Hebrew, and that the bread baked by it is called therefrom *hole-bread*, is corroborated by, if not founded upon, a passage cited by Buxtorf in his *Lex. Talmud.*: 'Faciunt חור foramen, vel cavitatem in terra, et calefaciunt eam igni coquuntque in ea panem, qui vocatur חררה, à חור cavitate illa in qua coctus est.'

There is a baking utensil called in Arabic *tajen* (طاجن) which is the same word (τηγάνου) by which the Septuagint renders the Hebrew מחבת *machabath*, in Lev. ii. 5. This leaves little doubt that the ancient Hebrews had this *tajen*. It is a sort of pan of earthenware or iron (usually the latter), flat, or slightly convex, which is put over a slow fire, and on which the thin flaps of dough are laid and baked with considerable expedition, although only one cake can be baked in this way at a time. This is not a household mode of preparing bread, but is one of the simple and primitive processes employed by the wandering and semi-wandering tribes, shepherds, husbandmen and others, who have occasion to prepare a small quantity of daily bread in an easy off-hand manner. Bread is also baked in a manner which, al-

though apparently very different, is but a modification of the principle of the *tajen*, and is used chiefly in the houses of the peasantry. There is a cavity in the fire-hearth, in which, when required for baking, a fire is kindled and burnt down to hot embers. A plate of iron, or sometimes copper, is placed over the hole, and on this the bread is baked.

Another mode of baking is in use chiefly among the pastoral tribes, and by travellers in the open country, but is not unknown in the villages. A smooth clear spot is chosen in the loose ground, a sandy soil—so common in the Eastern deserts and harder lands—being preferred. On this a fire is kindled, and, when the ground is sufficiently heated, the embers and ashes are raked aside, and the dough is laid on the heated spot, and then covered over with the glowing embers and ashes which had just been removed. The bread is several times turned, and in less than half an hour is sufficiently baked. Bread thus baked is called in Scripture עגה *'uggah* (Gen. xviii. 6; 1 Kings xvii. 13; Ezek. iv. 12), and the indication, 1 Kings xix. 6, is very clear, עגת רצפים *'uggath retzafim* (*coal-cakes*), i. e. cakes baked under the coals. The Septuagint expresses this word *'uggath* very fairly by ἐγκρυφίας, panis subcinericius (Gen. xviii. 6; Exod. xii. 39). According to Busbequius (*Itin.* p. 36), the name of *Hugath*, which he interprets *ash*-cakes, or *ash*-bread, was in his time still applied in Bulgaria to cakes prepared in this fashion; and as soon as a stranger arrived in the villages, the women baked such bread in all haste, in order to sell it to him. This conveys an interesting illustration of Gen. xvi. 6, where Sarah, on the arrival of three strangers, was required to bake 'quickly' such ash-bread—though not for sale, but for the hospitable entertainment of the unknown travellers. The bread thus prepared is good and palatable, although the outer rind, or crust, is apt to smell and taste of the smoke and ashes. The necessity of turning these cakes gives a satisfactory explanation of Hos. vii. 8, where Ephraim is compared to a cake not turned, *i. e.* only baked on one side, while the other is raw and adhesive.

The second chapter of Leviticus gives a sort of list of the different kinds of bread and cakes in use among the ancient Israelites. This is done incidentally, for the purpose of distinguishing the kinds which were and which were not suitable for offerings. Of such as were fit for offerings we find—

I. *Bread baked in ovens* (Lev. ii. 4); but this is limited to two sorts, which appear to be, 1st, the bread baked inside the vessels of stone, metal or earthenware, as already mentioned. In this case the oven is half filled with small smooth pebbles, upon which, when heated and the fuel withdrawn, the dough is laid. Bread prepared in this mode is necessarily full of indentations or holes, from the pebbles on which it is baked: 2nd, the bread prepared by dropping with the hollow of the hand a thin layer of the almost liquid dough upon the outside of the same oven, and which, being baked dry the moment it touches the heated surface, forms a thin wafer-like bread or biscuit. The first of these Moses appears to distinguish by the characteristic epithet of חלות, *perforated*, or *full of holes*; and the other by the name of רקיקים, *thin* cakes, being, if correctly identified, by much the thinnest of any bread used in the East. A cake of the former was offered as the first of the dough (Lev. viii. 26), and is mentioned in 2 Sam. vi. 19, with the addition of 'bread,'—*perforated bread* (חלת לחם). Both sorts, when used for offerings, were to be unleavened (perhaps to secure their being prepared for the special purpose); and the first sort, namely, that which appears to have been baked inside the oven, was to be *mixed up* with oil, while the other (that baked outside the oven), which from its thinness could not possibly be thus treated, was to be only smeared with oil. The fresh olive oil, which was to be used for this purpose, imparts to the bread something of the flavour of butter, which last is usually of very indifferent quality in Eastern countries.

II. *Bread baked in a pan*—1st, that which, as before described, is baked in, or rather on, the *tajen*. This also as an offering was to be unleavened and mixed with oil. 2nd. This, according to Lev. ii. 6, could be broken into pieces, and oil poured over it, forming a distinct kind of bread and offering. And in fact the thin biscuits baked on the *tajen*, as well as the other kinds of bread, thus broken up and re-made into a kind of dough, form a kind of food or pastry in which the Orientals take much delight, and which makes a standing dish among the pastoral tribes. The ash-cake answering to the Hebrew *'uggah* is the most frequently employed for this purpose. When it is baked, it is broken up into crumbs, and re-kneaded with water, to which is added, in the course of the operation, butter, oil, vinegar, or honey. Having thus again reduced it to a tough dough, the mass is broken into pieces, which are baked in smaller cakes and eaten as a dainty. The preparation for the Mosaical offering was more simple; but it serves to indicate the existence of such preparations among the ancient Israelites.

III. *Bread baked upon the hearth*—that is to say, baked upon the hearth-stone, or plate covering the fire-pit which has already been mentioned. This also was to be mixed with oil (Lev. ii. 7).

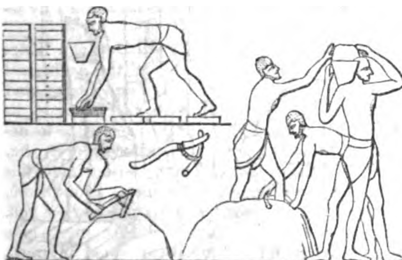
As these various kinds of baked breads were allowed as offerings, there is no question that they were the best modes of preparing bread known to the Hebrews in the time of Moses; and as all the ingredients were such as Palestine abundantly produced, they were such offerings as even the poorest might without much difficulty procure.

Besides these there are two other modes of preparing bread indicated in the Scriptures, which cannot with equal certainty be identified by reference to modern usages.

One of these is the נקודים *nikuddim* of 1 Kings xiv. 3, translated 'cracknels' in the Authorized Version, an almost obsolete word denoting a kind of crisp cake. The original would seem by its etymology (from נקד, speckled, spotted), to denote something spotted or sprinkled over, &c. Buxtorf (*Lex. Chald. et Talm.*) writes under this word: 'Orbiculi parvi panis instar dimidii ovi, *Teramoth*, c. 5;' and in another place (*Epit. rad. Hebr.* p. 544), 'Et bucellata, 1 Reg. xiv. 3, quæ biscocta vulgo vocant, sic dicta, quod in frusta exigua rotunda, quasi puncta conficerentur, aut quod singulari forma interpunctarentur.' It is indeed not improbable that they may have been a sort of biscuit or small and hard baked cakes,

calculated to keep (for a journey or some other purpose), by reason of their excessive hardness (or perhaps being *twice baked*, as the word *biscuit* implies). Not only are such hard cakes or biscuits still used in the East, but they are, like all biscuits, *punctured* to render them more hard, and sometimes also they are sprinkled with seeds; either of which circumstances sufficiently meets the conditions suggested by the etymology of the Hebrew word. The existence of such biscuits is further implied in Josh. ix. 5, 12, where the Gibeonites describe their bread as having become as *hard as biscuit* (not 'mouldy,' as in the Authorized Version), by reason of the length of their journey.

The other was a kind of fancy bread, the making of which appears to have been a rare accomplishment, since Tamar was required to prepare it for Amnon in his pretended illness (2 Sam. xiii. 6). As the name only indicates that it was some favourite kind of cake, of which there may have been different sorts, no conjecture with reference to it can be offered. See Hezel, *Real-Lexicon*, art. 'Brod;' Burckhardt, *Notes on the Bedouins;* and the various travellers in Palestine, &c., particularly Shaw, Niebuhr, Monconys, Russell, Lane (*Modern Egyptians*), Perkins, Olin, &c. compared with the present writer's personal observations.



BREAD OF THE PRESENCE. [SHEW BREAD.]

BREASTPLATE, a piece of defensive armour. [ARMS, ARMOUR.]

BREASTPLATE OF THE HIGH-PRIEST, a splendid ornament covering the breast of the high-priest. It was composed of richly embroidered cloth, in which were set, in four rows, twelve precious stones, on each of which was engraven the name of one of the twelve tribes of Israel (Exod. xxviii. 15-29; xxxix. 8-21). [PRIESTS, DRESS OF.]

BREECHES. [PRIESTS, DRESS OF.]

BRICKS. Bricks compacted with straw and dried in the sun, are those which are chiefly mentioned in the Scriptures. Of such bricks the tower of Babel was doubtless composed [BABEL, BABYLON], and the making of such formed the chief labour of the Israelites when bondsmen in Egypt (Exod. i. 13, 14). This last fact constitutes the principal subject of Scriptural interest connected with bricks; and leads us to regard with peculiar interest the mural paintings of that country, which have lately been brought to light, in which scenes of brick-making are depicted.

175. [Egyptian Brickmaking.]

'The use of crude brick, baked in the sun, was universal in Upper and Lower Egypt, both for public and private buildings; and the brickfield gave abundant occupation to numerous labourers throughout the country. These simple materials were found to be particularly suited to the climate, and the ease, rapidity, and cheapness with which they were made, afforded additional recommendations. Inclosures of gardens or granaries, sacred circuits encompassing the courts of temples, walls of fortifications and towns, dwelling-houses and tombs, in short, all but the temples themselves were of crude brick; and so great was the demand, that the Egyptian government, observing the profit which would accrue from a monopoly of them, undertook to supply the public at a moderate price, thus preventing all unauthorized persons from engaging in the manufacture. And in order the more effectually to obtain this end, the seal of the king, or of some privileged person, was stamped upon the bricks at the time they were made. This fact, though not positively mentioned by any ancient author, is inferred from finding bricks so marked both in public and private buildings; some having the ovals of a king, and some the name and titles of a priest, or other influential person: and it is probable that those which bear no characters belonged to individuals who had obtained a licence or permission from the government, to fabricate them for their own consumption. The employment of numerous captives who worked as slaves, enabled the government to sell the bricks at a lower price than those who had recourse solely to free labour; so that, without the necessity of a prohibition, they speedily became an exclusive manufacture; and we find that, independent of native labourers, a great many foreigners were constantly engaged in the brick-fields at Thebes and other parts of Egypt. The Jews, of course, were not excluded from this drudgery; and, like the captives detained in the Thebaïd, they were condemned to the same labour in Lower Egypt. They erected granaries, treasure-cities, and other public buildings for the Egyptian monarch: the materials used in their construction were the work of their hands; and the constant employment of brick-makers may be accounted for by the extensive supply required and kept by the government for sale' (Wilkinson's *Ancient Egyptians*, ii. pp. 97, 98).

Captive foreigners being thus found engaged in brick-making, Biblical illustrators, with their usual alacrity, jumped to the conclusion that these captive foreigners were Jews, and that the scenes represented were those of their actual operations in Egypt. Sir J. G. Wilkinson satisfactorily disposes of this inference by the following remark: 'To meet with Hebrews in the sculptures cannot reasonably be expected, since the remains in that part of Egypt where they lived have not been preserved; but it is curious to discover other foreign captives occupied in the same manner, and overlooked by similar 'task-masters,' and performing the very same labours as the Israelites described in the Bible; and no one can look at the paintings of Thebes, representing brick-makers, without a feeling of the highest interest. . . . . It is scarcely fair to argue that, because the Jews made bricks, and the persons here introduced are so engaged, they must necessarily be Jews; since the Egyptians and their captives are constantly required to perform the same task; and the great quantity made at all times may be justly inferred from

the number of buildings which still remain, constructed of these materials: but it is worthy of remark that *more bricks bearing the name of Thothmes III. (who is supposed to have been the king at the time of the Exode) have been discovered than at any other period*, owing to the many prisoners of Asiatic nations employed by him, independent of his Hebrew captives.'

The process of manufacture indicated by the representations in cut 175, does not materially differ from that which is still followed in the same country. The clay was brought in baskets from the Nile, thrown into a heap, thoroughly saturated with water, and worked up to a proper temper by the feet of the labourers. And here it is observable that the watering and tempering of the clay is performed entirely by the light-coloured labourers, who are the captives, the Egyptians being always painted red. This labour in such a climate must have been very fatiguing and unwholesome, and it consequently appears to have been shunned by the native Egyptians. There is an allusion to the severity of this labour in Nahum iii. 14, 15. The clay, when tempered, was cut by an instrument somewhat resembling the agricultural hoe, and moulded in an oblong trough; the bricks were then dried in the sun, and some from their colour appear to have been baked or burned, but no trace of this operation has yet been discovered in the monuments (Dr. W. C. Taylor's *Bible Illustrated*, p. 82). The writer just cited makes the following pertinent remarks on the order of the king that the Israelites should collect the straw with which to compact (not burn) their bricks: 'It is evident that Pharaoh did not require a physical impossibility, because the Egyptian reapers only cut away the tops of the corn [AGRICULTURE]. We must remember that the tyrannical Pharaoh issued his orders prohibiting the supply of straw about two months before the time of harvest. If, therefore, the straw had not been usually left standing in the fields, he would have shown himself an idiot as well as a tyrant; but the narrative shows us that the Israelites found the stems of the last year's harvest standing in the fields; for by the word 'stubble' (Exod. v. 12) the historian clearly means the stalks that remained from the last year's harvest. Still the demand that they should complete their tale of bricks was one that could scarcely be fulfilled; and the conduct of Pharaoh on this occasion is a perfect specimen of Oriental despotism.'

BRIDE, BRIDEGROOM. [MARRIAGE.]

BRIDGE. It is somewhat remarkable that the word bridge does not occur in all Scripture, although there were without doubt bridges over the rivers of Palestine, especially in the country beyond the Jordan, in which the principal perennial streams are found. There is mention of a military bridge (2 Macc. xii. 13) which Judas Maccabæus intended to make, in order to facilitate his operations against the town of Caspis, had he not been prevented. There are traces of ancient bridges across the Jordan, above and below the lake of Gennesareth, and also over the Arnon and other rivers which enter the Jordan from the East; and some of the winter torrents which traverse the westernmost plain (the plain of the coast) are crossed by bridges. But the oldest of these appear to be of Roman origin, and some of more recent date. It would be useless, in a subject so little Biblical, to trace the contrivances which were probably resorted to in the ruder and more remote ages. Such contrivances, before the stone bridge is attained, are progressively the same in most countries, or varied only by local circumstances. The bridges which existed in the later ages of Scriptural history are probably not very different from those which we still find in and near Palestine; and under this view the following representations of existing bridges are introduced.

176. [Jacob's Bridge.]

The principal existing bridge in Palestine is that shown in cut 176. It crosses the upper Jordan about two miles below the lake Houle. The river here flows rapidly through a narrow bed; and here from the most remote ages has lain the high road to Damascus from all parts of Palestine; which renders it likely that a bridge existed at this place in very ancient times, although, of course, not the one which is now standing. The bridge is called Jacob's Bridge (*Jisr Yakoub*), from a tradition that it marks the spot where the patriarch Jacob crossed the river on his return from Padan-Aram. But it is also sometimes called *Jisr Beni Yakoub*, the Bridge of Jacob's Sons, which may suggest that

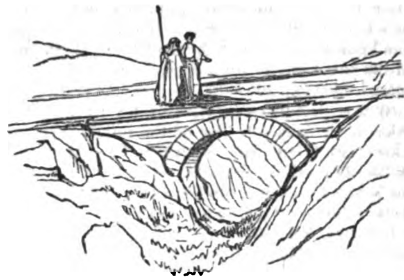
177. [Bridge at El Sak.]

the name is rather derived from some Arab tribe called the Beni Yakoub. The bridge is a very solid structure, well built, with a high curve in the middle like all the Syrian bridges; and is composed of three arches, in the usual style of these fabrics. Close by it, on the east, is a khan much frequented by travellers, built upon the remains of a fortress which was erected by the Crusaders to command the passage of the Jordan. A few soldiers are now stationed here to collect a toll upon all the laden beasts which cross the bridge.

No. 177 is a bridge or arch thrown over a ravine at El Sak, the antiquity of which is evinced by the sculptured cliffs with which it is connected.

Somewhat similar to this is the bridge next represented (No. 178), which is in many respects a

178. [Bridge of St. Anthony.]



curious and remarkable structure. It leads to a convent (of St. Anthony) among the mountains; which explains the Christian symbols that have been placed upon it.

179. [Bridge at Tchavdere.]

No. 179 is an ancient bridge, at Tchavdere, in Asia Minor. It is introduced as a fair specimen of many ancient bridges of one arch, by which winter torrents and small streams are crossed in Syria and Asia Minor.

Bridges, such as the following (No. 180), also entirely unfenced, frequently occur.

180. [Unfenced Bridge.]

No. 181 is a Persian bridge; but it is here introduced as a very fair specimen of the general character of the bridges which are met with in all parts of Western Asia.

181. [Persian Bridge.]

BRIERS. [Thorns.]

BROOK (נַחַל *nachal;* Sept. χείμαῤῥος): the original word thus translated might better be rendered by *torrent.* It is applied, 1. to small streams arising from a subterraneous spring, and flowing through a deep valley, such as the Arnon, Jabbok, Kidron, Sorek, &c.; and also the brook of the willows, mentioned in Isa. xv. 7; 2. to winter-torrents, arising from rains, and which are soon dried up in the warm season (Job vi. 15, 19). Such is the noted river (brook) of Egypt, so often mentioned as at the southernmost border of Palestine (Num. xxxiv. 5; Josh. xv. 4, 47), and, in fact, such are most of the brooks and streams of Palestine, which are numerous in winter and early spring, but of which very few survive the beginning of the summer.

BROTHER (אָח; New Test. Ἀδελφός). This term is so variously and extensively applied in Scripture, that it becomes important carefully to distinguish the different acceptations in which it is used.

1. It denotes a brother in the natural sense, whether the offspring of the same father only (Matt. i. 2; Luke iii. 1, 19), or of the same father and mother (Luke vi. 14, &c.).—2. A near relative or kinsman by blood, cousin (Gen. xiii. 8; xiv. 16; Matt. xii. 46; John vii. 3; Acts i. 14; Gal. i. 19).—3. One who is connected with another by any tie of intimacy or fellowship: hence—4. One born in the same country, descended from the same stock, a fellow countryman (Matt. v. 47; Acts iii. 22; Heb. vii. 5; Exod. ii. 11; iv. 18).—5. One of equal rank and dignity (Job xxx. 29; Prov. xviii. 9; Matt. xxiii. 8).—6. Disciples, followers, &c. (Matt. xxv. 40; Heb. ii. 11, 12).—7. One of the

same faith (Amos i. 9; Acts ix. 30; xi. 29; 1 Cor. v. xi.); from which and other texts it appears that the first converts to the faith of Jesus were known to each other by the title of Brethren, till the name of Christians was given to them at Antioch (Acts xi. 26).—8. An associate, colleague in office or dignity, &c. (Ezra iii. 2; 1 Cor. i. 1; 2 Cor. i. 1; &c.)—9. One of the same nature, a fellow-man (Gen. xiii. 8; xxvi. 31; Matt. v. 22, 23, 24; vii. 5; Heb. ii. 17; viii. 11).—10. One beloved, *i. e.* as a brother, in a direct address (Acts ii. 29; vi. 3; 1 Thess. v. 1).

In Matt. xiii. 55 James, Joses, Simon, and Judas are mentioned as the brothers of Jesus, and in the ensuing verse sisters are also ascribed to him. The Protestant spirit of opposition to the Popish notion about the perpetual virginity of Mary, has led many commentators to contend that this must be taken in the literal sense, and that these persons are to be regarded as children whom she bore to her husband Joseph after the birth of Christ. On the whole we incline to this opinion, seeing that such a supposition is more in agreement with the spirit and letter of the context than any other; and as the force of the allusion to the brothers and sisters of Jesus would be much weakened if more distant relatives are to be understood. Nevertheless there are some grounds for the other opinion, that these were not natural brothers and sisters, but near relations, probably cousins, of Christ. In Matt. xxvii. 56 a James and Joses are described as sons of Mary (certainly not the Virgin); and again a James and Judas are described as sons of Alphæus (Luke vi. 15, 16), which Alphæus is probably the same as Cleophas, husband of Mary, sister of the Virgin (John xix. 25). If therefore it were clear that this James, Joses and Judas are the same that are elsewhere described as the Lord's brothers, this point would be beyond dispute; but as it is, much doubt must always hang over it.

BUBASTIS. [PIBESETH.]

BULL (שׁוֹר *shor*), with other kindred terms, has been already noticed in the article **BEEVES**. We may add תּוֹר *tor*, which occurs only in Ezra vi. 9, 17; vii. 17; Dan. iv. 25, 32, 33 [iv. 22, 29, 30]; in all which passages it seems to refer to bullocks, labouring or yoke oxen, and cattle wild or tame, taken collectively; אבירים *abirim*, implying strength, and rendered 'bulls,' is found in Ps. xxii. 12; l. 13; lxviii. 30; Isa. xxxiv. 7, and Jer. xlvi. 21; and עגלות *agloth*, אגלים *aglim*, are used when the animals are under three years of age. It is contended that the castration of no animal was practised among the Hebrews. If that was the case other methods than those generally alluded to must have been adopted to break oxen to labour; for the mere application of a metal ring through the cartilage of the nostrils, although it might have greatly restrained the ferocity of the beasts, would not assuredly have rendered them sufficiently docile to the yoke and goad of a people whose chief dependence for food was in the produce of the plough.

The rearing of horned cattle was encouraged by the people of Israel. These animals were protected in some cases by express provisions of the law; they were held clean, being the usual sacrifice of consideration, and the chief article of flesh diet of the population. Judging from Egyptian remains, there were two great breeds of straight-backed cattle, the long-horned and the short-horned; and in Upper Egypt at least, there was one without horns. Another hunched species existed, which served to draw chariots, yoked in the same manner as the Brahminee bulls of India are at present. It is still abundant in Nubia, and, under the name of bos sacer, or Indicus, notwithstanding it breeds with the common species, is yet considered distinct. The calf is born with teeth; and although in central Africa, India, and China it is mixed with the other species, and when low in flesh is almost deprived of its hunch, the natural characters nevertheless continue; and from the evidence of ancient Egyptian pictures and written documents it must have been propagated for above 3000 years.

In Egypt the straight-backed or common cattle appear, from the same evidence, to have formed a very handsome breed with lunate horns. They were generally spotted black or red upon a white ground, and there were, besides, others white, red, or black. They all served for common use, but those without red were selected when new sacred bulls, apis or mnevis, were to be supplied; for they alone had the colours which could show the marks made by chance or by art, and required to fit the animal for the purpose intended. There was, besides, a sacred cow; and a black bull was worshipped at Hermonthis. This was the bash, the largest of bulls, by the Greeks changed to onaphis, basis, bazis, and had the additional character of the hair running the wrong way, or forward; hence, evidently it was not a true ox or bull, but a species of gnu, the catoblepas gorgon, or cat. taurina, still denominated *baas* (which is a Namaqua Hottentot name, and not Dutch, although the same word in Dutch signifies 'master') by the Namaquas, and a congener or the same as the فشتال *feshtall* of Shaw, whose name indicates a similar maned and bristled external. This presents another instance of the extension of Semitic words and names to South Africa; for though it may be that the same word was applied to a species of an approximating genus, perhaps the Aigocerus niger, which is black, and, like others of the group, has the direction of the hair on the mane and anterior parts turned forward, either or both of the above species may have extended so far northward as to have been within the occasional reach of the Egyptian priesthood; and the first, at least, which has congeners in Northern Africa, possesses external characters sufficiently remarkable to have answered their purposes.

In Palestine the breed of cattle was most likely in ancient times, as it still is, inferior in size to the Egyptian; and provender must have been abundant indeed, if the number of beasts sacrificed at the great Jewish festivals, mentioned in Josephus, be correct, and could be sustained for a succession of years.

Unless the name be taken synonymously with that of other species, there is not in the Bible any indication of the buffalo. The Asiatic species was not known in Greece till the time of Aristotle, who first speaks of it by the name of the Arachosian ox. No species of Bos Bubalus is known even at this day in Arabia; but in Egypt the Asiatic species has been introduced in consequence of the Moham-

medan conquests in the East. The indigenous buffaloes of Africa, amounting at least to two very distinct species, appear to have belonged to the south and west of that continent, and only at a later period to have approached Egypt as far as the present Bornou; for none are figured on any known monument in either Upper or Lower Egypt. With regard, however, to wild oxen of the true Taurine genus, some may, at a very remote period, have been found in Bashan, evidently the origin of the name,—a region where mountain, wood, and water, all connecting the Syrian Libanus with Taurus, were favourable to their existence; but the wild bulls of the district, mentioned in Psalm xxii. 12, and in various other passages, appear, nevertheless, to refer to domestic species, probably left to propagate without much human superintendence, except annually marking the increase, and selecting a portion for consumption, in the same manner as is still practised in some parts of Europe. For although the words, 'fat bulls of Bashan close me in on every side,' are an indication of wild manners, the word 'fat' somewhat weakens the impression; and we know that the half-wild white breed of Scotland likewise retains the character of encompassing objects that excite their distrust. It was therefore natural that in Palestine wild gregarious instincts should have still remained in operation, where real dangers beset herds, which in the time of David were still exposed to lions in the hills around them. See ANTELOPE, and CALF, where *Bahumed* seems to be a modification of Bahema. Baal is said to have been worshipped in the form of a beeve, and Moloch to have had a calf's or steer's head [BEEVES; CALF].—C. H. S.

182. [Ancient Jewish Funeral: Costume, Modern Syrian.]

BURIAL and SEPULCHRES. Abraham, in his treaty for the cave of Macpelah, spoke the language of nature when he expressed his anxiety to obtain a secure place in which 'to bury his dead out of his sight;' and accordingly, amongst every people whose natural feelings have been influenced by pure morality and religion, the consignment of the mortal remains of those near and dear to them to the custody of their mother earth, has been approved of as the most proper and pleasing mode of disposing of the dead. Two instances, indeed, we meet with in sacred history of the barbarous practice of burning them to ashes: the one in the case of Saul and his sons, whose bodies were probably so much mangled as to preclude their receiving the royal honours of embalment (1 Sam. xxxi. 12); the other, mentioned by Amos (vi. 10), appears to refer to a season of prevailing pestilence, and the burning of those who died of plague was probably one of the sanatory measures adopted to prevent the spread of contagion. But throughout the whole of their national history the people of God observed the practice of burial. Amongst them, as amongst many other ancient nations, the rites of sepulture were considered as of indispensable importance. It was deemed not only an act of humanity, but a sacred duty of religion to pay the last honours to the departed; while, to be deprived of these, as was frequently the fate of enemies at the hands of ruthless conquerors (2 Sam. xxi. 9-14; 2 Kings xi. 11-16; Ps. lxxix. 2; Eccles. vi. 3), was considered the greatest calamity and disgrace which a person could suffer.

On the death of any member of a family, preparations were forthwith made for the burial, which, among the Jews, were in many respects similar to those which are common in the East at the present day, and were more or less expensive according to circumstances. After the solemn ceremony of the last kiss and closing the eyes, the corpse, which was perfumed by the nearest relative, having been laid out and the head covered with a napkin, was subjected to entire ablution in warm water (Acts ix. 37), a precaution probably adopted to guard against premature interment. But, besides this first and indispensable attention, other cares of a more elaborate and costly description were amongst certain classes bestowed on the remains of deceased friends, the origin of which is to be traced to a fond and natural, though foolish anxiety to retard or defy the process of decomposition, and all of which may be included under the general head of embalming. Nowhere was this operation performed with such religious care and in so scientific a manner as in ancient Egypt, which could boast of a class of professional men trained to the business; and such adepts had these 'physicians' become in the art of preserving dead bodies, that there are *mummies* still found, which must have existed

183. [Interior of a Mummy Pit.]

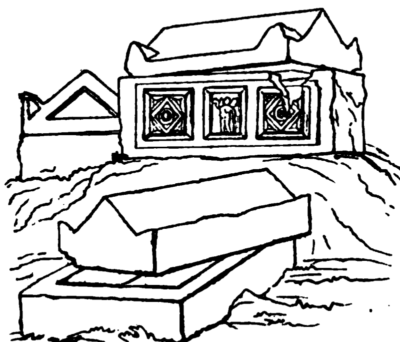
for many thousand years, and are probably the remains of subjects of the early Pharaohs. The

bodies of Jacob and Joseph underwent this eminently Egyptian preparation for burial, which on both occasions was doubtless executed in a style of the greatest magnificence (Gen. l. 2, 26). Whether this expensive method of embalming was imitated by the earlier Hebrews, we have no distinct accounts; but we learn from their practice in later ages that they had some observance of the kind, only they substituted a simpler and more expeditious; though it must have been a less efficient process, which consisted in merely swathing the corpse round with numerous folds of linen, and sometimes a variety of stuffs, and anointing it with a mixture of aromatic substances, of which aloes and myrrh were the chief ingredients. A sparing use of spices on such occasions was reckoned a misplaced and discreditable economy; and few higher tokens of respect could be paid to the remains of a departed friend than a profuse application of costly perfumes. Thus we are told by the writers of the Talmud (Massecheth Semacoth, viii.), that not less than eighty pounds weight of spices were used at the funeral of Rabbi Gamaliel, an elder; and by Josephus (*Antiq.* xvii. 8. § 3), that in the splendid funeral procession of Herod, 500 of his servants attended as spice-bearers. Thus, too, after the crucifixion, Nicodemus and Joseph of Arimathea, two men of wealth, testified their regard for the sacred body of the Saviour by 'bringing a mixture of myrrh and aloes about an hundred pound weight' (John xix. 39, 40); while, unknown to them, the two Marys, together with their associates, were prepared to render the same office of friendship on the dawn of the first day of the week. Whatever cavils the Jewish doctors have made at their extravagance and unnecessary waste in lavishing such a quantity of costly perfumes on a person in the circumstances of Jesus, the liberality of those pious disciples in the performance of the rites of their country was unquestionably dictated by the profound veneration which they cherished for the memory of their Lord. Nor can we be certain but they intended to use the great abundance of perfumes they provided, not in the common way of anointing the corpse, but, as was done in the case of princes and very eminent personages, of preparing 'a bed of spices,' in which, after burning them, they might deposit the body (2 Chron. xvi. 14; Jer. xxxiv. 5). For unpatriotic and wicked princes, however, the people made no such burnings, and hence the honour was denied to Jehoram (2 Chron. xxi. 19).

The corpse, after receiving the preliminary attentions, was enveloped in the grave-clothes, which were sometimes nothing more than the ordinary dress, or folds of linen cloth wrapped

184. [Grave-clothes.]

round the body, and a napkin about the head; though in other cases a shroud was used, which had long before been prepared by the individual for the purpose, and was plain or ornamental according to taste or other circumstances. The body thus dressed was deposited in an upper chamber in solemn state, open to the view of all visitors (Acts ix. 37).



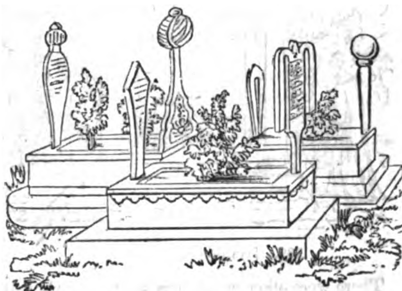
From the moment the vital spark was extinguished, the members of the family, especially the females, in the violent style of Oriental grief, burst out into shrill, loud, and doleful lamentations, and were soon joined by their friends and neighbours, who, on hearing of the event, crowded to the house in such numbers that Mark describes it by the term θόρυβος, a tumult (v. 38). By the better classes, among whom such liberties were not allowed, this duty of sympathizing with the bereaved family was, and still is, performed by a class of females who engaged themselves as professional mourners, and who, seated amid the mourning circle, studied, by vehement sobs and gesticulations, and by singing dirges in which they eulogized the personal qualities or virtuous and benevolent actions of the deceased (Acts ix. 39), to stir the source of tears, and give fresh impulse to the grief of the afflicted relatives. Numbers of these singing men and women lamented the death of Josiah (2 Chron. xxxv. 25). The effect of their melancholy ditties was sometimes heightened by the attendance of minstrels (αὐληταί, properly *pipers*); and thus in solemn silence, broken only at intervals by vocal and instrumental strains suited to the mournful occasion, the time was passed till the corpse was carried forth to the grave.

The period between the death and the burial was much shorter than custom sanctions in our country; for a long delay in the removal of a corpse would have been attended with much inconvenience, from the heat of the climate generally, and, among the Jews in particular, from the circumstance that every one that came near the chamber was unclean for a week. Interment, therefore, where there was no embalming, was never postponed beyond twenty-four hours after death, and generally it took place much earlier. It is still the practice in the East to have burials soon over; and there are two instances in sacred history where consignment to the grave followed immediately after decease (Acts v. 6, 10).

Persons of distinction were deposited in coffins. Among the Egyptians, who were the inventors of them, these chests were formed most commonly of several layers of pasteboard glued together, sometimes of stone, more rarely of sycamore wood, which was reserved for the great, and furnished, it is probable, the materials of the coffin which received the honoured remains of the vizier of Egypt. There is good reason to believe also that the kings and other exalted personages in ancient Palestine were buried in coffins of wood or stone, on which, as additional marks of honour, were placed their insignia when they were carried to their tombs—if a prince, his crown and sceptre—if a warrior, his armour,—and if a rabbi, his books.

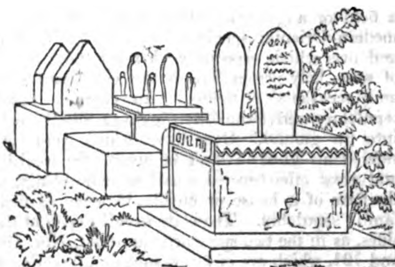
But the most common mode of carrying a corpse to the grave was on a bier or *bed* (2 Sam. iii. 31), which in some cases must have been furnished in a costly and elegant style, if, as many learned men conclude from the history of Asa (2 Chron. xvi. 14) and of Herod (Josephus, *Antiq.* xvii. 8. § 3), these royal personages were conveyed to their tombs on their own beds. The bier, however, in use among the common and meaner sort of people was nothing but a plain

wooden board, on which, supported by two poles, the body lay concealed only by a slight coverlet



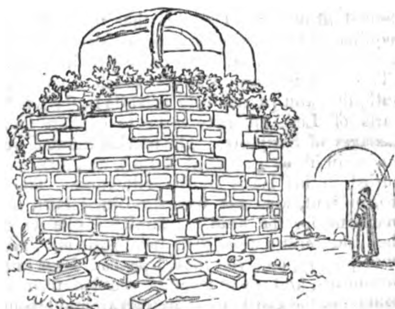
185. [Ancient Sarcophagi in Palestine.]

from the view of the attendants. On such a humble vehicle was the widow's son of Nain carried (Luke vii. 14), and 'this mode of performing funeral obsequies,' says an intelligent traveller, 'obtains equally in the present day among the Jews, Mohammedans, and Christians of the East.' The nearest relatives kept close by the bier, and performed the office of bearers, in which, however, they were assisted by the company in succession. For if the deceased was a public character, or, though in humble life, had been much esteemed, the friends and neighbours showed their respect by volunteering attendance in great numbers; and hence, in the story of the affecting incident at Nain, it is related that 'much people of the city were with the widow.' In cases where the expense could be afforded, hired mourners accompanied the procession, and, by every now and then lifting the covering and exposing the corpse, gave the signal to the company to renew their shouts of lamentation. A remarkable instance occurs in the splendid funeral cavalcade of Jacob. Those mercenaries broke out at intervals into the most passionate expressions of grief, but especially on approaching the boundaries of Canaan and the site of the sepulchre: the immense company halted for seven days, and, under the guidance of the mourning attendants, indulged in the most violent paroxysms of sorrow.



Sepulchres were, as they still are in the East,—by a prudential arrangement sadly neglected in our country—situated without the precincts of cities. Among the Jews, in the case of Levitical cities, the distance required to be 2000 cubits, and in all it was considerable. Nobody was allowed to be buried within the walls, Jerusalem forming the only exception, and even there the privilege was reserved for the royal family of David and a few persons of exalted character (1 Kings ii. 10; 2 Kings xiv. 20). In the vicinity of this capital were public cemeteries for the general accommodation of the inhabitants, besides a field appropriated to the *burial of strangers*,—the supposed site of which, together with the discoveries made in it, has been described by a late traveller, Wilde, in a most interesting and satisfactory manner, but the evidence he adduces for his conclusions does not admit of abridgment here.

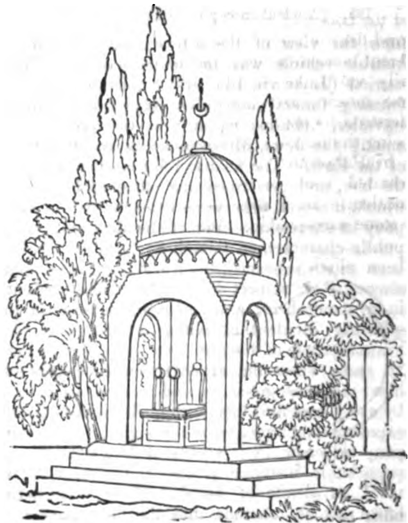
The style of the public cemeteries around the cities of ancient Palestine in all probability resembled that of the present burying-places of the East, of which Dr. Shaw gives the following description:—'They occupy a large space, a great extent of ground being allotted for the purpose. Each family has a portion of it walled in like a garden, where the bones of its ancestors have remained undisturbed for many generations. For in these inclosures the graves are all distinct and separate; each of them having a stone placed upright, both at the head and feet, inscribed with the name or title of the deceased; whilst the intermediate space is either planted with flowers, bordered round with stone, or paved with tiles.'



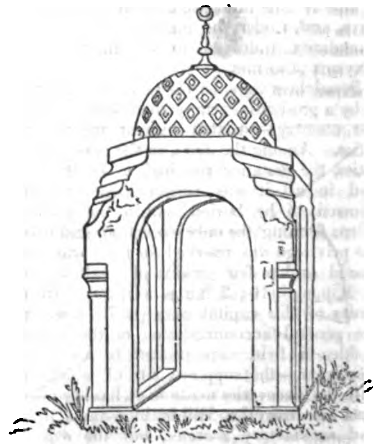
186. [Modern Syrian Tombs.]

Examples of these tombs are given in Nos. 186 and 187. By these it is seen that, as among people in good circumstances, the monumental stones are placed upon quadrangular tombs, in the centre of which evergreen or flowering shrubs are often planted, and tended with much care.

187. [Modern Syrian Tombs.]

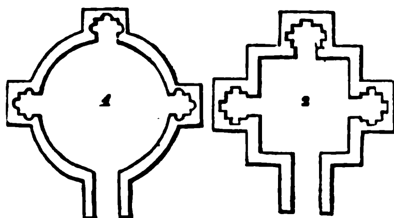


188. [Rachel's Sepulchre.]



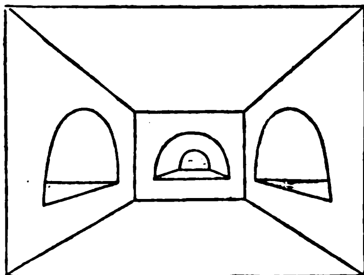
189. [Garden Tomb.]

There were other sepulchres which were private property, erected at the expense and for the use of several families in a neighbourhood, or provided by individuals as a separate burying-place for themselves. These were situated either in some conspicuous place, as Rachel's on the highway to Bethlehem (Gen. xxxv. 19)—the comparatively modern representation of which is given above in No. 188—or in some lonely and sequestered spot, under a wide-spreading tree (Gen. xxxv. 8) in a field or a garden. Of such garden tombs a modern Oriental specimen is given in No. 189, and over which, especially when the tomb is that of some holy person, lamps are sometimes hung and occasionally lighted. In common cases, sepulchres were formed by digging a small depth into the ground. Over these, which were considered an humble kind of tomb, the wealthy and great often erected small stone buildings, in the form of a house or cupola, to serve as their family sepulchre. These are usually open at the sides, as in the two specimens annexed, Nos. 190 and 191, which are of forms such as a traveller in the East has daily occasion to notice. Sometimes, however, these interesting monuments are built up on all sides, as in the tomb of Rachel figured above (No. 188); so that the walls are required to be taken down, and a breach made to a certain extent, on each successive interment. 'This custom,' says Carne, 'which is of great antiquity, and particularly prevails in the lonely parts of Lebanon, may serve to explain some passages of Scripture. The prophet Samuel was buried in his own house at Ramah, and Joab was buried in his house in the wilderness. These, it is evident, were not their dwelling-houses, but mansions for the dead, or family vaults which they had built within their own policies.' Not unfrequently, however, those who had large establishments, and whose fortunes enabled them to command the assistance of human art and labour, purchased, like Abraham, some of the natural caverns with which Palestine abounded, and converted them by some suitable alterations into family sepulchres; while others with vast pains and expense made excavations in the solid rock (Matt. xxvii. 60). These, the entrance to which was either horizontal or by a flight of steps, had their roofs, which were arched with the native stone, so high as to admit persons standing upright, and were very spacious, sometimes being divided into several distinct apartments; in which case the remoter or innermost chambers were dug a little deeper than those that were nearer the entrance, the approach into their darker solitudes being made by another descending stair. Many sepulchres of this description are still found in Palestine; but the descent into them is so choked up with the rubbish of ages, that they are nearly inaccessible, and have been explored only by a few indefatigable



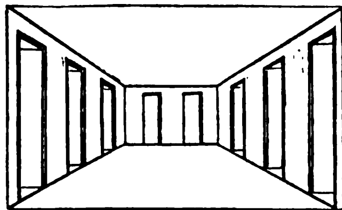
190. [Domed Sepulchre.]

191. [Domed Sepulchre.]



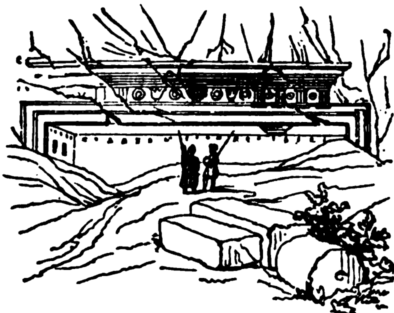
192. [Interior of Tomb of the Kings.]

hunters after antiquities. Along the sides of those vast caverns niches were cut, or sometimes shelves ranged one above another, on which were deposited the bodies of the dead, while in others the ground-floor of the tomb was raised so as to make different compartments, the lowest place in the family vaults being reserved for the servants. These interior arrangements may be the better understood by the help of the annexed engravings showing the interiors of tombs now actually existing in Palestine. No. 192 is the interior of the celebrated Tomb of the Kings (so called), near Jerusalem. In it are some further specimens of the stone sarcophagi already noticed. No. 193



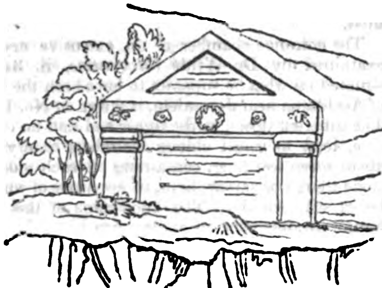
193. [Ground Plans of Sepulchres.]

contains two ground-plans showing the general character of the interior arrangements of the more extensive crypts. Some of those found near Tyre, and at Alexandria, are of the round form shown in fig. 1, but these seem exceptions; for the tombs at Jerusalem, in Asia Minor, and generally in Egypt and the East, offer the arrangement shown in fig. 2.



194. [Interior of Sepulchre at Tyre.]

The above cut (No. 194) is a chamber of one of the sepulchres situated near Tyre, with three large niches in which the bodies were deposited.



The entrance chamber of an extensive crypt, examined by Dr. Wilde (*Narrative*, ii. 344), situated on what he supposes to have been the site of Aceldama near Jerusalem, is shown in No. 195. The different doors, at the upper end and on each side, lead to small oblong chambers or crypts, about seven feet long, containing on each side a stone trough or sarcophagus, in every one of which bones still remain. The knowledge of this internal arrangement in those immense subterranean receptacles serves to illustrate that magnificent passage, where the prophet in a strain of the most sublime poetry represents all the kings of the earth as lying in sepulchral glory,

195. [Interior of Sepulchre near Jerusalem.]

and as raising themselves from their cells or thrones in astonishment at the arrival of the haughty tyrant of Assyria (Isa. xiv. 18). The more elevated the position of these sepulchres was in the rock—perched, as it were, among the high and seemingly inaccessible cliffs—of course the more notice and admiration they attracted, and the greater was thought to be the honour of having achieved so difficult an undertaking; and hence we discover the source of Shebna's vanity, which drew upon him in so pointed a manner the displeasure and rebuke of God (Isa. xxii. 16).

196. [Exterior of Tomb of the Kings.]

The mouth of the sepulchre was secured by a huge stone (Matt. xxvii. 60; John xi. 38). But the entrance-porch, to which the removal of this rude door gave admittance, was so large that several persons could stand in it and view the interior; and hence we read that the women who visited the sepulchre of our Lord, 'entering in, saw a young man sitting, clothed in a long white garment' (Mark xvi. 5); and in like manner, in reference to the flight of steps, that Peter 'stooping down, and looking in, saw the linen clothes lying' (John xx. 5). Some of the more splendid

197. [Exterior of Sepulchre: Jerusalem.]

of these tombs, however, instead of the block of stone, have the porches surmounted with tasteful mason-work, and supported by well-finished colonnades; and as they stand open and exposed, do now, as they did formerly, afford retreats to numbers of vagrants and lawless characters. The rocky valleys around Jerusalem exhibit numberless specimens of these sepulchral excavations. Representations of two of these are here given. No. 196 shows the exterior of the so-called sepulchre of the Kings, the interior of which is represented in No. 192. The other (No. 197) is the exterior view of the sepulchre, the interior arrangements of which are shown in No. 195. An interesting account of this tomb is given by Dr. Wilde (*ut sup.*), by whom it was first examined and described, after it had been recently discovered by the Arabs.

Monuments of this elegant description were erected to many of the prophets and other holy men who figured as prominent characters in the early history of Israel, and it seems to have been considered, in the degenerate age of our Lord, an act of great piety to repair and ornament with fresh devices the sepulchres of those ancient worthies (Matt. xxiii. 29). The art and taste of the times would, of course, expend their chief resources in what was deemed the patriotic service of adding fresh beauty and attraction to edifices which contained such venerable and precious dust. But humbler tombs received also some measure of attention, all in the neighbourhood of Jerusalem being at certain seasons whitewashed (Matt. xxiii. 27). The origin of this prevailing custom is to be traced not so much to a desire of rendering all such objects of interest in the environs of Jerusalem pleasing to the eye, as of making them easily discernible, and so preventing the risk of contracting ceremonial defilement through accident or ignorance, more especially at the annual festivals, when multitudes unacquainted with the localities resorted to the capital. To paint them with white was obviously the best preservative against the apprehended danger; and the season chosen for this garniture of the sepulchres was on the return of spring, a little before the Passover, when, the winter rains being over, a long unbroken tract of dry weather usually ensued. The words of Christ referred to were spoken but a few days before the Passover, when the fresh coating of white paint would be conspicuous on all the adjoining hills and valleys; and when we consider the striking contrast that must have been presented between the graceful architecture and carefully dressed appearance of these tombs without, and the disgusting relics of mortality that were mouldering within, we cannot fail to perceive the emphatic energy of the language in which our Lord rebuked the *hypocrisy* of the Pharisees.

It remains only to notice that, during the first few weeks after a burial, members of a family, especially the females, paid frequent visits to the tomb. This affecting custom still continues in the East, as groups of women may be seen daily at the graves of their deceased relatives, strewing them with flowers, or pouring over them the tears of fond regret. And hence, in the interesting narrative of the raising of Lazarus, when Mary rose abruptly to meet Jesus, whose approach had been privately announced to her, it was natural for her assembled friends, who were ignorant of her motives, to suppose 'she was going to the grave to weep there' (John xi. 31).—R. J.

198. [Women at Tombs.]

BURNT-OFFERINGS (עוֹלָה *'olah*, from עָלָה, *to ascend*), sacrifices which owed their Hebrew name to the circumstance that the whole of the offering was to be consumed by fire upon the altar, and to *rise*, as it were, in smoke towards heaven: hence also the term כליל (Deut. xxxiii. 10; 1 Sam. vii. 9; Ps. li. 21; comp. Judg. xx. 40); Chald. כלילא; Gr. ὁλοκαύτωμα, *entire burnt-offering*, alluding to the fact that, with the exception of the skin, nothing of the sacrifice came to the share of the officiating priest or priests in the way of emolument, it being *wholly and entirely* consumed by fire.

Such burnt-offerings are among the most ancient, if not the earliest, on Scriptural record. We find them already in use in the patriarchal times; hence the opinion of some, that *Abel's* offering (Gen. iv. 4) was a burnt-offering as regarded the firstlings of his flock, while the pieces of fat which he offered was a thank-offering, just in the manner that Moses afterwards ordained, or rather confirmed from ancient custom (Lev. i. *sq.*). It was a burnt-offering that Noah offered to the Lord after the Deluge (Gen. viii. 20).

Originally and generally all offerings from the animal kingdom seem to have passed under the name of *olah*, since a portion at least of *every* sacrifice, of whatever kind—nay, that very portion which constituted the offering to God—was

consumed by fire upon the altar. In process of time, however, when the sacrifices became divided into numerous classes, a more limited sense was given to the term עולה, it being solely applied to those sacrifices in which the priests did not share, and which were intended to propitiate the anger of Jehovah, for some particular transgression. Only oxen, male sheep or goats, or turtle-doves and young pigeons, all without blemish, were fit for burnt-offerings. The offerer, in person, was obliged to carry this sacrifice first of all into the fore-court, as far as the gate of the tabernacle or temple, where the animal was examined by the officiating priest to ascertain that it was without blemish. The offerer then laid his hand upon the victim, confessing his sins, and dedicated it as his sacrifice to propitiate the Almighty. The animal was then killed (which might be done by the offerer himself) towards the north of the altar (Lev. i. 11), in allusion, as the Talmud alleges, to the coming of inclement weather (typical of the Divine wrath) from the northern quarter of the heavens. After this began the ceremony of taking up the blood and sprinkling it *around* the altar, that is, upon the lower part of the altar, not immediately upon it, lest it should extinguish the fire thereon (Lev. iii. 2; Deut. xii. 27; 2 Chron. xxix. 22).

In the Talmud (Tract *Zebachim*, sect. i. ch. 1.) various laws are prescribed concerning this sprinkling of the blood of the burnt-offering: among others, that it should be performed about the middle of the altar, below the red line, and only twice, so as to form the figure of the Greek gamma; also, that the priest must first take his stand east of the altar, sprinkling in that position first to the east and then to the west: which done, he was to shift his position to the west, sprinkling again to the east and west, and lastly only round about the altar as prescribed in Lev. i. 5. The next act was the skinning or flaying of the animal, and the cutting of it into pieces, actions which the offerer himself was allowed to perform (Lev. i. 6). The skin alone belonged to the officiating priest (Lev. vii. 8). The dissection of the animal began with the head, legs, &c., and it was divided into twelve pieces. The priest then took the right shoulder, breast, and entrails, and placing them in the hands of the offerer, he put his own hands beneath those of the former, and thus waved the sacrifice up and down several times in acknowledgment of the all-powerful presence of God (Tract *Cholin*, i. 3). The officiating priest then retraced his steps to the altar, placed the wood upon it in the form of a cross, and lighted the fire. The entrails and legs being cleansed with water, the separated pieces* were placed together upon the altar in the form of a slain animal. Poor people were allowed to bring a turtle-dove or a young pigeon as a burnt-offering, these birds being very common, and cheap in Palestine (Maimonides, *Moreh Nevochim*, iii. 46). With regard to these latter, nothing is said about the sex, whether they were to be males or females. The mode of killing them was by nipping off the head with the nails of the hand.

Standing public burnt-offerings were those used daily morning and evening (Num. xxviii. 3; Exod. xxix. 38), and on the three great festivals (Lev. xxiii. 37; Num. xxviii. 11-27; xxix. 2-22; Lev. xvi. 3; comp. 2 Chron. xxxv. 12-16).

Private and occasional burnt-offerings were those brought by women rising from childbed (Lev. xii. 6); those brought by persons cured of leprosy (*ib.* xiv. 19-22); those brought by persons cleansed from issue (*ib.* xv. 14, *sq.*); and those brought by the Nazarites when rendered unclean by having come in contact with a dead body (Num. vi. 9), or after the days of their separation were fulfilled (*ib.* vi. 14).

Nor were the burnt-offerings confined to these cases alone; we find them in use almost on all important occasions, events, and solemnities, whether private or public, and often in very large numbers (comp. Judg. xx. 26; 1 Sam. vii. 9; 2 Chron. xxxi. 2; 1 Kings iii. 4; 1 Chron. xxix. 21; 2 Chron. xxix. 21; Ezra vi. 17; viii. 35). Heathens also were allowed to offer burnt-offerings in the temple, and Augustus gave orders to sacrifice for him every day in the temple at Jerusalem a burnt-offering, consisting of two lambs and one ox (Philo, *Opp.* ii. p. 592; Joseph. *De Bell. Jud.* ii. 17. 2).—E. M.

BUSHEL is used in the Auth. Vers. to express the Greek μόδιος, Latin *modius*, a measure of about a peck.

BUTTER. [Milk.]

BUTZ. [Byssus.]

BUZ, son of Nahor and Milcah, and brother of Huz (Gen. xxii. 21). Elihu, one of Job's friends, who is distinguished as an Aramæan or Syrian (Job xxxii. 2), was doubtless descended from this Buz. Judgments are denounced upon the tribe of Buz by Jeremiah (xxv. 23); and from the context this tribe appears to have been located in Arabia Deserta; which may render it uncertain whether the descendants of Nahor's son are intended, although a migration south of the Euphrates is by no means unlikely, and had perhaps already occurred in the time of Elihu.

BYSSUS. The Greek word βύσσος occurs in Luke xvi. 19, where the rich man is described as being clothed in purple and *fine linen;* and also in Rev. xviii. 12, 16, and xix. 8, 14, among the merchandise, the loss of which would be mourned for by the merchants trading with the mystical Babylon. But it is by many authors still considered uncertain whether this byssus was of *flax* or *cotton*. Reference has been made to this article both from *bad* and *butz*, and might be also from *shesh*. For, as Rosenmüller says, 'The Hebrew word *shesh*, which occurs thirty times in the two first books of the Pentateuch (*v.* Shesh, and Celsius, ii. p. 259), is in these places, as well as in Prov. xxxi. 22, by the Greek Alexandrian translators, interpreted *byssus*, which denotes Egyptian cotton, and also the cotton cloth made from it. In the later writings of the Old Testament, as for example, in the Chronicles, the book of Esther, and Ezekiel, *buz* is commonly used instead of *shesh*, as an expression for cotton cloth.' This however seems to be inferred rather than proved, and it is just as likely that improved civilization may have introduced a substance such as cotton, which was unknown at the times when *shesh* was spoken of

* In Lev. i. 8 mention is made only of the *head* and the *fat*, but these comprised, no doubt, also the other pieces, the sacrifice being an עולה, in which nothing was left to the priests.

and employed; in the same manner as we know that in Europe woollen, hempen, linen, and cotton clothes have, at one period of society, been more extensively worn than at another.

בד *bad* ocurs in numerous passages of Scripture, as Exod. xxviii. 42, and xxix. 29; Lev. vi. 3; xvi. 4, 23, 32; 1 Sam. ii. 18; xxxii. 18; 2 Sam. vi. 14; 1 Chron. xv. 27; Ezek. ix. 2, 3, 11; x. 2, 6, 7; Dan. x. 5; xii. 7. In all these places the word *linen* is used in the Authorized Version, and Rosenmüller (*Botany of the Bible*, p. 175) says, 'The official garments of Hebrew, as well as of Egyptian priests, were made of linen, in Hebrew *bad*.' Celsius, however (ii. p. 509), states his opinion thus: 'Non fuit igitur בד vulgare linum, ut arbitrati sunt viri quidam doctissimi; sed linum Ægypti optimum et subtilissimum;' and he quotes (p. 510) Aben Ezra for its being the same thing as *butz*: '*Butz* idem est quod *bad*, nempe species lini in Ægypto.'

בוץ *butz* or *buz* occurs in 1 Chron. iv. 21; xv. 27; 2 Chron. ii. 14; iii. 14; v. 12; Esther i. 6; viii. 15; Ezek. xxvii. 16; and in these passages in the Authorized Version it is rendered *fine linen* and *white linen*. According to Celsius, 'Butz idem est quod Græci βύσσον et Latini *byssum* adpellant;' while Rosenmüller, as above stated, considers buz and byssus to indicate cotton and the cloth made from it; as does Forster in his book *De Bysso Antiquorum*.

The mere similarity of name would not prove the correctness of either opinion, for they are not more like than are قطن *kootn*, and كتان *kutan*, adduced by Rosenmüller (*Bibl. Bot.* p. 176), as the Arabic names of cotton, while in fact they indicate, the first cotton, and the second, flax. So at p. 179, the same author states that 'in the Sanscrit, *karpasum* denotes a linen cloth.' Now nothing is more certain than that the Sanscrit word indicates cotton, and cotton only, which was no doubt known to the Hebrews during a part at least of the time when the Scriptures were written. Mr. Harmer has justly observed that 'there were various sorts of linen cloth in the days of antiquity; for little copious as the Hebrew language is, there are no fewer than four different words, at least, which have been rendered "linen," or "fine linen," by our translators.' These words are, *bad*, *butz*, *pishet*, and *shesh*. To which may be added *carpas* or *karpas*, and as Dr. Harris suggests, *sadin* and *seethun*. But as it will be more satisfactory, in the midst of so many uncertainties, to proceed from the known to the unknown, and from a knowledge of things to the names by which they were in early times indicated, so it will be desirable in this work to treat of the different substances employed for clothing, under the heads of COTTON, FLAX, and HEMP, as well as under SILK and WOOL.—J. F. R.

C.

CAB, a measure mentioned in 2 Kings vi. 25. The Rabbins make it the sixth part of a *seah* or *satum*, and the eighteenth part of an ephah. In that case a cab contained 3⅓ pints of our wine measure, or 2⅚ pints of our corn measure.

CABBALAH. [KABBALAH.]

CABUL (כבול; Sept. Ὅριον). A district given to Hiram, king of Tyre, by Solomon, in acknowledgment of the important services which he had rendered towards the building of the Temple (1 Kings ix. 13). Hiram was by no means pleased with the gift, and the district received the name of Cabul (*unpleasing*) from this circumstance. The situation of Cabul has been disputed; but we are content to accept the information of Josephus (*Antiq.* viii. 5. 3), who seems to place it in the north-west part of Galilee, adjacent to Tyre. In Galilee it is also placed by the Septuagint. There was a town named Cabul in the tribe of Zebulun (Josh. xix. 27), and as it was in Galilee, it is possible that it was one of the twenty towns consigned to Hiram, who, to mark his dissatisfaction, applied the significant name of this one town to the whole district. The cause of Hiram's dislike to what Solomon doubtless considered a liberal gift, is very uncertain. It has been conjectured (*Pictorial Bible*, note on 1 Kings ix. 13) that 'probably, as the Phœnicians were a maritime and commercial people, Hiram wished rather for a part of the coast, which was now in the hands of Solomon, and was not therefore prepared to approve of a district which might have been of considerable value in the eyes of an agricultural people like the Hebrews. Perhaps the towns were in part payment of what Solomon owed Hiram for his various services and contributions.'

CÆSAR, a name assumed by, or conferred upon, all the Roman emperors after Julius Cæsar. In this way it became a sort of title like Pharaoh, and, as such, is usually applied to the emperors in the New Testament, without their distinctive proper names (AUGUSTUS). The Cæsars mentioned in the New Testament are Augustus (Luke ii. 1); Tiberius (Luke iii. 1; xx. 22); Claudius (Acts xi. 28); Nero (Acts xxv. 8); Caligula, who succeeded Tiberius, is not mentioned.

CÆSAREA. There were two important towns in Palestine thus named in compliment to Roman emperors.

1. CÆSAREA PALESTINA, or Cæsarea of Palestine, so called to distinguish it from the other Cæsarea, or simply Cæsarea, without addition, from its eminence as the Roman metropolis of Palestine, and the residence of the procurator. It was built by Herod the Great, with much of beauty and convenience, twenty-two years before the birth of Christ, on a spot where had formerly stood a tower called Straton's Tower.

The whole coast of Palestine may be said to be extremely inhospitable, exposed as it is to the fury of the western storms, with no natural port affording adequate shelter to the vessels resorting to it. To remedy this defect, Herod, who, though an arbitrary tyrant, did much for the improvement of Judæa, set about erecting, at immense cost and labour, one of the most stupendous works of antiquity. He threw out a semicircular mole, which protected the port of Cæsarea on the south and west, leaving only a sufficient opening for vessels to enter from the north; so that, within the enclosed space, a fleet might ride at all weathers in perfect security. The mole was constructed of immense blocks of stone brought from a great distance, and sunk to the depth of 20 fathoms in the sea. The best idea of the work may perhaps be realised,

by comparing it as to design and execution with the Breakwater at Plymouth. Besides this, Herod added many splendid buildings to the city: among which was a temple, dedicated to Cæsar, a theatre, and an amphitheatre; and when the whole was finished, which was within twelve years from the commencement of the undertaking, he fixed his residence there, and thus elevated the city to the rank of the civil and military capital of Judæa, which rank it continued to enjoy as long as the country remained a province of the Roman empire (Joseph. *Antiq.* xv. 9. &c. See Dr. Mansford, *Script. Gazetteer*). Vespasian raised Cæsarea to the rank of a Roman colony, granting it first, exemption from the capitation tax, and afterwards, from the ground taxes (the real *jus Italicum*, see COLONY). The place was, however, inhabited chiefly by Gentiles, though some thousands of Jews lived in it (Joseph. *De Bell. Jud.* iii. 9. 1; iii. 14; *Antiq.* xx. 8. 7; *Vita*, 11).

Cæsarea is the scene of several interesting circumstances described in the New Testament, such as the conversion of Cornelius, the first-fruits of the Gentiles (Acts x); the residence of Philip the Evangelist (Acts xxi. 8); the journey thither of St. Paul; his pleading there before Felix; his imprisonment for two years; and his final pleading before Festus and King Agrippa (Acts xxiv.). It was here also, in the amphitheatre built by his father, that Herod Agrippa was smitten of God, and died (Acts xii. 21-23).

It seems there was a standing dispute between the Jewish and Gentile inhabitants of Cæsarea, to which of them the city really belonged. The former claimed it as having been built by a Jew, meaning King Herod; the latter admitted this, but contended that he built it for them and not for Jews, seeing that he had filled it with statues and temples of their gods, which the latter abominated (Joseph. *De Bell. Jud.* ii. 13. 7). This quarrel sometimes came to blows, and eventually,

199. [Cæsarea.]

the matter was referred to the emperor Nero, whose decision in favour of the Gentiles, and the behaviour of the latter thereupon, gave deep offence to the Jews generally, and afforded occasion for the first outbreaks, which led to the war with the Romans (Joseph. *De Bell. Jud.* ii. 14). One of the first acts of that war was the massacre of all the Jewish inhabitants by the Gentiles, to the number of 20,000 (Joseph. *u. s.* ii. 18. 1.).

In later times, Cæsarea is chiefly noted as the birth-place and episcopate of Eusebius, the celebrated Church historian, in the beginning of the 4th century.

Cæsarea is almost thirty-five miles north of Joppa or Jaffa, and fifty-five miles from Jerusalem. It still retains the ancient name in the form of Kaiseraih; but has long been desolate. The most conspicuous ruin is that of an old castle, at the extremity of the ancient mole (see the engraving). A great extent of ground is covered by the remains of the city. A low wall of grey-stone encompasses these ruins, and without this is a moat now dry. Between the accumulation of rubbish and the growth of long grass, it is difficult to define the form and nature of the various ruins thus enclosed. Nevertheless, the remains of two aqueducts, running north and south, are still visible. The one next the sea is carried on high arches; the lower one, to the eastward, carries its waters along a low wall, in an arched channel, five or six feet wide. The water is abundant and of excellent quality; and the small vessels of the country often put in here to take in their supplies. Cæsarea is, apparently, never frequented for any other purpose; even the high-road leaves it wide; and it has been visited

by very few of the numerous travellers in Palestine. The present tenants of the ruins are snakes, scorpions, lizards, wild boars, and jackals (George Robinson, *Travels*, ii. pp. 189, 191; see also D'Arvieux, Clarke, Buckingham, Joliffe, and Monro).

2. Cæsarea Philippi. Towards the springs of the Jordan, and near the foot of Isbel Shrik, or the Prince's Mount, a lofty branch of Lebanon, forming in that direction the boundary between Palestine and Syria Proper, stands a city originally called Banias, which has erroneously been considered by many to be the Laish captured by the Danites, and by them called Dan (Judg. xviii. 7-29). But it appears, from the testimony of both Eusebius and Jerome, that they were then separate and distinct cities, situated at the distance of four miles from each other. This city, which was in later times much enlarged and beautified by Philip the tetrarch, who called it Cæsarea in honour of Tiberius the emperor, adding the cognomen of Philippi to distinguish it from Cæsarea of Palestine, lay about 120 miles north from Jerusalem, and a day and a half's journey from Damascus (Matt. xvi. 13; Mark viii. 27). Herod Agrippa also bestowed upon it a considerable share of attention, still further extending and embellishing it. In compliment to the emperor Nero, its name was afterwards changed to Neronias; and Titus, after the overthrow of Jerusalem, exhibited some public games here, in which the Jewish prisoners were compelled to fight like gladiators, and numbers perished in the inhuman contests. Under the Christians it was erected into a bishopric of Phœnicia. 'During the Crusades,' says Dr. Robinson, 'it was the scene of various changes and conflicts. It first came into the possession of the Christians in 1129, along with the fortress on the adjacent mountain, being delivered over to them by its Israelite governor, after their unsuccessful attempt upon Damascus in behalf of that sect. It has now resumed its original name of Bâniâs, which is the Arabic pronunciation of the Paneas of the Greeks and Romans. The city and castle were given as a fief to the Knight Rayner Brus. In 1132, during the absence of Rayner, Bâniâs was taken, after a short assault, by the Sultan Ismail of Damascus. It was recaptured by the Franks, aided by the Damascenes themselves. In 1139, the temporal control was restored to Rayner Brus; and the city made a Latin bishopric, under the jurisdiction of the archbishop of Tyre (*Researches in Palestine*, vol. iii. p. 360). Bâniâs has now dwindled into a paltry and insignificant village, whose mean and destitute condition contrasts strikingly with the rich and luxuriant character of the surrounding country. It is said that many remains of ancient architecture are found in the neighbourhood, bearing testimony to the former grandeur of the place, although it is difficult to trace the site of the splendid temple erected here in honour of Augustus. The ruins of the castle of Bâniâs, which appears to have been a work of the Saracens, crown the summit of the adjoining mountain, and display a wall 10 feet in thickness, by which the fortress was defended. The ruins of another fortified castle are visible on the south of the village, and a substantial bridge which conducts to it, inscribed with an Arabic legend, its date being of the age of the Crusades.—R. J.

CAIN. The derivation of this word is disputed. Most writers trace it to קין, *an acquisition* or *possession*, but some derive it from a verb signifying *to lament*, and others from a verb of similar sound, signifying *to envy*. Both Eusebius and Chrysostom seem to support the last interpretation; but the best Hebrew authorities are on the side of that first named.

Abounding as the Scriptures do with proofs of human guilt, and filled yet more as are the secular annals of the world with instances of crime, none impress the mind with a stronger feeling of horror than that of Cain. It is easy to understand how the passion of envy or jealousy wrought in the heart of the offender; but some degree of mystery attends the immediate origin of his crime. Abel, it appears, brought two offerings, the one an oblation, the other a sacrifice. Cain brought but the former—a mere acknowledgment, it is supposed, of the sovereignty of God; neglecting to offer the sacrifice which would have been a confession of fallen nature, and, typically, an atonement for sin. It was not, therefore, the mere difference of feeling with which the two offerings were brought which constituted the virtue of the one, or the guilt of the other brother. God's righteous indignation against sin had been plainly revealed, and there can be no doubt that the means of safety, of reconciliation and atonement, were as plainly made known to Adam and his offspring. The refusal, therefore, of the sacrifice was a virtual denial of God's right to condemn the sinner, and at the same time a proud rejection of the proffered means of grace.

The punishment which attended the crime was such as could only be inflicted by an Almighty avenger. It admitted of no escape, scarcely of any conceivable alleviation. Cursed from the earth himself, the earth was doomed to a double barrenness wherever the offender should set his foot. Not like his father, sentenced merely to gather his food from the unwilling ground, bearing herbs, though thorns sprung up along with them, for him it was not to yield its strength; it was to be as without life beneath him. Physical want and hardship, therefore, were among the first of the miseries heaped upon his head. Next came those of mind and conscience: 'The voice of thy brother's blood crieth unto me from the ground,' was the announcement of his discovered guilt. He could now hear that same voice himself; nor did any retreat remain to him from the terrors of his own soul or those of Divine vengeance: 'From thy face shall I be hid,' was his agonizing cry, even when trembling at the voice of his judge; no hope, as he knew and thus confessed, continuing to exist for him who was utterly cut off from communion with God. By the statement that 'Cain went out from the presence of the Lord,' probability is given to the conjecture which represents him as abiding, till thus exiled, in some favoured spot where the Almighty still, by visible signs, manifested himself to his fallen creatures. The expression of dread lest, as he wandered over the face of the earth, he might be recognised and slain, has an awful sound when falling from the mouth of a murderer. But he was to be protected against the wrath of his fellow-men; and of this God gave him assurance, not, says Shuckford, by setting a mark upon him, which is a false translation, but by appointing a sign or token which he

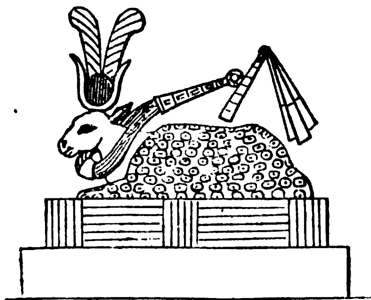
himself might understand as a proof that he should not perish by the hand of another, as Abel had perished by his.

What was the Divine purpose in affording him this protection it is difficult to determine. That it was not with the intention of prolonging his misery may be conjectured from the fact, that it was granted in answer to his own piteous cry for mercy. Some writers have spoken of the possibility of his becoming a true penitent, and of his having at length, after many long years of suffering, obtained the Divine forgiveness. It must be confessed that this affords the easiest solution of some difficulties in the circumstance alluded to; nor ought we, in any way, peremptorily to conclude that such repentance was impossible, when both our blessed Lord and St. Stephen, and a whole host of martyrs, did not refuse to pray for their murderers, assuredly intimating thereby that no irrevocable sentence had, as yet, been passed upon them.

It may be worthy of observation, that especial mention is made of the fact, that Cain having travelled into the land of Nod there built a city; and further, that his descendants were chiefly celebrated for their skill in the arts of social life. In both accounts may probably be discovered the powerful struggles with which Cain strove to overcome the difficulties which attended his position as one to whom the tillage of the ground was virtually prohibited.—H. S.

CAINAN (קֵינָן, *possessor*; Sept. Καϊνάν). 1. Son of Enos, and father of Mahaleel (Gen. v. 9; 1 Chron. i. 2). 2. Son of Arphaxad, the son of Shem, and father of Salah. His name is wanting in the present copies of the Hebrew Scriptures; but is found in the Septuagint version of Gen. x. 24; xi. 12, and in Luke iii. 36. As the addition of his generation of 130 years in the series of names is of great chronological importance, and is one of the circumstances which render the Septuagint computation of time longer than the Hebrew, this matter has engaged much attention, and has led to great discussion among chronologers. Some have suggested that the Jews purposely excluded the second Cainan from their copies, with the design of rendering the Septuagint and Luke suspected; others, that Moses omitted Cainan, being desirous of reckoning ten generations only from Adam to Noah, and from Noah to Abraham. Some suppose that Arphaxad was father of Cainan and Salah, of Salah naturally, and of Cainan legally; while others allege that Cainan and Salah were the same person, under two names. It is believed by many, however, that the name of this second Cainan was not originally in the text of Luke, but is an addition of inadvertent transcribers, who, remarking it in some copies of the Septuagint, added it (Kuinoël, *ad Luc.* iii. 36). Upon the whole, the balance of critical opinion is in favour of the rejection of this second Cainan. Even Hales, though, as an advocate of the longer chronology, predisposed to its retention, decides that we are fully warranted to conclude that the second Cainan was not, originally, in the Hebrew text, and the Septuagint versions derived from it. And since water cannot rise to a level higher than that of the spring from which it issues, so neither can the authority of the New Testament for its retention, rise higher than that of the Old Testament, from which it is professedly copied, for its exclusion (*Chronology*, i. p. 291). Some of the grounds for this conclusion are—1. That the Hebrew and Samaritan, with all the ancient versions and targums, concur in the omission; 2. That the Septuagint is not consistent with itself; for in the repetition of genealogies in 1 Chron. i. 24, it omits Cainan and agrees with the Hebrew text; 3. That the second Cainan is silently rejected by Josephus, by Philo, by John of Antioch, and by Eusebius; and that, while Origen retained the name itself, he, in his copy of the Septuagint, marked it with an obelisk as an unauthorized reading.

CAIAPHAS (Καϊάφας), called by Josephus (*Antiq.* xviii. § 2) Joseph Caiaphas, was high-priest of the Jews in the reign of Tiberius Cæsar (Luke iii. 2). We learn from Josephus that he succeeded Simon the son of Camith (about A.D. 27 or 28), and held the office nine years, when he was deposed. His wife was the daughter of Annas, or Ananus, who had formerly been high-priest, and who still possessed great influence and control in sacerdotal matters, several of his family successively holding the high-priesthood. The names of Annas and Caiaphas are coupled by Luke—'Annas and Caiaphas being the high-priests;' and this has given occasion to no small amount of discussion. Some maintain that Annas and Caiaphas then discharged the functions of the high-priesthood by turns; but this is not reconcilable with the statement of Josephus. Others think that Caiaphas is *called* high-priest, because he then actually exercised the functions of the office, and that Annas is so called because he had formerly filled the situation. But it does not thus appear, why of those who had before Caiaphas held the high-priesthood, Annas in particular should be named, and not Ishmael, Eliazer, or Simon, who had all served the office more recently than Annas. Hence, Kuinoël and others consider it as the more probable opinion, that Caiaphas was the high-priest, but that Annas was his vicar or deputy, called in the Hebrew, סגן *sagan*. Nor can that office be thought unworthy of a man who had filled the pontifical office, since the dignity of sagan was also great. Thus, for instance, on urgent occasions he might even enter the Holy of Holies (Lightfoot, *Hor. Heb.* ad Luc. iii. 2). Nor ought it to seem strange or unusual that the vicar of a high-priest should be called by that name. For if, as it appears, those who had once held the office were ever after, by courtesy, called high-priests, with greater justice might Annas, who was both a pontifical person and high-priest's vicar, be so called. In fact, the very appellation of high-priest is given to a sagan by Josephus (*Antiq.* xvii. 6, 4). See the commentators on Luke iii. 2; particularly Hammond, Lightfoot, Kuinoël, and Bloomfield.

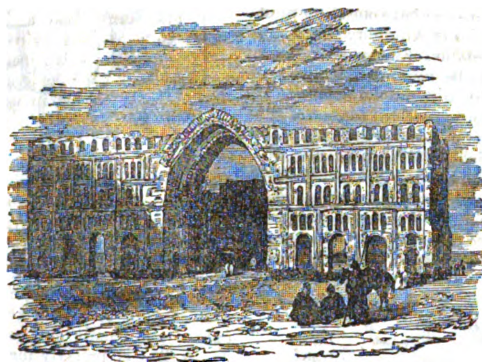


Caiaphas is the high-priest who rent his clothes, and declared Jesus to be worthy of death. When Judas had betrayed him, our Lord was first taken to Annas, who sent him to Caiaphas (John xviii. 13), who perhaps abode in another part of the same palace. What became of Caiaphas after his deposition in A.D. 38, is not known.

CAKES (Bread).

CALAH (כָּלַח; Sept. Χαλάχ), or rather CALACH, a city of Assyria, built by Ashur or Nimrod (the phrase in Gen. x. 11, 12, being ambiguous). It was at some distance from Nineveh, the City of Resen lying between them. Most writers concur in placing it on the Great Zab (the ancient Lycus) not far from its junction with the Tigris, and Resen is placed higher up on the same river, so as to be between it and Nineveh. There appears to be a trace of this name in Calachene, which Strabo describes as a province of Assyria, lying between the source of the Lycus and the Tigris. Many suppose that this Calah is the same as the Chalach (*Auth. Vers.* Halah) in 1 Kings xviii. 6; xvii. 11, whither Salmanassar transplanted a colony of Israelites; but there are good reasons assigned under another head (*Halah*) for disputing this conjecture.

CALEB (כָּלֵב, *dog;* Sept. Χάλεβ), son of Jephunneh, of the tribe of Judah. He was sent with Joshua and others to explore the land of Canaan, and in consequence of his joining with Joshua in opposing the discouraging accounts brought back by the other spies, they were both specially exempted from the decree of death which was pronounced on the generation to which they belonged (Num. xiii. 6; xiv. 6, 24, 38). When the land of Canaan had been invaded and partly conquered, Caleb was privileged to choose Kirjath-arba, or Hebron, and its neighbourhood, for his possession (Josh. xiv. 6-15). He accordingly went and wrested it from the native inhabitants, and thence proceeded to Debir, which was taken for him by his nephew Othniel, who, as his reward, received in marriage the hand of Caleb's daughter [ACHSAPH], with a valuable dower. (Josh. xv. 13-19). Caleb is usually supposed to have outlived Joshua.

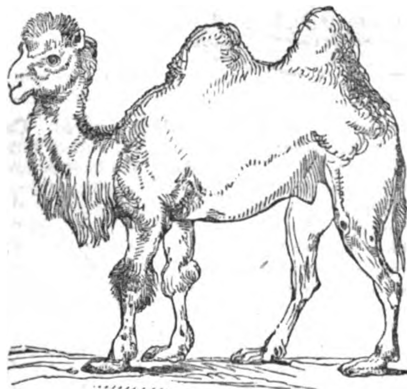


CALF (עֵגֶל) is mentioned in several places, but, not requiring a zoological explanation, it

200. [Egyptian Calf-Idol.]

may be sufficient to make a few remarks on the worship of calves and other superstitious practices connected with them. The most ancient and remarkable notice in the Scriptures on this head, is that of the golden calf which was cast by Aaron from the earrings of the people, while the Israelites were encamped at the foot of Sinai and Moses was absent on the Mount. The next notice refers to an event which occurred ages after, when Jeroboam, king of Israel, set up two idols in the form of a calf, the one in Dan and the other in Bethel. This almost incomprehensible degradation of human reason was, more particularly in the first instance, no doubt the result of the debasing influences which operated on the minds of the Israelites during their sojourn in Egypt, where, amid the daily practice of the most degrading and revolting religious ceremonies, they were accustomed to see the image of a sacred calf, surrounded by other symbols, carried in solemn pomp at the head of marching armies; such as may be still seen depicted in the processions of Rameses the Great or Sesostris. The preceding figure is a representation of a calf-idol which the present writer copied from the original collection made by the artists of the French Institute of Cairo. It is recumbent, with human eyes, the skin flesh-coloured, and the whole after-parts covered with a white and sky-blue diapered drapery: the horns are not on the head, but above it, and contain within them the symbolical globe surmounted by two feathers. Upon the neck is a blue and yellow yoke, and the flagellum, of various colours, is suspended over the back: the whole is fixed upon a broad stand for carrying, as here shown. The rendering of the Auth. Vers., which alludes to the image being finished with a graving tool, is obviously correct, for all the lines and toolings of the covering cloth, of the eyes, and of the feathers, must have required that manual operation (Exod. xxxii. 4). It is doubtful whether this idolatrous form is either Apis or Mnevis; it may perhaps represent the sun's first entrance into Taurus, or more probably be a symbol known to the Egyptians by an undeciphered designation, and certainly understood by the Edomites of later ages, who called it *bahumed* and *kharuf*, or the calf, the mysterious *anima mundi:* according to Von Hammer (*Pref. to Ancient Alphabets*), the Nabathæan secret of secrets, or the beginning and return of everything. With the emblems on the back, it may have symbolized the plural Elohim, long before the cabbalistical additions of this mysterious type had changed the figure. At the time of the departure of the Israelites from Egypt this may have been the Moloch of their neighbours, for that idol was figured with the head of a calf or steer. A similar divinity belonged to the earliest Indian, Greek, and even Scandinavian mythologies; and therefore it may be conceived that the symbol, enduring even to this day, was at that period generally understood by the multitude, and consequently that it was afterwards revived by Jeroboam without popular opposition. Egyptian paintings illustrate the contempt which the prophet Hosea (x. 5) casts upon the practice of those whom he designates as '*coming to sacrifice and kiss the calves;*' and commentators have been at pains to explain in what manner Moses reduced the golden calf to such a state as to make it potable in water; but surely as the science of making gold-leaf for gilding was already practised in Egypt, there could be no difficulty, even if chemical processes had not then been discovered, in effecting the object. With regard to Jer. xxxiv. 18, 19, it may be sufficient to mention that many nations of antiquity had a practice of binding themselves to certain resolutions by the ceremony of cutting a calf or other victim into two halves or sides, laying them on the ground, and passing between the severed parts. This was considered as constituting a peculiarly binding obligation (comp. Gen. xv. 10, 17).—C. H. S.

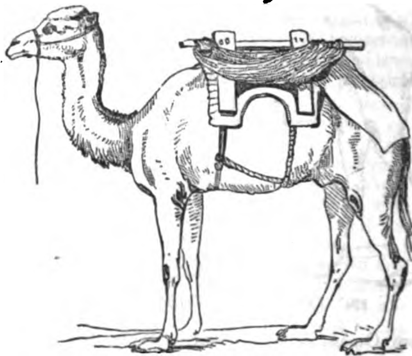
CALNEH (כַּלְנֵה ; Sept. Χαλάννη), or rather CHALNEH, the fourth of Nimrod's cities (Gen. x. 10), and probably not different from the Calno of Isa. x. 9, or the Canneh of Ezek. xxvii. 23. According to the Chaldee translation, with which Eusebius and Jerome agree, this is the same place that was subsequently called Ctesiphon. It lay on the Tigris, opposite Seleucia, and was for a time the capital of the Parthians. This ancient opinion respecting Chalneh is rendered probable by the circumstance that the district named Ctesiphon was called by the Greeks Chalonitis (Pliny, *Hist. Nat.* vi. 26, 27; Polyb. v. 44). Ammianus Marcellinus (xxiii. 6. 23) states that it was the Persian king Pacorus (who reigned from A.D. 71 to 107) who changed the name of the city to Ctesiphon; but that name must have been more ancient, as it is mentioned by Polybius. In the time of the prophet Amos, Calneh appears to have constituted an independent principality (Amos vi. 1, 2); but not long after it became, with the rest of Western Asia, a prey to the Assyrians (Isa. x. 9). About 150 years later, Calneh was still a considerable town, as may be inferred from its being mentioned by Ezekiel (xxvii. 23) among the places which traded with Tyre. The site of Ctesiphon, or Calneh, was afterwards occupied by El-Madain, *i. e. the (two) cities*, of which the only remains are the ruins of a remarkable palace called Tauk-kesra, some mounds of rubbish, and a considerable extent of massive wall towards the river. The ruined palace, with its broken arch, although it stands on low ground, is a most conspicuous object, and is seen at a considerable distance, in ascending the river, in varied and striking points of view, in consequence of the serpentine course of the stream in this part.



201. [Tauk-kesra.]

CALVARY, the place where Christ was crucified. In three of the Gospels the Hebrew name of the place, GOLGOTHA (*place of a skull*), is given; and in Luke (xxiii. 33), where we find Calvary in the Authorized Version, the original is not Calvary, but Cranion (κρανίον), a diminutive of κρᾶνον (*a skull*). Calvaria is the Latin translation of this word, adopted by the Vulgate, from which it found its way into our version. But as the names *Cranion* and *Calvaria* are respectively Greek and Latin translations of the original Golgotha, which occurs in three out of the four Gospels, the plan of this work requires that the various particulars connected with the site of the Crucifixion should be referred to GOLGOTHA.

CAMBYSES. [AHASUERUS.]

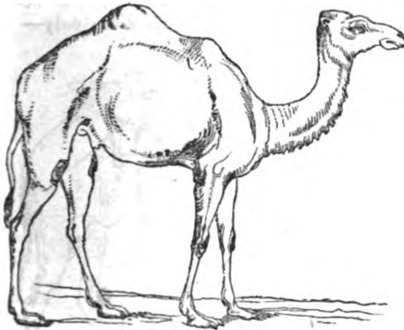


CAMEL (גָּמָל *gamal* in Hebrew and Syriac, *gamala* in Chaldaic, *jemel* in ancient Arabic, *djammel* in modern, and κάμηλος in Greek). These are the principal names in Eastern history of the genus Camelus, as constituted by modern naturalists. In this arrangement it comprises two species positively distinct, but still possessing the common characters of being ruminants without horns, without muzzle, with nostrils forming oblique slits, the upper lip divided, and separately movable and extensile, the soles of the feet horny, with two toes covered by unguiculated claws, the limbs long, the abdomen drawn up, and the neck, long and slender, is bent down and up, the reverse of that of a horse, which is arched. Camels have thirty-six teeth in all, whereof three cuspidate on each side above, six incisors, and two cuspidate on each side below, which, though differently named, still have all more or less the character of tushes. They have callosities on the breast-bone and on the flexures of the joints. Of the four stomachs, which they have in common with other animals chewing the cud, the ventriculus, or paunch, is provided with membranous cells to contain an extra provision of water, enabling the species to subsist for four or more days without drinking. But when in the desert, the camel has the faculty of smelling it afar off, and then, breaking through all control, he rushes onwards to drink, stirring the element previously with a fore-foot, until quite muddy. Camels are temperate animals, being fed on a march only once in twenty-four hours, with about a pound weight of dates, beans, or barley, and are enabled in the wilderness, by means of their long flexible necks and strong cuspidate teeth, to snap as they pass at thistles and thorny plants, mimosas and caper-trees. They are emphatically called the ships of the desert; having to cross regions where no vegetation whatever is met with, and where they could not be enabled to continue their march but for the aid of the double or single hunch on the back, which, being composed of muscular fibre, and cellular substance highly adapted for the accumulation of fat, swells in proportion as the animal is healthy and well fed, or sinks by absorption as it

supplies the want of sustenance under fatigue and scarcity; thus giving an extra stock of food without eating, till by exhaustion the skin of the prominences, instead of standing up, falls over, and hangs like empty bags on the side of the dorsal ridge. Now, when to these endowments are added a lofty stature and great agility; eyes that discover minute objects at a distance; a sense of smelling of prodigious acuteness—ever kept in a state of sensibility by the animal's power of closing the nostrils to exclude the acrid particles of the sandy deserts; a spirit, moreover, of patience, not the result of fear, but of forbearance, carried to the length of self-sacrifice in the practice of obedience, so often exemplified by the camel's bones in great numbers strewing the surface of the desert; when we perceive it furnished with a dense wool, to avert the solar heat and nightly cold, while on the animal, and to clothe and lodge his master when manufactured, and know that the female carries milk to feed him,—we have one of the most incontrovertible examples of Almighty power and beneficence in the adaptation of means to a direct purpose, that can well be submitted to the apprehension of man; for, without the existence of the camel, immense portions of the surface of the earth would be uninhabitable, and even impassable. Surely the Arabs are right, 'Job's beast is a monument of God's mercy!' The two species are—1. The Bactrian camel (*camelus Bactrianus* of authors) is large and robust; naturally with two hunches, and originally a native of the highest table-lands of Central Asia, where even now, wild individuals

202. [Bactrian Camel.]

may be found. The species extends through China, Tartary, and Russia, and is principally imported across the mountains into Asia Minor, Syria, and Persia. One appears figured in the processions of the ancient Persian satrapies among the bas-reliefs of *Chehel Minar*, where the Arabian species is not seen. It is also this species which, according to the researches of Burckhardt, constitutes the brown Taous variety of single-hunched Turkish or Toorkee camels commonly seen at Constantinople, there being a very ancient practice among breeders, not, it appears, attended with danger, of extirpating with a knife the foremost hunch of the animal soon after birth, thereby procuring more space for the packsaddle and load. It seems that this mode of rendering the Bactrian cross-breed similar to the Arabian camel or dromedary (for Burckhardt misapplies the last name), is one of the principal causes of the confusion and contradictions which occur in the descriptions of the two species, and that the various other intermixtures of races in Asia Minor and Syria, having for their object either to create greater powers of endurance of cold or of heat, of body to carry weight, or to move with speed, have still more perplexed the question. From these causes a variety of names have arisen, which, when added to the Arabian distinctions for each sex, and for the young during every year of its growth, and even for the camels nursing horse-foals, the appellatives become exceedingly numerous. We notice only—



203. [Arabian Camel: baggage.]

2. The Arabian camel or dromedary (*camelus dromedarius* or *Arabicus* of naturalists, בכר *bacar*; and female and young בכרה, Isa. lx. 6; Jer. ii. 23) is properly the species having naturally but one hunch, and considered as of Western-Asiatic or of African origin, although no kind of camel is figured on any monument of Egypt, not even where there are representations of live stock such as that found in a most ancient tomb beneath the pyramid of Gizeh; which shows herdsmen bringing their cattle and domesticated animals to be numbered before a steward and his scribe; and in which we see oxen, goats, sheep, asses, geese, and ducks, but neither horses nor camels. That they were not indigenous in the early history of Egypt is countenanced by the mythical tale of the priests describing 'the flight of Typhon, seven days' journey upon an ass.' We find, however, camels mentioned in Genesis xii.; but being placed last among the cattle given by Pharaoh to Abraham, the fact seems to show that they were not considered as the most important part of his donation. This can be true only upon the supposition that only a few of these animals were delivered to him, and therefore that they were still rare in the valley of the Nile; though soon after there is abundant evidence of the nations of Syria and Palestine having whole herds of them fully domesticated. These seem to imply that the genus Camelus was originally an inhabitant of the elevated deserts of Central Asia, its dense fur showing that a cold but dry atmosphere was to be encountered, and that it came already domesticated, towards the south and west, with the oldest colonies of mountaineers who are to be distinguished from earlier tribes who subdued the ass, and perhaps from others still more an-

cient, who, taking to the rivers, descended by water, and afterwards coasted and crossed narrow seas.

Of the Arabian species two very distinct races are noticed; those of stronger frame but slower pace used to carry burdens, varying from 500 to 700 weight, and travelling little more than twenty-four miles per day; and those of lighter form bred for the saddle with single riders, whereof the fleetest serve to convey intelligence, &c., and travel at the rate of 200 miles in twenty-four hours. They are designated by several appellations, such as Deloul, the best coming

204. [Arabian Camel: saddle.]

from Oman, or from the Bishareens in Upper Egypt; also Hadjeens, Ashaary, Maherry, Reches, Badees at Herat, Rawahel, and Racambel in India, all names more or less implying swiftness, the same as δρομὰς, *swift*. Caravans of loaded camels have always scouts and flankers mounted on these light animals, and in earlier ages, Cyrus and others employed them in the line of battle, each carrying two archers. The Romans of the third and fourth centuries of our era, as appears from the '*Notitia*,' maintained in Egypt and Palestine several *alæ* or squadrons, mounted on dromedaries; probably the wars of Belisarius with the northern Africans had shown their importance in protecting the provinces bordering on the desert; such was the *ala dromedariorum Antana* at *Ammata* in the tribe of Judah, and three others in the Thebais. Buonaparte formed a similar corps, and in China and India the native princes and the East India Company have them also.

All camels, from their very birth, are taught to bend their limbs and lie down to receive a load or a rider. They are often placed circularly in a recumbent posture, and together with their loads form a sufficient rampart of defence against robbers on horseback. The milk of she-camels is still considered a very nutritive cooling drink, and when turned it becomes intoxicating. Their dung supplies fuel in the desert, and in sandy regions where wood is scarce; and occasionally it is a kind of resource for horses when other food is wanting in the wilderness. Their flesh, particularly the bunch, is in request among the Arabs, but was forbidden to the Hebrews, more perhaps from motives of economy, and to keep the people from again becoming wanderers, than from any real uncleanness.

Camels were early a source of riches to the patriarchs, and from that period became an increasing object of rural importance to the several tribes of Israel, who inhabited the grazing and border districts, but still they never equalled the numbers possessed by the Arabs of the desert. In what manner the Hebrews derived the valuable remunerations obtainable from them does not directly appear, but it may be surmised that by means of their camels they were in possession of the whole trade that passed by land from Asia Minor and Syria to the Red Sea and Egypt; and from the Red Sea and Arabia towards the north, and to the Phenician sea-ports. On swift dromedaries the trotting motion is so hard that to endure it the rider requires a severe apprenticeship; but riding upon slow camels is not disagreeable, on account of the measured step of their walk; ladies and women in general are conveyed upon them in a kind of wickerwork sedan, known as the takht-ravan of India and Persia. Those which carried the king's servants or guests, according to Philostratus, were always distinguished by a gilded boss on the forehead.

It is likely the word אחשתרנים *achashteranim* (Esth. viii. 10), rendered 'young dromedaries' (though Bochart regards it as meaning mules), implies the swift postage or conveyance of orders, the whole verse showing that all the means of dispatch were set in motion at the disposal of government. With regard to the passage in Matt. xix. 24, 'It is easier for a camel to go through the eye of a needle,' &c., and that in Matt. xxiii. 24, 'Ye strain at a gnat, and swallow a camel,' it may be sufficient to observe, that both are proverbial expressions, similarly applied in the kindred languages of Asia.—C. H. S.

CAMPHIRE. [Copher.]

CANA (Κανᾶ), a town in Galilee, not far from Capernaum, where Christ performed his first miracle by turning water into wine (John iv. 46). *This* Cana is not named in the Old Testament, but is mentioned by Josephus as a village of Galilee (*Vita*, § 16, 64; *De Bell. Jud.* i. 17. 5). The site has long been identified with the present Kefr Kenna, a small place about four miles north-east from Nazareth, on one of the roads to Tiberias. It is a neat village, pleasantly situated on the descent of a hill looking to the south-west, and surrounded by plantations of olive and other fruit trees. There is a large spring in the neighbourhood, enclosed by a wall, which, if this be the Cana of the New Testament, is doubtless that from which water was drawn at the time of our Lord's visit. It is also observable that water-pots of compact limestone are still used in this neighbourhood, and some old ones are, as might be expected, shown as those which once contained the miraculous wine. Here are also the remains of a Greek church, and of a house said to be that of Nathaniel, who was a native of Cana (John ii. 1-11). The view which we give is that of the traditional Cana.

There is a ruined place called Kâna el-Jelil, about eight miles N. ½ E. from Nazareth, which Dr. Robinson is inclined to regard as the more probable site of Cana. His reasons, which are certainly of considerable weight, may be seen in *Biblical Researches*, iii. 204-208. Descriptions of Kefr Kenna may be found in Pococke, Burckhardt, Clarke, G. Robinson (*Travels*), Richardson, Monro, Schubert, &c.

205. [Cana: Kefr Kenna.]

CANAAN (כְּנַעַן; Χαναάν), son of Ham and grandson of Noah. The transgression of his father Ham (Gen. ix. 22-27), to which some suppose Canaan to have been in some way a party, gave occasion to Noah to pronounce that doom on the descendants of Canaan which was, perhaps, at that moment made known to him by one of those extemporaneous inspirations with which the patriarchal fathers appear in other instances to have been favoured [Blessing]. That there is no just ground for the conclusion that the descendants of Canaan were cursed as an immediate *consequence* of the transgression of Ham, is shown by Professor Bush, who, in his *Notes on Genesis*, has fairly met the difficulties of the subject.

CANAAN, Land of, the ancient name of that portion of Palestine which lay to the west of the Jordan (Gen. xiii. 12; Num. xxxiii. 51; Deut. xi. 30: Judg. xxi. 12), the part beyond the Jordan eastward being distinguished by the general name of Gilead (comp. Judg. xxi. 12). The denomination Canaan included Philistia and Phœnicia (comp. Isa. xxiii. 11, and Gesenius thereon; Ezek. xvi. 29; Zeph. ii. 5). The name occurs on Phœnician coins (Eckhel, *Doctr. Num.* iv. 409), and was not even unknown to the Carthaginians (Gesen. *Gesch. d. Heb. Sprach.* p. 16). For an account of the geography, &c. of the country, see Palestine.

CANAANITES (כְּנַעֲנִי; Sept. Χαναναῖοι), the descendants of Canaan, the son of Ham and grandson of Noah, inhabitants of the land of Canaan and the adjoining districts. A general account of the different nations included in the term is given in the present article, and a more detailed account of each will be found under their respective names.

The Israelites were delivered from Egypt by Moses, in order that they might take possession of the land which God had promised to their fathers. This country was then inhabited by the descendants of Canaan, who were divided into six or seven distinct nations, viz. the Hittites, Girgashites, Amorites, Canaanites, Perizzites, Hivites, and Jebusites (Exod. iii. 17, where the Girgashites are not mentioned; Deut. vii. 1, &c.). All these tribes are included in the most general acceptation of the term Canaanites; but the word, in its more restricted sense, as applied to one tribe, designated those 'who dwelt by the sea, and by the coasts of Jordan' (Num. xiii. 29). Besides these 'seven nations,' there were several tribes of the Canaanites who lived beyond the borders of the Promised Land, northward. These were the Arkites, Sinites, Arvadites, Zemarites, and Hamathites (Gen. x. 17, 18), with whom, of course, the Israelites had no concern. There were also other tribes of Canaanitish origin (or possibly other names given to some of those already mentioned), who were dispossessed by the Israelites. The chief of these were the Amalekites, the Anakites, and the Rephaim (or 'giants,' as they are frequently called in our translation).* These nations, and especially the six or seven so frequently mentioned by name, the Israelites were commanded to dispossess and utterly to destroy (Exod. xxiii. 23; Num. xxxiii. 53; Deut. xx. 16, 17). The de-

* Other tribes are mentioned in the promise to Abraham (Gen. xv. 19), viz. the Kenites, Kenizzites, and Kadmonites. Of these the Kenites, or at least a branch of them, seem to have adhered to the Israelites, through their connection by marriage with Moses (Judg. iv. 11), and they were treated with kindness when the Amalekites were destroyed by Saul (1 Sam. xv. 6). The others are not elsewhere mentioned—the term Kenezite, applied to Caleb (Josh. xiv. 14), being a patronymic. (See Josh. xv. 17.)

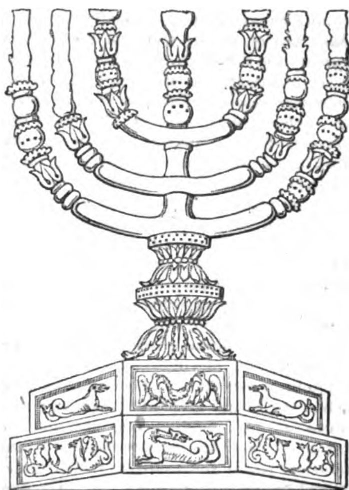
struction, however, was not to be accomplished at once. The promise on the part of God was that he would 'put out those nations by little and little,' and the command to the Israelites corresponded with it; the reason given being, 'lest the beasts of the field increase upon thee' (Exod. xxiii. 29; Deut. vii. 22).

The destructive war commenced with an attack on the Israelites, by Arad, king of the Canaanites, which issued in the destruction of several cities in the extreme south of Palestine, to which the name of Hormah was given (Num. xxi. 1-3). The Israelites, however, did not follow up this victory, which was simply the consequence of an unprovoked assault on them; but turning back, and compassing the land of Edom, they attempted to pass through the country on the other side of the Jordan, inhabited by a tribe of the Amorites. Their passage being refused, and an attack made on them by Sihon, king of the Amorites, they not only forced their way through his land, but destroyed its inhabitants, and proceeding onwards towards the adjoining kingdom of Bashan, they in like manner destroyed the inhabitants of that district, and slew Og, their king, who was the last of the Rephaim, or giants (Deut. iii. 11). The tract of which they thus became possessed was subsequently allotted to the tribes of Reuben and Gad, and the half tribe of Manasseh.

After the death of Moses the Israelites crossed the Jordan, and, under the conduct of Joshua, took possession of the greater part of the Promised Land, and destroyed its inhabitants. Several cities, however, still held out, particularly Jebus, afterwards Jerusalem, which was not taken till the time of David (2 Sam. v. 6), and Sidon, which seems never to have yielded to the tribe of Asher, to whom it was allotted (Judg. i. 31). Scattered portions also of the Canaanitish nations escaped, and were frequently strong enough to harass, though not to dispossess, the Israelites. The inhabitants of Gibeon, a tribe of the Hivites, made peace by stratagem, and thus escaped the destruction of their fellow-countrymen. Individuals from amongst the Canaanites seem, in later times, to have united themselves, in some way, to the Israelites, and not only to have lived in peace, but to have been capable of holding places of honour and power; thus Uriah, one of David's captains, was a Hittite (1 Chron. xi. 41). In the time of Solomon, when the kingdom had attained its highest glory and greatest power, all the remnants of these nations were made tributary, and bond-service was exacted from them (1 Kings ix. 20). The Girgashites seem to have been either wholly destroyed or absorbed in other tribes. We find no mention of them subsequent to the book of Joshua, and the opinion that the Gergesenes, or Gadarenes, in the time of our Lord, were their descendants, has very little evidence to support it (Rosenmüller, *Scholia in Gen.* x. 16; Reland, *Palæstina*, i. 27, p. 138). The Anakites were completely destroyed by Joshua, except in three cities, Gaza, Gath, and Ashdod (Josh. xi. 21-23); and the powerful nation of the Amalekites, many times defeated and continually harassing the Israelites, were at last totally destroyed by the tribe of Simeon (1 Chron. iv. 43). Even after the return of the Jews from the Babylonish captivity, there were survivors of five of the Canaanitish nations, with whom alliances had been made by the Jews, contrary to the commands which had been given them. Some of the Canaanites, according to ancient tradition, left the land of Canaan on the approach of Joshua, and emigrated to the coast of Africa. Procopius (*De Bello Vandalico*, ii. 10) relates that there were in Numidia, at Tigisis (*Tingis*), two columns on which were inscribed, in Phœnician characters, ἡμεῖς ἐσμὲν οἱ φυγόντες ἀπὸ προσώπου Ἰησοῦ τοῦ λῃστοῦ υἱοῦ Ναυῆ—'We are those who fled from the face of Joshua, the robber, the son of Naue.' (Bochart, *Peleg*, i. 24; Michaelis, *Laws of Moses*, art. 31, vol. i. p. 176, Smith's Transl.; Winer's *Realwörterbuch*, arts. 'Canaaniter' and 'Josua'.)

The manner in which the Israelites became possessed of the Promised Land has been so frequently brought as an objection to the inspired character of the Old Testament, and indeed is so far removed from the ordinary providential government of God, that it will be proper, in closing this account, to notice the difficulty which has been felt, and to advert to some of the hypotheses by which it is sought to be removed. Many have asserted, in order to alleviate the difficulty, that an allotment of the world was made by Noah to his three sons, and that by this allotment the Land of Promise fell to the share of Shem—that the descendants of Ham were therefore usurpers and interlopers, and that on this ground the Israelites, as the descendants of Shem, had the right to dispossess them. This explanation is as old as Epiphanius, who thus answered the objection of the Manichæans. Others justify the war on the ground that the Canaanites were the first aggressors—a justification which applies only to the territory on the other side of the Jordan. Michaelis, to whom we must refer for a lengthened investigation of the subject (*Laws of Moses*, b. ii. ch. iii. vol. 1, p. 111-179, Smith's Transl.), dissatisfied with these and other attempted apologies, asserts that the Israelites had a right to the land of Canaan, as the common pasture land of their herdsmen, in consequence of the undisturbed possession and appropriation of it from the time of Abraham till the departure of Jacob into Egypt—that this claim had never been relinquished, and was well known to the Canaanites, and that therefore the Israelites only took possession of that which belonged to them. The same hypothesis is maintained by Jahn (*Hebrew Commonwealth*, ch. ii. § x. Stowe's Transl.). In the Fragments appended to Taylor's edition of Calmet's *Dictionary* (vol. iv. pp. 95, 96), another ground of justification is sought in the supposed identity of race of the Egyptian dynasty under which the Israelites were oppressed, with the tribes that overran Canaan—so that the destruction of the latter was merely an act of retributive justice for the injuries which their compatriots in Egypt had inflicted on the Israelites. To all these and similar attempts to justify, on the ground of *legal right*, the forcible occupation of the land by the Israelites, and the extermination (at least to a great extent) of the existing occupants, it is to be objected, that no such reason as any of these is hinted at in the sacred record. The right to carry on a war of extermination is there rested simply on the divine command to do so. That the Israelites were instruments in God's hand is a lesson not only continually impressed on their minds by the teaching of Moses, but enforced by their defeat whenever

they relied on their own strength. That there *may* have been grounds of justification, on the plea of human or legal right, ought not indeed to be denied, but it is, we imagine, quite clear, from the numerous attempts to find what these grounds were, that they are not stated in the Old Testament; and to seek for them as though they were necessary to the justification of the Israelites, seems to be an abandonment of the high ground on which alone their justification can be safely rested —the express command of God.



It may be said that this is only shifting the difficulty, and that just in proportion as we exculpate the Israelites from the charges of robbery and murder, in their making war without *legal* ground, we lower the character of the Being whose commands they obeyed, and throw doubt on those commands being really given by God. This has indeed been a favourite objection of infidels to the divine authority of the Old Testament. Such objectors would do well to consider whether God has not an absolute right to dispose of men as he sees fit, and whether an exterminating war, from which there was at least the opportunity of escape by flight, is at all more opposed to our notions of justice, than a destroying flood, or earthquake, or pestilence. Again, whether the fact of making a chosen nation of *His* worshippers the instruments of punishing those whose wickedness was notoriously great, did not much more impressively vindicate his character as the only God, who 'will not give his glory to another, nor his praise to graven images,' than if the punishment had been brought about by natural causes. Such considerations as these must, we apprehend, silence those who complain of injustice done to the Canaanites. But then it is objected further, that such an arrangement is fraught with evil to those who are made the instruments of punishment, and, as an example, is peculiarly liable to be abused by all who have the power to persecute. As to the first of these objections, it must be remembered, that the conduct of the war was never put into the hands of the Israelites—that they were continually reminded that it was for the wickedness of those nations that they were driven out, and, above all, that they themselves would be exposed to similar punishment if they were seduced into idolatry—an evil to which they were especially prone. As to the example, it can apply to no case where there is not an equally clear expression of God's will. A person without such a commission has no more right to plead the example of the Israelites in justification of his exterminating or even harassing those whom he imagines to be God's enemies, than to plead the example of Moses in justification of his promulgating a new law purporting to come from God. In a word, the justification of the Israelites, as it appears to us, is to be sought in this alone, that they were clearly commissioned by God to accomplish this work of judgment, thus, at once, giving public testimony to, and receiving an awful impression of, His power and authority, so as in some measure to check the outrageous idolatry into which almost the whole world had sunk.—F. W. G.

CANDACE, or, more correctly, Κανδάκη (both the c's being hard), was the name of that queen of the Ethiopians (Κανδάκη ἡ βασίλισσα Αἰθιόπων), whose high treasurer was converted to Christianity under the preaching of Philip the Evangelist (Acts viii. 27). The country over which she ruled was not, as some writers allege, what is known to us as Abyssinia; it was that region in Upper Nubia which was called by the Greeks *Meroë* and is supposed to correspond to the present province of Atbara, lying between 13° and 18° north latitude. From the circumstance of its being nearly enclosed by the Atbara (Astaboras or Tacazze) on the right, and the Bahr el Abiad, or White river, and the Nile on the left, it was sometimes designated the 'Island' of Meroë; but the ancient kingdom appears to have extended at one period to the north of the island as far as Mount Berkal. The city of Meroë stood near the present Assour, about twenty miles north of Shendy; and the extensive and magnificent ruins found not only there, but along the upper valley of the Nile, attest the art and civilization of the ancient Ethiopians. These ruins, seen only at a distance by Bruce and Burckhardt, have since been minutely examined and accurately described by Cailliaud (*Voyage à Meroë*), Rüppel (*Reisen in Nubien, &c.*), and other travellers. Meroë, from being long the centre of commercial intercourse between Africa and the south of Asia, became one of the richest countries upon earth; the 'merchandise' and wealth of Ethiopia (Isa. xlv. 14) was the theme of the poets both of Palestine and Greece; and since much of that affluence would find its way into the royal coffers, the circumstance gives emphasis to the phrase—πάσης τῆς γάζης, '*all* the treasure' of Queen Candace. It is further interesting to know, from the testimonies of various profane authors, that for some time both before and after the Christian era, Ethiopia Proper was under the rule of female sovereigns, who all bore the appellation of 'Candace,' which was not so much a proper name as a distinctive title, common to every successive queen, like 'Pharaoh' and 'Ptolemy' to the kings of Egypt, and 'Cæsar' to the emperors of Rome. Thus Pliny (*Hist. Nat.* vi. 29) says that the centurions whom Nero sent to explore the country reported—'regnare in Meroë feminam *Candacen*, quod nomen multis jam annis ad reginas transiit.' Strabo also (p. 820, ed. Casaub.) speaks of a warrior-queen of Ethiopia called Candace, in the reign of Augustus, the same whom Dion Cassius (liv. 5) describes as queen of the Αἰθίοπες ὑπὲρ Αἰγύπτου οἰκοῦντες. An insult having been offered to the Romans on the Ethiopian frontier of Egypt, Caius Petronius, the governor of the latter province, marched against the Ethiopians, and having defeated them in the field, took Pselca, and then crossing the sands which had long before proved fatal to Cambyses, advanced to Premnis, a strong position. He next attacked Napata, the capital of Queen Candace, took and destroyed it; but then retired to Premnis, where he left a garrison, whom the warlike queen assailed, but they were relieved by Petronius. This Napata, by Dion called Tanape, is supposed to have stood near Mount Berkal, and to have been a kind of second Meroë; and there is still in that neighbourhood (where there are likewise many splendid ruins) a village which bears the very similar name of *Merawé*. Eusebius, who flourished in the fourth century, says, that in his day the queens of Ethiopia continued to be called Candace.

A curious confirmation of the fact of female

sovereignty having prevailed in Ethiopia has been remarked on the existing monuments of the country. Thus, on the largest sepulchral pyramid near Assour, the ancient Meroë (see Cailliaud, plate xlvi.), a female warrior, with the royal ensigns on her head, drags forward a number of captives as offerings to the gods; on another compartment she is in a warlike habit, about to destroy the same group. Heeren, after describing the monuments at Naga, or Naka, south-east of Shendy, says, 'It is evident that these representations possess many peculiarities, and that they are not pure Egyptian. The most remarkable difference appears in the persons offering. The queens appear with the kings; and not merely as presenting offerings, but as heroines and conquerors. Nothing of this kind has yet been discovered on the Egyptian reliefs, either in Egypt or Nubia. It may therefore with certainty be concluded, that they are subjects peculiar to Ethiopia. Among the Ethiopians, says Strabo (p. 1177), the women also are armed. Herodotus (ii. 100) mentions a Nitocris among the ancient queens of Ethiopia. Upon the relief [on the monument at Kalabshé] representing the conquest of Ethiopia by Sesostris, there is a queen, with her sons, who appears before him as a captive' (Heeren, *On the Nations of Africa*, vol. ii. p. 399). It is singular enough, that when Bruce was at Shendy, the government of the district was in the hands of a female called *Sittina*, *i.e.* the lady or mistress. He says 'There is a tradition there, that a woman, whose name was Hendaqué, once governed all that country, whence we might imagine that this was part of the kingdom of Candace; for writing this name in Greek letters it will come to be no other than Hendaqué, the native or mistress of Chendi or Chandi' (*Travels to discover the Source of the Nile*, vol. iv. p. 529; comp. vol. i. p. 505). It is true that, the name Kandaké being foreign to the Jews, it is in vain to seek with Calmet for its etymology in Hebrew, but the conjectural derivation proposed by Bruce is wholly inadmissible; nor is the attempt of Hiller to trace its meaning in the Ethiopic language much more satisfactory (Simonis, *Onomasticon Nov. Test.* p. 88). De Dieu asserts, on the authority of ecclesiastical tradition, that the proper name of the queen mentioned in the Acts was *Lacasa*, and that of her chamberlain *Judich*. It is not unlikely that some form of Judaism was at this period professed to a certain extent in Ethiopia, as well as in the neighbouring country of Abyssinia. Irenæus (iii. 12) and Eusebius (*Hist. Eccl.* ii. 1) ascribe to Candace's minister her own conversion to Christianity, and the promulgation of the Gospel throughout her kingdom; and with this agrees the Abyssinian tradition, that he was likewise the apostle of Tigré, that part of Abyssinia which lay nearest to Meroë; it is added that he afterwards preached the Gospel in Arabia Felix, and also in the island of Ceylon, where he suffered martyrdom (See Tillemont, *Mem. Hist. Eccl.* tom. ii.; Basnage, *Exercitatt. anti-Baron.* p. 113; Ludolf, *Comment. ad Hist. Æthiop.* p. 89). [Ethiopia; Abyssinia.]—N. M.

CANDLESTICK (הַמְּנוֹרָה; Sept. ἡ λυχνία). The candelabrum which Moses was commanded to make for the tabernacle, after the model shown him in the Mount, is chiefly known to us by the passages in Exod. xxv. 31-40; xxxvii. 17-24; on which some additional light is thrown by the Jewish writers, and by the representation of the spoils of the Temple on the arch of Titus.

206.

The material of which it was made was fine gold, of which an entire talent was expended on the candelabrum itself and its appendages. The mode in which the metal was to be worked is described by a term which appears to mean *wrought* with the hammer, as opposed to *cast* by fusion. The structure of the candelabrum, as far as it is defined in the passages referred to, consisted of a base; of a shaft rising out of it; of six arms, which came out by threes from two opposite sides of the shaft; of seven lamps, which were supported on the summits of the central shaft and the six arms; and of three different kinds of ornaments belonging to the shaft and arms. These ornaments are called by names which mean *cups*, *globes*, and *blossoms*. The cups receive, in verse 33, the epithet *almond-shaped* (it being uncertain whether the resemblance was to the *fruit* or to the *flowers*). Three such cups are allotted to every arm; but four to the shaft: two-and-twenty in all. Of the four on the shaft, three are ordered to be placed severally under the spots where the three pairs of arms set out from the shaft. The place of the fourth is not assigned; but we may conceive it to have been either between the base and the cup below the lowest tier of arms, or, as Bähr prefers, to have been near the summit of the shaft. As for the name of the second ornament, the word only occurs in two places in the Old Testament, in which it appears to mean the capital of a column; but the Jewish writers generally (cited in Ugolini, *Thesaur.* xi. 917) concur in considering it to mean *apples* in this place. Josephus, as he enumerates *four* kinds of ornaments, and therefore two of his terms must be considered identical, may be supposed to have understood *globes*, or *pomegranates* (σφαιρία, ῥοΐσκοι, *Antiq.* iii. 6). But as the term here used is not the common name for pomegranates, and as the Sept. and Vul-

gate render it *σφαιρωτῆρες* and *sphærulæ*, it is safest to assume that it denotes bodies of a spherical shape, and to leave the precise kind undefined. Bähr, however, is in favour of *apples* (*Symbolik*, i. 414). The name of the third ornament means *blossom, bud;* but it is so general a term that it may apply to any flower. The Sept., Josephus, and Maimonides, understand it of the lily; and Bähr prefers the flower of the almond. It now remains to consider the manner in which these three ornaments were attached to the candelabrum. The obscurity of verse 33, which orders that there shall be 'three almond-shaped cups on one arm, globe and blossom, and three almond-shaped cups on the other arm, globe and blossom; so on all the arms which come out of the shaft,' has led some to suppose that there was only one globe and blossom to every three cups. However, the fact that, according to verse 34, the shaft (which, as being the principal part of the whole, is here called the *candelabrum* itself), which had only four cups, is ordered to have globes and blossoms (in the plural), is a sufficient proof to the contrary.

It is to be observed, that the original text does not define the height and breadth of any part of the candelabrum; nor whether the shaft and arms were of equal height; nor whether the arms were curved round the shaft, or left it at a right angle, and then ran parallel with it. The Jewish authorities maintain that the height of the candelabrum was eighteen palms, or three ells; and that the distance between the outer lamps on each side was two ells. Bähr, however, on the ground of harmonical proportion with the altar of incense and table of shew-bread, the dimensions of which are assigned, conjectures that the candelabrum was only an ell and a half high and broad. The Jewish tradition uniformly supports the opinion that the arms and shaft were of equal height; as do also Josephus and Philo (*l. c.; Quis Rer. Div. Hær.* § 44); as well as the representation on the arch of Titus. Scacchius has, however, maintained that they formed a pyramid, of which the shaft was the apex.

This candelabrum was placed in the Holy Place, on the *south* side (*i. e.* to the *left* of a person entering the tabernacle), opposite the table of shew-bread (Exod. xxvi. 35). Its lamps, which were supplied with pure olive oil only, were lighted every evening, and extinguished (as it seems) every morning (Exod. xxvii. 21; xxx. 7, 8; Lev. xxiv. 3; 1 Sam. iii. 3; 2 Chron. xiii. 11). Although the tabernacle had no windows, there is no good ground for believing that the lamps burnt by day in it, whatever may have been the usage of the second temple. It has also been much disputed whether the candelabrum stood lengthwise or diagonally as regards the tabernacle; but no conclusive argument can be adduced for either view. As the lamp on the central shaft was by the Jewish writers called נר מערבי, *the western*, or *evening lamp*, some maintain that the former name could not be applicable unless the candelabrum stood across the tabernacle, as then only would the central lamp point to the west. Others again adhere to the latter signification, and build on a tradition that the central lamp alone burnt from evening to evening, the other six being extinguished by day (Reland, *Antiq.* i. 5. 8).

In the first temple, instead of this single candelabrum, there were ten candelabra of pure gold (whose structure is not described, although *flowers* are mentioned: 1 Kings vii. 49; 2 Chron. iv. 7), one half of which stood on the north and the other on the south side of the Holy Place. These were carried away to Babylon (Jer. lii. 19). In the temple of Zerubbabel there appears to have been only one candelabrum again (1 Mac. i. 21; iv. 49, 50). It is probable that it also had only seven lamps. At least, that was the case in the candelabrum of the Herodian temple, according to the description of Josephus (*De Bell. Jud.* vii. 5). This candelabrum is the one which, after the destruction of Jerusalem, was carried with other spoils to Rome; then, A.D. 455, became a part of the plunder which Genseric transported to Africa; was again, about A.D. 533, recaptured from the Vandals by Belisarius, and carried to Constantinople, and was thence sent off to Jerusalem, and from that time has disappeared altogether. It is to this candelabrum that the representation on the arch of Titus at Rome was intended to apply; and, although the existence of the figures of eagles and marine monsters on the pediment of that lamp tends, with other minor objections, to render the accuracy of that copy very questionable (as it is incredible the Jews should have admitted any such graven images into their temple), yet there is reason to believe that, in other points, it may be relied upon as a reasonably correct representation of the Herodian candelabrum. Reland has devoted a valuable little work to this subject, *De Spoliis Templi Hierosolym. in Arcu Titiano*, ed. sec. Schulze, 1775.—J. N.

CANE (or CALAMUS), SWEET, an aromatic seed, mentioned among the drugs with which sacred perfumes were compounded (Ezek. xxvii. 19) [KANEH].

CANKER-WORM. [YELEK.]

CANNEH (Ezek. xxvii. 23), probably the same as CALNEH (Gen. x. 10), which see.

CANON. 1. The Greek word Κανών denotes, primarily, a straight rod; and from this flow numerous derivative uses of it, in all of which the idea of *straightness*, as opposed to *obliquity*, is apparent. Among the rest, it is employed to denote a *rule* or *standard*, by a reference to which the rectitude of opinions or actions may be determined. In this latter acceptation it is used in the New Testament (comp. Gal. vi. 16; Phil. iii. 16). In the same sense it is frequently used by the Greek fathers (Suicer. *Thes. Eccles.* in voce); and as the great standard to which they sought to appeal in all matters of faith and duty was the revealed will of God contained in the scriptures of the Old and New Testaments, they came insensibly to apply this term to the collective body of those writings, and to speak of them as THE CANON or RULE. In the same acceptation we shall use the term in this article.

2. The Canon then may be defined to be 'The Authoritative Standard of Religion and Morals, composed of those writings which have been given for this purpose by God to men.' A definition frequently given of the Canon is, that it is 'The Catalogue of the Sacred Books;' while Semler (*Von Freier Untersuchungen des Canons*), Doederlein (*Institutio Theol. Christ.* tom. i. p. 83), and others, define it as 'The List of the Books publicly read in the meetings of the early Chris-

tians.' The former of these definitions, however, leaves out of sight the true meaning of the term Canon; and the latter is doubly erroneous, as it not only omits the main characteristic of the Canon, *its divine authority*, but substitutes for this a characteristic which is historically false, as the Canon was not at any time synonymous with the list of books read in public in the early churches.

3. According to this definition, in order to establish the Canon of Scripture, it is necessary to show that all the books of which it is composed are of divine authority; that they are entire and incorrupt: that, having them, it is complete without any addition from any other source; and that it comprises the whole of those books for which divine authority can be proved. It is obvious that, if any of these four particulars be not true, Scripture cannot be *the sole and supreme* standard of religious truth and duty. If any of the books of which it is composed be not of divine authority, then part of it we are not bound to submit to; and consequently, *as a whole*, it is not the standard of truth and morals. If its separate parts be not in the state in which they left the hands of their authors, but have been mutilated, interpolated, or altered, then it can form no safe standard; for in appealing to it, one cannot be sure that the appeal is not made to what is spurious, and what, consequently, may be erroneous. If it require or admit of supplementary revelations from God, whether preserved by tradition or communicated from time to time to the Church, it obviously would be a mere contradiction in terms to call it *complete*, as a standard of the divine will. And if any other books were extant, having an equal claim, with the books of which it is composed, to be regarded as of divine authority, it would be absurd to call it the *sole* standard of truth; for in this case the one class of books would be quite as deserving of our reverence as the other.

4. Respecting the *evidence* by which the Canon is thus to be established, there exists considerable difference of opinion amongst Christians. Some contend, with the Catholics, that the authoritative decision of the Church is alone competent to determine the Canon; others appeal to the concurrent testimony of the Jewish and early Christian writers; and others rest their strongest reliance on the internal evidence furnished by the books of Scripture themselves. We cannot say that we are satisfied with any of these sources of evidence exclusively. As Michaelis remarks, the first is one to which no consistent Protestant can appeal, for the matter to be determined is of such a kind, that, unless we grant the Church to be infallible, it is quite possible that she may at any given period of her existence determine erroneously; and one sees not why the question may not be as successfully investigated by a private individual as by the Church. The concurrent testimony of the ancient witnesses is invaluable so far as it goes; but it may be doubted if it be sufficient of itself to *settle* this question, for the question is not *entirely* one of facts, and testimony is good proof only for *facts*. As for the internal evidence, one needs only to look at the havoc which Semler and his school have made of the Canon, to be satisfied that where dogmatical considerations are allowed to determine exclusively such questions, each man will extend or extruncate the Canon so as to adjust it to the Procrustean couch of his own preconceived notions. As the question is one partly of fact and partly of opinion, the appropriate grounds of decision will be best secured by a combination of authentic testimony with the evidence supplied by the books themselves. We want to know that these books were really written by the persons whose names they bear; we want to be satisfied that these persons were commonly reputed and held by their contemporaries to be assisted by the divine spirit in what they wrote; and we want to be sure that care was taken by those to whom their writings were first addressed, that these should be preserved entire and uncorrupt. For all this we must appeal to the testimony of competent witnesses, as the only suitable evidence for such matters. But after we have ascertained these points affirmatively, we still require to be satisfied that the books themselves contain nothing obviously incompatible with the ascription to their authors of the divine assistance, but, on the contrary, are in all respects favourable to this supposition. We want to see that they are in harmony with each other; that the statements they contain are credible; that the doctrines they teach are not foolish, immoral, or self-contradictory; that their authors really assumed to be under the divine direction in what they wrote, and afforded competent proofs of this to those around them; and that all the circumstances of the case, such as the style of the writers, the allusions made by them to places and events, &c., are in keeping with the conclusion to which the external evidence has already led. In this way we advance to a complete moral proof of the divine authority and canonical claims of the sacred writings.

5. The books specified as canonical in the 6th Article of the Church of England, and the 1st of the Confession of the Church of Scotland, are received as such by the majority of Protestants. To these the Church of Rome adds, as part of the Old Testament, ten other books, or parts of books, which Protestants reject as Apocryphal [APOCRYPHA]. For the evidence in support of the genuineness and divine authority of those books universally regarded by Christians as canonical, taken individually, we shall refer here to the articles in this work under the titles of these books respectively. The remainder of the present article shall be devoted to a sketch of the formation and history of the Canon, first of the Old Testament, and then of the New.

6. *Formation of the Old Testament Canon.*—By this is meant the collection into one whole of all those books whose divine authority was recognised by the Jews, and which now form the Old Testament, as that is received by the Protestant churches. The question is—At what time and by whom was this done?

In answer to this, a very steadfast tradition of the Jews ascribes the completion of the Old Testament Canon to Ezra, and certain other persons who, after the re-building of the Temple, formed with him, and under his auspices, what has been called the Great Synagogue (כנסת הגדולה). Without pretending to be able to give full demonstration of the accuracy of this traditionary opinion, it seems to us one which may by evidence, both direct and

circumstantial, be rendered so extremely probable, that to call it in question would be to exhibit a degree of scepticism such as, in all other questions of a similar kind, would be thought highly unreasonable and absurd. In the *first* place, there is the testimony of the tradition itself. It occurs in one of the oldest books of the Talmud, the Pirke Aboth; and is repeated, with greater minuteness, in the Babylonian Gemarah (*Tr. Baba Bathra*, fol. 13, 2. See the passages in Buxtorf's *Tiberias*, lib. i. c. 10). The substance of it is that, after Moses and the elders, the sacred books were watched over by the prophets; and that the Canon was completed by Ezra, Nehemiah, and the men of the Great Synagogue. Against this tradition it has been objected that it proves too much, for it says that the men of the Great Synagogue *wrote* the later books, such as the twelve minor prophets, &c. But that, by *writing*, is here meant not the original composing of these books, but the *ascription* (the *to*-writing) of them to the sacred Canon may be inferred, partly from the circumstance that, in the same tradition, the men of Hezekiah are said to have *written* the Proverbs, which can only mean that they *copied* them (see Prov. xxv. 1), for the purpose of inserting them in the Canon; and partly from the fact that the word here used (כתבו) is used by the Targumist, on Prov. xxv. 1, as equivalent to the Heb. עתק. An attempt has also been made to discredit this tradition, by adducing the circumstance that Simon the Just, who lived long after Ezra, is said, in the Pirke Aboth, to have been one of the members of the Great Synagogue; but to this much weight cannot be allowed, partly because Simon is, in the passage referred to, said to have been one of the *remnants* of the Great Synagogue, which indicates his having outlived it; and principally because the same body of tradition which states this opinion, makes him the *successor* of Ezra: so that either the whole is a mistake, or the Simon referred to must have been a different person from the Simon who is commonly known by the title of 'Just' (Cf. Othonis, *Lex. Rabbin. Philol.* p. 604, Gen. 1675; Hävernick's *Einleitung in das A. T.* Th. i. Abt. 1, s. 43). Or we may adopt the opinion of Hartmann (*Die Enge Verbindung des Alt. Test. mit d. Neuen*, s. 127), that the college of men learned in the law, which gathered round Ezra and Nehemiah, and which properly was the synagogue, continued to receive accessions for many years after their death, by means of which it existed till the time of the Maccabees, without our being required to suppose that what is affirmed concerning its doings in the time of Ezra is meant to refer to it during the entire period of its existence. Suspicions have also been cast upon this tradition from the multitude of extravagant wonders narrated by the Jews respecting the Great Synagogue. But such are found in almost every traditionary record attaching to persons or bodies which possess a nationally heroic character; and it is surely unreasonable, because a chronicler tells one or two things which are incredible, that we should disbelieve all besides that he records, however possible or even probable it may be. 'Je ne nie pas,' says Fabricy (*Des Titres Primitifs de la Révélation*, i. 87, Rome, 1772), 'que les Docteurs Juifs n'ayent avancé bien des chimères au sujet de cette Grande-Synagogue; mais laissons le fabuleux, et prenons ce qu'il y a de vrai dans un point d'antiquité Hébraïque, appuyé sur des témoignages que la bonne critique ne permet pas de révoquer en doute.'—2ndly. The part of this tradition which ascribes the formation of the Canon, before the Exile, to Moses and the prophets, is sufficiently supported by the testimony of Scripture itself. When Moses had finished the writing of the Law, 'he delivered it to the priests, the sons of Levi, and unto the elders of Israel' (Deut. xxxi. 9); and the book was then taken and put in the side of the ark, in the most holy place (ver. 26). Towards the close of the book of Joshua it is said that 'he wrote these words in the book of the law of God;' which Le Clerc, with considerable probability, explains as meaning that he agglutinated the membrane on which his words were written to the volume of Moses which had been deposited in the side of the ark (*Comment.* in loc.). At a later period we find that Samuel, when he had told the people the manner (משפט the *jus publicum*) of the kingdom, wrote it in *the* book (הספר), and laid it up before the Lord (1 Sam. x. 25). Hilkiah, at a still later date, is said to 'have found the book of the Law in the House of the Lord' (2 Kings xxii. 8). Isaiah, in calling attention to his own prophecies, says, 'Seek ye out of the book of the Lord and read; no one of these shall fail' (xxxiv. 16); a passage on which Gesenius says (*Comment.* i. 921), 'The poet seems to have before his mind the placing of his oracle in a collection of oracles and sacred writings, whereby future generations might judge of the truth of his predictions.' And Daniel informs us, that he 'understood, by *the books*, the number of the years of the captivity' (ix. 2); an expression which seems to describe the sacred Canon so far as it then was complete (Gesenius, *Lex. Heb.* in v. ספר). From these notices we may gather—that such books as were sanctioned by the authority of Moses and the prophets (whose business it was, as the watchmen of Zion, to guard the people against either the reception of any writing that was spurious or the loss of any that was genuine) were acknowledged by the Jews, before the Exile, as of divine authority; that in all probability an authentic copy was in every case laid up in the sanctuary, and placed under the care of the priests* (Joseph. *Antiq.* v. 1. 17), from which copies were taken and circulated among the people (2 Chron. xvii. 9); and that collections of these were made by pious persons for their own use, such as Daniel probably had in Babylon, and such as Jeremiah seems to have had, from the frequent quotations in his prophecies from the older books.—3rdly. It is natural to suppose that, on the return of the people from their exile, they would desiderate an authoritative collection of their sacred books. We know that, on that occasion, they were filled with an anxious desire to know the will of God, for neglect of which, on the part of their fathers, they had so severely suffered; and that, to meet this desire, Ezra and certain of the Priests and Le-

* The entrusting of the sacred books to the care of the priesthood was common to the Jews with the ancient nations generally. See Hävernick's *Einleit.* i. 1. § 17, and the authors cited there.

vites read and expounded the word of the Lord to the people (Neh. viii. 1-8; ix. 1-3). As their fathers also had been misled by *false* prophets, it is natural to suppose that they would earnestly crave some assurance as to the writers whose words they might with safety follow. The Temple also was now bereft of its sacred treasures (Joseph. *De Bell. Jud.* vi. 6; *Tract. Rabbin. Joma.* ed. Sheringham, p. 102, sqq.). During the exile, and the troublous times preceding it, several prophets had committed their oracles to writing, and these required to be added to the Canon; and the majority of the people having lost acquaintance with the Hebrew, a translation of their sacred books had become necessary. All this conspired to render it imperative that some competent authority should, at the time of the second temple, form and fix the code of sacred truth.—4thly. The time of Ezra and Nehemiah was the latest at which this could be done. As the duty to be performed was not merely that of determining the genuineness of certain books, but of pointing out those which had been divinely ordained as a rule of faith and morals to the Church, it was one which none but a prophet could discharge. Now in the days of Nehemiah and Ezra there were several prophets living, among whom we know the names of Haggai, Zechariah, and Malachi; but with that age expired the line of prophets which God had appointed 'to comfort Jacob, and deliver them by assured hope' (Ecclus. xlix. 10). On this point the evidence of Josephus, the Apocryphal books, and Jewish tradition, is harmonious (comp. Joseph. *Cont. Apion.* i. 8; 1 Macc. iv. 46; ix. 27; xiv. 41; Hieronym. *ad Jes.* xlix. 21; Vitringa, *Obs. Sac.* lib. vi. cap. 6, 7; Hävernick, *Einleit.* i. 1. 27; Hengstenberg, *Beiträge zur Einleit. ins A. T.* i. s. 245). As the men of the Great Synagogue were thus the last of the prophets, if the Canon was not fixed by them, the time was passed when it could be fixed at all.—5thly. That it was fixed at that time appears from the fact, that all *subsequent* references to the sacred writings presuppose the existence of the complete Canon; as well as from the fact, that of no one among the Apocryphal books is it so much as hinted, either by the author or by any other Jewish writer, that it was worthy of a place among the sacred books, though of some of them the pretensions are in other respects sufficiently high (*e. g.* Ecclus. xxxiii. 16-18; l. 28). Josephus, indeed, distinctly affirms (*Cont. Ap.* loc. cit.) that, during the long period that had elapsed between the time of the close of the Canon and his day, no one had dared either to add to, or to take from, or to alter anything in, the sacred books. This plainly shows that in the time of Artaxerxes, to which Josephus refers, and which was the age of Ezra and Nehemiah, the collection of the sacred books was completed by an authority which thenceforward ceased to exist.

7. *Division of the Canon into three parts, the Law, the Prophets, and the Writings* (תורה נביאים וכתובים). This division is very ancient; it appears in the prologue to Ecclesiasticus, in the New Testament, in Philo, in Josephus, and in the Talmud (Surenhusii Βιβ. Καταλλ. p. 49). Respecting the *principle* on which the division has been made, there is a considerable difference of opinion. Whilst all are agreed that the first part, the Law, was so named from its containing the national laws and regulations; the other two are regarded by some as named from the character of the writings they contain; by others, from the office and station of their authors; and by others, from a sort of accidental combination, for which no reason can now be assigned. Of these, the second is the only one that will bear the test of examination. Two very material points in its favour are, 1st, that in the days of the Theocracy there was a class of persons who bore the name of Prophets (נביאים) *professionally*, *i. e.* they were persons not who were occasionally favoured with divine revelations, but who, renouncing all other occupations, gave themselves up to the duties of the prophetic office; and, 2ndly, that of *all* the books in the second division the reputed authors belong to this class; while of those in the third division, *none* of the authors, with two exceptions, belong to this class. The exceptions are Daniel and Lamentations. Of these the first is only apparent, for, though Daniel uttered prophecies, he was not *by profession* a prophet. The latter presents a greater difficulty; the best way of getting over which perhaps is, with Hävernick, to admit it to be an exception, and suppose it made intentionally, for the purpose of classing this book of elegies with the Psalms and other lyric poetry of the Jews (*Einleit.* § 11, s. 65). Adopting this theory, the title of the *second* division is accounted for. As for that of the *third*, the most probable account of it is, that, at first, it was fuller—viz. 'the *other* writings,' as distinguished from the Law and the Prophets (comp. the expression τὰ ἄλλα βιβλία, used by the Son of Sirach, *Ecclus.* Prol.); and that in process of time it was abbreviated into 'the writings.' This part is commonly cited under the title *Hagiographa*.

8. *Subsequent History of the Old Testament Canon.*—The Canon, as established in the time of Ezra, has remained unaltered to the present day. Some, indeed, have supposed that, because the Greek version of the Old Testament contains some books not in the Hebrew, there must have been a double canon, a Palestinian and an Egyptian (Semler, *Apparat. ad liberaliorem V. T. interpret.* § 9, 10; Corrodi, *Beleuchtung der Gesch. des Jüdisch. u. Christlich. Kanons*, s. 155-184; Augusti, *Einleit. ins. A. T.* s. 79); but this notion has been completely disproved by Eichhorn (*Einleit.* bd. i. s. 23), Hävernick (*Einl.* i. § 16), and others. All extant evidence is against it. The Son of Sirach, and Philo, both Alexandrian Jews, make no allusion to it; and Josephus, who evidently used the Greek version, expressly declares against it in a passage above referred to (§ 6). The earlier notices of the Canon simply designate it by the threefold division already considered. The Son of Sirach mentions 'the Law, the Prophets, and the other books of the fathers;' and again, 'the Law, the Prophecies, and the rest of the books;' expressions which clearly indicate that in his day the Canon was fixed.* In

* Hitzig and some others speak of the title thus applied to the third division as 'vague,' and as indicating no settled canon. But this is absurd. 'The *rest* of *the* books' pre-supposes a fixed number of books, by subtracting from which the remainder is found.

the New Testament our Lord frequently refers to the Old Testament, under the title of 'The Scriptures,' or of 'The Law' (Matt. xxi. 42; xxii. 29; John x. 30, &c. &c.); and in one place he speaks of 'the Law of Moses, the Prophets, and the Psalms' (Luke xxiv. 44); by the third of these titles intending, doubtless, to designate the Hagiographa, either after the Jewish custom of denoting a collection of books by the title of that with which it commenced; or, as Hävernick suggests, using the term ψαλμοί as a general designation of these books, because of the larger comparative amount of lyric poetry contained in them (*Einl.* § 14); Paul applies to the Old Testament the appellations 'The Holy Writings' (γραφαὶ ἅγιαι, Rom. i. 2); 'the Sacred Letters' (ἱερὰ γράμματα, 2 Tim. iii. 15), and 'the Old Covenant' (ἡ παλαιὰ διαθήκη, 2 Cor. iii. 14); both our Lord and his Apostles ascribe divine authority to the ancient Canon (Matt. xv. 3; John x. 34-36; 2 Tim. iii. 16; 2 Peter i. 19-21, &c.); and in the course of the New Testament, quotations are made from all the books of the Old except Ruth, Ezra, Nehemiah, Esther, Canticles, Lamentations, and Ezekiel; the omission of which may be accounted for on the simple principle that the writers had no occasion to quote from them. Philo attests the existence in his time of the ἱερὰ γράμματα, describes them as comprising laws, oracles uttered by the prophets, hymns, and the other books by which knowledge and godliness may be increased and perfected (*De Vita Contemplat.* in *Opp.*, tom. ii. p. 275, ed. Mangey); and quotations from or references to the most of the books are scattered through his writings. The evidence of Josephus is very important, for, besides general references to the sacred books, he gives a formal account of the Canon, as it was acknowledged in his day, ascribing five books, containing laws and an account of the origin of man, to Moses, thirteen to the Prophets, and four, containing songs of praise to God and ethical precepts for men, to different writers, and affirming that the faith of the Jews in these books is such that they would for them suffer all tortures and death itself (*Cont. Apion.* i. 7, 8; Eichhorn, *Einleit.* i. § 50; Jahn, *Introductio*, p. 50). Melito, bishop of Sardis in the second century of the Christian era, gives, as the result of careful inquiry, the same books in the Old Testament Canon as we have now, with the exception of Nehemiah, Esther, and Lamentations; the two first of which, however, he probably included in Ezra, and the last in Jeremiah (Euseb. *Hist. Eccles.* iv. 26; Eichhorn, *Einl.* i. § 52). The catalogues of Origen (Euseb. *Hist. Eccles.* vi. 2, 5), of Jerome (*Prol. Galeat.* in *Opp.* iii.), and of others of the fathers, give substantially the same list (Eichhorn, *l. c.*; Augusti, *Einl.* § 54; Cosins, *Scholastical Hist. of the Canon*, ch. iii. vi.; Henderson, *On Inspiration*, 449). In the Talmudic Tract entitled *Baba Bathra*, a catalogue of the books of the sacred Canon is given, which exactly corresponds with that now received by Christians (Buxtorf, *Tiberias*, c. 11). Hence it appears that all the evidence we have shows that the Canon, once fixed, has remained unaltered.

9. *Formation of the New Testament Canon.*—Whilst there is abundance of evidence in favour of the divine authority of the New Testament books, taken separately, fully greater perhaps than can be adduced in support of many of those of the Old Testament, the history of the formation of the New Testament Canon is involved in much greater obscurity than that of the Old. An ecclesiastical tradition ascribes to the apostle John the work of collecting and sanctioning the writings which were worthy of a place in the Canon; but this tradition is too late, too unsupported by collateral evidence, and too much opposed by certain facts, such as the existence of doubt in some of the early churches as to the canonicity of certain books, the different arrangement of the books apparent in catalogues of the Canon still extant, &c., for any weight to be allowed to it. A much more probable opinion, and one in which nearly all the modern writers who are favourable to the claims of the Canon are agreed, is, that each of the original churches, especially those of larger size and greater ability, collected for itself a complete set of those writings which could be proved, by competent testimony, to be the production of inspired men, and to have been communicated by them to any of the churches as part of the written word of God; so that in this way a great many complete collections of the New Testament scriptures came to be extant, the accordance of which with each other, as to the books admitted, furnishes irrefragable evidence of the correctness of the Canon as we now have it. This opinion, which in itself is highly probable, is rendered still more so when we consider the scrupulous care which the early churches took to discriminate spurious compositions from such as were authentic—the existence, among some, of doubts regarding certain of the New Testament books, indicating that each church claimed the right of satisfying itself in this matter—their high veneration for the genuine apostolic writings—their anxious regard for each other's prosperity leading to the free communication from one to another of whatever could promote this, and, of course, among other things, of those writings which had been entrusted to any one of them, and by which, more than by any other means, the spiritual welfare of the whole would be promoted—the practice of the fathers of arguing the canonicity of any book, from its reception by the churches, as a sufficient proof of this—and the reason assigned by Eusebius (*Hist. Eccles.* iii. 25) for dividing the books of the New Testament into ὁμολογούμενοι and ἀντιλεγόμενοι, viz. that the former class was composed of those which the universal tradition of the churches authenticated, while the latter contained such as had been received by the majority, but not by all (Storch, *Comment. Hist. Crit. de Libb. N. Testamenti Canone*, &c. p. 112, ff.; Olshausen's *Echtheit der IV. Evang.* s. 439). In this way we may readily believe that, without the intervention of any authoritative decision, either from an individual or a council, but by the natural process of each body of Christians seeking to procure for themselves and to convey to their brethren authentic copies of writings in which all were deeply interested, the Canon of the New Testament was formed.

10. *History of the New Testament Canon.*—The first certain notice which we have of the existence of any of the New Testament writings, in a collected form, occurs in 2 Pet. iii. 16, where the writer speaks of the epistles of Paul in such a way as to lead us to infer that at that time the

whole or the greater part of these were collected together, were known amongst the churches generally (for Peter is not addressing any particular church), and were regarded as on a par with 'the other Scriptures,' by which latter expression Peter plainly means the sacred writings both of the Old Testament and the New Testament, as far as then extant.—That John must have had before him copies of the other evangelists is probable from the *supplementary* character of his own gospel.—In the anonymous Epistle to Diognetus, which is, on good grounds, supposed to be one of the earliest of the uninspired Christian writings, the writer speaks of the Law, the Prophets, the Gospels, and the Apostles (§ xi. ed. Hefele).—Ignatius speaks of 'betaking himself to the Gospel as the flesh of Jesus, and to the apostles as the Presbytery of the church,' and adds, 'the prophets also we love;' thus showing, that it is to the Scriptures he was referring (*Ep. ad Philadelphenos*, § v. ed. Hefele).—Theophilus of Antioch speaks frequently of the New Testament writings under the appellation of *αἱ ἅγιαι γραφαί*, or *ὁ θεῖος λόγος*, and in one place mentions the Law, the Prophets, and the Gospels, as alike divinely inspired (*AdAutol.* iii. 11).—Clement of Alexandria frequently refers to the books of the New Testament, and distinguishes them into 'the Gospels and Apostolic Discourses' (*Quis Dives Salvus?* prope fin.; *Stromat.* sæpissime).—Tertullian distinctly intimates the existence of the New Testament Canon in a complete form in his day, by calling it 'Evangelicum Instrumentum' (*Adv. Marc.* iv. 2), by describing the whole Bible as 'totum instrumentum utriusque Testamenti' (*Adv. Prax.* c. 20), and by distinguishing between the 'Scriptura Vetus' and the 'Novum Testamentum' (*ibid.* c. 13).—Irenæus repeatedly calls the writings of the New Testament 'the Holy Scriptures,' 'the Oracles of God' (*Adv. Hær.* ii. 27; i. 8, &c.), and in one place he puts the Evangelical and Apostolical writings on a par with the Law and the Prophets (*ibid.* i. 3, § 6). From these allusions we may justly infer that before the middle of the third century the New Testament Scriptures were generally known by the Christians in a collected form, and reverenced as the word of God. That the books they received were the same as those now possessed by us, is evident from the quotations from them furnished by the early Fathers, and which have been so carefully collected by the learned and laborious Lardner, in his *Credibility of the Gospel History*. The same thing appears from the researches of Origen and Eusebius, both of whom carefully inquired, and have accurately recorded what books were received as Canonical by the tradition of the churches or the church writers (*ἐκκλησιαστικὴ παράδοσις*), and both of whom enumerate the same books as are in our present Canon, though of some, such as the Epistles of James and Jude,* the 2nd Ep. of Peter, the 2nd and 3rd of John, and the Apocalypse, they mention that though received by the majority, they were doubted by some (Euseb. *H. E.* iii, 25; vi. 24). Besides these sources of information we have no fewer than ten ancient catalogues of the New Testament books still extant. Of these, *six* accord exactly with our present Canon, while of the rest *three* omit only the Apocalypse, and *one* omits, with this, the Epistle to the Hebrews (Lardner's *Works*, vol. iv. and v., 8vo.; Horne's *Introduction*, vol. i. p. 70, 8th edition). An accumulation of evidence so copious and direct as this renders the integrity of the New Testament Canon a fact, than which none of a purely historical kind is better ascertained.

11. With the external evidence thus furnished in favour of the sacred Canon, the internal fully accords. In the Old Testament all is in keeping with the assumption that its books were written by Jews, sustaining the character, surrounded by the circumstances, and living at the time ascribed to their authors; or if any apparent discrepancies have been found in any of them, they are of such a kind as further inquiry has served to explain and reconcile. The literary peculiarities of the New Testament, its language, its idioms, its style, its allusions, all are accordant with the hypothesis that its authors were exactly what they profess to have been—Jews converted to Christianity, and living at the commencement of the Christian era. Of both Testaments the theological and ethical systems are substantially in harmony; whilst all that they contain tends to one grand result—the manifestation of the power and perfection of Deity, and the restoration of man to the image, service, and love of his Creator. The conclusion from the whole facts of the case can be none other than that the Bible is entitled to that implicit and undivided reverence which it demands, as the only divinely appointed *Canon* of religious truth and duty.

12. Besides the immortal work of Lardner and the different introductions to the critico-historical study of Scripture, the following works may with advantage be consulted on the subject of the Canon:—Cosin's *Scholastical History of the Canon*, 4to. London, 1657, 1672; Du Pin's *History of the Canon and Writers of the Books of the Old and New Test.* 2 vols. folio, London, 1699-1700; Ens. *Bibliotheca Sacra, sive Diatribe de Librorum Nov. Test. Canone*, 12mo. Amstel. 1710; Storch, *Comment. Hist. Crit. de Libb. Nov. Test. Canone*, 8vo. Francof. ad Viadrum, 1755; Schmid, *Hist. Antiq. et Vindicatio Canonis V. et N. Test.* 8vo. Lips. 1775; Millii *Proleg. in Nov. Test. Pars Prima*, Oxon. 1707; Jones's *New and Full Method of settling the Canonical Authority of the New Test.* 3 vols. 8vo.; Paley's *Horæ Paulinæ;* Alexander's *Canon of the Old and New Test. ascertained*, 12mo. Princeton, U. S. 1826, London, 1828.—W. L. A.

CANTICLES, or SOLOMON'S SONG (שִׁיר הַשִּׁירִים; Sept. ᾆσμα τῶν ᾀσμάτων; Vulg. *Canticum Canticorum;* all signifying the Song of Songs), is generally believed to have been so denominated in the inscription, to denote the superior beauty and excellence of this poem. It is one of the five *megilloth*, or volumes, placed immediately after the Pentateuch in the present manuscripts of the Jewish Scriptures, in the following order, viz. Canticles, Ruth, Lamentations, Ecclesiastes, and Esther; although this

* Origen omits these altogether in his list as given by Eusebius, but elsewhere in his writings he so fully admits their Canonicity, that this omission can be regarded only as an oversight either on his part or on that of Eusebius.

order is sometimes violated [SCRIPTURE, HOLY]. It also constitutes the fourth of the *Cetubim*, or writings (hagiographa), which in the Jewish enumeration comprehend the Psalms, Proverbs, Job, Canticles, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, and Ezra; which last includes the book of Nehemiah. These books are supposed to have been so called in contradistinction to the Law, which was delivered *orally*, and to the prophetical books, which were dictated in a peculiar manner. The *Cetubim* the Jews regard as the inspired writings of men who had no prophetic mission [HAGIOGRAPHA].

Canonicity of Canticles.—In favour of the canonical authority of this book (which has been questioned in ancient and modern times) we may observe, that it is found in all the copies of the Hebrew Bible which have descended to our times, as well as in the version of the Seventy, which was finished some time in the second century before the Christian era. It is also found in all the ancient catalogues which have come down to us from the early Christian church. The most ancient which we possess, that of Melito, bishop of Sardis (A.D. 170), preserved by Eusebius (*Hist. Eccles.* iv. ch. 26.), professes to give an account of the books of the Old Testament, according to the order in which they were written, from accurate information obtained in the East. The names of these books, he acquaints us, are as follows:—'of Moses, five books, Genesis, Exodus, Leviticus, Numbers, Deuteronomy; Jesus Naue, Judges, Ruth; four books of Kings; two of Paralipomena; Psalms of David; Proverbs of Solomon; Ecclesiastes; *Song of Songs;* Job; of Prophets, Isaiah, Jeremiah; of the twelve Prophets, one book; Daniel, Ezekiel, Esdras.' The book of Canticles is invariably contained in all subsequent catalogues. It has consequently all the external marks of canonicity possessed by any other book of the Old Testament not expressly cited in the New. Those who have questioned its right to a place in the sacred volume have proceeded more in dogmatical than on historico-critical grounds. It has been, indeed, attempted to be shown that the Song of Solomon was not included by Josephus in his account of the books of canonical Scripture, on the following grounds:—Josephus divides these books into the 'five books of Moses; thirteen books containing the history of their own times, written by the Prophets who succeeded him, to the time of Artaxerxes, son of Xerxes, king of Persia; and the remaining four consisting of hymns to God, and admonitions for the conduct of men's lives.' It is generally supposed that these four books are—Psalms, Proverbs, Ecclesiastes, and Canticles; and that the thirteen other books, included under the term Prophets, are—Joshua, Judges and Ruth, Samuel, Kings, Chronicles, Ezra and Nehemiah, Esther, Isaiah, Jeremiah and Lamentations, Ezekiel, Daniel, the twelve minor Prophets, and the book of Job. But it has been maintained, that this last book more appropriately belongs to the four which contain hymns and admonitions for human conduct, than to the Prophets who wrote the history of their own times after Moses, and consequently that there is no place left for Canticles. Those who adopt this view are compelled to separate the book of Ezra from that of Nehemiah, in order to make up the number of thirteen prophets; but whatever appearance of truth these may be in this reasoning, which is that advanced by Mr. William Whiston, in his supplement to his *Essay towards restoring the Text of the Old Testament*, it is overbalanced by the fact already stated, that this book formed part of the Jewish canonical Scriptures and of the Septuagint version. It is true that other books are found in the copies of this latter version, which were either originally written in Greek, as the Book of Wisdom and others, or are translated from the Hebrew or Chaldee, as Ecclesiasticus, and the first book of Maccabees; but it is confessed that these never formed part of the first or Jewish canon. The Book of Canticles was also translated into Greek, from the original, by Symmachus the Jew, and by Aquila, in the second century.

The Canticles was one of the books translated by Jerome from the Greek, or rather, corrected from the older Latin version, and published by that Father; but this work is now lost. We still possess in the present Latin Vulgate Jerome's translation of this book from the original Hebrew.

Subject of Canticles.—The subject of this book is confessedly LOVE. But it has been a matter of much controversy, especially in modern times, what kind of love is here celebrated. It is equally a matter of dispute among divines whether the interpretation of the poem is limited to its obvious and primary meaning, or whether it does not also include a latent mystical and allegorical sense. We shall speak of these subjects in order. And, first, as to the literal and primary meaning, the earliest information which we have is contained in the preface of Origen to his commentary on this book. This eminent scholar holds it to be an epithalamium, or marriage-song, in the form of a drama. This idea has been, in modern times, improved by Lowth, Bossuet, Michaelis, and other commentators. 'The Song of Songs,' says Bishop Lowth, 'for so it is entitled, either on account of the excellence of the subject or of the composition, is an epithalamium, or nuptial dialogue, or rather, if we may be allowed to give it a title more agreeable to the genius of the Hebrews, a Song of Loves. Such is the title of Psalm xlv. It is expressive of the utmost fervour as well as delicacy of passion: it is instinct with all the spirit and sweetness of affection. The principal characters are Solomon himself and his bride, who are represented speaking both in dialogue, and in soliloquy, when accidentally separated. Virgins, also, the companions of the bride, are introduced, who seem to be constantly on the stage, and bear a part of the dialogue. Mention is also made of young men, friends of the bridegroom, but they are mute persons. This is exactly conformable to the manners of the Hebrews, who had always a number of companions to the bridegroom, thirty of whom were present in honour of Samson at his nuptial feast (Judg. xiv. 13). In the New Testament, according to the Hebrew idiom, they are called children, or sons of the bridechamber, and friends of the bridegroom. There, too, we find mention of ten virgins who went forth to meet the bridegroom and conduct him home; which circumstances indicate that this poem is founded on the nuptial rites of the Hebrews, and is ex-

pressive of the forms or ceremonial of their marriage. In this opinion, indeed, the harmony of commentators is not less remarkable than their disagreement concerning the general economy and conduct of the work, and the order and arrangement of the several parts. The present object of inquiry, however, is only whether any plot or fable be contained or represented in this poem; and upon this point the most probable opinion is that of the celebrated Bossuet, a critic whose profound learning will ever be acknowledged, and a scholar whose exquisite taste will ever be admired.'

Bossuet's idea of this poem was, that it is a regular drama, or pastoral eclogue, consisting of seven acts, each act filling a day, concluding with the Sabbath, inasmuch as the bridegroom on this day does not, as usual, go forth to his rural employments, but proceeds from the marriage chamber into public with his bride. The following are Bossuet's divisions of the plots:—

First day . .	Chap. i.—ii. 6.
Second day .	ii. 7—17.
Third day .	iii.—v. 1.
Fourth day .	v. 2—vi. 9.
Fifth day . .	vi. 10—vii. 11.
Sixth day . .	vii. 12—viii. 3.
Sabbath . . .	viii. 4—14.

Lowth so far differs from Bossuet as to deny the existence of a regular drama, inasmuch as there is no termination to the plot. Michaelis, in his notes to his German translation of Lowth's *Prelections*, endeavours to overturn the views of Bossuet and Lowth, and to show that this poem can have no relation to the celebration of a marriage, inasmuch as the bridegroom is compelled in his nuptial week to quit his spouse and friends for whole days, in order to attend to his cattle in the pastures; and while he altogether repudiates the idea, which some have had the rashness to maintain, that the subject of the poem, in its literal signification, is a clandestine amour, inasmuch as the transaction is described as legal and public, and the consent of parents plainly intimated, he equally rejects the views of those who conceive that these songs relate to the state of parties betrothed before marriage. His opinion is, that this poem has no reference to a future marriage, but that the chaste loves of conjugal and domestic life are described. This state, he conceives, in the East, admits of more of the perplexities, jealousies, plots, and artifices of love than it does with us; the scene is more varied, and there is consequently greater scope for invention.

But the idea that the conjugal state, or the loves of married persons, are here referred to, has been strongly opposed by some of the ablest modern writers, including Eichhorn (*Einleitung*), Rosenmüller (*Scholia in Cant.* Pref. p. 261), Jahn (*Einleitung* and *Introduct. in Compendium redacta*), who maintain that the chaste mutual loves of two young persons antecedent to marriage are here celebrated. The last-named writer having observed that neither in monogamy nor in polygamy is the passion of love so ardent as is here represented, proceeds to maintain that no other object remains but 'the chaste and reciprocal affection of the sexes previously to marriage. Some of the language,' he adds, 'may be thought indecorous in persons in such circumstances; but this is not the case, unless it be taken in the worst sense. It admits of a meaning perfectly chaste, which in the mouths of chaste lovers, such as the parties are uniformly represented, is the only one that can be true.' He conceives that there is no necessity to suppose any actual historical foundation for the poem.

Here it may be necessary to state, that the learned are divided on the point whether the Canticles consist of one continued and connected poem, or of a number of detached songs or amorets. The first person who maintained the latter opinion was Father Simon, who was on this account unjustly accused of denying the canonicity of the book. This opinion has been subsequently defended by Eichhorn (*Einleitung*), Jahn, Pareau (*Institutio Interpretis V. T.* p. iii. § iv. c. xi. § 3; *Biblical Cabinet*, vol. ii. p. 129), and many others. A very general opinion is, that it is an idyl, or rather, a number of idyls, all forming a collective whole. Such is the opinion held, among others, by Sir William Jones and Dr. J. Mason Good, in his beautiful translation of the Song of Songs. Dr. Adam Clarke, however, will not allow that the book of Canticles comes under the denomination of a pastoral, an idyl, an ode, or an epithalamium. He conceives it to be a composition *sui generis*, partaking more of the nature of a mask than anything else—an entertainment for the guests who attended a marriage ceremony. He admits no mystical sense. Jahn, in the work above alluded to, having stated his opinion that the work comprehends several amatory poems, thus distributes them:—1. An innocent country maiden makes an undisguised profession of her attachment, and her lover, a shepherd, replies to it with equal protestations of affection (i. 2—ii. 7). Some prefer concluding this dialogue at i. 11, and making i. 12—ii. 7, a soliloquy, in which the maiden is supposed to repeat some compliments of her lover. But this is without sufficient reason.—2. A maiden sings of her lover, who is seeking her everywhere, and she also confesses her warm affection (ii. 8—iii. 5). Some suppose that ii. 8—14 is a dream, and that in verse 15 the maiden awakes, who dreams again in iii. 1-5. But if these places are similar to dreams, it ought to be remembered that waking dreams are not uncommon with lovers. This the poet, true to nature, has here represented.—3. A maiden in a litter, surrounded by Solomon's soldiers, is brought to the harem of the king. The lover prefers, far before all the royal beauties, his own beloved, in whose society he declares that he is happier than the king himself (iii. 6-v. 1). Some choose to make iv. 8—v. 1, a distinct poem; but they can hardly offer any sufficient reason for separating this portion from the other. Nevertheless the distribution of the work into its several parts must be left very much to the reader's own taste and feeling.—4. A maiden beloved sings of her lover. He had come to her door at night, and had fled away before she opened it. She seeks him; is beaten by the watch, and stripped of her veil. She describes the beauty of her lover, who at length answers, celebrating her loveliness, with a contemptuous glance at the multitude of the king's wives (v. 2-vi. 9).—5. Shulamith recounts, in few words, the allurements of the courtiers, whom she has met with unexpectedly in the garden, and her rejection of them, and celebrates her affection for

her lover (vi. 10—viii. 3).—6. Protestation and praises of constant affection (viii. 4-7).—7. A discourse between two brothers, about guarding and giving away their sister in marriage; who replies with scorn, that she would be her own guardian (viii. 8-12).—8. A fragment. A lover wishes to hear his beloved. She replies by persuading him to fly. Perhaps her parents or relations were near, who, in the East, never permit such meetings (viii. 13, 14).

Ewald considers the poem to consist of a drama in four parts. The heroine of the poem, according to this writer, is a country maiden, a native of Engedi, who, while rambling in the plains, fell in with the chariots of Solomon, and was carried by him into his palace. (Ewald's *Das Hohe Lied Salomo's*, Gotting. 1826).

We may here mention, that the divisions in general of this poem have been modified according to the views of its different commentators. Those, for instance, who regard it as *prophetical*, have adopted various divisions; such as the *legal* and *evangelical*—the former commencing with the captivity, and ending with the death of Christ, from the commencement to chap. iv. 6; and the latter from chap. iv. 7 to the end. Nicholas Lyranus considers the six first chapters to represent the Old Testament, and the two last the New. Ederus (*Œconom. Bibl.* p. 180) supposes that it describes the history of the church to the time of Christ, in ten dramas. Gregory de Valentia divides it into two parts—the first containing the history of the Israelitish church to Solomon; and the second, the professing Christian church, to the time of Constantine. Cornelius a Lapide finds in it the Christian church in its infancy to the feast of the Pentecost, its youth to the time of Constantine, its manhood under Constantine, its old age in the time of the Arian and Nestorian heresies, and its renovation under Basil, Chrysostom, and Augustin. Those who consider it as a *dogmatical* book form other divisions. Thus, Cocceius, holding it to be a representation of the progress of religion in the soul, or the spiritual wedlock of Christ and the church, divides it into four parts, consisting of espousals, mutual love, reconciliation, and consummation in heaven; while Calovius forms of it three divisions, consisting of the desire of Christ and his advent, grief for the loss of the bridegroom, and the song of the bridegroom and bride.

Object of the Canticles.—It has been in all ages a matter of dispute, whether we are to seek for any hidden or occult meaning under the envelope of the literal and obvious sense. While several eminent men have maintained that the object of these poems is confined to the celebration of the mutual love of the sexes, or that its main design, in so far as its sacred character is considered, is the inculcation of marriage, and especially of monogamy, the majority of Christian interpreters, at least since the days of Origen, have believed that a divine allegory is contained under the garb of an epithalamium, founded on the historical fact of the marriage of Solomon with the daughter of Pharaoh: others have held it to be a simple allegory, having no historical truth for its basis. We are informed by Jerome, that Origen wrote ten books of commentaries on this poem, containing twenty thousand *stichi*. Of these there are extant, in Latin, two homilies, translated from the original Greek by Jerome; and four books of Commentaries, in the version of Rufinus (Origen, *Opera*, Paris, 1740, vol. iii.). While the celebrated author admits the historical sense, he represents, according to his custom, a hidden sense, in which either the church or the soul of the believer (for he does not determine which) converses with the divine Redeemer. 'This little book,' he says, 'seems to be an epithalamium—that is, a nuptial song—written by Solomon, and sung in the person of a bride to her bridegroom, who is the word of God burning with celestial love. For she loved him passionately, whether we consider her as the soul made after his image, or the church.' Jerome, in his *Epistle to Pope Damasus*, observes, that 'Origen, having in his other writings exceeded all others, in his work on Canticles has exceeded himself.' Jerome and the Fathers in general have followed Origen's interpretation. The only exception to this view, among the early writers, whose name has come down down to us, is the famous Syrian commentator, Theodore, Bishop of Mopsuestia, the friend and schoolfellow of St. Chrysostom. This eminent writer altogether denied the allegorical interpretation, and is said to have considered the Canticles to have been composed with the view of gaining the affections of an Ethiopian princess. Theodoret, in his *Commentary on Canticles*, while he states that Eusebius, Cyprian of Carthage, and others nearer to the apostolic age recognised the Canticles as a spiritual book, acquaints us that there were persons who slandered the book, and denied its spiritual meaning, putting together fables unworthy of a doting old woman; others, he observes, were of opinion that the wise Solomon writes concerning himself and the daughter of Pharaoh, while some authors of the same class feigned that the Shunamite (for the word is sometimes thus read) was no other than Abishag, who was a native of Shunem. St. Bernard assigns to the book three senses—a historical, a moral, and a spiritual. He describes it as an agreeable and figurative epithalamium, in which Solomon sings the mysteries of an eternal marriage; and among the moderns, Bossuet observes, that 'Solomon adduces, as an example, his chaste affection towards Pharaoh's daughter; and while on the foundation of a true history he aptly describes the most passionate love, he sings, under the envelope of an elegant fable, celestial loves and the union of Christ and the Church.'

Among those who have maintained the opinion that the Song of Songs is an allegory founded on facts, were Isidore Clarius and Francis Vatablus. Lightfoot also considers the poem to refer to a daughter of Pharaoh, an Ethiopian and a Gentile. Others, as we have observed, among whom are the learned Lutherans Carpzov (*Introductio ad Libros Canonicos V. T.*), and Gerhard (*Postill. Salomonis, in Cant.* proœm. cap. x.), maintain that the book is a simple allegory, having no historical base whatever, but describing the love which subsists between Christ and the Church under figures borrowed from the ardour of human passion. These writers maintain that there exists no double sense whatever, but that its primary is its only sense, and that this primary sense is entirely of a spiritual character.

As, however, the Scriptures give no intimation

that this book contains a mystical or allegorical sense, recourse has been had to the analogy of some of the Messianic Psalms, whose application to Spiritual objects is recognised in the New Testament. Especially a great resemblance has been observed between the character of the Canticles and the 45th Psalm; and it will suffice for our present purpose to cite the opinion of Rosenmüller, one of the ablest commentators on the Messianic Psalms, in reference to this subject. Professing to follow the opinion of the ancient Hebrews, communicated by the Chaldee paraphrast, and the writer of the Epistle to the Hebrews—namely, that the 45th Psalm celebrated the excellencies and praises of the great Messiah; he observes, 'Throughout the latter part of the psalm this allegory, in which the Hebrew poets particularly delighted, is maintained. They were accustomed to represent God as entertaining, towards his chosen people, feelings which they compared to conjugal affections; and which they deduced, under this figure, into all their various and even minute expressions. In the illustrating and beautifying of this allegory, the whole of the *Song of Songs* is occupied: *that the subject of that poem, and that of the psalm before us, is the same, there is no doubt among sound interpreters*.' The reader may also refer, in illustration of this subject, to the many passages of the Old and New Testament in which this figure is retained by the sacred writers: such as Isaiah liv. 5; lxii. 5; Jerem. iii. 1, &c.; Ezek. xvi. and xxiii.; Matt. ix. 15; John iii. 29; 2 Cor. xi. 2; Ephes. v. 2, 3, &c.; Rev. xix. 7; xxi. 2; xxii. 17. (See, especially, Bishop Lowth's 21st Lecture, *De Sacra Heb. Poesi.*) The writers, however, who have admitted the allegorical sense, are divided as to the object and design of the allegory. The ancient Chaldee paraphrast, a writer not more ancient than the sixth century, has been considered by some as preserving the tradition of the Jews on this subject. In this commentary (the Targum) the Canticles are explained as a figurative description of the gracious conduct of Jehovah towards his people, in delivering them from the Egyptian bondage, conferring great benefits on them during their progress through the wilderness, and conveying them in safety to the promised land. Aben Ezra, the celebrated Jewish commentator of the 12th century, considered that the Canticles represented the history of the Jews from Abraham to the Messiah. Others have conceived the bride to be Wisdom, with whom Solomon was acquainted from his childhood, and with whose beauty he was captivated (Leo Hebræus, Dialog. iii. *De Amore*). This latter is the view followed by Rosenmüller in his *Scholia*. He conceives the sudden transitions of the bride from the court to the grove inexplicable, on the principle that the Canticles describe only human love; but while adopting the allegorical interpretation, he professes to follow the Chaldee paraphrast and Solomon Jarchi, and terms the Canticles a dramatico-allegorical poem. Luther, in his *Commentary on Canticles*, maintained the allegorical interpretation, conceiving Jehovah to be the bridegroom, the bride the Jewish nation, and the poem itself a figurative description of Solomon's civil government, which, as we have already seen, appears, from Theodoret, to have been an opinion of some of the ancients. In his *Commentary* on 1 Peter, however, he explains the bride to be the New Testament church. For the view in his *Commentary on Canticles* he is put down as a follower of those ancient heretics by Sixtus of Sienna, and other writers of the church of Rome. But from this charge he is ably defended by Gerhard (*ut supra*).

The modern writers of the Roman church have, in general, followed Origen and Jerome in their allegorical interpretations. The learned Hug, however (*Das Hohelied in einen noch unversuchten Deutung*, Freyberg, 1813), has given an entirely new interpretation. He finds, under the image of the bride, the ten tribes, and by the brothers of the Shulamite he understands the citizens of Judah, inasmuch as they did not think the Jews worthy of being united with them. He regards the book as an attempt made in the time of Hezekiah to re-unite the remnant of the ten tribes to the tribe of Judah. Carpzov states that the Papists find Christ the spouse, and Mary the bride; but this only applies to very few writers in the Roman communion. Others among them explain the allegory as descriptive of the union between Christ and perfect souls, including the blessed Virgin; among English commentators also the idea is very prevalent that the Canticles have a peculiar reference to the union of the soul of the believer with Christ. The Rev. T. Scott observes, in his *Commentary*, that 'no other poem of the kind could be so explained as to describe the state of the heart at different times, and to excite admiring, adoring, grateful love to God our Saviour as this does.' We shall briefly dismiss the other views held respecting the Canticles by those who admitted the allegorical sense. Grotius has been justly censured for his views on this subject. Conceiving it to be a dialogue between Solomon and the daughter of the king of Egypt, he supposes that the mysteries of marriage are hidden under modest expressions. His comments cannot be too highly reprobated for their grossness and obscenity. At the same time he adds that 'Solomon, in order to perpetuate the work, composed it with such art that, without much distortion, it might be found to contain an allegory expressive of the love of God to the Israelites, as held by the Chaldee paraphrast and Maimonides. But as this was a type of the love of Christ to his Church, Christians laudably employed their genius in applying the words of the Song to this.' Carpzov, who admits no literal interpretation, considers that Bossuet only rehashed this idea of Grotius, whom he acknowledges to have been a great man, if he had let sacred subjects alone.

Among the remaining allegorical senses given to this poem, is that of its being a dialogue between God and the human soul, and even between the divine and human nature of Christ; while the alchemists conceive the whole book to treat of nothing but the philosopher's stone, of which Solomon was in search (see Carpzov's *Introduction*). We must not omit the opinion of the learned Keiser, who conceives it to be a historico-allegorical song, celebrating the restoration of the Mosaic worship by Zerubbabel, Ezra, and Nehemiah (*Das Hohelied*, Erlangen, 1825).

We are now to give some account of those who deny any but a literal interpretation of this book. We find in the Mishna (*Pirke Avoth* and *Mas-*

sochet Jadaim) some allusion to an idea that until the time of Ezra doubts were entertained as to the authenticity of this book; and to a decision of the Rabbins, that so far from its being an impure book, it was the most holy of all the hagiographa; and that if any controversy existed, it was only in respect to Ecclesiastes. We are also informed by Origen and Jerome that the Jews forbade this book to be read by any one until he arrived at thirty years of age—a restriction which these Fathers approved of in consequence of the amatory character of the poem. Among the Christian writers we have already observed that the only author of antiquity who has defended its literal interpretation was Theodore of Mopsuestia, who was condemned at the second Council of Constantinople for having 'disparaged the Canticles, by asserting that Solomon wrote these things to his bride, expounding things unutterable to Christian ears.' Leontius of Byzantium, a writer of the seventh century, in his book against Nestorius (see *Canisius*, vol. i. p. 577), observes, among other things, of Theodore, that he 'interpreted libidinously, according to his own mind, and with meretricious tongue, the most holy Song of Songs, which, with incredible audacity, he cuts off from the sacred books. Jahn also (*Introduction*) says, that the worst interpretation of all was that of Theodore, who considered the Canticles an obscene book. Dr. Nathaniel Lardner had long since observed that this accusation was probably false, as being made by his enemies. The reader can only form his judgment from the few fragments which have come down to us from this eminent interpreter. The following is, perhaps, the most remarkable:—'It becomes all readers to reflect that this book of the wise man cannot be looked on as an encouragement to immorality, and therefore to be held in disrepute. Neither should the book, on the other hand, be commended as having a prophetical character, for the edification of the Church; for had it been a prophetical book, there would have been some mention in it of the name of God; but all ought to know that the book is a table entertainment, such as Plato, at a later period, wrote concerning love, on which account the public reading of the Canticles was never allowed either to the Jews or to us, as being a domestic and nuptial Song of Solomon, singing to his guests the reproaches cast upon his bride.' But whatever might have been Theodore's particular views, he appears to have had no followers for many ages; the allegorical interpretation has been the current one in the Christian Church. Erasmus is said to have been the first after Theodore to deny this interpretation (*American Ency.*, art. 'Sol.'s Song'). Le Clerc, at a later period, took the same view, maintaining that it was simply an idyl or pastoral eclogue; and, in more modern times, some of the most distinguished interpreters have followed this interpretation.

The opinions of those who have acknowledged no other than the literal interpretation of the Canticles has had a considerable influence in the question of the canonicity of the book. Nor is it at all surprising that those who were in the habit of attaching a spiritual meaning to it should find it difficult to believe that a book, treating of human love, should have a place in the inspired volume. Jahn endeavours to explain this by the hypothesis that the author or authors of these songs do not celebrate all kinds of chaste love of the sexes before marriage, but only that which leads to monogamy (which is commended in Ecclesiastes ix. 9) and polygamy condemned, iii. 6-11, and vi. 8, 9; or that the prophets—possibly Haggai, Zechariah, and Malachi—who placed the Canticles in the canon, seem to have understood it in the mystical sense; so that the canonical sense is mystical, although this sense was not intended by the authors [INSPIRATION]. Most, however, of the literal commentators are of opinion that marriage, being a divine institution, the chaste love of the sexes is a fit subject for sacred song. Thus Pareau (*Institutio Interpretis V. T.*; see Translation in *Bib. Cabinet*, vol. ii. p. 291), who conceives that these songs are employed in 'describing the chastest love subsisting between a certain young man and a girl betrothed to him, in which the poet gives the reins to a most luxuriant imagination,' thinks that, at the same time, nothing is seen adapted to excite or nourish impure feelings, but that the author seems to have studiously endeavoured to adorn the virtuous loves of the future spouses with all those allurements which a fervid and Oriental genius could imagine, that he might more efficaciously recal the young men of his time from the enticements of impure love (See also Seiler's *Hermeneutics*, § 175). Seiler conceives that the aim of these songs consists in a commendation of conjugal fidelity, and of pure love for one wife, who is the legitimate spouse, even in a state of polygamy.

An argument has been made use of against the literal sense derived from the style of the poem; some critics having maintained that actual deformities are ascribed to the bride, which is inconsistent with an amatory poem; but from this charge it has been powerfully vindicated by writers of exquisite taste, of whom it will be sufficient to name Bossuet, Lowth, Eichhorn, and Dr. J. Mason Good. 'Even regarding it,' says Calmet, 'as a mere human composition, it has all the beauties of which a piece of this nature is capable. The bride and bridegroom express their sentiments in figurative and enigmatic periods, and by comparisons and similitudes derived from rural scenery. If the comparisons are sometimes too strong, we must allow something to the genius of the Orientals and the vivacity of love. The style is tender, lively, animated, and delicate' (Preface to *Canticles*).

These views, however, respecting the beauties of the poem, leave the question of its mystical and spiritual character untouched. We know that many poets, ancient and modern, have written amatory songs, which have allegorical, distinct from the primary, meaning. To adduce a familiar instance, it is known that several of Mr. Moore's *Melodies* are of this character. It is, therefore, at least possible that the Canticles may have a hidden meaning; but as the Scriptures no where refer to this, it can only be inferred from analogy. It is, at the same time, remarkable, that although the ancient Jews have attached a *Messianic* character to several of the psalms, they have never, as far as we know, sought this meaning in the Canticles.

It was chiefly the *subject* of the poem that influenced Dr. J. Pye Smith in rejecting the Canticles from the Canon, although he also maintained,

with Whiston, that Josephus did not include it in his catalogue (*Scripture Testimony*, i. 55, 3rd edit. 1837; also *Congregational Magazine* for 1837, 1838.)

But by many who defend the allegorical interpretation, it is acknowledged that, even in its literal sense, it has a just claim to be considered a canonical book. Dr. J. Mason Good, for instance, who, although he acknowledges that we have no sufficient data to build a decisive opinion, still believes it an allegory (observing that 'this allegoric mode of describing the sacred union subsisting between mankind at large, or an individual and pious soul, and the great Creator, is common to almost all Eastern poetry,' in proof of which he refers to the chaste and virtuous Sadi or the more impassioned Hafiz), and maintains that 'to those who disbelieve the existence of such an allegory, they still afford a happy example of the pleasures of holy and virtuous love; they inculcate, beyond the power of didactic poetry, the tenderness which the husband should manifest for his wife, and the deference, modesty, and fidelity with which his affection should be returned; and, considered even in this sense alone, they are fully entitled to the honour of constituting a part of the sacred Scriptures' (*Song of Songs, or Sacred Idyls*, by J. Mason Good, M.D.).

The translators of the Canticles have come in for their share of obloquy. 'Sebastian Castellio,' says Beza, 'wanted to expunge the Canticles from the Canon as an impure and obscene poem, and heaped the vilest reproaches on those ministers who resisted him. For this he was summoned before the senate, and expelled from Geneva. Conceiving the whole to relate to the amours of the polygamist monarch, he rendered it into Latin so as to express the effeminate and softly breathing sighs of lovers, imitating rather Catullus and Petronius than a divine prophet.' Beza styles Castellio an ambitious and self-opinionated man. Sixtus Senensis is equally severe on Castellio's translation (*Bib. Sac.* book vi. hær. xiii. p. 664). He has been even accused of calling the Canticles 'a flagitious book.' These are, however, it must be borne in mind, the accusations of Castellio's enemies; and it must be recollected that Castellio was particularly obnoxious to Beza on other accounts, especially for disapproving of the burning of Servetus, which Beza had defended, together with the propriety of burning heretics in general (Beza's *Life of Calvin*). Beza himself subsequently incurred similar obloquy for his own translation; and it is known, that when in his old age he married his second wife, he facetiously called his youthful bride by the name of his *Shunamite*.

Author and Age of Canticles.—These have been also much disputed. The inscription ascribes it to Solomon; and this is confirmed by the universal voice of antiquity, although some of the Jews have attributed it to Hezekiah.

From some Aramaic words, the spelling of David, in the solitary instance in which it occurs, with a י (yod), and the abbreviation of the pronoun אשר, the work has been supposed, by Eichhorn, Jahn, and others, to be written after the captivity. Rosenmüller dwells on the word 'Paradise,' which is found only here (ch. iv. 13), and in Ecclesiastes (ii. 5), and (Nehemiah (iv. 8), as a proof of this later date. The *two* latter books he regards as evidently written after the exile. But this mode of spelling David, which also occurs in Amos (vi. 5), only proves that the present text is corrupted. Aramaic words are found in other books of Scripture, whose antiquity is undisputed. Ewald fixes it to the year B.C. 920, which brings it near the age of Solomon; and Pareau, although coinciding with Rosenmüller in the opinion that Ecclesiastes was written after the captivity, has not 'the least doubt that the song is rightly attributed to Solomon;' and the eminent critic De Wette (*Lehrbuch*) is of opinion that the whole range of the figures and allusions, and the character of the manners depicted, prove that this work belongs to the age of Solomon. He accounts for the later features by supposing several minor poems to have been collected at some late period.—W. W.

CAPERNAUM (Καπερναούμ), a city on the north-western side of the Lake of Gennesareth, and on the border of the tribes of Zebulun and Naphtali. The infidelity and impenitence of the inhabitants of this place, after the evidence given to them by our Saviour himself of the truth of his mission, brought upon them this heavy denunciation:—'And thou, Capernaum, which art exalted unto heaven, shalt be brought down to hell: for if the mighty works which have been done in thee had been done in Sodom, it would have remained unto this day,' &c. (Matt. xi. 23.) This seems to have been more than any other place the residence of Christ after he commenced his great mission; and hence the force of the denunciation, which has been so completely accomplished, that even the site of Capernaum is quite uncertain. Dr. Robinson (*Bibl. Researches*, iii. 288-294) exposes the errors of all previous travellers in their various attempts to identify the site of Capernaum; and, from a hint in Quaresmius, he is rather inclined to look for it in a place marked only by a mound of ruins, called by the Arabs, Khan Minyeh. This is situated in the fertile plain on the western border of the Lake of Gennesareth, to which the name of 'the land of Gennesareth' is given by Josephus (*De Bell. Jud.* iii. 10, 8). This plain is a sort of triangular hollow, formed by the retreat of the mountains about the middle of the western shore. The base of this angle is along the shore, and is about one hour's journey in length, whereas it takes an hour and a half to trace the inner sides of the plain. In this plain Josephus places a fountain called Capharnaum: he says nothing of the town; but, as it can be collected from the Scriptural intimations that the town of Capernaum was in this same plain, it may be safely concluded that the fountain was not far from the town, and took its name therefrom. In this plain there are now two fountains, one called 'Ain el Madanwarah, the 'Round Fountain'—a large and beautiful fountain, rising immediately at the foot of the western line of hills. This Pococke took to be the Fountain of Capernaum, and Dr. Robinson was at the time disposed to adopt this conclusion. There is another fountain called 'Ain et-Tin, near the northern extremity of the plain, and not far from the lake. It is overhung by a fig-tree, from which it derives its name. Near this are several other springs, the water of which is said to be brackish; but Burckhardt, who rested for some time under the great fig-tree, describes the water of the main

source as sweet. This is the fountain which Dr. Robinson inclines to regard as that which Josephus mentions under the name of Capharnaum; and the reasons which he assigns certainly make it appear preferable to the other fountain at the inner part of the plain. Whichever be the Capharnaum, we should look for some traces of an ancient town in the vicinity, and, finding them, should be justified in supposing that they formed the remains of Capernaum. There are no ancient remains of any kind near the Round Fountain, which is one of the reasons against its claim to indicate the site of ancient Capernaum. But near the 'Ain et-Tin is a low mound of ruins, occupying a considerable circumference, which certainly offer the best probability which has yet been offered of being the remains of the doomed city: and if these be all its remains, it has, according to that doom, been brought low indeed. Near the fountain is also a khan, which gives the name of Khan Minyeh to the spot. This khan is now in ruins, but was once a large and well-built structure. Close on the north of this khan, and of the fountain, rocky hills of considerable elevation come down quite to the lake, and form the northern termination of the plain. It is important to add, that Quaresmius expressly states, that in his day, the place called by the Arabs Minyeh, was regarded as marking the site of Capernaum (*Elucid.* T. S. ii. p. 864).

CAPHTHOR (כַּפְתּוֹר; Deut. ii. 23; Jer. xlvii. 4; Amos ix. 7) was the real and proper country of the Philistines. There has been a great diversity of opinion with regard to the exact situation of that country. The general opinion that Caphthor was Cappadocia, is, upon the whole, founded more on the ancient versions of the Bible, such as the Septuagint and the Targums, than on any sound argument. Against this opinion have been urged:—1. The authority of Josephus, who seems to seek Caphthor somewhere between Egypt and Ethiopia; 2. That the Caphthorim came originally from Egypt, from which Cappadocia is so far removed, that it seems highly improbable that an Egyptian colony should first have emigrated thither, and then again removed to Palestine still more remote; 3. That Caphthor and Cappadocia are very dissimilar names even in sound; 4. That Caphthor is (Jer. xlvii. 4) designated as an island (אִי), though אִי sometimes also signifies a coast.

Others again, such as Calmet (*Dissert. sur l'Origine des Philistins*, p. 321), and still more J. G. Lackemacher (*Obser. Phil.* p. 2, 11, *sqq.*), have tried to prove that the Philistines derived their origin from the island of *Crete*, because—1. Caphthor is, with Jeremiah, an island, and—2. The proper name of the Philistines is כרתים (Ezek. xxv. 16; Zeph. ii. 5; 1 Sam. x. 14). The Sept., however, evidently makes a distinction between כפתורים and כרתים; nor is it probable that Crete should have been so populous, in the time of Abraham, as to send colonies to remote Palestine.

By far more probable is Calmet's previous opinion (found in the first edition of his *Comment. on Genesis*, but which he afterwards recalled), that Caphthor is the island of *Cyprus*. From the geographical situation of that island, it may have been known to the Egyptians at a very early period, and they may have sent colonies thither, who afterwards removed, from some reason or other, to the southern coast of Palestine bordering on Egypt. Swinton (*Inscr. Cit.* Oxon. 1750, pp. 78, 85) actually found on that island an ancient Phœnician coin, with the inscription כבדר (Kubdor), not very unlike כפתור; but in the *Allgemeine Liter. Zeitung* (Leipsic, 1825, i. 440) it has been proved that Swinton was mistaken in the reading of that inscription. Forster (*Epist. ad Michael.* p. 17, *sq.*) thinks that the Caphthorim had lived on the Egyptian coast (as אִי in Jer. xlvii. 4 is also used of sea-coasts), somewhere about Damietta. From hence, he supposes a colony of that people, and their brethren and easterly neighbours, the *Casluchim*, had gone forth, in the period between the first wars of the world (described in Gen. xiv.) and the birth of Isaac, and settled on the southern coast of Palestine, under the name of *Philistines*, after having expelled the Avim, who lived about Gaza [AVIM]. Only in subsequent times, Forster thinks, these new Philistines had again sent a colony who conquered the province of Lapethus, in the island of Cyprus. This colony he identifies with the Ethiopians, who lived, according to Herodotus (vii. 88), upon that island. There is much solid ground in favour of this opinion.—E. M.

CAPPADOCIA (Καππαδοκία), an ancient province of Asia Minor, bounded on the north by Pontus, on the east by the Euphrates and Armenia Minor, on the south by Mount Taurus (beyond which are Cilicia and Syria), and on the east by Phrygia and Galatia. The country is mountainous and abounds in water, and was celebrated for the production of wheat, for its fine pastures, and for its excellent breed of horses, asses, and sheep. The inhabitants were notorious for their dulness and vice. They were called 'Syrians' in the age of Herodotus (i. 72; v. 49), and even in Strabo's days they bore the name of 'Leuco-Syrians,' *i. e.* 'White Syrians' (xii. p. 544), in contradistinction to those dwelling beyond the Taurus, whose complexion was darkened by the sun. Cappadocia was subjugated by the Persians under Cyrus; but after the time of Alexander the Great it had kings of its own, who bore the common name of Ariarathes. It continued to be governed by tributary kings under the Romans till A.D. 17, when Tiberius made it a Roman province. Christianity was very early propagated in Cappadocia, for St. Peter names it in addressing the Christian churches in Asia Minor (1 Pet. i. 1). Cappadocians were present at Jerusalem on the day of Pentecost (Acts ii. 9).

CAPTIVITIES. The word *Captivity*, as applied to the people of Israel, has been appropriated, contrary to the analogy of our language, to mean Expatriation. The violent removal of the entire population of a city, or sometimes even of a district, is not an uncommon event in ancient history. As a measure of policy, no objection to it on the ground of humanity was felt by any one; since, in fact, it was a very mild proceeding, in comparison with that of selling a tribe or nation into slavery. Every such destruction of national existence, even in modern times, is apt to be embittered by the simultaneous disruption of religious bonds; but in the ancient world, the positive sanctity attributed to special places, and the local attachment of Deity, made expatriation doubly severe. The Hebrew people, for instance, in many

most vital points, could no longer obey their sacred law at all, when personally removed from Jerusalem; and in many others they were forced to modify it by reason of their change of circumstances.

Two principal motives impelled conquering powers thus to transport families in the mass: first, the desire of rapidly filling with a valuable population new cities, built for pride or for policy; next, the determination to break up hostile organisations, or dangerous reminiscences of past greatness. Both might sometimes be combined in the same act. To attain the former object, the skilled artisans would in particular be carried off; while the latter was better effected by transporting all the families of the highest birth, and all the well-trained soldiery. The Greeks used the special epithet ἀνάσπαστοι for a population thus removed (Herod. vi. 93, *et passim*).

The expatriation of the Jewish people belongs to two great eras, commonly called the first and second Captivity; yet differing exceedingly in character. It is to the former that the above remarks chiefly apply. In it, the prime of the nation were carried eastward by the monarchs of Assyria and Babylon, and were treated with no unnecessary harshness, even under the dynasty that captured them. So far were they from the condition of *bondsmen* (which the word 'captive' suggests), that the book of Susanna represents their elders in Babylon as retaining the power of life and death over their own people (i. 28), when Daniel was as yet a very young man. The authority of that book cannot indeed be pressed as to the chronology; yet the notices given by Ezekiel (xiv. 1; xx. 1) concur in the general fact, that they still held an internal jurisdiction over their own members. At a later time, under the Seleucidæ, we have distinct proof that in the principal cities the Jews were governed by an officer (ἐθνάρχης) of their own nation; as also in Egypt under the Ptolemies. The book of Tobit exhibits Israelites in Media possessed of slaves themselves (viii. 18); the book of Daniel tells us of a Jew, in eminent political station; and that of Esther celebrates their power and consequence in the Persian empire. Under the Seleucidæ [ANTIOCHUS] they were occasionally important as garrison-soldiers; and it may be suspected that, on the whole, their lot was milder than that of the other conquered nations among which they dwelt.

That which we name the first Captivity, was by no means brought about by a single removal of the population. In fact, from beginning to end, the period of deportation occupied full 150 years; as the period of return reaches probably through 100. The first blow fell upon the more distant tribes of Israel, about 741 B.C.; when Tiglath-pileser, king of Assyria (2 Kings xv. 29), carried off the pastoral population which lived beyond the Jordan, with Zebulon and Naphtali. (To this event allusion is made in Isaiah ix. 1; a passage very ill translated in our received version.) In the time of this conquering monarch, Assyria was rapidly rising into power, and to aggrandize Nineveh was probably a great object of policy. It is therefore credible, as he had received no particular provocation from the Israelites, that he carried off these masses of population to stock his huge city with. His successor Shalmaneser made the Israelitish king Hoshea tributary. When the tribute was withheld, he attacked and reduced Samaria (B.C. 721), and, by way of punishment and of prevention, transported into Assyria and Media its king and all the most valuable population remaining to the ten tribes (2 Kings xvii. 6). That he did not carry off all the peasants is probable from the nature of the case; Hengstenberg however maintains the contrary (*Authentie des Pentateuches*, ch. i. 'On the Samaritan'). The families thus removed were, in great measure, settled in very distant cities; many of them probably not far from the Caspian Sea; and their place was supplied by colonies from Babylon and Susis (2 Kings xvii. 24). Such was the end of Israel as a kingdom.—An interval of more than a century followed before Judah was to suffer a similar fate. Two separate deportations are narrated in the book of Kings, three in that of Jeremiah, while a fourth and earlier one appears in the book of Daniel. Jeremiah dates by the years of Nebuchadnezzar's reign (who came to the throne B.C. 606 or 605), and estimates that in his seventh year 3023 were carried off, in his eighteenth 832, and in his twenty-third only 745; making in all, as the writer is careful to note, 4600 (Jer. lii. 28, &c.). The third removal he ascribes to Nebuzaradan, the Babylonian general. That some error here exists, at least in the *numbers*, appears undeniable; for 4600 persons was a very petty fraction of the Jewish people; and, in fact, 42,360 are stated to have returned immediately upon the decree of Cyrus (Ezra ii. 64). In 2 Kings xxiv. 8-16, we find 18,000 carried off at once, in the third month of king Jehoiachin, and in the eighth year of Nebuchadnezzar; which evidently is the same as the first removal named by Jeremiah, and may be placed in B.C. 598. After this, the vassal king Zedekiah having rebelled, his city is beleaguered, and finally in his eleventh year is reduced (B.C. 588) by Nebuchadnezzar in person; and in the course of the same year, 'the nineteenth of Nebuchadnezzar' (2 Kings xxv. 8), Nebuzaradan carries away all the population except the peasants. Perhaps we need not wonder that no mention is made in the 'Kings' of the third deportation; for the account of the destruction was in a manner complete, upon the second invasion. There is a greater difficulty in the statement with which the book of Daniel opens, which is generally interpreted to mean that *in the third year* of Jehoiakim, Nebuchadnezzar besieged and captured Jerusalem, partially plundered the temple, and carried off the first portion of the people into captivity, among whom was Daniel. The text however does not explicitly say so much, although such is the obvious meaning; but if this is the only interpretation, we find it in direct collision with the books of Kings and Chronicles (which assign to Jehoiakim an *eleven* years' reign), as also with Jeremiah xxv. 1. The statement in Daniel partially rests on 2 Chron. xxxvi. 6; which is itself not in perfect accordance with 2 Kings xxiv. In the earlier history, the war broke out during the reign of Jehoiakim, who died before its close; and when his son and successor Jehoiachin had reigned three months, the city and its king were captured. But in the Chronicles, the same event is made to happen twice over, at an interval of three months and ten days (2 Chron. xxxvi. 6 and 9), and even so, we do not obtain accordance with the received interpretation

of Daniel i. 1-3. It seems on the whole the easiest supposition, that 'the third *year* of Jehoia*kim*' is there a mistake for 'the third *month* of Jehoia*chin*.' Hengstenberg, however, and Havernick defend the common reading, and think they reconcile it with the other accounts. On the whole, it is pretty clear that the people of Judah, as of Israel, were carried out of their land by TWO principal removals. The former, B.C. 598, was directed to swell the armies and strengthen the towns of the conqueror; for of the 18,000 then carried away, 1000 were 'craftsmen and smiths, all strong and apt for war,' and the rest are called 'mighty men of valour.' (Yet there is a difficulty about verses 14 and 16 in 2 Kings xxiv.) It was not until the rebellion of Zedekiah that Nebuchadnezzar proceeded to the extremity of breaking up the national existence, B.C. 588. As the temple was then burnt, with all the palaces and the city walls, and no government was left but that of the Babylonian satrap, this latter date is evidently the true era of the captivity. Previously Zedekiah was tributary; but so were Josiah and Ahaz long before; the national existence was still saved.

Details concerning the *Return* from the captivity are preserved in the books denominated after Ezra and Nehemiah; and in the prophecies of two contemporaries, Haggai and Zechariah. The first great event is the decree of Cyrus, B.C. 536, in consequence of which 42,360 Jews of Babylon returned under Sheshbazzar, with 7337 slaves, besides cattle. This ended in their building the altar, and laying the foundation of the second temple, 53 years after the destruction of the first. The progress of the work was, however, almost immediately stopped: for Zerubbabel, Jeshua and the rest abruptly refused all help from the half-heathen inhabitants of Samaria, and soon felt the effects of the enmity thus induced. That the mind of Cyrus was changed by their intrigues, we are not informed; but he was probably absent in distant parts, through continual war. (There is a difficulty in Ezra iv. as to the names Ahasuerus and Artaxerxes; yet the general facts are clear.)—When Darius (Hystaspis), an able and generous monarch, ascended the throne, the Jews soon obtained his favour. At this crisis, Zerubbabel was in chief authority (Sheshbazzar perhaps being dead), and under him the temple was begun in the second and ended in the sixth year of Darius, B.C. 520-516. Although this must be reckoned an era in the history, it is not said to have been accompanied with any new immigration of Jews. We pass on to 'the seventh year of king Artaxerxes' (Longimanus). Ezra vii. 7, that is, B.C. 458, when Ezra comes up from Babylon to Jerusalem, with the king's commendatory letters, accompanied by a large body of his nation. The enumeration in Ezra viii. makes them under 1800 males, with their families; perhaps amounting to 5000 persons, young and old: of whom 113 are recounted as having heathen wives (Ezra x. 18-43). In the twentieth year of the same king, or B.C. 445, Nehemiah, his cupbearer, gains his permission to restore 'his fathers' sepulchres,' and the walls of his native city; and is sent to Jerusalem with large powers. This is the crisis which decided the national restoration of the Jewish people: for before their city was fortified, they had no defence against the now confirmed enmity of their Samaritan neighbours; and, in fact, before the walls could be built, several princes around were able to offer great opposition [SANBALLAT]. The Jewish population was overwhelmed with debt, and had generally mortgaged their little estates to the rich; but Nehemiah's influence succeeded in bringing about a general forfeiture of debts, or at least of the interest: after which we may regard the new order of things to have been finally established in Judæa [NEHEMIAH]. From this time forth it is probable that numerous families returned in small parties, as to a secure home, until all the waste land in the neighbourhood was re-occupied.

There has been great difference of opinion, as to how the 70 years of captivity spoken of by Jeremiah (xxv. 12; xxix. 10) are to be estimated. A plausible opinion would make them last from the destruction of the first temple, B.C. 588, to the finishing of the second, B.C. 516: but the words of the text so specify 'the punishing of the king of Babylon' as the end of the 70 years—which gives us the date B.C. 538—that many, with Jahn, cling to the belief that a first captivity took place in the third year of Jehoiakim, B.C. 605. Winer, on the contrary, suspects that a desire to make out the 70 years in this way, has generated the story in Daniel, so irreconcilable with the books of Kings and of Jeremiah. But, in fact, if we read Jeremiah himself, it may appear that in ch. xxv. he intends to compute the 70 years from the time *at which he speaks* (ver. 1, 'in the fourth year of Jehoiakim,' *i. e.* B.C. 604); and that in xxix. 10 the number 'seventy years' is still kept up, in remembrance of the former prophecy, although the language there used is very lax.

The great mass of the Israelitish race nevertheless remained in dispersion. Previous to the captivity, many Israelites had settled in Egypt (Zech. x. 11; Isa. xix. 18), and many Jews afterwards fled thither from Nebuzaradan (Jer. xli. 17). Others appear to have established themselves in Sheba (see Jost's *Geschichte* &c), where Jewish influence became very powerful (SHEBA).

It is maintained by Von Bohlen (*Genesis*, p. cxvi.) that the ten tribes intermarried so freely with the surrounding population as to have become completely absorbed; and it appears to be a universal opinion that no one now knows where their descendants are. But it is a harsh assumption that such intermarriages were commoner with the ten tribes than with the two; and certainly, in the apostolic days, the *twelve* tribes are referred to as a well-known people, sharply defined from the heathen (James i. 1; Acts xxiv. 7). Not a trace appears that any repulsive principle existed at that time between the Ten and the Two. 'Ephraim no longer envied Judah, nor Judah vexed Ephraim;' but they had become 'one nation;' though only partially 'on the mountains of Israel' (Isa. xi. 13; Ezek. xxxvii. 22). It would seem, therefore, that one result of the captivity was to blend all the tribes together, and produce a national union which had never been effected in their own land. If ever there was a difference between them as to the books counted sacred, that difference entirely vanished; at least no evidence appears of the contrary fact. When, moreover, the laws of landed inheritance no longer enforced the maintenance of separate tribes and put a difficulty in the way of their intermarriage, an almost inevitable result in course of time was the entire obliteration of this distinction;

and as a fact, no modern Jews know to what tribe they belong, although vanity always makes them choose to say that they are of the two or three, and not of the ten tribes. That all Jews now living have in them the blood of all the twelve tribes, ought (it seems) to be believed, until some better reason than mere assertion is advanced against it.

When Cyrus gave permission to the Israelites to return to their own country, and restored their sacred vessels, it is not wonderful that few persons of the ten tribes were eager to take advantage of it. In two centuries they had become thoroughly naturalized in their eastern settlements; nor had Jerusalem ever been the centre of proud aspirations to them. It is perhaps remarkable, that in Ezra ii. 2, 36 (see also x. 18, 25), the word *Israel* is used to signify what we might call the Laity as opposed to the priests and Levites; which might seem as though the writer were anxious to avoid asserting that all the families belonged to the two tribes. (If this is not the meaning, it at least shows that all discriminating force in the words Israel and Judah was already lost. So, too, in the book of Esther, the twelve tribes through all parts of the Persian empire are called Jews.) Nevertheless, it was to be expected that only those would return to Jerusalem whose expatriation was very recent; and principally those whose parents had dwelt in the Holy City or its immediate neighbourhood. The re-migrants doubtless consisted chiefly of the pious and the poor; and as the latter proved docile to their teachers, a totally new spirit reigned in the restored nation. Whatever want of zeal the anxious Ezra might discern in his comrades, it is no slight matter that he could induce them to divorce their heathen wives—a measure of harshness which St. Paul would scarcely have sanctioned (1 Cor. vii. 12): and the century which followed was, on the whole, one of great religious activity and important permanent results on the moral character of the nation. Even the prophetic spirit by no means disappeared for a century and a half; although at length both the true and the false prophet were supplanted among them by the learned and diligent scribe, the anxious commentator, and the over-literal or over-figurative critic. In place of a people prone to go astray after sensible objects of adoration, and readily admitting heathen customs; attached to monarchical power, but inattentive to a hierarchy; careless of a written law, and movable by alternate impulses of apostacy and repentance; we henceforth find in them a deep and permanent reverence for Moses and the prophets, an aversion to foreigners and foreign customs, a profound hatred of idolatry, a great devotion to priestly and Levitical rank, and to all who had an exterior of piety; in short, a slavish obedience both to the law and to its authorized expositors. Now first, as far as can be ascertained (observe the particularity of detail in Neh. viii. 4, &c.), were the synagogues and houses of prayer instituted, and the law periodically read aloud. Now began the close observance of the Passover, the Sabbath, and the Sabbatical year. Such was the change wrought in the guardians of the Sacred Books, that, whereas the pious king Josiah had sat eighteen years on the throne without knowing of the existence of 'the Book of the Law' (2 Kings xxii. 3, 8); in the later period, on the contrary, the text was watched over with a scrupulous and fantastic punctiliousness. From this era, the civil power was absorbed in that of the priesthood, and the Jewish people affords the singular spectacle of a nation in which the priestly rule came later in time than that of hereditary kings. Something analogous may perhaps be seen in the priestly authority at Comana in Cappadocia under the Roman sway (Cicero, *Ep. ad Div.* xv. 4, &c.).

In their habits of life also, the Jewish nation was permanently affected by the first captivity. The love of agriculture, which the institutions of Moses had so vigorously inspired, had necessarily declined in a foreign land; and they returned with a taste for commerce, banking, and retail trade, which was probably kept up by constant intercourse with their brethren who remained in dispersion. The same intercourse in turn propagated towards the rest the moral spirit which reigned at Jerusalem. The Egyptian Jews, it would seem, had gained little good from the contact of idolatry (Jer. xliv. 8); but those who had fallen in with the Persian religion, probably about the time of its great reform by Zoroaster, had been preserved from such temptations, and returned purer than they went. Thenceforward it was the honourable function of Jerusalem to act as a religious metropolis to the whole dispersed nation; and it cannot be doubted that the ten tribes, as well as the two, learned to be proud of the Holy City, as the great and free centre of their name and their faith. The same religious influences thus diffused themselves through all the twelve tribes of Israel.

Thus in Egypt and Arabia, in Babylonia, Assyria, Media, masses of the nation were planted, who, living by traffic and by banking, were necessitated to spread in all directions as their numbers increased. By this natural progress they moved westward, as well as eastward, and, in the time of St. Paul, were abundant in Asia Minor, Greece, and the chief cities of Italy.

The extermination suffered by the Jewish inhabitants of Palestine, under the Romans, far better deserves the name of captivity: for after the massacre of countless thousands, the captives were reduced to a real bondage. According to Josephus (*De Bell. Jud.* vi. 9. 3), 1,100,000 men fell in the siege of Jerusalem by Titus, and 97,000 were captured in the whole war. Of the latter number, the greatest part was distributed among the provinces, to be butchered in the amphitheatres or cast there to wild beasts; others were doomed to work as public slaves in Egypt: only those under the age of seventeen were sold into private bondage. An equally dreadful destruction fell upon the remains of the nation, which had once more assembled in Judæa, under the reign of Hadrian (A.D. 133), which Dion Cassius concisely relates: and by these two savage wars, the Jewish population must have been effectually extirpated from the Holy Land itself, a result which did not follow from the Babylonian captivity. Afterwards, a dreary period of fifteen hundred years' oppression crushed in Europe all who bore the name of Israel, and Christian nations have visited on *their* head a crime perpetrated by a few thousand inhabitants of Jerusalem, who were not the real forefathers of the European

Jews. Nor in the East has their lot been much more cheering. With few and partial exceptions, they have ever since been a despised, an oppressed, and naturally a degraded people; though from them have spread light and truth to the distant nations of the earth.—F. W. N.

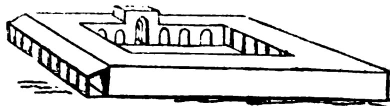
CARAVAN (كروان) is the name given to a body of merchants or pilgrims as they travel in the East. A multitude of people, of all ages and conditions, assembling to undertake a journey, and prosecuting it *en masse* for days and weeks together, is a thing unknown in Europe, where, from the many facilities for travelling, and a well organized system of police, travellers can go alone and unprotected along the highways to any distance with the most perfect security. But troops of people on march are a common spectacle along the roads of Eastern countries; and, indeed, the nature of the countries in many places, as well as the disorderly state of society, points out the only practicable way of travelling to be in large caravans. The dangers arising from the vast deserts that intersect these regions, as well as from wild beasts and bands of marauding Arabs, are too numerous and imminent for single traders or solitary travellers to encounter; and hence merchants and pilgrims are accustomed to unite for mutual protection in traversing these wild and inhospitable parts, as well as for offering a more effectual resistance to the attacks of robbers. Through this kind of intercourse, which principally obtains in Turkey, Persia, and Arabia, most of the inland commerce of the East is carried on; and certainly of all the various modes in which the commodities of one country are conveyed to another, it is the cheapest and the most expeditious, as the possession of the camel affords facilities for journeying over barren and sandy regions, which would be inaccessible to wheel-carriages, and the difficulties and privations of which no beast of burden but this invaluable creature could endure. The company composing a caravan is often very numerous, consisting, it may be, of several hundred persons, and as many thousand camels; and it may be supposed that the assembling of so many individuals, together with the orderly distribution of their respective bales of merchandise and travelling equipage, is an affair requiring both time and the most careful attention. Accordingly, the packing and unpacking of the camels, as well as the general service of the caravans, employ a great many hands, some of whom, by dint of economy and active habits, often raise themselves from the condition of servants to the more respectable status of merchants, who travel on their own account or in the capacity of carriers. Any person can, under certain regulations, form a caravan at any time. But generally there are stated periods, which are well known as the regular starting-times for the mercantile journeys; and the merchants belonging to the company, or those travellers who are desirous of accompanying it for the benefit of a safe conduct, repair to the place of rendezvous where the caravan is to be formed, exhibiting, as their goods and camels successively arrive, a motley group—a busy and tumultuous scene of preparation, which can be more easily conceived than described. As in the hot season the travelling is performed under night, the previous part of the day on which the caravan leaves is consumed in the preparatory labours of packing—an indispensable arrangement, which has been observed with unbroken uniformity since the days of Ezekiel (xii. 3); and then, about eight o'clock, the usual starting-time, the whole party put themselves in motion, and continue their journey without interruption till midnight (Luke xi. 5, 6) or later. At other seasons they travel all day, only halting for rest and refreshment during the heat of noon. The distances are measured by a day's journey; and from seven to eight hours seem to have been a usual day's journey for caravans (Hornemann, p. 150); so that, estimating the slow and unwieldy gait of a camel at 2½ miles an hour, the average rate of travel will be from 17 to 20 miles per day.

The earliest caravan of merchants we read of is the itinerant company to whom Joseph was sold by his brethren (Gen. xxxvii.). 'Here,' says Dr. Vincent, 'upon opening the oldest history in the world, we find the Ishmaelites from Gilead, conducting a caravan loaded with the spices of India, the balsam and myrrh of Hadramaut, and in the regular course of their traffic proceeding to Egypt for a market. The date of this transaction is more than seventeen centuries before the Christian era, and notwithstanding its antiquity, it has all the genuine features of a caravan crossing the desert at the present hour' (*Commerce and Navig. of the Ancients*, vol. ii. p. 262). This caravan was a mixed one, consisting of three classes, Ishmaelites (ver. 25), Midianites (ver. 28), and Medanites, as the Hebrew calls the last (ver. 36), who, belonging to the mountainous region of Gilead, would seem, like the nomade tribes of Africa in the present day, to have engaged themselves as commercial travellers, and were then, in passing over the plain of Dothan, on the high caravan-road for the market of Egypt. This circumstance, though minute, and incidentally introduced, is a beautiful confirmation of the truth of Scripture history; for it is well known that the ancient Egyptians were not addicted to commerce, and that all their traffic was thrown into the hands of foreigners, who by overland carriage regularly imported the productions of other countries—slaves, from Ethiopia; incense, from Arabia; and spices, from India —into Egypt, which was then, as it has been in all ages, the emporium of the Southern and Western nations.

Besides these communities of travelling merchants in the East, there are caravans of pilgrims, *i.e.* of those who go for religious purposes to Mecca, comprising vastly greater multitudes of people. Four of these start regularly every year: one from Cairo, consisting of Mahommedans from Barbary; a second from Damascus, conveying the Turks; a third from Babylon, for the accommodation of the Persians; and a fourth from Zibith, at the mouth of the Red Sea, which is the rendezvous for those coming from Arabia and India. The organization of the immense hordes which, on such occasions, assemble to undertake a distant expedition, strangers to each other, and unaccustomed to the strict discipline which is indispensable for their comfort and security during the march, though, as might be expected, a work of no small difficulty, is accomplished in the East by a few simple arrangements which are the result of long experience. One obvious bond of union

to the main body, when travelling by night and through extensive deserts, is the music of the Arab servants, who by alternate songs in their national manner beguile the tedium of the way; while the incessant jingling of innumerable bells fastened to the necks of the camels—a characteristic feature of Oriental caravans—enlivens the patient beasts, frightens animals of prey, and keeps the party together. To meet all the exigencies of the journey, however, which would be a task impracticable without the establishment of some kind of order, and a prudent division of labour, the caravan is placed under the charge of a *caravan bashi*, the chief who presides over all, and under whom there are five leading officers appointed to different departments:—one who regulates the march; a second, whose duties only commence at halting time; a third who superintends the servants and cattle; a fourth who takes charge of the baggage; a fifth who acts as paymaster, &c.; and besides these, there are the officers of the military escort that always accompanies it. One functionary of the highest importance remains to be noticed—the *hybeer*, or guide, a word derived by Bruce from the Arabic verb *hubbar*, to inform or direct, and whose services are indispensable in crossing the great deserts, such as that along the coast of the Red Sea or on the western extremities of Africa. He is commonly a person of influence, belonging to some powerful tribe, whose valuable assistance on an emergency may by his means be obtained; and, besides the indispensable qualities of truth and fidelity, his personal qualifications must embrace an extensive and accurate acquaintance with the whole features of the land. For as he has the lives and property of all in his power, it is absolutely necessary that he understand the prognostics of the weather, the time and places where the terrible simoom or hot wind blows, and the tracts occupied by shifting sands; and that he know the exact locality and qualities of the wells, the oases that afford the refreshments of shade for the men and grass for the cattle, the situation of hostile or treacherous tribes, and the means of escaping those threatened dangers.

This description of the general economy of caravans we follow up by the account given by Pitts of the Hadj caravan which he accompanied to Mecca, and embracing so many minute details, that it may be both interesting and instructive to the reader to be furnished with it in the traveller's own words. 'The first day,' says he, 'we set out from Mecca, it was without any order at all—all hurly-burly; but the next day every one laboured to get forward, and in order to do it there was many times much quarrelling and fighting. But after every one had taken his place in the caravan, they orderly and peaceably kept the same place till they came to Grand Cairo. They travel four camels abreast, which are all tied one after another like as in teams. The whole body is divided into several *cottors*, or companies, each of which has its name, and consists, it may be, of several thousand camels; and they move, one cottor after another, like distinct troops. At the head of each cottor is some great gentleman or officer, who is carried in a thing like a litter, borne by two camels, one before and the other behind. At the head of every cottor there goes likewise a sumpter camel, which carries his treasure, &c. This camel has two bells, hanging one on each side, the sound of which may be heard a great way off. Others of the camels have bells round about their necks, like those which our carriers put about their fore-horse's neck; which, together with the servants who belong to the camels, and travel on foot, singing all night, make a pleasant noise, and the journey passes away delightfully. Thus they travel in good order every day till they come to Grand Cairo; and were it not for this order, you may guess what confusion would be among such a vast multitude. They have lights by night (which is the chief time of travelling, because of the exceeding heat of the sun), which are carried on the top of high poles, to direct the hadjis, or pilgrims, on their march. These are somewhat like iron stoves, into which they put short dry wood, which some of the camels were loaded with: it is carried in great sacks, which have a hole near the bottom, where the servants take it out as they see the fire needs a recruit. Every cottor has one of these poles belonging to it, some of which have ten, some twelve, of these lights on their tops, or more or less: they are likewise different in figures as well as in numbers—one perhaps oval-way, like a gate; another triangular, or like N or M, &c.; so that every one knows by them his respective cottor. They are carried in the front, and set up in the place where the caravan is to pitch, before that come up, at some distance from one another. They are also carried by day, not lighted; but yet, by the figure and number of them, the hadjis are directed to what cottor they belong, as soldiers are by their colours where to rendezvous; and without such directions it would be impossible to avoid confusion in such a vast number of people.'



This description of the Hadj caravans that travel yearly to Mecca, bears so close a resemblance to the far-famed journey of the Israelites through almost the same extensive deserts, that, as the arrangement of those vast travelling bodies seems to have undergone no material alteration for nearly four thousand years, it affords the best possible commentary illustrative of the Mosaic narrative of the Exodus. Like them, the immense body of Israelitish emigrants, while the chief burden devolved on Moses, was divided into companies, each company being under the charge of a subordinate officer, called a prince (Num. vii.). Like them, the Hebrews made their first stage in a hurried manner and in tumultuous disorder (Exod. xii. 11); and, like them, each tribe had its respective standard, the precise form and device of which, amid the conflicting accounts of the Rabbins, it is not easy to determine [STANDARDS]; but which, of whatever description it was, was pitched at the different stages, or thrust perpendicularly into the ground, and thus formed a central point, around which the straggling party spread themselves during their hours of rest and leisure (Num. ii. 2). Like them, the signal for starting was given by the blast of a trumpet, or rather trumpets (Num. x. 2, 5); and the time of march and halting was regulated by the same rules that have been observed by all travellers from time immemorial during the hot season. Like theirs, too, the elevation of the standard, as it was borne forward in the van of each company, formed a prominent object to prevent dispersion, or

enable wanderers to recover their place within the line or division to which they belonged. Nor was there any difference here, except that, while the Israelites in like manner prosecuted their journey occasionally by night as well as by day, they did not require the aid of fires in their standards, as the friendly presence of the fiery pillar superseded the necessity of any artificial lights. One other point of analogy remains to be traced in the circumstance of Hobah being enlisted in the service of the Hebrew caravan as its guide through the great Arabian desert. At first sight, the extreme solicitude of Moses to secure his brother-in-law in that capacity may appear strange, and not easily reconcilable with the fact that they enjoyed the special benefit of a heavenly guide, who had guaranteed, in a supernatural manner, to direct their progress through the wilderness. But the difficulty will vanish when it is borne in mind, that although the pillar of cloud by day and of fire by night sufficed to regulate the main stages of the Hebrews, foraging parties would at short intervals require to be sent out, and scouts to reconnoitre the country for fuel, or to negotiate with the native tribes for provender and water. And who so well qualified to assist in these important services as Hobah, from his intimate acquaintance with the localities, his influence as a Sheikh, and his family connection with the leader of Israel?

The nature and economy of the modern Hadj caravans might be applied also to illustrate the return of the Hebrew exiles under Ezra from the land of their captivity.

The bands of Jewish pilgrims that annually repaired from every corner of Judæa to attend the three great festivals in Jerusalem, wanted this government and distribution into distinct companies, and seem to have resembled less the character of the great Mecca caravans than the irregular processions of the Hindoos to and from the scene of some of their religious pageants. On such occasions multitudes of men, women, and children, amounting to ten or twenty thousand (Roberts' *Oriental Illustrations*, and Ward's *View of the Hindoos*), may be seen bending their way to the place of ceremonial, with their beds, cooking implements, and other luggage on their heads, prosecuting their journey in this manner from day to day, by long or shorter stages, as custom or physical strength may dictate. As in a crowd of this motley description not the slightest regard is paid to regularity or order, and every one of course takes the place or mingles with the group that pleases him, the separation of the nearest friends for a whole day must, in such circumstances, be a common and unavoidable occurrence; and yet anxiety is never felt, unless the missing one fail to appear at the appointed rendezvous of the family. In like manner among the ancient Jews, the inhabitants of the same village or district would naturally form themselves into travelling parties, for mutual security as well as for enjoying the society of acquaintance. The poorer sort would have to travel on foot, while females and those of the better class might ride on asses and camels. But as their country was divided into tribes, and those who lived in the same hamlet or canton would be more or less connected by family ties, the young, the volatile, and active among the Jewish pilgrims had far more inducements to disperse themselves amongst the crowd than those of the modern processions numbers of whom are necessarily strangers to each other. In these circumstances it is easy to understand how the young Jesus might mingle successively with groups of his kindred and acquaintance, who, captivated with his precocious wisdom and piety, might be fond to detain him in their circle, while his mother, together with Joseph, felt no anxiety at his absence, knowing the grave and sober character of their companions in travel: and the incident is the more natural that his parents are said to have gone 'one day's journey' from Jerusalem before they missed him; since, according to the present, and probably the ancient, practice of the East, the first stage is always a short one, seldom exceeding two or three hours. Micmash—the modern El Vyra, where Mary's discovery is reputed to have been made—is, according to Mr. Munro (*Summer Ramble*, vol. i. p. 265), scarcely three miles from Jerusalem, where the caravan of Galilæan pilgrims halted.—R. J.

CARAVANSERAIS. In the days of the elder patriarchs, there seem to have been no places specially devoted to the reception of travellers, at least in the pastoral districts frequented by those venerable nomades; for we find Abraham, like the Oriental shepherds of the present day, under a strong sense of the difficulties and privations with which journeying in those regions was attended, deeming it a sacred duty to keep on the outlook, and offer the wayfaring man the rites of hospitality in his own tent. Nor could the towns of Pales-

207.

tine, as it would seem, at that remote period, boast of any greater advance with respect to establishments of this sort; for the angelic strangers who visited Lot in Sodom were entertained in his private house; and on the tumultuous outrage occasioned by their arrival disinclining them to subject his family to inconvenience and danger by prolonging their stay, they announced their intention to lodge in the streets all night. This elicited no surprise, nor any other emotion than a strenuous opposition on the part of their kind-hearted host to their exchanging the comforts of his home for a cheerless exposure to the cold and dews of midnight; and hence we conclude that the custom, which is still frequently witnessed in the cities of the East, was then not uncommon, for travellers who were late in arriving, and who had no introductions to a private family, to bivouac in the streets, or wrapping themselves up in the ample folds of their hykes, to pass the night as they best could in the open air. In the Arab towns and villages, however, when a traveller arrives in the daytime, the sheikh, or some principal person of the place, goes out to welcome him, and treats him with great civility in his own house; or else he conducts him to the *menzil*, which, though a place of rather a nondescript character, is understood to be the house occupied by those who entertain strangers, when there are no other lodgings, and to which the women in the sheikh's

house, having surveyed the number of the guests, send provisions of every kind according to the season, and provide every accommodation the place can afford (La Roque, *De la Palestine*, p. 124).

The first mention of an inn, or house set apart for the accommodation of travellers, occurs in the account of the return of Jacob's sons from Egypt (Gen. xlii. 27); and as it was situated within the confines of that country, and at the first stage from the metropolis, it is probable that the erection of such places of entertainment originated with the Egyptians, who were far superior to all their contemporaries in the habits and the arts of civilized life, and who, though not themselves a commercial people, yet invited to their markets such a constant influx of foreign traders, that they must have early felt the necessity and provided the comforts of those public establishments. The 'inns' where travellers lodge in the East do not, however, bear the least resemblance to the respectable houses of the same class in this country, much less do they approximate to the character and appurtenances of European hotels. The Egyptian inn, where the sons of Israel halted to bait their asses, was probably, from the remote period to which it belonged, of a rude and humble description, in point both of appearance and accommodation—merely a shed, under the roof of which the cattle and their drivers might obtain shelter from the heats of noon and the dews of midnight; and such is the low state of art, or the tyrannical force of custom in the East, that establishments of this kind in the present day can, with few exceptions, boast of improvements, that render them superior to the mean and naked poverty of those which received the pilgrims of the patriarchal age.

خان *khan*, or كروانسراي *karavanserai*, is the name which this kind of building bears; and though the terms are often applied indiscriminately, there is an acknowledged distinction, which seems to be, that *khan* is applied to those which are situated in or near towns, whereas caravanserais (a lodge for caravans, as the compound word imports) is the more appropriate designation of such as are erected in desert and sequestered places. A khan is always to be found in the neighbourhood of a town; and while houses corresponding to the description of the other are generally disposed at regular stages along public and frequented roads, they are more or less numerous in proportion to the relative distances of towns, and the populous or desert state of the country. Some are provided at the public expense, or owe their existence to devoted Mussulmans, who bestow a portion of their wealth, as a meritorious act of charity, in promoting the comfort and refreshment of pilgrims; while others are erected by the contributions of private merchants for their own accommodation. The latter, of course, are the most spacious, the most elegant and best appointed; but though varying in character and size, this class of establishments preserves so generally the same uniform plan of construction, that a description of one may serve to convey an idea of all. Let the reader imagine, then, a large edifice, which, though in the distance it seems an immense pile, resembling a castellated fort, on a nearer approach loses much of this formidable appearance, when it is found that no part of the building rises above the enclosing wall. It presents the form of a square, the sides of which, about 100 yards in length each, are surrounded by an external wall of fine brickwork, based on stone, rising generally to the height of twenty feet. In the middle of the front wall there is a wide and lofty archway, having on one or both sides a lodge for the porter and other attendants; while the upper part of it, being faced with carving or ornamental mason-work, and containing several rooms, surmounted by elegant domes, is considered the most honourable place of the building, and is therefore appropriated to the use of the better sort. This archway leads into a spacious rectangle, the area forming a courtyard for cattle, in the midst of which is a well or fountain. Along the sides of the rectangle are piazzas extending the whole length, and opening at every few steps into arched and open recesses,' which are the entrances into the travellers' apartments. An inner door behind each of these conducts to a small oblong chamber, deriving all its light from the door, or from a small open window in the back wall entirely destitute of furniture, and affording no kind of accommodation in the way of presses or shelves, except some rude niches excavated in the thick walls. This cell is intended for the dormitory of the traveller, who generally prefers, however, the recess in front for sitting in under shade during the daytime, as well as for sleeping in during the night, when the season allows; being the more adapted for this purpose that the floor is neatly paved, or consists of a smooth bed of earth, on a platform rising two or three feet above the level of the area. There being no other door but the entrance arch, each occupant remains isolated in his own quarters, and is cut off from all communication with the other inmates of the caravanserai. But in the middle of each of the three sides there is a large hall, which serves as a travellers' room, where all may indiscriminately assemble: while at the end of each side there is a staircase leading to the flat roof of the house, where the cool breeze and a view of the surrounding country may be enjoyed. These chambers generally stand on the ground-floor, which is a few feet above the level of the court-yard; but in the few buildings of this sort which have two stories, the travellers are accommodated above, while the under flat is reserved for the use of their servants, or appropriated as warehouses for goods. And in such establishments there is found one other additional advantage in having a supply of servants and cooks, as well as a shop in the porter's house, where all commodities may be procured. Caravanserais of this superior class, however, are rarely to be met with. The most part are but wretched lodging-places—filled, it may be, with dirt and vermin—consisting only of bare walls, in which not an article of furniture is to be seen, nor a cooking utensil to be found, nor provisions of any sort to be obtained for love or money. The traveller must carry along with him, as well as provide with his own hands, whatever is necessary for his use and comfort. If he performs his journey on camels or on horseback, he must, on arriving at the stage, act as his own ostler, tie up his beast, and distribute its provender and litter. To supply the want of a divan and bed, he must take his mat and carpet, which, folded up, may have

served him for a saddle, and squat upon the floor, or repose himself at night; or if he is a pedestrian, and must travel as lightly as possible, he makes the cloak which he wears by day discharge the office of a counterpane by night. In the victualling department he finds as great a dearth as in that of furniture. He must subsist on the supply of food and articles of luxury he may have had the foresight to provide, and husband them as well as he can, as no addition to his stores can be made till he reaches the next town. In general he must content himself with a plain diet of dry bread, fruits, or such prepared viands as admit of preservation; or if he wishes a fresh cooked meal, he must himself furnish the fuel, kindle the fire, superintend the boil or the roast, as well as wash and arrange his eating-pan. 'The baggage of a man, therefore, who wishes to be completely provided,' says Volney, 'consists of a carpet, a mattress, a blanket, two saucepans, with lids, contained within each other; two dishes, two plates, &c., coffee-pot, all of copper well tinned. A small wooden box for salt and pepper, a round leather table, which he suspends from the saddle of his horse, small leather bottles or bags for oil, melted butter, water, a pipe, a tinder-box, a cup of cocoa-nut, some rice, dried raisins, dates, Cyprus cheese, and, above all, coffee berries, with a roaster and wooden mortar to pound them.' Every one, although his travelling equipage may not be so complete as this, must find several of these items and implements indispensable to existence during a journey in the East; for in many of the khans or caravanserais to which he may come, he can look for nothing from the keeper except to show him the way to his chamber, and give him the key if it is furnished with a door. One assistance only he may depend upon, and it is no inconsiderable one,—that of receiving some attendance and aid if overtaken by sickness; for one of the requisite qualifications for the office is, that the functionary possess a knowledge of simples, and the most approved practice in case of fracture or common ailments. And hence the good Samaritan in the parable (Luke x. 30), although he was obliged, in the urgency of the case, himself to apply from his own viaticum a few simple remedies for the relief of the distressed man, left him with full confidence to be treated and nursed by the keeper of the khan, whose assiduities in dressing the wounds and bruises of his patient might be quickened, perhaps, by the liberal remuneration he was promised, as well as by the example of the humane traveller.

Among the Egyptians, and indeed among the ancients generally, the keepers of houses of public entertainment were always women (Herod. ii. 35); and hence we can easily account for the ready admission which the spies obtained into the house of Rahab, 'on the wall of Jericho,' situated, as such houses were, for the reception of strangers, for the most part at the gate or entrance into the town (Josh. ii. 1). This woman is called a harlot in our translation. But the Hebrew, זונה *sonah*, signifies also the landlady of an inn or tavern—most of whom, doubtless, in ancient times, were women of easy virtue—the more so as the idolatrous religion to which they were educated encouraged prostitution: and hence there being only a single word in the original descriptive of both professions, and the first having been adopted by the Septuagint, which was the common version of the Jews in the days of Paul and James (Heb. xi. 31; James ii. 25), those two Apostles might have used the same expression that they found there. The original Hebrew, however, admits of being translated by another word, to which no degrading or infamous associations are attached.

The preceding observations on the ancient and existing accommodation for journeying in the East, will serve to illustrate many passages in the sacred volume, where allusions are made to incidents of travel. The state of Judæa, however, in the time of Christ and the Apostles, was, probably, in respect to means of communication, much superior to that of any Oriental country in the present day; and we may be disposed to conclude that for the encouragement of intercourse between distant parts, that country was then studded with houses of public entertainment on a scale of liberal provision at present unknown in the same quarter of the world. But the warm commendations of hospitality so frequently met with in the works of contemporary classical writers, as well as the pressing exhortations of the inspired Apostle to the practice of that virtue, too plainly prove that travellers were then chiefly dependent on the kindness of private individuals. The strong probability is, that the 'inns' mentioned in the New Testament find their true and correct representations in the Eastern khans and caravanserais of the present day; and that, although the Jews of that period could not have been acquainted with the largest and most magnificent of this class of buildings, which do not date earlier than the commencement of the Mecca caravans, and which the devotion of opulent Mussulmans then began to erect for the accommodation of the pilgrims, they had experience of nothing better than the bare walls and cell-like apartments of such edifices as we have described above. Bishop Pearce, Dr. Campbell, and others, indeed, have laboured to show that κατάλυμα, the word used by Luke to denote the place whence Mary was excluded by the previous influx of strangers, is not synonymous with πανδοχεῖον, the house to which the good Samaritan brought the wounded stranger, although in both instances our translators, for want of corresponding terms in the English language, have indiscriminately rendered it by 'inn.' Κατάλυμα signifies the guest-chamber (Mark xiv. 14; Luke xxii. 11); and it is extremely probable that, as upper-rooms were always the largest in a house, and most suitable for the reception of a numerous company, every respectable householder in Jerusalem appropriated one gratuitously to his friends, who flocked to Jerusalem at the annual feasts, and who from that circumstance might call it their 'inn.' Πανδοχεῖον, again, was a house set apart for the accommodation of all strangers who could pay for their lodging and entertainment; and as the name, 'receiver of everything,' seems to imply, was of a mean description, having no partition wall, men and cattle being both included under the same roof, the former occupying one side, and the latter the other. Beth-lehem being the chief city of the family of David, a κατάλυμα might have been placed, by the kindness of some friend, at the service of Joseph and Mary, who were wont to resort to it as often as business or

friendship called them to town. But as the same privilege might have been offered to others, who, owing to the general census, flocked in such unwonted numbers, that the first comers completely occupied every vacant space, they were obliged to withdraw to the πανδοχεῖον, where, in the only retired corner, viz., at the head of the cattle, the mother of Jesus brought forth her child. This explanation of these eminent critics, however, does not invalidate, nor in the least degree affect the views we have advanced respecting the general resemblance of the ancient inns of Judæa to the modern khans or caravanserais; for in these, as well as in the καταλύματα, persons are generally admitted without payment. And occasions are constantly occuring to set multitudes on travel, many of whom are driven, like Joseph and Mary, for want of room, from the inn to the adjoining stables.

Many caravanserais, however, have not the accommodation of stables, the cattle being allowed to range in the open area; and hence has arisen an opinion warmly espoused by many learned writers, and supported by a venerable tradition, that our Lord was born in an adjoining shed, or probably in a subterranean cave, like the grotto that is sometimes connected with the fountain of the place (Justin Martyr, *Dial. with Trypho*, p. 303; Origen, *Cont. Cels.*). [Bethlehem.] Moreover, much learning has been expended on the word φάτνη, which our translators have rendered 'manger;' although it is capable of the clearest demonstration, that the ancients, equally with the modern inhabitants of the East, are strangers to the conveniences which go under that name in European stables. The anecdote, quoted by Campbell from Herodotus, respecting Mardonius, the Persian general, having brought with him a brazen manger for his horses, only establishes our remark, proving as it does that those ancient mangers were more like troughs than the crib out of which our horses are fed; and, indeed, in the only other place in the New Testament where φάτνη occurs, it is rendered 'stall;' that is, not the thing out of which the cattle ate, but the place from which they ate (see Parkhurst, in loco). No explanation, however, that we have met with, appears so satisfactory, and conveys such an intelligible picture to the eye, as that given by the editor of the *Pictorial Bible* (Luke ii. 7); with whose words we shall conclude this article. 'The most complete establishments have very excellent stables in covered avenues, which extend *behind* the ranges of apartments—that is, between the back walls of these ranges of building and the *external* wall of the khan; and the entrance to it is by a covered passage at one of the corners of the quadrangle. The stable is on a level with the court, and consequently below the level of the buildings, by the height of the platform on which they stand. Nevertheless, this platform is allowed to project behind into the stable, so as to form a bench, to which the horses' heads are turned, and on which they can, if they like, rest the nose-bag of hair-cloth, from which they eat, to enable them to reach the bottom when its contents get low. It also often happens that not only this bench exists in the stable, but also recesses corresponding to those in front of the apartments, and formed by the side walls which divide the rooms, being allowed to project behind into the stable, just as the projection of the same walls into the great area forms the recesses in front. These recesses in the stable or the bench, if there are no recesses, furnish accommodation to the servants and others who have charge of the beasts; and when persons find on their arrival that the apartments usually appropriated to travellers are already occupied, they are glad to find accommodation in the stable, particularly when the nights are cold or the season inclement. It is evident, then, from this description, that the part of the stable called 'the manger,' could not reasonably have been other than one of those recesses, or at least a portion of the bench which we have mentioned, as affording accommodation to travellers under certain circumstance.'—R. J.

CARBUNCLE. [Ekdah.]

CARCHEMISH (כַּרְכְּמִישׁ) is mentioned in Isa. x. 9 among other places in Syria which had been subdued by an Assyrian king, probably Tiglath-pileser. That Carchemish was a stronghold on the Euphrates appears from the title of a prophecy of Jeremiah against Egypt (xlvi. 2):—'Against the army of Pharaoh-necho, king of Egypt, which lay on the river Euphrates, at Carchemish, and which Nebuchadnezzar the king of Babylon overthrew, in the fourth year of Jehoiakim, the son of Josiah, king of Judah.' According to 2 Chron. xxxv. 20, Necho had five years before advanced with his ally Josiah, the father of Jehoiakim, against the Babylonians, on the Euphrates, to take Carchemish. These two circumstances—the position of Carchemish on the Euphrates, and its being a frontier town, render it probable that the Hebrew name points to a city which the Greeks called Kirkesion, the Latins Cercusium, and the Arabs, Karkesiyeh (قرقيسيا); for this too lay on the western bank of the Euphrates, where it is joined by the Chaboras. It was a large city, and surrounded by strong walls, which, in the time of the Romans, were occasionally renewed, as this was the remotest out-post of their empire, towards the Euphrates, in the direction of Persia (Ammian. Marcell. xxiii. 11). It is unknown whether any traces of it still exist; for, as it lies off the usual route of caravans, it has not been noticed by modern travellers (Rosenmüller, *Bib. Geog.*)

CARIA (Καρία), a country lying at the south-western extremity of Asia Minor, to which, among others, the Romans wrote in favour of the Jews (1 Macc. xv. 22, 33). Its principal towns were Halicarnassus, Cnidus, and Myndus, which are all mentioned in the rescript of the Roman senate, to which we refer. Halicarnassus was the birthplace of Herodotus; Cnidus is mentioned in Acts xxvii. 7, as having been passed by St. Paul on his voyage to Rome.

CARMEL (כַּרְמֶל; Sept. Κάρμηλος), a range of hills extending north-west from the plain of Esdraelon, and ending in a promontory, or cape, which forms the Bay of Acre. The extent of this range of hills is about six miles, not in a direct line; but the two extremities (on the western side towards the sea) jut out, and stand over against each other, forming a bow in the middle. The height is about 1500 feet; and at the foot of the mountain, on the south, runs the brook Kishon,

and a little further north, the river Belus. Mount Carmel consists rather of several connected hills than of one ridge; the north and eastern parts being somewhat higher than the southern and western. The foot of the northern portion approaches the water very closely, so that, when seen from the hills north-east of Acre, the mountain appears as if 'dipping his feet in the western sea;' but further south it retires more inland, so as to leave between the mountain and the sea an extensive and very fertile plain.

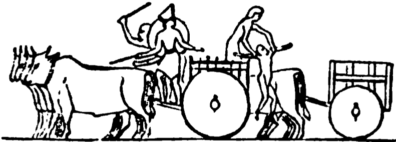
208.

Mount Carmel forms the only great promontory upon the coast of Palestine. According to the reports of most travellers, the mountain well deserves its Hebrew name (Carmel—*country of vineyards and gardens*). Mariti describes it as 'a delightful region,' and says the good quality of its soil is apparent from the fact that many odoriferous plants and flowers, as hyacinths, jonquils, tazettos, anemones, &c., grow wild upon the mountain (*Travels*, p. 274, *sq*). Otto von Richter (*Wallfahrten*, p. 64) gives the following account: Mount Carmel is entirely covered with verdure. On its summit are pines and oaks, and further down olives and laurel trees, everywhere plentifully watered. It gives rise to a multitude of crystal brooks, the largest of which issues from the so-called Founain of Elijah; and they all hurry along, between banks thickly overgrown with bushes, to the Kishon. Every species of tillage succeeds here admirably, under this mild and cheerful sky. The prospect from the summit of the mountain over the gulf of Acre and its fertile shores, and over the blue heights of Lebanon and the White Cape, is enchanting.' Mr. Carne also ascended the mountain, and traversed its whole summit, which occupied several hours. He says —'No mountain in or around Palestine retains its ancient beauty so much as Carmel. Two or three villages and some scattered cottages are found on it; its groves are few, but luxuriant; it is no place for crags and precipices, or rocks of the wild goats; but its surface is covered with a rich and constant verdure' (*Letters*, ii. 119). Such descriptions admirably illustrate the vivid representations of the inspired Hebrew prophets and poets in respect of Carmel. Thus, Isaiah (xxxv. 2) alludes to 'the excellency (splendid ornaments) of Carmel.' So, on account of the graceful form and verdant beauty of the summit, the head of the bride in Cant. vii. 5 is compared to Carmel. It was also celebrated for its pastures, and is therefore ranked with Bashan in Isa. xxxiii. 9; Jer. i. 19; Amos i. 2.

It is nevertheless right to state that a much less glowing account of Carmel is given by many travellers; but we are satisfied that the difference arises from the time of the year at which the place was visited. Those who were on Carmel in the spring, or early summer, found the mountain covered with verdure; whereas those whose visit was later in the year—towards the end of summer or in autumn,—found everything parched, dry, and brown. This is the real secret of the discordant accounts which travellers of equal credit often give of the same places.

The mountain is of compact limestone, and, as often happens where that is the case [CAVES], there are in it very many caverns—it is said, more than a thousand. In one tract, called the Monk's Cavern, there are as many as four hundred adjacent to each other, furnished with windows and with places for sleeping hewn in the rock. A peculiarity of many of these caverns is mentioned by Shulz (*Leitung*, &c., v. pp. 187, 382), that the entrances into them are so narrow that only a single person can creep in at a time; and that the caverns are so crooked that a person is immediately out of sight unless closely followed. This may serve to give a clearer idea of what is intended in Amos ix. 3, where the Lord says of those who endeavour to escape his punishments, 'Though they hide themselves in the top of Carmel, I will search and take them out thence.' That the grottoes and caves of Mount Carmel were already, in very ancient times, the abode of prophets and other religious persons is well known. The prophets Elijah and Elisha often resorted thither (1 Kings xviii. 19, *sq.* 42; 2 Kings ii. 25; iv. 25; and comp. perhaps 1 Kings xviii. 4, 13). At the present day is shown a cavern called the cave of Elijah, a little below the Monks' Cavern already mentioned, and which is now a Moslem sanctuary. Upon the summit is an ancient establishment of Carmelite monks, which order, indeed, derived its name from this mountain. The old convent was destroyed by Abdallah Pasha, who converted the materials to his own use; but it has of late years been rebuilt on a somewhat imposing scale by the aid of contributions from Europe (Dr. Robinson's *Addit. to Calmet*, in art. 'Carmel;' comp. Winer's *Biblisches Realwörterbuch;* Raumer's *Palästina;* and the following travellers: D'Arvieux, Maundrell, Pococke, Mariti, Clarke, Buckingham, Irby and Mangles, Monro, Skinner, Hardy, G. Robinson, Richter, Schubert, &c.

2. CARMEL. Another Carmel, among the mountains of Judah, is named in Josh. xv. 55. It was here that Saul set up the trophy of his victory over Amalek (1 Sam. xv. 12), and where Nabal was shearing his sheep when the affair took place between him and David in which Abigail bore so conspicuous a part (1 Sam. xxv. 2, *sq.*). This Carmel is described by Eusebius and Jerome as, in their day, a village, with a Roman garrison, ten miles from Hebron, verging towards the east. From the time of the Crusades till the present century its name seems to have been forgotten. But it was recognised by Seetzen,

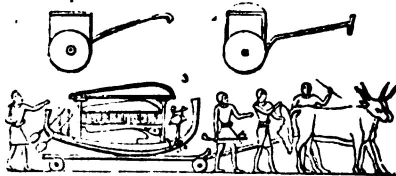


and more recently by Count Berton and Dr. Robinson, under the name of Kurmul. The place is now utterly desolate, but the ruins indicate a town of considerable extent and importance. These ruins lie around the head and along the two sides of a valley of some width and depth, the head of which forms a semicircular amphitheatre shut in by rocks. They consist chiefly of the foundations and broken walls of dwellings and other edifices, scattered in every direction, and thrown together in mournful confusion and desolation. The most remarkable ruin is that of a castle, quadrangular, standing on a swell of ground in the midst of the town. A minute description of this and the other remains is given by Dr. Robinson (*Bib. Researches*, ii. pp. 195-201). The distance of this place from Hebron is nearer eight Roman miles than ten, as assigned by Eusebius and Jerome.

CARNAIM. [Ashtaroth.]

CARPENTER. [Handicraft.]

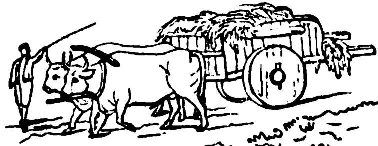
CARPUS (Κάρπος), a disciple of Paul who dwelt at Troas (2 Tim. iv. 13).



CART (עֲגָלָה; Sept. Ἅμαξα). The Hebrew word rendered by our translators in some places by 'waggon,' and in others by 'cart,' denotes any vehicle moving on wheels and usually drawn by oxen; and their particular character must be determined by the context indicating the purpose for which they were employed. First, we have the carts which the king of Egypt sent to assist in transporting Jacob's family from Canaan (Gen. xlv. 19, 27). From their being so sent it is manifest that they were not used in the latter country; and that they were known there as being peculiar to Egypt is shown by the confirmation which they afforded to Jacob of the truth of the strange story told by his sons. These carts or waggons were, of course, not war-chariots, nor such curricles as were in use among the Egyptian nobility, but were not suited for travelling. The

209.

only other wheel-vehicles actually or probably used by the Egyptians themselves are those represented in figs. 1, 2, of No. 210. But they are not found on the monuments in such connection as to show whether they were employed for travelling or for agriculture. The solid wheels would suggest the latter use, if, indeed, the same feature does not rather show that, although figured on Egyptian monuments, they are the cars of a foreign people. This is the more probable, inasmuch as the ready means of transport and travel by the Nile seems to have rendered in a great measure unnecessary any other wheel-carriages than those for war or pleasure. The sculptures, however, exhibit some carts as used by a nomade people (enemies of the Egyptians) in their migrations. If any of these had, by the rout of this people, been left in the hands of the Egyptians, the king would no doubt consider them suitable to assist the migration of another people of similar habits. At any rate, they afford the only attainable analogy, and are for that reason here represented (No. 209).



Elsewhere (Num. vii. 3, 6; 1 Sam. vi. 7) we read of carts used for the removal of the sacred ark and utensils. These also were drawn by two oxen.

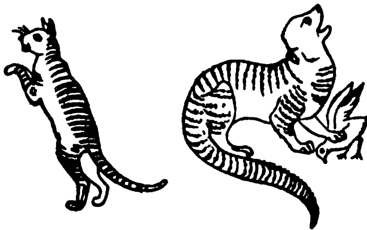
210.

In Rosellini we have found a very curious representation of the vehicle used for such purposes by the Egyptians (No. 210, fig. 3). It is little more than a platform on wheels; and the apprehension which induced Uzzah to put forth his hand to stay the ark when shaken by the oxen (2 Sam. vi. 6), may suggest that the cart employed on that occasion was not unlike this, as it would be easy for a jerk to displace whatever might be upon it.

As it appears that the Israelites used carts, they doubtless employed them sometimes in the removal of agricultural produce, although we are not aware of any distinct mention of this practice in Scripture. This is now the only use for which carts are employed in Western Asia. They are such as are represented in No. 211.

211.

CASLUHIM (כַּסְלֻחִים; Sept. Χασμωνιείμ), properly Casluchim, a people whose progenitor was a son of Mizraim (Gen. x. 14; 1 Chron. i. 12). He, or they, for the word applies rather to a people than to an individual, are supposed by Bochart and others to have carried a colony from Egypt, which settled in the district between Pelusium and Gaza, or, in other words, between the Egyptians and the Philistines. There are some grounds for this conjecture; but it is impossible to obtain any certainty on so obscure a subject.



CASSIA. [Ketziah.]

CASTLE. [Fortifications.]

CASTOR AND POLLUX (Διόσκουροι), the Dioscuri: in heathen mythology, the twin sons of Jupiter by Leda. They had the special province of assisting persons in danger of shipwreck (Theocrit. *Id.* xxii. 1; Xenoph. *Symp.* viii. 29; comp. Horat. *Carm.* i. 3. 2; iv. 8. 31); and hence their figures were often adopted for 'the sign' (τὸ παράσημον, *insigne*), from which a ship derived its name, as was the case with that 'ship of Alexandria' in which St. Paul sailed on his journey for Rome (Acts xxviii. 11).

CAT (αἴλουρος). It might be assumed that the cat was an useful, if not a necessary, domestic animal to the Hebrew people in Palestine, where corn was grown for exportation, as well as for

consumption of the resident population, twenty or thirty-fold more than at present, and where, moreover, the conditions of the climate required the precaution of a plentiful store being kept in reserve to meet the chances of scarcity. The animal could not be unknown to the people, for their ancestors had witnessed the Egyptians treating it as a divinity, under the denomination of Pasht, the Lunar Goddess, or Diana, holding every domesticated individual sacred, embalming it after death, and often sending it for interment to Bubastis. Yet we find the cat nowhere mentioned in the canonical books as a domestic animal. And in Baruch it is noticed only as a tenant of Pagan temples, where no doubt the fragments of sacrificed animals and vegetables attracted vermin, and rendered the presence of cats necessary. This singular circumstance, perhaps, resulted from the animal being deemed unclean, and being thereby excluded domestic familiarity, though the Hebrews may still have encouraged it, in common with other vermin-hunters, about the outhouses and farms, and corn-stores, at the risk of some loss among the broods of pigeons which, in Palestine, were a substitute for poultry. If the domestic species of cats were not tolerated, there could not exist many wild in a country almost destitute of forests; but, in their stead, at least in Egypt, Syria, Arabia, and Persia, there are numerous species of viverridæ and mustelidæ, to which, in common phrase, we apply the word cat, as civet cat and polecat. These are species that hunt in open grounds and visit ruined buildings; and among them, perhaps, some wild canidæ may be collectively those denominated, with obvious propriety, צִיִּים *Tziyim.*

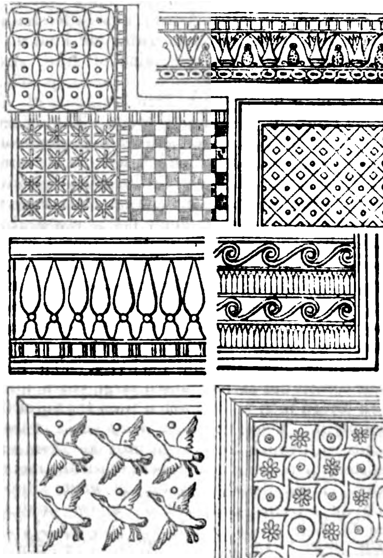
212.

With regard to the neighbouring nations just named, they all had domestic cats, it is presumed, derived from a wild species found in Nubia, and first described by Ruppel under the name of Felis Maniculata. The typical animal is smaller, more slender, and more delicately limbed than the European. The fur is pale yellowish grey, with some dark streaks across the paws, and at the tip of the tail. In the domesticated state it varies in colours and markings, for the ancient monuments of Egypt contain many painted figures, which show them cross-barred like our wild species in Europe. Two specimens are here given from these paintings; one clearly a cat; the other, in the original, figured as catching birds; acting like a retriever for his master, who is fowling in a boat. It is not, apparently, a cat, but a species of gennet or paradoxurus, one of the genera before hinted at. Both are nearly allied to the celebrated Ichneumon, the Herpestes of authors, the modern Nems, which is even now occasionally domesticated; it differs in manners, for the Herpestes pharaonis does not frequent the uplands, but willingly takes the water.—C. H. S.

CATERPILLAR. [Chasil.]

CATTLE. [Beasts; Bull.]

CAVES. The geological formation of Syria is highly favourable to the production of caves. It consists chiefly of limestone, in different degrees of density, and abounds with subterranean rivulets. The springs issuing from limestone generally contain carbonate of lime, and most of them yield a large quantity of free carbonic acid upon exposure to the air. To the erosive effect upon limestone rocks, of water charged with this acid, the formation of caves is chiefly to be ascribed (*Enc. Metropol.* art. 'Geology,' pp. 692, 693). The operation of these causes is sometimes exemplified by a torrent perforating a rock, and forming a natural arch, like that of the Nahr el Leben, which falls into the Nahr El Salib, called also the river of Beirout. The arch is upwards of 160 feet long, 85 feet wide, and nearly 200 feet above the torrent (Kitto's *Physical History of Palestine*, art. 'Geology and Mineralogy'). The *subordinate* strata of Syria, sandstone, chalk, basalt, natron, &c. favour the formation of caves. Consequently the whole region abounds with subterranean hollows of different dimensions. Some of them are of immense extent; these are noticed by Strabo, who speaks of a cavern near Damascus capable of holding 4000 men (xvi. p. 1096, edit. 1707). This cavern is shown to the present day. Modern travels abound with descriptions of the caves of Syria. The Crusade writers record the local traditions respecting them current in their times (William of Tyre; Quaresmius, *Elucid. Ter. Sanc.*). Tavernier (*Voyage de Perse*, part ii. chap. iv.), speaks of a grotto between Aleppo and Bir, which would hold near 3000 horse. Maundrell has described a large cavern under a high rocky mountain, in the vicinity of Sidon, containing 200 smaller caverns (*Travels*, pp. 158, 159). Shaw mentions the numerous dens, holes, and caves, in the mountains on the sea coast, extending through a long range on each side of Joppa. The accounts of the latest and most accurate travellers verify their statements. The *first* mention of a *cave* in Scripture relates to that into which Lot and his two daughters retired from Zoar, after the destruction of Sodom and Gomorrah (Gen. xix. 30). It was some cavern in the mountains of Moab, but tradition has not fixed upon any of the numerous hollows in that region. The next is the *cave of Machpelah*, in the field of Ephron, which Abraham purchased of the sons of Heth (Gen. xxv. 9, 10). There Abraham buried Sarah, and was himself afterwards buried; there also Isaac, Rebecca, Leah, and Jacob, were buried (Gen. xlix. 31; l. 13). The cave of Machpelah is said to be under a Mahometan mosque, surrounded by a high wall called the Haram; but even the Moslems are not allowed to descend into the cavern. The tradition that this is the burial-place of the patriarchs, is supported by an immense array of evidence (Robinson, *Biblical Researches in Palestine*, ii. 433-440).



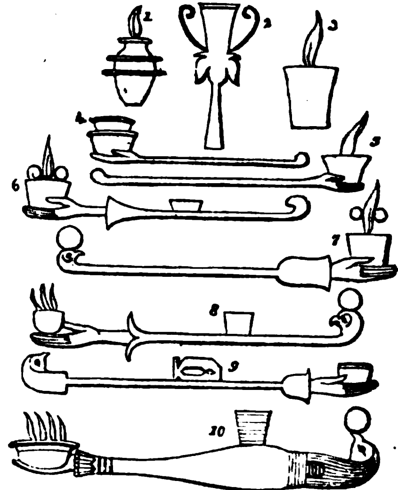
The situation of the cave at *Makkedah*, into which the five kings of the Amorites retired upon their defeat by Joshua, and into which their carcases were ultimately cast, is not known (Josh. x.

6, 37). Some of the caves mentioned in the Scriptures were *artificial*, or consisted of natural fissures enlarged or modified for the purposes intended. It is recorded (Judg. vi. 2), that 'because of the Midianites, the children of Israel *made* them the dens which are in the mountains, and caves, and strongholds.' Caves made by art are met with in various quarters. An innumerable multitude of excavations are found in the rocks and valleys round Wady Musa, which were probably formed at first as sepulchres, but afterwards inhabited, like the tombs of Thebes (Robinson's *Researches*, ii. 529). Other excavations occur at Deir Dubbân (ii. 353); others in the Wady leading to Sânta Hanneh (ii. 395). 'In the mountains of Kŭl'at Ibn Ma'an, the natural caverns have been *united* by passages cut in the rocks, in order to render them more commodious habitations. In the midst of these caverns several cisterns have been built; the whole would afford refuge for 600 men' (Burckhardt's *Travels*, p. 331). Caves were used as *dwelling-places* by the early inhabitants of Syria. The Horites, the ancient inhabitants of Idumæa Proper, were Troglodytes or dwellers in caves, as their name imports. Jerome records that in his time Idumæa, or the whole southern region from Eleutheropolis to Petra and Ailah, was full of habitations in caves, the inhabitants using subterranean dwellings on account of the great heat (*Comm. on Obad.* v. 6). 'The excavations at Deir Dubbân and on the south side of the Wady, leading to Santa Hanneh, are probably the dwellings of the ancient Horites' (Robinson, ii. 353), and they are peculiarly numerous around Beit Jibrin (Eleutheropolis) (ii. 425). The Scriptures abound with references to habitations in rocks; among others, see Num. xxiv. 21; Cant. ii. 14; Jer. xlix. 16; Obad. 3. Even at the present time many persons live in caves. The inhabitants of Anah, a town on the east of the Jordan, lat. 32°, long. 35° E., all live in grottoes or caves hollowed out of the rock (Buckingham's *Travels among the Arab Tribes*, p. 61). In the neighbourhood of Hebron peasants still live in caves, and especially during the summer, to be near their flocks (Wilkinson's *Travels*, i. 313). Poor families live in caverns in the rocks which seem formerly to have been inhabited as a sort of village, near the ruins of El Burj. So also at Siloam, and in the neighbourhood of Nazareth. Caves afforded excellent *refuge in the time of war*. Thus the Israelites (1 Sam. xiii. 6) are said to have hid themselves in caves, and in thickets, and in rocks, and in high places, and in pits. See also Jer. xli. 9; Joseph. *Antiq.* xii. 11. 1. Hence, then, to 'enter into the rock, to go into the holes of the rocks, and into the caves of the earth' (Isa. ii. 19), would, to the Israelites, be a very proper and familiar way to express terror and consternation. The *pits* spoken of seem to have consisted of large wells, in 'the sides' of which, excavations were made, leading into various chambers. Such pits were sometimes used as *prisons* (Isa. xxiv. 22; li. 14; Zech. ix. 11); and with *niches* in the sides, for *burying-places* (Ezek. xxxii. 23). Many of these vaulted pits remain to this day. The cave in which *Lazarus was buried* was probably something of this kind. The tomb shown as his, at Bethany, is not attended with the slightest probability (Robinson, ii. 100). The *strongholds of Engedi*, which afforded a retreat to David and his followers (1 Sam. xxiii. 29; xxiv. 1), can be clearly identified. They are now called 'Ain Tidy by the Arabs, which means the same as the Hebrew, namely, 'The Fountain of the Kid.' 'On all sides the country is full of caverns, which might serve as lurking-places for David and his men, as they do for outlaws at the present day. The whole scene is drawn to the life' (Robinson, ii. 203)). *The cave of Adullam*, to which David retired to avoid the persecutions of Saul (1 Sam. xxii. 1, 2), and in which he cut off the skirt of Saul's robe (1 Sam. xxiv. 4), is an immense natural cavern at the Wady Khureitun, which passes below the Frank mountain (Herodium: see the *Map of Palestine*). For a description of this cave by Irby and Mangles, and the reasons for believing its identity, see article ADULLAM. Dr. Pococke refers to a tradition that 30,000 persons once retired into it to avoid a malaria. Such is the extent of the cavern, that it is quite conceivable how David and his men might 'remain in the sides of the cave,' and not be noticed by Saul (*Travels*, vol. ii. p. 41). Caverns were also frequently *fortified* and occupied by soldiers. Josephus often mentions this circumstance. He relates also that Herod sent horsemen and footmen to destroy the *robbers that dwelt in caves*, and did much mischief in the country. They were very near to a village called Arbela (now called Kŭlat Ibn Ma'an); the adjacent ruins are known by the name of Irbid, a corruption of Irbil, Arabic for Arbela (Burckhardt's *Travels*, p. 331). On the fortieth day after, Herod came with his whole army to exterminate them. The robbers sallied out of their caves and boldly gave him battle, and even caused the left wing of his army to give way, though they were ultimately defeated. Herod then laid *siege* to certain other caverns containing robbers, but found operations against them very difficult. These were situated on the middle of abrupt and precipitous mountains, and could not be come at from any side, since they had only some winding pathways, very narrow, by which they got up to them. The rock that lay on their front overhung valleys of immense depth, and of an almost perpendicular declivity. To meet these difficulties Herod caused large boxes filled with armed men to be lowered from the top of the mountain. These men had long hooks in their hands with which they might pull out those who resisted them, and tumble them down the mountains. From these boxes they at length slipped into the caverns, destroyed the robbers and set fire to their goods (*Antiq.* xiv. 15, § 4, 5; *De Bell. Jud.* i. 16, § 2-4). This description of *caves of robbers* reminds us of our Lord's words, in which he reproaches the Jews with having made the Temple *a den of thieves*, σπήλαιον λῃστῶν (Matt. xxi. 13). In the former of these passages Josephus calls them τοὺς ἐν τοῖς σπηλαίοις λῃστας, and in the latter, λῃστων τινων εν σπηλαίοις κατοικούντων. Certain caves were afterwards fortified by Josephus himself during his command in Galilee under the Romans. In one place he speaks of these as the caverns of Arbela (*Vita*, § 37), and in another as the caverns near the lake Gennesareth (*De Bell. Jud.* ii. 20. 6). A fortified cavern existed in the time of the Crusades. It is mentioned by William of Tyre (xxii. 15-21), as situate in the country beyond the Jordan,

sixteen Roman miles from Tiberias. The cave of Elijah is pretended to be shown, at the foot of Mount Sinai, in a chapel dedicated to him; and a hole near the altar is pointed out as the place where he lay (Robinson, i. 152).—J. F. D.

CEDAR. [Erez.]

CEILING. The orientals bestow much attention upon the ceilings of their principal rooms. Where wood is not scarce, they are usually composed of one curious piece of joinery, framed entire, and then raised and nailed to the joists. These ceilings are often divided into small square compartments; but are sometimes of more complicated patterns. Wood of a naturally dark colour is commonly chosen, and it is never painted. In places where wood is scarce, and sometimes where it is not particularly so, the ceilings are formed of fine plaster, with tasteful mouldings and ornaments, coloured and relieved with gilding, and with pieces of mirror inserted in the hollows formed by the involutions of the raised mouldings of the arabesques, which enclose them as in a frame. The antiquity of this taste can be clearly traced by actual examples up to the times of the Old Testament, through the Egyptian monuments, which display ceilings painted with rich colours in such patterns as are shown in the annexed cut. The explanation thus obtained



213.

satisfactorily illustrates the peculiar emphasis with which 'ceiled houses' and 'ceiled chambers' are mentioned by Jeremiah (xxii. 14) and Haggai (i. 4).

CENCHREÆ (Κεγχρεαί), one of the ports of Corinth, whence Paul sailed for Ephesus (Acts xviii. 18). It was situated on the eastern side of the isthmus, about seventy stadia from the city: the other port on the western side of the isthmus was called Lechæum. [Corinth.]

CENSER, the vessel in which incense was presented in the temple (2 Chron. xxvi. 19; Ezek. viii. 11; Ecclus. l. 9). Censers were used in the daily offering of incense, and yearly on the day

214. [Egyptian Censers.]

of atonement, when the high-priest entered the Holy of Holies. On the latter occasion the priest filled the censer with live coals from the sacred fire on the altar of burnt-offering, and bore it into the sanctuary, where he threw upon the burning coals the 'sweet incense beaten small' which he had brought in his hand (Lev. xvi. 12, 13). In this case the incense was burnt while the high-priest held the censer in his hand; but in the daily offering the censer in which the live coals were brought from the altar of burnt-offering was set down upon the altar of incense. This alone would suggest the probability of some difference of shape between the censers used on these occasions. The daily censers must have had a base or stand to admit of their being placed on the golden altar, while those employed on the day of atonement were probably furnished with a handle. In fact, there are different names for these vessels. Those in daily use were called מקטרת *miktereth*, from קטר, 'incense;' whereas that used on the day of atonement is distinguished by the title of מחתה *michtah* or 'coal-pan.' We learn also that the daily censers were of brass (Num. xvi. 39), whereas the yearly one was of gold (Joseph. *Antiq.* xvi. 4. 4). The latter is also said to have had a handle (Mishn. tit. *Yoma*, iv. 4), which, indeed, as being held by the priest while the incense was burning, it seems to have required. These intimations help us to conclude that the Jewish censers were unlike those of the classical ancients, with which the sculptures of Greece and Rome have made us familiar; as well as those (with perforated lids, and swung by chains) which are used in the church of Rome. The form of the daily censer we have no means of determining beyond the fact that it was a pan or vase, with a stand whereon it might rest on the golden altar. Among the Egyptians the incense was so generally burned in the hand of the officiating priest, that the only censers which we find in the least degree suited to this purpose are

those represented in figs. 2 and 3 of No. 214. But the numerous figures of Egyptian censers, consisting of a small cup at the end of a long shaft or handle (often in the shape of a hand), probably offer adequate illustration of those employed by the Jews on the day of atonement. There was, however, another kind of censer (fig. 1) less frequently seen on the Egyptian monuments, and likewise furnished with a handle, which will probably be regarded by many as offering a more probable resemblance. It is observable that in all cases the Egyptian priests had their costly incense made up into small round pellets, which they projected successively from between their finger and thumb into the censer, at such a distance, that the operation must have required a peculiar knack to be acquired only by much practice. As the incense used by the Jews was made up into a kind of paste, it was probably employed in the same manner.

CENSUS. [POPULATION.]

CENTURION (ἑκατοντάρχης and ἑκατόνταρχος), a Roman military officer in command of a hundred men, as the title implies. Cornelius, the first Gentile convert to Christianity, held this rank (Acts x. 1, 22). Other Centurions are mentioned in Matt. viii. 5, 8, 13; xxvii. 54; Luke vii. 2, 6; Acts xxi. 32; xxii. 25, 26; xxiii. 17, 23; xxiv. 23; xxvii. 1, 6, 11, 31, 43; xxviii. 16.

CEPHAS (Κηφᾶς; in later Hebrew or Syriac כֵּיפָא), a surname which Christ bestowed upon Simon (John i. 42), and which the Greeks rendered by Πέτρος, and the Latins by Petrus, both words meaning a 'rock,' which is the signification of the original [PETER].

CERATIA, CERATONIA, is the name of a tree of the family of Leguminous plants, of which the fruit used to be called *Siliqua edulis* and *Siliqua dulcis*. By the Greeks, as Galen and Paulus Ægineta, the tree is called κερατία, κερατωνία, from the resemblance of its fruit to κέρας, a horn. The word κεράτιον occurs in Luke xv. 16, where it has been translated *husks* in the Authorized Version: our Saviour, in the parable of the prodigal son, says that 'he would fain have filled his belly with the *husks* that the swine did eat; and no man gave unto him.' In the Arabic Version of the New Testament, the word خروب *Kharoob*, often written خرنوب *Kharnoob*, is given as the synonym of *Keratia*. According to Celsius, the modern Greeks have converted the Arabic name into χάρουβα, and the Spaniards into *Garrova* and *Algaroba*. The Italians call the tree *Caroba*, the French *Carroubier*, and the English Carob-tree. Though here, little more than its name is known, the Carob-tree is extremely common in the South of Europe, in Syria, and in Egypt. The Arabs distinguish it by the name of *Kharnoob shamee*—that is the Syrian Carob. The ancients, as Theophrastus and Pliny, likewise mention it as a native of Syria. Celsius states that no tree is more frequently mentioned in the Talmud, where its fruit is stated to be given as food to cattle and swine: it is now given to horses, asses, and mules. During the Peninsular war the horses of the British cavalry were often fed on the beans of the Carob-tree. Both Pliny (*Hist. Nat.* xv. 23) and Columella (vii. 9) mention that it was given as food to swine. By some it has been thought, but apparently without reason, that it was upon the husks of this tree that John the Baptist fed in the wilderness: from this idea, however, it is often called St. John's Bread, and Locust-tree.

215. [Ceratonia Siliqua.]

The Carob-tree grows in the south of Europe and north of Africa, usually to a moderate size, but it sometimes becomes very large, with a trunk of great thickness, and affords an agreeable shade. The quantity of pods borne by each tree is very considerable, being often as much as 800 or 900 pounds weight: they are flat, brownish-coloured, from 6 to 8 inches in length, of a subastringent taste when unripe, but, when come to maturity, they secrete, within the husks and round the seeds, a sweetish-tasted pulp. When on the tree, the pods have an unpleasant odour; but, when dried upon hurdles, they become eatable, and are valued by poor people, and during famine in the countries where the tree is grown, especially in Spain and Egypt, and by the Arabs. They are given as food to cattle in modern, as we read they were in ancient, times; but, at the best, can only be considered very poor fare.—J. F. R.

CETUBIM (כְּתוּבִים, *the Writings*), one of the three larger divisions of the Old Testament used by the Hebrews, and thus distinguished from the Law and the Prophets (the other two divisions) as being in the first instance committed to writing, and not delivered orally. Hence the book of Daniel is found in this division; his prophecies having been originally written down, and not orally delivered. This is the division of Scripture known also by the corresponding Greek name of HAGIOGRAPHA. It contained Psalms, Proverbs, Job, Canticles, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra and Nehemiah (reckoned as one), and Chronicles.

CHABAZZELETH (חֲבַצֶּלֶת) occurs in two places in Scripture, first in the passage of Cant. ii. 1, where the bride replies, 'I am the

Rose of Sharon and the lily of the valleys;' and secondly, in Isa. xxxv. 1, 'The wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as the *rose*.' In both passages we see, that in the Auth. Vers., as also in some others, the word is considered to indicate the rose. The Sept. renders it simply by *flower* in the passage of the Canticles. In this it has been followed by the Latin Vulgate, Luther, &c. It is curious, however, as remarked by Celsius, *Hiero.*, i. p. 489, that many of those who translate *chabazzeleth* by *rose* or *flower* in the passage of the Canticles, render it by *lily* in that of Isaiah.

216. [Narcissus tazetta.]

The rose was, no doubt, highly esteemed by the Greeks, as it was, and still is, by almost all Asiatic nations, and, as it forms a very frequent subject of allusion in Persian poetry, it has been inferred that we might expect some reference to so favourite a flower in the poetical books of the Scripture, and that no other is better calculated to illustrate the above two passages. But this does not prove that the word chabazzeleth, or any similar one, was ever applied to the rose. Other flowers, therefore, have been indicated, to which the name chabbazzeleth may be supposed, from its derivation, to apply more fitly. Scheuzer refers to Hiller (*Hierophyt.* p. 2), who seeks chabazzeleth among the bulbous rooted plants, remarking that the Hebrew word may be derived from *chabab* and *batzal*, a bulb, or bulbous root of any plant; as we have seen it applied to the onion in the article Betzal. So Rosenmüller remarks that the substantial part of the Hebrew name shows that it denotes a flower growing from a bulb, and adds in a note 'that חבצלת is formed from בצל or bulb, the guttural ח being sometimes put before triliterals, in order to form quadriliterals from them' (see Gesen. *Gram.* p. 863). Some therefore have selected the asphodel as the bulbous plant intended; respecting which the author of 'Scripture Illustrated' remarks, 'It is a very beautiful and odoriferous flower, and highly praised by two of the greatest masters of Grecian song. Hesiod says it grows commonly in woods; and Homer (*Odyss.*, i. 24) calls the Elysian fields 'meads filled with asphodel.'

Celsius (*l. c.*) has already remarked that Bochart has translated chabazzeleth by narcissus; and not without reason, as some Oriental translators have so explained it. In the Targum, Cant. ii. 1, instead of chabazzeleth we have *narkom*, which, however, should have been written narkos נרקוס, as appears from the words of David Cohen de Lara, '*Narkos idem est ac chabazzeleth Saron.*' So in Isa. xxxv. 1, chabazzeleth is written *chamsaloito* in the Syrian translation, 'quod maronita Latine vertit narcissum' (Cels. *Hierobot.* i. p. 489). This, Rosenmüller informs us, according to the testimony of Syriac Arabic Dictionaries, denotes the 'colchicum autumnale,' that is, the meadow saffron. That plant certainly has a bulb-like root-stock; in form the flowers resemble those of the crocus, are of a light violet colour, but without any scent. Narkom and narkos are, no doubt, the same as the Persian nurgus, Arabic نرجس, and which, throughout the East, indicates Narcissus Tazetta, or the polyanthus narcissus. The ancients describe and allude to the narcissus on various occasions, and Celsius has quoted various passages from the poets indicative of the esteem in which it was held. As they were not so particular as the moderns in distinguishing species, it is probable that more than one may be referred to by them, and, therefore, that N. Tazetta may be included under the same name as N. poeticus, which was best known to them. It is not unimportant to remark that the narcissus was also called βολβὸς ἐμετικός, and Bulbus vomitorius, and the Arabic *busl-al-kye*, no doubt refers to the same or a kindred species. It is curious also that an Eastern name, or the corruption of one, should be applied by gardeners even in this country to a species of narcissus—thus, N. Trewrianus and crenulatus,—the former, supposed by some to be a variety of N. orientalis, were once called *bazalman* major and *bazalman* minor. That the narcissus is found in Syria and Palestine is well known, as it has been mentioned by several travellers; and, also, that it is highly esteemed by all Asiatics from Syria even as far as India. Hence, if we allow that the word chabazzeleth has reference to a bulb-bearing root, it cannot apply to the rose. The narcissus, therefore, is as likely as any other of the bulbous tribe to have been intended in the above passages.—J. F. R.

CHAFF, the refuse of winnowed corn. It is used as a symbol for unprofitable and worthless characters (Ps. i. 4; Matt. iii. 12).

CHAIN. Chains of gold appear to have been as much used among the Hebrews, for ornament or official distinction, as they are among ourselves at the present day. The earliest mention of them occurs in Gen. xli. 42, where we are told that a chain of gold formed a part of the investiture of Joseph in the high office to which he was raised in Egypt; a later instance occurs in Dan. v. 29, from which we learn that a golden chain was part of a dress of honour at Babylon. In Egypt the judges wore chains of gold, to which was attached a jewelled figure of Thmei, or Truth; and in that country similar chains were also worn as ornaments by the women. It is not, however, necessary to suppose that the Hebrews derived this custom from the Egyptians; for the fact

that chains are mentioned among the spoil of the Midianites shows that they were in use among people whose condition of life more nearly resembled that of the Israelites before they obtained possession of Canaan. It would seem that chains were worn both by men and women (Prov. i. 9; Ezek. xvi. 11), and we find them enumerated among the ornaments of brides (Cant. i. 10; iv. 9).

It was a custom among the Romans to fasten a prisoner with a light chain to the soldier who was appointed to guard him. One end of it was attached to the right hand of the prisoner, and the other to the left hand of the soldier. This is the *chain* by which Paul was so often bound, and to which he repeatedly alludes (Acts xxviii. 20; Eph. vi. 20; 2 Tim. i. 16). When the utmost security was desired, the prisoner was attached by two chains to two soldiers, as was the case with Peter (Acts xii. 6).

CHALCEDONY (χαλκηδών, Rev. xxi. 19), a precious stone, supposed by some to be the same that occurs in the Hebrew Scriptures (Exod. xxviii. 18) under the name of *nophek* (translated 'emerald'); but this is doubtful. Chalcedony is a variety of amorphous quartz, and the distinction between it and agate is not very satisfactorily established. It is harder than flint (specific gravity 2·04), commonly semi-transparent, and is generally of one uniform colour throughout, usually a light brown and often nearly white; but other shades of colour are not infrequent, such as grey, yellow, green, and blue. Chalcedony occurs in irregular masses, commonly forming grotesque cavities, in trap rocks and even granite. It is found in most parts of the world; and in the east is employed in the fabrication of cups and plates, and articles of taste, which are wrought with great skill and labour, and treasured among precious things. In Europe it is made into snuff-boxes, buttons, knife-handles, and other minor articles.

CHALDÆAN PHILOSOPHY. This is a subject of interest to the student of the Bible, in consequence of the influence which the Babylonian philosophy exerted on the opinions and manner of thinking of the Israelites during their captivity in Babylon—an influence of a general and decided character, which the Rabbins themselves admit, in alleging that the names of the angels and of the months were derived by the house of Israel from Babylon (*Rosh Hashanah*, p. 56). The system of opinion and manner of thinking which the captives met with in Babylon cannot be characterized exclusively as Chaldæan, but was made up of elements whose birth-place was in various parts of the East, and which appear to have found in Babylon a not uncongenial soil, where they grew and produced fruit which coalesced into one general system. Of these elements the two principal were the Chaldæan and the Medo-Persian or Zoroastrian. It is to the first that the reader's attention is invited in this article.

The Chaldæans, who lived in a climate where the rays of the sun are never darkened, and the night is always clear and bright by means of the light of the moon and stars, were led to believe that light was the soul of nature. Accordingly it was by the light of the sun and stars that the universal spirit brought forth all things; and therefore the Chaldæans offered their homage to the Supreme Being in the heavenly bodies, where he appeared to them in a special manner to dwell. As the stars form separate bodies, imagination represented them as distinct existences, which had each their peculiar functions, and exerted a separate influence in bringing forth the productions of nature. The idea of a universal spirit disappeared, as being too abstract for the people, and not without difficulty for cultivated minds; and worship was offered to the stars as so many powers that governed the world. It is easy to see how the Chaldæans passed from this early corruption of the primitive religion of the Bible to a low and degrading polytheism.

As light was regarded as the only moving-power of nature, and every star had its own influence, so natural phenomena appeared the result of the particular influence of that heavenly body which at any given time was above the horizon; and the Chaldæan philosophers believed that they found the cause of events in its position, and the means of foretelling events in its movements. These views, and perhaps the extraordinary heat and the pestilential winds which in certain months prevail in the country, and against which there is no protection except in the hills, led the Chaldæans to the mountains which gird the land. On these observatories, which nature seems to have expressly formed for the purpose, they studied the positions and movements of the heavenly host. They thought they saw that similar phenomena were constantly accompanied by the same conjunction of the stars, which seemed to observe regular movements and a similar course. On this the Chaldæan priests came to the conviction that natural events are bound together, and that sacrifices do not interrupt their course; that they all have a common origin, which works according to unknown principles and laws, whose discovery is so important as to deserve their best attention. The heavenly bodies themselves are obedient to these laws; their formation, position, and influence, are consequences of these universal laws, by which nature was controlled. This determined the Chaldæans to seek in the heavens the knowledge of the original cause which created the world, and of the laws which that cause followed in the formation of things, and in the production of phenomena, since in the heavens dwelt the power which brings all things forth.

The stars were masses of light; the space which held them was filled with light; no other power appeared to operate therein: accordingly the Chaldæans held light to be the moving-power which had produced the stars. It could not be doubted that this power possessed intelligence, and the operations of the mind appear to have so much resemblance to the subtlety and fleetness of light, that men who had only imagination for their guide had no hesitation to represent intelligence as a property of light, and the universal spirit or highest intelligence as light itself. The observations of the Chaldæans had taught them that the distances of the stars from the earth are unequal, and that light decreases in its approach to the earth, on which they concluded that light streams forth from an endless fountain far removed from the earth, in doing which it fills space with its beams, and forms the heavenly bodies in different positions and of different magnitudes. The

creative spirit was therefore set forth by them under the image of an eternal inexhaustible fountain of light; they thought this fountain was to the universe what the sun is to the regions lighted and warmed by his beams.

As light becomes less in propagating itself, its fountain must be of an inconceivable subtlety and purity, and accordingly, in its loftiest condition, intelligent. As its beams are removed from their source they lose their activity, and by the gradual waning of their influence sink from their original perfection; they therefore produced different existences and intelligences, in proportion as they became more distant from the fountain of light; at last, passing from one element into another, they lost their lightness, were pressed together, and made dense, till they became corporeal, and produced chaos. There accordingly was between the Supreme Being and the earth a chain of intermediate existences whose perfections decreased as they were more remote from the First Great Cause. This Supreme Being had communicated in a distinguished degree his primary radiations, intelligence, power, productiveness; all other emanations had, in proportion to their distance from the highest intelligence, a less and less share in these perfections; and thus were the different regions of light, from the moon to the dwelling-place of the Supreme, filled with various orders of spirits.

The space which contained the First Cause, or Fountain of radiations, was filled with pure and happy intelligences. Immediately beneath this region began the corporeal world, or the empyreum, which was a boundless space, lighted by the pure light which flowed immediately from the Great Source; this empyreum was filled with an infinitely less pure fire than the original light, but immeasurably finer than all bodies. Below this was the ether, or grosser region, filled with still grosser fire. Next came the fixed stars, spread over a wide region where the thickest parts of the ethereal fire had come together and formed the stars. The world of planets succeeded, which contained the sun, moon, and the wandering stars. Then came the last order of beings—the rude elements which are deprived of all activity, and withstand the motions and influence of light. The different parts of the world are in contact, and the spirits of the upper regions can influence the lower, as well as descend and enter into them. As the chaotic elements were without shape and motion, the spirits of the higher regions must have formed the earth, and human souls are spirits sprung from them. To these spirits from above the system of the Chaldæans ascribed all the productions, appearances, and movements upon the earth. The formation of the human body, the growth of the fruits, all the gifts of nature, were attributed to beneficent spirits. In the space below the moon, in the midst of night, tempests arose, lightnings threaded the dark clouds, thunder broke forth and laid waste the earth; there were found spirits of darkness, corporeal demons spread through the air. Often, too, were flames of fire seen to rise out of the bosom of the earth, and the mountains were shaken. Earthly powers or demons were supposed to dwell in the centre of the earth; and since matter was held to be without activity, all movements were attributed to spirits. Storms, volcanoes, tempests, appeared to have no other object than to destroy human happiness; and these demons were held to be wicked spirits who produced these evils; to them every unfortunate event was ascribed, and a sort of hierarchy was formed of these evil beings, as had been done in the case of the good spirits. But why did not the Supreme mind put down, by an exertion of his power, this swarm of wicked spirits? Some thought it was beneath the dignity of the Primary Essence to contend with these demons; others were of opinion that these bad spirits were naturally indestructible, and as the Supreme could neither destroy nor improve them, he had banished them to the centre of the earth and to the region beneath the moon, where they indulged in their baseness and exercised their dominion: in order, however, to protect the human race against fiends so numerous and fearful, he commissioned good spirits, whose office it was to defend men against these corporeal demons. As the good and the bad spirits had various degrees of power, and different offices, so they had names given to them which described their functions. As the good spirits were under an obligation to protect men and furnish succour in their need, they were compelled to learn human language; accordingly it was believed that a guardian angel against every evil was possessed by every one who bore his mysterious name—a name which was to be pronounced only when succour was needed. All manner of names were therefore devised, by which the good spirits were conjured or informed of human necessities; and all the combinations of the alphabet were exhausted in order to bring about a commerce between men and angels. Here is the origin of the Cabbala, which gave strange names to these spirits, in order to bring them into connection with men, and by this means to do wonderful things (Matt. xii. 24-27). These names also sometimes served to drive bad spirits away: they were a kind of exorcism. For since it was believed that these demons had been banished to the centre of the earth, and that they could do evil only in consequence of having baffled the vigilance of the guardian spirits and escaped to the outer world, so, it was held, they were compelled to flee as soon as they heard the name of the good angels whose business it was to keep them shut up in subterranean caverns, and to punish them if they ventured from their prisonhouse. A power, too, was ascribed to the name of the spirit, or to the image which marked his office—a power which forced the spirit to come on being called; and, accordingly, it was held that this name carved on a stone kept the spirit near the person who wore the stone—a notion in which is probably found the origin of Talismans, which were formed either by words or symbolical figures.

The fragments of Berosus, preserved by Eusebius and Josephus, and to be found in Scaliger (*De Emendat. Temp.*), and more fully in Fabricius (*Bib. Gr.* xiv. 175), afford some information on the subject of Chaldæan philosophy. Berosus was a priest of the god Baal, at Babylon, in the time of Alexander the Great. The Talmud and other works of the Jewish Rabbins may also be advantageously consulted, together with the following authorities:—Euseb. *Præp. Evang.* ix. 10; Philo, *De Mig. Mun.*; Selden, *De Diis Syris*, Proleg. 3; Stanley's *History of Oriental Philosophy*; Knorrii de Rosenroth, *Cabbala de-*

CHALDÆANS (כַּשְׂדִּים) is the name which is found appropriated in parts of the Old Testament to inhabitants of Babylon and subjects of the Babylonian kingdom. In 2 Kings xxv., where an account is given of the siege of Jerusalem in the reign of Zedekiah, by Nebuchadnezzar, the latter monarch is expressly designated 'King of Babylon,' while his troops in general are spoken of as 'Chaldees,' 'the army of the Chaldees.' In Isaiah xiii. 19, Babylon is called 'the glory of kingdoms, the beauty of the Chaldees' excellency;' and in xxiii. 13 of the same book, the country is termed 'the land of the Chaldæans.' So in Daniel ix. 1, 'In the first year of Darius, of the seed of the Medes, which was made king over the realm of the Chaldæans.' Ptolemy uses the term Χαλδαία (χώρα), Chaldæa, for that part of Babylonia which, lying in the south-west, borders on Arabia Deserta. Strabo speaks to the same effect, and Pliny terms Babylon *Chaldaicarum gentium caput*, the head of the Chaldæan nations. The origin and condition of the people who gave this name to the Babylonians, have been subjects of dispute among the learned. Probably, however, they were the same people that are described in Greek writers as having originally been an uncultivated tribe of mountaineers, placed on the Carduchian mountains, in the neighbourhood of Armenia, whom Xenophon describes as brave and fond of freedom (*Cyrop.* i. 31; *Anab.* iv. 3, 4, 7, 8, 25). In Habakkuk i. 6-10 the Chaldæans are spoken of in corresponding terms: 'Lo, I raise up the Chaldæans, that bitter and hasty nation, which shall march through the breadth of the land to possess the dwelling-places that are not theirs; they are terrible and dreadful; their horses are swifter than leopards and more fierce than evening wolves; their horsemen shall spread themselves; they shall fly as the eagle that hasteth to eat.' They are also mentioned in Job i. 17: 'Chaldæans fell upon the camels (of Job) and carried them away.' These passages show not only their warlike and predatory habits, but, especially that in Job, the early period in history at which they were known.

As in all periods of history hardy and brave tribes of mountaineers have come down into the plains and conquered their comparatively civilized and effeminate inhabitants, so these Armenian Chaldæans appear to have descended on Babylon, made themselves masters of the city and the government, and eventually founded a dominion, to which they gave their name, as well as to the inhabitants of the city and the country tributary to it, infusing at the same time young blood and fresh vigour into all the veins and members of the social frame. What length of time the changes herein implied may have taken cannot now be ascertained. Winer (*Realwörterbuch*, s. v. *Chaldäer*) conjectures that the Chaldæans were at first subjects of the Assyrian monarchy, which, from 2 Kings xvii. 24, &c., also 2 Chron. xxxiii. 11, appears to have been established in Babylon; and that, while subjects of that empire, they became civilized, gained for themselves the government, and founded the Chaldee-Babylonian kingdom or dynasty.

Of the kingdom of Babylon, Nimrod (Gen. x. 8, sqq.) was the founder and first sovereign. The next name of a Babylonian monarch is found in Gen. xiv. 1, where 'Amraphel, king of Shinar,' is cursorily mentioned. A long interval occurs, till at last, in 2 Kings xx. 12, 13, the name of another is given: 'Berodach-baladan, the son of Baladan, king of Babylon,' it appears 'sent letters and a present unto Hezekiah; for he had heard that Hezekiah had been sick. And Hezekiah hearkened unto them, and shewed them all the house of his precious things: there was nothing in his house, nor in his dominion, that Hezekiah shewed them not.' On becoming acquainted with this fact, the prophet Isaiah announced that the treasures of the kingdom would be plundered and taken to Babylon along with the descendants of Hezekiah, who were to become eunuchs in the palace of the king of Babylon. The friendly act which passed between these two kings took place in the year B.C. 713. About a hundred years later, the prophets Jeremiah and Habakkuk speak of the invasion of the Chaldæan army. Nebuchadnezzar now appears in the historical books, and, in Ezra v. 12, is described as 'the king of Babylon, the Chaldæan, who destroyed this house (the temple), and carried the people away into Babylon.' How extensive and powerful his empire was, may be gathered from the words of Jeremiah xxxiv. 1—'Nebuchadnezzar, king of Babylon, and all his army, and all the kingdoms of the earth of his dominion, and all the people, fought against Jerusalem.' The result was, that the city was surrendered, and the men of war fled, together with king Zedekiah, but were overtaken in the plains of Jericho and completely routed. The Israelitish monarch was carried before Nebuchadnezzar, who ordered his eyes to be put out, after he had been compelled to witness the slaughter of his sons: he was then bound in fetters of brass and conveyed a captive to Babylon. The next Chaldee-Babylonian monarch given in the Scriptures is the son of the preceding, Evil-merodach, who (2 Kings xxv. 27) began his reign (B.C. 562) by delivering Jehoiachin, king of Judah, after the unfortunate sovereign had endured captivity, if not incarceration, for a period of more than six and thirty years. Circumstances incidentally recorded in connection with this event serve to display the magnitude and grandeur of the empire; for it appears (ver. 28) that there were other captive kings in Babylon besides Jehoiachin, and that each one of them was indulged with the distinction of having his own throne. With Belshazzar (B.C. 538), the son of Nebuchadnezzar, closes the line of Chaldæan monarchs. In the seventeenth year of his reign, this sovereign was put to death, while engaged with all his court in high revelry, by Cyrus, when he took the city of Babylon in the night season (Dan. v. 30), and established in the city and its

dependencies the rule of the Medo-Persians [Belshazzar].

It has been seen, from the foregoing statements, that the history of Babylon supplied by the Scriptures is brief, imperfect, and fragmentary. Little additional light can be borrowed from other quarters, in relation to the period comprised within the Biblical accounts.

The oldest history of the land, as delivered by Berosus (Euseb. *Chron.*), gives no information capable of being annexed to the sacred narratives; whilst there is in the Canon of Ptolemy a list of Babylonian kings, which, in union with Berosus and Abydenus (Euseb. *Chron.*), leads to a not improbable result. This canon enumerates from the time of Nabonassar (B.C. 747), the first independent king of Babylon, nineteen Babylonian kings, whose united reigns, including two periods of interregnum, make a total of 210 years. The first name which is found alike in Ptolemy and Berosus is Belibus, or Elibus, and Berosus represents this monarch as immediately succeeding Merodach-baladan, with the remark that the last, after the murder of the Assyrian viceroy, had liberated Babylon from the Assyrian yoke, and Belibus, putting his predecessor to death, took the government as an independent prince, until, after a period of three years, Sanherib besieged the city, and made Babylon again an Assyrian province, under his son Esarhaddon, or Asordanius. With Nabopolassar, the father of Nebuchadnezzar, there begins a new and clearer epoch in Babylonian history. This prince, who was properly an Assyrian viceroy or satrap in Babylon, being supported by an alliance with the Median rulers, succeeded in making himself the independent sovereign of Babylon, destroyed the city of Nineveh, and established his dominion over Phœnicia and Cœle-Syria. His son (B.C. 604) pushed these conquests as far as Egypt. Evil-merodach, his son, succeeded him (B.C. 561), but was, in the second year of his reign, put to death by his brother-in-law Neriglissar. The latter, on the death of his wife, undertook the government, and after four years (B.C. 555) was succeeded by his son, Laboro-soarchod. But the youth could not sustain himself in power for longer than nine months. A conspiracy robbed him of his crown and life, and Nabonnidus (in Herodotus called Labynetus), that is, the Belshazzar of the Bible, ascended the throne, who, in the year B.C. 538 or 539, was overcome by Cyrus. From this event Babylon became a Persian province, and shared the fate of the Persian empire.

Authentic history affords no information as to the time when the Chaldæan immigration took place. It is possible that, at a very early period, a tribe of Chaldees wandered into Babylon and gave to the land the seven Chaldee kings mentioned by Berosus; but it is possible also that the Chaldæans entered in a mass into the Babylonian territory for the first time not long before the era of Nabonassar (B.C. 747), which Michaelis and others have thought the words of Isaiah render probable, ch. xxiii. 13—'Behold the land of the Chaldæans, this people was not, till the Assyrian founded it for them that dwell in the wilderness.' The circumstance, moreover, that a Shemitic dialect is found to have prevailed in Babylon, corroborates the idea that the Chaldæans were immigrants, since the northern Chaldæans must, from their position, have spoken a different form of speech.

The kingdom of the Chaldees is found among the four 'thrones' spoken of by Daniel (vii. 3, sqq.), and is set forth under the symbol of a lion having eagles' wings. The government was despotic, and the will of the monarch, who bore the title of 'King of Kings' (Dan. ii. 37), was supreme law, as may be seen in Dan. iii. 12; xiv. 28. The kings lived inaccessible to their subjects in a well-guarded palace, denominated, as with the ancient Persians (Xenop. *Cyrop.* 1), 'the gate of the king' (Dan. ii. 49, compared with Esther ii. 19, 21, and iii. 2). The number of court and state servants was not small; in Dan. vi. 1, Darius is said to have set over the whole kingdom no fewer than 'an hundred and twenty princes.' The chief officers appear to have been a sort of 'mayor of the palace,' or prime minister, to which high office Daniel was appointed (Dan. ii. 49), 'a master of the eunuchs' (Dan. i. 3), 'a captain of the king's guard' (Dan. ii. 14), and 'a master of the magicians,' or president of the Magi (Dan. iv. 9). Distinct probably from the foregoing was the class termed (Dan. iii. 24, 27) 'the king's counsellors,' who seem to have formed a kind of 'privy council' or even 'cabinet' for advising the monarch and governing the kingdom. The entire empire was divided into several provinces (Dan. ii. 48; iii. 1), presided over by officers of various ranks. An enumeration of several kinds may be found in Dan. iii. 2, 3. The head officers, who united in themselves the highest civil and military power, were denominated אחשדרפנין, 'presidents' (Dan. vi. 2); those who presided over single provinces or districts bore the title of פחות (Hagg. i. 1; ii. 2), in the Chaldee dialect פחותא, 'governor.' The administration of criminal justice was rigorous and cruel, will being substituted for law, and human life and human suffering being totally disregarded. Nebuchadnezzar (Dan. ii. 5) declares to the college of the Magi—'If ye will not make known unto me the dream with the interpretation thereof, ye shall be cut in pieces, and your houses shall be made a dunghill' (see also Dan. iii. 19; vi. 8; Jer. xxix. 22). The religion of the Chaldees was, as with the ancient Arabians and Syrians, the worship of the heavenly bodies; the planets Jupiter, Mercury, and Venus were honoured as Bel, Nebo, and Meni, besides Saturn and Mars (Gesenius *On Isaiah*). Astrology was naturally connected with this worship of the stars, and the astronomical observations which have made the Chaldæan name famous were thereby guided and advanced. The language spoken in Babylon was what is designated Chaldee, which is Shemitic in its origin, belonging to the Aramaic branch. The immigrating Chaldæans spoke probably a quite different tongue, which the geographical position of their native country shows to have belonged to the Medo-Persian stock.

The term Chaldæans represents also a branch of the order of Babylonian Magi (Hesych. Χαλδαῖοι γένος Μάγων). In Dan. ii. 2 they appear among 'the magicians, and the astrologers, and the sorcerers,' who were 'called for to shew the king his dream.' In the 10th verse of the same chapter they are represented as speaking in the name of the rest; or otherwise theirs was a general designation which comprised the entire class

(Dan. iv. 7; v. 7): a general description of these different orders is found in Dan. v. 8, as 'the king's wise men.' In the Greek and Roman writers the term *Chaldæans* describes the whole order of the learned men of Babylon, (Strabo, xv. p. 508; Diod. Sic. ii. 29; Cic. *De Div.* i. 1. 2). In later periods the name Chaldæans seems, without reference to place of birth, to have been applied in the western parts of the world to persons who lived by imposing on the credulity of others, going from place to place professing to interpret dreams and disclose the future. In this sense the word is obviously used by Josephus (*De Bell. Jud.* ii. vii. 36), when 'diviners and some Chaldæans' are said to have been called in by Archelaus to expound what was 'portended' by a dream he had had when he 'seemed to see nine ears of corn, full and large, but devoured by oxen.'—Winer's *Realwörterbuch*; *Real-Encyclopädie der Class. Alterthum*, W. von Pauly; Ideler, *Handbuch der Chron.* [BABYLON].—J. R. B.

CHALDEE LANGUAGE is the name by which the elder form of the Aramaic idiom is generally distinguished. Whether there is any authority in the Old Testament for applying this designation to the *Aramaic* language is a question which depends on the sense in which the expression 'tongue of the Chaldees,' in Dan. i. 4, is to be taken; and which involves such important historical points that it does not come within the scope of this article (see Hengstenberg, *Authentie des Daniel*, p. 310). Another preliminary question is, whether there is any propriety in the common definition of the Chaldee language as the *eastern*, and especially as the *Babylonian* dialect—or, indeed, even as a *dialect* at all—of the Aramaic. Hupfeld strenuously maintains the negative of all these propositions in the *Theologische Studien* for 1830, p. 290, sq. Avoiding these debateable points, however, we apply the name Chaldee language to that Aramaic idiom which, in our present text of the Old Testament, is employed in the passages of Daniel, from ii. 4 to vii. 28; in Ezra, from iv. 8 to vi. 18, and vii. from 12 to 26; in Gen. xxxi. 47; and in Jer. x. 11; as also to that in which several translations and paraphrases of portions of the Old Testament, the so-called Targums, are written. The language is thus distinguished, as to the nature of the documents in which it is employed, into Biblical and Targumical Chaldee. Winer, however, regarding linguistical characteristics chiefly, distinguishes three grades of its purity: the language, as found in the Targum of Onkelos, as most free from Hebraisms; the Biblical Chaldee, which, as it frequently intermixes certain peculiarities of Hebrew (as the ה of the article, the plural ending *im*, the dual form, and the conjugation *Hophal*), ranks below the first class; and the idiom of the other Targums, which not only abounds with foreign words, but possesses several peculiar formations which border on those of the Syriac and of Rabbinical Hebrew. The language of the Talmud is also usually called Chaldee; and, if we except the Mishnah (which is written in an idiom not so very far removed from Biblical Hebrew, with a tincture of Chaldee), it is true of the Gemaras that they are written in such very *corrupt* Chaldee that their idiom is more properly designated as the Talmudical dialect.

We have already [ARAMAIC LANGUAGE] noticed those several features which the Chaldee possesses in common with the Syriac; and it now remains to define those, certainly not marked, characteristics by which it is distinguished from it. These are—the predominance of the A-sound where Syriac has O; the avoidance of diphthongs and of otiant letters; the use of dagesh-forte; the regular accentuation of the last syllable; and the formation of the infinitives, except in *Peal*, without the preformative מ. The mode of writing is also much less *defective* than in Syriac [TARGUM].—J. N.

CHAMBERS OF IMAGERY. The scenes of pictorial representation referred to by this phrase are connected with an interesting passage in the history of Ezekiel and the Jewish exiles, who were stationed in Assyria, on the banks of the Chebar. At one of their interesting prayer-meetings for the restoration of Israel, which had been held so often and so long without any prospect of brighter days, and when the faith and hopes of many of the unfortunates were waxing dim and feeble, Ezekiel, in presence of his friends, consisting of the exiled elders of Judah, was suddenly wrapt in mystic vision, and graciously shown, for his own satisfaction, as well as that of his pious associates, the reasons of God's protracted controversy with Israel, and the sad necessity there was for still dealing hardly with them. Transported by the Spirit (not bodily, indeed, nor by external force, but in imagination) to the city and temple of Jerusalem, he there saw, as plainly as if it had been with the eye of sense, atrocities going on within the precincts of the holy place—the perpetration of which in the very capital of Judæa, the place which God had chosen to put his name there, afforded proof of the woful extent of national apostacy and corruption, and was sufficient to justify, both to the mind of the prophet, and his circle of pious associates, the severity of the divine judgments on Israel, and the loud call there was for prolonging and increasing, instead of putting a speedy end to, the dire calamities they had so long been suffering (Ezek. viii.).

The first spectacle that caught his eye, as he perambulated, in mystic vision, the outer court of the Temple—that court where the people usually assembled to worship—was a colossal statue, probably of Baal, around which crowds of devotees were performing their frantic revelries, and whose forbidden ensigns were proudly blazoning on the walls and portals of His house, who had proclaimed himself a God jealous of his honour (ver. 3, Lowth *in loc.*). Scarcely had the prophet recovered from his astonishment and horror at the open and undisguised idolatry of the multitude in that sacred enclosure, when his celestial guide bade him turn another way, and he would see greater abominations. Leading him to that side of the court, along which were ranged the houses of the priests, his conductor pointed to a mud-wall (ver. 7), which, to screen themselves from observation, the apostate servants of the true God had raised; and in that wall was a small chink, by widening which he discovered a passage into a secret chamber, which was completely impervious to the rays of the sun, but which he found, on entering it, lighted up by a profusion of brilliant lamps. The sides of

it were covered with numerous paintings of beasts and reptiles—the favourite deities of Egypt; and, with their eyes intently fixed on these decorations, was a conclave of seventy persons, in the garb of priests—the exact number, and, in all probability, the individual members of the Sanhedrim, who stood in the attitude of adoration, holding in their hands each a golden censer, containing all the costly and odoriferous materials which the pomp and magnificence of the Egyptian ritual required. 'There was every form of creeping things and abominable beasts, and all the idols of the house of Israel portrayed round about.' The scene described was wholly formed on the model of Egyptian worship; and every one who has read the works of Wilkinson, Belzoni, Richardson, and others, will perceive the close resemblance that it bears to the outer walls, the sanctuaries, and the hieroglyphical figures that distinguished the ancient mythology of Egypt. What were the strange and unsightly images engraven on the walls of this chamber discovered by Ezekiel, and that formed the objects of the profane reverence of these apostate councillors, may be known from the following metrical description, which the late Mr. Salt, long the British Consul in Egypt, has drawn of the gods worshipped by the ancient idolatrous inhabitants of that country. Those who have prosecuted their researches among the rubbish of the temples, he says, have found in the deeply-sequestered chambers they were able to reach—

'The wildest images, unheard of, strange,
That ever puzzled antiquarians' brains:
Genii, with heads of birds, hawks, ibis, drakes,
Of lions, foxes, cats, fish, frogs, and snakes,
Bulls, rams, and monkeys, hippopotami;
With knife in paw, suspended from the sky,
Gods germinating men, and men turn'd gods,
Seated in honour, with gilt crooks and rods;
Vast scarabæi, globes by hands upheld,
From chaos springing, 'mid an endless field,
Of forms grotesque, the sphinx, the crocodile,
And other reptiles from the slime of Nile.'

In order to show the reader still further how exactly this inner chamber that Ezekiel saw was constructed after the Egyptian fashion, we subjoin an extract from the work of another traveller, descriptive of the great Temple of Edfou, one of the admired relics of antiquity; from which it will be seen that the degenerate priests of Jerusalem had borrowed the whole style of the edifice, in which they were celebrating their hidden rites—its form, its entrance, as well as its pictorial ornaments on the walls—from their idolatrous neighbours of Egypt:—'Considerably below the surface of the adjoining building,' says he, 'my conductor pointed out to me a *chink in an old wall*, which, he told me, I should creep through on my hands and feet; the aperture was not two feet and a half high, and scarcely three feet and a half broad. My companion had the courage to go first, thrusting in a lamp before him: I followed. The passage was so narrow that my mouth and nose were almost buried in the dust, and I was nearly suffocated. After proceeding about ten yards in utter darkness, the heat became excessive, the breathing was laborious, the perspiration poured down my face, and I would have given the world to have got out; but my companion, whose person I could not distinguish, though his voice was audible, called out to me to crawl a few feet farther, and that I should find plenty of room. I joined him at length, and had the inexpressible satisfaction of standing once more upon my feet. We found ourselves in a *splendid apartment of great magnitude*, adorned with an incredible profusion of sacred *paintings and hieroglyphics*' (Madden's *Trav. in Turkey, Egypt, &c.*; see also Maurice, *Indian Antiq.* vol. ii. p. 212). In the dark recesses of such a chamber as this, which they entered like the traveller through a hole in the outer wall, and in which was painted to the eye the grotesque and motley group of Egyptian divinities, were the chief men at Jerusalem actually employed when Ezekiel saw them. With minds highly excited by the dazzling splendour, and the clouds of fragrant smoke that filled the apartment, the performers of those clandestine rites seem to have surpassed even the enthusiastic zeal of their ancestors in the days of Moses, when, crowding round the pedestal of the golden calf, they rent the air with their cries of 'These be thy gods, O Israel!' Beneath a calmer exterior, the actors in the scene pointed out to Ezekiel concealed a stronger and more intense passion for idolatry. Every form of animal life, from the noblest quadruped to the most loathsome reptile that spawned in Egypt, received a share of their insane homage; and the most extraordinary feature of the scene was that the individual who appeared to be the director of these foul mysteries, the master of ceremonies, was Jaazaniah, a descendant of that zealous scribe who had gained so much renown as the principal adviser of the good king Josiah, and whose family had for generations been regarded as the most illustrious for piety in the land. The presence of a scion of this venerated house in such a den of impurity, struck the prophet as an electric shock, and showed better, than all the other painful spectacles this chamber exhibited, to what a fearful extent idolatry had inundated the land.

It might have been supposed impossible for men to have sunk to a lower depth of superstition than that of imitating the Egyptians in worshipping the monsters of the Nile, or the vegetable produce of their fields and gardens, had not the prophet been directed to turn yet again, and he would see greater abominations that they did. 'Then he brought me to the gate of the Lord's house, which was towards the north; and behold there sat women weeping for Tammuz' (ver. 14). This, the principal deity of the Phœnicians, and who was often called also by that people Adoni, that is, My Lord, became afterwards famous in the Grecian mythology under the well-known name of Adonis; and the circumstance of his being selected for the subject of their most beautiful fiction by so many of the classic poets, is a sufficient proof of the great popular interest his name and ritual excited among the idolators of the ancient world. It is said to have originated in a tragic adventure that befel an intrepid and beautiful prince of Phœnicia, who was killed while hunting a wild boar, by which that land was infested, and whose untimely death in the cause of his country was bewailed in an annual festival held to commemorate the disastrous event. During the seven days that the festival lasted, the Phœnicians appeared to be a nation of mourners; and

in every town and village a fictitious representation of Tammuz was got up for the occasion, and the whole population assembled to pour forth their unbounded sorrow for his hapless fate, more especially at Byblos, in Syria, where a temple was erected in honour of this national deity. A strange imposture was practised to influence the public lamentations. There was on this temple a gigantic statue of the god, the eyes of which were filled with lead, which, on fire being applied within, of course melted and fell in big drops to the ground, a signal for the loud wailings of the bystanders, whose eyes in sympathetic imitation were dissolved in tears. Conspicuous among the crowd, on such occasions, a band of mercenary females directed the orgies; and, in conformity with an ancient custom of bewailing the dead on anniversaries at the *doors of houses* (Potter's *Grec. Antiq.* b. iv. ch. 3), others took their station at the *gate*, with their faces directed northward, as the sun was said to have been in that quarter of the heavens at the time when Tammuz died. These violent efforts in mourning were always followed by scenes of the most licentious and revolting revelry, which, though not mentioned, are manifestly implied among the 'greater abominations' which degraded this other group of idolators.

Besides the hieroglyphics of Egypt and the orgies of Tammuz, there was another form of superstition still, which in Jerusalem, then almost wholly given to idolatry, had its distinguished patrons. '*Turn* thee yet again,' said his celestial guide to the prophet, 'and thou shalt see greater abominations than these' (ver. 16). And he brought him 'unto the inner court of the Lord's house, and behold at the door of the temple of the Lord, between the porch and the altar, were about five-and-twenty men, with their backs towards the temple of the Lord, and their faces towards the east; and they worshipped the sun towards the east.' Perhaps of all the varieties of superstition which had crept in among the Hebrews in that period of general decline, none displayed such flagrant dishonour to the God of Israel as *this* (Clemens Alexandrinus, *Strom.* vii. p. 520); for, as the most holy place was situated at the west end of the Sanctuary, it was impossible for these twenty-five men to pay their homage to the rising sun without turning their backs on the consecrated place of the divine presence; and accordingly this fourth circle is introduced last, as if their employment formed the climax of abominations—the worst and most woful sign of the times. Could stronger proofs be wanted that the Lord had not forsaken Israel, but was driven from them? This was the lesson intended, and actually accomplished, by the vision; for while the prophet was made aware by this mystic scene of the actual state of things among his degenerate countrymen at home, he saw himself—and instructed the pious circle around him to see—a proof of the long-suffering and the just severity of God in deferring to answer their fervent and long-continued prayers for the emancipation of their country.—R. J.

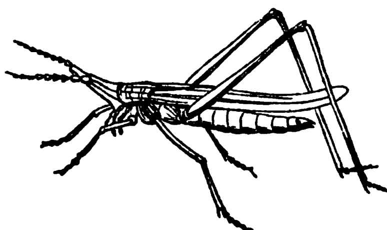
CHAMELEON appears to be a satisfactory translation of תנשמת *tinshemeth*, which denotes a small species of lizard, celebrated for the faculty it has of changing the colour of its skin. This property, however, has no reference to the substance it may be placed on, as generally asserted, but is solely derived from the bulk of its respiratory organs acting upon a transparent skin, and on the blood of the animal. The chameleons form a small genus of Saurians, easily distinguished by the shagreened character of the skin, and the five toes on the feet, divided differently from those of most other animals, there being, if the expression may be allowed, two thumbs opposed to three fingers. Their eyes are telescopic, move separately, and can be directed backwards or forwards. Chameleons are slow, inoffensive, and capable of considerable abstinence from food; which consists solely of flies, caught by the rapid protrusion of a

217. [Chameleon Africanus.]

long and viscous tongue. Among themselves they are irascible, and are then liable to change their colours rapidly: dark yellow or grey is predominant when they are in a quiescent state, but, while the emotions are in activity, it passes into green, purple, and even ashy black. The species found in Palestine and all Northern Africa, is the common *Chameleon Africanus*, and is that referred to in Lev. xi. 30, where unclean animals are mentioned.—C. H. S.

CHAMOIS. [Zemer.]

CHAOS, a term taken from the Greek mythology, according to which Chaos was the first existence and the origin of all subsequent forms of being (Hesiod, *Theogon.* 116; Ovid, *Metamorph.* i. 5). The description which Ovid gives of Chaos itself, and of the formation of the world from the chaotic mass, bears so many striking resemblances to the Mosaic account of the creation, that one can scarcely fail to regard it as having been derived from traditions, the source of which is to be traced to the sacred record. There is, however, this great difference between the scriptural and the heathen cosmogonies—that the former sets out with the emphatic declaration that the unformed mass was the creation of God; whilst the latter speaks of it as the already existing materials out of which he formed the world, or even as itself the cause and author of all things. If, however, heathen philosophers have been indebted to the inspired narrative for their most consistent views of the formation of the world, on the other hand Christian philosophers have borrowed from them (with very little advantage, as we think) the term by which the unformed condition of the world was denoted, and, with the word, have too frequently associated some part of the heathen idea attached to it. Our present object is to inquire what the Chaos was of which Moses speaks (Gen. i. 2). Was it the first form in which matter was created? and do the succeeding operations described relate to the very beginning of material order and animal life? Or was it merely a condition preparatory to the re-



organisation of the world, which had already been the abode of living beings?—in other words, is the first verse of the inspired record to be dissociated from the succeeding, and to be understood only as a declaration of the important truth, that the visible universe was not made from anything already existing (Heb. xi. 3); whilst the confusion and darkness which are described in the succeeding verse, relate to a state long subsequent to the 'beginning,' and were introductory to a new order of material existence, of which man is the chief and lord? The first of these opinions is not only in accordance with the ancient notions of chaos to which we have referred, but is that which would be naturally maintained, unless cause be shown to the contrary. No one would gratuitously assume a long interval, where it must be admitted there is no intimation of such an interval having occurred. Accordingly, most interpreters, who have been ignorant of geological phenomena, have at once decided that the chaos of which Moses speaks was the form in which matter was first created. Some have even declared that there cannot have been any such interval as we have spoken of (Prof. Stuart, in *Bib. Repos.* No. xxi., Jan. 1836). But, on the other hand, the world gives intimations, in the rocks which compose its crust, of various and long-continued changes both of condition and of inhabitants. Those who have carefully examined these different forms of being, and have attentively studied the circumstances in which their remains are now found, have been forced to the conviction, that in many cases the rocks have been gradually formed by deposition at the bottom of an ocean, which has been successively the habitation of races differing alike from each other and from those now existing; that the coeval land likewise has had its distinct races of inhabitants, and that the land and water have changed places many times in the history of the world. It is impossible to do more than barely glance at these geological facts; but it will be seen that they lead to these three conclusions—(1) that the world has existed during some long period *before* the Mosaic record of creation in six days—(2) that, during that period, it was the abode of animals differing in organization and structure from those now found on its surface—and (3) that it has been exposed to various convulsions and reorganizations, more or less general. In the face of these facts it appears impossible to hold the ordinarily received opinion that the universe was created only just before the creation of man; and the question then is, how are these facts to be reconciled with the Mosaic narrative? Not by denying the evidence of our senses (which is, in truth, a very dangerous mode of upholding the sacred record, though it has been adopted by those who especially claim to themselves the title of Scriptural Geologists), nor, on the other hand, by treating the Mosaic account as a *mythus*, or allegorical representation (a mode of explanation, which, if ever admissible, ought not to be resorted to without the most pressing necessity), but surely by re-examining the interpretation *we* have put on the words of Scripture, and by seeking to ascertain whether the discrepancy does not arise from *our view* of the narrative. A favourite mode of explaining the Mosaic account, a few years back, was to take the six days of creation for unlimited periods, during which the changes we are speaking of took place. This ground has, however, been almost completely abandoned, both because the account so understood does not agree with the physical phenomena, and because such an interpretation is, to say the least, hardly admissible on exegetical principles. If we keep in mind that the revelation of God to man is not intended to teach physical science—that it never speaks the language of philosophy, but of appearances—and that it tells of these only so far as they relate to the human race, we obtain a clue by which we may be safely guided through these difficulties. We shall not then wonder that no notice should be taken of previous conditions and inhabitants of this earth, supposing such to have existed. The first sentence of the inspired record will then be regarded as the majestic declaration of a fact, which the world had lost sight of, but which it deeply concerned men to know. What occurred subsequently, until the earth was to be furnished for the abode of man, is to be gathered not from the written word, but from the memorials engraven on the tablets of the world itself. The succeeding verse of the Mosaic account then relates to a state of chaos, or confusion, into which the world was thrown immediately before the last reorganization of it. The connection of the two sentences by the Hebrew copulative ו seems to us to furnish no serious difficulty. Every attentive reader knows that this particle is very frequently used to continue a narrative when the events so connected were by no means immediately consecutive. Nor is such a chaos opposed to geological phenomena, which plainly tell of 'critical periods' and of 'revolutions of organic life' (Phillips's *Geology*, in *Cab. Cycl.* vol. ii. p. 264). Geologists are not indeed at present (if ever they may be) in a condition to identify the disruption and confusion of which we suppose Moses to speak with any one of these violent convulsions; but that events which might be described in his language have taken place in the world's history, over considerable portions of its surface, seems to be fully established. Whether the chaos of which we are now speaking was universal, or was confined to those regions which formed the cradle of the human race, is a question on which we do not feel it needful to enter. We do not regard the evidence which geology furnishes as complete enough to decide such a point, though the latter supposition has been adopted by Dr. Pye Smith, in his lectures *On the Relation between the Holy Scriptures and some Parts of Geological Science.* To these lectures, as well as to the articles by Professor Hitchcock, in the *Biblical Repository* (Nos. 17, 18, 20, and 22), and to various papers which have appeared at different times in the *Christian Observer*, the reader is referred for a fuller discussion of this and kindred questions.—F. W. G.

CHARGOL (חַרְגֹּל; Sept. Ὀφιομάχης; Vulg. *Ophiomachus*; Eng. Vers. *Beetle*; found only in Lev. xi. 22). This word cannot mean the *beetle*. No species of scarabæus was ever used as food by the Jews, or perhaps any other nation. Nor does any known species answer to the generic description given in the preceding verse: 'This ye may eat of every winged creeper which goeth upon four

(feet); that which hath joints at the upper part of its hind legs, to leap with them upon the earth' (comp. Niebuhr, *Descrip. de l'Arabie*, Copenhague, 1773, p. 33). Hence it is plain that the chargol is some winged creeper, which has at least four feet, which leaps with its two hind jointed legs, and which we might expect, from the permission, to find actually used as food. This description agrees exactly with the *locust-tribe* of insects, which are well known to have been eaten by the common people in the East from the earliest times to the present day. This conclusion is also favoured by the derivation of the word, which comes from חרג, to shake, and רגל, the foot, like the English grasshopper, and French sauterelle. The Arabic حرجل is derived from a word signifying a troop or swarm, and is explained by Golius as a *species of locusts without wings.* It seems, indeed, to be so generally agreed among the learned that chargol denotes the locust, that the matter of dispute is rather what particular *species* of locust is intended, or whether the word describes any one of those several *states* through which the locust passes, in each of which it greatly resembles the perfect insect, the only difference being, that in the larva state it is entirely *destitute of wings* and *wing-cases*, and that in the pupa state it possesses only the rudiments of those members gathered up so as to form four little buttons on the shoulders. Swammerdam observes that the want of attention to these particulars, in former writers, had led to a very unnecessary multiplication of names, Aldrovand, Johnson, Mouffet, and others having described the locust in these several states under the names bruchi, atelabi, aselli, &c., supposing them to be so many distinct species. Michaelis, on the other hand, contends that the several words in this passage, ארבה, חגב, חרגל, סלעם, denote only the four successive states of locusts, produced by casting off their several skins or coverings.

Their *first* state, he thinks, is before they have cast off their first cuticle; but that, since in this state they are so small as not to be readily used for food, Moses enumerates only their *four* remaining states (*Supplement. ad Lexicon Hebraic.* pt. iii. pp. 667-669, and 910-912). To this view, however, it is justly objected by Rosenmüller (apud Bochart), that the phrase 'after its kind or species,' added to *each* of these terms, is not consistent with the various *states* merely through which the locust passes. Tychsen maintains that the words refer to four different *species* of locusts, and endeavours to show that ארבה is the *gryllus gregarius*, Forskalii; that סלעם is the *gryllus eversor de asso* apud Rœselium; חרגל, the *gryllus gurges de asso*, et *gryllus verrucivorus*, Linn.; and that the חגב is the gryllus coronatus, Linn. (Tychsen, *Comment. de Locustis Biblicis*, subjoined to Don Ignacio de Asso y del Rio's, *Abhandlung von den Heuschrecken und ihren*, &c., Rostock, 1787-8).

In attempting to ascertain the particular *species* of locust intended by the word 'chargol,' great deference is due to the term adopted by the Septuagint and repeated by Jerome, which is evidently derived from ὄφις and μάχη, and indicates a creature that fights with serpents. Inapplicable as such a description may seem to be to the habits of any known species of locust, it may, never-

218. [Truxalis nasutus.]

theless, help to identify the species of which we are in search. Now the ancients have certainly referred to the notion of locusts fighting with serpents (Aristot. *Hist. Anim.* ix. 9; Plin. *Hist. Nat.* xi. 35). Although this notion is justly discarded by Cuvier (Grandsagne's edition of Pliny, Parisiis, 1828, p. 451, note), yet it may serve to account for the *application* of the term ὀφιομάχης to a species of locust. For this word instantly suggests a reference to the *ichneumon*, the celebrated destroyer of serpents and other vermin; and it is remarkable that Hesychius, in the second century, applies the word ὀφιομάχος both to the *ichneumon*, and a species of *locust* having no wings. If then any species of locust can be adduced whose habits resemble those of the *ichneumon*, may not this resemblance account for the name, *quasi* the ichneumon (locust); just as the whole genus of insects called Ichneumonidæ were so denominated because of the *supposed* analogy between their services and those of the Egyptian ichneumon? and might not this name, given to that species of locust at a very early period, have afterwards originated the erroneous notion referred to by Aristotle and Pliny? Now, there is one kind of locusts, the genus *truxalis* (fierce or cruel), inhabiting Africa and China, and comprehending many species, which hunts and preys upon insects. It is also called the truxalis nasutus, or long-nosed. May not, then, this winged, leaping, insectivorous locust, and its various species, be 'the chargol, after its kind,' and the ὀφιομάχης of the Septuagint? or might the name have arisen from the similarity of *shape* and *colour*, which is striking, between the truxalis nasutus and the ichneumon; just as the locust generally, is, at this time, called *cavalette* by the Italians, on account of its resemblance in shape to the *horse*? We know that the ancients indulged in tracing the many resemblances of the several parts of locusts to those of other animals (Bochart, *Hieroz.* pt. ii. lib. iv. c. 5, p. 475). It may be observed, that it is no objection to the former and more probable supposition, that a creature which lives upon other insects should be allowed as food to the Jews, contrary to the general principle of the Mosaic law in regard to birds and quadrupeds, this having been unquestionably the case with regard to many species of fishes coming within the regulation of having 'fins and scales,' and known to exist in Palestine at the present time—as the perch, carp, barbel, &c. (Kitto's *Physical History of Palestine*, article Fishes). The fact that the Chargol is never made the means of the divine chastisements (for which purpose a

locust preying upon insects *could* scarcely be used), *concurs*, at least, with the foregoing speculation—J. F. D.

CHARIOT RACES. [Games.]

CHARIOTS. The Scriptures employ different words to denote carriages of different sorts, but it is not in every case easy to distinguish the kind of vehicle which these words severally denote. We are now, however, through the discovery of ancient sculptures and paintings, in possession of such information respecting the chariots of Egypt, Assyria, Babylon, and Persia, as gives advantages in the discussion of this subject which were not possessed by earlier writers. The chariots of these nations are, in fact, mentioned in the Scriptures; and by connecting the known with the unknown, we may arrive at more determinate conclusions than have hitherto been attainable.

The first chariots mentioned in Scripture are those of the Egyptians; and by close attention to the various notices which occur respecting them, we may be able to discriminate the different kinds which were in use among that people.

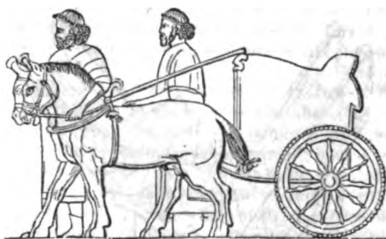
The earliest notice on this head occurs in Gen. xli. 43, where the king of Egypt honours Joseph by commanding that he should ride in the second of the royal chariots. This was doubtless a state-chariot, and the state-chariots of the Egyptians do not appear to have been different from their war-chariots, the splendid military appointments of which rendered them fit for purposes of royal pomp. This view of the matter is confirmed by our finding that, although the same word (מרכבה *mercabah*) is again used for chariots of state in Gen. xlvi. 29, 1 Sam. viii. 11, 2 Sam. xv. 1, it undoubtedly denotes a war-chariot in Exod. xv. 4, Joel ii. 5. In Isa. ii. 7, the same word appears to comprehend chariots of every kind which were found in cities. This may be accounted for by the fact that chariots anciently in the east were used almost entirely for purposes of state or of war, being very rarely employed by private persons. We also observe that where private carriages were known, as in Egypt, they were of the same shape as those used in war, and only differed from them by having less complete military accoutrements, although even in these the case for arrows is not wanting. One of the most interesting of the Egyptian paintings represents a person of quality arriving late at an entertainment in his curricle, drawn (like all the Egyptian chariots) by two horses. He is attended by a

219. [Egyptian Curricle.]

number of running footmen, one of whom hastens forward to knock at the door of the house, another advances to take the reins, a third bears a stool to assist his master in alighting, and most of them carry their sandals in their hands that they may run with the more ease. This conveys a lively illustration of such passages as 1 Sam. viii. 11; 2 Sam. xv. 1. The principal distinction between these private chariots and those actually used in war was, as appears from the monuments, that in the former the party drove himself, whereas in war the chariot, as among the Greeks, often contained a second person to drive it, that the warrior might be at liberty to employ his weapons with the more effect. But this was not always the case; for in the Egyptian monuments we often see even royal personages alone in their chariots, warring furiously, with the reins lashed round their waist (No. 223). So it appears that Jehu (who certainly rode in a war-chariot) drove himself; for his peculiar style of driving was recognised at a considerable distance (2 Kings ix. 20).

There has been some speculation as to any difference of meaning between the preceding word *mercabah* (מרכבה), and *mercab* (מרכב). In 1 Kings v. 6, the latter obviously means chariots, taken collectively. But in Lev. xv. 9 (rendered in the Auth. Vers. 'saddle') and Cant. iii. 10 (rendered 'the bottom') it has been understood by some to denote the seat of a chariot. To this view there is the fatal objection that ancient chariots had no seats. It appears to denote the seat of a litter (the only vehicle that had a seat), and its name *mercab* may have been derived from the general resemblance of the body of a litter (distinguished from the canopy, &c.) both in form and use, to that of a chariot.

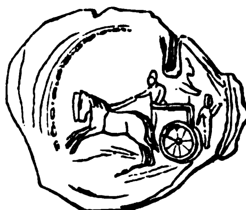
Another word, רכב *receb*, from the same root, appears to signify a carriage of any kind, and is especially used with reference to large bodies of carriages, and hence most generally of war-chariots; for chariots were anciently seldom seen together in large numbers except when employed in war. It is applied indifferently to the war-chariots of any nation, as to those of the Egyptians (Exod. xiv. 9), the Canaanites (Josh. xvii. 18; Judg. i. 19; iv. 3), the Hebrews (2 Kings ix. 21, 24; x. 16), the Syrians (2 Kings v. 9), the Persians (Isa. xxi. 7, 9). By a comparison of these references with those passages in which *mercabah* occurs, we find the two words applied with so little distinction to all sorts of carriages as to suggest that they were used indifferently and interchangeably, just as we should say either 'carriage' or 'coach,'—neither of which is specific, and both of which differ more from each other than the Hebrew *receb* and *mercabah* —to denote the same vehicle. Indeed there are passages in which both words are manifestly applied to the same identical vehicle, as in 2 Kings v. 9, 21, and 1 Kings xxii. 35, 38; where no reader would suspect a change of vehicles, which some have endeavoured to establish in order to make out a difference between the *receb* and *mercabah*. Mr. Charles Taylor, in one of the fragments appended to his edition of Calmet, indulges in much ingenious speculation on this subject, and labours to make out that while the *mercabah* denoted a chariot of state drawn by four horses, the *receb* was a humbler chariot drawn by two horses, and sometimes a litter carried by two horses. To this it may be sufficient to answer that chariots of state were *not* drawn by four horses in the East; that no instance of such a practice can be produced; and that the best Hebrew scholars of the



continent deny that it can be proved that *receb* anywhere denotes a litter, for which indeed there is a different word [LITTER].

There is another word which is sometimes rendered by chariot, viz. עֲגָלָה *'agalah;* but as we have elsewhere [CART] shown that it denotes a plaustrum, cart, or waggon, drawn by oxen, we need not here return to the subject. It is indeed alleged that in Ps. xlvi. 9 the word manifestly imports a chariot of war. The plural *'agaloth,* is there used, and the supposition that it means a chariot of war proceeds on the assumption that only chariots were used in war. But this is not the fact, for in the scenes of Egyptian warfare we find carts, drawn by oxen, brought into the field by certain nomade nations, and in which they endeavour to escape from their pursuers.

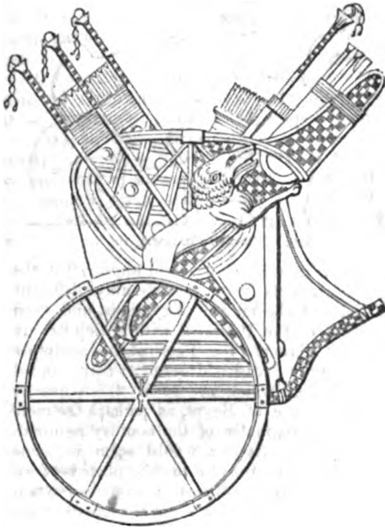
In the prophecy of Nahum, who was of the first captivity, and resident (if not born) at Elkosh in Assyria, there is much allusion to chariots, suggested doubtless by their frequency before his eyes in the streets of Nineveh and throughout the Assyrian empire. In fact, when prophesying the downfall of Nineveh, he gives a particular and animated description of their action in the streets of the great city:—



> The shield of his mighties is made red:
> The valiant men are clothed in scarlet:
> The chariots are as the fire of lamps, in the
> day when he prepareth them.
> And the horsemen spread fear
> In the streets, the chariots madden:
> They run to and fro in the broad places:
> Their appearance is as lamps, they run
> as lightning. Nahum ii. 3, 4.

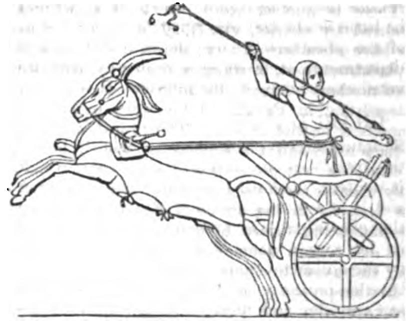
These allusions to the horsemen and chariots of Nineveh give much interest to one of the very recent discoveries of M. Botta, on the site of that very ancient city. In excavating a certain mass of building, which appears to have formed part of some much more extensive pile, he discovered various inscriptions and sculptures, which seem to show that the work was earlier than the age of Cyrus, and may be referred to the times of the Assyrian Empire. In one place is a bas-relief, representing a horseman at full gallop. Another part of the same wall represents two horsemen galloping side by side, with another following at a short distance. Further on, two armed horsemen are visible, one following the other at full gallop. The movement of the horses is very animated; and both men and horses show traces of colour. In another place are two horsemen walking their horses side by side. The only horseman visible has a sword; a quiver and bow are over his shoulder, and his legs are clothed in mail. These figures are very interesting, not only in connection with the prophecy which so distinctly mentions the 'horsemen' of Nineveh, but because they are, in fact, the only mounted figures which occur among the more ancient monuments of Asia. None have been found at Babylon, none at Persepolis; and among the numerous sculptures and paintings of Egypt, only one solitary unarmed figure, who seems to have crossed the back of the animal by accident. But the matter of greatest interest is the discovery of a curious bas-relief, representing a chariot drawn by two horses, and containing three persons. The principal of these appears to be a bearded man, lifting his right arm, and holding in his left hand a bow. He wears a tiara painted *red* ('the valiant men are clothed *in scarlet*'); behind him is a beardless slave, carrying a fringed parasol, and at his left is the charioteer holding the reins and the whip. The principal person and the charioteer wear ear-rings. The chariot-wheels have eight spokes: the chariot itself has been covered with carving, now impossible to be made out. The most noticeable thing is a bench, which seems to be attached to the chariot by a double belt, and which M. Botta supposes to have been a metal rod, intended to secure the solidity of the whole. The horses are admirably drawn, and afford indications of pure Arabian blood. Their harness is very rich, and still bears evident traces of colouring, among which blue and red only can be distinguished, the rest having turned black. Behind the chariot rides a cavalier, bearing a lance, with a sword at his belt, and a quiver over his shoulder (*Athenæum*, July 29, 1843).

220. [Persian Chariot.]



From this description it would appear that the Assyrian chariots were considerably different from those of the ancient Egyptians, and even from those of the Persians, with which we are acquainted through the Persepolitan sculpture (now in the British Museum), here copied (No. 220), and which are of a much heavier build than those of Egypt, as perhaps the more mountainous character of the country required. The chariots of Assyria would seem in some respects to have occupied a middle place between the other two. Among other points we observe that the spokes of the wheels are never more than six in the Egyptian chariot, while in the Assyrian there are eight, and in the Persian eleven. Not very different from the Persian chariot is one represented on a coin found at Babylon (No. 221): but the spokes of the wheels are eight, as in the Assyrian chariot. This coin has given occasion to much unsound speculation in the attempt to connect it with the history of Daniel.

221. [Babylonian Chariot.]



CHARIOTS OF WAR. The Egyptians used horses in the equipment of an armed force

before Jacob and his sons had settled in Goshen; they had chariots of war, and mounted asses and mules, and therefore could not be ignorant of the art of riding; but for ages after that period Arab nations rode on the bare back, and guided the animals with a wand. Others, and probably the shepherd invaders, noosed a single rope in a slip-knot, round the lower jaw, forming an imperfect bridle, with only one rein; a practice still in vogue among the Bedouins. Thus cavalry were but little formidable compared with chariots, until a complete command over the horse was obtained by the discovery of a true bridle. This seems to have been first introduced by chariot-drivers, and there are figures of well-constructed harness, reins, and mouth-pieces, in very early Egyptian monuments, representing both native and foreign chariots of war. These differed little from each other, both consisting of a light pole, suspended between and on the withers of a pair of horses, the after end resting on a light axle-tree, with two low wheels. Upon the axle

222. [Egyptian War Chariot.]

stood a light frame, open behind and floored for the warrior and his charioteer, who both stood within: on the sides of the frame hung the war-bow, in its case; a large quiver with arrows, and darts had commonly a particular sheath. In Persia, the chariots, elevated upon wheels of considerable diameter, had four horses abreast; and, in early ages, there were occasionally hooks or scythes attached to the axles. In fighting from chariots great dexterity was shown by the warrior, not only in handling his weapons, but also in stepping out upon the pole to the horses' shoulders, in order the better to attain his enemies, and the charioteer was an important person, sometimes equal in rank to the warrior himself. Both the kingdoms of Judah and Israel had war-chariots, and, from the case of king Josiah at the battle of Megiddo, it is clear they had also travelling-vehicles, for being wounded he quitted his fighting-chariot, and in a second, evidently more commodious, he was brought to Jerusalem (2 Chron. xxxv. 24). Chariots of war continued to be used in Syria in the time of the Maccabees (2 Mac. xiii. 5), and in Britain when Cæsar invaded the island;

223. [Egyptian War Chariot.]

but it would lead us beyond our proper limits if we were to expatiate on the Biga and Quadriga, the Essedum, Rheda, and Covinus of the ancients. The subject belongs more properly to a dictionary of classical antiquities.—C. H. S.

CHARITY. The Greek word ἀγάπη, frequently thus rendered in the Authorized Version of the New Testament (*e. g.* 1 Cor. xiii. throughout), is that which is more usually translated 'love' in the same version (*e. g.* John xv. throughout). The translation of the word by 'love' is the more proper, seeing that 'charity' has acquired a signification in our language which limits it to overt acts of beneficence. Ἀγάπη denotes that kindly state of mind or feeling which renders a person full of such goodwill or affectionate regard towards others as is always ready to evince itself in word or action. In short, it describes that state of feeling which the apostle enjoined the Romans (xii. 10) to entertain: 'Be ye *kindly affectioned* one to another.' This extended meaning of the word explains the pre-eminence which the apostle assigns to the virtue which it implies over every other Christian grace (1 Cor. xiii.).

CHARMING OF SERPENTS. [ADDER.]

CHARTUMMIM (חַרְטֻמִּים; Sept. ἐπαοιδοί, φαρμακοί). This is the title rendered 'magicians' in our version, applied to the 'wise men' of Egypt (Gen. xli. 8, 22; Exod. vii. 11; viii. 7, 18, 19; ix. 11), and of Babylon (Dan. i. 20; ii. 2). The word 'magicians' is not in either case properly applied, as the magi belonged to Persia, rather than to Babylon or Egypt; and should be altogether avoided in such application, seeing that it has acquired a sense different from that which it once bore. The Hebrew word properly denotes 'wise men,' as they called themselves and were called by others; but, as we should call them, 'men eminent in learning and science,' their exclusive possession of which in their several countries enabled them occasionally to produce effects which were accounted supernatural by the people. Pythagoras, who was acquainted with Egypt and the East, and who was not unaware of the unfathomable depths of ignorance which lie under the highest attainable conditions of human knowledge, thought the modest title of philosopher (φιλόσοφος), 'lover of wisdom,' more becoming, and accordingly he brought it into use; but that of 'wise men' still retained its hold in the East.

Gesenius concludes that the Egyptian *Chartummim* were those of the Egyptian priests who had charge of the sacred records. His etymological reasons may be seen in his Thesaurus. There can be little doubt that they belonged to some branch of the priesthood, seeing that the more recondite departments of learning and science were cultivated exclusively in that powerful caste.

CHARUL (חָרוּל) occurs in three places in Scripture, and in them all is translated '*nettles*' in the Auth. Version. Thus in Prov. xxiv. 30, 31, it is written, 'I went by the field of the slothful, &c., and, lo, it was all grown over with thorns, and nettles (*charullim*) had covered the face thereof.' So in Job xxx. 7 it is stated that he was insulted by the children of those whom he would formerly have disdained to employ, and who were so abject and destitute that 'among the bushes they brayed; under the *nettles* they were gathered together;' and in Zeph. ii. 9, 'Surely Moab shall be as Sodom, and the children of Ammon as Gomorrah, even the breeding of *nettles*, and salt-pits, and a perpetual desolation.' Considerable difficulty has been experienced in determining the plant which is alluded to in the above passages, which, as Celsius says, 'sacris scriptoribus parcius memorata, et notis paucissimis descripta, ac distincta.' The majority of translators and commentators have thought that some thorny or prickly plant, or a nettle, is intended by the charul, on account of the other plants which are mentioned along with it. Hence brambles, the wild plum, and thistles, have been severally selected; but nettles have had the greatest number of supporters. Celsius however prefers the Zizyphus Paliurus, or the plant which has been called Christ's thorn, as that best suited to the several contexts.

Of all these determinations, however, it must be observed that they amount to nothing more than conjectures, because, as Rosenmüller says, the cognate languages have not this word, and also because 'the Greek translators of Alexandria in the first and last of these three places (the only places in which the Hebrew word occurs) entirely deviate from our present Hebrew text; but in the passage of Job they translate *charul* by *wild shrubs*.' To us it does not appear, from the import of the above passages, that a thorny plant is necessarily meant by the term under review. All that is implied is that neglected fields, that is, fields in cultivation which are neglected, will become covered with *weeds*, and that these should be of a kind such as idlers, as in the passage of Job, might take shelter under, or lie down among. This passage, indeed, seems to preclude any thorny plant or nettle, as no one would voluntarily resort to such a situation; and one of the commentators, as quoted by Celsius (ii. p. 168), appears to have been of the same opinion: 'Bar Bahlul apud Castellum pisa vel cicerculas explicat:' that is, he considers *pease*, or rather vetches, to be intended. Moreover, it is worthy of remark, that there is a word in a cognate language, the Arabic, which is not very dissimilar from *charul* or *kharul*, and which is applied to plants apparently quite suitable to all the above passages. The word خردل *khardul* is applied in all old Arabic works, as well as at the present day, to different species of mustard, and also to plants which are employed for the same purposes as mustard (as we hope to be able to show in the article SINAPI), and it is not very unlike the *kharul* or *charul* of Scripture. In fact, they do not differ more than many words which are considered to have been originally the same. Some of the wild kinds of mustard are well known to spring up in corn fields, and to be the most troublesome of all the weeds with which the husbandman has to deal: one of these, indeed, *sinapis arvensis*, is well known to be, and is specially mentioned by a modern botanical author, Sir James Smith, as abundant in corn-fields, where it is a very troublesome weed, and also in waste ground, when newly disturbed. So also, as old a writer as Gerarde, in his *Herbal*, says, 'There be three sorts of wild turneps; one our common rape, which beareth the seed whereof is made rape-oil, and feedieth singing birds: the other, the common enimy to corne, which we call charlock.' He likewise mentions that this is also called *carlock*, *chadlock* and *kedlock*, words which it is curious to observe for their resemblance to *khardul*, *kharul*, or *charul*, and which are applied in our country to this wild kind of mustard, as khardul is to the species of mustard indigenous in different parts of Asia. That some of these are found in Syria and Palestine is well known, as Russel mentions the above *sinapis arvensis*, or charlock, as common in the neighbourhood of Aleppo, and, in fact, it is one of the most widely diffused of the species. Decandolle, in his *Syst. Natural.* ii. p. 615, describes it as 'Habitat arvis, vineis, agris Europæ interdum nimis copiosa, a Lusitania ad Petropolim, a Sicilia ad Daniam, ab Anglia ad Tauriam.'

294. [Sinapis Orientalis.]

Irby and Mangles moreover state, that in their journey from Bysan to Adjeloun they met with the mustard plant growing wild, and as high as their horses' heads. In fact, so large do some of the species grow in these countries, that one of them

has been supposed to be the mustard tree alluded to by our Saviour. *S. arvensis* being so widely diffused is probably also found in Palestine, though this can only be determined by a good botanist on the spot, or by a comparison of genuine specimens. But there is another species, the *S. orientalis*, which is common in corn-fields in Syria, and south and middle Europe, and which can scarcely be distinguished from *S. arvensis*. Either of these will suit the above passages, and as the name is not very dissimilar, we are of opinion that it is better entitled to be the *charul* of Scripture than any other plant that has hitherto been adduced. It would be the first to spring up in a carelessly cultivated field, and choke the neglected corn, while it would soon cover deserted fields, and might readily be resorted to for shelter from a hot wind, or even from the rays of the sun, when growing so large as is described by some of the travellers in the Holy Land.—J. F. R.

CHASE. [Hunting.]

CHASIL (חָסִיל; Sept. βροῦχος; Vulg. *bruchus*; Eng. Vers. *caterpillar*) occurs in *Hebrew*, 1 Kings viii. 37; 2 Chron. vi. 28; Ps. lxxviii. 46; Isa. xxxiii. 4; Joel i. 4; ii. 25.

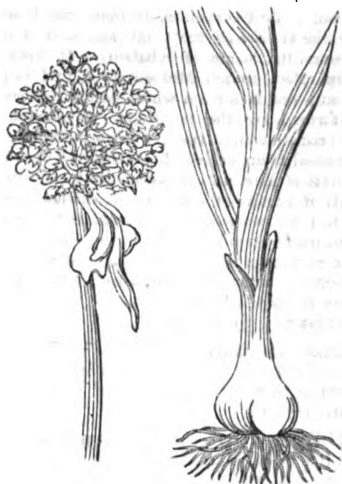
In the *Sept.* Lev. xi. 22; 3 Kings viii. 37; 2 Chron. vi. 28; Ps. civ. 34; Joel i. 4; ii. 25; Amos vii. 1; Nahum iii. 15, 16.

In the *Vulg.* Lev. xi. 22; 2 Chron. vi. 28; Ps. civ. 34; Isa. xxxiii. 4; Jer. li. 14; Joel i. 4; Nahum iii. 15, 16.

In the *Auth. Vers.* 1 Kings viii. 37; 2 Chron. vi. 28; Ps. lxxviii. 46: cv. 34; Isa. xxxiii. 4; Jer. li. 14, 27; Joel i. 4; ii. 25.

The English word *caterpillar* belongs strictly to the *larvæ* of the genus lepidoptera, and more especially to the larvæ of a section of it, the *Papilionidæ*. It is, however, far from provable that the חסיל is any species of caterpillar. The root חסל, from which it is derived, signifies to 'consume' or 'devour,' and it is especially used to denote the ravages of the *locust* (Deut. xxviii. 38, יחסלנו הארבה). The Arabic and Syriac cognates also signify to consume. The word βροῦχος, by which it is frequently rendered in the Septuagint, from βρώσκω, I eat up, conveys also the idea of ravenousness. All these names indicate a creature whose chief characteristic is voracity, and which also attaches to all the species of *locusts*. The ancients, indeed, concur in referring the word to the locust tribe of insects, but are not agreed whether it signifies any particular *species* of locust, or is the name for any of those *states* or *transformations* through which the locust passes from the egg to the perfect insect. The *Latin Fathers* take it to mean the *larva* of the locust, and the *Greek* understand it as the name of an *adult* locust. The Latins give the name *bruchus* to the young locust before it has wings, call it *attelabus* when it begins to fly, and *locusta* when it is fully able to fly. Thus Jerome, in his *Comm. on Nahum*, c. iii. 'Bruchus nihil aliud faciat, nisi semper in terra sit, et *absque alis* cibo et ventri serviat; *attelabus* autem saltem modicas assumat alas, et, cum in altum volare non possit, tamen de terra exsilire notatur, et tandem perveniens in *locustam* volitat.' And again, 'Attelabus quem significantius *commessorem* interpretatus est Aquila, parva locusta est, inter locustam et bruchum, et modicis pennis reptans, potius quam volans semperque subsiliens.' Augustine also, on Ps. civ., says 'Bruchus est locustæ *fœtus*; una plaga est locustæ et bruchi, quoniam altera est parens, et alter est fœtus.' The same opinion is maintained by Gregorius '*in Jobum* lib. xxxiii. c. 17.' These statements of Jerome, and the other Latins, are very remarkable, since the Vulgate, in Nahum iii. 16, reads Bruchus expansus est et *avolavit*, and *flies away*; and the Septuagint, also, in the same place, reads βροῦχος ὥρμησε καὶ ἐξεπετάσθη, and what is still more remarkable, Jerome himself, Lev. xi. 22, puts the bruchus among the volucres. It is curious to see the Greek fathers ascribing *wings* and the power of *flight* to the bruchus, in *their* comments on the *same* passages. Thus Cyril upon Nahum iii.: Φασὶ γὰρ, ὅτι, πιπτούσης χαλάζης, καὶ ὑετῶν καταρηγνυμένων ἀδρανὴς εἰς πτῆσιν ὁ βροῦχος, καταδεδευμένων αὐτῷ τῶν πτέρων. And Theodoret upon the same passage: τῆς ἡλιακῆς προσβαλλούσης ἀκτῖνος ἀνίσταται καὶ πεταννύσι τὰ πτερὰ, καὶ εἰς ἕτερον μεταβαίνει τόπον. The same writer on Amos vii. 1 plainly distinguishes the bruchus from the *young* of the locust. Ἐπιγονὴν δε ἀκρίδων, he observes, ἐκαλησε τὸν Ἀσσύριον, βροῦχον δὲ τὸν Βαβυλώνιον. The Septuagint also in Lev. xi. 22, seems to distinguish the bruchus and *its* τὰ ὅμοια, 'and its kind,' from the ἄκρις, or common locust, and *its* τὰ ὅμοια as differing not in age but in species. Theophrastus also, Περὶ τῶν ἀθρόων φαινόμενων ζώων says, χαλεπαὶ μὲν οὖν αἱ ἀκρίδες, χαλεπώτεροι δὲ οἱ ἀττέλεβοι, καὶ τούτων μάλιστα οὓς καλοῦσι βρούκους (βρούχους). The testimony of Hesychius is very clear: Βροῦκος ἀκρίδων εἶδος Ἴωνες. Κύπριοι δε τὴν χλωρὰν ἀκρίδα, βροῦκαν. Ταραντῖνοι δὲ, Ἀτελέβον, ἕτεροι, Ἀρουραίαν μάντιν. The inconsistency of Jerome's statements, and the contrariety both of his notions on the subject and of the other Latins to those of the Greeks, may be owing to the circumstance that in his time the use of the words in question might have become arbitrary, or loose and uncertain. Even Pliny calls the attelabi, minimæ locustarum *sine pennis* (*Nat. Hist.* xxix. 4, 20). Thus Jerome translates חסיל, in 1 Kings viii. 37, by rubigo; nor does the Septuagint observe strict uniformity; for, in Ps. lxxviii. 46, it has ἐρυσίβη and in Is. xxxiii. 4, ἀκρίδες.

The superior antiquity however of the Septuagint entitles its opinion to preference, and, in the passages already quoted, it ascribes *flight* to the βροῦχος, and speaks of it as a distinct species; and in the former particular especially, it is difficult to suspect it of an egregious error. The statement of Aristotle is also worthy of notice, who speaks of the *attelabos* as a mature insect, for he refers to its parturition and eggs (*Hist. An.* v. 29).



The arguments and speculations of the most eminent modern writers may be seen in Bochart, *Hierozo.*; Rosenmüller, vol. iii. p. 256, sqq. Lips. 1793-6. Upon those arguments and speculations, the learned editor gives an opinion, which appears to us the best that can be formed; it is this, that the Hebrew word does mean a locust, but of what species it is impossible to determine. One of his observations we cannot forbear to quote, namely, that in Ps. lxxviii. 46, the חסיל is parallel to ארבה, the most certain name for the locust; and that in Isa. xxxiii. 4, the חסילים answer to the

נצים in the other member of the sentence, a collocation which seems plainly to intimate different species.—J. F. D.

CHASMIL (חַשְׁמַל, Ezek. i. 4, 27; viii. 2) was probably a composition of several sorts of metal, since even ἤλεκτρον, by which the word is rendered by the ancients, frequently signifies a composition of gold and silver (Plin. *Hist. Nat.* xxxiii. 23; ix. 65). Nor were the ancients unacquainted with the art of amalgamating various species of metal; and the Latin *aurichalcum*, at least according to the derivation of Isidorus (*Orig.* xvi. 19: 'Aurichalcum dicitur, quod et splendorem auri et duritiem æris possideat'), would thus coincide with Bochart's etymology (*Hieroz.* iii. p. 893) of חשמל; for he thinks the word composed of נחש *æs*, and מלל *aurum*, and proposes to read נחשמל, instead of חשמל. Neither can there be any doubt that aurichalcum is a mere Latinized form of the Greek ὀρείχαλκος (Homer, *Hymn.* v. 9; Hes. *Scut.* 122; Callim. *In lav. Pallad.* 19). According to Serv. (*ad Æn.* xii. 87), the aurichalcum possessed the *brightness of gold* and the *hardness of copper*, and might not improbably have been our present *platina*, which has been re-discovered in the Ural mountains, after having long been known as an American fossil. Pliny (*Hist. Nat.* xxxiv. 1) says of aurichalcum, 'Nec reperitur longo iam tempore, effeta tellure.' Perhaps by the נחשת מצהב (Ezra viii. 27) was meant *aurichalcum*; at least the derivation of the words tallies with the properties of that metal.—E. M.

CHATZIR (חָצִיר), or CHAZIR, also CHAJIR. This word occurs in several places in the Old Testament, where it is variously translated, as *grass*, in 1 Kings xviii. 5, 2 Kings xix. 26, Job xl. 15, Ps. xxxvii. 2, &c.; *herb* in Jôb viii. 12; *hay*, in Prov. xxvii. 25, and Isa. xv. 6; and *court*, in Isa. xxxiv. 13: but in Num. xi. 5, it is translated *leeks*. Hebrew scholars state that the word signifies 'greens' or 'grass' in general; and it is no doubt clear, from the context of most of the above passages, that this must be its meaning. There is therefore no reason why it should not be so translated in all the passages where it occurs, except in the last. It is evidently incorrect to translate it *hay*, as in the above passages of Proverbs and Isaiah, because the people of Eastern countries, as it has been observed, do not make hay. The author of *Fragments*, in continuation of Calmet, has justly remarked on the incorrectness of our version, 'The *hay* appeareth, and the tender *grass* showeth itself, and the *herbs* of the mountains are gathered' (Prov. xxvii. 25):—'Now certainly,' says he, 'if the *tender grass* is but just beginning to show itself, the *hay*, which is grass cut and dried after it has arrived at maturiy, ought by no means to be associated with it; still less ought it to be placed before it.' The author continues, 'The word, I apprehend, means the first shoots, the rising, just budding spires of grass.' So in Isa. xv. 6.

In the passage of Num. xi. 5, where the Israelites in the desert long for 'the melons, and the *leeks*, and the onions, and the garlick' of Egypt, it is evident that it was not *grass* which they desired for food, but some green, perhaps grass-like vegetable, for which the word *chatzir* is used, and which is above translated *leeks*. In the same way that, in this country, the word *greens* is applied to a variety of cabbage, in India *subzee*, from *subz* 'green' is used as a general term for herbs cooked as kitchen vegetables. It is more than

235.

probable, therefore, that chatzir is here similarly employed, though this does not prove that *leeks* are intended. Ludolphus, as quoted by Celsius (*Hierobot.* ii. 264), supposes that it may mean lettuce, or salads in general, and others that the succory or endive may be the true plant. But Rosenmüller states, 'The most ancient Greek and the Chaldee translators unanimously interpret the Hebrew by the Greek πράσα, or leeks.' The name moreover seems to have been specially applied to leeks from the resemblance of their leaves to grass, and from their being conspicuous for their green colour. This is evident from minerals even having been named from πράσον on account of their colour, as prasius, prasites, and chrysoprasium. The Arabs use the word كراث *kooras*, or *koorath*, as the translation of the πράσον of the Greeks, and with them it signifies the leek, both at the present day and in their older works. It is curious that of the different kinds described, one is called *kooras-al-bukl*, or leek used as a vegetable. That the leek is esteemed in Egypt we have the testimony of Hasselquist, who says, 'that the kind called *karrat* by the Arabs must certainly have been one of those desired by the children of Israel; as it has been cultivated and esteemed from the earliest times to the present time in Egypt.' So the Roman satirist—

'Porrum et cepe nefas violare et frangere morsu.
O sanctas gentes, quibus hæc nascuntur in hortis
Numina!'

The Romans employed it much as a seasoning to their dishes, as is evident from the number of recipes in Apicius referred to by Celsius. The leek (Allium Porrum) was introduced into this country about the year 1562, and, as is well known, continues to be esteemed as a seasoning to soups and stews.—J. F. R.

CHEBAR (כְּבָר; Sept. Χοβάρ), a river of Mesopotamia, upon the banks of which king Nebuchadnezzar planted a colony of Jews, among whom was the prophet Ezekiel (2 Kings xxiv. 15; Ezek. i. 1, 3; iii. 15, 23; x. 15, 22). This is without doubt the same river that was known among the Greeks as the Chaboras, and which now bears the name of Khabour. It flows to the Euphrates through Mesopotamia, and is the only considerable stream which enters that river. It is formed by the junction of a number of small brooks, which rise in the neighbourhood of a ruined town called Ras-el-Ain, 13 furlongs south-west of Merdin. It takes a southerly direction till it receives the waters of another stream equal to itself, when it bends westward to the Euphrates, which it enters at Kerkesia, the Carchemish of Scripture. [CARCHEMISH.] (Rosenmüller, *Bib. Geog.* ii. 180; Kinnier, *Geog. Mem. of the Persian Empire*, p. 244).

CHEDEK. [THORNS.]

CHEDORLAOMER, King of Elam, and leader of the five kings who invaded Canaan in the time of Abraham (Gen. xiv). [ABRAHAM; ASSYRIA; ELAM.]

CHEESE. The most important passage in which this preparation from milk is mentioned in Scripture is that where Job, figuratively describing the formation of the fetus in the womb, says—

'Hast thou not poured me out like milk,
And curdled (condensed, solidified) me like cheese?' (x. 10).

We know not how our Biblical illustrators have deduced from this that the cheese used in the East necessarily was in a semi-fluid state. It rather alludes to that progressive solidification which is common to all cheese, which is always soft when new, though it hardens when it becomes old. But for the tendency to seek remote and recondite explanations of plain things, it must seem perfectly obvious that to 'curdle like cheese' does not mean that curdled milk *was* cheese; but that milk was curdled to form eventually the hardened cheese. If the text proves anything as to the condition of cheese, it would rather show that, when considered fit for use, it was hard, than that it was soft or fluid; the process of solidification being the subject of allusion, of which curdling the milk is, in the case of cheese, only the first though the most essential operation. Undoubtedly the Orientals do eat curds, or curdled milk; but that therefore their cheese consists of curdled milk is not the correct inference. We also eat curds, but do not regard curds as cheese—neither do they. The other passages describe 'cheese' in the plural, as parts of military provision, for which the most solid and compact substances are always preferred. Persons on a march would not like to encumber themselves with curdled milk (2 Sam. xvii. 29).

There is much reason to conclude that the cheese used by the Jews differed in no respect from that still common in the East; which is usually exhibited in small cakes about the size of a tea saucer, white in colour, and excessively salt. It has no rind, and soon becomes excessively hard and dry—being, indeed, not made for long keeping. It is best when new and comparatively soft; and, in this state, large quantities are consumed in lumps or crumbs not made up into cakes. All cheese in the East is of very indifferent quality; and it is within the writer's own knowledge that the natives infinitely prefer English or Dutch cheese when they can obtain it. In making cheese, the common rennet is either butter-milk or a decoction of the great-headed thistle, or wild artichoke. The curds are afterwards put into small baskets made of rushes or palm leaves, which are then tied up close, and the necessary pressure applied.

There are several decisions in the Mishnah relative to the pressure by which cheese was made (*Cholim*, viii. 2). This proves that, as observed before, no preparation of milk was regarded as cheese while in a fluid state, or before being subjected to pressure. In another place (*Avoda Sara*, ii. 5) it is decided that cheese made by foreigners could not be eaten, from the fear that it might possibly be derived from the milk of some animal which had been offered in sacrifice to idols.

CHALBENAH (חֶלְבְּנָה) is mentioned in Exod. xxx. 34, as one of the substances from which the incense for the sanctuary was to be prepared: 'Take unto thee sweet spices, stacte and onycha and (*chelbenah*) galbanum.' The Hebrew word is very similar to the Greek χαλβάνη, which occurs as early as the time of Hippocrates. The substance is more particularly described by Dioscorides, who gives μετώπιον as an additional name, and states that it is an exudation produced by a ferula in Syria. So Pliny (xii. 25), as translated by Holland, 'Moreover we have from Syria out of the same mountain, Amanus, another kind of gum, called galbanum, issuing out of an herb-like fennelgeant, which some call by the name of the said resin, others stagonotis. The best galbanum, and which is most set by, is grisly and clear, withal resembling hammoniacum.' Theophrastus had long previously (*Hist. Pl.* ix. 7) said that galbanum flows from a Panax of Syria. In both cases it is satisfactory to find a plant of the same natural family of Umbelliferæ pointed out as yielding this drug, because the plant has not yet been clearly ascertained. The Arabs, however, seem to have been acquainted with it, as they give its names. Thus, 'galbanum' in Persian works has *barzu* assigned to it as the Arabic, *bireeja* as the Hindoostanee, with *khulyan* and *metonion* as the Greek names (evident corruptions of χαλβάνη and μετώπιον, arising from errors in the reading of the diacritical points): *Kinneh* and *nafeel* are stated to be names of the plant, which is described as being jointed, thorny, and fragrant (Royle, *Illust. Himal. Bot.* p. 23). Lobel made an attempt to ascertain the plant by sowing some seeds which he found attached to the gum of commerce: 'Oritur in hortis nostris hæc pervenusta planta semine copioso, lato, foliaceo, aromatico, reperto Antwerpiæ in *galbani lachrymæ*' (*Obs.* p. 431). The plant which was thus obtained is the Ferula ferulago of Linnæus, a native of N. Africa, Crete, and Asia Minor. It has been objected, however, that it does not yield galbanum in any of these situations; but the same objection might be made, though erroneously, to the mastich-tree, as not yielding mastich, because it does not do so except in a soil and climate suitable to it. Other plants, as the Bubon galbanum and gummiferum, have, in consequence, been selected, but with less claim,

as they are natives of the Cape of Good Hope. The late Professor Don, having found some seeds of an umbelliferous plant sticking to the galbanum of commerce, has named the plant, though yet unknown, Galbanum officinale. These seeds, however, may or may not have belonged to the galbanum plant. Dr. Lindley has suggested another plant, which he has named *Opoidia galbanifera*, and which grows in Khorassan, in Durrood, whence specimens were sent to this country by Sir John M'Niell, as yielding an inferior sort of ammoniacum. Upon the whole, it is evident that the plant is yet to be ascertained. Galbanum is in the present day imported into this country, both from the Levant and from India. That from the latter country is exported from Bombay, having been first imported thither, probably from the Persian Gulf. It is therefore probable that it may be produced in the countries at the head of that gulf, that is, in the northern parts of Arabia or in Persia, (portions of which, as is well known, were included in the Syria of the ancients;) perhaps in Kurdistan, which nearly corresponds with ancient Assyria. The later Greeks, finding the country to the north of Palestine subject to the Assyrians, called the country Assyria, or by contraction *Syria*. It is on this account that in classical writers the names Assyria and Syria are so often found interchanged (*l. c.* p. 214).

Galbanum, then, is either a natural exudation, or obtained by incisions from some umbelliferous plant. It occurs in commerce in the form either of tears or masses, commonly called *lump-galbanum*. The latter is of the consistence of wax, tenacious, of a brownish, or brownish yellow colour, with white spots in the interior, which are the agglutinated tears. Its odour is strong and balsamic, but disagreeable, and its taste warm and bitter. It is composed of 66 per cent. of resin, and 6 of volatile oil, with gum, &c., and impurities. It was formerly held in high esteem as a stimulant and anti-spasmodic medicine, and is still employed as such, and for external application to discuss indolent tumours. A French author enumerates various pharmaceutic preparations of which it formerly constituted an ingredient, as 'le Mithridate, l'orvietan, le dioscordium de Fracasta, l'onguent des Apôtres ou dedacapharmaque d'Avicenna, &c., les emplatres divin de Jacques Lemort, manus Dei magnetique d'Ange Sola,' &c. It is still more to our purpose that we learn from Dioscorides that, in preparing a fragrant ointment, galbanum was mixed with other aromatic substances; as under *Μετώπιον* he says, in the Latin translation of Sprengel, 'Paratur et in Ægypto unguentum, vernaculo nomine Metopium dictum, scilicèt propter galbani permistionem. Lignum enim e quo galbanum manat, metopium vocatur. Ex oleo omphacino et amygdalarum amararum, cardamomo, scheno, calamo, melle, vino, myrrha, balsami semine, galbano et resina componitur.' Hence we see that it was the practice of the ancients to mix galbanum with the most fragrant substances with which they were acquainted. The effect of such mixture must depend upon the proportion in which it or any other strong-smelling substance is intermixed, more than upon what is its peculiar odour when in a concentrated state. We need not, therefore, inquire into the reasons which have been assigned to account for galbanum being intermixed with stacte and onycha as sweet spices. We see that the same practice existed among the Greeks and the Egyptians.—J. F. R.

CHEMOSH (כְּמוֹשׁ; Sept. Χαμώς) is the name of a national god of the Moabites (1 Kings xi. 7; 2 Kings xxiii. 13; Jer. xlviii. 7; who are for this reason called the 'people of Chemosh,' in Num. xxi. 29), and of the Ammonites (Judg. xi. 24), whose worship was introduced among the Israelites by Solomon (1 Kings xi. 7). No etymology of the name which has been proposed, and no attempt which has been made to identify this god with others whose attributes are better known, are sufficiently plausible to deserve particular notice. Jerome's notion that Chemosh is the same as Baal Peor has no historical foundation; and the only theory which rests on any probability is that which assumes a resemblance between Chemosh and Arabian idolatry (cf. Beyer, *Addit. ad Selden.* p. 322; Pocock, *Specimen*, p. 307). Jewish tradition affirms that he was worshipped under the symbol of a black star; and Maimonides states that his worshippers went bare-headed, and abstained from the use of garments sewn together by the needle. The black star, the connection with Arabian idolatry, and the fact that Chemosh is coupled with Moloch, favour the theory that he had some analogy with the planet Saturn.—J. N.

CHENANIAH (חֲנַנְיָה, *God's goodness*; Sept. Χωνενία), a master of the temple music, who conducted the grand musical services when the ark was removed from the house of Obed-edom to Jerusalem (1 Chron. xv. 22).

CHERETHITES and PELETHITES (כְּרֵתִי וּפְלֵתִי, *Crethi* and *Plethi* without the final ם in the plural; Sept. Χερεθὶ καὶ Φελεθί), names borne by the royal life-guards in the time of David (2 Sam. viii. 18; 1 Chron. xviii. 17). Prevailing opinion translates their names, 'Headsmen and Foot-runners.' The word כרתים is used for *woodcutters*, 2 Chron. ii. 10, and it might seem probable that the Cherethites, like the lictors of the Roman dictator, carried axes, both as a badge of office and for prompt use. In the later years of David, their captain, Benaiah, rose to a more commanding importance than the generals of the regular troops; just as in imperial Rome the præfect of the prætorian guards became the second person in the empire. It is evident that, to perpetrate any summary deed, Benaiah and the guards were chiefly relied on. That they were strictly a body-guard is distinctly stated in 2 Sam. xxiii. 23. The grammatical form of the Hebrew words is nevertheless not quite clear: and as the Cherethites are named as a nation of the south (1 Sam. xxx. 14), some are disposed to believe Crethi and Plethi to be foreign Gentile names used collectively. No small confirmation of this may be drawn from 2 Sam. xv. 18: 'All the Cherethites and all the Pelethites and all the Gittites, six hundred men,' &c. If the two first words were grammatical plurals, like the third (Gittites), it is scarcely credible that final ם should be added to the third, and not also to the other two. As the word *all* is repeated three times, and 600 men is the number intended the third time, the Cherethites and Pelethites must have been reckoned by the hundred; and since the Gittites were clearly foreigners, all

the à priori improbability which some have seen in David's defending himself by a *foreign* guard falls to the ground. His Gittite satellites are one more proof of the intensity of the tyrannical principle already come in; since equally among the Greeks and Romans, and in modern Europe, for a prince to trust the care of his person to foreign guards has ever been looked on as the most evident mark that he is keeping down his own subjects by force.

That in 2 Sam. xv. 1, Absalom's runners are called by the name רצים, which they also afterwards bear, may perhaps go to prove that Plethi or Pelethites does *not* mean 'runners.' Indeed, as such a meaning of the word cannot be got out of pure Hebrew, but recourse to the Arabic language is needed, the probability would in any case be, that the institution, as well as the name, was imported by David from the south. Ewald believes that *Plethi* means *Philistines*, and that it has been slightly corrupted to rhyme with Crethi. May not Plethi have been from another dialect? Be this as it may, these body-guards for the prince are not found under the reign of Saul.—F. W. N.

CHERITH (כְּרִית; Sept. Χοῤῥάθ), a river in Palestine, on the banks of which the prophet Elijah found refuge (1 Kings xvii. 3-7). Eusebius and others have conceived themselves bound by the words על פני הירדן, rendered 'east of the Jordan', to seek the river in the Trans-Jordanic country: but although the words sometimes require this translation (as in Gen. xxv. 18; Josh. xv. 18), they may also be rendered 'towards,' or 'before the Jordan' (comp. Gen. xvi. 22)—that is, in coming from Samaria. And this interpretation, which places the Cherith west of the Jordan, agrees with the history, with Josephus (*Antiq.* viii. 13, 7), and with the local traditions which have uniformly placed the river of Elijah on this side the Jordan. Dr. Robinson drops a suggestion that it may be the Wady Kelt, which is formed by the union of many streams in the mountains west of Jericho, issuing from a deep gorge, in which it passes by that village and then across the plain to the Jordan. It is dry in summer.

CHERUBIM (Cherub, pl. Cherubim) is the name of certain symbolical figures frequently mentioned in Scripture. Hebrew nouns of the masculine gender generally end in *im*, and our translators, in adopting this form into their version in preference to the English cherubs, have in several places improperly added the letter *s* to the termination of the word—a grammatical error, supposed by some to have originated in the circumstance of the writers of the preceding age employing in the vulgar Latin, then in use, the term cherubini, instead of cherubi. Parkhurst and other learned Hutchinsonians derive the word כרב from כ, a particle of similitude, and רב, 'great' or 'powerful'—so as, according to the theory of their school, to constitute the cherubic figures emblems of the Almighty. Archbishop Newcome and others trace its origin to a Chaldee root כרב, signifying 'to plough,' and hence, this operation being in ancient times and in Eastern countries the work of oxen, cherub is sometimes used in Scripture to denote that animal—as in Ezekiel (i. 10), where the face of a cherub is synonymous with that of an ox. A third class of etymologists, considering that God is frequently described as riding on the cherubim as his chariot, propose by a transposition of the letters to deduce it from רכב, the Arabic word signifying 'to ride;' while another derivation, on the same principle of transposition, has lately been suggested by Dr. Kirby, who thinks that ברך, 'to bless' or 'curse,' is more likely to be the genuine root of the term. Without deciding to which of these etymological conjectures the preference is due, as they are all founded on the views which their respective authors have adopted of the character and design of those remarkable images, it may be observed in general, that they all involve the leading idea that the cherubim were symbols, either directly emblematic of Deity, or significant of the ruling powers by which the agency of God is carried on in the natural and moral world.

Figures of the cherubim were conspicuous implements in the Levitical tabernacle. Two of them were placed at each end of the mercy-seat, standing in a stooping attitude, as if looking down towards it, while they overshadowed it with their expanded wings—and, indeed, they were component parts of it, formed out of the same mass of pure gold as the mercy-seat itself (Exod. xxv. 19).

These figures were afterwards transferred to the most holy place in Solomon's temple, and it has been supposed from 1 Chron. xxviii. 19, that that prince constructed two additional ones after the same pattern, and of the same solid and costly material; but whether it was with a view to increase their number in accordance with the more spacious and magnificent edifice to which they were removed, or merely to supply the place of those made by Moses, which in the many vicissitudes that befel the ark might have been mutilated or entirely separated from the mercy-seat to which they were attached—is not ascertained. This much, however, is known, that Solomon erected two of colossal dimensions, in an erect posture with their faces towards the walls (2 Chron. iii. 13), covering with their outstretched wings the entire breadth of the debir, or most holy place. These sacred hieroglyphics were profusely embroidered on the tapestry of the tabernacle, on the curtains and the great vail that separated the holy from the most holy place (Exod. xxvi. 1-31), as well as carved in several places (1 Kings viii. 6-8) on the walls, doors, and sacred utensils of the temple. The position occupied by these singular images at each extremity of the mercy-seat—while the Shechinah, or sacred flame that symbolized the divine presence, and the awful name of Jehovah in written characters (Bates, *Critica Hebræa*, p. 288) were in the intervening space—gave rise to the well-known phraseology of the sacred writers, which represents the Deity dwelling between or inhabiting the cherubim; and, in fact, so intimately associated were they with the manifestation of the divine glory, that whether the Lord is described as at rest or in motion, as seated on a throne, or riding in a triumphal chariot, these symbolic figures were essential elements in the description (Numb. vii. 89; Ps. xviii. 10; lxxx. 1; xcix. 1-10; Isa. vi. 2; xxxvii. 16). It may be remarked, on the second last passage, that the clause which our translators have rendered 'above him stood the seraphim,' is in the

Septuagint 'the cherubim stood round about him.'

The prominent place assigned to these cherubic figures in the divinely-appointed place of ancient worship invests them with an interest and importance sufficient to stimulate the curiosity of the Biblical student to inquire both into their form and their design. The difficulties, however, attending the inquiry are neither few nor small. Josephus, a learned Jew of the sacerdotal tribe, declares that they resembled no animals that ever were seen by man, and that their form no man knew in his day (*Antiq.* iii. 6); and several modern Jews of great erudition, among whom is Abenezra, think that the term cherubim was indiscriminately applied to figures 'of any kind that were sculptured on stone, engraven on metal, carved on wood, or inwrought on cloth,' although that writer himself states it to be his opinion—founded apparently on no basis more solid than a conjectural idea of the comparative ease with which the human form admits of bending forward, and, therefore, adopted by the ancient masters in their paintings—that the figures which Moses placed looking down at the mercy-seat were those of winged men or boys. But although the later Jews lost all knowledge of these mystic symbols, and in the Scriptures—the only source whence true information is to be obtained—much obscurity as well as great diversity mark all the passages that contain allusions to the subject, yet sufficient data exist from which, if we cannot surmount all the difficulties that lie in the way of the investigation, we may at least approximate to the truth. Rejecting the opinion of those who maintain that the cherubim were of various shapes, we assume it to be, if not absolutely certain, at least highly probable, that in all the passages of Scripture where they are spoken of their figures were uniform. The first occasion on which they are mentioned is on the expulsion of our first parents from Eden, when the Lord placed cherubim on the east of the garden. The word מקדם, translated 'on the east,' may signify as well '*before* or on the edge of;' and the historian does not say that the Lord placed there cherubim, but הכרבים, the cherubim. Besides, שכן, rendered by our translators 'placed,' signifies properly 'to place in a tabernacle,' an expression which, viewed in connection with some incidents in the after history of the primeval family (Gen. iv. 14-16), seems a conclusive establishment of the opinion that this was a local tabernacle, in which the symbols of the Divine presence were manifested, suitably to the altered circumstances in which man after the Fall came before God, and to the acceptable mode of worship he was taught to observe. That consecrated place, with its striking symbols, called 'the presence of the Lord,' there is reason to believe, continued till the time of the deluge, otherwise there would have been nothing to guard the way to the tree of life; and thus the knowledge of their form, from the longevity of the antediluvians, could have been easily transmitted to the time of Abraham (Faber, *Horæ Mosaicæ*, b. ii. ch. 6). Moreover, it is an approved opinion that, when those emblems were removed at the close of the patriarchal dispensation from the place of public worship, the ancestors of that patriarch formed small models of them for domestic use, under the name of Seraphim, or Teraphim, according to the Chaldee dialect (Faber, *Origin of Pag. Idol.* i. 256). The next occasion in the course of the sacred history on which the cherubim are noticed is when Moses was commanded to provide the furniture of the tabernacle; and, although he received instructions to make all things according to the pattern shown him in the Mount, and although it is natural to suppose that he saw a figure of the cherubim, yet we find no minute and special description of them, as is given of everything else, for the direction of the artificers (Exod. xxvi. 31). The simple mention which the sacred historian makes, in both these passages, of the cherubim, conveys the impression that the symbolic figures which had been introduced into the Levitical tabernacle were substantially the same with those established in the primeval place of worship on the outskirts of Eden, and that by traditional information, or some other means, their form was so well known, both to Bezaleel and the whole congregation of Israel, as to render superfluous all further description of them. On no other ground can we account for the total silence as to their configuration, unless we embrace the groundless and unworthy opinion of those who impute to the author of the Pentateuch a studied concealment of some parts of his ritual, after the manner of the Mystics (Landseer, *Sabæan Researches*. p. 321). But there was no mystery as to those remarkable figures, for Ezekiel knew at once (x. 20) the living creatures which appeared in his vision supporting the throne of God, and bearing it in majesty from place to place, to be cherubim, from having frequently seem them, in common with all other worshippers, in the carved work of the outer sanctuary. Moreover, as is the opinion of many eminent divines, the visionary scene, with which this prophet was favoured, exhibited a transcript of the Temple, which was shown in pattern to David, and afterwards erected by his son and successor; and, as the chief design of that later vision was to inspire the Hebrew exiles in Babylon with the hope of seeing, on their return to Judæa, another temple, more glorious than the one then in ruins, it is reasonable to believe that, as the whole style and apparatus of this mystic temple bore an exact resemblance (1 Kings vi. 20) to that of Solomon's magnificent edifice, so the cherubs also that appeared to his fancy portrayed on the walls would be facsimiles of those that belonged to its ancient prototype. Taking then his description of them to be the proper appearance that belonged in common to all his cherubic creatures (chaps. i. x. xli.), we are led to conclude that they were compound figures, unlike any living animals or real object in nature; but rather a combination, in one nondescript artificial image, of the distinguishing features and properties of several. The ox, as chief among the tame and useful animals, the lion among the wild ones, the eagle among the feathery tribes, and man, as head over all—were the animals which, or rather parts of which, composed the symbolical figures. Each cherub had four distinct faces on one neck—that of a man in front, that of a lion on the right side, and of an ox on the left; while behind was the face of an eagle. Each had four wings, the two under ones covering the lower extremities (Heb. the feet), in token of decency and humility, while the upper ones, spread out on a level with the head and

shoulders, were so joined together, to the edge of his neighbours', as to form a canopy; and in this manner they soared rather than flew, without any vibratory motion with their wings, through the air. Each had straight feet. The Hebrew version renders it 'a straight foot;' and the probability is, that the legs were destitute of any flexible joint at the knee, and so joined together that its locomotions must have been performed in some other way than by the ordinary process of walking, or lifting one foot after another. Dr. Adam Clarke has explained this by referring 'to some ancient Egyptian images of Isis, Osiris, Anubis, &c. in his possession, where the legs were not separated, nor was there any bend at the knees; so that if there was any motion at all, it must have been by gliding, not progressive walking' (*Comment.* in loc.). The ideal picture, then, which Ezekiel's description would lead us to form of the cherub, is that of a winged man, or winged ox, according to the particular phase it exhibited or the particular direction from which it was seen. If viewed in one aspect, it showed conspicuously the face, hands, and body of a man; in another, the broad face, legs, and cloven foot of an ox appeared as the prominent features of the image. And this consideration may serve to reconcile the discrepancies that appear in the accounts which, in different parts of Scripture, are given of the cherubim. Thus, for instance, in certain parts of the lavers of Solomon's Temple were carved, between groups of palm-trees, the faces of lions and oxen, evidently as parts of the cherubim (1 Kings, vii. 29, 36), while no hint is given of the usual accompaniments of the man and the eagle; and in the mystic temple of Ezekiel, the cherubim, which, alternately with a palm-tree, were seen engraven on its walls and doors, exhibited the face of a man and a lion, while no mention is made of either an eagle or an ox, of the human hands, or the ox-like feet of these singular images. The difference in these several descriptions is to be accounted for from the circumstance of the living creatures being beheld by the prophet at one point of observation, and of the artificial ones being engraven, carved, or embroidered on a flat extended surface; and, consequently, one side or a small part only of the figure appeared to the eye of the beholder. To use the words of Dr. Watts, 'That figure which would have had all four faces visible if it had stood forth as a real animal or a statue, could have had but two faces, or at most three, visible when figured on a wall or curtain, the other being hid behind; and thus the cherubs may be in all places of Scripture the same four-faced animals, and yet only two or three of their faces appear, according to their designed situation and the art of perspective (*Remnants of Time*, xx.).

Whether the golden calf constructed by Aaron might be—not the Apis of Egypt—but a representation of the antediluvian Cherubim—as some suppose, from its being made on '*a* feast to the Lord,' and called 'the *gods* of Israel' (Exod. xxxii. 5), and whether Jeroboam, in the erection of his two calves, intended a schismatic imitation of the sacred symbols in the Temple of Jerusalem rather than the introduction of a new species of idolatry (1 Kings xii. 28), we shall not stop to inquire. But, as paganism is a corruption of patriarchal worship—each nation having added something according to its own taste and fancy—perhaps we may find a confirmation of the views given above of the compound form of the cherubim in the strange figures that are grouped together in the heathen deities. The numerous ox-heads, for instance, in the statue of the ancient Diana, and particularly the Asiatic idols, almost all of which exhibit several heads and arms attached to one person, or the heads of different animals combined, afford a collateral proof, similar to the universal prevalence of sacrifice, that the form of the primitive cherubim has been traditionally preserved and extended over a large portion of the world. See Calmet, *Fragments;* Clarke *On Ezekiel;* and, particularly, Parkhurst, *Heb. Lex.*

[This may indeed be shown by the following actual figures copied from ancient monuments, all of which illustrate some one or more of the notions which we attach to the cherubic forms; and while they afford material assistance to our ideas on the subject, they show that figures of this kind, as sacred symbols, were not peculiar to the Hebrews, and that their presence in the sanctuary was not calculated to excite any surprise among the neighbouring nations, or to lead to the notion that the Jews also were worshippers of idols, for even in the pagan monument they never appear as idols, but as symbols; and it was very possibly this fact—that the cherubic figures were not liable to be misunderstood—which induced the Divine wisdom to permit their introduction into the most holy place. Of all these, the most remarkable is the figure sculptured in bas-relief. The first group (No. 226) is from Egypt. The figures are the more remarkable from being such as appear upon the sacred *arks* of that country, and the disposition of their wings agrees much with one or another of the arrangements which have been ascribed to the cherubim of the Ark [ARK]. As such figures certainly existed in Egypt before the time of Moses, this may suggest another reason in addition to that already given, why a particular description of the cherubim was not judged necessary.

226.

The next group of figures (No. 227) is also Egyptian, and shows the diversity of the winged symbols which so often appear on the monuments.

Figs. 1 and 8 are such hovering winged figures as usually surmount the whole of a sacred tablet or shrine: and to such hovering wings there seem

227.

some symbolical allusions in Scripture even when the cherubim are not mentioned. Fgure 4, that of a hawk with the face and symbols of Isis, and the crowned and winged serpents (figs. 6, 7), are

228.

the only compound images, and as such deserve particular attention.

If we proceed to Babylon, similar winged sym-

229.

bols are discovered. The cut (No. 228) is from an antique gem found at Babylon. It combines the human and quadrupedal forms with the wings of a bird, and is not unlike the Egyptian sphinx, excepting that the head is that of a man, not of a woman. The next (No. 229) is from a Babylonian cylinder, and is remarkable as giving not only the wings but the head of a bird to the human form.

In proceeding to the monuments of ancient Persia, the winged symbols become still more striking. The very remarkable example in the annexed engraving is from a bas relief at Mourg Aub (No. 230), representing a man arrayed in a richly embroidered robe, with such quadruple wings as the vision of Ezekiel ascribes to the cherubim, with the addition of ample horns (the well-known symbols of regal power) issuing from the head, and upbearing a symbolical crown or mitre, such as is often seen on the heads of the Egyptian gods and their ministering priests.

230.

231.

The next group of figures (No. 231) is collected from different ancient Persian sculptures and gems. Fig. 1 is a hovering winged symbol,

which occurs as frequently in the Persian monuments as the similar figures do in those of Egypt. 1 and 4 are remarkable as offering a near approach to the traditional figure which has been assigned to angels; and 3 affords a very curious example of quadruple wings, resembling those in No. 230, but being much shorter.

232.

The 4th figure in the above cut (232) affords a rare example of the combination of the beast, bird, and man, and seems to be the same as the Babylonian sphinx in a different position. The other figures in the same cut are frequently repeated in the Persian sculptures. They are acknowledged Mithric symbols; and, as such, they go far to evince the purely symbolical character of the cherubic figures. In all of these, except the last, a warrior is represented grasping these winged symbols by the single horn, with which all of them are furnished, with one hand, while he thrusts his second into them with the other. It is observable that these figures, taken together, include all those which Ezekiel's vision assigns to the Cherubim—the head of a man, an eagle, a lion, and an ox (fig. 5): but we do not any where find all these combined in a single figure, as appears to have been the case in the visionary cherubim.

It is of some importance to remark, that the winged symbolical figures of this description are far more rare in the remoter East—in India—China, than in Western Asia.]

The opinions concerning the design of the cherubim are as diversified as those relative to their form. All are agreed that they had a symbolical meaning, although it is not easy to ascertain it. The ancients, as well as the fathers, considered that they had both a physical and a metaphysical object: thus, for instance, Philo regarded them as signifying the two hemispheres; and the flaming sword, the motion of the planets; in which opinion he is joined by some moderns, who consider them to have been nothing more than astronomical emblems—the Lion and the Man being equivalent to Leo and Aquarius—the signs of the zodiac (Landseer, *Sab. Resear.* p. 315). Irenæus views them as emblematic of several things, such as the four elements, the four quarters of the globe, the four gospels, the four universal covenants (*Adv. Hæres.* iii. 11). Tertullian supposed that the cherubic figures, particularly the flaming sword, denoted the torrid zone (*Apol.* cap. 47). Justin Martyr imagined that the living creatures of Ezekiel were symbolical of Nebuchadnezzar, the Assyrian monarch, in his distress; when he ate grass like an ox, his hair was like a lion's, and his nails like a bird's claws (*Quæst.* xliv.). And Athanasius supposed that they were significant of the visible heavens (*Quæst. ad Antiocl.* cxxxv.). The opinions of the moderns may be reduced to three systems. Hutchinson and his followers consider the cherubim as emblems of the Trinity, with man incorporated into the divine essence: in proof of which they remark that דחרב אתלדט signify either a flaming fiery sword, as the words are rendered by the Septuagint, or rather, a flame of fire and a sword or knife; so that, in this figure, there was exhibited in visible form, to the minds of our first parents, fire—the emblem of divine wrath, as well as an instrument for sacrifice—which, as it enfolded or revolved round itself (דמתרפכת or as Ezekiel writes מתלקחת), can mean nothing else than a picture of the satisfaction to be made by deity itself. But the grand objection to this theory, where it is at all intelligible, is, that not only are the cherubim, in all the places of Scripture where they are introduced, described as distinct from God, and no more than his attendants, but that it represents the divine Being, who is a pure spirit, without parts, passions, or anything material, making a visible picture of himself, when in all ages, from the beginning of time, he has expressly prohibited 'the likeness of anything in heaven above' (see Parkhurst, *Heb. Lexicon*, sub voce). Another system regards the cherubim as symbolical of the chief ruling powers by which God carries on the operations of nature. As the heaven of heavens was typified by the holy of holies in the Levitical tabernacle (Heb. ix. 3-12, 24-28), this system considers that the visible heavens may be typified by the holy place or the outer sanctuary, and accordingly finding, as its supporters imagine they do, the cherubim identified with the aerial firma-

ment and its elements in such passages as the following: 'He rode upon a *cherub*, and did fly, yea, he did fly upon the wings of the *wind*,' where the last hemistich is exegetical of the former (Ps. xviii. 10); 'Who rideth upon the heavens in thy help, and in his excellency upon the sky' (Deut. xxxiii. 26; Ps. lxviii. 4); 'He maketh the clouds his chariot:' he is said to descend in fire (Exod. xix. 18), and between which he dwelt in light (1 Tim. vi. 16); and it was in this very manner he manifested his divine glory in the tabernacle and temple—they interpret the cherubim, on which the Lord is described as riding, to be symbolical of the wind, the clouds, the fire, the light; in short, the heavens, the atmosphere, the great physical powers by which the Creator and preserver of the universe carries on the operations of nature.

A third system considers the cherubim, from their being instituted immediately after the Fall, as having particular reference to the redemption of man, and as symbolical of the great and active rulers or ministers of the church. Those who adopt this theory as the true explanation of their emblematical meaning, are accustomed to refer to the living creatures, or cherubim, mentioned in the Apocalyptic vision (Rev. iv. 6), improperly rendered in our English translation 'beasts' (ζῶα), and which, it is clear, were not angels, but redeemed men connected with the church, and deeply interested in the blessings and glory procured by the Lamb. The same character may be ascribed to the living creatures in Ezekiel's visions, and to the cherubim, which stood over and looked into the mercy-seat, sprinkled with the blood of the atonement, and on the Shechinah, or divine glory arising from it, as well as the cherubic figures which were placed on the edge of Eden; and thus the cherubim, which are prominently introduced in all the three successive dispensations of the covenant of grace, appear to be symbols of those who, in every age, should officially study and proclaim the glory and manifold wisdom of God (See on this curious subject Monceau, *Aaron Purgatus*; Shaw, *On the Cherubim*; Spencer, *De Legib. Hebræor.*; Grotius, *Notes on the Old Test.*; Bochart, *De Animal.*; Bryant's *Mythol.*; Kirby's Introduct. to *Bridgewater Treatise*.)—R. J.

CHESTNUT-TREE. [ARMON.]

CHILDREN. The word 'children' is sometimes used in the plural number, when meant to designate only one male issue (comp. 1 Chron. ii. 31; 2 Chron. xxiv. 25; xxxiii. 6). In such places the terms בנים, literally 'sons,' is equivalent to offspring, all of whom had probably died except the last-mentioned in the text. The more children—especially of male children—a person had among the Hebrews, the more was he honoured, it being considered as a mark of divine favour, while sterile people were, on the contrary, held in contempt (comp. Gen. xi. 30; xxx. 1; 1 Sam. ii. 5; 2 Sam. vi. 23; Ps. cxxvii. 3, *sq.*; cxxviii. 3; Luke i. 7; ii. 5). That children were often taken as bondsmen by a creditor for debts contracted by the father, is evident from 2 Kings iv. 1; Is. l. 1; Neh. v. 5. Among the Hebrews, a father had almost unlimited power over his children, nor do we find any law in the Pentateuch restricting that power to a certain age; it was indeed the parents who even selected wives for their sons (Gen. xxi. 21; Exod. xxi. 9, 10, 11; Judg. xiv. 2, 5). It would appear, however, that a father's power over his daughters was still greater than that over his sons, since he might even annul a sacred vow made by a daughter, but not one made by a son (Num. xxx. 4, 16). Children cursing or assaulting their parents were punished by the Mosaical Law with death (Exod. xxi. 15, 17; Lev. xx. 9); a remarkable instance of which is quoted by Christ (Matt. xv. 4, 6; Mark vii. 9, 13). Before the time of Moses a father had the right to choose among his male children, and declare one of them (usually the child of his favourite wife) as his first-born (בכור), though he was perhaps only the youngest. Properly speaking, the 'first-born' was he who was first begotten by the father, since polygamy excluded all regard in that respect to the mother. Thus Jacob had sons by all his four wives, while only one of them was called the first-born (Gen. xlix. 3); we find, however, instances, where that name is applied also to the first-born on the mother's side (1 Chron. ii. 50; comp. v. 42; Gen. xxii. 21). The privileges of the first-born were considerable, as shown in BIRTHRIGHT.

The first-born son, if not expressly deprived by the father of his peculiar rights, as was the case with Reuben (Gen. xlix.), was at liberty to sell them to a younger brother, as happened in the case of Esau and Jacob (Gen. xxv. 31, *sq.*). Considering the many privileges attached to first-birth, we do not wonder that the Apostle called Esau a *thoughtless person* (Heb. xii. 16). There are some allusions in Scripture to the modes in which children were carried. These appear to be adequately represented by the existing usages, as represented in the following cut (No. 233), in which fig. 1 represents a Nestorian woman bearing her child bundled at her back, and fig. 2, an Egyptian female bearing her child

233.

on her shoulder. The former mode appears to be alluded to in several places, and the latter in Isa. xlix. 22. For other matters regarding children, see ADOPTION, BIRTH, BIRTHRIGHT, EDUCATION.—E. M.

CHINNERETH. [CINNERETH.]

CHIOS (Χίος), one of the principal islands of the Ionian Archipelago, mentioned in Acts xx. 15. It belonged to Ionia, and lay between the islands Lesbos and Samos, and distant eight miles from the nearest promontory (Arennum Pr.) of Asia Minor. It is thirty miles long from N. to S., and its greatest breadth ten miles. It is very fertile in cotton, silk, and fruit, and was anciently celebrated for its wine. The principal town was also called Chios, and had the advantage of a good harbour (Strabo xiv. p. 645). The island is now called by the Greeks

Khio, and by the Italians Scio. The wholesale massacre and enslavement of the inhabitants by the Turks in 1822 forms one of the most shocking incidents of the Greek war.

CHISLEV (כִּסְלֵו; 1 Macc. i. 54, Χασελεῦ) is the name of that month which is the third of the civil, and the ninth of the ecclesiastical year of the Jews, and which commences with the new moon of our December. It corresponds, in Josephus, to the Macedonian month Ἀπελλαῖος. As it is now admitted that Chislev is one of those Persian names of months which the Jews adopted after the captivity, it is fruitless to search for a Syro-Arabian etymology of the word. Benfey has shown that כסלו is a mutilated form of כסלוי; and, by an ingenious, although adventurous, mode of derivation, deduces that word from the Zend *Khsathravairya*, through a series of commutations incident to its transit through the different dialects (*Monatsnamen einiger alter Völker*, p. 124).

The memorable days which were observed in this month were:—The feast of the dedication of the Temple, in commemoration of its being purified from the heathen abominations of the Syrians, which was celebrated by illuminations and great demonstrations of joy for eight days, beginning from the 25th of this month (1 Mac. iv. 59): and a fast on account of Jehoiakim having, in this month, burnt the roll containing Jeremiah's prophecy (Jer. xxxvi. 22, 23). There is some dispute whether this fast was observed on the 6th or on the 28th of the month. It is an argument in favour of the earlier day that the other would fall in the middle of the eight days' festival of the dedication.—J. N.

CHITTAH. [WHEAT.]

CHITTIM, or KITTIM (כִּתִּיִּים, כִּתִּים), a branch of the descendants of Javan, the son of Japheth (Gen. x. 4). The plural termination of Chittim, and other names in this ethnographical survey (ver. 13, 14), renders it probable that the term *son* must be understood (like its correlate, *father*; v. AB) not in the strict sense of that relation. On the authority of Josephus, who is followed by Epiphanius and Jerome, it has been generally admitted that the Chittim migrated from Phoenicia to Cyprus, and founded there the town of Citium, the modern Chitti. 'Chethimus possessed the island of Chethima, which is now called Cyprus, and from this, all islands and maritime places are called Chethim by the Hebrews' (Joseph. *Antiq.* i. 6, § 1). Cicero, it may be remarked, speaks of the Citians as a Phoenician colony (*De Finibus*, iv. 20), 'scis enim Citiaeos clientes tuos a Phoenicia profectos.' Dr. Pococke copied at Citium thirty-three inscriptions in Phoenician characters, of which an engraving is given in his *Description of the East*, (vol. ii. p. 213), and which have recently been explained by Gesenius in his *Monum. Phoenic.* (p. 124-133). Some passages in the prophets (Ezek. xxvii. 6; Isa. xxiii. 1, 12) imply an intimate connection between Chittim and Tyre. At a later period the name was applied to the Macedonians (1 Macc. i. 1, Χεττιείμ; and viii. 1, Κιτιέων). Hengstenberg has lately endeavoured to prove that in every passage in the Old Testament where the word occurs, it means Cyprus, or the Cyprians. On Numbers xxiv. 24, he remarks that the invaders of Ashur and Eber are said to come not *from* Chittim, but מיד כתים, *from the coast of* Chittim, that being the track of vessels coming from the west of Palestine. In Dan. xi. 30, he contends that the use of the absolute form, ציים, instead of the construct, denotes a less intimate connection with the following word, and that the phrase means, like that in Balaam's prophecy (to which he supposes the prophet alludes), ships sailing *along the coast* of Chittim. The Vulgate translates Chittim, in this passage, *Romanos*, an interpretation adopted by several of the ancient Jewish and Christian writers. Bochart attempts to support it on etymological grounds, of which Michaelis presumes to say, 'etymologica autem quæ de Latio Bochartus habet, facile ipsi relinquo, quæstiones geographicas his *crepundiis* carere cupiens.'

After a careful examination of the works of which the titles are given at the end of this article, the writer is disposed to acquiesce in the opinion expressed by the editor of the *Pictorial Bible*, 'Chittim seems to be a name of large signification (such as our Levant), applied to the islands and coasts of the Mediterranean, in a loose sense, without fixing the particular part, though particular and different parts of the whole are probably in most cases to be understood' (v. notes on Ezek. xxvii. 6; Michaelis, *Spicilegium Geographiæ Hebræorum Exteræ post Bochartum*, pars i. pp. 1-7, 103-114; Michaelis, *Supplementa ad Lexica Hebraica*, pp. 1138, 1377-1380; Bocharti *Geogr. Sacr.* c. 157-161; Gesenii *Thesaurus*, p. 726; Pococke's *Description of the East*, vol. ii. p. 213; Newton's *Dissertations on the Prophecies*, v.; Hengstenberg, *Die Geschichte Bileams und seine Weissagungen*, Berlin, 1842, pp. 200-202).—J. E. R.

CHIUN. [REMPHAN.]

CHLOE (Χλόη), a Christian woman at Corinth, some members of whose family afforded Paul intelligence concerning the divisions which reigned in the church at that place (1 Cor. i. 11).

CHOACH. [THORNS.]

CHORAZIN (Χοραζίν), a town mentioned in Matt. xi. 21; Luke x. 13, in connection with Bethsaida and Capernaum, not far from which, in Galilee, it appears to have been situated. Jerome makes it a village of Galilee, on the shore of the lake Tiberias, two miles from Capernaum (*Onomast.*, art. 'Chorozain'). Lightfoot and other Talmudical scholars have endeavoured to identify it with certain places named in the Mishnah; and travellers have hazarded various conjectures as to its site. But no place of the name has been historically noticed since the days of Jerome; and not only the town, but its very name appears to have long since perished. [BETHSAIDA; CAPERNAUM.]

CHRIST. [JESUS.]

CHRONICLES. *Name.*—This name seems to have been first given to two historical books of the Old Testament by Jerome (Prolog. Galeat.). The Hebrews call them דברי הימים, i. e. *words of days*, *diaries*, or *journals*, and reckon them but one book. The Alexandrian translators, who regarded them as two books, used the appellation Παραλειπόμενα, *things omitted*, as if they were *supplementary* to the other historical records belonging to the Old Testament canon.

Contents.—In 1 Chron. i-ix. is given a series of genealogical tables interspersed with historical notices. These genealogies are not complete.

1 Chron. x-xxix. contains the history of David, partly agreeing with the account given of him in the books of Samuel, though with several important additions relating to the Levites.

2 Chron. i-ix. contains the history of Solomon.

2 Chron. x-xxviii. furnishes a succinct account of the kingdom of *Judah* while *Israel* still remained, but separate from the history of the latter.

2 Chron. xxix-xxxvi. describes the kingdom of Judah after the downfall of Israel, especially with reference to the worship of God.

From this analysis it appears that the Chronicles contain an epitome of sacred history, particularly from the origin of the Jewish nation to the end of the first captivity.

Diction.—The diction is such as suits the time *immediately* subsequent to the captivity. It is substantially the same with that of Ezra, Nehemiah, and Esther, which were all written shortly after the Babylonish exile. It is mixed with *Aramæisms*, marking at once the decline of the Jews in power, and the corruption of their native tongue. The pure Hebrew had been then laid aside. It was lost during their sojourn in Babylon. The *orthography* is characterized by an adoption of the *matres lectionis*, particularly in the word דוד, which is written דויד. In one passage (2 Chron. xxv. 1) ירושלים occurs for ירושלם. In proper names *Aleph* is frequently interchanged with *he* quiescent at the end, as עזא for עזה (1 Chron. xiii. 7). A contrary interchange of the same letters is found at the commencement of a word, as היך for איך (1 Chron. xiii. 12). *Aleph prosthetic* occurs in אישי for ישי (1 Chron. ii. 13). We meet also with such peculiarities of *diction* as ארנון for ארגמן (2 Chron. ii. 6); בוץ, a Persian word (2 Chron. ii. 13); בירה, which appears also to be of Persian origin (1 Chron. xxix. 1); גנזך (1 Chron. xxviii. 11); התיחש (1 Chron. v. 17); מדרש (2 Chron. xxiv. 27; xiii. 22); נדן (1 Chron. xxi. 7); צרך (2 Chron ii. 15); קבל (2 Chron. xxix. 16); תלמיד (1 Chron. xxv. 8). (See Gesenius's *Geschichte der Heb. Sprache und Schrift;* Gramberg's *Die Chronik nach ihrem Geschichtl. Charakter*, &c.; De Wette's *Einleitung*, 4th ed. § 189.)

Age and Author.—Internal evidence sufficiently demonstrates that the Chronicles were written after the captivity. Thus the history is brought down to the end of the exile, and mention is made of the restoration by Cyrus (2 Chron. xxxvi. 21, 22). It is certain that they were compiled after the time of Jeremiah (2 Chron. xxxv. 25), who lived to see the destruction of Jerusalem by the Chaldæans. The genealogy of Zerubbabel is even continued to the time of Alexander (1 Chron. iii. 19-24). The same opinion is supported by the character of the *orthography* and the nature of the *language* employed, as we have already seen, both which are Aramæan in complexion, and harmonize with the books confessedly written after the exile. The Jews generally ascribe the Chronicles to Ezra (*Baba Bathra*, f. xv. c. 1). Such is their most ancient tradition, however false it may be in the opinion of Ewald. With them agree Carpzov, Eichhorn, Keil, and Hävernick; but Calmet, Jahn, De Wette, Bertholdt, Gramberg, and Movers attribute them to some unknown author. The following arguments may be adduced in favour of the current Jewish opinion:—

1st. The language of Ezra, who is generally thought to have written the book that bears his name, remarkably coincides with that of the Chronicles. Accordingly, Movers fully concedes that Chronicles and Ezra formed originally one book and proceeded from one author, although he argues that only a part of the book of Ezra was written by himself, while the other part and the books of Chronicles were compiled by some priest or Levite. But if Ezra wrote a portion of that book which is now called by his name, there is no good ground for supposing that he did not compose the whole; and if he compiled the whole, then we argue that the fragmentary character and the entire style present a remarkable similarity to the books of the Chronicles. They obviously point to the same writer (See Keil's *Apologetischer Versuch über die Chronik*, Berlin, 1833, 8vo.).

2ndly. Another argument in support of the same view is, that the book of Ezra begins with the same words with which the Chronicles terminate. The same person repeats his own words in order to connect his history.

This repetition, however, has been accounted for in other ways. Thus it has been conjectured that the last two verses were added by some transcriber, who, having finished the book of Chronicles at verse 21, proceeded, without leaving the usual distance between different books, to write the book of Ezra; but, soon finding his mistake, broke off abruptly and began Ezra at the usual distance, without erasing the lines which he had carelessly appended to Chronicles. This supposes that Ezra once followed Chronicles. Others account for the repetition by referring to a practice among the Jews, who, 'in the public reading of their Scriptures, to avoid ending with the recital of any calamity producing dejection, add the commencement of the next paragraph, or repeat a portion of that which precedes, in order to finish with something consolatory.' Gramberg thinks that such repetition proves the writer of Chronicles to have had the book of Ezra before him; but this is purely conjectural, and contrary to other evidence. Besides, why may it not as well establish the reverse? The wish of this Rationalist writer to bring down these books to a very late period prompted him to advance an argument so utterly baseless.

To the first mode, which attributes this remarkable recapitulation to a transcriber, we do not attach much probability. It may be objected that there are at least two verbal differences between the words as they appear in Chronicles and in Ezra, so that the careless transcriber must be supposed not only to have written so far without perceiving his mistake, but also to have copied inaccurately. Besides, it is not consistent with the habitual accuracy of the Jewish scribes to have committed so palpable an error; or, after having fallen into it, not to rectify it. The universality of its existence also militates against the hypothesis. Another copyist must soon have detected the mistake, unless he had chosen to shut his eyes. All copies contain the passage in both places; and it is found in the Septuagint translation both of Chronicles and Ezra.

The second mode of accounting for the fact is equally improbable. The practice to which appeal is made relates to the *public recital* of the Hebrew Scriptures, rather than to their *written state*. Besides, the *mnemonic* term יתקק includes a definite number of books, viz. Isaiah, the twelve minor prophets, Lamentations, and Ecclesiastes, in reading which the Jews were accustomed to repeat the portion that precedes the termination. That they added the commencement of the paragraph *subsequent to* the sad portion, or that such a practice was extended to Ezra, or indeed to any other of the sacred books except those specified, can never be proved. It is a gratuitous supposition, destitute of all foundation.

In short, no method of accounting for the repetition is so probable as that which makes Ezra continue his own history *nearly* in his own words.

3rdly. The portions peculiar to the Chronicles are just such as we might expect from Ezra. They correspond to his character as a zealous reformer and priest.

In opposition to these arguments it has been asserted—

1st. That the genealogy of Zerubbabel is brought down to the time of Alexander, who was later than Ezra. Hence some have even placed the writer in the time of Alexander the Great. So De Wette, in the third edition of his *Introduction to the Old Testament*. Eichhorn, Jahn, and Dahler assume, that 1 Chron. iii. 19-24 was appended by a modern hand. This conjecture may be true, though it does not commend itself to our approbation, because there is strong evidence in favour of the opinion that the canon was completed by Ezra and the learned men with whom he was associated (see Hävernick's *Einleitung in das Alte Testament*, p. 49). Was it not possible, however, for Ezra to write the portion in question? If he was inspired, as we believe, is there aught to forbid the supposition that such knowledge was directly communicated to him? The fact of his inspiration is quite sufficient to account for his recording the genealogy of Zerubbabel.

2ndly. The difference of the genealogies in 1 Chron. vi. 3, etc., and Ezra vii. 1, etc., proves that Ezra was not the writer of both. So De Wette. This argument is weak. Ezra's design in writing the book that bears his name must have been different from his object in compiling the Chronicles. Most properly, therefore, does he vary in his accounts. Sometimes he relates more briefly what he had already narrated in detail, and *vice versâ*.

3rdly. It is improbable that the histories contained in the books of Kings and Chronicles should be written by the same person, since they contain numerous discrepancies and contradictions. This objection is valid only against those who believe that the books of Kings were written by Ezra. So far from supposing, with Dr. Allix and others, that Ezra wrote the Chronicles about 26 years after the Kings, we believe, upon the ground of strong internal evidence, that there was almost an interval of a century between the composition of the two works.

4thly. Such passages as 2 Chron. v. 9 and viii. 8, the former of which speaks of the ark being in the holy place 'unto this day,' and the latter, of tribute being paid 'until this day,' seem to imply that the Chronicles were written while the temple was standing, before the decline of Judah.

Were it supposed that Ezra was *the original* writer of these passages, they would prove fatal to the idea of his having composed these historical books. But, on the contrary, they were transcribed from records existing before the temple was demolished, and inserted verbatim as Ezra found them. But why, it may be asked, did he not accommodate them to his own time? Did he quote indiscriminately, as has been said, without taking the trouble to reconcile inconsistencies? Far be it from us to adopt or sanction such unguarded language as virtually sets aside the inspiration of the writer.

The Chronicles were intended as a *supplement* to other historical books, especially Samuel and Kings. Accordingly, the portions repeated from these for the sake of completeness, or derived from public annals, the compiler did not deem necessary or desirable to adapt in every instance to the time in which he himself lived. They were copied with the subordinate design of *connecting* such portions as he was prompted to write for the first time. They are *incidental*, not *essential*, to the author's purpose. They serve as links to give unity and compactness to such paragraphs as the Holy Spirit thought to be the most important. To change these extracts was not, therefore, regarded necessary. Minute and systematic effort for attaining accuracy does not characterize the sacred authors. With an ingenuous and noble negligence they disdain artificial trammels. Expressions like these show the scrupulous fidelity with which the compiler adhered to the ancient records. The same passages, it may be remarked, also occur in the books of Kings (1 Kings viii. 8; 1 Kings ix. 21), and show, from their exact similarity, that they were copied from the same original.

5thly. The difference of style and manner of narration in Ezra and Chronicles shows that Ezra was not the author. So Jahn. This assertion is certainly unfounded. The style, language, and idiom are remarkably alike, as will be manifest to the attentive reader of these works. The manner of narration in both partakes of no greater dissimilarity than the different objects with which they were written demand and justify. Other arguments in favour of Ezra may be seen in Keil's *Apologetischer Versuch über die Chronik*, Berlin, 1833, 8vo.

Scope.—The principal design of the writer seems to have been to maintain the proper distinctions between the tribes and families of the returning Hebrews, that the Messiah's descent out of the tribe and family whence he was to spring according to prophecy, might be made manifest. Accordingly, the family of David is specially noticed and prominently portrayed. The author also shows how the lands had been distributed before the captivity, that the people might obtain the ancient inheritance of their fathers. In doing so he goes back to the most ancient times, and presents to his countrymen their earliest history, lest, during their exile, they might have forgotten their original and lost the traces of their real ancestry. In addition to this object it was also intended to show how the worship of God should be properly resumed and orderly re-established. In accordance with such a purpose he gives the genea-

logy of the priests and Levites more fully than any other writer, records their functions and rank, and enters with particularity into the arrangements established among them by David and Solomon. These two purposes, which are closely allied, will serve to demonstrate the perfect congruity of all that is peculiar in the Chronicles. They account for the genealogical tables, the specifications of tribes and families with their situation, as also for a variety of references to the priests and Levites, to the preparations made by David for building the temple, the reformations which took place at different periods, the prosperity of such kings as feared Jehovah and walked in his ways, to the marvellous interpositions of Heaven on behalf of those who trusted in Him alone, to the idolatry of Israel and their consequent misfortunes.

The books of Chronicles as compared with those of Kings are more *didactic* than *historical*. The *historical* tendency is subordinated to the *didactic*. Indeed, the purely historic form appears to be preserved only in so far as it presented an appropriate medium for those religious and moral observations which the author was directed to adduce. Samuel and Kings are more occupied with the relation of *political* occurrences; while the Chronicles furnish detailed accounts of *ecclesiastical* institutions.

Sources.—A thorough examination of these books as compared with those of Samuel and Kings will satisfy the inquirer that the latter were known to Ezra and extensively used by him in the composition of Chronicles. It is impossible to believe, with Le Clerc, that the writer of the Chronicles did not know the books of Samuel and Kings. De Wette and Movers refer to the character of originality belonging to the earlier accounts of Samuel and Kings as contrasted with the compilation-manner of the records in the books before us, but this has a feeble and questionable existence. The earlier books themselves must have been compiled from annals. So far as the history contained in them is concerned, it bears little evidence of originality. It is true that the books of Samuel present no references to national records such as occur in Kings, but their internal character and structure evince their derivation from annals contemporaneous with the events they relate.

But the books of Samuel and Kings are not the only source from which the Chronicles have been taken. Public documents formed the common groundwork of the three histories. The Pentateuch has also been used in their compilation. A comparison of the first nine chapters of 1 Chron. with the Mosaic books will show the parallelism existing between them; and it should be especially noticed that 1 Chron. i. 43-54 agrees *verbatim* with Genesis xxxvi. 31-43. Perhaps, however, this passage in both has been drawn from the same source.

As the Almighty does nothing superfluously, and puts forth no exertion of his power where his infinite wisdom does not perceive a fitting necessity, it would have been unnecessary, as far as we can perceive, to suggest anew to the mind of the writer facts with which he must have been partially acquainted by tradition, and which he had an opportunity of knowing from the sacred records. It is evident that the Chronicles were compiled not only from former inspired writings, but, for the most part, from public records, registers, and genealogies belonging to the Jews. That national annals existed there can be no doubt. They are expressly mentioned, as in 1 Chron. xxvii. 24. They contained an account of the most important events in the history of the Hebrews, and were generally lodged in the tabernacle or temple, where they could be most conveniently consulted.

The histories of kings appear to have been usually written by *prophets* (1 Chron. xxix. 29; 2 Chron. ix. 29; xii. 15; xiii. 22). Hence they constantly refer to the divine rewards and punishments characterizing the theocracy. These historical writings of the prophets were, for the most part, inserted in the public annals, as is evident from 2 Chron. xx. 34; xxxii. 32; xii. 15; xxiv. 27. Whether they were *always* so inserted is questionable, for they seem to be distinguished from the annals of the kingdom in 2 Chron. xxxiii. 19. From such sources Ezra extracted the accounts which he was prompted to write for the use of mankind in all ages. We cannot believe that his selection was indiscriminate or careless. His inspiration effectually secured him against everything that was inaccurate or unsuitable to the purposes for which he was supernaturally enlightened. That he committed mistakes cannot for a moment be admitted, else his history is impugned and its position in the canon inexplicable. His veracity, integrity, and scrupulous exactness must be held fast by every right-minded believer.

The following are the *references* to older memoirs or historical works:—1. The book of Samuel the seer, the book of Nathan the prophet, and the book of Gad the seer (1 Chron. xxix. 29). This cannot mean the inspired books of Samuel, because they do not contain the entire history of David ('his acts first and last'). It refers to a history of his own times written by Samuel, and to a continuation of it, embracing succeeding times, written by Nathan and Gad, from which it is probable that part of the contents of the present books of Samuel was drawn.—2. The book of Nathan the prophet, the prophecy of Ahijah the Shilonite, and the visions of Iddo the seer (2 Chron. ix. 29).—3. The book of Shemaiah the prophet, and of Iddo the seer *concerning genealogies*; or, as De Wette translates it, *after the manner of family-registers* (2 Chron. xii. 15).—4. The *story*, or rather, the *interpretation* (*midrash*) of the prophet Iddo (2 Chron. xiii. 22).—5. The book of Jehu the son of Hanani, inserted in the book of the Kings of Israel (2 Chron. xx. 34).—6. The history of Uzziah, by Isaiah the son of Amoz (2 Chron. xxvi. 22).—7. The vision of Isaiah the prophet, in the book of the Kings of Judah and Israel (2 Chron. xxxii. 32.) (See Gesenius's *Commentar über den Jesaia; Einleit.* § 4.)—8. The sayings of Hosai (2 Chron. xxxiii. 19).—9. The interpretation of the book of the Kings (2 Chron. xxiv. 27).—10. The book of the Kings of Judah and Israel (2 Chron. xvi. 11; xxv. 26; xxvii. 7; xxviii. 26; xxxv. 27; xxxvi. 8). This could not have been our present books of Kings, but *public annals*, because in several instances where the reader is referred to them for further information, our books of Kings contain less than what is stated in the Chronicles.—11. The book of the Kings of Israel (2 Chron. xx. 34).

—12. The words or histories of the Kings of Israel (2 Chron. xxxiii. 18). It is probable that Nos. 10, 11, and 12 refer to the same historical work. —13. The Chronicles of King David (1 Chron. xxvii. 24).—14. The Lamentations (2 Chron. xxxv. 25). This does not mean the Lamentations of Jeremiah which we now have, but other Lamentations composed by the prophet on *the death of Josiah*, and long since lost.

Discrepancies between the books of Chronicles and former histories.—These discrepancies may be arranged under three heads: I., variations *in orthography and diction;* II., *in arrangement;* III., *in facts and numbers.*

I. *Older* and *more difficult* expressions are usually changed for such as are *later* and *easier.*

Those variations that respect *orthography* alone are of a threefold kind.

(*a.*) The *Scriptio plena* instead of the *defectiva* (comp. 2 Chron. viii. 18 with 1 Kings ix. 27).

(*b.*) Variations adapted to the *later* and, for the most part, the *Aramæan* form of the language (comp. 2 Chron. x. 18 with 1 Kings xii. 18).

(*c.*) Corrections of anomalous forms (comp. 2 Chron. xxi. 9 with 2 Kings viii. 21).

Variations of a *grammatical* nature exhibit the same endeavour to accommodate the text of the older and more difficult original to later usage, thus:—

(*a.*) The older form of a substantive is changed for a later form from the same root (comp. 1 Chron. xiv. 2 with 2 Sam. v. 12).

(*b.*) The more ancient or irregular flexion of a substantive or verb is altered into that belonging to later usage (comp. 2 Chron. ix. 19 with 1 Kings x. 20; 1 Chron. xix. 12 with 2 Sam. x. 11).

(*c.*) Alterations adapted to the later *usus loquendi* are made in the construction. Thus, in place of the *infinitive absolute*, joined to the finite verb of the same root, the writer of the Chronicles uniformly omits the infinitive (comp. 1 Chron. xiv. 10 with 2 Sam. v. 19; 2 Chron. vii. 19 with 1 Kings ix. 6).

(*d.*) Grammatical corrections. Thus, in verbs *Lamed He*, the writer of the Chronicles uses the *apocopated future conversive*, instead of the *full form* (comp. 2 Chron. xviii. 23, 33 with 1 Kings xxii. 24, 34).

Thus far with regard to the *orthography* and *grammatical character*. In respect to the *language* of these books we find—

(*a.*) That an older or unusual expression is changed for one later or more current (comp. 1 Chron. xxi. 2 with 2 Sam. xxiv. 2; 1 Chron. x. 12 with 1 Sam. xxxi. 12).

(*b.*) Names that had become rare or antiquated, are altered into such as had become current and better known (comp. 2 Chron. xvi. 4 with 1 Kings xv. 20).

(*c.*) *Definiteness* and *precision* are given to indefinite expressions used in the sources whence the writer drew (comp. 2 Chron. xxxiv. 24 with 2 Kings xxii. 16).

(*d.*) Expressions liable to be taken in an erroneous or bad sense are changed for others which are synonymous (comp. 2 Chron. xxii. 12 with 2 Kings xi. 3; 1 Chron. xix. 4 with 2 Sam. x. 4).

II. Discrepancies in *arrangement.*

Even a cursory perusal of these books, as compared with those of Samuel and Kings, will show that several sections are differently placed. This fact, however, is of no weight against the *authenticity* or *authority* of the Chronicles. The sacred writers do not profess to follow the order of time. The historical writings of Moses, the prophecies of Isaiah and Jeremiah, the Gospels of Matthew, Mark, and Luke, are not placed in the exact order of time: 1 Chron xiv. (comp. 2 Sam. v. 11-25), 2 Chron. i. 14-17 (comp. 1 Kings x. 26-29), and 2 Chron. ix. 25, &c., are evidently out of their true chronological position.

III. Under this head may be classed—

(*a.*) Omissions of words, phrases, sentences, and paragraphs; as also abbreviations of former statements.

(*b.*) Additions, longer or shorter, as compared with preceding accounts relative to the same topics.

If we remember that these books are *supplementary*, we shall not be surprised at such particulars, but rather be prepared to expect them. Several localities had changed their names or undergone alterations. The restored Jews knew certain things under other appellations and by other definitive marks than those which had formerly distinguished them. The writers had also different purposes, requiring an adaptation of their narratives to the circumstances amid which they lived, and the state of knowledge possessed by their contemporaries. Besides, the materials were more numerous after the captivity. So far, then, from accusing the writer of *incorrectness*, *senselessness*, and *confusion*, as De Wette does, because of these discrepancies, we regard them as evidences of his fidelity and proofs of his artlessness. *Variations* are not *contradictions.* No two historians in narrating the same events will give exactly the same circumstances, although both their narratives may be most true.

(*c.*) Discrepancies and contradictions.

But not only do *discrepancies* exist between the Chronicles and former histories, there are also *contradictions.* Looking at the Masoretic text, the fact cannot be questioned. However disagreeable or unwelcome, it must be admitted.

Many passages, however, which are usually adduced under this head, do not belong to it. Thus—

2 Chron. ix. 25	1 Kings iv. 26.
„ xxii. 2	2 Kings viii. 26.
1 Chron. xxi. 1	2 Sam. xxiv. 1.
„ xxi. 5	„ xxiv. 9.
„ xxi. 11, 12 ...	„ xxiv. 13.
„ xxi. 25	„ xxiv. 24.
2 Chron. xiii. 2	1 Kings xv. 10.

are not opposed to one another. There is no contradiction in them: they are quite reconcilable. Dr. Kennicott and others have hastily inferred that there is corruption, because they did not perceive their right meaning. Our space will not allow us to point out the true mode of harmonising them; we may therefore be permitted to refer to Davidson's *Sacred Hermeneutics*, where they are fully resolved. The preceding are not *all* the passages frequently quoted as contradictory. They furnish a *specimen* of those that appear to be so. In Movers, Kennicott, and Gramberg, others may be found which are injudiciously

brought forward as truly at variance; yet there are *real contradictions*. Thus—

2 Chron. viii. 18 ..... 1 Kings ix. 28.
1 Chron. xi. 11 ...... 2 Sam. xxiii. 8.
„ xxi. 5 ...... „ xxiv. 9, where the numbers of Judah are different.
„ xviii. 4 ..... 2 Sam. viii. 4.
„ xix. 18 ..... „ x. 18.

and other places that might be quoted, present *real contradictions*. How then are they to be disposed of? To this we reply, that the text is corrupt. It is well known that the text of the books of Samuel, Kings, and Chronicles is in a worse condition than that of the other inspired writings. The fact is unquestionable, in whatever way it may be explained. Here, transcribers fell into more mistakes than they have elsewhere committed. Many of the names and words that are differently written, should be referred to this head. Some omissions and some interpolations also belong to it. They are nothing but corruptions in the text. But the principal contradictions relate to *numbers*. These seem to have been expressed in various ways; and copyists, having different methods of marking them, were naturally exposed to errors. Sometimes numbers were designated by *letters*, occasionally by *ciphers;* and again they were marked by *words*.

It is time that the text of these historical books should be rectified in those instances where an unquestionable necessity exists. If there be not manuscript evidence to warrant certain changes, we should not be deterred from making them. Common sense, the credit of the inspired writers, and, above all, their sacred authority, outweigh all scruples about correcting by *conjecture*. *Real contradictions* should never be allowed to tarnish a text written under the immediate superintendence of the Holy Spirit. Errors committed by copyists should be at once removed, else evil-minded men may charge them on the original authors. Some are averse to believe that they have originated, since the close of the canon, in the unavoidable changes incident to the multiplication of copies during many centuries. It is marvellous to observe the attachment with which Rationalists adhere to the Masoretic text as if it were *perfect*. On the ground of its *absolute correctness*, they attribute to the sacred writers ignorance, falsification, and error. We greatly admire a conscientious zeal for the general purity of our present text, and envy not the motives of the man who emends it rashly. A disposition to alter it frequently and frivolously is not far from scepticism. But we equally dislike that rigid adherence to its present condition which individuals having no concern for the truth of God or the honour of his word exhibit—an adherence, so far from being commendable, that it subserves the very worst purpose, even to impugn the truthfulness of the most honest historians.

But De Wette affirms that the writer of Chronicles contradicts *himself*, as well as preceding historians. In proof of this assertion he quotes the following passages:—

2 Chron. xiv. 1 ...... 2 Chron. xv. 19, and 1 Kings xv. 32.
„ xiv. 2 .... 2 Chron. xv. 17.
„ xvii. 6 ...... „ xx. 33.
„ xxx. 26 ..... „ xxxv. 18.

From a careful perusal and comparison of these places, we affirm that they are not contradictory. It is only the superficiality of rationalism or the blindness of infidelity that discovers opposition in them.

The character of such statements as are peculiar to the Chronicles.—From an inspection of 1 Chron. xvi. 4-41; 1 Chron. xxii.-xxvi. 28; xxviii.; xxix.; 2 Chron. xv. 1-15; 2 Chron. xvii. 7, &c.; xxvi. 16-21; xxx.; xxxi., it will be manifest, that it was one design of Ezra to notice with particularity the order of the divine worship as established by David and Solomon, with various reformations in the theocracy that took place at different times. The Levitical priesthood, and the public service of God, are specially noticed and prominently brought into view. From 2 Chron. xiii.; xx. 21, &c.; xix. 2, &c.; xxv. 7, &c., it is evident that God's miraculous interference on behalf of Judah, and his displeasure with idolatrous Israel, were also intended to be depicted. In accordance with the same object, pious kings evincing appropriate zeal for the glory of Jehovah are commended, and their efforts marked with approval (comp. 2 Chron. xiv. 6-15; xvii. 10, &c.; xx.; xxvi. 5, &c.; xxvii. 4-6, &c.), while the ruin of idolatrous practices is forcibly adduced (2 Chron. xxi. 11, &c.; xxviii. 5, &c.; xxxiii. 11, &c.; xxv. 14, &c.; xxxvi. 6).

Such are the characteristic peculiarities of these books; and we now ask the impartial reader to consider if they be not worthy of the Holy Spirit under whose guidance the Chronicles were written. Are they not admirably in unison with the character of Ezra the high-priest and reformer? What more natural, or more accordant with the solicitudes of this holy man, than to dwell upon such matters as relate to the worship of Jehovah, to the priests, and Levites? Surely *he* was appropriately directed to record the reformations effected by godly kings, and the disastrous consequences of forsaking the true God, whose zeal was abundantly manifested in reform, and to whom idolatry was peculiarly offensive. And yet upon these very chapters and paragraphs charges the most flagrant have been founded. The author of them has been accused of hatred to Israel, predilection for the Levites, love of the marvellous, design to magnify pious kings and to heighten the mistakes of the kingdom of Israel. It is unnecessary to enter into any refutation of these monstrous accusations. They bear with them their own condemnation. They are the offspring of that Rationalism which resolves to see nothing but what it relishes. On every page of these historical books are impressed *genuineness* and *honesty*. The writer candidly refers to the sources whence his information was derived; and contemporary readers, placing implicit reliance on his statements, allowed the original documents to perish. He relates many things disgraceful to Judah and its kings, while he evinces no desire to palliate or conceal sin. He even retains, as we have seen before, expressions incongruous with his own age, and therefore exactly copied from the ancient records. Surely a writer guilty of falsification would have been careful to alter these into exact correspondence with his own times. Transparent simplicity of character needs not such minutiæ.

We have alluded to the attacks made upon

these books in Germany, because they are of a most serious nature. Nor have they yet ceased. They are still continued. Since De Wette put forth his energies in the unholy service (in his *Beiträge zur Einleitung in das Alte Testament*, Halle, 1806, 8vo.), he has repeated and enlarged his objections in every edition of a popular Introduction to the Old Testament, although Dahler, *De Librorum Paralipomenôn auctoritate atque fide historica*, Argentor. 1819, 8vo., successfully combated his statements. He has been aided too and strengthened by Gramberg, in his *Die Chronik nach ihrem Geschichtl. Charakter und ihrer Glaubwürdigkeit neu geprüft*, Halle, 1823, 8vo., and indirectly encouraged by Gesenius, in his *Geschichte der Hebr. Sprache und Schrift*, Leipzig, 1815, 8vo.; and in his *Commentar über den Jesaia*. Yet the credibility of the books has stood these various attacks, uninjured. In opposition to De Wette and Gramberg, two scholars have appeared who have successfully vindicated the Chronicles from their superficial accusers. We refer to F. C. Movers, who, in his *Kritische Untersuchungen über die Biblische Chronik*, Bonn, 1834, 8vo., has entered into an examination of all the points connected with these books with great skill and minuteness. His work is of a masterly and most satisfactory character. It is immeasurably the best on the subject that has ever appeared. In addition to Movers, we allude to C. F. Keil, whose *Apologetischer Versuch über die Chronik*, Berlin, 1833, 8vo., forms a very valuable treatise on the same side. Differing in various respects from Movers, he takes up some interesting topics in connection with the Chronicles, and occasionally advances opinions more correct than those of the pastor in Bonn. To these may be subjoined the observations of Eichhorn, in his *Introduction*, who is wondrously judicious and sound on this subject; as also the *Introduction* of Jahn, who displays here his wonted ability. Nor should the old but valuable *Introduction* of Carpzov be neglected.—S. D.

CHRONOLOGY is the science which measures time by the periodic revolutions of the heavenly bodies, particularly of the sun, moon, and stars. The idea of time is derived from the succession of events which happen in the heavens or on the earth. The entrance of events in human history is accidental and irregular, but in the history of the heavens it is subject to fixed and certain laws. Accordingly the heavenly phenomena afford the surest basis for the division of time, and serve best to give orderly arrangements to the irregular and accidental events which succeed each other in civil history. Chronology is divided into two kinds, theoretical and practical, or mathematical and historical. The first teaches the division of time in reference to the phenomena of the heavens; the second teaches it in regard to the succession of human events. The culmination of a star, or, what is the same thing, the daily turning of the earth on its axis, offers a regular and constantly-recurring event as a measure of time, and answers for this purpose better than the varying period of time which is derived from the revolution of the earth round the sun.

The knowledge of the Hebrews in chronology rested altogether on appearances; not a trace of anything like a scientific view is to be found in their literature. The books of the Old Testament recognise none of the great eras which other nations have employed. Nor is it until the first book of the Maccabees that any such guide is found. Times and periods are for the most part left relatively undetermined; and consequently it is difficult, if not impossible, to establish any satisfactory chronology for the succession of events in the history of the Hebrew people. Genealogical tables indeed are not wanting, but they are of little service for the general purposes of chronology. Neither the new moon nor the year were the ancient Hebrews able to measure and foretel with astronomical accuracy, so as to possess some standard for chronological purposes; and they were content, so far as regards the moon, with such information as marks and traces on the hills, or messengers could afford, after the new moon had made her appearance.

The last thing which appears of importance to the annalist of a rude age is to mark the precise order of the occurrences which he records, and more especially to afford the means of determining their place in the map of time, by noting their distance from some common point to which they may all be referred. In the more ancient portion of the Old Testament we have to rely almost solely upon the uncertain standard which is founded upon the average duration of human life and the length of a generation—a mode of reckoning which, as it proceeds upon a principle at no time fixed, and assumes the constancy of elements which are subject to an incessant, but irregular variation, cannot be applied with any degree of confidence to establish the date of events removed from one another by the lapse of centuries. From the flood to the days of Abraham the generation or period between the birth of a father and that of his eldest son became gradually contracted; but as the rate of diminution was far from being uniform, no satisfactory conclusion can hence be deduced in regard to the number of years which passed from the nativity of Arphaxad to the infancy of the patriarch. Had the sacred historians been led to measure the lapse of time and the succession of events by a reference to the epoch of creation, or even to that of the deluge, there would have been no difficulty in finding the proper place of every other occurrence, as well as the true limits of every particular epoch. From the Exode down to the era of Christianity, the life of the human being, having fallen more nearly to its present extent, supplies a better standard; and hence from the death of Moses to the decline of the Jewish state, chronology shines with a clearer and more steady light.

Chronology finds it no easy task to harmonize the discrepancies which present themselves alike in regard to the length of the entire period which elapsed from the Creation to the birth of Christ, and the several great periods into which, for the sake of convenience, the lengthened whole has been divided. The distance of the Creation from the Christian era, which has been stated with about 140 different variations, is given in the Indian Chronology, as computed by Gentil, at 6174 years; in the Babylonian, by Bailly, at 6158, in the Chinese, by Bailly, at 6157; in the Septuagint, by Abulfaragius, at 5508; while Jewish

writers bring it down below the computation of Capellus, namely, 4000, and one, Rabbi Lipman, to so contracted a sum as 3616. The separate numbers which compose this chronological period are thus stated by Usher, Playfair, Jackson, and Hales:—

CHRONOLOGY.

	Usher.	Playfair.	Hales.	Jackson.
	Years.	Years.	Years.	Years.
From Creation to Deluge	1656	1656	2256	2256
„ Deluge to Birth of Abraham	292	292	1002	1072
„ Birth to his leaving Haran	134	75	75	75
„ that event to the Exode	430	430	430	430
„ Exode to foundation of Temple	479	540	621	579
„ Temple to Christian era	1013	1014	1027	1014
	4004	4007	5411	5426

The chronology of the English Bible was regulated by the views of Usher, who followed, in general, the authority of the Hebrew text. Jackson and Hales put themselves under the guidance of the Septuagint and Josephus, maintaining that the modern Hebrew text has been greatly vitiated in the whole department of chronology, and more especially in the genealogical tables which respect the antediluvian patriarchs, as well as the ten generations immediately after the Flood. The computation of Jackson places the Creation B.C. 5426; that of the modern Hebrew for the same era is 4004, making a difference of 1422 years. According to Hales the world was created B.C. 5411; according to the modern Hebrew Bible, 4004—difference, 1407 years. The shortened scheme, adopted by Usher from the Masorite Jews, is recent in its origin, when compared with the more comprehensive chronology of the Septuagint. This last was used before the advent of our Lord, was followed by the fathers of the church, and appears not to have been called in question till, in the eighth century, a disposition to exchange it for the Rabbinical method of reckoning was first manifested by the venerable Bede. The preference given, in consequence of the reformation from Popery, to everything Hebrew, or connected therewith, led, at an early period after that great protest against the corruptions of the Western church, to the adoption and general use, at least in this country, of the numbers of the original Hebrew text. In time, however, opponents to this system appeared. Isaac Vossius, in his treatise *De Vera Ætate Mundi*, was the first of any note. He was feebly answered by Hornius. Pezron, in his work *L'Antiquité des Tems rétablie et défendue contre les Juifs et les nouveaux Chronologistes*, produced a great impression in favour of the lengthened period advocated by Vossius. The positions of Pezron were assailed by Martianay, whose chief merit lies in having given occasion for Pezron's reply, entitled *Défense de l'Antiquité des Tems*. The treatise of Mr. Hayes on the chronology of the Septuagint is the first considerable work by an English author on the genealogical numbers of the Greek Scriptures compared with those of the Hebrew text, and it is peculiarly valuable for a successful attempt to prove that the Chaldæan and Egyptian antiquities are consistent with the sacred history of the Jews, when viewed through the medium of the Septuagint. It was not, however, till the middle of the last century that the indefatigable Jackson produced, in three volumes, quarto, his great work, the *Chronological Antiquities*. Adopting the principles of Vossius, Pezron, and Hayes, he made the interval between Adam and Christ 5426 years. In the beginning of the present century Dr. Hales published the first volume of a laborious work entitled, *A New Analysis of Chronology*, an undertaking which ultimately extended to three volumes, without adding anything of much value to the conclusions of Jackson. Mr. Faber, in his work on Pagan idolatry, offers some judicious observations on the chronology of ancient history, treading generally in the footsteps of Hales. The *Origines* of Sir William Drummond proceeds also on the ground supplied by the Septuagint chronology.

The contracted scheme of the Hebrew text is rejected by the greatest names in this branch of Biblical literature, as being glaringly inconsistent not only with the records of other nations, but even with the history of the ancient Hebrews themselves. A detailed statement of grounds for admitting the authority of the Septuagint in preference to that of the original Hebrew may be found in a preliminary dissertation prefixed to the first volume of Dr. Michael Russell's *Connection of Sacred and Profane History, from the Death of Joshua to the Decline of the Kingdoms of Israel and Judah*, London, 1827. The computation which Dr. Russell considers to 'accord best with the ancient Scriptures, as well as with the several histories which have been derived from them, does not extend the number of years from the creation to the advent of Christ beyond 5441.' The same writer undertakes to prove that the great difference which is found between the chronology of the modern Hebrew Scriptures and the system of dates which determine the order of the corresponding events, as recorded in the Samaritan Pentateuch, in the Septuagint version, and in the works of Josephus, did not always exist, but must have been occasioned by an alteration introduced into the Jewish registers between the period at which the translation of the Seventy was first made public and the middle of the second century of the Christian era. Evidence is also adduced to show that this difference was not accidental and such as might have originated in the ignorance or carelessness of transcribers, but was regularly planned and effected for an unworthy object. The chronology of the Hebrew Scriptures and that of the Greek version, the author contends, were originally the same; and that the accuracy of the latter was not called in question by the

Jews for nearly four hundred years—that is, until the rapid progress of Christianity awakened the enmity of certain unprincipled individuals of that 'nation,' who were induced to alter the dates of their ancient chronicles in order to weaken the arguments derived from them in support of the new religion.

The entire period which elapsed from the Creation till the birth of Christ is usually divided for chronological purposes into the following ages:—From the Creation to the Deluge; from the Deluge to the birth of Abraham; from the birth of Abraham to the Exode of the Israelites; from the Exode to the building of Solomon's temple; from the building of the temple to the destruction of the same; from the destruction of the temple to the restoration of the Jews; and from that event to the Christian era. In the first of the above periods a very great discrepancy is found to prevail between the numeration of the modern Hebrew text and that of the Septuagint and Josephus. The amount of the difference between these ancient authorities, as well as the singular variation which appears in the Samaritan Pentateuch, will be understood from the following table:—

Number of Years from the Creation to the Deluge.

	Lived before Birth of Eldest Son.				After the Birth of Eldest Son.				Total Length of Life.			
	Hebr.	Samar.	Sept.	Josep.	Hebr.	Samar.	Sept.	Josep.	Hebr.	Samar.	Sept.	Josep.
Adam	130	130	230	230	800	800	700	700	930	930	930	930
Seth	105	105	205	205	807	807	707	707	912	912	912	912
Enos	90	90	190	190	815	815	715	715	905	905	905	905
Cainan . . .	70	70	170	170	840	840	740	740	910	910	910	910
Malaleel . . .	65	65	165	165	830	830	730	730	895	895	895	895
Jared	162	62	162	162	800	785	800	800	962	847	962	962
Enoch	65	65	165	165	300	300	200	200	365	365	365	365
Methuselah . .	187	67	187	187	782	653	782	782	969	720	969	969
Lamech . . .	182	53	188	182	595	600	595	595	777	653	753	777
Noah, at the Flood	600	600	600	600								
To the Flood . .	1656	1307	2262	2256								

Thus, from the Creation to the Deluge, the number of years, according to the

Hebrew text, is 1656
Samaritan Pentateuch . . 1307
Septuagint Version . . . 2262
Josephus 2256

Between Josephus and the Septuagint the difference is only six years; while both of these differ from the modern Hebrew Bible not less than six hundred. The cause of this remarkable variation, or rather what has been considered the manner in which it was occasioned, may be discovered in the principle according to which the Jews constructed their chronological tables. They measured the several eras of their ancient history not by adding together the full lives of their successive patriarchs, but by taking the sum of their *generations*—that is, the age to which they had respectively attained at the birth of their eldest son. For example, the generation of Enos, or his age at the birth of Cainan, is estimated by the Hebrew and Samaritan texts as having extended to 90 years; the residue of his life, according to the same authorities, is 815 years; and the total length of life, being the amount of both these sums, is 905 years; whereas, in the Septuagint and Josephus, the generation is enlarged to 190 years; the residue of life is diminished to 715 years; while the full length of life, or 905 years, is the same in all these ancient records. Hence, in order to lengthen or shorten any particular era, it was only necessary to alter the proportion between the generation and the residue of life, and such, Dr. Russell states, was the method actually adopted.

An era properly so called the ancient Hebrews did not possess. Signal events seem to have been made use of as points from which to date. Moses, like Herodotus, reckoned by generations. The Exodus, as may be seen in Exod. xix. 1, and Num. xxxiii. 38, probably, also, the building of the first temple (1 Kings ix. 10; 2 Chron. iii. 2), were employed as starting-points to aid in assigning events their position in historical succession. Also the destruction of the first temple, or the beginning of the Babylonish captivity (in the summer of the year B.C. 586), and the liberation of the Jews from the Syrian yoke by the valour of the Maccabees (in the autumn of the year B.C. 143), were used as epochs from which time was reckoned. After the manner of other nations, the Hebrews computed time by the succession of their princes, as may be seen throughout the books of Kings and Chronicles. At a later period, and in the first book of the Maccabees, what is termed the Greek era, or that of the Seleucidæ, began to be employed. This era, which is also called the era of the Syro-Macedonians, commences from the year of Rome 442, twelve years after the death of Alexander, and 311 years and four months before

the birth of our Saviour, the epoch of the first conquest of Seleucus Nicator in that part of the West which afterwards composed the immense empire of Syria. The Julian year, formed of the Roman months, to which Syrian names were given, was used. This era prevailed not only in the dominions of Seleucus, but among almost all the people of the Levant, where it still exists. The Jews did not abandon the use of this era until within the last 400 years. At present they date from the Creation, which they hold to have taken place 3760 years and three months before the commencement of the Christian era. In order to fix their new moons and years, as well as their feasts and festivals, they were obliged to make use of astronomical calculations and cycles. The first cycle they used for this purpose was one of 84 years; but this being discovered to be faulty, they had recourse to the Metonic cycle of 19 years, which was established by the authority of Rabbi Hillel, prince of the Sanhedrim, about the year 360 of the Christian era. This they still use, and say it is to be observed till the coming of the Messiah. Indeed, some contend that their present practice of dating from the Creation of the world is of great antiquity. Their year is luni-solar, consisting either of 12 or 13 months each, and each month of 29 or 30 days; for in the compass of the Metonic cycle there are 12 common years, consisting of 12 months, and seven intercalary years, consisting of 13 months, which are the third, sixth, eighth, eleventh, fourteenth, seventeenth, and nineteenth of the cycle.

The birth of the Saviour of the world probably took place somewhat earlier than the date which is usually assigned to it. Usage, however, has long fixed the era to which it gave rise, namely *the Christian era*, or the era of the Incarnation, to begin on the 10th day of January, in the middle of the fourth year of the 194th Olympiad, the 753rd year of the building of Rome, and in the 4714th of the Julian period. The use of the Christian era was introduced in the sixth century; in France it was first employed in the seventh. About the eighth it was generally adopted; but considerable difference has existed not only in various countries but even in the same place in the same country and at the same period, respecting the commencement of the year. Nor did the use of the era become universal in Christendom till the fifteenth century. The Christian year consists of 365 days for three successive years, and of 366 in the fourth, which is termed leap-year. This computation subsisted for 1000 years without alteration, and is still used by the followers of the Greek church. The simplicity of this form has brought it into very general use, and it is customary for astronomers and chronologists, in treating of ancient times, to date back in the same order from its commencement. There is unfortunately a little ambiguity on this head, some persons reckoning the year immediately before the birth of Christ as 1 B.C., and others noting it with 0, and the second year before Christ with 1, thus producing one year less than those who use the former notation. The first, however, is the usual mode.

The Christian year, arranged as has been shown, was 11′ 11″ too long, an error which amounted to a day in nearly 129 years. Towards the end of the sixteenth century the time of celebrating the Church festivals had advanced ten days beyond the periods fixed by the Council of Nice in 325. It was, in consequence, ordered by a Bull of Gregory XIII. that the year 1582 should consist of only 355 days, which was brought about by omitting ten days in the month of October, namely from the 5th to the 14th. And to prevent the recurrence of a like irregularity, it was also ordered that in three centuries out of four the last year should be a common instead of a leap-year, as it would have been by the Julian Calendar. The year 1600 remained a leap-year, but 1700, 1800, and 1900 were to be common years. This amended mode of computing was called 'The New Style.' It was immediately adopted in all Catholic countries, but Protestants came to use it only gradually. In England the reformed calendar was adopted in the year 1752 by omitting eleven days, to which the difference between the styles then amounted. The alteration was effected in the month of September, the day which would have been the third being called the fourteenth.

The following summary shows the correspondence of the principal epochs, eras, and periods with that of the birth of Christ, or Christian era.

Epochs, Eras, and Periods.	Months and Years of Commencement.
The Grecian year of the World	September 1, B.C. 5598.
The ecclesiastical era of Constantinople	March 21, or April 1, B.C. 5508.
The civil era of Constantinople	September 1, B.C. 5508.
The Alexandrian era	August 29, B.C. 5502.
The ecclesiastical era of Antioch	September 1, B.C. 5492.
The Julian period	January 1, B.C. 4713.
The Mundane era	October, B.C. 4008.
The Jewish Mundane era	Vernal equinox, B.C. 3761.
The civil Jewish era	October, B.C. 3761.
The era of Abraham	October 1, B.C. 2015.
The destruction of Troy	June 12 or 24, B.C. 1184.
The epoch of the building of Solomon's temple	May, B.C. 1015.
The era of the Olympiads	New moon of Summer solstice, B.C. 776.
The Roman era	April 21, B.C. 753.
The era of Nabonassar	February 26, B.C. 747.
The epoch of Daniel's 70 weeks	Vernal equinox, B.C. 458.
The Metonic cycle	July 15, B.C. 432.
The Calippic period	New moon of Summer solstice, B.C. 330
The Philippean era	June, B.C. 323.

Epochs, Eras, and Periods.	Months and Years of Commencement.
The Syro-Macedonian era	September 1, B.C. 312.
The Tyrian era	October 19, B.C. 125.
The Sydonian era	October, B.C. 110.
The Cæsarean era of Antioch	September 1, B.C. 48.
The Julian era	January 1, B.C. 45.
The Spanish era	January 1, B.C. 38.
The Actian era	January 1, B.C. 30.
The Actian era in Egypt	September 1, B.C. 30.
The Augustan era	February 14, B.C. 27.
The Pontifical indiction	December 25, or January 1, B.C. 3.
The indiction of Constantinople	September 1, B.C. 3.
The vulgar Christian era	January 1, A.D. 1.
The destruction of Jerusalem	September 1, A.D. 69.
The era of the Maccabees	November 24, A.D. 166.
The era of Dioclesian	September 17, A.D. 284.
The era of Ascension	November 12, A.D. 295.
The era of Martyrs	February 23, A.D. 303.
The era of the Armenians	July 7, A.D. 552.
The era of the Hegira	July 16, A.D. 622.
The era of Yezdegird, or Persian era	June 16, A.D. 632.

Nicholas, in Lardner's *Cabinet Cyclopædia.* A valuable treatise on *Eras of Ancient and Modern Times* may be found in the *Companion to the Almanac*, 1830.—J. R. B.

CHRYSOLITE. [THARSHISH.]

CHRYSOPRASUS. [SHOHAM.]

CHURCH (Ἐκκλησία). The original Greek word, in its larger signification, denotes a number of persons called together for *any* purpose, an assembly of any kind, civil or religious. As, however, it is usually applied in the New Testament to religious assemblages, it is very properly translated by 'assembly,' in the few instances in which it occurs in the civil sense (Acts xix. 32, 39, 41). It is, however, well to note that the word rendered 'assembly' in these verses is the same which is rendered 'church' everywhere else.

In a few places the word occurs in the Jewish sense, of a congregation, an assembly of the people for worship, either in a synagogue (Matt. xviii. 17) or generally of the Jews regarded as a religious body (Acts vii. 38; Heb. ii. 12). The text last cited is quoted from Psalm xxii. 22; where the Septuagint uses ἐκκλησία for the Hebrew קהל, which has the same meaning, namely, assembly or congregation. Elsewhere also this word, which we render 'church' in the New Testament, is used by the Sept. for the Hebrew word which we render 'congregation' in the Old Testament.

But the word most frequently occurs in the Christian sense of an assemblage (of Christians) generally (1 Cor. xi. 18). Hence it denotes a church, the Christian church; in which, however, we distinguish certain shades of meaning, viz.—1. A particular church, a church in a certain place, as in Jerusalem (Acts viii. 1; xi. 22, &c.), in Antioch (Acts xi. 26; xiii. 1, &c.), in Corinth (1 Cor. i. 2; 2 Cor. i. 1), &c. &c. 2. Churches of (Gentile) Christians, without distinguishing place (Rom. xvi. 4). 3. An assembly of Christians which meets anywhere, as in the house of any one (Rom. xvi. 5; 1 Cor. xvi. 19; Philem. 2). The Church universal—the whole body of Christian believers (Matt. xvi. 18; 1 Cor. xii. 28; Gal. i. 13; Eph. i. 22; iii. 10; Heb. xii. 23, &c.).

CHUSHAN-RISHATHAIM (כּוּשַׁן רִשְׁעָתַיִם; Sept. Χουσαρσαθαίμ), a king of Mesopotamia, by whom the Israelites were oppressed for eight years (B.C. 1394 to B.C. 1402), until delivered by Othniel (Judg. iii. 8-10).

CHUZA (Χουζᾶς), steward of Herod Antipas, whose wife Joanna was one of those who employed their means in contributing to the wants of Christ and his apostles (Luke viii. 3).

CILICIA (Κιλικία), the south-eastern part of Asia Minor, bounded on the W. by Pamphylia; separated on the N. from Cappadocia by the Taurus range, and on the E. by Amanus from Syria; and having the gulf of Issus (Iskenderoon) and the Cilician Sea (Acts xxvii. 5) on the South. By the ancients the eastern part was called Cilicia Propria (ἡ ἰδίως Κιλικία, Ptolemy), or the level Cilicia (ἡ πεδιάς, Strabo); and the western, the rough (ἡ τραχεῖα, Strabo, xiv. 5), or mountainous (ἡ ὀρεινή, Herod. ii. 34). The former was well-watered, and abounded in various kinds of grain and fruits (Xenoph. *Anab.* i. 2. § 22. Cilicia—dives bonis omnibus terra. Ammianus Marcell. xiv. 8. § 1. The chief towns in this division were *Issus* (Xenoph. *Anab.* i. 4), at

the south-eastern extremity, celebrated for the victory of Alexander over Darius Codomannus (B.C. 333), and not far from the passes of Amanus (τῶν Ἀμανίδων λεγομένων Πυλῶν, Polyb. xii. 8); *Soles*, originally a colony of Argives and Rhodians, the birth-place of Menander, the comic poet (B.C. 262); the stoic philosopher Chrysippus (B.C. 206), and of Aratus, author of the astronomical poem τὰ Φαινόμενα (B.C. 270); and *Tarsus*, the birth-place of the Apostle Paul [TARSUS]. Cilicia Trachea furnished an inexhaustible supply of cedars and firs for ship-building; it was also noted for a species of goat, of whose skins cloaks and tents were manufactured. Its breed of horses was so superior, that 360 (one for each day of the year) formed part of the annual tribute to the king of Persia (Herod. iii. 90). The neighbourhood of Corycus produced large quantities of saffron (Crocum sylvestre optimum. Prima nobilitas Cilicio, et ibi in Coryco monte, Plin. *Nat. Hist.* xxi. 17). Herodotus says that the first inhabitants of the country were called Hypachæi, Ὑπαχαιοί; and derives the name of Cilicia from Cilix, son of Agenor, a Phœnician settler (vii. 91). He also states that the Cilicians and Lycians were the only nations within the Halys who were not conquered by Crœsus (i. 28). Though partially subjected to the Assyrians, Medes, Persians, Syrians, and Romans, the Eleuthero- (or free) Cilicians, as the inhabitants of the mountainous districts were called, were governed by their own kings (Reguli, Tacit. ii. 78), till the time of Vespasian. The sea-coast was for a long time occupied by pirates, who carried on the appropriate vocation of slave-merchants, and found ample encouragement for that nefarious traffic among the opulent Romans (Mannert, vi. 1; Strabo, xiv. 5); but at last their depredations became so formidable, that Pompey was invested with extraordinary powers for their suppression, which he accomplished in forty days. He settled the surviving freebooters at Solæ, which he rebuilt and named Pompeiopolis. Cicero was proconsul of Cilicia (A.U.C. 702), and gained some successes over the mountaineers of Amanus, for which he was rewarded with a triumph (*Epist. ad Fam.* xv. 4). Many Jews were settled in Cilicia. (Acts vi. 9; Philo, *De legat. ad Caium*, § 36.)

According to the modern Turkish divisions of Asia Minor, Cilicia Proper belongs to the Pashalic of Adana; and Cilicia Trachea to the Liwah of Itchil in the Mousselimlik of Cyprus. (Malte-Brun's *Geography*, Edinb. 1822, vol. ii. p. 97.) A copious account of the ancient Geography of Cilicia is given in Mannert's *Geographie der Griechen und Römer*. vi. 2, pp. 32-113.—J. E. R.

CINNAMON. [KINNEMON.]

CINNERETH, or CINNEROTH (כִּנֶּרֶת or כִּנְּרוֹת), one of the 'fenced cities' of the tribe of Naphtali (Josh. xix. 35; Deut. iii. 17; Josh. xi. 2). In the last of the texts cited it seems to indicate a district. It is also the earlier name of the lake Gennesareth (which is supposed to be a corruption of Cinnereth), from which we may collect that the town lay on the western border of the lake, and was of sufficient consequence to give its own name to it. It is even supposed that Cinnereth, afterwards Gennesareth, was the earlier name of the town of Tiberias, and under the latter change still extended its own denomination to the lake; nor is there anything improbable in this conjecture.

CIRCUMCISION. The history of Jewish Circumcision lies on the surface of the Old Testament. Abraham received the rite from Jehovah, Moses established it as a national ordinance, and Joshua carried it into effect before the Israelites entered the land of Canaan. Males only were subjected to the operation, and it was to be performed on the eighth day of the child's life: foreign slaves also were forced to submit to it, on entering an Israelite's family. Those who are unacquainted with other sources of information on the subject besides the Scriptures might easily suppose that the rite was original with Abraham, characteristic of his seed, and practised among those nations only who had learned it from them. This, however, appears not to have been the case; and the principal object of the present article is to put together what is known on the *extra-Jewish* Circumcision.

The topic has been treated with much research by so many learned writers that it may seem improbable that any passages of ancient authors which bear upon it can have escaped notice. Michaelis (*Laws of Moses*, vol. iv.), to whom we are indebted for various references, has dedicated forty-one pages to the subject: nor does it appear that any important addition has been made by later inquirers. It remains, therefore, to form our own judgment upon the facts which have been ascertained.

First of all, *the Egyptians* were a circumcised people. Vonck, followed by Wesseling (*ad Herod.* ii. 37) and by numerous able writers, alleged that this was not true of the whole nation, but of the priests only; that at least the priests were circumcised is beyond controversy. No one can for a moment imagine that they adopted the rite from the despised shepherds of Goshen; and we are immediately forced to believe that Egyptian circumcision had an independent origin. A great preponderance of argument, however, appears to us to prove that the rite was universal among the old Egyptians, as long as their native institutions flourished; although there is no question that, under Persian and Greek rule, it gradually fell into disuse, and was retained chiefly by the priests and by those who desired to cultivate ancient wisdom (see Origen, quoted by Michaelis, § 185, p. 25).

Herodotus distinctly declares that the Egyptians practised circumcision; and that he meant to state this of the whole nation is manifest, not only since he always omits to add any restriction, but because, immediately following his first statement of the fact, he annexes this remark—'The *priests* moreover shave their whole body every other day,' &c. (Herod. ii. 37). It is difficult to suppose that the historian could have been mistaken on this point, considering his personal acquaintance with Egypt. Further, he informs us that the Colchians were a colony from Egypt, consisting of soldiers from the army of Sesostris. With these he had conversed (ii. 104), and he positively declares that they practised circumcision. Yet if the rite had been confined to the priestly caste of Egypt, it could hardly have been found among the Colchians at all. The same remark will apply to the savage Troglodytes of Africa, every branch of whom, except one (the Kolobi), as Diodorus in-

forms us (iii. 81), was circumcised, having learnt the practice from the Egyptians. The Troglodytes appear to have been widely diffused through Libya, which argues a corresponding diffusion of the rite; yet, from the silence of Diodorus concerning the *other* savage nations whom he recounts as African Ethiopians, we may infer that it was *not* practised by them. The direct testimony of Diodorus, Philo, and Strabo is to the same effect as that of Herodotus respecting Egypt; yet this can hardly be called confirmatory, since in their days the rite was no longer universal. Josephus (*Contra Ap.* ii. 13) speaks of it as practised by the priests only; he however reproaches Apion for neglecting the institutions of his country in remaining uncircumcised. Origen, in the passage above referred to, confirms the statement of Josephus. In Kenrick's *Herodotus* (ii. 37) the French commissioners who examined some Egyptian mummies, are quoted, as establishing from them the fact of Egyptian circumcision.

Herodotus, moreover, tells us that the Ethiopians were also circumcised; and he was in doubt whether they had learned the rite from the Egyptians, or the Egyptians from them. By the Ethiopians we must understand him to mean the inhabitants of Meroë or Sennaar. In the present day the Coptic Church continues to practise it, according to C. Niebuhr (quoted by Michaelis); the Abyssinian Christians do the same (Ludolf. *Hist. Ethiop.* do. do.); and that it was *not* introduced among the latter with a Judaical Christianity appears from their performing it upon both sexes. (It is scarcely worth while to invent a new name, recision, or resection, for accuracy's sake.) Oldendorp describes the rite as widely spread through Western Africa—16° on each side of the Line,—even among natives that are not Mohammedan. In later times it has been ascertained that it is practised by the Kafir nations in South Africa, more properly called Kosa, or Amakosa, whom Prichard supposes to form 'a great part of the native population of Africa to the southward of the Equator.' He remarks upon this:—'It is scarcely within probability that they borrowed the custom from nations who profess Islám, or we should find among them other proofs of intercourse with people of that class. It is more probable that this practice is a relic of ancient African customs; of which the Egyptians, as it is well known, partook in remote ages' (Prichard, *Physical Hist. of Man*, 3rd ed. vol. ii. p. 287).

How far the rite was extended through the Syro-Arabian races is uncertain. In the 9th section of the Epistle of Barnabas (which, whether genuine or not, is very old), the writer comments as follows:—'But you will say, the Jews were circumcised for a sign. And so are all the Syrians and the Arabians, and the idolatrous priests; .... and even the Egyptians themselves are circumcised.' This language is vague and popular; yet it shows how notorious was the wide diffusion of the custom. The Philistines, in the days of Saul, were however uncircumcised; so also, says Herodotus (ii. 104), were all the Phoenicians who had intercourse with the Greeks. That the Canaanites, in the days of Jacob, were not all circumcised, is plain from the affair of Dinah and Shechem. The story of Zipporah (Exod. iv. 25) who did not circumcise her son, until fear came over her, that Jehovah would slay her husband Moses, proves that the family of Jethro, the Midianite, had no fixed rule about it, although the Midianites are generally regarded as children of Abraham by Keturah. On the other hand, we have the distinct testimony of Josephus (*Antiq.* i. 12, 2) that the Ishmaelite Arabs, inhabiting the district of Nabathaea, were circumcised after their 13th year: this must be connected with the tradition which no doubt existed among them, of the age at which their forefather Ishmael underwent the rite (Gen. xvii. 25). St. Jerome also (quoted by Michaelis) informs us that, to his day, '*usque hodie*,' the tribes dwelling round Judaea and Palestine were circumcised, 'especially all the Saracens who dwell in the desert.' Elsewhere he says that, 'except the Egyptians, Idumaeans, Ammonites, Moabites, and Ishmaelites of the desert, *of whom the greater part* are circumcised, all other nations in the world are uncircumcised.' A negative argument is more or less dangerous: yet there is something striking in the fact, that the books of Moses, of Joshua, and of Judges, never bestow the epithet *uncircumcised* as a reproach on any of the seven nations of Canaan, any more than on the Moabites or Ammonites, the Amalekites, the Midianites, or other inland tribes with whom they came into conflict. On the contrary, as soon as the Philistines become prominent in the narrative, after the birth of Samson, this epithet is of rather common occurrence. The fact also of bringing back, as a trophy, the foreskins of slain enemies, never occurs except against the Philistines (1 Sam. xviii.). We may perhaps infer, at least until other proof or disproof is attained, that while the Philistines, like the Sidonians and the other maritime Syrian nations known to the Greeks, were wholly strangers to the practice, yet among the Canaanites, and all the more inland tribes, it was at least so far common that no general description could be given them from the omission.

It appears from Josephus (*Antiq.* xiii. 9), that when Hyrcanus subdued the Idumaeans, he forced them to be circumcised on pain of expatriation. This shows that they had at least disused the rite. But that is not wonderful, if it was only a custom, and not a national religious ordinance; for, as Michaelis observes, the disuse of it may have dated from the edict of Antiochus Epiphanes, of which it is said (1 Macc. i. 41, 42), 'The King Antiochus wrote to all his kingdom, that all should be one people; and that all should keep the ordinances of his country: and all the nations acquiesced according to the word of the king.'

The rather obscure notices which are found in Jeremiah and Ezekiel of the circumcision of the nations who were in immediate contact with Israel, admit of a natural interpretation in conformity with what has been already adduced (Jer. ix. 25; Ezek. xxxi. 18; also xxxii. 19, *et passim*). The difficulty turns on the new *moral* use made of the term 'uncircumcised,' to mean simply *impure*. The passage in Jeremiah is thus translated by Ewald:—

'Behold, the days come, that I visit all the uncircumcised circumcised ones; Egypt and Judah, Edom and the children of Ammon and Moab; and all the dwellers in the wilderness that are shaven on the temples: for all the heathen are

uncircumcised, and so is all the house of Israel uncircumcised in heart.'

The shaving of the temples appears to be a religious custom of the same kind: Herodotus (iii. 8) ascribes it to the Arabs generally, and Josephus rather strangely regards the epithet *τροχοκουρίδες*, in the ancient Greek poet Chœrilus (*c. Ap.* i. 22), as a description of his own countrymen. Knowing that the Egyptians were circumcised, it no longer remains doubtful how *the reproach of Egypt* (Josh. v. 9) should be interpreted.

How far the rite of circumcision spread over the south-west of Arabia no definite record subsists. The silence of the Korân confirms the statement of Abulfedâ (*Histor. Ante-Islamica*, p. 180, ed. Fleischer, 1831), that the custom is older than Mohammed, who, it would appear, in no respect regarded it as a religious rite. Nevertheless it has extended itself with the Mohammedan faith, as though it were a positive ordinance. Pocock (*Specimen Hist. Arab.*, p. 309) cites a tradition, which ascribes to Mohammed the words—

الختان سنة الرجال مكرمة النسا

Circumcision is an ordinance for men, and honourable in women. This extension of the rite to the other sex might, in itself, satisfy us that it did not come to those nations from Abraham and Ishmael. We have already seen that Abyssinian circumcision has the same peculiarity: so that it is every way probable that Southern Arabia had the rite from the same source or influence as Ethiopia. In fact, the very closest relations are known to have subsisted between the nations on the opposite coasts of the Red Sea. Another passage of Abulfedâ (*Annales Muslemici*, vol. i. p. 92) gives specific information on this subject. In the battle of Ohod, in the third year of the Hegira, 'Hamza, the uncle of the prophet, committed great slaughter. When Sabba' ben' Abd ul Uzzâ, whose mother was a circumciser in Mecca, passed by him, Hamza called out, Come on, you son of a she-circumciser! [*resectricis nympharum!*]' The form of the word proves that this was strictly the trade of the old woman, and that the custom, as applied to females, was no innovation of those days.

Pocock quotes the ecclesiastical historian Philostorgius, for the fact that the Himyarite Arabs circumcise their children on the *eighth day*. He adds a passage from Al Gazzâli, in which the writer says, that the Arabs differ from the Jews as to the time; for they postpone it until the child has teeth, which he thinks safer. Finally, he cites Ibn Athîr, who, writing of the times antecedent to Mohammed, says that the Arabs were accustomed to circumcise between the tenth and fifteenth years.

The statement of Philostorgius may receive light from the Arab historians, who relate (Jost, *Geschichte der Israeliten*, vol. v. p. 236, sqq.) that about a century before the Christian era, several Jewish sovereigns reigned in the region called Shebâ by the Jews, and Yemen by the moderns, where the Himyarites (or Homeritæ) dwelt. The few facts preserved show that they were not close observers of the Mosaic Law, and the suspicion might arise that they were called *Jews* chiefly from their having received Jewish circumcision. We have, however, a collateral evidence of much importance, to prove that the influence acting on them had really come from Judæa; namely, it is well known that in Abyssinia a nation called the Falasha still exists, which has very thoroughly adopted the Jewish religion, insomuch as to have invented legends that allege their descent from the Hebrews. They possess the Old Testament in the Ghees language and character, but their own language is said to be quite alien from the Hebrew; facts which prove that they were really *proselyted* by the Jews at some early period. [ABYSSINIA.] At that same time, it is credible, the Hebrew faith met with similar success on the opposite coast of the Red Sea. Jost believes that, during the war of the Maccabees, great numbers of Jews migrated into Arabia; and it is certain that in later times they were very numerous in Yemen, and their influence great. Wherever they were settled proselytes must have been made; and great zeal was doubtless used to induce them to circumcise their children duly according to the Mosaic rite. We can then quite understand Philostorgius's fact, if we are allowed to suppose that he spoke loosely of 'the Himyarites' doing that which was done by a great many of them. [Concerning the connection of the Jews with Yemen, see farther under SOLOMON.]

An interesting story is told by Josephus—the date so late as the reign of the Emperor Claudius (*Antiq.* xx. 2)—how Izates, the young king of Adiabene, and his mother Helena, were converted by Jewish teachers to a belief in the one true God, the God of the Hebrews: and how, when Izates was desirous of being circumcised, and his mother dreaded that it would alienate his subjects, his Jewish instructor Ananias warmly seconded her views, with a heart like that of Paul; telling him that if he was resolved to imitate Jewish institutions, he could, without being circumcised, adore the true divinity; and that this was far more important than circumcision. At the time he satisfied the young monarch; but afterwards, another Jew, named Eleazar, came from Galilee, and inveighed so strongly on the impiety of his disobedience, that, without more delay, Izates submitted to the rite. It is evident that, in a controversy of this sort, the more narrow-minded teacher had the advantage: and, in consequence, it appears that 'proselytes of righteousness' were always circumcised (Judith xiv. 10, and Tacit. *Hist.* v. 5). The facility with which whole nations have adopted the practice from the Mohammedans proves that it is not so serious an obstacle to the spread of a religion as some have thought it.

The moral meaning of the word 'uncircumcised' was a natural result of its having been made legally essential to Hebrew faith. 'Uncircumcised in heart and ears' was a metaphor to which a prophet would be carried, as necessarily as a Christian teacher to such phrases as 'unbaptized in soul,' or 'washed by regeneration.' If, however, we try to take a step farther back still, and ask *why* this ordinance in particular was selected, as so eminently essential to the seed of Abraham, we probably find that we have reached a point at which we must be satisfied with knowing the fact without the reason. *Every* external ordinance, as for instance baptism, must have

more or less that is arbitrary in it. It is, however, abundantly plain that circumcision was *not* intended to separate the Jews from other nations generally, for it could not do so: and, least of all, from the Egyptians, as the words in Joshua v. 9 show. Rather, it was a well known and already understood *symbol of purity*.

A great deal of speculation and argument has been employed on the utility and origin of the rite to the Egyptians and others. Herodotus, long ago, declared that it was adopted for cleanliness, καθαριότητος εἵνεκα: and a slight acquaintance with the ideas of the Turks, concerning personal defilement, will make it easy to believe that an idea of cleanliness continued the practice among nations which had once become habituated to it. In the ancient Egyptians this Turkish spirit was carried to a great height; nor is it wonderful that in hot climates detailed precepts of cleanliness form a very large part of primitive religion. But we can hardly rest in this as a sufficient account of the *origin* of the rite. A sort of circumcision has been found in various parts of the Indian Seas and Pacific Ocean; many notices of which have been collected in the *Penny Cyclopædia* (art. *Circumcision*); but nothing would be gained by reproducing them here. It is more important to state that an adequate physical reason for performing the operation on females of several African races has been fully substantiated. The curious reader will find in Laurence's *Lectures* (chap. v.), the decisive testimony of Mr. Barrow and Dr. Somerville on this point; with an allusion to the efforts of the Romish missionaries to forbid the practice in Abyssinia, and the unexpected consequences which thwarted them. No positive evidence has yet been obtained, that the operation is equally expedient for the males in any of the same races: yet the analogy of the two cases forces us to believe that in both the custom has a physical or medical ground; especially when it is remarked to predominate so much in Africa, where alone (as far as yet appears) such physical peculiarities of structure exist. It was practised, moreover, by the males of African tribes so savage and so little addicted to religious ceremonialism, that a broader ground must be sought for it than simple cleanliness. We have already named the Troglodytes. Strabo mentions two other tribes of Africa, whom he calls Kreophagi and Kolobi (xvi. 4; pp. 387-390, 392. ed. Tauch.), who practised on themselves a yet more shocking mutilation (κολοβοὶ τὰς βαλάνους), ascribed to the Kolobi by Diodorus also. The fact, also, that most of these nations performed whatever operation it was, not on infants, but on those who were advancing towards marriageable age, conspires to indicate that some physical inconvenience gradually showed itself (as with the Bushmen females), of which they desired to get rid. Jost looks upon *infant* circumcision as the distinguishing mark of Judaism; and this may be nearly correct, though we have seen that, according to Abulfedâ, some Arabs delayed it only till after teething. In fact Diodorus (iii. 31), when speaking of that branch of the Troglodyte nations, which was called Kolobi, declares that they were subjected to the operation in infancy (ἐκ νηπίου). Their unnatural and cruel custom is possibly to be referred to superstition. Some indeed have looked on circumcision itself as a softened form of the barbarous rite by which the Galli, or priests of Cybele, were qualified for their office. The Kolobite custom might, on the contrary, be a carrying out of that barbarity to the extremest point possible, short of exterminating the population of a tribe. In Winer's *Realwörterbuch* (art. Beschneidung) will be found details of the mode in which the Jews carry their law into effect; and of the still more singular and painful process by which a circumcised person was in some sort restored to his natural condition. (see 1 Macc. i. 15; Joseph. *Antiq.* xii. 5. 1; and Paul, 1 Cor. vii. 18, ἐπισπᾶσθαι).

If an independent and human origin has been discovered for Egyptian circumcision, the thought of necessity arises that the Israelites must have had it from the same sources as the nations around them; and it has been discussed (Spencer, *De Leg. Heb.*) whether they even borrowed it from the Egyptians. The idea has naturally given much offence: but in truth the question involves no peculiar difficulty; it is only part of another far wider inquiry. It is notorious that many other ancient nations had various ceremonies and institutions in common with the Jews, and that the Hebrew law is by no means in all points original. That sacrifice pre-existed, is on the surface of the Bible History. The same, however, is true of temples, tabernacles, priests, ever-burning fire, oracles, &c. The fact has been often denoted by saying that the Jewish institutions are a selection, revision and re-enactment of an older patriarchal religion.—F. W. N.

CISTERN. In a country which has scarcely more than one perennial stream, where fountains are not abundant, and where the months of summer pass without rain, the preservation of the rain-water in cisterns must always have been a matter of vast importance, not only in the pasture-grounds, but in gardens, and, above all, in towns. Hence the frequent mention of cisterns in Scripture, and more especially of those which are found in the open country. These were, it seems, the property of those by whom they were formed (Num. xxi. 22). They are usually little more than large pits, but sometimes take the character of extensive subterraneous vaults, open only by a small mouth, like that of a well. They are filled with rain water, and (where the climate allows) with snow during winter, and are then closed at the mouth with large flat stones, over which sand is spread in such a way as to prevent their being easily discovered. If by any chance the waters which the shepherd has thus treasured up are lost by means of an earthquake or some other casualty, or are stolen, both he and his flocks are exposed to great and imminent danger; as are also travellers who hasten to a cistern and find its waters gone. For this reason a failure of water is used as the image of any great calamity (Isa. xli. 17, 18; xliv. 3). There is usually a large deposit of mud at the bottom of these cisterns, so that he who falls into them, even when they are without water, is liable to perish miserably (Gen. xxxvii. 22, sq.; Jer. xxxviii. 6; Lam. iii. 53; Ps. xl. 2; lxix. 15). Cisterns were sometimes used, when empty, as prisons, and indeed prisons which were constructed under-ground received the same name, בור (Gen. xxxix. 20; xl. 15).

In cities the cisterns were works of much

labour, for they were either hewn in the rocks or surrounded with subterraneous walls, and lined with a fine incrustation. The system which in this respect formerly prevailed in Palestine is, doubtless, the same that exists at present; and indeed there is every probability that most of the cisterns now in use were constructed in very ancient times. Professor Robinson assures us, that 'the main dependence of Jerusalem at the present day is on its cisterns; and this has probably always been the case.' He then mentions the immense cisterns now and anciently existing within the area of the Temple; supplied partly by rain water, and partly by an aqueduct from Solomon's Pools, and which, of themselves, would furnish a tolerable supply in case of a siege. 'But, in addition to these, almost every private house in Jerusalem, of any size, is understood to have at least one or more cisterns, excavated in the soft limestone rock on which the city is built. The house of Mr. Lanneau, in which we resided, had no less than four cisterns; and as these are but a specimen of the manner in which all the better class of houses are supplied, I subjoin here the dimensions:

	Length.	Breadth.	Depth.
I.	15 feet.	8 feet.	12 feet.
II.	8 „	4 „	15
III.	10 „	10 „	15
IV.	30 „	30 „	20

This last is enormously large, and the numbers given are the *least* estimate. The cisterns have usually merely a round opening at the top, sometimes built up with stonework above, and furnished with a curb and a wheel for the bucket; so that they have externally much the appearance of an ordinary well. The water is conducted into them from the roofs of the houses during the rainy season; and, with proper care, remains pure and sweet during the whole summer and autumn. In this manner most of the larger houses and the public buildings are supplied. The Latin convent, in particular, is said to be amply furnished; and in seasons of drought is able to deal out a sufficiency for all the Christian inhabitants of the city.

Most of these cisterns have undoubtedly come down from ancient times; and their immense extent furnishes a full solution of the question as to the supply of water for the city. Under the disadvantages of its position in this respect, Jerusalem must necessarily have always been dependent on its cisterns; and a city which thus annually laid in its supply for seven or eight months could never be overtaken by a want of water during a siege. Nor is this a trait peculiar to the Holy City; for the case is the same throughout all the hill-country of Judah and Benjamin. Fountains and streams are few, as compared with Europe and America; and the inhabitants, therefore, collect water during the rainy season in tanks and cisterns in the cities, in the fields, and along the high roads, for the sustenance of themselves and of their flocks and herds, and for the comfort of the passing traveller. Many, if not the most, of these are obviously antique; and they exist not unfrequently along the ancient roads which are now deserted. Thus, on the long-forgotten way from Jericho to Bethel, 'broken cisterns' of high antiquity are found at regular intervals. That Jerusalem was thus actually supplied of old with water is apparent also from the numerous remains of ancient cisterns still existing in the tract north of the city, which was once enclosed within the walls' [RESERVOIRS].

CITIES. [TOWNS.]

CITIES OF REFUGE. Places of refuge where, under the cover of religion, the guilty and the unfortunate might find shelter and protection were not unknown among the ancient heathen. The jus asyli, or right of shelter and impunity, was enjoyed by certain places reputed sacred, such as groves, temples and altars. This protective power commonly spread itself over a considerable district round the holy spot, and was watched over and preserved by severe penalties. Yet the fate of Pausanias, were there no other similar case, shows that it could not always stand against the assaults of popular indignation. Pausanias, having tampered with the great enemies of his native country, the Persians, was tried at Sparta and condemned. In order to escape from the consequent punishment, he fled into a temple of Minerva. With a view to keep him there and thus punish him with death, the Ephori blocked up the doors and destroyed the roof, the mother of the criminal bringing the first stone.

Among the Greeks and Romans the number of these places of asylum became in process of time very great, and led, by abuse, to a fresh increase of criminals. Tiberius, in consequence, caused a solemn inquiry into their effects to be made, which resulted in a diminution of their number and a limitation of their privileges (Suet. *Tib.* 37, compared with Ernesti, *Excursus ad h. l.*; Osiander, *De Asylis Gentium*, in Gronov. *Thesaur.* t. vi.).

In the Apocrypha (2 Macc. iv. 33) mention is made of a city having the jus asyli—'Onias withdrew himself into a sanctuary at Daphne that lieth by Antiochia.' The temple of Diana at Ephesus (Acts xix. 27) was also a heathen asylum, whose privileges in this respect increased with the progress of time.

This pagan custom passed into Christianity. As early as Constantine the Great, Christian churches were asylums for the unfortunate persons whom an outraged law or powerful enemies pursued. Theodosius, in 431, extended this privilege to the houses, gardens, and other places which were under the jurisdiction of the churches, and the synod of Toledo, in 681, widened the right of asylum to thirty paces from every church. Since then this ecclesiastical privilege prevailed in the whole of Catholic Christendom, and was preserved undiminished, at least in Italy, so long as the papal independence remained. The right acted beneficially in ages when violence and revenge predominated, and fixed habitations were less common than now; but its tendency to transfer power from the magistrate to the priesthood was injurious to the inviolability of law and the steady administration of justice. It has accordingly in recent times been abrogated by most governments (*Conversations Lexicon*, in voc.).

Among the Jews the 'cities of refuge' bore some resemblance to the asylum of the classic nations, but were happily exempt from the evil consequences to which reference has been made, and afford, even to the present day, no mean

proof of the superior wisdom and benignant spirit of the Jewish laws.

The institution was framed with a view to abate the evils which ensued from the old established rights of the blood-avenger [BLOOD-REVENGE], and thereby to further the prevalence in the nation of a mild, gentle, and forgiving spirit.

From the laws on this point (Exod. xxi. 13; Num. xxxv. 9-35; Deut. xix. 1-13) it appears that Moses set apart out of the sacerdotal cities six as 'cities of refuge.' There were, on the eastern side of the Jordan, three, namely, 'Bezer in the wilderness, in the plain country of the Reubenites, and Ramoth in Gilead of the Gadites, and Golan in Bashan of the Manassites' (Deut. iv. 43); on the western side three, namely, 'Kedesh in Galilee in Mount Naphtali, and Shechem in Mount Ephraim, and Kirjath-arba, which is Hebron, in the mountain of Judah' (Josh. xx. 7). If found desirable, then other cities might be added. An inspection of the map will show how wisely these places were chosen so as to make a city of refuge easy of access from all parts of the land. To any one of these cities a person who had unawares and unintentionally slain any one might flee, and if he reached it before he was overtaken by the avenger of blood, he was safe within its shelter, provided he did not remove more than a thousand yards from its circuit, nor quit the refuge till the decease of the high-priest under whom the homicide had taken place. If, however, he transgressed these provisions, the avenger might lawfully put him to death. The roads leading to the cities of refuge were to be kept in good repair. Before, however, the fugitive could avail himself of the shelter conceded by the laws, he was to undergo a solemn trial, and make it appear to the satisfaction of the magistrates of the place where the homicide was committed that it was purely accidental. Should he, however, be found to have been guilty of murder, he was delivered 'into the hand of the avenger of blood, that he might die.'

And the Israelites were strictly forbidden to spare him either from considerations of pity or in consequence of any pecuniary ransom. This disallowal of a compensation by money in the case of murder shows a just regard for human life, and appears much to the advantage of the Hebrew legislation when compared with the practice of other countries (Athens, for instance, and Islam), in which pecuniary atonements were allowed, if not encouraged, and where, in consequence, the life of the poor must have been in as great jeopardy as the character of the wealthy.

The asylum afforded by Moses displays the same benign regard to human life in respect of the homicide himself. Had no obstacle been put in the way of the Goel, instant death would have awaited any one who had the misfortune to occasion the death of another. By his wise arrangements, however, Moses interposed a seasonable delay, and enabled the manslayer to appeal to the laws and justice of his country. Momentary wrath could hardly execute its fell purposes, and a suitable refuge was provided for the guiltless and unfortunate.

Yet as there is a wide space between the innocence of mere homicide and the guilt of actual murder, in which various degrees of blame might easily exist, so the legislator took means to make the condition of the manslayer less happy than it was before the act or the mischance, lest entire impunity might lead to the neglect of necessary precaution and care. With great propriety, therefore, was the homicide made to feel some legal inconvenience. Accordingly he was removed from his patrimony, restricted in his sphere of locomotion, affected indirectly in his pecuniary interests, and probably reduced from an affluent or an easy station to one of service and labour (Michaelis, *Mos. Recht*, vi. 4). Should any reader still think that this treatment of a manslayer was unnecessarily severe, let him advert to the spirit of the age, and especially study the recognised rights of the next of kin to a slain person, and he will most probably be ready to allow that everything was done in this matter which circumstances admitted. The benefit of the protection afforded was common to strangers and sojourners with native Israelites.

What ensues rests on the authority of the Rabbins. In order to give the fugitive all possible advantage in his flight, it was the business of the Sanhedrim to make the roads that led to the cities of refuge convenient by enlarging them and removing every obstruction that might hurt his foot or hinder his speed. No hillock was left, no river was allowed over which there was not a bridge, and the road was at least two and thirty cubits broad. At every turning there were posts erected bearing the words *Refuge, Refuge*, to guide the unhappy man in his flight; and two students in the law were appointed to accompany him, that, if the avenger should overtake him before he reached the city, they might attempt to pacify him till the legal investigation could take place.

When once settled in the city of refuge, the manslayer had a convenient habitation assigned him gratuitously, and the citizens were to teach him some trade whereby he might support himself. To render his confinement more easy, the mothers of the high-priests used to feed and clothe these unfortunate fugitives, that they might not be impatient and pray for the death of their sons, on whose decease they were restored to their liberty and their property. If the slayer died in the city of refuge before he was released, his bones were delivered to his relations, after the death of the high-priest, to be buried in the sepulchre of his fathers (Lewis, *Origines Hebraicæ*).

That the right of asylum among the Jews was in later periods of their history so extended as to open the door to great abuses may be inferred from 1 Macc. x. 43, where unqualified impunity and exemption from both liabilities and penalties are promised, under the influence, not of the Mosaic law, but of heathen morals and ambition, to 'whosoever they be that flee unto the temple at Jerusalem, or be within the liberties thereof.'

In the words now cited reference appears to be made to a custom which prevailed from very early times, both among the chosen people and the nations of the world, of fleeing, in case of personal danger, to the altar. With the Jews it was customary for the fugitive to lay hold of the horns of the altar, whether in the tabernacle or temple; by which, however, shelter and security were obtained only for those who had committed sins of ignorance or inadvertence: thus true did Moses

remain to his principle that the wilful shedding of human blood could only by blood be atoned—a principle which the advances of civilization and the spread of the gentle spirit of the Gospel have caused to be questioned, if not exploded (Exod. xxi. 14; 1 Kings i. 50; ii. 28). From the two last passages it seems that state criminals also sought the protection of the altar, probably more from the force of custom than any express law. Their safety, however, depended on the will of the king; for in the passages referred to it appears that in one case (that of Adonijah) life was spared, but in the other (that of Joab) it was taken away even 'by the altar.' Compare Matt. xxiii. 35.—J. R. B

CITIZENSHIP. Strict isolation did by no means, as some suppose, form the leading principle in the system of theocracy as laid down by Moses, since even non-Israelites, under the various names of נר, נכרי, or תושב, not only were allowed to reside in Palestine, but had the fullest protection of the law, equally with the native Israelites (Exod. xii. 19; Lev. xxiv. 22; Num. xv. 15; xxxv. 15; Deut. i. 16; xxiv. 17: the law of usury, Deut. xxiii. 20, made, however, an exception), and were besides recommended in general terms by Moses to humanity and charity (Exod. xxii. 21; xxiii. 9; Lev. xix. 33, 34; Deut. x. 18; comp. Jer. vii. 6; Mal. iii. 5; Joseph. *Contra Ap.* ii. 28), as well as to a participation in certain prerogatives granted to the poor of the land, such as a share in the tithe and feast-offering, and the harvest in the Jubilee-year (Deut. xiv. 29; xvi. 10, 14; xxvi. 11; Lev. xxv. 6). In return, it was required on the part of non-Israelites not to commit acts by which the religious feelings of the people might be hurt (Exod. xx. 10; Lev. xvii. 10; xviii. 26; xx. 2; xxiv. 16; Deut. v. 14. The eating of an animal which had died a natural death, Deut. xiv. 21, seems to have been the sole exception). The advantage the Jew had over theGentile was thus strictly spiritual, in his being a citizen, a member of the theocracy, of the קהל יהוה (community of God), on whom positive laws were enjoined. But even to this spiritual privilege Gentiles were admitted under certain restrictions (Deut. xxiii. 1-9); thus we find among the Israelites, דואג, an Edomite (1 Sam. xxi. 8.), as also אוריה, an Hittite (a Canaanite). The only nations that were altogether excluded from the citizenship of the theocracy by especial command of the Lord, were the Ammonites and Moabities, from a feeling of vengeance against them: and in the same situation were all castrated persons, and bastards, from a feeling of disgrace and shame (Deut. xxiii. 1-6). In the time of Solomon, no less than 153,600 strangers were resident in Palestine (2 Chron. ii. 17).

Roman citizenship (πολιτεία, Acts xxii. 28, jus civitatis, civitas) was granted in the times of the Emperors to whole provinces and cities (Dio Cass. xli. 25; Suet. *Aug.* 47), as also to single individuals, for some service rendered to the state or the imperial family (Suet. *Aug.* 47), or even for a certain sum of money (Acts xxii. 28; Dio Cass. xli. 24). The Apostle Paul was a Roman citizen by family (Acts, *l. c.*), and hence his protesting against corporal or capital punishment (Acts xvi. 37; comp. Cic. *Verr.* v. 57, 65; Euseb. *Hist. Eccles.* v. 1, etc.).—E. M.

CITRON. [Tapuach.]

CLAUDA (Κλαύδη), a small island off the S.W. coast of Crete, mentioned in Acts xxvii. 16. It was also called Gaudos (Mela, ii. 7; Plin. *Hist. Nat.* iv. 42), and now bears the name of Gozzo.

CLAUDIA (Κλαυδία), a Christian female of Rome, mentioned in 2 Tim. iv. 21.

CLAUDIUS (Κλαύδιος), the fifth Roman emperor, and successor of Caligula, A.D. 41-54 (Acts xi. 28; xviii. 2). His full name was Tiberius Claudius Nero Germanicus. Previously to his accession he led rather a dissolute life, and the throne was in a great measure secured to him through the address and solicitations of Herod Agrippa (Joseph. *Antiq.* xix. 2. 1, c. 3 and 4; comp. Suet. *Claud.* 10). This obligation he returned by great and peculiar favours to that personage; and the Jews were generally treated with indulgence till the ninth year of his reign, when those who abode at Rome were all banished thence (Acts xviii. 2; comp. Suet. *Claud.* 25). Several famines occurred under Claudius, one of which, in the fourth year of his reign, extended to Palestine and Syria, and appears to be that which was foretold by Agabus (Acts xi. 28, and Kuinoel, *in loc.*; also Krebs, *Obs. in N. T.* p. 210).

CLAUDIUS LYSIAS. [Lysias.]

CLAUDIUS FELIX. [Felix.]

CLAY, a substance frequently mentioned in Scripture, chiefly with reference to its employment by the potter, the elegant and useful forms assumed by the rude material under his hands supplying a significant emblem of the Divine power over the destinies of man (Isa. lxiv. 8; Rom. ix. 21). A remarkable allusion to the use of clay in sealing occurs in Job xxxviii. 14, 'He turneth it as clay to the seal.' This may be explained by reference to the ancient practice of impressing unburnt bricks with certain marks and inscriptions which were obviously made by means of a large seal or stamp. We trace this in the bricks of Egypt and Babylon [Bricks]. Modern Oriental usages supply another illustration. Travellers, when entering the khans in towns, often observe the rooms in which goods have been left in charge of the *khanjee* sealed on the outside with clay. A piece of clay is placed over the lock, and impressed by a large wooden stamp or seal.

CLEMENT (Κλήμης), a person mentioned by Paul (Phil. iv. 3), as one whose name was in the book of life. For the meaning of this phrase, see Book of Life. This Clement was, by the ancient church, identified with the bishop of Rome of the same name (Euseb. *Hist. Eccles.* iii. 4; *Constitut. Apost.* vii. 46); and that opinion has naturally been followed by Roman Catholic expositors. It cannot now be proved incorrect; but the suspicion exists that the case here may be as with many other names in the New Testament, which have been assigned to celebrated persons of a later period. Clement is said to have lived to the third year of the emperor Trajan (A.D. 100), when he suffered martyrdom.

There is an epistle of Clement to the Corinthians, which was highly esteemed by the ancient church, and was publicly read in many churches [Epistles, Apostolical].

1. CLEOPAS (Κλεόπας), one of the two disciples to whom Jesus appeared in the way to Emmaus (Luke xxiv. 18). He is not to be con-

founded with the other Cleophas, who was also called Alphæus.

2. CLEOPHAS (Κλωπᾶς), or rather Clopas, who was also called Alphæus, which see.

CLIMATE. [Palestine.]

CLOUD. The allusions to clouds in Scripture, as well as their use in symbolical language, must be understood with reference to the nature of the climate, where the sky scarcely exhibits the trace of a cloud from the beginning of May to the end of September, during which period clouds so rarely appear, and rains so seldom fall, as to be considered phenomena—as was the case with the harvest rain which Samuel invoked (1 Sam. xii. 17, 18), and with the little cloud, not larger than a man's hand, the appearance of which in the west was immediately noticed as something remarkable not only in itself, but as a sure harbinger of rain (1 Kings xviii. 44).

As in such climates clouds refreshingly veil the oppressive glories of the sun, clouds often symbolize the Divine presence, as indicating the splendour, insupportable to man, of that glory which they wholly or partially conceal (Exod. xvi. 10; xxxiii. 9; xxxiv. 5; xl. 34, 35; Num. xi. 25; xxi. 5; Job xxii. 14; Ps. xviii. 11, 12; xcvii. 2; civ. 3; Isa. xix. 1; Matt. xvii. 5; xxiv. 30, &c.; Acts i. 9; Rev. i. 7; xiv. 14, 16). Somewhat allied to this use is that which makes clouds the symbols of the Divine power (2 Sam. xxii. 12; Ps. lxviii. 34; lxxxix. 6; civ. 3; Nahum i. 3).

Clouds are also the symbol of armies and multitudes of people (Jer. iv. 13; Isa. lx. 8; Heb. xii. 1). This is often very scientifically explained by the information that clouds are composed of innumerable drops of rain or vapour. This, although true, is certainly not the truth which the Hebrew poets had in view. Any one who has noticed the effect of a large and compact body of men upon the surface of an extensive plain, moving like a cloud in the clear sky, or who has seen a similar body of men upon the side of a distant hill, will find a more obvious source of the comparison.

There are many other dispersed symbolical allusions to clouds in Scripture not coming under these descriptions; but their purport is in every case too obvious to need explanation (see particularly Prov. xvi. 15; Eccles. xii. 2; Isa. iv. 5; xliv. 22; 2 Pet. ii. 17; Jude 12).

CLOUD, PILLAR OF. [Exodus.]

CNIDUS (Κνίδος), otherwise Gnidus, a town and peninsula of Doris in Caria, jutting out from the south-west part of Asia Minor, between the islands of Rhodes and Cos. It was celebrated for the worship of Venus (Strabo, xiv. p. 965; Plin. *Hist. Nat.* xxxvi. 15; Hom. *Odyss.* i. 30). The Romans wrote to this city in favour of the Jews (1 Macc. xv. 23), and St. Paul passed it in his way to Rome (Acts xxvii. 7).

COAL. It is generally assumed that, in those numerous passages of our version in which the word coal occurs, *charcoal*, or some other kind of *artificial* fuel, is to be understood; at all events, that the word has not its English meaning. The idea is founded upon the supposition that fossil coal was not known to the ancients as an article of fuel, and especially to the ancient inhabitants of Syria, whose country it is generally imagined did not produce it. It has indeed been strongly maintained that coal has not been used for fuel, even in England, much more than 400 years; notwithstanding the reasons alleged by Horsley and others that the Romans worked coal-mines in this country'; and by Whittaker, that it was used as fuel by the Saxons. Truth, however, here, perhaps, as usually, lies in the middle. Although the *general* use of coal for fuel is even in this country of comparatively recent date, and certainly so in every other, yet the conclusion that it was totally unknown and unemployed for any purpose, either here or in other countries, including even Syria, does not necessarily follow. The existence of coal in *Syria* is now placed beyond a doubt. Many indications of coal occur in the Lebanon mountains; the seams of this mineral even protrude through the superincumbent strata in various directions. At Cornale, eight hours from Beirout, at 2500 feet above the level of the sea, where the coal-seams are three feet in thickness, a mine is actually being worked by order of Mohammed Ali, in which more than 100 men are employed. The coal is of good quality, and mixed with iron pyrites. In 1837 the quantity of coal extracted was 14,700 cantars of 217 okes, each making about 4000 tons. A furnace for smelting the ore and a railroad to convey the coals to Beirout were then in contemplation. (Elliot, vol. ii. p. 257; and Dr. Bowring's 'Report').

The following passage from the Περὶ τῶν λίθων of Theophrastus, proves beyond a doubt, in the opinion of his learned translator and annotator Sir John Hill, that fossil coal was employed at least by 'the smiths,' *οἱ χαλκεῖς*, in the time of that ancient naturalist. *Οὓς δὲ καλοῦσιν εὐθὺς ἄνθρακας, τῶν θρυπτομένων, διὰ τὴν χρείαν, εἰσὶ γεώδεις. ἐκκαίονται δὲ καὶ πυροῦνται καθάπερ οἱ ἄνθρακες. εἰσὶ δὲ περί τε τὴν Λιγυστικὴν, ὅπου καὶ τὸ ἤλεκτρον, καὶ ἐν τῇ* Ἠλείᾳ, Βαδιζόντων Ὀλυμπιάζε *τὴν δ' ὄρους, οἷς καὶ οἱ χαλκεῖς χρῶνται, κη.* On this passage Sir John Hill observes, 'The substance here denoted, whatever mistakes there have been among authors since about it, appears to me to be evidently no other than the *common pit-coal*; and I have made it appear as clearly so in the translation, only by having properly rendered the word *ἄνθρακες*, the carelessly misunderstanding which word alone has been the occasion of all the erroneous guesses about the substance denoted. The authors of these seem all to have understood the word *ἄνθραξ* as signifying fossil or pit-coal; and therefore as the author compares the burning of this substance to that, they were necessitated to think of some other substance that he might here mean, as it was impossible he should compare a thing to itself, *ἐκκαίονται καθάπερ οἱ ἄνθρακες*, evidently, "they kindle and burn like wood coals," or, as we call it, charcoal, for that is the genuine and determinate sense of the word *ἄνθραξ* in Greek and *carbo* in Latin, as is evident from the other works of Theophrastus, Pliny, and all the older naturalists. Even the more correct of the moderns, when they would express what we call *pit-coal*, the substance here described by the author, never use the words *ανθραξ* or carbo, but always λιθανθραξ or carbo fossilis (see Woodward, Charlton, and Merritt). The similar use of this bitumen got it the name of coal, but always with an addition that distinguished it from what was more commonly and properly so called, and expressed its being not of

vegetable but of fossil origin' (London, 1774, pp. 64-66). So clear a testimony to the use of pit-coal by artificers in *Greece*, nearly 300 years B.C., with the well-ascertained existence of coal in *Syria*, emerging to the very surface, may, in conjunction with some particulars respecting the mention of coal in the Scriptures, tend to show the possibility that coal, in the proper sense, was not wholly unknown or unemployed by the ancient Hebrews, &c. The Hebrew words most frequently and properly translated coal are two, גחלת and פחם. Though the Hebrews seem to have frequently used the word גחלת in the same *generic* sense as we do when we say a ton of coals, meaning coals not yet burnt, a pan of coals, meaning coals on fire, and as the Greeks, though not so loosely, apply ἄνθρακια, and the Romans *carbo*, yet when precision required it, the Hebrews, as well as ourselves and the Greeks and Romans, knew how to express the difference in the case of *ignited* coals, which they most commonly do by the addition of אש, a distinction preserved in the Septuagint by the word πῦρ (though the Septuagint often *introduces* this word when the sense of the *single* Hebrew word seems to require it, and generally with great correctness); and which distinction is also generally preserved in the Vulgate by the use of the appropriate word pruna:—Serv. *ad Æn.* xi. 788: 'Docet hoc esse discrimen inter prunam et carbonem, quod, illa accensa sit, hic verò extinctus. Sed etiam dum ardet carbo dicitur' (Facciolati). The following classification is offered, comprehending all the instances in which the word גחלת occurs:—First, in its *generic* and *indefinite application*, that is, meaning coal whether ignited or not: 2 Sam. xiv. 7, 'they shall quench my coal which is left;' Sept. ἄνθρακα; Vulg. scintillam; evidently ignited, used *tropically* for posterity, like 1 Kings xv. 4, and several other passages: Job xli. 21, 'his breath kindleth coals,' ἄνθρακες, prunas, *i. e.* coals not before ignited: Isa. xlvii. 14, 'not a coal to warm at,' but here the word לחמם decides the ignition, ἄνθρακας πυρός, prunas: Ps. xviii. 8, 'coals were kindled at it,' ἄνθρακες, *carbones* succensi sunt: Ps. cxx. 4, 'with coals of juniper,' Sept. σὺν τοῖς ἄνθραξι τοῖς ἐρημικοῖς; Vulg. cum carbonibus *desolatoriis:* Prov. vi. 28, English version supplies (hot) coals: Sept. *adds* πυρὸς to ἀνθράκων, prunas: Prov. xxv. 22, 'shall heap coals of fire upon his head,' Sept. supplies πυρός, prunas: Isa. xliv. 19, 'upon the coals,' ἀνθράκων, carbones: Ezek. xxiv. 11, 'upon the coals,' ἄνθρακας, prunas.

Our second class consists of instances in which the word אש is added, in order to fix the sense of ignition:—Lev. xvi. 12, 'a censer full of burning coals of fire,' ἀνθράκων πυρός, prunis: 2 Sam. xxii. 9, 13, 'coals of fire were kindled at it,' ἄνθρακες πυρός, carbones ignis: Ps. xviii. 12, 'the coals of fire passed,' ἄνθρακες πυρός, carbones ignis: Ps. cxl. 10, 'let burning coals fall on them,' ἀνθράκες πυρός, carbones: Ezek. i. 13, 'coals of fire,' ἀνθράκων πυρός, carbonum ignis: Ezek. x. 2, 'coals of fire,' ἀνθράκων πυρός, prunis ignis.

The other Hebrew word translated coal is פחם. It occurs only three times:—Prov. xxvi. 21, לגחלים פחם, 'as coals are to burning coals, and wood to fire,' &c., Ἐσχάρα ἄνθραξι, sicut carbones ad prunas: here the word פחם plainly means unignited coal (Qu. mineral coal?), as appears from the parallel comparison, and 'as *wood* to *fire*.' Isa. xliv. 12, 'the *smith* worketh in the coals: the Sept. has no corresponding word, but old commentators read ἐν ἄνθραξι, in prunis. Isa. liv. 16, 'the *smith* that bloweth the coal in the fire,' ἄνθρακας, prunas. From the foregoing analysis it appears that the word גחלת often means coals thoroughly ignited; but פחם, coal *before* being ignited.

There are several instances in which the word 'coal' in our version is an improper translation. 1 Kings, xix. 6, עגת רצפים 'a cake baken *on the coals*,' ἐγκρυφίας, subcinericius panis. רצפה here properly means a hot stone (a *pavement*, Esth. i. 6, and elsewhere), and עגת רצפים properly mean small cakes baked *under* ashes—a common food to this day among the Orientals, especially when travelling [BREAD]. רצף is also a hot stone *thrown into* milk or broth in order to heat it (Gesenius). Another mis-translation occurs (Hab. iii. 5), 'burning coals went forth at his feet' in the margin 'burning diseases' (Deut. xxx 24). The Sept. varies widely; the Vulgate still more widely—'egredietur diabolus,' which is, however, explained as pestis by the commentators. Another mis-translation is (Lam. iv. 8), 'Their visage is blacker than a coal;' margin, 'darker than blackness;' חשך משחור, ὑπὲρ ἀσβόλην, super carbones. Another mis-translation occurs (Cant. viii. 6), 'the coals thereof are coals of fire;' רשפיה רשפי אש, περίπτερα αὐτῆς, περίπτερα πυρός, Ald. ἄνθρακες πυρός, ut lampades ignis. A *questionable* translation occurs (Is. vi. 6), 'a live coal,' רצפה, ἄνθρακα πυρός, *calculus*; but the Rabbis render it 'coal.' The instances of the word coal in the New Testament remain to be noticed:—(John xviii. 18), 'a fire of coals,' ἀνθρακιά, ad prunas. The word here evidently means a mass of live charcoal (so Suid. ἀνθρακιὰ πεφυρακτωμένοι ἄνθρακες, who gives an adage which makes a plain difference—μὴ τὴν τέφραν φεύγων, εἰς ἀνθρακιὰν πέσῃς,' which may be exactly paralleled by a *well-known* English adage). (Eccl. viii. 10; xi. 32, occur in the same sense in the Apocrypha.) From the foregoing analysis the following passages are selected as countenancing the idea that the ancient Hebrews were acquainted with *natural coal*. In the sublime description of the leviathan (Job xli. 21), 'his breath kindleth coals,' the representation, though highly hyperbolical, is of course supported by a consistency and *proportion of ideas*. But to suppose that the word here rendered coals means any kind of *artificial* fuel, reduces the whole scene to an intolerable bathos; whereas if we refer the word to the natural production, it is admirably preserved. The association of *charcoal* with a creature which 'makes the deep to boil like a caldron,' and which, when on land, 'is king of the children of pride,' is too incongruous to be attributed to the sublimest of ancient poets; but it is a conception worthy of his powers to represent a mass of coal ignited by the breath of leviathan. A similar remark is due to the magnificent representation (2 Sam. xxii. 9, 13, and Ps. xviii. 8), 'through the brightness before HIM were coals of fire kindled.' This *oft-repeated* expression suits only, but it suits well, the idea of

a stratum of mineral matter as being ignited by the material splendors attending on the Divine appearance and interposition.—J. F. D.

COCK (ἀλέκτωρ; in Hebrew possibly גבר *Gaber*, if Jerome's version of Isa. xxii. 17, 18 be correct: our version of the passage is obscure). It is somewhat singular that this bird and poultry in general should not be distinctly noticed in the Hebrew Scriptures; especially as rearing gallinaceous fowls was an object of considerable economical importance in Egypt, and their flesh one of the principal resources for the table in every part of Southern and Western Asia. It is true, the date when the practice of obtaining them by artificial heat commenced in Egypt is sufficiently disputable, and birds of the genus Gallus, properly so called, are not indigenous in Western Asia, but belong in their original condition to lower India, Indo-China, and the great islands of Austral-Asia. They were, it may be surmised, unknown in Egypt when the Mosaic law was promulgated, and, though imported soon after, they always remained in an undetermined condition, neither clean nor unclean, but liable to be declared either by decisions swayed by prejudice, or by fanciful analogies; perhaps chiefly the latter; because poultry are devourers of unclean animals, scorpions, scolopendra, small lizards, and young serpents of every kind.

But although rearing of common fowls was not encouraged by the Hebrew population, it is evidently drawing inferences beyond their proper bounds, when it is asserted that they were unknown in Jerusalem, where civil wars, and Greek and Roman dominion, had greatly affected the national manners. The excess of pharisaical punctiliousness is evidence that opinions and customs widely opposed to their own were prevalent, and, in the dependant state of the nation, were openly professed even by the numerous resident foreigners, the Pagan garrisons, and by many Jews, under the influence of the Epicurean philosophy.

In the denials of Peter, described in the four Gospels, where the cock-crowing is mentioned by our Lord, the words are plain and direct, not we think admitting of cavil, or of being taken to signify anything but the real voice of the bird, the ἀλεκτοροφωνία, as it is expressed in Mark xiii. 35, in its literal acceptation, and not as denoting the sound of a trumpet, so called, because it proclaimed a watch in the night; for, to what else than a real hen and her brood does our Saviour allude in Luke xiii. 34, where the text is proof that the image of poultry was familiar to the disciples, and consequently that they were not rare in Judæa? To the present time in the East, and on the Continent of Europe, this bird is still often kept, as amongst the Celtæ (Cæsar, *Bell. Gall.* iv. 12), not so much for food as for the purpose of announcing the approach and dawn of day.—C. H. S.

COCKATRICE. [SERPENT.]

COCKCROWING. The cock usually crows several times about midnight, and again about break of day. The latter time, because he then crows loudest, and his 'shrill clarion' is most useful by summoning man to his labours, obtained the appellation of *the* cockcrowing emphatically, and by way of eminence; though sometimes the distinctions of the *first* and *second* cockcrowing are met with in Jewish and heathen writers (Bochart, vol. iii. p. 119). These times, and these names for them, were, no doubt, some of the most ancient divisions of the night adopted in the East, where 'the bird of dawning' is most probably indigenous. The latter ἀλεκτοροφωνία was retained even when artificial divisions of time were invented. In our Lord's time the Jews had evidently adopted the Greek and Roman division of the night into four periods, or watches; each consisting of three hours; the first beginning at six in the evening, ἐν τῇ δευτέρᾳ φυλακῇ, καὶ ἐν τῇ τρίτῃ φυλακῇ (Luke xii. 38); τετάρτῃ δὲ φυλακῇ τῆς νυκτός (Matt. xiv. 25; Mark vi. 48). These watches were either numbered first, second, third, and fourth, as now specified, or were called ὀψέ, μεσονύκτιον, ἀλεκτοροφωνία, πρωΐ. These are all mentioned (Mark xiii. 35; Veget. *Re Milit.* iii. 8, 'In quatuor partes ad clepsydram sunt divisæ vigiliæ, ut non amplius quam tribus horis nocturnis, necesse est vigilare,' Censorin, *de Die Natal.* Περὶ φ. τετάρτην, vide Joseph. *Antiq.* xviii. 9, C. Περὶ φ. δευτέραν, Diod. Sic. 18. 40; Xen. *Anab.* iv. 1. 5).

It has been considered a contradiction that Matthew (xxvi. 34), records our Lord to have said to Peter, πρὶν ἀλέκτορα φωνῆσαι, τρὶς ἀπαρνήσῃ με, whereas St. Mark (xiv. 30), says, πρὶν ἢ δὶς φωνῆσαι. But Matthew, giving only the *general sense* of the admonition (as also Luke xxii. 34; John xiii. 38), evidently alludes to that only which was *customarily* called *the* cockcrowing, but Mark, who wrote under Peter's inspection, more accurately recording *the very words*, mentions the *two* cockcrowings (Wetstein on Mark xiv. 30; Scheuchzer, *Phys. Sacr.* on Mark xiii. 35; Whitby's *Note* on Matt. xxvi. 34). Another objection to this part of the Evangelical history has been founded upon an assertion of the Mischna, in *Bava Kama*, vii. 7, אין מגדלין הרנגולין בירושלם מפני קדושים, 'They do not breed cocks at Jerusalem because of the holy things': because it is interpreted, cocks turn up the dunghills, and set free the reptiles by which the sacrifices might be polluted which were eaten as food; and that, consequently, Peter could not *hear* one crow. But this is sufficiently answered in the preceding article. Even the traditions themselves on this subject are not uniform; witness the story in *Erubin*, p. 26. 1, of a cock which killed a child, and was stoned by order of the council. Other instances are given by Reland, which show that the cock might crow, though *not in the city*, and yet be heard by Peter in the stillness of the night, especially as the palace of Caiaphas stood on an elevated situation, at the distance of scarcely 400 yards from the city walls. At the same time the word ἀλέκτωρ, being everywhere *anarthrous* in the New Testament (except Luke xxii. 60, where, however, the article is rejected by Griesbach upon the authority of a multitude of MSS.), it may be inferred from this indefiniteness, that cocks, if at all tolerated in Jerusalem, were far less common than with us. Δίς, in Mark, is for ἐκ δευτέρου, and τρίς is explained, semel iterumque, plus simplici vice, a certain for an uncertain number, as 1 Cor. xii. 28. So Eusth. *ap. Schl. Lex.* says τρίς is for πολλάκις. Thus the seeming contradiction, at least, between Mark and the other Evangelists is removed (Lightfoot, *Hor. Heb*: Bynæus

de morte Christi, ii. 6; Reland, *Orat. de Gall. Cantu;* Altmann *De Gallicin.;* Biel, *Animad. ad* J. G. Altmann; Ansaldi *Comment.*, the four last in Ugolini, *Thesaur.* vol. xxvii. Ven. 1763; Adam's *Roman Antiq.* p. 33; Winer, *Biblisches Real-Wörterbuch*, Leipzig, 1833, art. Hühner).—

COCKLE. [BEEHA.]

CŒLESYRIA (ἡ κοίλη Συρία), the *hollow* Syria. This name, which is evidently of Grecian origin in the times of the Seleucidæ, was originally applied to the valley lying between the mountain-ranges of Libanus and Anti-Libanus. It was also used to denote the whole tract of country (with the exception of Judæa and Phœnicia) reaching from Seleucis to Arabia and the confines of Egypt (Strabo, xvi. 2, vol. iii. p. 365, ed. Tauch.; Polyb. *Hist.* v. 80, § 3). In the time of David, Cœlesyria was probably included in 'Syria of Damascus,' which was conquered by that monarch (2 Sam. viii. 6), but recovered from Solomon by Rezon the son of Eliadah (1 Kings xi. 24). The possession of it was an object of many struggles between the Seleucidæ and the kings of Egypt (Polyb. i. 3; ii. 71; iii. 1; v. 40; xvi. 39; xxvii. 17). *Amyce*, the name of the plain through which the Orontes flowed (τὸ Ἀμύκης πεδίον, Polyb. v. 59), is derived by Bochart from the Syriac עמיקא *Amica*, which means *deep*, and is nearly synonymous with the Greek *Cœle* (vid. *Geogr. Sac. Pars poster.* i. 1.) The same learned writer supposes that Syrophœnicia is the same as Cœlesyria. Scythopolis and Gadara are mentioned by Josephus as cities of Cœlesyria (*Antiq.* xiii. 13 § 2, § 3). The name frequently occurs in the Apocrypha (1 Macc. x. 69; 2 Macc. viii. 8; x. 11; Esdr. ii. 17, 24; iv. 48; vii. 1); in Esdr. vi. 3, it is called simply Syria. Under the emperor Diocletian, Phœnice and Cœlesyria formed one province, called Phœnicia Libanica. Under the present Turkish government the western part of Cœlesyria is in the Pashalic of Saide, and the eastern in the Pashalic of Damascus.—J. E. R.

COFFIN. [BURIAL.]

COLONY (Κολώνια). This distinction is applied to Philippi in Macedonia (Acts xvi. 12). Augustus Cæsar had deported to Macedonia most of the Italian communities which had espoused the cause of Antony; by which means the towns of Philippi, Dyrrachium, &c., acquired the rank of Roman colonies (Dio Cass. p. 455). They possessed the *jus coloniarium* (Plin. *Hist. Nat.* v. 1), *i. e.* so-called *jus Italicum* (*Digest. Leg.* viii. 8), consisting, if complete, in a free municipal constitution, such as was customary in Italy, in exemption from personal and land taxes, and in the commerce of the soil, or the right of selling the land.

COLOSSÆ (Κολοσσαί), a city of Phrygia, on the river Lycus (now Gorduk), not far from its confluence with the Mæander, and near the towns of Laodicea, Apamea, and Hieropolis (Col. ii. 1; iv. 13, 15; comp. Plin. *Hist. Nat.* v. 41; Strabo, xii. p. 576). A Christian church was formed here very early, probably by Epaphras (Col. i. 7; iv. 12, sq.), consisting of Jews and Gentiles, to whom Paul, who does not appear to have ever visited Colossæ in person (Col. ii. 1) addressed an Epistle from Rome. Not long after, the town was, together with Laodicea and Hierapolis, destroyed by an earthquake. This, according to Eusebius, was in the ninth year of Nero; but the town must have been immediately rebuilt, for in his twelfth year it continued to be named as a flourishing place (Nicet. *Chron.* p. 115). It still subsists as a village named Khonas. The

234. [Colossæ: Khonas.]

huge range of Mount Cadmus rises immediately behind the village, close to which there is in the mountain an immense perpendicular chasm, affording an outlet for a wide mountain torrent. The ruins of an old castle stand on the summit of the rock forming the left side of this chasm. There are some traces of ruins and fragments of stone in the neighbourhood, but barely more than sufficient to attest the existence of an ancient site; and that this site was that of Colossæ is satisfactorily established by the Rev. F. V. J. Arundell, whose book (*Discoveries in Asia Minor*) contains an ample description of the place.

COLOSSIANS, EPISTLE TO THE.—That this Epistle is the genuine production of the apostle Paul is proved by the most satisfactory evidence, and has never indeed been seriously called in question. It is less certain, however, *when* and *where* it was composed by him. The common opinion is that he wrote it at Rome during his imprisonment in that city (Acts xxviii. 16, 30). Erasmus, followed by others, supposes that Ephesus was the place at which it was composed; but this suggestion is obviously untenable from its incompatibility with the allusions contained in the Epistle itself to the state of trouble and imprisonment in which the Apostle was whilst composing it (i. 24; iv. 10, 18). In Germany, the opinions of theologians have been divided of late years between the common hypothesis and one proposed by Dr. David Schulz in Ullmann and Umbreit's *Theologische Studien und Kritiken* for 1829, s. 612 ff., viz., that this Epistle, with those to the Ephesians and Philemon, was written during the Apostle's two years' imprisonment at Cæsarea previous to his being sent to Rome. This opinion has been adopted and defended by Schott, Böttger, and Wiggers, whilst it has been opposed by Neander, Steiger, Harless, Rückert,

Credner, and others. The following is a synopsis of the leading arguments in favour of this opinion, and of the counter-arguments of those who oppose it:—1. It is highly improbable that Paul would allow two years of easy imprisonment (Acts xxiv. 23-27) to pass away without writing to some of the churches at a distance, especially as he tells us that upon him 'came daily the care of all the churches' (2 Cor. xi. 28), and as we find that he secured time for this even when most actively employed in his public apostolic labours. To this it is replied that, admitting the facts here assumed, they only prove that Paul *might* have employed himself during these two years in epistolary correspondence with distant churches, but afford no certain evidence that he really did so, far less that he wrote then the very epistles in question. 2. These epistles bear evident marks of having been written in consequence of communications made personally to Paul by parties connected with the churches to which they were addressed; and there is greater probability of his receiving such communications at Cæsarea than at Rome, especially during the earlier part of his residence there, to which these epistles (if written at Rome) must be ascribed. But it is replied to this that, distant as Rome was from the churches of Asia Minor, there is nothing unlikely in the supposition that Epaphras and others may have undertaken a journey thither to consult the Apostle about the state of these churches, threatened as they were with danger; and, for anything we know to the contrary, many of the Asiatic Christians may have had occasion to be at Rome at any rate on affairs of their own. 3. There is no small difficulty in supposing that in the early part of the Apostle's residence at Rome, all the parties mentioned in these epistles, viz., Timothy, Aristarchus, Mark, Jesus-Justus, Epaphras, Luke, Demas, Onesimus, Tychicus, should be found there with him, especially as we are told (Acts xxvii. 2) that only Aristarchus accompanied Paul and Luke from Cæsarea, and as, in the epistles known to have been written from Rome, only two of the parties above-mentioned, Timothy and Luke, are referred to as with the Apostle (Phil. i. 1; ii. 19; 2 Tim. iv. 11); whilst, on the other hand, from Acts xx. 4, we learn that some, at least, of these parties were with Paul at Cæsarea. In answer to this, it is said that it does not appear other than natural that Paul should have gathered around him in his imprisonment those young men who had elsewhere been the companions and instruments of his operations, and have used them for the purpose of maintaining a continual intercourse with distant churches according to their circumstances and wants. 4. The appearance of Onesimus, the slave of Philemon, at the place where Paul was, *very soon* (πρὸς ὥραν) after he had left his master at Colossæ (Philem. ver. 15), agrees better with the supposition that Paul was at Cæsarea, than with the supposition that he was at Rome. To this it is replied, that Rome was the most likely of all places for a fugitive slave to betake himself to, and that with respect to the expression πρὸς ὥραν, it is so vague, and is used so obviously as an antithesis to αἰώνιον in the same verse, that nothing certain can be argued from it. 5. The request of Paul to Philemon (ver. 22), that he would provide him a lodging at Colossæ, as he hoped to visit that place shortly, agrees better with the supposition that this epistle was written at Cæsarea, whilst yet hopes might be entertained of his liberation, than that it was written at Rome, when his expectations of freedom must have become faint, and whence, according to his avowed purpose (Rom. xv. 28), he was more likely, in case of being liberated, to travel westwards into Spain, than to return to Asia. The answer to this is, that though the Apostle had originally designed to journey from Rome to Spain, the intelligence he received of the state of things in the churches of Asia Minor may have determined him to alter his resolution; and upon the whole, we know so little of the Apostle's relations during his imprisonment at Rome, that it is not safe to build much upon any such allusions (Schulz, *loc. cit.*; Neander, *Hist. of the Apostolic Churches*; Eng. Transl. vol. i. p. 373; Credner, *Einleit. in das N. T.* s. 390; Schott, *Isagoge in N. T.* § 66; Steiger, *Der Br. Pauli an d. Kolosser u. s. w.* s. 335; Harless, *Comment. üb. d. Br. Pauli an d. Epheser. u. s. w.* s. 63; Rückert, *Der Br. Pauli an d. Ephes. u. s. w.* s. 305; Böttger, *Beiträge, &c.* 3 Abth.) In a very able article in a recent number of the *Studien und Kritiken*, the whole question has been subjected to a new investigation by Dr. Julius Wiggers of the University of Rostoch, who comes to the conclusion, that of the facts above appealed to, none can be regarded as *decisive* for either hypothesis. He inclines, however, to the opinion of Schulz, chiefly on the grounds that Paul, in writing to the Ephesians, makes no mention of Onesimus, who accompanied Tychicus, the bearer of his epistle to that church, and that *both* in this epistle and in that to the Colossians, he states that he had sent Tychicus εἰς αὐτὸ τοῦτο, ἵνα γνῶτε τὰ περὶ ἡμῶν, καὶ παρακαλέσῃ τὰς καρδίας ὑμῶν (Eph. vi. 22; Col. iv. 8 [according to the best MSS.]) The former of these, Wiggers thinks, can be accounted for only on the supposition that Tychicus and Onesimus having to set out from Cæsarea, would reach Colossæ *first*, where the latter would tarry, so that he did not *need* to be commended to the church at Ephesus; the latter of these, he thinks, indicates that the place whence Tychicus was to set out was one from which he might proceed *either* to Colossæ or to Ephesus first, not one from which he had, as a mere matter of course, to pass through Ephesus in order to reach Colossæ; and hence he infers that Cæsarea, and not Rome, was the place whence these epistles were despatched (*Stud. u. Krit.* 1841, s. 436). We cannot say that these two considerations appear to us so cogently decisive of this question as they do to Dr. Wiggers. For, not to insist upon the obvious incoherence of the one with the other, it does not by any means appear *necessary* that Paul should have commended Onesimus to the care of the church at Ephesus in case of his passing through that city, seeing he was the companion of one whose introduction would be enough to secure their kind offices on his behalf; and surely there is nothing improbable in the supposition that Paul should have sent Tychicus on the same errand both to Colossæ and to Ephesus, even though he must needs pass through the one to reach the other. In a case where the internal evidence produces so exact an equipoise, the testimony of tradition may fairly be permitted to

settle the question; and this is unequivocally in favour of the opinion that these epistles were written from Rome during the earlier part of the Apostle's confinement there.

In what *order* these three epistles were written, it is not possible clearly to determine. Between that to the Colossians and that to the Ephesians the coincidences are so close and numerous (see Horne's *Introduction*, vol. iv. p. 381) that the one must have been written immediately after the other, whilst the mind of the Apostle was occupied with the same leading train of thought. By the greater part the priority is assigned to the Epistle to the Colossians; though for this no more convincing argument has been adduced than that which Harless, Steiger, and Wiggers have urged, viz.: that this supposition best explains the force of the conjunction καὶ before ὑμεῖς in Eph. vi. 21. The expression 'that you *also* may know, &c.,' seems to imply that the same knowledge had been conveyed to *others;* and as Paul makes the same statement to the Colossians, but without the καὶ ὑμεῖς, it is argued that the recollection of having made that statement being in his mind when he was writing to the Ephesians, he expressed himself in the manner above noted. This, it must be allowed, is not very satisfactory, for, as an argument, it holds good only on the supposition either that the Epistle to the Colossians was to be read also and *first* by the Ephesians, or that the Apostle fell unconsciously into the mistake of supposing that because what he had written to the Colossians was fresh in his own recollection, it must be as well known to the Ephesians. The Epistle to Philemon being a mere friendly letter, intended chiefly to facilitate the reconciliation of Onesimus to his master, was probably written immediately before the departure of the party by whom it was to be carried.

The Epistle to the Colossians was written, apparently, in consequence of information received by Paul through Epaphras concerning the internal state of their church (i. 6-8). Whether the Apostle had ever himself before this time visited Colossæ is matter of uncertainty and dispute. From ch. ii. 1, where he says, 'I would that ye knew what great conflict I have for you and for them at Laodicea, and for as many as have not seen my face in the flesh,' &c., it has by some been very confidently concluded that he had not. To this it is replied by Theodoret, Lardner, and others, that Paul does not intend to *include* the Colossians and Laodiceans among those who had not seen his face, but specifies the latter as a distinct class; as is evident, they think, from his using the *third* person in ver. 2. This latter consideration, however, is of no weight, for the use of the third person here is easily accounted for on the principle that the pronoun takes the person of the nearer noun rather than that of the more remote (cf. Gal. i. 8); and it certainly would be absurd to maintain that all contained in the second verse has no relation to the Colossians and Laodiceans, notwithstanding the reference to them in ver. 1, and again in ver. 4. As respects the words in ver. 1, they will, in a mere philological point of view, bear to be understood in either way. It has been urged, however, that when, in ver. 5, the Apostle says, 'though I am absent in the flesh, yet am I with you in the spirit,' &c., his language is strongly indicative of his having formerly been amongst the Colossians, for the verb ἄπειμι is used properly only of such absence as arises from the person's *having gone away from* the place of which his absence is predicated. In support of the same view have been adduced Paul's having twice visited and gone through Phrygia (Acts xvi. 6; xviii. 23), in which Colossæ was a chief city; his familiar acquaintance with so many of the Colossian Christians, Epaphras, Archippus, Philemon (who was one of his own converts, Phil. 13, 19), and Apphia, probably the wife of Philemon [APPHIA]; his apparent acquaintance with Onesimus, the slave of Philemon, so that he recognised him again at Rome; the cordiality of friendship and interest subsisting between the Apostle and the Colossians as a body (Col. i. 24, 25; ii. 1; iv. 7, &c.); the Apostle's familiar acquaintance with their state and relations (i. 6; ii. 6, 7, &c.); and their knowledge of so many of his companions, and especially of Timothy, whose name the Apostle associates with his own at the commencement of the epistle, a circumstance which is worthy of consideration from this, that Timothy was the companion of Paul during his first tour through Phrygia, when probably the Gospel was first preached at Colossæ.' Of these considerations it must be allowed that the cumulative force is very strong in favour of the opinion that the Christians at Colossæ had been privileged to enjoy the personal ministrations of Paul. At the same time, if the Colossians and Laodiceans are not to be included among those of whom Paul says they had not seen his face, it seems unaccountable that in writing to the Colossians he should have referred to this class at all. If, moreover, he had visited the Colossians, was it not strange that he should have no deeper feeling towards them than he had for the multitudes of Christians scattered over the world whose faces he had never seen? In fine, as it is quite *possible* that Paul may have been twice in Phrygia without being once in Colossæ, is it not easy also to account for his interest in the church at Colossæ, his knowledge of their affairs, and his acquaintance with individuals among them, by supposing that members of that church had frequently visited him in different places, though he had never visited Colossæ? (Lardner's *Credibility, Suppl.*, ch. xiv.; Schulz in *Stud. und Krit.*, Jahrg. 1829, s. 536; Wiggers, *Ibid.* Jahrg. 1838, s. 165; Steiger, *Colosserbr.* s. 200; Whitby, *Pref. to Coloss.*)

A great part of this Epistle is directed against certain false teachers who had crept into the church at Colossæ. To what class these teachers belonged has not been fully determined. Heinrichs (*Nov. Test. Koppian.* vol. vii. part ii. p. 156) contends that they were disciples of John the Baptist. Michaelis and Storr, with more show of reason, conclude that they were Essenes. Hug (*Introd.* vol. ii. p. 449, E. T.) traces their system to the Magian philosophy, of which the outlines are furnished by Iamblichus. But the best opinion seems to be that of Neander (*lib. cit.* i. 374, *ff.*), by whom they are represented as a party of speculatists who endeavoured to combine the doctrines of Oriental theosophy and asceticism with Christianity, and promised thereby to their disciples a deeper insight into the spiritual world, and a fuller approximation to heavenly purity and intelligence than simple Christianity could yield. Against this party the Apostle argues by reminding the Co-

lossians that in Jesus Christ, as set before them in the Gospel, they had all that they required—that he was the image of the invisible God, that he was before all things, that by him all things consist, that they were complete in him, and that he would present them to God holy, unblamable, and unreprovable, provided they continued stedfast in the faith. He then shows that the prescriptions of a mere carnal asceticism are not worthy of being submitted to by Christians; and concludes by directing their attention to the elevated principles which should regulate the conscience and conduct of such, and the duties of social and domestic life to which these would prompt.

In the conclusion of the Epistle, the Apostle, after sending to the Colossians the salutations of himself and others who were with him, enjoins the Colossians to send this Epistle to the Laodiceans, and that they likewise should read τὴν ἐκ Λαοδικείας. It is disputed whether by these concluding words Paul intends an Epistle from him to the Laodiceans or one from the Laodiceans to him. The use of the preposition ἐκ favours the latter conclusion, and this has been strongly urged by Theodoret, Chrysostom, Jerome, Philastrius, Œcumenius, Calvin, Beza, Storr, and a multitude of other interpreters. Winer, however, clearly shows that the preposition here may be under the law of attraction, and that the full force of the passage may be thus given—'that written *to* the Laodiceans and to be brought *from* Laodicea to you' (*Grammatik d. Neutestamentl. Sprachidioms*, s. 434, Leipz. 1830). It must be allowed that such an interpretation of the Apostle's words is in itself more probable than the other; for supposing him to refer to a letter from the Laodiceans to him, the questions arise, How were the Colossians to procure this unless he himself sent it to them? And of what use would such a document be to them? To this latter question it has been replied that probably the letter from the Laodiceans contained some statements which influenced the Apostle in writing to the Colossians, and which required to be known before his letter in reply could be perfectly understood. But this is said without the slightest shadow of reason from the Epistle before us; and it is opposed by the fact that the Laodicean epistle was to be used by the Colossians *after* they had read that to themselves (ὅταν ἀναγνωσθῇ, κ. τ. λ.). It seems, upon the whole, most likely that Paul in this passage refers to an epistle sent by him to the church in Laodicea at the same time with that to the church at Colossæ. It is probable also that this Epistle is now lost, though the suggestion of Grotius that it was the same with the Canonical Epistle to the Ephesians has found some advocates [EPHESIANS, EPISTLE TO THE]. The extant epistle to the Laodiceans is on all hands allowed to be a clumsy forgery (Michaelis, *Introd.* vol. iv. p. 124, ff.; Hug, *Introd.* ii. 436; Steiger, *Colosserbr. in loc.*; Heinrichs, *in loc.*; Raphel. *in loc.*).

Besides the commentaries mentioned in this article the following are deserving of notice:—Davenant, *Expositio Ep. D. Pauli ad Colossenses*, Cantab. 1627, fol., translated by the Rev. J. Allport, 2 vols. 8vo. Lond. 1831-32; Böhmer, *Isagoge in Ep. a Paulo ad Coloss. datam, &c.* 8vo. Berol. 1829: Bähr, *Commentar üb. d. Br. Pauli an die Kolosser.* 8vo. Basel, 1830; Storr, *Interpretatio Ep. ad Coloss.* (in *Opusc. Acad.* ii. 120).—W. L. A.

COMFORTER. [PARACLETUS.]

COMMENTARY. In the discussion of this subject we propose to pursue the following arrangement:—

1. To inquire what is meant by commentary.
2. To notice different kinds of commentary.
3. To mention the prominent defects of existing commentaries.
4. To review the leading and best known commentaries.

1. By *commentary*, in its theological application, is usually meant an exhibition of the meaning which the sacred writers intended to convey; or a development of the truths which the Holy Spirit willed to communicate to men for their saving enlightenment. This is usually effected by notes more or less extended—by a series of remarks, critical, philological, grammatical, or popular, whose purport is to bring out into view the exact sentiments which the inspired authors meant to express. The ideas contained in the Old and New Testaments are thus transferred into other languages, and rendered intelligible by the help of oral or written signs. There is a high and holy meaning in the words of holy men who spake as they were moved. To adduce this in a perspicuous form is the important office of the commentator. As there never has been, and from the nature of the case there never can be, a universal language, God selected for the revelation of his will those languages which were in all respects the fittest media for such a purpose. Hence arises the necessity of transplanting from these individual dialects the momentous truths they were selected to express; and of clothing in the costume of various people, as far as that costume can be adapted to such an object, the precise sentiments which were in the minds of the inspired writers. It is true that this can only be imperfectly done, owing to the various causes by which every language is affected; but the *substance* of revelation may be adequately embodied in a great variety of garb. The truths that make wise unto salvation are capable of being fairly represented in every tongue and dialect under heaven. There is an adaptation in their nature to the usage of every language that can possibly arise. The relation of immortal beings to their great Creator is every where the same; and the duties consequent upon such a relation are also identical. Their wants and necessities, too, are essentially alike. Hence there is a peculiar fitness in divine truth for appearing without injury in the linguistic costumes of different tribes.

The characteristics of commentary are,—

(*a.*) An elucidation of the meaning belonging to the words, phrases, and idioms of the original.

The signification of terms is generic or specific. A variety of significations also belongs to the same term, according to the position it occupies. Now a commentary points out the particular meaning belonging to a term in a particular place, together with the reason of its bearing such a sense. So with phrases. It should likewise explain the construction of sentences, the peculiarities of the diction employed, the difficulties belonging to certain combinations of words, and the mode in which they affect the general meaning. But this is only a small part of the business

belonging to a commentator. He may be able to unfold the significations of words with discriminating nicety; with the genius of language he may be familiar; he may clearly perceive all its idioms, and rightly apprehend its difficult phrases. In short, as far as verbal criticism is concerned, he may be a consummate master, while yet he may prove an indifferent commentator. True commentary embraces much more than an acquaintance with isolated words and phrases, or with the grammatical principles of the Hebrew and Greek languages. It fills a more extended and elevated sphere than simple philology. It takes a higher range than grammatical minutiæ or rhetorical adjustment. These, indeed, form one of its elements, but they are far from being the only feature by which it is distinguished.

(*b.*) Another characteristic of commentary is an exhibition of the writer's scope, or the end he has in view in a particular place. It ascertains the precise idea he intended to inculcate in a given locality, and how it contributes to the general truth enforced. Every particle and word, every phrase and sentence, forms a link in the chain of reasoning drawn out by an inspired author—a step in the progress of his holy revelations. It is therefore essential to perceive what contribution it makes to the import of an entire passage, whether in the way of enriching or qualifying the sentiments embodied. A commentary should thus exhibit the design of a writer in a certain connection,—the arguments he employs to establish his positions, their coherence with one another, their general harmony, and the degree of importance assigned to them. The drift of a discourse should never be lost sight of, else an author will be misunderstood and misinterpreted.

(*c.*) In addition to this, the train of thought or reasoning pursued throughout an entire book or epistle, the various topics discussed, the great end of the whole, with the subordinate particulars it embraces, the digressions made by the writer,—these, and other particulars of a like nature, should be pointed out by the true commentator. The connection of one argument with another, the consistency and *ultimate* bearing of all the statements advanced—in short, their various relations, as far as these are developed or intimated by the author, should be clearly apprehended and intelligently stated. There is a plan or purpose that pervades every book, epistle, or prophecy of the sacred writers; a plan which does not, indeed, wholly exclude, but which usually takes precedence of, other objects to which the book may be subservient. To trace such a plan, as it is carried out by the original writer, and to unfold the precise mode in which it promotes the highest interests of mankind, is one of the chief characteristics of commentary.

(*d.*) Another characteristic of commentary is, that it presents a comparison of the sentiments contained in one book, or one entire connected portion of Scripture, with those of another, and with the general tenor of revelation. A beautiful harmony pervades the Bible. Diversities, indeed, it exhibits, just as we should expect it *à priori* to do; it presents difficulties and mysteries which we cannot fathom; but, with this variety, there is a uniformity worthy of the wisdom of God. All his works are distinguished by the same beautiful arrangement; and the revelation of his will forms no exception. A commentator should therefore bring into juxtaposition the various portions of the divine word, and point out their divine symmetry. He should be able to account for diversities of sentiment, in reference to the same topic, that appear in the pages of books written at different periods, and addressed to individuals or communities whose circumstances, intellectual and physical, were dissimilar. An exposition that fails to do this is deficient in one of its highest qualities. Without it, religious truth will be seen in disjointed fragments; no connected system, compact and harmonious in its parts, will meet the eye. The adaptation of the entire scheme of revelation to the salvation of mankind will be dimly apprehended, while there is no comprehensive survey of its fair proportions.

From what has been stated in regard to the constituents of commentary, it will also be seen that it differs from *translation*. The latter endeavours to find in another language *equivalent terms* expressive of the ideas which the words of the Hebrew and Greek languages were framed to convey. It seeks to embody the same sentiments as are contained in the Scriptures, by means of phraseology closely corresponding in its symbolical character to the diction of the Bible. It is easy to see, however, that in many cases this cannot be done, and that in others it can be effected very imperfectly. There are and must be a thousand varieties of conception expressed in the original languages of Scripture, of which no other can afford an adequate representation. The inhabitants of the countries where the sacred books were written lived amid circumstances in many respects diverse from those of other people. These circumstances naturally gave a colouring to their language. They affected it in such a way as to create terms for which there are no equivalents in the languages of tribes who are conversant with different objects, and live amid different relations. Translation fails in numerous instances, just because the language of one people contains words and idioms to which that of none other presents fit counterparts. In such a case, no expedient is left but *circumlocution*. By the help of *several phrases*, we must try to approximate at least the sentiment or shade of thought which the inspired writers designed to express. Where *exact representatives* cannot be found, we bring together *various terms* which may give as vivid a representation of the original as can be effected through the medium of the language in which the interpretation is given. *Commentary* is thus more diffuse than *translation*. Its object is not to find words in one language corresponding to those of the original languages of the Scriptures, or nearly resembling them in significance, but to set forth the meaning of the writers in notes and remarks of considerable length. *Paraphrase* occupies a middle place between translation and commentary; partaking of greater diffuseness than the former, but of less extent than the latter. It aims at finding equivalent terms to those which the sacred writers employ, accompanied with others that appear necessary to fill up the sense, or to spread it out before the mind of the reader in such a form as the authors themselves might be supposed to have employed in reference to the

people to whom the paraphrast belongs. *Scholia* differ from commentary only in brevity. They are short notes on passages of Scripture. Sometimes difficult places alone are selected as their object; at other times they embrace continuously an entire book. In every case *brevity* is, or ought to be, their distinguishing feature.

2. There are two kinds of commentary which we shall notice, viz. the *critical* and the *popular*. The former contains grammatical and philological remarks, unfolds the general and special significations of words, points out idioms and peculiarities of the original languages, and always brings into view the Hebrew or Greek phraseology employed by the sacred writers. It dilates on the peculiarities and difficulties of construction which may present themselves, referring to various readings, and occasionally bringing into comparison the sentiments and diction of profane writers where they resemble those of the Bible. In a word, it takes a wide range, while it states the processes which lead to results, and shrinks not from employing the technical language common to scholars. In this way the meaning of the original is brought out. Extended dissertations are sometimes given, in which the language is made the *direct subject* of examination, and the aid of lexicons and grammars called in to support or confirm a certain interpretation. *Popular* commentary states in perspicuous and untechnical phraseology the sentiments of the holy writers, usually without detailing the steps by which that meaning has been discovered. It leaves philological observations to those whose taste leads them to such studies. All scientific investigations are avoided. Its great object is to present, *in an attractive form*, the thoughts of the sacred authors, so that they may vividly impress the mind and interest the heart. It shuns all peculiarities that might repel the simple-minded, reflecting reader of the Bible, and endeavours to adduce the truth of God without minute details or tedious digressions. It avoids every thing that a reader unacquainted with Hebrew and Greek would not understand; and occupies itself solely with the *theology* of the inspired authors – that holy sense which enlightens and saves mankind. This, however, is rather what popular commentary *should do*, than what it *has hitherto done*. We have described the *appropriate sphere* of its duty, rather than the province which it has actually occupied.

The limits of *critical* and *popular* commentary are not so wide as to prevent a partial union of both. Their ultimate object is the same, viz. to present the exact meaning which the Holy Spirit intended to express. Both may state the import of words and phrases; both may investigate the course of thought pursued by prophets and apostles. They may develope processes of argumentation, the scope of the writers' remarks, the bearing of each particular on a certain purpose, and the connection between different portions of Scripture. In these respects *critical* and *popular* commentary may substantially coincide. Perhaps the union of both presents the best model of commentary, provided the former be divested of learned parade and repulsive technicalities, and the latter be perspicuously full. Yet there is much difficulty in combining their respective qualities. In *popularising* the critical, and in elevating the popular to the standard of intelligent interpretation, there is room for the exercise of great talent. The former is apt to degenerate into *philological sterility;* the latter into *trite reflection.* But by *vivifying* the one, and *solidifying* the other, a good degree of affinity would be effected. The results which learning has attained, by processes unintelligible to all but the scholar, might surely be presented to the unlearned reader so as to be perceived and relished. And what are the results which it is the great object of every commentator to realise? They are simply *the ideas* which the inspired writers designed to set forth. *These* constitute *theology.* They are emphatically *the truth.* They are the holy mind of God, as far as he has thought fit to reveal it to men—the pure and paramount realities which metamorphose the sinner into the saint. The commentator who comes short of this important end, or fails in exhibiting the whole counsel of God in its harmonious proportions, is not successful. It matters little whether he be possessed of profound learning, if he cannot exhibit in all their strength and richness the exact thoughts of the holy men who wrote. To this all his erudition should be subordinate. Critical and antiquarian knowledge should only be regarded as a mean of arriving at such an object. Geographical, chronological, and historical remarks should solely subserve the educement or confirmation of Jehovah's will. The building about which they are employed they should *raise, strengthen,* or *consolidate.* As long as they contribute nothing to the rearing or cementing of its parts, they are useless lumber. The grand question with every commentator should be, what did the Holy Ghost mean to express by such a phrase or sentence? What train of thought does the inspired writer pursue? what truth does he design to teach, what doctrine to embody, what duty to inculcate? Am I exhibiting as the mind of the Spirit what I have sufficient reason to believe to be really such? Have I examined every thing within my reach, which could be supposed to throw light on the original, or aid in understanding it? Has every known circumstance been taken into account? These and similar questions should never be lost sight of by the intelligent commentator; for in proportion as he is actuated by the motives they imply will he produce a solid and safe exposition, such as the sacred original was truly meant to exhibit.

3. The prominent defects of existing commentaries.

(*a.*) *Prolixity.* This defect chiefly applies to the older works: hence their great size. It is not uncommon to meet with a large folio volume of commentary on a book of Scripture of moderate extent. Thus Byfield, on the Epistle to the Colossians, fills a folio volume; and Venema, on Jeremiah, two quartos. Peter Martyr's 'most learned and fruitfull commentaries upon the Epistle to the Romans' occupy a folio, and his 'commentarie upon the book of Judges' another tome of the same extent. But Venema on the Psalms, and Caryl on Job, are still more extravagant, the former extending to no less than six volumes quarto, the latter to two goodly folios. It is almost superfluous to remark that such writers wander away, without confining themselves to exposition. We do not deny that even their extraneous matter may be good and edifying

to those who have the patience to wade through its labyrinths, but still it is not *commentary*. It is not a simple elucidation of the meaning which the sacred writers intended to express. To say every thing that it is almost possible to say on a passage, or to write down what first comes up in the mind, and nearly in the same form in which it suggests itself, is far from giving the true sense, which ought ever to be *the one object* in view. It is very easy to write, *currente calamo*, any thing however remotely connected with a passage, or to note down the thoughts as they rise; but to *think out* the meaning of a place, to exercise independent mental effort upon it, to apply severe and rigid examination to each sentence and paragraph of the original, is quite a different process. To exhibit in a lucid and self-satisfying manner the results of deep thought and indomitable industry, is far from the intention of those prolix interpreters, who, in their apparent anxiety to compose a *full* commentary, present the reader with a chaos of annotations, and bury the holy sense of the inspired writers beneath the rubbish of their prosaic musings.

(*b.*) Some commentators are fond of detailing various opinions, without sifting them. This also we reckon a defect. They procure a number of former expositions, and write down out of each what is said upon a text. They tell what one and another learned annotator affirms, but do not search or scrutinise his affirmations. No doubt an array of names looks imposing; and the reader may stare with surprise at the extent of research displayed; but nothing is easier than to fill up pages with such patchwork, and to be as entirely ignorant of the nature of commentary as before. The intelligent reader will be inclined to say, What matters it to me what this rabbi has said, or that doctor has stated? I am anxious to know *the true sense* of the Scriptures, and not the varying opinions of men concerning them. I long to have the refreshing truths of the Bible presented to me in their native purity, just as they are found in the pages of inspiration. Do not perplex me with the notions of numerous commentators, many of whom were utterly incompetent for their task; but let me see the mind of the Spirit fully and fairly exhibited, without the artificial technicalities of scholastic theology. It is a work of supererogation to collect a multitude of annotations from various sources, most of which the industrious collector knows to be improbable or erroneous. It is folly to adduce and combat interpretations, from which the common sense and simple piety of the unsophisticated reader turn away with instinctive aversion. If *plausible views* be stated, they should be thoroughly analysed. But in all cases the *right meaning* ought to be a *prominent* thing with the commentator, and *prominently* should it be manifested, surrounded, if possible, with those hues which Heaven itself has given it, and qualified by such circumstances as the Bible may furnish.

(*c.*) Another defect consists in dwelling on *the easy*, and evading *the difficult passages*. This feature belongs especially to those English commentaries which are most current among us. By a series of appended remarks, plain statements are expanded; but wherever there is a real perplexity, it is glozed over with marvellous superficiality. It may be that much is said *about* it, but yet there is no penetration beneath the surface; and when the reader asks himself what is the true import, he finds himself in the same state of ignorance as when he first took up the Commentary in question. *Pious reflections*, and *multitudinous inferences* enter largely into our popular books of exposition. They *spiritualise*, but they do not *expound*. They *sermonise* upon a book, but they do not catch its spirit, or comprehend its meaning. All this is out of place. A *preaching*, *spiritualising* commentary does not deserve the appellation of *commentary* at all. When a writer undertakes to educe and exhibit the true sense of the Bible, he should not give forth his own meditations, however just and proper in themselves. Put in the room of *exposition*, they are wholly out of place. The simple portions of the Bible are precisely those which require little to be said on them, while to the more difficult superlative attention should be paid. But the reverse order of procedure is followed by our popular commentators. They piously descant on what is well known, leaving the reader in darkness where he most needs assistance.

The intelligent part of the public are beginning to see that no one man, be his industry what it may, is competent to write a commentary on the whole Bible. Let him possess vast learning, great abilities, sound judgment, mental acumen, and indefatigable zeal, he will still find it impossible to produce a solid commentary on all the canonical books. It is true that one person may write *what is commonly styled* a *commentary* embracing the entire Bible, but how little of independent inquiry does such a work present! How feebly does it trace out the course of thought pursued by each of the inspired writers, the numerous allusions to manners and customs, the whole meaning of the original. Much, very much is left by it untouched. It pursues an easy path, and difficulties vanish before it, because the *highest object* of the right-minded interpreter, so far from being attained, is not sought to be realized. There may be a great amount of writing —the thoughts of preceding commentators may be given in another costume with appended reflections; but, in all this, there is no profound or satisfying investigation. The mere surface of revelation is skimmed. The work is performed perfunctorily. Nothing of value is added to former interpretations. The essence and spirit of the original are to a great extent unperceived. The shades and colourings of thought are unreflected. Two or three books are quite sufficient for one man, to whatever age he may attain. By *intelligently expounding* them, he will do more to advance the cause of sacred interpretation, than if he were to travel over the entire field of the Bible. We had rather see a sound and able commentary on one book, than a prosing expansion of stale remarks on all. It displays more real talent, as it exhibits more independent thought. We value highly the labours of those men who devote themselves to a few books, with an honest determination to ascertain their true meaning, and with such qualifications intellectual, moral, and literary, as have been already noticed. If they be men of the right stamp, we may expect great benefit from their investigations. As for those who have the self-confidence to undertake the exposition of all Scripture, we are inclined to

pass by their harmless drudgery, never looking to it for true exposition. They are mere hewers of wood and drawers of water. They collect the observations of others; but it will be found that *sermonising* and *discursive* annotations fill up their lengthened pages.

4. We shall very briefly refer to the principal commentators on the Bible.

Calvin.—In all the higher qualifications of a commentator Calvin is pre-eminent. His knowledge of the original languages was not so great as that of many later expositors; but in developing the meaning of the sacred writers, he has few equals. It has been well remarked that he chiefly attended to the *logic* of commentary. He possessed singular acuteness, united to a deep acquaintance with the human heart, a comprehension of mind by which he was able to survey revelation in all its features, and an enlightened understanding competent to perceive sound exegetical principles, and resolute in adhering to them. He can never be consulted without advantage, although all his opinions should not be followed. His works present specimens of exegesis that deserve to be ranked among the best extant, because they are occupied with the *spiritual essence* of the Bible—with *the theology* of the inspired writers.

Beza.—Beza's talents are seen to great advantage in expounding the argumentative parts of the Bible. He possessed many of the best exegetical qualities which characterized his great master. In tracing the connection of one part with another, and the successive steps of an argument, he displays much ability. His acuteness and learning were considerable. He was better acquainted with *the theology* than *the criticism* of the New Testament.

Hammond.—This learned annotator was well qualified for interpretation. His paraphrase and annotations on the New Testament possess considerable value; and many good specimens of criticism are found in his notes. Yet he has not entered deeply into the spirit of the original, or developed with uniform success the meaning of the inspired writers. Many of the most difficult portions he has superficially examined, or wholly mistaken.

Poole.—Poole's annotations on the Holy Bible contain several valuable, judicious remarks. But their defects are numerous. The pious author had only a partial acquaintance with the original. He was remarkable neither for profundity nor acuteness. Yet he had piety and good sense, amazing industry, and an extensive knowledge of the older commentators.

Poli Synopsis Criticorum.—In this large work, the annotations of a great number of the older commentators are collected and condensed. But they are seldom sifted and criticised, so that the reader is left to choose among them for himself. Such a chaos of remarks is apt to confuse the mind. Whoever has time, and patience, and discrimination, may find correct exegesis scattered through the whole; but simpler and more direct commentary is much to be preferred.

Grotius.—This very learned writer investigates the literal sense of the Scriptures with great diligence and success. He had considerable exegetical tact, and a large acquaintance with the heathen classics, from which he was accustomed to adduce parallels. His taste was good, and his mode of unfolding the meaning of a passage simple, direct, and brief. His judgment was sound, free from prejudice, and liberal beyond the age in which he lived. As a commentator he was distinguished for his uniformly good sense. But he wanted the depth and acuteness of Calvin. It has been said without reason, that he found Christ nowhere in the Old Testament. It is true that he opposed the Cocceian method, but in this he should be commended. His chief defect is in *spiritual discernment*. Hence he rests in the literal meaning in many cases, where there is a higher or ulterior reference.

Le Clerc.—Excellent notes are interspersed throughout the commentaries of this author, which the younger Rosenmüller transcribed into his *Scholia*. His judgment was good, and his mode of interpretation perspicuous. From his richly stored mind he could easily draw illustrations of the Bible both pertinent and just. Yet he was very defective in theological discrimination. Hence, in the *prophetic* and *doctrinal* books, he is unsatisfactory. It has been thought, not without truth, that he had a rationalistic tendency. It is certain that he exalted his own judgment too highly, and pronounced dogmatically where he ought to have manifested a modest diffidence.

Calmet.—Calmet is perhaps the most distinguished commentator on the Bible belonging to the Roman Catholic Church. In the higher qualities of commentary his voluminous work is very deficient. It contains a good collection of historical materials, and presents the meaning of the original where it is already plain; but his historical apparatus needs to be purified of its irrelevant, erroneous statements; while on the difficult portions no new light is thrown.

Patrick, Lowth, Arnald, and *Whitby.*—Bishop Patrick had many of the elements belonging to a good commentator. His learning was great when we consider the time at which he lived, his method brief and perspicuous. Lowth was inferior to Patrick. Whitby presents a remarkable compound of excellences and imperfections. In philosophy he was a master. In critical elucidations of the text he was at home. Nor was he wanting in acuteness or philosophical ability. His judgment was singularly clear, and his manner of annotating straightforward. Yet he had not much comprehensiveness of intellect, or a deep insight into the spiritual nature of revelation. The sublime harmony of the New Testament was but dimly seen by him. In the spirit of a high relish for the purity of the Gospel he seldom mounts up into its mysteries. Deeply baptized in the Spirit's influences he could not have been, else many of his expository notes would have been different.

Henry.—The name of this good man is venerable, and will be held in everlasting remembrance. His commentary does not contain much *exposition*. It is full of *sermonising*. It is surprising, however, to see how far his good sense and simple piety led him into the doctrine of the Bible, apart from many of the higher qualities belonging to a successful commentator. In thoroughness and solidity of exposition he is not to be named with Calvin. His prolixity is great. *Practical preaching* is the burden of his voluminous notes.

Gill.—The prominent characteristic of Gill's

commentary is *heaviness*. It lacks condensation and brevity. The meaning of the inspired authors is often undeveloped, and more frequently distorted. It has the lumber and rubbish of learning, without learning itself.

Doddridge.—The taste of this pious commentator was good, and his style remarkably pure. He had not much acumen or comprehension of mind; but he had an excellent judgment, and a calm candour of inquiry. His paraphrase leaves much unexplained, while it dilutes the strength *of the original*. It is too discursive and sermonising. The notes are few, and ordinarily correct.

Scott. — The prevailing characteristic of Scott's commentary is judiciousness in the opinions advanced. The greater portion of it, however, is not *proper exposition*. The pious author preaches about and paraphrases the original. His simplicity of purpose generally preserved him from mistakes; but as a commentator he was neither acute nor learned. He wanted a competent acquaintance with the original, power of analysis, a mind unprepossessed by a doctrinal system, and penetration of spirit.

A. Clarke.—In most of the higher qualities by which an interpreter should be distinguished, this man of much reading was wanting. His historical and geographical notes are the best. But he had no philosophical ability. His prejudices warped his judgment. His philology is not unfrequently puerile. Acuteness and penetration are not seen in his writings. There is no deep insight into the mind of the sacred writers.

The modern Germans, prolific as they are in theological works, have seldom ventured to undertake an exposition of the whole Bible. Each writer usually confines himself to the task of commenting on a few books. In this their wisdom is manifested. Yet they do not excel in good specimens of commentary. They are *word-explainers*. In pointing out various readings, in grammatical, historical, and geographical annotations, as also in subtle speculations respecting the genius of the times in which the writers of the Bible lived, they are at home. In the *lower criticism* we willingly sit at their feet and learn. But with regard to the *higher*, in all that pertains to the *logic* of commentary, in development of the sense in its holy relations, they are lamentably wanting. Refined notions usurp the place of practical piety in their minds; and the minutiæ of verbal criticism furnish them nutriment apart from the rich repast of theological sentiment and sanctifying truth. But there are some noble exceptions.

E. F. C. Rosenmüller.—The *Scholia* of this laborious writer extend over the greater part of the Old Testament. Looking to the last editions, they are unquestionably of high value. They bring together a mass of annotation such as is sufficient to satisfy the desires of most Biblical students. Yet the learned author undertook too much to perform it in a masterly style. Hence his materials are not properly sifted, the chaff from the wheat. He has not drunk deeply into the spirit of the inspired authors. He seems indeed not to have had a soul attuned to the spirituality of their utterances, or impregnated with the celestial fire that touched their hallowed lips. His father, the author of the *Scholia* on the New Testament, is a good *word-explainer* for students beginning to read the original. He has not produced a masterly specimen of commentary on any one book or epistle.

Olshausen.—The best example of commentary on the New Testament with which we are acquainted has been given by this writer. It is a model of exposition unrivalled in any language. Verbal criticism is but sparingly introduced, although even here the hand of a master is apparent. He is intent, however, on higher things. He investigates the thought, traces the connection, puts himself in the same position as the writers, and views with philosophic ability the holy revelations of Christ in their comprehensive tendencies. The critical and the popular are admirably mingled. Greatly do we lament that the writer was cut off before he completed so excellent a performance.

Tholuck.—The commentaries of this eminent writer on various books of the New Testament, especially those on the Epistles to the Romans and Hebrews, exhibit the highest exegetical excellences. While he critically investigates phrases and idioms, he ascends into the pure region of the ideas, unfolding the sense with much skill and discernment. His commentary on John is of a more popular cast. His interpretation of the *Bergpredigt*, or Sermon on the Mount, is very valuable.

In addition to these, Germany has produced other specimens of commentary that occupy a high place in the estimation of competent judges. Lücke, on John's writings, especially in the *third* edition now in progress; Gesenius, on Isaiah; De Wette, on the Psalms; Hävernick, on Ezekiel and Daniel; Billroth, on the Corinthians; Harless, on Ephesians; and Baehr, on the Colossians, possess much merit, accompanied, it is true, with some serious faults. As examples of thorough and solid commentary, the English language presents none equal to those of Professor Stuart on the Epistles to the Romans and Hebrews. The learned author has fully entered into the spirit of the great Apostle, evading no difficulty, and tracing the course of his reasoning with considerable success. He has consequently thrown more light on these difficult Epistles than many are willing to allow. A valuable commentary on the Epistle to the Romans we also possess in that of Professor Hodge, although the author cannot be said to have gone far beyond Calvin, in whose steps he has closely trod.

Our space will not allow us to mention other expository treatises. Those we have noticed are best known in this country, and most perused.

S. D.

COMMERCE. The idea conveyed by this word is represented in the sacred writings by the word trade; the Hebrew term רכל *rekel* signifying literally 'trade' or 'traffic.'

Commerce, in its usual acceptation, means the exchange of one thing for another—the exchange of what we have to spare for what we want, in whatever country it is produced. The origin of commerce must have been nearly coeval with the world. As pasturage and agriculture were the only employments of the first inhabitants, so cattle, flocks, and the fruits of the earth were the only objects of the first commerce, or that species of it called barter It would appear that some progress had been made in manufactures in the ages before the flood

The building of a city or village by Cain, however insignificant the houses may have been, supposes the existence of some mechanical knowledge. The musical instruments, such as harps and organs, the works in brass and in iron exhibited by the succeeding generations, confirm the belief that the arts were considerably advanced. The construction of Noah's ark, a ship of three decks, covered over with pitch, and much larger than any modern effort of architecture, proves that many separate trades were at that period carried on. There must have been parties who supplied Noah and his three sons with the great quantity and variety of materials which they required, and this they would do in exchange for other commodities, and perhaps money. That enormous pile of building, the tower of Babel, was constructed of bricks, the process of making which appears to have been well understood. Some learned astronomers are of opinion that the celestial observations of the Chinese reach back to 2249 years before the Christian era; and the celestial observations made at Babylon, contained in a calendar of above nineteen centuries, transmitted to Greece by Alexander, reach back to within fifteen years of those ascribed to the Chinese. The Indians appear to have had observations quite as early as the Babylonians.

Such of the descendants of Noah as lived near the water may be presumed to have made use of vessels built in imitation of the ark—if, as some think, that was the first floating vessel ever seen in the world—but on a smaller scale, for the purpose of crossing rivers. In the course of time the descendants of his son Japhet settled in 'the isles of the Gentiles,' by which are understood the islands at the east end of the Mediterranean sea, and those between Asia Minor and Greece, whence their colonies spread into Greece, Italy, and other western lands.

Sidon, which afterwards became so celebrated for the wonderful mercantile exertions of its inhabitants, was founded about 2200 years before the Christian era. The neighbouring mountains, being covered with excellent cedar-trees, furnished the best and most durable timber for ship-building. The inhabitants of Sidon accordingly built numerous ships, and exported the produce of the adjoining country, and the various articles of their own manufacture, such as fine linen, embroidery, tapestry, metals, glass, both coloured and figured, cut, or carved, and even mirrors. They were unrivalled by the inhabitants of the Mediterranean coasts in works of taste, elegance, and luxury. Their great and universally acknowledged pre-eminence in the arts procured for the Phœnicians, whose principal seaport was Sidon, the honour of being esteemed, among the Greeks and other nations, as the inventors of commerce, ship-building, navigation, the application of astronomy to nautical purposes, and particularly as the discoverers of several stars nearer to the north pole than any that were known to other nations; of naval war, writing, arithmetic, book-keeping, measures and weights; to which it is probable they might have added money.

Egypt appears to have excelled all the neighbouring countries in agriculture, and particularly in its abundant crops of corn. The fame of its fertility induced Abraham to remove thither with his numerous family (Gen. xii. 10).

The earliest accounts of bargain and sale reach no higher than the time of Abraham, and his transaction with Ephron. He is said to have weighed unto him '400 shekels of silver, current money with the merchant' (Gen. xxiii. 16). The word merchant implies that the standard of money was fixed by usage among merchants, who comprised a numerous and respectable class of the community. Manufactures were by this time so far advanced, that not only those more immediately connected with agriculture, such as flour ground from corn, wine, oil, butter, and also the most necessary articles of clothing and furniture, but even those of luxury and magnificence, were much in use, as appears by the ear-rings, bracelets of gold and of silver, and other precious things presented by Abraham's steward to Rebecca (Gen. xxiv. 22, 53).

In the book of Job, whose author, in the opinion of the most learned commentators, resided in Arabia, and was contemporary with the sons of Abraham, much light is thrown upon the commerce, manufactures, and science of the age and country in which he lived. There is mention of gold, iron, brass, lead, crystal, jewels, the art of weaving, merchants, gold brought from Ophir, which implies commerce with a remote country, and topazes from Ethiopia; ship-building, so far improved that some ships were distinguished for the velocity of their motion; writing in a book, and engraving letters or writing on plates of lead and on stone with iron pens, and also seal-engraving; fishing with hooks, and nets, and spears; musical instruments, the harp and organ; astronomy, and names given to particular stars. These notices tend to prove that, although the patriarchal system of making pasturage the chief object of attention was still maintained by many of the greatest inhabitants where the author of the book of Job resided, the sciences were actively cultivated, the useful and ornamental arts in an advanced state, and commerce prosecuted with diligence and success; and this at a period when, if the chronology of Job is correctly settled, the arts and sciences were scarcely so far advanced in Egypt, from whence, and from the other countries bordering upon the eastern part of the Mediterranean Sea, they afterwards gradually found their way into Greece.

The inhabitants of Arabia appear to have availed themselves, at a very early period, of their advantageous situation between the two fertile and opulent countries of India and Egypt, and to have obtained the exclusive monopoly of a very profitable carrying trade between those countries. They were a class of people who gave their whole attention to merchandise as a regular and established profession, and travelled with caravans between Arabia and Egypt, carrying upon the backs of camels the spiceries of India, the balm of Canaan, and the myrrh produced in their own country, or of a superior quality from the opposite coast of Abyssinia—all of which were in great demand among the Egyptians for embalming the dead, in their religious ceremonies, and for ministering to the pleasures of that superstitious and luxurious people. The merchants of one of these caravans bought Joseph from his brothers for twenty pieces of silver, that is about 2*l*. 11*s*. 8*d*. sterling, and carried him into Egypt. The southern Arabs were eminent traders, and enjoyed a

large proportion, and in general the entire monopoly, of the trade between India and the western world, from the earliest ages, until the system of that important commerce was totally overturned when the inhabitants of Europe discovered a direct route to India by the Cape of Good Hope.

At the period when Joseph's brethren visited Egypt, inns were established for the accommodation of travellers in that country and in the northern parts of Arabia. The more civilized southern parts of the peninsula would no doubt be furnished with caravanserais still more commodious.

During the residence of the Israelites in Egypt manufactures of almost every description were carried to great perfection. Flax, fine linen, garments of cotton, rings and jewels of gold and silver, works in all kinds of materials, chariots for pleasure, and chariots for war, are all mentioned by Moses. They had extensive manufactories of bricks. Literature was in a flourishing state; and, in order to give an enlarged idea of the accomplishments of Moses, it is said he was 'learned in all the wisdom of the Egyptians' (Acts xii. 22).

The expulsion of the Canaanites from a great part of their territories by the Israelites under Joshua, led to the gradual establishment of colonies in Cyprus, Rhodes, and several islands in the Ægean Sea; they penetrated into the Euxine or Black Sea, and, spreading along the shores of Sicily, Sardinia, Gaul, Spain, and Africa, established numerous trading places, which gradually rose into more or less importance. At this period mention is first made of Tyre as a strong or fortified city, whilst Sidon is dignified with the title of Great.

During the reign of David, king of Israel, that powerful monarch disposed of a part of the wealth obtained by his conquests in purchasing cedar-timber from Hiram, king of Tyre, with whom he kept up a friendly correspondence while he lived. He also hired Tyrian masons and carpenters for carrying on his works. Solomon, the son of David, cultivated the arts of peace, and indulged his taste for magnificence and luxury to a great extent. He employed the wealth collected by his father in works of architecture, and in strengthening and improving his kingdom. He built the famous Temple and fortifications of Jerusalem, and many cities, among which was the celebrated Tadmor or Palmyra. From the king of Tyre he obtained cedar and fir, or cypress-timbers, and large stones cut and prepared for building, which the Tyrians conveyed by water to the most convenient landing-place in Solomon's dominions. Hiram also sent a vast number of workmen to assist and instruct Solomon's people, none of whom had skill 'to hew timber like the Sidonians.' Solomon, in exchange, furnished the Tyrians with corn, wine, and oil, and received a balance in gold. Solomon and Hiram appear to have subsequently entered into a trading speculation or adventure upon a large scale. Tyrian shipwrights were accordingly sent to build vessels for both kings at Eziongeber, Solomon's port on the Red Sea, whither he himself went to animate them with his presence (2 Chron. viii. 17). These ships, conducted by Tyrian navigators, sailed in company to some rich countries called Ophir and Tarshish, regarding the position of which the learned have multiplied conjectures to little purpose. The voyage occupied three years; yet the returns in this new found trade were very great and profitable. This fleet took in apes, ebony, and parrots on the coasts of Ethiopia, gold at Ophir, or the place of traffic whither the people of Ophir resorted; it traded on both sides of the Red Sea, on the coasts of Arabia and Ethiopia, in all parts of Ethiopia beyond the straits when it had entered the ocean; thence it passed up the Persian Gulf, and might visit the places of trade upon both its shores, and run up the Tigris or the Euphrates as far as these rivers were navigable.

After the reign of Solomon the commerce of the Israelites seems to have very materially declined. An attempt was made by Jehoshaphat, king of Judah, and Ahaziah, king of Israel, to effect its revival; but the ships which they built at Eziongeber having been wrecked in the harbour, the undertaking was abandoned. It does not appear that they had any assistance from the Phœnicians in fitting out this fleet. Great efforts were made by the Egyptians to extend the commerce of their country, among which, not the least considerable was the unsuccessful attempt to construct a canal from the Nile to the Arabian Gulf.

The rising prosperity of Tyre soon eclipsed the ancient and long-flourishing commercial city of Sidon. About 600 years before Christ her commercial splendour appears to have been at its height, and is graphically described by Ezekiel (xxvii). The imports into Tyre were fine linen from Egypt; blue and purple from the isles of Elisha; silver, iron, tin, and lead from Tarshish—the south part of Spain; slaves and brazen vessels from Javan or Greece, Tubal, and Meshech; horses, slaves bred to horsemanship, and mules from Togarmah; emeralds, purple, embroidery, fine linen, corals, and agates from Syria; corn, balm, honey, oil, and gums from the Israelites; wine and wool from Damascus; polished ironware, precious oils, and cinnamon from Dan, Javan, and Mezo; magnificent carpets from Dedan; sheep and goats from the pastoral tribes of Arabia; costly spices, some the produce of India, precious stones, and gold from the merchants of Sheba or Sabæa, and Ramah or Regma, countries in the south part of Arabia; blue cloths, embroidered works, rich apparel in corded cedar-chests, supposed to be original India packages, and other goods from Sheba, Ashur, and Chilmad, and from Haran, Canneh, and Eden, trading ports on the south coast of Arabia. The vast wealth that thus flowed into Tyre from all quarters brought with it its too general concomitants—extravagance, dissipation, and relaxation of morals.

The subjection of Tyre, 'the renowned city which was strong in the sea, whose merchants were princes, whose traffickers were the honourable of the earth,' by Cyrus, and its subsequent overthrow by Alexander, after a determined and most formidable resistance, terminated alike the grandeur of that city and the history of ancient commerce, as far as they are alluded to in Scripture (Anderson's *History of Commerce;* Vincent's *Commerce and Navigation of the Indian Ocean;* Heeren's *Researches;* Barnes's *Ancient Commerce of Western Asia*, in *American Biblical Repository*, 1841).—G. M. B.

COMMON (κοινός). The Greek term properly signifies *what belongs to all* (as in Wisd. vii. 3, κοινὸς ἀήρ), but the Hellenists applied it (like the Hebrew חל) to what was profane, *i. e. not holy*, and therefore of common or promiscuous use (Acts x. 14). They also applied the term to what was *impure*, whether naturally or legally (as in Mark vii. 2, compared with Macc. i. 47, 62). And, finally, it was used of meats forbidden, or such as had been partaken of by idolaters, and which, as they rendered the partakers thereof impure, were themselves called κοινὰ (common), and ἀκάθαρτα (unclean) (see Kuinoel on Acts x. 14).

COMMUNION (κοινωνία), a fellowship or agreement, when several persons join and partake together of one thing (2 Cor. vi. 14; 1 John i. 3); hence its application to the celebration of the Lord's supper as an act of fellowship among Christians (1 Cor. x. 16): and it is to this act of participation or fellowship that the word 'communion' is now restricted in the English language, the more familiar application of it having fallen into disuse.

CONCORDANCE, the name assigned to a book which gives the words contained in the Holy Scriptures in alphabetical order, with a reference to the place where each may be found. This is the essential idea of a concordance; other ancillary information may be presented in concordances, such as a separate order of proper names, the meanings which in the compiler's opinion important words are found to bear, and the etymological signification of appellatives, &c. There are two great distinctive principles on which concordances may be constructed—either to present every word found in the Bible, or only the leading and most important words. The adoption of the first necessarily swells a book to inconvenient dimensions, and renders its use in the ordinary purposes of study somewhat onerous and inconvenient. But great judgment is requisite in compiling a concordance on the other principle, lest words of less importance should be preferred to those of greater; and as importance is altogether a relative matter, the selection made by the author may omit words which some, if not many, readers would desiderate. The Germans also make a distinction between concordances of things and concordances of words: the first comprising in detailed and alphabetical form the subject-matter of the sacred volume; the second corresponding with the ordinary English notion of a concordance. Concordances, too, vary with the languages in which, or for which, they are constructed, as for the original Hebrew and Greek, or for the several versions of the Scriptures, such as the Vulgate, the German, the English, &c.

It is not here intended to present a full or a chronological history of all the concordances which have been produced, but to put down those particulars which seem to combine interest and utility.

Writings of this kind imply that the sacred Scriptures are regarded with reverence, held to be authoritative in religion, and are made the subject of appeal alike in learning, teaching, and disputation. So long therefore as the Bible was scattered piecemeal up and down the world in convents and libraries, and so long as it was rarely studied even by the professed ministers of religion, concordances were neither needed nor produced; yet there never ceased, in the darkest ages of the Church, to be some who felt a profound interest in the study of the venerable book, and consequently some rude essays appear to have been made in this way before the age in which concordances may properly be said to have had their origin. It is to the Reformation and the deep and general concern which it awakened touching the truths contained in the Scriptures; it is to the primary principle of the Reformation—the appeal from tradition to the Bible, from the Church to the word of God; it is to the wide-spread conviction of the plenary and even verbal inspiration of the Bible, that the world is indebted for the care, diligence, learning, and self-denial which have been employed in constructing and perfecting the concordance.

The utility of concordances in the way of exegesis, that is, to assist the student in the discovery and explanation of the meaning of the sacred writings, is based on the position that the several parts of divine revelation are consistent with each other and form harmonious elements in one grand system of spiritual truth, so that by comparing together parallel passages what is clear may be exemplified and confirmed, and what is dark may be expounded. Books of this sort, too, are of service to the Christian teacher, as affording facilities by means of those fragmentary recollections of words and things which the mere hearing of the Scriptures read leave in the mind, for readily discovering the particular book and verse where any desired passage is to be found; and also as enabling him, with comparatively little trouble, to take a survey of what the Bible contains in regard to any particular subject which he may have to handle.

Antony of Padua (born A.D. 1195, died 1231) is said to have produced the first work of the kind, entitled *Concordantiæ Morales*, which was formed from the Vulgate translation. Hugo de Santo Caro, better known as Cardinal Hugo, a Dominican monk, who died about 1262, followed Antony in 1244, by compiling for the Vulgate a concordance of the Scriptures. Having given himself sedulously to the study of holy writ, with a view of writing a commentary thereon, he was, in order to facilitate his labour, led to project and undertake to form a concordance, calling to his aid his brother monks to the number of no fewer than five hundred. Their labours have been a rich storehouse for subsequent compilers. The concordance thus made was improved by Conrad of Halberstadt, who flourished about 1290, and by John of Segovia in the ensuing century.

These works seem to have led to the first Hebrew concordance, which was produced by Rabbi Mordecai Nathan, which he began in 1438, and finished in 1448, after ten years' hard labour by himself and some assistants. It was first printed at Venice in 1523, fol., by Dan. Bomberg, then in Basle in 1581, and afterwards at Rome in 1621. It is entirely Hebrew, and entitled *The Light of the Way*. In 1556 it was translated into Latin by Reuchlin, but both the Hebrew and the Latin editions are full of errors.

These errors were for the most part corrected and other deficiencies supplied by Calasio, a Franciscan friar, who published *Concordantiæ Sacr. Bibl. Hebr. et Latin.* Romæ, 1621, 4

vols. fol. Referring the reader for details respecting this work to Orme's *Bibliotheca Biblica*, p. 112, we dwell a little more on a work which is found less seldom than the former in private theological libraries—*Concordantiæ Bibl. Ebraicæ, nova et artificiosa methodo dispositæ*, Basil, 1632, fol. This is the production of John Buxtorf, the father, but was published by his son. It takes for its basis the work of Rabbi Nathan, though it is much better arranged, more correctly printed, the roots more distinctly ascertained, and the meanings more accurately given; but as the references are made by Hebrew letters, and relate to the Rabbinical divisions of the Old Testament, it is of little service, unless the student is familiar with the Masoretic system. This work was abridged under the title of *Fons Leonis*, &c., Berolini, 1677, 8vo. The concordance of Calasio was republished in London under the direction of W. Romaine, 1747-9, 4 vols. fol., and under the patronage of all the monarchs in Europe, not excepting the pope himself. Before this republication, however, there appeared, in 1679 (Kopenh. fol.), Ch. Nolde *Concor. particularum Ebr. Chaldaicarum*. Reference may also be made to Simonis *Onomasticon V. T.* Halle, 1741, fol. But the best and, at least to the English reader, most important work on this subject is, *The Hebrew Concordance, adapted to the English Bible, disposed after the manner of Buxtorf*, by John Taylor, D.D., London, 1754, 2 vols. fol. Dr. Taylor was an eminent Presbyterian divine at Norwich, the author of several publications which show great industry and learning. His concordance is by far the most complete work of the kind. It was the fruit of many years' labour, and has left little room for improvement. The patronage of all the English and Irish bishops recommended the work to the world.

An edition of Buxtorf's *Hebrew Concordance*, which has received so much care and attention on the part of the author, as nearly to deserve the name and bear the character of a new work—*Hebräischen und Chaldäischen Concordanz zu den Heiligen Schriften Alten Testaments*, von Dr. Julius Fürst (Leipzig, Tauchnitz; London, Nutt) offers one of the most useful aids to the study of the Bible that have ever appeared. The necessity of such a work as the present arises not only from the errors found in Buxtorf and the comparative rarity of the work, but also from the great advances which, since the time when Buxtorf's work appeared (A.D. 1632), have been made both in the knowledge of the Shemitic languages, in the general science of theology, and the particular department of Biblical exegesis. We may specify one or two of the advantages offered by this work. In addition to those of a more mechanical kind, such as a good type and clear arrangement, there are, 1. A corrected text, founded on Hahn's *Vanderhoogt;* 2. The Rabbinical significations; 3. Explanations in Latin, giving the etymology of the Rabbinical; illustrations from the three Greek Versions, the Aramaic Paraphrase, the Vulgate, &c.; the Greek words employed by the Seventy as renderings of the Hebrew; together with philological and archæological notices, so as to make the Concordance contain an ample Hebrew lexicon. This work is far preferable to Taylor's *Hebrew Concordance*, which is now not easily met with. Every theological library which has not a copy of Fürst must be considered as wanting an essential requisite. The work, when known, will, we are assured, be welcomed by English scholars.

The best Greek concordance to the Septuagint is that which bears the title—A. Trommii *Con. Græc. Vers. vulgo dic. LXX. Interpre.* Amst. 1718, 2 vols. fol. The author of this learned and most laborious work was minister of Groningen, and published the concordance in the eighty-fourth year of his age. He was born in 1623 and died in 1719. It follows the order of the Greek words of which it first gives a Latin translation, and then the Hebrew word or words for which the Greek term is used in the Seventy. Then the different places in which the words occur follow in the order of the several books and chapters. When the word occurs in any of the ancient Greek translators, Aquila, Symmachus, or Theodotion, the places where it is found are referred to at the end of the quotations from the Sept. The words of the Apocrypha are placed at the end of each enumeration. There are two indices at the end of the work: one Hebrew and Chaldaic, by examining which the Greek term used in the Septuagint for any Hebrew or Chaldee word is seen at once, with the Latin version and the place where it is found in the concordance, so that Tromm serves in a measure for a Hebrew concordance; the other index contains a lexicon to the Hexapla of Origen, and comprehends the Greek words in the fragments of the old Greek translators published by Montfaucon.

The first Greek concordance to the New Testament, now exceedingly rare, is entitled Xysti Betuleii *Concordantiæ Græcæ Novi Testamenti*, Basil. 1546, fol. The author, whose real name was Birck, was a minister of the Lutheran church; he was born in 1500, and died at Augsburg in 1554. A concordance to the Greek New Testament, projected and partly executed by Robert Stephens, and completed and published by his son Henry (Genev. 1594, fol.), is too inaccurate to merit more than a passing notice. The ensuing is the work which the divine should possess—Erasmi Schmidii *Novi Testamenti J. C. Græci; hoc est, originalis linguæ ταμεῖον*, &c. Vetemb. 1638, fol. The author, a Lutheran divine, was a professor of the Greek language in the university of Wittemberg, where he died in 1637. In 1717 a revised edition was published at Gotha, of which a handsome reprint, in 2 vols. 8vo., was issued from the Glasgow University press in 1819. The same work, edited by Greenfield, has been printed by the Messrs. Bagster of London, in a thin, flat pocket volume, and in another form, 32mo., being one of their 'Polymicrian Series.' By omitting the unimportant proper names, the indeclinable particles, the pronouns and the verb substantive, by substituting simple references for citation under such circumstances as allow of the change, the ponderous labours of the Stephenses and Schmid are in these editions compressed into neat, low-priced, and convenient pocket volumes, without any detraction from utility.

A new and very superior edition of Schmid's ταμεῖον has recently been put forth by C. H. Bruder, who has improved the work so as to bring it into accordance with the advanced and enlightened views on critical and hermeneutical subjects which characterise what may be termed

the scientific theology of Germany in the present day. Among the advantages of this edition, let it suffice to specify, 1. Fulness, accuracy, and correspondence with Griesbach's edition; 2. Regard has been paid to the editions of Lachmann and Scholz; all the readings of the Elzevirs, Mill, Bengel, Knapp, Tittmann, Scholz, and also of Erasmus, Robert Stephens' third edition, and of Schmid himself, are either given or pointed out. The student is presented also with a selection of readings from the most ancient MSS., from the interpreters of Scripture who lived in the earlier ages of the church, and the works of the ecclesiastical fathers: no various reading possessing critical value is omitted. This, indeed, is a work of so much value, that no good theological library can be without it; and when its worth and utility come to be known in this country, it will soon supersede the ordinary editions and reprints of Schmid's *Concordance*. It is put forth under the auspices of that spirited publisher Tauchnitz of Leipsic.

One of the most valuable aids for the general study of the New Testament which modern times have produced is '*The Englishman's Greek Concordance of the New Testament;* being an attempt at a Verbal Connexion between the Greek and the English Texts. London, 1839.' The work, which is carefully compiled and beautifully got up, takes Schmid as its basis. The plan is to present in alphabetical succession every word which occurs in the Greek New Testament with the series of passages (quoted from the English translation) in which each such word occurs; the word or words exhibiting the Greek word under immediate consideration being printed in italic letters. The utility of such a work is various. We will give one instance. Let it be supposed that the student is engaged in endeavouring to learn the import of the words 'that it might be fulfilled.' If his acquaintance with Greek is small, he has to refer to an index at the end of the volume in order to ascertain what is the Greek word which our translators have rendered by 'fulfilled.' If he is familiar with the Greek New Testament, he at once turns to the word πληρόω, which he finds in both Greek and English characters, immediately followed by the several passages in English which are renderings of πληρόω in the original. For the sake of completing our illustration, we transcribe several of these renderings, taking them in the order in which they are found in this *Concordance*—the order, that is, in which the books of the New Testament stand in the Common Version: these renderings are, 'fulfilled,' 'to fulfil,' 'was full,' 'fill ye up,' 'filled,' 'had ended,' 'full come,' 'make full,' 'were (years) expired,' 'were ended,' 'fulfil ye my joy,' 'God shall supply,' 'ye are complete,' 'works perfect.' Now enough of the context is given to enable a diligent reader of the English New Testament to learn, as his eye runs down the column of citations, on which subject each quoted passage bears, and generally which therefore is the general import and bearing of each rendering of the Greek original. First impressions are thereby at once gained—perhaps definite convictions as well—without once referring to the Greek Testament itself, though the citations may extend throughout the volume, and require hours to be consumed had they to be sought without aid. These first impressions may lead to sustained thought or careful investigation: indeed, the most profound study of the New Testament may, with the assistance here provided, be carried on with no less ease than satisfaction, by any one who is intent on learning 'the mind of the Spirit,' though but scantily provided with erudition.

In consequence of the revived study of the Bible and of the Christian fathers, as well as the greater interest felt in religion and religious inquiries which the last quarter of a century has witnessed in France, and especially in Paris, a new Concordance to the Latin Vulgate has recently been produced: '*Concordantiæ Biblior. Sacr.*, Vulgatæ Editionis, Recensitæ, multoque prioribus auctiores, emendante, accuratius denuo colligente et cum omnibus Bib. textibus conferente T. P. Dutripon.' London, Nutt, Fleet-street. This work is founded on that of Cardinal Hugo, which, though executed by fifty different compilers (chiefly Benedictine monks), is far from being either accurate or complete. The editor appears to have discharged his duty with great care and labour; and the printer has well performed his part. The points in which this edition contains improvements, in comparison with the last of those which preceded it, are numerous and important. It may be sufficient to state that it contains 22,000 passages not to be found in previous Concordances to the Vulgate. Some of the additions, indeed, seem rather suited to the peculiar condition of Biblical study in the Catholic communion than to the requirements of the general theologian; nevertheless, the work is a valuable contribution to Biblical literature, and must in this country be regarded with peculiar pleasure, as both a result and an instrument of an increase of Scriptural knowledge on the part of our Catholic brethren. The Archbishop of Paris has accepted the dedication of the Concordance to himself; and it has been approved by most of the archbishops and bishops of France and Belgium.

The work of Andrew Symson, *Lexicon Anglo-Græco-Latin. N. T.*, London, 1658, fol., is rather a dictionary than a concordance, and formed on so bad a plan as to be of little service. A much better book is *A Concordance to the Greek Testament, with the English Version to each Word, the principal Hebrew roots corresponding to the Greek words of the Septuagint, with short Critical Notes, and an Index*, by John Williams, LL.D., Lond. 1767, fol.

The first concordance to the English version of the New Testament was published without date, but certainly before 1540, by 'Mr. Thomas Gybson,' being chiefly, as appears probable from the prefatory epistle to the reader, the work of the famous printer John Day. It is entitled *The Concordance of the New Testament, most necessary to be had in the hands of all soche as desire the communication of any place contained in the New Testament.* The first English concordance to the *entire* Bible was by John Marbeck—*A Concordance, that is to saie, a Worke wherein by the order of the letters of the A, B, C, ye maie redely find any worde conteigned in the whole Bible, so often as it is there expressed or mentioned*, Lond. 1550, fol. Till the year 1555, when Robert Stephens published his concordance, it was not customary to mark the verses in books

of this sort. At first it was thought sufficient to specify the chapter with the letters *a, b, c, d*, as marks to point out the beginning, middle, and end of each chapter. But in 1545 Robert Stephens divided the Bible into verses, thus preparing the way for a more exact reference in concordances, &c.; but Marbeck does not appear to have been under the influence of this improvement, as his work refers merely to the chapters. In Townley's *Bib. Lit.* vol. iii. p. 118, may be found some interesting particulars respecting Marbeck's condition in life, labours, and ill-treatment.

The following work, which appeared in the same year as the last, is a translation from the German—*A Briefe and a Compendious Table, in maner of a Concordance, openyng the waye to the principall Histories of the whole Bible and the most comon articles grounded and comprehended in the Newe Testament and Olde, in maner as amply as doeth the great Concordance of the Bible. Gathered and set forth by Henry Bullinger, Leo Jude, Conrade Pellicane, and by the other ministers of the Church of Ligurie. Translated from the Hygh Almayne into Englysh by Walter Lynne. To which is added, a Translation of the Third Boke of Machabees*, 8vo. 1550. Lynne, the translator, was an English printer, who flourished about the middle of the sixteenth century, a scholar, author, and translator of several books. Bullinger, the author, was a Swiss reformer, born near Zurich in Switzerland, 1504.

Several English concordances of greater or less value were superseded by the correct and valuable work of Alexander Cruden, entitled *A Complete Concordance to the Holy Scriptures of the Old and New Testament, &c.; to which is added, a Concordance to the books called Apocrypha*, 1737, 4to. Three editions were published by the author during his life, and many have appeared since his death. The London edition of 1810 is the best standard edition. The work is complete, the definitions accurate, and the references correct. Several useful editions of Cruden have been put forth by the Messrs. Bagster, which are worth far more than their cost. The same publishers have issued *An Alphabetical Index of the Holy Scriptures, comprising the Names, Characters, and Subjects, both of the Old and New Testament*, in two different sizes, which the Biblical student will find very serviceable. In a 'Memoir of Mr. Alexander Cruden,' prefixed to an edition published in 1823, and since, are given some interesting but painful particulars respecting this worthy and industrious man, to whom the religious world is so deeply indebted.

At a time when German theological literature is beginning to receive some of its merited attention, it may not be unacceptable to mention a valuable concordance for the German Bible—*Biblische Hand-Concordanz für Religionslehrer und alle Freunde der Heiligen Schrift*, Leipzig, 1841. The work is more comprehensive than similar writings in the English language. It is divided into three parts:—1. A full and complete register of all the words found in the Bible; 2. An index of the most important things, subjects, and ideas found in the Bible, with references to the places where they lie in the sacred volume; as for instance, under the head—'Lord's Supper—a meal commemorative of the death of Jesus—it brings us into intimate fellowship with Christ;—the worthy participation of the same; spiritual enjoyment of the flesh and blood of Christ,' &c. The third part gives the leading doctrines of Christianity systematically arranged, drawn up according to Luther's *Catechism*, and accompanied by Scriptural proofs. (Orme's *Bibliotheca Biblica;* Watts's *Bibliotheca Britannica;* Winer's *Handbuch;* Röhr's *Kritische Prediger-Bibliothek*, 1841.)—J. R. B.

CONCUBINAGE, in a scriptural sense, means the state of cohabiting lawfully with a wife of second rank, פִּלֶגֶשׁ *pilgash*, who enjoyed no other conjugal right but that of cohabitation, and whom the husband could repudiate, and send away with a small present (Gen. xxi. 14). In like manner, he could by means of presents, exclude his children by her from the heritage (Gen. xxv. 6). Such concubines, פִּלַגְשִׁים, had Nahor (Gen. xxii. 24), Abraham (xxv. 6), Jacob (xxxv. 22), Eliphas (xxxvi. 12), Gideon (Judg. viii. 3), Saul (2 Sam. iii. 7), David (1 Sam. v. 13; xv. 16; xvi. 21), Solomon (1 Kings xi. 3), Caleb (1 Chron. ii. 46), Manasseh (*ib.* vii. 14), Rehoboam (2 Chron. xi. 21), Abiah (2 Chr. xiii. 21), and Belshazzar (Dan. v. 2). To judge from the conjugal histories of Abraham and Jacob (Gen. xvi. and xxx.), the immediate cause of concubinage was the barrenness of the lawful wife, who in that case introduced her maid-servant, of her own accord, to her husband, for the sake of having children. Accordingly we do not read that Isaac, son of Abraham, had any concubine, Rebecca, his wife, not being barren. In process of time, however, concubinage appears to have degenerated into a regular custom among the Jews, and the institutions of Moses were directed to prevent excess and abuse in that respect, by wholesome laws and regulations (Exod. xxi. 7-9; Deut. xxi. 10-14). It would seem that the unfaithfulness of a concubine was not regarded as an act of real adultery (Lev. xix. 20). To guard adult male offspring from debauchery before marriage, their parents, it appears, used to give them one of their female slaves, as a concubine. She was then considered as one of the children of the house, and she retained her rights as a concubine, even after the marriage of the son (Exod. xxi. 9, 19). When a son had intercourse with the concubine of his father, a sort of family punishment, we are informed, was inflicted on him (Gen. xxxv. 22; 1 Chron. v. 1).

In the Talmud (tit. *Cetuboth*), the Rabbins differ as to what constitutes concubinage; some regarding as its distinguishing feature the absence of the betrothing ceremonies (sponsalia), and of the כתובה (libellus dotis), or portion of property allotted to a woman by special engagement, and to which she was entitled on the marriage day, after the decease of the husband, or in case of repudiation; others, again, the absence of the latter alone.

The Roman law calls concubinage, an allowed custom (licita consuetudo). When this expression occurs in the constitutions of the Christian emperors, it signifies what we now sometimes call a *marriage of conscience*. The concubinage tolerated among the Romans, in the time of the Republic and of the heathen emperors, was that between persons not capable of contracting legal marriage. Inheritances might descend to children that sprung from such a tolerated cohabitance.

Concubinage between such persons they looked on as a kind of marriage, and even allowed it several privileges; but then it was confined to a single person, and was of perpetual obligation, as much as marriage itself. Hottoman observes, that the Romans had allowed concubinage long before Julius Cæsar enacted the law by which every one was at liberty to marry as many wives as he pleased. The emperor Valentinian, Socrates tells us, allowed every man two. Concubinage is also used to signify a marriage with a woman of inferior condition, to whom the husband does not convey his rank. Dajos (Paratilla) observes, that the ancient laws allowed a man to espouse, under the title of concubine, certain persons who were esteemed unequal to him, on account of the want of some qualities requisite to sustain the full honour of marriage; and he adds, that though such concubinage was beneath marriage both as to dignity and civil rights, yet was concubine a reputable title, and very different from that of 'mistress' among us. The connection was considered so lawful that the concubine might be accused of adultery in the same manner as a wife.

This kind of concubinage is still in use in some countries, particularly in Germany, under the title of halb-ehe (half-marriage), or left-hand marriage, in allusion to the manner of its being contracted, namely, by the man giving the woman his left hand instead of the right. This is a real marriage, though without the usual solemnity, and the parties are both bound to each other for ever, though the female cannot bear the husband's name and title.—E. M.

CONEY. [SHAPHAN.]

CONFLAGRATION, GENERAL. The opinion that the end of the world is to be effected by the agency of fire is very ancient, and was common amongst heathen philosophers (Ovid, *Metamorph.* i. 256). Other testimonies are quoted by Grotius (*De Veritate Rel. Chr.*, lib. i. § 22). It is not easy to discover the origin of this opinion; it can scarcely be traced to tradition derived from revelation, since there is no distinct reference to such a catastrophe in the Old Testament. It is, moreover, remarkable, considering how universal and definite is the ordinary belief on the subject, that there is only one passage in the New Testament, viz., 2 Pet. iii. 7-10, which can be adduced as speaking distinctly of this event. This passage is, indeed, very explicit, but it should not be forgotten that some learned and able expositors have referred it altogether to the destruction of Jerusalem and of the Jewish polity. Amongst those who have held this opinion are Dr. Lightfoot (*Horæ Hebr.* in Joh. 21, 22) and Dr. John Owen (Θεολογούμενα, ed. Bremen, 1684, p. 147, quoted by Dr. Pye Smith, *Scripture and Geology*, sect. 6, p. 233, 1st ed.). If, however, with the majority of interpreters, we refer the prediction to the end of the world, to which it seems most naturally to apply, we could not have a more distinct statement of the fact that the present order of things is to be terminated by the world we inhabit and all the works of man it contains being 'burnt up.' There is no reason for assuming that the whole material universe is to be involved in this catastrophe; the mention of the heavens leads our thoughts no further than the atmosphere and vapours surrounding this planet. Nor should we regard this conflagration as involving the absolute destruction or annihilation of the world: it is more consistent with the narrative itself, as well as with physical science, to consider it as introductory to a new and better state of things—'new heavens and a new earth wherein dwelleth righteousness' (ver. 11). By what means the conflagration is to be effected we are not informed, and all attempts to explain how this is to be accomplished must be mere speculation, into which we do not think it necessary or advantageous to enter. We have only at present to remark that such an event is not inconsistent with physical facts. We know that the temperature of the earth increases gradually and with considerable regularity as we descend below the surface (Phillips, *Geology*, vol. ii. p. 232), and have every reason to believe that the central mass is intensely hot. We know, moreover, that there are subterranean fires of great extent, if not forming part of this heated central mass. The means, therefore, of combustion are near at hand. But even if there were no such central heat, chemistry points out very easy means by which the conflagration may be effected through the agency of various elementary substances (Phillips, *Geology*, vol. ii. p. 211). We find evidence also in the pyrogenous rocks which form so large a part of the crust of the earth, that the world has already been subjected, if not to conflagration, yet to a more intense and general action of heat than any which is now observed on the surface of the earth; and it is clearly not impossible that the action may be yet more intense and more general. In speculating on this subject, however, the caution of Calvin should not be disregarded—'Mali ergo sunt interpretes, qui in argutis speculationibus multum consumunt operæ, quum apostolus totam hanc doctrinam ad pias exhortationes accommodet' (Calvin, *Comm. in* 2 *Pet.* iii. 10).—F. W. G

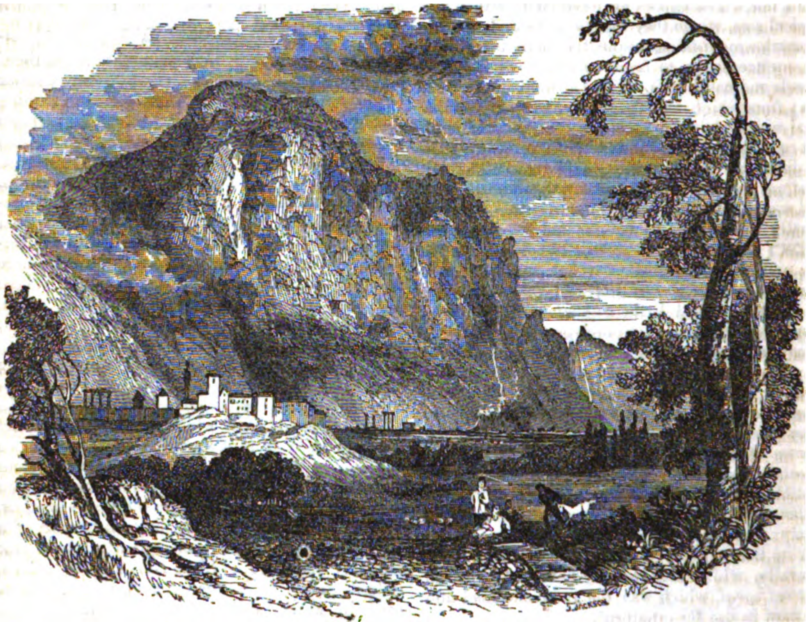
CONIAH. [JECONIAH.]

COOS (Κῶς), Cos or Co (now Stan-Co or Stanchio), a small and fertile island in the Ægean Sea, near the coast of Caria, in Asia Minor, almost between the promontories on which the cities Cnidus and Halicarnassus were situated. It was celebrated for its wine, silks, and cotton of a beautiful texture. The island is mentioned in 1 Macc. xv. 23; Acts xxi. 1.

COPPER (נְחֹשֶׁת). Tubal-cain is recorded as the first artificer in brass and iron (Gen. iv. 22). In the time of Solomon, Hiram of Tyre was celebrated as a worker in brass (1 Kings vii. 14; comp. 2 Chron. ii. 14). To judge from Hesiod (*Op. et Dies*, 134), and Lucret. (v. 1285), the art of working in copper was even prior to that in iron, probably from its being found in larger masses, and from its requiring less labour in the process of manufacture. Palestine abounded in copper (Deut. viii. 9), and David left behind him an immense quantity of it to be employed in building the temple (1 Chron. xxii. 3-14). Of copper were made all sorts of vessels in the Tabernacle and Temple (Lev. vi. 28; Num. xvi. 39; 2 Chron. iv. 16; Ezr. viii. 27), weapons, and more especially helmets, armour, shields, spears, (1 Sam. xvii. 5, 6, 38; 2 Sam. xxi. 16), also chains (Judg. xvi. 21), and mirrors (Exod. xxxviii. 8). The larger vessels were moulded in founderies, as also the pillars

for architectural ornaments (1 Kings vii.) It would however appear (1 Kings vii. 14) that the art of copper-founding was, even in the time of Solomon, but little known among the Jews, and was peculiar to foreigners, particularly the Phœnicians. Michaelis (*Mos. Recht*, iv. 217, 314) observes, that Moses seems to have given to copper vessels the preference over earthen, and on that ground endeavours to remove the common prejudice against their use for culinary purposes. From copper, also, money was coined (Matt. x. 9).—E. M.

CORAL, a hard, cretaceous marine production, arising from the deposit of calcareous matter by a minute polypous animal, in order to form the cell or polypidom into whose hollows the tenant can wholly or partially retire. The corals thus produced are of various shapes, most usually branched like a tree. The masses are often enormous in the tropical seas, where they top the reefs and cap the submarine mountains, frequently rising to or near the surface so as to form what are called coral islands and coral reefs. These abound in the Red Sea; from which, most probably, was derived the coral with which the Hebrews were acquainted; but coral is also found in the Mediterranean. It is of different colours, white, black, red. The red kind was anciently, as at present, the most valued, and was worked into various ornaments. Coral is usually understood to be denoted by the word ראמות *ramoth*, in Job xxviii. 18; Ezek. xxvii. 16; and this interpretation is not unsuitable, although the etymology is not well made out, and the dialects afford little support. The ancient translators were evidently much perplexed to determine whether the word פנינים *peninim* (Job. xxviii. 18; Prov. iii. 15; viii. 11; xx. 15; xxxi. 10; Lam. iv. 7) meant corals or pearls. This will always be doubtful: but the text in Lament. iv. 7, by describing the article as *red*, suggests a preference of the former. Winer indeed remarks (*Realwörterbuch*, *s. v.* Korallen), that it is scarcely credible such a product should have circulated under two different names (if *ramoth* also means coral): but surely there is no difficulty in conceiving that one word may have denoted *coral* generally, while another may have distinguished that *red coral*, which was the most esteemed and the most in use for ornament.



CORBAN (קָרְבָּן; N. T. Κορβᾶν), a Hebrew word employed in the Hellenistic Greek, just as the corresponding Greek word δῶρον was employed in the Rabbinical Hebrew (Buxtorf, *Lex. Rab.* col. 579) to designate an oblation of any kind to God. It occurs only once in the New Testament (Mark vii. 11), where it is explained (as also by Josephus, *Antiq.* l. 4, c. 4, § 4, *Contra Ap.* l. 1, § 22) by the word δῶρον. There is some difficulty in the construction and exact meaning of this passage and the corresponding one, Matt. xv. 5. The grammatical difficulty arises from the sentence being apparently incomplete. This difficulty our translators, following Beza, solve by supplying the words 'he shall be free' (*insons erit*). Most critics, however, regard the following verse (Matt. xv. 6, Mark vii. 12) as the apodosis of the sentence, the καὶ being redundant 'more Hebræo,' according to Grotius, or rather serving to indicate the conclusion (De Wette, *Kurze Erklärung des Ev. Matt.*, p. 151; see also Winer, *Gram. der N. T. Sprachidioms*, § 66, p. 537). The more important point, however, is to ascertain the precise meaning of the expression κορβᾶν (ὅ ἐστι δῶρον) ὃ ἐὰν ἐξ ἐμοῦ ὠφεληθῇς. Many interpreters, at the head of whom stands Beza, supply ἐστὶ after the word κορβᾶν, and suppose that a gift of the property of the son had actually been made to the service of God (see Olshausen, *Biblischer Commentar.* on Matt. xv. 5). The sense is then, 'Whatever of mine might benefit thee is corban, is already dedicated to God, and I have therefore no power over it.' Others, more correctly, as we think, supply ἔστω rather than ἐστί, and translate, 'Be it corban (that is, devoted) whatever of mine shall profit thee' (Campbell's translation, see his note on the passage). Lightfoot (*Hor. Hebr.* on Matt. xv. 5) notices a formula of frequent occurrence in the Talmud (in the treatises Nedarim and Nazir) which seems to be exactly that quoted by our Lord, קרבן שאני נהנה לך, '[Be it] corban, [as to] which I may be profitable to thee.' He, as well as Grotius, shows that this and similar formulæ were not used to signify that the thing was actually devoted, but was simply intended to prohibit the use of it from the party to whom it was thus made corban, as though it were said, If I give you anything or do anything for you, may it be as though I gave you that which is devoted to God, and may I be accounted perjured and sacrilegious. This view of the passage certainly gives much greater force to the charge made by our Lord that the command 'Whoso curseth father or mother let him die the death' was nullified by the tradition. It would, indeed, seem surprising that such a vow as this (closely analogous to the modern profanity of imprecating curses on one's self if certain conditions be not fulfilled) should be considered to involve a religious obligation from which the party could not be freed even if afterwards he repented of his rashness and sin. It appears, however, from Rabbinical authority that anything thus devoted was irreclaimable (Grotius, *Annotationes in Matt.* xv. 5), and that even the hasty utterance of a word implying a vow was equivalent to a vow formally made (Lightfoot, *Hor. Hebr.*). This, indeed, seems to be the force of the expression used in Mark, καὶ οὐκέτι ἀφίετε, κ. τ. λ., 'ye *suffer* him no more to do aught for his father or his mother.' A more striking instance of the subversion of a command of God by the tradition of men can hardly be conceived.—F. W. G.

CORIANDER. [GAD.]

CORINTH, a Grecian city, placed on the isthmus which joins Peloponnesus (now called the Morea) to the continent of Greece. A lofty rock rises above it, on which was the citadel, or the Acrocorinthus (Livy, xlv. 28). It had two harbours: Cenchreæ, on the eastern side, about 70 stadia distant; and Lechæum, on the modern Gulf of Lepanto, only 12 stadia from the city (Strabo, viii. 6). Its earliest name, as given by Homer, is *Ephyre*; and mysterious legends connect it with Lycia, by means of the hero Bellerophon, to whom a plot of ground was consecrated in front of the city, close to a cypress grove (Pausanias, ii. 2). Owing to the great difficulty of weathering Malea, the southern promontory of Greece, merchandise passed through Corinth from sea to sea; the city becoming an *entrepôt* for the

goods of Asia and Italy (Strabo, viii. 6). At the same time it commanded the traffic by land from north to south. An attempt made to dig through the isthmus was frustrated by the rocky nature of the soil; at one period, however, they had an invention for drawing galleys across from sea to sea on trucks. With such advantages of position, Corinth was very early renowned for riches, and seems to have been made by nature for the capital of Greece. The numerous colonies which she sent forth, chiefly to the west and to Sicily, gave her points of attachment in many parts; and the good will, which, as a mercantile state, she carefully maintained, made her a valuable link between the various Greek tribes. The public and foreign policy of Corinth appears to have been generally remarkable for honour and justice (Herod. and Thucyd. *passim*); and the Isthmian games, which were celebrated there every other year, might have been converted into a national congress, if the Corinthians had been less peaceful and more ambitious.

When the Achæan league was rallying the chief powers of southern Greece, Corinth became its military centre; and as the spirit of freedom was active in that confederacy, they were certain, sooner or later, to give the Romans a pretence for attacking them. The fatal blow fell on Corinth (B.C. 146), when L. Mummius, by order of the Roman Senate, barbarously destroyed that beautiful town (Cicero, *Verr.* i. 21), eminent even in Greece for painting, sculpture, and all working in metal and pottery; and as the territory was given over to the Sicyonians (Strabo, *l. c.*), we must infer that the whole population was sold into slavery.

285. [Corinth.]

The Corinth of which we read in the New Testament was quite a new city, having been rebuilt and established as a Roman colony, and *peopled with freedmen from Rome* (Pausanias and Strabo, *u. s.*) by the dictator Cæsar, a little before his assassination. Although the soil was too rocky to be fertile, and the territory very limited, Corinth again became a great and wealthy city in a short time, especially as the Roman proconsuls made it the seat of government (Acts xviii.) for *southern* Greece, which was now called the province of Achaia. In earlier times Corinth had been celebrated for the great wealth of its Temple of Venus, which had a gainful traffic of a most dishonourable kind with the numerous merchants resident there—supplying them with harlots under the forms of religion. The same phenomena, no doubt, reappeared in the later and Christian age. The little which is said in the New Testament seems to indicate a wealthy and luxurious community, prone to impurity of morals; nevertheless, all Greece was so contaminated, that we may easily overcharge the accusation against Corinth.

The Corinthian Church is remarkable in the Epistles of the Apostle Paul by the variety of its spiritual gifts, which seem for the time to have eclipsed or superseded the office of the elder or bishop, which in most churches became from the beginning so prominent. Very soon, however, this peculiarity was lost, and the bishops of Corinth take a place co-ordinate to those of other capital cities. One of them, Dionysius, appears to have exercised a great influence over many and distant churches, in the latter part of the second century (Eusebius, *Hist. Eccles.* iv. 23).—F. W. N.

CORINTHIANS, EPISTLES TO THE.—FIRST EPISTLE. The testimony of Christian antiquity is full and unanimous in ascribing this inspired production to the pen of the Apostle Paul

(Lardner's *Credibility*. *Works*, vol. ii. *plur. loc.*; see also Heydenreich, *Comment. in priorem D. Pauli ad Cor. epist. Proleg.* p. 30; Schott, *Isagoge in N. T.* pp. 236, 239, sqq.), and with this the internal evidence arising from allusions, undesigned coincidences, style, and tone of thought, fully accords. The epistle seems to have been occasioned partly by some intelligence received by the Apostle concerning the Corinthian church from the domestics of Chloe, a pious female connected with that church (i. 11), and, probably, also from common report (ἀκούεται, v. i.); and partly by an epistle which the Corinthians themselves had addressed to the Apostle, asking advice and instruction on several points (vii. 1), and which probably was conveyed to him by Stephanas, Fortunatus, and Achaicus (xvi. 17). Apollos, also, who succeeded the Apostle at Corinth, but who seems to have been with him at the time this epistle was written (xvi. 12), may have given him information of the state of things among the Christians in that city. From these sources the Apostle had become acquainted with the painful fact that since he had left Corinth (Acts xviii. 18) the church in that place had sunk into a state of great corruption and error. One prime source of this evil state of things, and in itself an evil of no inferior magnitude, was the existence of schisms or party divisions in the church. 'Every one of you,' Paul tells them, 'saith I am of Paul, and I of Apollos, and I of Cephas, and I of Christ' (i. 12). This has led to the conclusion that four great parties had arisen in the church, which boasted of Paul, Apollos, Peter, and Christ, as their respective heads. By what peculiarities of sentiment these parties may be supposed to have been distinguished from each other it is not difficult, with the exception of the last, to conjecture. The existence in many of the early churches of a strong tendency towards the ingrafting of Judaism upon Christianity is a fact well known to every reader of the New Testament; and though the church at Corinth was founded by Paul and afterwards instructed by Apollos, yet it is extremely probable that as in the churches of Galatia so in those of Achaia this tendency may have been strongly manifested, and that a party may have arisen in the church at Corinth opposed to the liberal and spiritual system of Paul, and more inclined to one which aimed at fettering Christianity with the restrictions and outward ritual of the Mosaic dispensation. That this party received any countenance from Peter cannot for a moment be supposed; but that they might, for the sake of giving greater authority to their own doctrines, have made use of the name of the great 'Apostle of the circumcision' by assigning it to their party, appears extremely probable. The vehement opposition of this party to Paul, and their pointed attack upon his claims to the Apostolic office, would naturally lead those who had been Paul's converts and who probably formed the major part of the church to rally round his pretensions and the doctrines of a pure and spiritual Christianity which he taught. Closely allied with this party, and in some respects only a subdivision of it, was that of Apollos. This distinguished individual was not only the friend of Paul, but had followed up Paul's teaching at Corinth in a congenial spirit and to a harmonious result (iii. 5, &c.). Between the party, therefore, assuming his name and that ranking itself under the name of the Apostle there could be no substantial ground of difference. Perhaps, as Apollos had the advantage of Paul in mental polish, and especially in facility in public speaking (Acts xviii. 24; comp. 2 Cor. x. 10), the sole ground on which his party may have preferred him was the higher gratification he afforded by his addresses to their educated taste than was derived from the simple statements of the Apostle concerning 'Christ and him crucified.' Thus far all, though almost purely conjectural, is easy and probable; but in relation to the fourth party—that which said, 'I am of Christ,'—it has been found extremely difficult to determine by what peculiar sentiments they were distinguished. The simplest hypothesis is that of Eichhorn (*Einleit.* iii. 107), Schott (*Isagoge in Nov. Test.* p. 233), Pott (*Nov. Test. Koppian.* vol. v. part i. p. 25), and others, viz. that this party was composed of the better sort in the church, who stood neutral and did not mingle in the contentions of the other parties. This opinion is chiefly based on 1 Cor. iii. 22, 23, where it is supposed the four parties are alluded to and that of Christ alone commended. But this seems a forced and improbable interpretation of that passage; the words ὑμεῖς δὲ Χριστοῦ being much more naturally understood as applying to *all* the Corinthians, than as describing only a part of them. This opinion, moreover, hardly tallies with the language of the Apostle concerning the Christ-party, in 1 Cor. i. 12, and 2 Cor. x. 7, where he evidently speaks of them in terms of censure, and as guilty of dividing Christ. Another hypothesis is that suggested by Storr (*Notitiæ Historicæ epistoll. ad Cor. interpretationi servientes. Opusc. Acad.* vol. ii. p. 242), and which has been followed, among others, by Hug (Introd. II. p. 371, Eng. Tr.), Bertholdt (*Einl.* s. 3320), and Krause (*Pauli ad Cor. Epistolæ Græce. Perpetua annot. illustr. Proleg.* p. 35), viz. that the Christ-party was one which, professing to follow James and the other brethren of the Lord, as its heads, claimed to itself, in consequence of this relationship, the title οἱ τοῦ Χριστοῦ, by way of eminence. To this it has been objected, that had the party in question designed, by the name they assumed, to express the relationship of their leader to Jesus Christ, they would have employed the words οἱ τοῦ κυρίου, not οἱ τοῦ Χριστοῦ, the former being more correctly descriptive of a *personal*, and the latter of an *official*, relationship. Besides, as Olshausen remarks, 'the party of James could not be precisely distinguished from that of Peter; both must have been composed of strenuous Jew-Christians. And, in fine, there is a total absence of all positive grounds for this hypothesis. . . . The mere naming of "the brethren of the Lord" in 1 Cor. ix. 5, and of James in 1 Cor. xv. 7, can prove nothing, as this is not in connection with any strictures on the Christ-party, or indeed on any party, but entirely incidentally; and the expression γινώσκειν Χριστὸν κατὰ σάρκα (2 Cor. v. 16) refers to something quite different from the family-relations of the Saviour: it is designed to contrast the purely human aspect of his existence with his eternal heavenly essence' (*Biblische Comment.* bd. iii. abt. 1, s. 457; Comp. Billroth's *Commentary on the Corinthians*, vol. i. p. 11, Eng. Tr.). In an able treatise which appeared

in the Tübingen *Zeitschrift für Theologie* for 1831, part iv. p. 61, Professor Baur has suggested that, properly speaking, there were only *two* parties in the Corinthian Church—the Pauline and the Petrine; and that, as that of Apollos was a subdivision of the former, that of Christ was a subdivision of the latter. This subdivision, he supposes, arose from the opposition offered by the Petrine party to Paul, which led some of them to call in question the right of the latter to the apostleship, and to claim for themselves, as followers of Peter, a closer spiritual relationship to the Saviour, the honour of being the alone genuine and apostolically-designated disciples of Christ. This opinion is followed by Billroth, and has much in its favour; but the remark of Neander, that 'according to it the Christ-party would be discriminated from the Petrine only in name, which is not in keeping with the relation of this party-appellation to the preceding party-names,' has considerable weight as an objection to it. Neander himself, followed by Olshausen, supposes that the Christ-party was composed of persons 'who repudiated the authority of all these teachers, and independently of the apostles, sought to construct for themselves a pure Christianity, out of which probably they cast everything that too strongly opposed their philosophical ideas as a mere foreign addition. From the opposition of Hellenism and Judaism and from the Helleno-philosophical tendency at Corinth, such a party might easily have arisen. . . . . To such the Apostles would seem to have mixed too much that was Jewish with their system, and not to have presented the doctrines of Christ sufficiently pure. To Christ alone, therefore, would they professedly appeal, and out of the materials furnished them by tradition, they sought, by means of their philosophic criticism, to extract what should be the pure doctrine of Christ' (*Apostol. Zeitalt.* s. 205; vol. i. p. 273 of Eng. Tr.). The reasoning of the Apostle in the 1st, 2nd, 12th, 13th, 14th, and 15th chapters of the 1st Epistle seems clearly to indicate that some such notions as these had crept into the Church at Corinth; and, upon the whole, this hypothesis of Neander commends itself to our minds as the one which is best maintained and most probable. At the same time, we have serious doubts of the soundness of the assumption on which all these hypotheses proceed, viz. that there really were in the Corinthian church sects or parties specifically distinguished from each other by peculiarities of doctrinal sentiment. That erroneous doctrines were entertained by individuals in the church, and that a schismatical spirit pervaded it, cannot be questioned; but that these two stood formally connected with each other may fairly admit of doubt. Schisms often arise in churches from causes which have little or nothing to do with diversities of doctrinal sentiment among the members; and that such were the schisms which disturbed the church at Corinth appears to us probable, from the circumstance that the existence of these is condemned by the Apostle, without reference to any doctrinal errors out of which they might arise; whilst, on the other hand, the doctrinal errors condemned by him are denounced without reference to their having led to party strifes. From this we are inclined to the opinion that the schisms arose merely from quarrels among the Corinthians as to the comparative excellence of their respective teachers—those who had learned of Paul boasting that he excelled all others, and the converts of Apollos and Peter advancing a similar claim for them, whilst a fourth party haughtily repudiated all subordinate teaching, and pretended that they derived all their religious knowledge from the direct teaching of Christ. The language of the Apostle in the first four chapters, where alone he speaks directly of these schisms, and where he resolves their criminality not into their relation to false doctrine, but into their having their source in a disposition to glory in men, must be regarded as greatly favouring this view. Comp. also 2 Cor. v. 16.

Besides the schisms and the erroneous opinions which had invaded the Church at Corinth, the Apostle had learned that many immoral and disorderly practices were tolerated among them, and were in some cases defended by them. A connection of a grossly incestuous character had been formed by one of the members, and gloried in by his brethren (v. 1, 2); law-suits before heathen judges were instituted by one Christian against another (vi. 1); licentious indulgence was not so firmly denounced and so carefully avoided as the purity of Christianity required (vi. 9-20); the public meetings of the brethren were brought into disrepute by the women appearing in them unveiled (xi. 3-10), and were disturbed by the confused and disorderly manner in which the persons possessing spiritual gifts chose to exercise them (xii.-xiv.); and in fine the ἀγάπαι, which were designed to be scenes of love and union, became occasions for greater contention through the selfishness of the wealthier members, who, instead of sharing in a common meal with the poorer, brought each his own repast, and partook of it by himself, often to excess, while his needy brother was left to fast (xi. 20-34). The judgment of the Apostle had also been solicited by the Corinthians concerning the comparative advantages of the married and the celibate state (vii. 1-40), as well as, apparently, the duty of Christians in relation to the use for food, of meat which had been offered to idols (viii. 1-13). For the correction of these errors, the remedying of these disorders, and the solution of these doubts, this epistle was written by the Apostle. It consists of four parts. The first (i.-iv) is designed to reclaim the Corinthians from schismatic contentions; the second (v.-vi.) is directed against the immoralities of the Corinthians; the third (vii.-xiv.) contains replies to the queries addressed to Paul by the Corinthians, and strictures upon the disorders which prevailed in their worship; and the fourth (xv.-xvi.) contains an elaborate defence of the Christian doctrine of the resurrection, followed in the close of the epistle by some general instructions, intimations, and greetings.

From an expression of the Apostle in ch. v. 9, it has been inferred by many that the present was not the first epistle addressed by Paul to the Corinthians, but that it was preceded by one now lost. For this opinion, however, the words in question afford a very unsatisfactory basis. They are as follows:—ἔγραψα ὑμῖν ἐν τῇ ἐπιστολῇ, κ. τ. λ. Now these words must be rendered either 'I have written to you in *this* epistle,' or 'I wrote to you in *that* epistle;' and our choice between these two renderings will depend partly on grammatical and partly on historical grounds. As the

aorist ἔγραψα may mean either 'I wrote' or 'I have written,' nothing can be concluded from it in either way. It may be doubted, however, whether, had the Apostle intended to refer to a former epistle, he would have used the article τῇ simply, without adding προτέρᾳ; whilst on the other hand there are cases which clearly show that had the Apostle intended to refer to the present epistle, it was in accordance with his practice to use the article in the sense of '*this*' (comp. ἡ ἐπιστολὴ Coloss. iv. 16, τὴν ἐπιστ. 1 Thess. v. 27). In support of this conclusion it may be added, 1st. that the Apostle had really in this epistle given the prohibition to which he refers, viz., in the verses immediately preceding that under notice; and that his design in the verses which follow is so to explain that prohibition as to preclude the risk of their supposing that he meant by it anything else than that *in the church* they should not mingle with immoral persons; 2nd. that it is not a little strange that the Apostle should, only in this cursory and incidental manner, refer, to a circumstance so important in its bearing upon the case of the Corinthians as his having already addressed them on their sinful practices; and 3rd. that had such an epistle ever existed, it may be supposed that some hint of its existence would have been found in the records of the primitive Church, which is not the case. On these grounds we strongly incline to the opinion that the present is the first epistle which Paul addressed to the Corinthians (Bloomfield, *Recensio Synopt.* in loc.; Billroth's *Commentary*, Eng. Tr., vol. i. p. 4, note a).

From 2 Cor. xii. 14, and xiii. 1, compared with 2 Cor. ii. 1, and xiii. 2, it appears that before the writing of that epistle Paul had *twice* visited Corinth, and that one of these visits had been after the Church there had fallen into an evil state; for otherwise his visit could not have been described as one ἐν λύπῃ, and one during which God had humbled him before them. Did this second visit to Corinth precede also the writing of the first epistle? On this point the Acts give us no help, as the writer is totally silent concerning this second visit of Paul to Corinth. But we may safely infer from 2 Cor. i. 15, 16, 23, that Paul had not been at Corinth between the writing of the first and second epistles, so that we must place his second visit before the writing of the first epistle. When this second visit took place we can only conjecture; but Billroth's suggestion that it was made some time during the period of Paul's residence of three years at Ephesus (Acts xx. 31), perhaps on the first reception of unpleasant news from Corinth, is extremely probable. Supposing the Apostle to have made this short visit and to have returned to Ephesus, this first epistle may have been written either in that city or in Macedonia, through which Paul probably journeyed on his way from Corinth to Ephesus. This latter is the traditional opinion (see the addition to ch. xiii. in some MSS.), and is greatly favoured by the way in which Paul speaks of Ephesus (1 Cor. xv. 32) as a place in which he *had been* rather than one in which he *was* when writing this epistle. From the allusion to the Passover in ch. v. 7, 8, most have inferred that the epistle was written at the time of Easter; but this does not necessarily follow from the Apostle's allusion. As to the year, great diversity of opinion prevails, but most are agreed that it was not earlier than 56 nor later than 59.

The subscription above referred to intimates that this epistle was conveyed to Corinth by Stephanas, Fortunatus, Achaicus, and Timothy. As respects the last named there is evidently a mistake, for from ch. xvi. 10, it appears that Timothy's visiting Corinth was a thing not certain when this letter was finished, and from 2 Cor. viii. 17, 18, it appears that Timothy did not visit Corinth till afterwards. Comp. also Acts xix. 22. As respects the others, this tradition is probably correct.

SECOND EPISTLE. Not long after the transmission of the first epistle, the Apostle left Ephesus in consequence of the uproar excited against him by Demetrius the silversmith, and betook himself to Troas (Acts xix. 23, sq.). Here he expected to meet Titus with intelligence from Corinth of the state of things in that church. According to the common opinion Titus had been sent by Paul to Corinth, partly to collect money in aid of the distressed Christians in Palestine, partly to observe the effect of the Apostle's first epistle on the Corinthians; but Billroth, Rückert, and others, rather suppose him to have been sent before the writing of the first epistle solely for the former of these purposes, and that he remained in Corinth till after the reception by the church there of that epistle, while Bleek (*Studien und Kritiken*, Jahrg. 1830, s. 625; comp. Neander's *Hist. of the Apostolic Age*, vol. i. p. 312, Eng. Tr.) suggests that Titus may have been despatched with an epistle now lost, and written between the first and second of those still extant. This hypothesis of a 'lost epistle' seems to be the convenient resource of the German critics for the removal of all difficulties, but in the absence of any direct evidence in its support, it cannot, in this case, be admitted to be worthy of consideration. Billroth's hypothesis rests also upon a very unstable basis, as Neander shows, by whom the common opinion is espoused and defended (vol. i. p. 312). In this expectation of meeting Titus at Troas, Paul was disappointed. He accordingly went into Macedonia, where, at length, his desire was gratified, and the wished-for information obtained (2 Cor. ii. 13; vii. 15, sq.).

The intelligence brought by Titus concerning the church at Corinth was on the whole favourable. The censures of the former epistle had produced in their minds a godly sorrow, had awakened in them a regard to the proper discipline of the church, and had led to the exclusion from their fellowship of the incestuous person. This had so wrought on the mind of the latter that he had repented of his evil courses, and showed such contrition that the Apostle now pities him, and exhorts the church to restore him to their communion (2 Cor. ii. 6-11; vii. 8, sq.). A cordial response had also been given to the appeal that had been made on behalf of the saints in Palestine (ix. 2). But with all these pleasing symptoms there were some of a painful kind. The anti-Pauline influence in the church had increased, or at least had become more active; and those who were actuated by it had been seeking by all means to overturn the authority of the Apostle, and discredit his claims as an ambassador of Christ.

This intelligence led the Apostle to compose

his second epistle, in which the language of commendation and love is mingled with that of censure, and even of threatening. This epistle may be divided into three sections. In the first (i.-iii.) the Apostle chiefly dwells on the effects produced by his first epistle and the matters therewith connected. In the second (iv.-ix.) he discourses on the substance and effects of the religion which he proclaimed, and turns from this to an appeal on behalf of the claims of the poor saints on their liberality. And in the third (x.-xiii.) he vindicates his own dignity and authority as an apostle against the parties by whom these were opposed. The divided state of feeling in the Apostle's mind will account sufficiently for the difference of tone perceptible between the earlier and later parts of this epistle, without our having recourse to the arbitrary and capricious hypothesis of Semler (*Dissert. de duplice appendice Ep. ad Rom. Hal.* 1767) and Weber (*Prog. de numero epp. ad Cor. rectius constituendo*, Vitem. 1798) whom Paulus follows, that this epistle has been extensively interpolated.

Besides the commentaries of Pott, Krause, Heydenreich, Billroth, Rückert, and Olshausen, to which reference has already been made in this article, that of Emmerling on the Second Epistle (*Ep. Pauli ad Cor. Posterior Græce. Perpet. Comment. illust.* Lips. 1823); that of Barnes on the First Epistle (New York, 1838, 12mo.; Lond. 1841, 8vo.); and that of Flatt on both Epistles (*Vorlesungen üb. die Br. an d. Corinther.* Tüb. 1827) deserve to be noticed.—W. L. A.

CORMORANT. [SALACH.]

CORN. The word דָּגָן *dagan*, which is rendered 'grain,' 'corn,' and sometimes 'wheat' in the Authorized Version, is the most general of the Hebrew terms representing 'corn,' and is more comprehensive than any word in our language, seeing that it probably includes not only all the proper corn-grains, but also various kinds of pulse and seeds of plants, which we never comprehend under the name of 'corn' or even of 'grain.' דגן may, therefore, be taken to represent all the commodities which we describe by the different words corn, grain, seeds, pease, beans. Among other places in which this word occurs, see Gen. xxvii. 28-37; Num. xviii. 27; Deut. xxviii. 51; Lam. ii. 12, &c. There is another word, בר *bar*, which denotes any kind of cleansed corn, that is, corn purified from the chaff and fit for use (Gen. xli. 35-49; Prov. xi. 26; Jer. iv. 11; Joel ii. 24). The same word is more rarely used to describe corn in a growing state (Ps. lxv. 13), in which sense it may be compared with the Arabic بر, and the Latin *far*. The word שבר *sheber*, which is sometimes rendered corn, denotes in a general sense 'provisions' or 'victuals,' and by consequence 'corn,' as the principal article in all provisions (Gen. xlii. 1, 2, 20; Exod. viii. 5; Neh. x. 32, &c.).

The different products coming under the denomination of corn, are noticed under the usual heads, as BARLEY, WHEAT, &c.; their culture, under AGRICULTURE; their preparation, under BREAD, FOOD, MILL, &c.

CORNELIUS. The centurion of this name, whose history occurs in Acts x., most probably belonged to the Cornelii, a noble and distinguished family at Rome. He is reckoned by Julian the Apostate as one of the few persons of *distinction* who embraced Christianity. His station in society will appear upon considering that the Roman soldiers were divided into legions, each legion into ten cohorts, each cohort into three bands, and each band into two centuries or hundreds; and that Cornelius was a commander of one of these centuries (ἑκατοντάρχης), belonging to the *Italic* band; so called from its consisting chiefly of Italian soldiers, formed out of one of the six cohorts granted to the procurators of Judæa, five of which cohorts were stationed at Cæsarea, the usual residence of the procurators (Jahn, *Biblische Archäologie*, ii. Th., s. 215, Wien, 1824). The *religious position* of Cornelius, before his interview with Peter, has been the subject of much debate. On the one side it is contended, that he was what is called a *proselyte of the gate*, or a Gentile, who, having renounced idolatry and worshipping the true God, submitted to the seven (supposed) precepts of Noah, frequented the synagogue, and offered sacrifices by the hands of the priests; but, not having received circumcision, was not reckoned among the Jews. In support of this opinion it is pleaded that Cornelius is styled φοβούμενος τὸν Θεὸν (a man fearing God), ver. 2, the usual appellation, it is alleged, for a proselyte of the gate, as in chap. xiii. 16, 26, and elsewhere; that he prayed at the usual Jewish hours of prayer (x. 30), that he read the Old Testament, because Peter refers him to the prophets (x. 43), and that he gave much alms to the *Jewish* people (x. 2, 22). On the other side it is answered that the phrases φοβούμενοι τὸν Θεόν, and the similar phrases εὐλαβεῖς, and εὐσεβεῖς, are used respecting any persons imbued with reverence towards God (x. 35; Luke i. 50; ii. 25; Col. iii. 22; Rev. xi. 18); that he is styled by Peter ἀλλόφυλος (a man of another race or nation), with whom it was un*lawful* for a Jew to associate, whereas the law *allowed* to foreigners a perpetual residence among the Jews, provided they would renounce idolatry and abstain from blood (Lev. xvii. 10, 11, 13), and even commanded the Jews to love them (Lev. xix. 33, 34); that they mingled with the Jews in the synagogue (Acts xiv. 1), and in private life (Luke vii. 3); that, had Cornelius been a proselyte of the gate, his conversion to Christianity would not have occasioned so much surprise to the Jewish Christians (Acts x. 45), nor would 'they that were of the circumcision' have contended with Peter so much on his account (xi. 2); that he is expressly classed among the Gentiles by James (xv. 14), and by Peter himself, when claiming the honour of having first preached to the Gentiles (xv. 7); that the remark of the opposing party at Jerusalem, when convinced, 'then hath God also to the Gentiles granted *repentance unto life*,' would have been inapplicable upon the very principles of those who assert that Cornelius was a proselyte, since they argue from the traditions of modern Jews, the most eminent of whom, Maimonides, admits a sincere proselyte *to be in a state of salvation*. The other arguments, derived from the observance of the Jewish hours of prayer by Cornelius, and his acquaintance with the Old Testament, are all resolvable into a view of his religious position, which will shortly be stated. The strongest objection against the supposition that Cornelius was

a proselyte of the gate arise from the very reasonable doubt whether any such distinction existed in the time of the apostles. Maimonides, indeed, speaks of it, but the lateness of the period at which he flourished, A.D. 1160, and the absence of any scriptural authority, require us to consider his assertions as referring to a time much later than that of the apostles. 'According to my idea,' says Bishop Tomline, 'proselytes were those, and those only, who took upon themselves the obligation of the whole Mosaic law, but retained that name till they were admitted into the congregation of the Lord, as adopted children. Gentiles were allowed to worship and offer sacrifices to the God of Israel in the outer court of the temple; and some of them, persuaded of the sole and universal sovereignty of the Lord Jehovah, might renounce idolatry without embracing the Mosaic law; but such persons appear to me never to be called proselytes in Scripture, or in any ancient Christian writer' (*Elements of Christian Theology*, vol. i. pp. 266, 267). Dr. Lardner has remarked that the notion of two sorts of proselytes is not to be found in any Christian writer before the *fourteenth* century (*Works*, vol. vi. pp. 522-533, 8vo. and vol. xi. pp. 313-324. See also Jennings's *Jewish Antiquities*, book i. chap. iii.) The arguments on the other side are ably stated in Townsend's *Chronological Arrangements of the New Testament*, vol. ii. p. 115, &c. London. On the whole, the position of Cornelius, in regard to religion, appears to us to have been in the last class of persons described by Bishop Tomline, consisting of Gentiles who had so far benefited by their contact with the Jewish people as to have become convinced that theirs was the true religion, who consequently worshipped the true God, were acquainted with the Scriptures of the Old Testament, most probably in the Greek translation, and observed several Jewish customs, as, for instance, their hours of prayer, or anything else that did not involve an act of special profession. This class of persons seems referred to in Acts xiii. 16, where they are plainly distinguished from the Jews, though certainly mingled with them. To the same class is to be referred Candace's treasurer (Acts viii. 27, &c.); and in earlier times, the midwives of Egypt (Exod. i. 17), Rahab (Josh. vi. 25), Ruth, Araunah the Jebusite (2 Sam. xxiv. 18, &c.), the persons mentioned 1 Kings viii. 41, 42, 43, Naaman (2 Kings v. 16, 17). See also Josephus, *Antiq.* xiv. 7, § 2, and his account of Alexander the Great going into the temple, and offering sacrifice to God, according to the direction of the High Priest, (ibid. xi. 8, § 5); of Antiochus the Great (ibid. xii. 3, § 3, 4), and of Ptolemy Philadelphus, (ibid. xii. 2, § 1, &c.). Under the influence of these facts and arguments, we regard Cornelius as having been selected of God to become *the firstfruits of the Gentiles*. His character appears suited, as much as possible, to abate the prejudices of the Jewish converts against what appeared to them so great an innovation. It is well observed by Theophylact, that Cornelius, though neither a Jew nor a Christian, lived the *life* of a good Christian. He was *εὐσεβὴς*, influenced by spontaneous reverence to God. He practically obeyed the restraints of religion, for he feared God, and this latter part of the description is extended to all his family or household (ver. 2). He was liberal in alms to the Jewish people, which showed his respect for them; and he 'prayed to God always,' at all the hours of prayer observed by the Jewish nation. Such piety, obedience, faith, and charity, prepared him for superior attainments and benefits, and secured to him their bestowment (Ps. xxv. 9; l. 23; Matt. xiii. 12; Luke viii. 15; John vii. 17).

The remarkable circumstances under which these benefits were conferred upon him are too plainly and forcibly related in Acts x. to require much comment. While in prayer, at the ninth hour of the day, he beheld, in waking vision, an angel of God, who declared that 'his prayers and alms had come up for a memorial before God,' and directed him to send to Joppa for Peter, who was then abiding 'at the house of one Simon, a tanner.' Cornelius sent accordingly; and when his messenger had nearly reached that place, Peter was prepared by the symbolical revelations of a noonday ecstacy, or trance, to understand that nothing which God had cleansed was to be regarded as common or unclean.

It is well remarked by Paley, that the circumstances of the two visions are such as to take them entirely out of the case of momentary miracles, or of such as may be accounted for by a *false perception*. 'The vision might be a dream; the message could not. Either communication taken separately might be a delusion; the concurrence of the two was impossible to happen without a supernatural cause.' (*Evidences*, prop. i. chap. 2). The inquiries of the messengers from Cornelius suggested to Peter the application of his vision, and he readily accompanied them to Joppa, attended by six Jewish brethren, and hesitated not to enter the house of one whom he, as a Jew, would regard as unclean. The Apostle waived the too fervent reverence of Cornelius, which, although usual in the East, was rendered by Romans only to their gods; and mutual explanations then took place between him and the centurion. After this the Apostle proceeded to address Cornelius and his assembled friends, and expressed his conviction that the Gentiles were no longer to be called unclean, and stated the leading evidence and chief doctrines of the Gospel. While he was discoursing, the miraculous gifts of the Holy Spirit, contrary to the order hitherto observed of being preceded by baptism and imposition of hands, fell on his Gentile auditors. Of this fact Peter and his companions were convinced, for they heard them speak with tongues, foreign and before unknown to them, and which Peter and his companions knew to be such by the aid of their own miraculous gifts, and, under divine impulse, glorify God as the author of the Gospel. The Jewish brethren who accompanied Peter were astonished upon perceiving, by these indubitable indications, that the Holy Spirit was poured out upon the Gentiles, as upon themselves at the beginning (x. 45). Peter, already prepared by his vision for the event, and remembering that baptism was by the command of Jesus, *associated* with these miraculous endowments, said, 'Can any man forbid water that these should be baptized, who have received the Holy Ghost as well as we?' and yet, agreeably to the apostolic rule of committing the administration of baptism to others, and, considering that the consent of the Jewish brethren would be more explicit if they performed the duty, he ordered *them* to baptize Cornelius and

his friends, his household, whose acceptance as members of the Christian church had been so abundantly testified.—J. D. F.

CORNER-STONE. The symbolical title of 'chief corner stone' (λίθος ἀκρογωνιαῖος) is applied to Christ in Eph. ii. 20, and 1 Pet. ii. 8, 16, which last passage is a quotation from Isa. xxviii. 16, where the Septuagint has the same words for the Hebrew אבן פנה. There seems no valid reason for distinguishing this from the stone called 'the head of the corner' (κεφαλὴ γωνίας, Matt. xxi. 42; which is the Sept. translation of ראש פנה in Ps. cxviii. 22), although some contend that the latter is the top-stone or coping. The λίθος ἀκρογωνιαῖος or 'corner-stone' was a large and massive stone so formed as when placed at a corner, to bind together two outer walls of an edifice. This properly makes no part of the *foundation*, from which it is distinguished in Jer. li. 56; though, as the edifice rests thereon, it may be so called. Sometimes it denotes those massive slabs which, being placed towards the bottom of any wall, serve to bind the work together, as in Isa. xxviii. 16. Of these there were often two layers, without cement or mortar (Bloomfield, *Recens. Synop.* on Eph. ii. 20). This explanation will sufficiently indicate the sense in which the title of 'chief corner-stone' is applied to Christ.

COTTON. On account of the uncertainty attending the subject, and the difference of opinion among writiers who have discussed it, reference was made from Byssus to this article, in order that we might proceed from a knowledge of the article itself to its history in early ages, and thus endeavour to discover the names by which it was first known. Cotton is well known to be a wool-like substance which envelopes the seeds, and is contained within the roundish-pointed capsule or fruit of the cotton-shrub. Every one also knows that cotton has, from the earliest ages, been characteristic of India. Indeed, it has been well remarked, that as from early times sheep's wool has been principally employed for clothing in Palestine and Syria, in Asia Minor, Greece, Italy, and Spain, hemp in the northern countries of Europe, and flax in Egypt, so cotton has always been employed for the same purpose in India, and silk in China. In the present day, Cotton, by the aid of machinery, has been manufactured in this country on so extensive a scale, and sold at so cheap a rate, as to have driven the manufacture of India almost entirely out of the market. But still, until a very recent period, the calicoes and chintzes of India formed very extensive articles of commerce from that country to Europe. For the investigation of the early history of cotton, we are chiefly indebted to the earliest notices of this commerce; before adducing these, however, we may briefly notice the particular plants and countries from which cotton is obtained. India possesses two very distinct species: 1. *K. Gossipium herbaceum* of botanists, of which there are several varieties, some of which have spread north, and also into the south of Europe, and into Africa. 2. *Gossipium arboreum*, or cotton-tree, which is little cultivated on account of its small produce, but which yields a fine kind of cotton. This must not be confounded, as it often is, with the silk-cotton tree, or *Bombyx heptaphyllum*, which does not yield a cotton fit for spinning. Cotton is now chiefly cultivated in Central India, from whence it is carried to and exported from Broach. It is also largely cultivated in the districts of the Bombay Presidency, as also in that of Madras, but less in Bengal, except for home manufacture, which of course requires a large supply, where so large a population are all clothed in cotton. The supplies of cotton which we derive from America are obtained from two entirely distinct species—*Gossipium Barbadense*, of which different varieties yield the Sea Island, Upland, Georgian, and the New Orleans cottons; while *G. Peruvianum* yields the Brazil, Pernambuco, and other South American cottons. These species are original natives of America.

In the first place we must notice the names by which cotton is known in the East.—'The European names have evidently been derived from قطن *qutn*, *kutn*, or *kootn*, which is the most common Arabic name, though others are assigned it in that copious language. The other Asiatic names do not appear to have any connection with this, or with one another; as Persian *poombet*, and Hindee, the plant (as well as cotton with its seed), *kupas*, the cotton *rose;* Bengalee, *kapase*, *tula*, *banga;* Sanscrit, *karpasee*. From the last, the Hindee and Bengalee have, no doubt, had their origin; and the resemblance between these and the term Gossipium, which has been considered of Egyptian origin, from being written with so many of the same consonants, is remarkable' (Royle, *Himal. Botany*, p. 86). To these may be added that the Tamul name of cotton is *purtie*, and that at Bombay it is known as *kapoos*. We may now proceed to the earliest distinct notice of the export of cotton goods from India.

226. [Gossipium herbaceum.]

Arrian, who is supposed to have been an Egyptian Greek, who lived in the first or second century of the Christian era, and who was both a merchant and a navigator, gives, in his Periplus of the Erythræan Sea, an account of the articles of commerce to be met with at the different ports; and

it is to be remarked, that on reaching the ports of India and Barbarike, cotton cloths of various kinds (ὀθόνιον) are mentioned as articles of export. Syrastrene, or Cutch, is described as producing cotton for ordinary manufacture. From Ozene, the modern Ougein, Σινδόνες Ἰνδικαί, fine muslins; Σινδόνες Μολόχιναι, muslins of the colour of melons; Ἱκανὸν χυδαῖον ὀθόνιον, a large quantity of ordinary cottons (Vincent, ii. p. 407; al Barygaza, *i. e.* Baroch); ὀθόνιον παντοῖον, cottons of all sorts. Both in the Periplus and in the *Digest of the Roman Law* the word Καρπάσος, or *Karpasus*, occurs, and is translated 'fine muslins' by Dr. Vincent; and there can be no doubt that the cloths were manufactured of cotton then, as they are now, in India. Pliny mentions cotton in several passages; in one of which he says, that the inhabitants of Tylos called their cotton-trees *gossympini;* in another he gives the Indian name, '*ibi primum* carbasis *repertis*;' and in a third he represents cotton to be the native growth of Egypt, and says that it is called *gossipion*. Mr. Yates, in his *Textrinum Antiquorum*, adduces these passages, but doubts of their all being genuine. There is no doubt, however, that cotton was known by its Indian name long previously, as Mr. Yates himself traces it to Statius, and infers 'that the Greeks made use of muslins or calicoes, or at least of cotton cloths of some kind, which were brought from India as early as 200 years B.C.' (*l. c.* p. 341). Subsequent to the expedition of Alexander, the Greeks first became well acquainted with the cotton plant. Nearchus, the admiral of his fleet, reported that there were in India trees bearing, as it were, flocks or bunches of wool; that the natives made linen garments of it, &c. Quintus Curtius, speaking of the Indians, says, 'Corpora usque pedes *carbaso* velant, soleis pedes, capita linteis vinciunt.' Theophrastus, the disciple of Aristotle, says,—'The trees from which the Indians make cloths have a leaf like that of the black mulberry; but the whole plant resembles the dog-rose. They set them in rows so as to look like vines at a distance.' In another part of the same book he thus writes of the island of Tylos—'The wool-bearing trees, which grow abundantly in this island, had a leaf like that of the vine, but smaller; they bore no fruit, but the capsule, containing the wool, was, when closed, about the size of a quince; when ripe, it expanded so as to emit the wool, which was woven into cloths, either cheap or of great value.' (iii. 106).

Herodotus, however, gives the earliest notice of the cotton of India, as he states that the wild trees in that country bear fleeces as their fruit, surpassing those of sheep in beauty and excellence; and that the Indians use cloth made from those trees. So the thorax, or cuirass, sent by Amasis, king of Egypt, to Sparta, 'was adorned with gold and rich fleeces from trees.' This probably refers to the practice of the Indians wearing coats, something of the form of frock-coats, which are padded with cotton, so as often to be sword-proof. Ctesias, who resided so long at the Persian court, and was contemporary with Herodotus, was also acquainted with Indian wool of trees, as he mentions their ξύλινα ἱμάτια. That this was meant to refer to cotton 'may be inferred from the testimony of Varro, as we find it in Servius (*Comm. in Virg. Æn.* i. 649): 'Ctesias ait in India esse arbores quæ lanam ferant' (Yates, *l. c.* p. 335). As Herodotus and Ctesias were contemporaries, years B.C. 400, they are not far removed from the time when the earliest extra-Indian notice of the name of cotton occurs, B.C. 519; and that is in the Book of Esther, i. 6, where the word corresponding to 'green' in the Authorized Version is כרפס *karpas*, and which no doubt means cotton [KARPAS]. (See Baines's *History of Cotton Manufacture;* Yates's *Textrinum Antiquorum*, p. 335; Royle, *Illustr. of Himal. Bot.*, p. 84.)

Having thus traced cotton upwards from the time of the Periplus of Arrian to that of Herodotus and Ctesias, there is no difficulty in conceiving that its Indian name (karpas) may have reached the Persian court of Susa in the time of Ahasuerus, whose dominions extended to India, and between which country and Persia there was constant communication at a much earlier period. Heeren has clearly shown the course of the Indian trade, both by caravans from Northern India, and by boats up the Euphrates, whence the commodities of India crossed over to Syria by Tadmor, or Palmyra (2 Chron. viii. 4). In like manner there was early communication by the Red Sea between Egypt and the countries of the South. Among these India must be included, from the various products which reached the West, and which are described or clearly indicated by Greek authors, and in the earliest parts of the Bible, as the present writer has endeavoured to prove in his *Essay on the Antiquity of Hindoo Medicine*. In the time of the Periplus of Arrian, it is very evident that the communication between India and Egypt was frequent and extensive, and that cotton cloths at that time formed an article of export from the latter to the former. That they did so at still earlier periods we cannot but believe probable; for the muslins of India, though stigmatized by one as only 'the shadow of a commodity,' yet having early earned for themselves the poetical description of 'webs of woven air,' could not have escaped the scrutiny of those who sought in the countries of the South for agile wood and almug trees, and who brought from India cinnamon and cassia, spikenard and sweet cane, all well-known products of that far-famed country.

Though it is probable that cotton was imported into Egypt and known to the Hebrews, it is extremely difficult to prove the fact. Thus Mr. Yates, the most recent writer on the subject, is of opinion, with Celsius and others, that *bad, batz, shesh*, and *byssos*, all mean linen; while Forster, in his work *De Bysso Antiquorum*, proved to the satisfaction of many that *shesh* and *byssus* both indicate cotton. In this discrepancy it is difficult to come to a satisfactory conclusion. From the time that the mummies of Egypt were found to be enveloped in pieces and rolls of cloth, different authors have adduced these as evidence that the Egyptians were acquainted with cotton. Thus Rouelle in 1750, and Dr. Forster, with Dr. Solander, were of opinion that the cloth was cotton. So also Blumenbach and others. Previous to the time of Rouelle, and by some subsequently, the cloth was thought to be linen. This question was settled by J. Thomson, Esq. of Clitheroe, who obtained a great variety of specimens of mummy-cloth, and employed Mr. Bauer to examine them with his excellent microscopes, aided by his unrivalled skill in using them. The result was to

prove that all the specimens were of linen, and not of cotton; and there can be no doubt about the correctness of the text as the ultimate fibre of cotton is a transparent flattened tube, without joints, and twisted like a corkscrew; whilst the fibres of linen and of the various mummy-cloths were transparent cylinders jointed like a cane, and neither flattened nor spirally twisted. Hence, as Mr. Thomson concludes his paper, 'Herodotus states that the Egyptians wrapped their dead in cloth of the byssus. It has been shown that, without exception, every specimen of mummy-cloth yet examined has proved to be linen. We owe, therefore, the satisfactory establishment of the fact, that the byssus of the ancients was *flax*, to the microscope of Mr. Bauer.' This might be supposed to have settled the question for ever; but Rosselini has since 'found the seeds of the cotton-plant in a vessel' in the tombs of Egypt, and Dr. Bowring has ascertained that 'the mummy-cloth of a child was formed of cotton, and not of linen, as is the case with adult mummies.' The question, therefore, remains still unsettled. We knew before that the cultivation of flax and the use of linen among the Egyptians were very general; and the doubt was whether they were acquainted with cotton or not. Cotton is found apparently wild in Upper Egypt; it is cultivated on the west coast of Africa, but it has not yet been settled whether these are indigenous or introduced plants. If these should be proved to be African plants, the production of the above seeds would be easily accounted for; and cotton *might* have been cultivated in the remote parts of Egypt without its being recorded by the earliest writers. That it was not employed as mummy-cloths for adults might have arisen from prejudice or some religious scruple; for we are told that persons were not allowed to be buried in the woollen cloths which they wore outside of their linen garments.

The difficulty of ascertaining whether cotton was known to the Egyptians having been shown to be sufficiently great, even when we have such a substance as mummy-cloth to deal with, it is hardly necessary to add that it is still more difficult to say whether it is mentioned in the Scriptures elsewhere than in the Book of Esther, because we have only the Hebrew names to assist us in our inquiries; because the same names have been applied by the ancients, and by writers in later times, sometimes to cotton and sometimes to linen; and becaues we are unable to ascertain whether the earlier authors were more precise than their successors. Thus, fine linen was called ὀθόνη. This is considered by Celsius and Forster to be an Egyptian word, and to correspond to אטון *athon* or *ethon*; which, when 'put into Greek letters and with Greek terminations, becomes ὀθόνη and ὀθόνιον' (Yates, p. 265). But we have seen that ὀθόνιον was, in the time of the Periplus, applied to what must have been cotton goods exported from Indian ports. Sindon (σινδὼν) also is thought to be of Egyptian origin, as Coptic scholars inform us that it is found in the modern Shento, which has the same signification. Although σινδὼν originally denoted linen, we find it applied, like ὀθόνη, to cotton-cloth likewise' (Yates, *l. c.* p. 266). Βύσσος or *byssus*, until the time of Forster, was always considered to indicate linen. Mr. Yates continues to be of this opinion (p. 267), and objects to the argument of Dr. Forster (p. 274). The passage of Julius Pollux, which states that Byssus is a kind of flax among the Indians, he considers with Celsus to be an incorrect reading; that, according to the current text, Pollux only asserts that βύσσος is a kind of flax, without adding that it grew among the Indians. With respect to Philostratus, who mentions cotton in two passages, he admits that he uses βύσσος to denote cotton, and says 'besides its proper and original sense, this word was occasionally used, as λίνον, ὀθόνη, Sindon, Carbasus, and many others were, in a looser and more general application,' and considers the evidence of Philostratus as being of too late an age (the third century), to decide the original meaning of the term. But to us it appears equally doubtful whether some of the older authors did not use the same terms in an equally loose manner, for wherever the new product appeared it would be designated by an old name, as few would be able to distinguish the material of which a new or a fine kind of cloth was made. This looseness of expression has descended to modern times, as authors might be cited who, even when writing on the subject of cotton, sometimes use the incorrect term of linen. Thus Orme, a writer well acquainted with India, in his *Hist. Frag. of the Mogul Empire*, p. 413, says 'the rigid clumsy fingers of an European would scarcely be able to make a piece of canvas with the instruments which are all that an Indian employs in making a piece of *cambric*,' where he no doubt means muslin, though using a word which designates a manufacture of flax. Considering, therefore, that different names are applied in the Scriptures to the finer kinds of cloth; that cotton was certainly known in the time of Esther (B.C. 500); that the term Butz does not occur until the book of Chronicles, at a time when the commerce with India was well established; and that Byssus was undoubtedly applied in later times to cotton-cloth; we are not satisfied that Butz, at least, does not signify cotton-cloth in all the passages referred to under Byssus, as well as those where the word *Butz* occurs [FLAX and SHESH].—J. F. R.

COUCH. [BED; SEAT.]

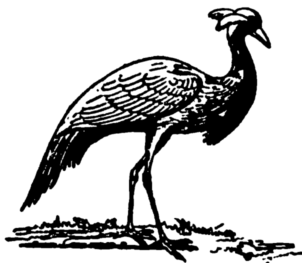
COVENANTS. Among other instances of anthropomorphic forms of speech [ANTHROPOMORPHISM] employed in Scripture is the use of the term *covenant*, to designate the divine dealings with mankind, or with individuals of the race. In all such cases, the *proper* idea of a covenant or mutual contract between parties, each of which is bound to render certain benefits to the other, is obviously excluded, and one of a merely *analogical* nature substituted in its place. Where God is one of the parties, and man the other, in a covenant, all the benefits conferred must be on the part of the former, and all the obligations sustained on the part of the latter. Such a definition, therefore, of a divine covenant as would imply that both parties are under conditions to each other is obviously incorrect, and incompatible with the relative position of the parties. Even such a definition as the following:—'Fœdus Dei cum hominibus est promissio bonorum cum conditione,' which is that given by Morus (*Epitom. Theol. Christ.* p. 160), is objectionable, on the ground of its implying that the exercise of God's grace to man is *dependent* upon something which man has to render to God.

We should prefer defining God's covenant with man as a gracious engagement on the part of God to communicate certain unmerited favours to men, in connection with a particular constitution or system, through means of which these favours are to be enjoyed. Hence in Scripture the covenant of God is called his 'counsel,' his 'oath,' his 'promise' (Ps. lxxxix. 3, 4; cv. 8-11; Heb. vi. 13-20; Luke i. 68-75; Gal. iii. 15-18, &c.); and it is described as consisting wholly in the gracious bestowal of blessing on men (Is. lix. 21; Jer. xxxi. 33, 34). Hence also the application of the term covenant to designate such fixed arrangements, or laws of nature, as the regular succession of day and night (Jer. xxxiii. 20), and such religious institutions as the Sabbath (Exod. xxxi. 16); circumcision (Gen. xvii. 9, 10); the Levitical institute (Lev. xxvi. 15); and in general any precept or ordinance of God (Jer. xxxiv. 13, 14); all such appointments forming part of that system or arrangement in connection with which the blessings of God's grace were to be enjoyed. In accordance with this is the usage of the verbs הקים, נתן, and שׂום to denote the forming of a divine covenant with man, all of which indicate the perfect sovereignty of God in the matter.

The divine covenants were ratified with the sacrifice of a piacular victim, the design of which was to show that without an atonement there could be no communication of blessing from God to man. Thus when God made a covenant with Abraham certain victims were slain and divided into halves, between which a smoking furnace and a burning lamp, the symbols of the divine presence, passed, to indicate the ratification of the promises conveyed in that covenant to Abraham; and here it is deserving of notice, as illustrating the definition of a divine covenant above given, that the divine glory *alone* passed between the pieces; whereas had the covenant been one of mutual stipulation, Abraham also would have performed the same ceremony (Gen. xv. 1-18; cf. Rosenmüller, *in loc.*). In like manner, the Levitical covenant was ratified by sacrifice (Exod. xxiv. 6-8); and the Apostle expressly affirms, on this ground, the necessity of the death of Christ, as the mediator of the new covenant; declaring that where a covenant is, there also of necessity must be the death of the appointed victim (Heb. ix. 16; cf. Macknight, *in loc.*). With this accords the etymology of ברית, the Hebrew word for 'covenant,' which, by the best lexicographers, is derived from ברה *cecidit, secuit;* and the usage of the phrase כרת ברית, *fœdus secare, percutere* (comp. Gr. ὅρκια τέμνειν).

Of the divine covenants mentioned in Scripture the first place is due to that which is emphatically styled by Jehovah, '*My* covenant.' This is God's gracious engagement to confer salvation and eternal glory on all who come to him through Jesus Christ. It is called sometimes 'the everlasting covenant' (Isa. lv. 3; Heb. xiii. 20), to distinguish it from those more temporary arrangements which were confined to particular individuals or classes; and the *second*, or *new*, or *better covenant*, to distinguish it from the Levitical covenant, which was *first* in order of time, because first ratified by sacrifice, and became *old*, and was shown to be *inferior*, because on the appearance of the Christian dispensation it was superseded, and passed away (Jer. xxxi. 31; Gal. iv. 24; Heb. vii. 22; viii. 6-13; ix. 15-23; xii. 24). Though this covenant was not, strictly speaking, ratified before the death of Christ, the great sacrificial victim (Heb. xiii. 20), yet it was revealed to the saints who lived before his advent, and who enjoyed salvation through the retrospective power of his death (Rom. iii. 25; Heb. ix. 15). To the more highly favoured of these God gave specific assurances of his gracious purpose, and on such occasions he was said to establish or make his covenant with them. Thus he established his covenant with Noah (Gen. ix. 8, 9); with Abraham (Gen. xvii. 4, 5); and with David (Ps. lxxxix. 3, 4). These were not distinct covenants, so much as renewals of the promises of the everlasting covenant, coupled with certain temporal favours, as types and pledges of the fulfilment of these promises.

The old or Sinaitic covenant was that given by God to the Israelites through Moses. It respected especially the inheritance of the land of Canaan, and the temporal blessings therewith connected; but it stood related to the new covenant, as embodying a typical representation of those great truths and blessings which the Christian dispensation unfolds and conveys.



In the system of a certain class of theologians great importance is attached to what they have technically called 'the covenant of works.' By this they intend the constitution established by God with Adam, during the period of his innocence So far as this phraseology is not understood to imply that man, even in his sinless state, was competent to bind Jehovah by any conditions, it cannot be objected to. It seems also to have the sanction of one passage of Scripture, viz. Hos. vi. 7, which Montanus, Grotius, Castalio, Burk, Rosenmüller, Newcome, Hitzig, and almost all the best interpreters, agree in rendering thus: 'But they *like Adam* have transgressed the covenant.'

Theologians have also spoken of 'the covenant of redemption,' by which they mean an engagement entered into between God the Father and God the Son from all eternity, whereby the former secured to the latter a certain number of ransomed sinners, as his church or elect body, and the latter engaged to become their surety and substitute. By many the propriety of this doctrine has been doubted; but the references to it in Scripture are of such a kind that it seems unreasonable to refuse to admit it. With it stand connected the subjects of election, predestination, the special love of Christ to his people, and the certain salvation of all that the Father hath given him.

Sometimes a mere human contract is called God's covenant, in the sense of involving an appeal to the Almighty, who, as the Judge of the whole earth, will hold both parties bound to fulfil their engagement. Compare 1 Sam. xx. 8; Jer. xxxiv. 18, 19; Ezek. xvii. 18, 19. (Witsius, *De Œconomiâ Fœderum;* Russell, *On the Old and New Covenants*, 2nd edit. 1843).—W.L.A.

CRANE (Isa. xxxviii. 14, Jer. viii. 7) סוּס *sus*, and עָגוּר *'agur*, occur in these passages as names of birds, and have been generally considered as denoting the 'crane' and 'swallow;' but translators are by no means agreed as to the appropriation of these names to the Hebrew terms. Our version renders *sis* by 'crane,' but Bochart, more correctly, as we think, decides in favour of 'swallow;' while Luther, rejecting both, prefers 'heron.

Where so much diversity of opinion reigns, it will be most safe to search for the true meaning by examining the internal evidence furnished by the texts in question, the two names occurring in no other instance. In Isaiah, allusion is made to the voice of both the species, which is described by the verb 'to chatter,' in accordance, or nearly so, with all the critical authorities that we have consulted. In Jeremiah, where both names occur in the same order, the birds are represented as 'observing the time of their coming.' Now, if the

237. [Numidian Crane: Grus Virgo.]

'crane' of Europe had been meant by either denomination, the clamorous habits of the species would not have been expressed as 'chattering;' and it is most probable that the striking characteristics of that bird, which are so elegantly and forcibly displayed in Hesiod and Aristophanes, would have supplied the lofty diction of prophetical inspiration with associations of a character still more exalted. 'Sus' or 'Sis' is the name of a fabulous long-legged bird in Arabian legends, but it also indicates the expressive sound of the swallow's voice; while 'agur' is transferred with slight alteration to the stork, in those northern tongues which have similarly altered the Chaldee version (כורכיא) *kurkeya*, into *kurg* and *curki* (see Nemnich, *s. v.* Ardea). The Teutonic *Aiber*, Dutch *Oyevaer*, Esthonian *Aigr* and *Aigro*, therefore, support the view that, Agur is a tribal appellation of one of the great wading birds; but neither the Hebrew text nor the Teutonic names point to the crane of Europe (*Ardea Grus*, Linn., *Grus Cinerea* of later ornithologists); since that species has a loud trumpet voice, and therefore does not 'chatter;' but especially, because in its migrations it crosses the Mediterranean into Africa, and does not appear in Palestine, unless by accident (driven thither possibly by a western storm of wind); and, when a troop of cranes alight under these circumstances, it is only for a moment; they do not give evidence of purposely assembling like the swallow. Thus the few characteristics indicated might seem to point out the stork, which does assemble in Syria in flocks, before its departure, and is not a clamorous bird, having little or no voice. But as the stork is clearly designated by a different appellation in the original, we must search for another species as the representative of *agur;* and we fortunately find one which completely answers to the conditions required; for, being neither a genuine crane, a stork, nor a heron, having a feeble voice, and striking but distinct manners; it is remarkable for beauty, numbers, residence, and periodical arrival and departure. The 'Ardea virgo' of Linn. the 'Grus virgo' of later writers, and 'Anthropoides virgo' of some, is the bird, we have every reason to conclude, intended by 'agur,' though not coming from the north, but from Central Africa, down the Nile (the very circumstance which puzzled Hasselquist), and in the Spring arriving in Palestine, while troops of them proceed to Asia Minor, and some as far north as the Caspian. They are frequently found portrayed on Egyptian monuments, and the naturalist just quoted, who saw them on the Nile, afterwards shot one near Smyrna: they visit the swamp above that city, and the lake of Tiberias, and depart in the fall, but do not utter the *clangor* of the crane, nor adopt its flight in two columns, forming an acute angle, the better to cleave the air. This bird is not more than three feet in length; it is of a beautiful bluish grey, with the cheeks, throat, breast, and tips of the long hinder feathers and quills black, and a tuft of delicate white plumes behind each eye. It has a peculiar dancing walk, which gave rise to its French denomination of 'demoiselle.'—C. H. S.

CREATION. In the ideas implied by this term a subject of vast extent and most profound interest is suggested; at the same time, one in reference to which but little can be said to be so certainly known or distinctly understood, as to afford adequate satisfaction to that curiosity which is so naturally excited in the human mind with respect to it, and which has evinced itself in all ages by the discussions, whether of a theological or of a philosophical nature, which have so largely occupied the attention both of religious and scientific writers.

In the present article, on a point of so much importance in Biblical literature, we shall endeavour to give as comprehensive a sketch of existing views as our limits will permit; and to do this the more satisfactorily we must, in the first instance, observe the due distinction between the several branches of the inquiry, and the attainable sources of knowledge on the subject. These are, of course, comprised under the two main heads of *reason* and *revelation*. We shall, in the first instance, offer some elucidations of the views derived from each of these sources *separately*, and then advert to the degree in which they bear *upon each other*, and to the connection and degree of accordance or discordance between them, real or apparent: and though, in so doing, we must necessarily touch upon some points on which considerable and even violent controversy has been called forth, yet we shall endeavour most strictly to avoid all discussion in a polemical spirit, and to confine ourselves to the dispassionate statement of what appears to be the best established views of the actual facts.

In the first place, then, the doctrine of revelation on this point, in the most general view, is chiefly founded on the simple ascription of the original formation of all things to Divine power, and on the title of the 'Creator' applied to the Deity. This is the constant language of all parts of Scripture, both of the Old and New Testaments; and in the meaning of the term 'create' we must seek the origin of those views which constitute the theological and revealed belief respecting the mode in which the world had its beginning.

The meaning of this word has been commonly associated with the idea of 'making out of nothing.' But when we come to inquire more

precisely into the subject, we can of course satisfy ourselves as to the meaning only from an examination of the original phrases.

Now, in the Hebrew Scriptures three distinct verbs are in different places employed with reference to the same divine act, viz. ברא *create*, עשה *make*, יצר *form* or *fashion*: now, though each of these has its shade of distinction, yet the best critics understand them as so nearly synonymous that, at least in regard to the idea of making out of nothing, little or no foundation for that doctrine can be obtained from the use of the first of these words. They are used *indifferently* and *interchangeably* in many passages; as, *e. g.* in Isa. xliii. 7, where they all three occur applied to the same divine act. The Septuagint renders ברא indifferently by *ποιεῖν* and *κτίζειν*. But especially in the account of the Creation in Gen. i. the verbs are used irrespectively in verses 7, 16, 21, 25, &c.; and, comparing Gen. i. 27 and ii. 7, man is said to have been *created*, yet he is also said to have been *formed out of the ground*. Again, in the Decalogue (Exod. xx. 11), the verb is עשה, *made*, not *created*. In Gen. i. the Septuagint has *ἐποίησεν* throughout.

On such a point much weight will be ascribed to the opinion of Dr. Pusey, professor of Hebrew at Oxford, who has distinctly stated his view that the word ברא implies neither positively, on the one hand, a formation out of nothing, nor, on the other, positively a formation out of existing materials, but that it is absolutely indefinite and neutral as to either of these conditions (Buckland's *Bridgewater Treatise*, note, p. 22). Thus he observes that the original expression 'let there be light' (Gen. i. 3), by no means *necessarily* implies that light had never before existed (ibid. note, 26). Upon the whole, he considers the only difference between the three verbs to lie in the *degree of force* in the expression; ברא, *create*, being simply the stronger and more emphatic word to express more forcibly the absolute power of the Creator.

In the New Testament we have a similar indifferent use of the words *κτίζειν* and *ποιεῖν* in a great number of passages. The former is applied to the origin of the world in Mark xiii. 19, and to the formation of man in 1 Cor. xi. 9, and in some other places; but most remarkably in Col. i. 16. The same word is also applied in a spiritual sense in Eph. ii. 10 and other passages, in which the figure clearly involves formation out of what existed before; as also in Eph. iv. 24, Col. iii. 10, &c. It manifestly implies previous materials in Heb. ix. 11, as in the Septuagint version of the corresponding passage in Lev. xvi. 16. But more particularly in Rom. i. 20, the expression *τὰ γὰρ ἀόρατα αὐτοῦ ἀπὸ κτίσεως κόσμου τοῖς ποιήμασι νοούμενα* places in synonym the substantives corresponding to the verbs 'create' and 'fashion' or 'form.' This appears to be nearly the whole substance of what we can collect from the Scriptures, whether Jewish or Christian, *as to the force of the verbal expressions* and the idea implied by the term 'Creation.'

If from the subject of the *general idea* of creation we turn to that of the particular *mode* in which the 'formation' of existing things (whether the crude material existed previously or not) is represented to have taken place, we find more extensive and express declarations in various parts of the Bible. It is not our purpose to furnish a concordance of texts, nor to introduce quotations of all that bear upon the subject, any more than our readers probably would look for it. It will suffice to observe that we have many *general* statements of the kind, and one or two very *circumstantial* representations. Of the former kind we may remark that almost all refer to the *attributes* and *perfections* of the Deity evinced in the work of creation, rather than to any precise explanation of *how* it was accomplished. The sacred writers also refer largely to the Divine *will* and the announcement of that will by His *word* as the immediate agent, as in Ps. xxxiii. 6, 9, and cxlviii. 5; Rev. iv. 11, and many other places; and this reference to the Divine *word* is considered by many to be in effect the same with the more direct ascription of the work of creation to the Divine *λόγος* in John i. 3; which again is explicitly referred to the Son of God in Eph. iii. 9, and Heb. i. 2, 3; and again, Col. i. 16. It would lead us too far from our immediate object here to discuss more minutely the precise doctrinal bearing of the passages last referred to, and others of similar import; and our readers will find full information on these topics under other more appropriate heads. We will merely observe further, that these *general* representations of the creation all agree in speaking of it in terms of the most unbounded extent and *universality* of operation: this is observable in the last cited texts, and not less pointedly in Acts xiv. 15, and xvii. 24; Rev. x. 6; besides many others; but it is to be observed, it is not expressed that this universal act took place *at one and the same time*, nor whether it was *instantaneous* or *gradual*.

We come next to those Scriptural representations of the Creation, which are more precise and circumstantial. Of these the earliest in order of time is that stated to have been announced by the Divine voice from Mount Sinai, in the delivery of the law to the Israelites (Exod. xx. 11), where the entire and complete work of Creation is described as carried on and ended in six days. The description pointedly applies to the *whole* universe; and the Great Work was succeeded by a seventh day, of rest or cessation, implying, that is, the *final* perfection of the process.

When the books of the Old Testament were afterwards written, the Mosaic history naturally opened with a general statement to the same effect. It is well known to be the opinion of some of the most learned critics, that the book of Genesis, in its existing form, is properly a compilation of more than one ancient document, portions of each being mixed in different parts of the narrative. Thus the short account of the Creation in Gen. ii. 4, is considered to have been the commencement of the most ancient record, while the more expanded and circumstantial account in Gen. i. and ii. 1-3, was prefixed from a later document. [See Bauer's *Theology of the Old Test.* p. 11, Eng. Tr. 1838.] But it will not be material to our present purpose to follow this distinction. We are principally concerned with the *terms* of the description, from whatever source its materials may have been derived.

The points most important to be noticed are the following.—The first sentence is taken by

many to stand distinct from what follows, as a first general announcement, or title, as it were; then, after a break, the account of the six days' work is supposed to begin. The description in the second verse (commonly conveyed by the term Chaos) is supposed by some connected with the first verse; by others, with the subsequent. Either way it positively expresses a state of universal ruin, disorder, and darkness. Out of this chaos the divine word evokes light, and, by degrees, order and organization; but by several successive and beautifully appropriate stages, divided into periods called nights and days; in which first the grander distribution of the inert materials of the universe into their respective places occurs, and then, progressively, the stages of organized existence from the lower up to the higher forms: until at length the whole is crowned by the introduction of man, who is constituted lord of the inferior world, and the spirit of life breathed into him: — when the majestic scene closes with the final cessation put to the work in the Divine rest on the seventh day, and the pronouncing of a peculiar benediction and sanctification of it.

On the sublime and unapproachable magnificence of this description it is not to our present purpose to dilate; but there is a peculiar character of unity of design and subordination and connection of parts observable throughout it, which, in any human composition, we should instantly refer to the most exalted poetical genius, and recognize as marking the most profound skill in the composition and invention of the narrative, the disposition, as it were, of the whole machinery of the great drama.

Very different is the view which some modern commentators have been induced to take of it. It will neither be necessary nor pleasing to enter into detailed descriptions of them. But the following very brief sketch of some of them is necessary:—Some do *not* make the separation of the first verse, before alluded to, but, taking the whole to refer to one single creative process, stretch that process out to a vast, and, in fact, unlimited length of time, by interpreting each of the six days (though most expressly described as alternations of day and night) as meaning periods of thousands or millions of years; and alleging, as their authority, that in certain parts of the prophetic writings, the term 'day' is used for an indefinitely long period, and that it is said with God 'a thousand years are as one day!' When, however, they come to the seventh day at the close (which is, nevertheless, obviously spoken of in the very same terms), they then go back to the ordinary sense of a natural day.

Others suppose the first verse, or the first two, to refer to an original formation of all things, the time, manner, and circumstances of which are left wholly undetermined. Then, after an indefinitely long interval, this original universe was totally overwhelmed and destroyed; and then, in six natural days, the whole existing world called into being in its place, in accordance with the literal terms of the remainder of the narrative.

A different class of interpreters contend that the whole account is to be taken together, as in the *first* of the instances just stated, but the days understood literally; the whole however is to be interpreted as referring to a more remote period than is commonly imagined, and as not intended to describe the *existing* species of plants and animals, but various other species, now extinct, which have been, by *subsequent* convulsions of nature, destroyed, while others have been successively, by fresh acts of creation, introduced in their place.

We will allude only to one other interpretation, the most recent which has been proposed, and which possesses every claim to attention which can be commanded by piety, learning, and devotedness to the sole cause of truth on the part of its author, Dr. J. Pye Smith, whose volume on the *Relations of Scripture to Geology, &c.*, we earnestly recommend to the attentive perusal of all who wish to acquire a comprehensive knowledge of the whole subject, as well as to be enlightened by the philosophical views and scriptural eloquence of the venerable and excellent writer.

His interpretation is briefly of this kind: the separation of the first verse he adopts as above: this refers to the original universal creation: and in the vast undefined interval, an almost unlimited series of changes in the structure and products of the earth may have taken place. After this, at a comparatively recent epoch, a *small portion* of the earth's surface was brought into a state of disorder, ruin, and obscuration; out of which the creation of the existing species of things, with the recall of light, and the restored presence of the heavenly bodies, took place literally, according to the Mosaic narrative, in six natural days. All this is supported by profound critical distinctions as to the sense of the original words. The brevity of this sketch we trust will be productive of no misconception, as we hope all our readers will satisfy themselves out of the original work.

In this cursory review of different interpretations we have made a passing allusion to geology, and the changes which it indicates as having taken place at remote periods on the earth's surface. We shall presently recur particularly to this subject. But it will be evident to most of our readers that some consideration of these scientific conclusions has been the main motive which suggested the various interpretations, some few of which we have mentioned. Our present concern with them is, however, on purely critical and philological grounds. And in this point of view, with the utmost respect for the several authors, without going into any details of controversy, we would wish simply to put all such interpretations, on their own intrinsic merits, to the judgment of any perfectly unbiassed inquirer. Yet for ourselves (without wishing to press any decision), we must confess they all appear to suggest senses which are of a very different nature from any which the plain tenor of the narrative would seem almost unavoidably to convey. We cannot here go into details of verbal criticism: but we are fully disposed to grant all that may be urged as to the precise signification of some of the terms; which may doubtless, by long established custom and association, have been commonly received in senses which a more exact knowledge of the original language may not warrant. At the same time we do not think anything of this kind can materially affect the broad view of the subject. We are disposed to look at the narrative *as a whole*:—and even allowing the greatest latitude as to the precise shades of meaning in its particular

features, to ask whether the *general* impression of its design can be rationally conceived to fall in with these views of it? Whether, rather, any such signification imposed on it does not seem to do palpable violence to its integrity, its distinctness, its majestic sublimity, its special purport, bearing, and manifest object?

We will, however, add one general remark applicable to all such interpretations in a philological point of view. In attempting to ascertain the true sense of a passage in any ancient book, we ought surely to decide in our own minds distinctly *what* it is at which we aim, whether to find some sense, to our apprehensions consistent, and such as the terms of the passage in question *may be made to bear*,—or to seek, as well as we can, what meaning it was the probable *intention of the writer* to convey These two considerations, it should be observed, though really very distinct, are too often confounded together; or rather, the latter is almost wholly lost sight of.

In the case before us, we cannot help thinking, there has been generally a great want of attention to this distinction. Some of the commentators indeed appear to allow that Moses himself may have individually intended to convey only that meaning which, they seem to confess, appears upon the face of his narrative, but at the same time they conceive there was *a hidden sense* really designed, accordant with the views they suggest, and which has not really been developed till the present day. The probability of such a doctrine in general it would be beyond our limits to discuss. But in reference to the immediate subject, we must confess, it appears to us yet more involved in complexity than the difficulties it is called in to solve.

Lastly, others have thought that the whole description must be taken literally as it stands; but yet, *if* found contradicted by facts, may, without violence to its obvious design and construction, be regarded as rather intended for a mythic poetical composition, or religious apologue, than for a matter-of-fact history.

To these points we shall recur; meanwhile, to follow the order of our discussion, we must here advert to another question.

The idea of 'creation,' as meaning absolutely 'making out of nothing,' or calling into existence that which did not exist before, in the strictest sense of the terms (as we have seen), is *not* a doctrine of *Scripture*, but it has been held by many on the grounds of *natural theology*, as enhancing the ideas we form of the divine power, and more especially since the contrary must imply the belief in the *eternity* and *self-existence* of *matter*. It has hence been a point largely discussed by those who have gone into the metaphysical arguments in support of the existence and attributes of the Deity. To maintain the eternity of matter is held to be the basis of materialism: and the sole self-existence of God has been upheld as essential to our idea of divinity, and the belief in a similar quality in matter strenuously objected to as either investing matter with the attributes of Deity, and thus involving us in Pantheism, or else derogatory from the divine perfections so entirely, as to leave us in a state of opinion differing little from atheism. Thus Dr. S. Clarke has argued at length against the self-existence of matter, on the ground that self-existence implies necessary existence; and this again implies that it would be contradictory to suppose the world not to exist; which it does not, since we *can* conceive the possibility of its non-existence (see *Demonstration of the Being and Attrib.* &c., prop. iii.). In general, we would observe that the abstract belief in a creation, as a calling into existence of the material world out of nothing, according to the definition of the schoolmen, 'Dicitur aliquid esse factum de nihil cum intelligimus esse quidem factum, sed non esse aliquid unde sit factum' (Anselm, *Monol.* c. 8), must be regarded as an opinion which rests wholly upon arguments of a metaphysical kind. It must, on the one hand, be distinguished clearly from the creation spoken of in the Bible, and, on the other, from the process by which the present order of physical existence was introduced, so far as it may be disclosed to us by the evidence of physical science. The metaphysical arguments will of course possess different degrees of weight to different minds: at all events they should be most carefully examined. And though Scripture and nature do not absolutely assert this view of the matter, yet they offer nothing at variance with it.

The *creation*, or *origin*, of the world, in a philosophical sense, is a subject which, as might be expected, has engaged the attention of philosophers of all classes and sects from the earliest times. To attempt to give any correct account of the innumerable theories and speculations which have been started on this subject would be beyond our design; but some few remarks by way of illustration may be desirable.

In general, we may observe that of these theories, many which have passed current as philosophical speculations have been framed *not* on *purely* philosophic grounds, but on a mixture of philosophical with legendary and fabulous systems among the heathen writers of antiquity;—and, among the moderns, with an attempt to combine the deductions of physical science with the real or supposed statements of revelation. All such speculations appear to us essentially faulty. In all such inquiries we should preserve a distinct idea of the ground on which we are proceeding. In the attempt to mix up considerations of so very different a nature in one view we shall pervert and injure both. Let the inductive conclusions stand on their own ground, and revelation on its proper evidence, then both will obtain their proper and distinct authority.

Those theories in earlier times, which were professedly based on purely philosophical grounds, were most frequently of an extremely hypothetical character. Such were the speculations of most of the ancient philosophical sects; they rather sought to make out some plausible system couched in the technical language of their schools, than fairly to trace what was really the order of nature, and follow by the humble but sure path of induction, the actual laws by which she is regulated, and which, when diligently studied, never fail to lead us on from one step of generalization to another, until we arrive at the surest conviction of that universal order and profoundly-regulated unity and harmony of physical causes, which form the irresistible evidence of the all-pervading influence of the one great moral cause of the universe. We will, however, just mention one or two illustrative instances:—

Among the ancient philosophers, Plato distinctly ascribed the formation of all things to a supreme being, but seems also to have held the independent existence of matter; that is, he maintained three principles—God, matter, idea: the idea being an incorporeal archetype existent in the Divine mind, according to which matter was moulded and fashioned (Plutarch, *De Placitis*, i. 3). This doctrine, indeed, seems to be nearly the same with that of Thales and Pythagoras, from whom it was probably borrowed. Cicero expressly tells us that 'Thales held water to be the principle of all things; and God, that mind which fashioned all things out of water' (*De Nat. Deor.* i.). Aristotle held the pre-existence of matter; and observes, 'It is the common opinion of naturalists that nothing can be made out of nothing;' and that it is impossible that it should be otherwise (*Phys.* i. 4. 8). And further: 'neither can everything be made out of everything, but out of some subject fitted thereto; as animals and plants out of their seed' (*l. c.* 9). Here, indeed, he seems to be approaching the argument of simple physical induction, the legitimate result of which ought to be to remind us of the proper boundaries of all physical argument, and to show that the question of the original constitution of matter is one which no such induction can ever solve. And though probably they did not view the subject in this philosophical light, yet some of the fathers of the Christian Church, in their discussions of these speculative questions, have expressed the truth in terms exactly harmonising with the most rigid modern philosophy. 'It is impossible,' says St. Chrysostom, 'for man's nature by curious inquiry to penetrate into the workmanship of God' (*In Gen.* λογ. β'): and Lactantius observes, 'His works are seen with the eyes, but how he made them, the mind itself cannot see' (§ 2). There are those who condemn all such speculations as evincing but the empty presumption of human reason: but they do not perceive that the real fault lies, not in the *use* of reason, but in the *perversion* of it; not in trusting to its guidance, but in refusing its cautions, and arrogantly imagining that we can penetrate regions where the only safe path of induction is manifestly closed to us.

In modern times there have not been wanting those who have pursued cosmogonical speculations on what they considered purely philosophical grounds: though to the adherents of strict inductive science their philosophical character will appear to stand on no better ground than the reveries of the ancients. For the sake of those readers who may feel interested in such theories, we may just name some of the most celebrated of these authors:—Buffon, in his *Histoire Naturelle;* Wolfe, in his *Cosmologia;* Holbach, in his *Système de la Nature* (incorrectly ascribed to Mirabaud or to Lagrange); and the disciples of Kant, as Hegel, Oken, and others, among whom the most prominent is J. Müller. As a specimen of the kind of speculation pursued, we may briefly state that his work, *Ueber die Entschung der Welt aus Nichts*, is founded on the old maxim, 'ex nihilo nihil fit;' from whence he deduces the existence of an original governing power possessing omnipresence and omniscience. But the production of a world could only take place in one of two ways, 'either in a pantheistical or a spiritual mode;' that is, the original power might create a world of which he, or an emanation from him, is the all-pervading soul, or might part with portions of his own intelligence, which might animate portions of the creation. Müller adopts the second of these, and contends that this distribution of the divine intelligence is what produces duration or time: the continued existence of time is the evidence of the continuance of divine power. This power (if we have the least idea of the author's meaning), by indefinite continuance alone, becomes concentrated, as it were, in some kind of effect, which produces, or at least brings together, a sort of original matter or ether, which subsequently undergoes changes owing to three principal forces or forms of power—attraction, repulsion, and inertia; after which, rotation being communicated, worlds and systems may result. But as we cannot pretend to say that from any statements we have seen we can render the subject at all more intelligible, we must hope this specimen may suffice.

If we turn to the more strict and proper investigation of physical science, it will be important to inquire what amount of testimony with respect to the origin of the world they may be able to supply.

The science of *astronomy* has sometimes been appealed to as having reference to the probable origin and antiquity of the solar system; but on a closer examination the degree of evidence which it furnishes will be found little more than conjectural.

The most recent and complete investigations of the theory of gravitation have totally excluded all idea of the action of adventitious causes in sustaining or disturbing the system. Its apparent irregularities have been all analyzed and reduced to calculation, to system, and order, and shown to be, in fact, but portions of the exact regularity by which the whole fabric is sustained, and which recur in a perfectly determinate cycle through determinate periods, though some of them are of immense length.

All this does not, however, prove that the universe *has existed* through those immensely long periods: astronomical science *does not show* us any commencement; but there is no evidence whatever at variance with it.

Observations on the motions of Encke's comet have disclosed the *high probability* of the existence of a certain extremely rare medium through the celestial space, which offers a certain resistance to that small comet, itself composed of extremely rarified matter. This medium, or ether, must therefore oppose *some* resistance, however inexpressibly small, to the solid planets; and the result must be, in an inconceivably long period of time, that they will approach, and finally fall into, the sun.

Astronomy, then, may point to the *termination* of the present order of things. It has been argued, as a sort of analogous presumption, that that which will have an end had also a beginning; but this, considered in the light of evidence of creation, is surely far too slight and inconclusive to be of much value. Another argument has been sometimes dwelt on to which we must refer rather more particularly. This is what is termed 'the Nebular Hypothesis,' which may be thus very briefly explained: La Place suggested it (purely

as an *hypothesis*), which might give a plausible representation from analogy of the origin of the *motions* of the solar system. In all parts of the heavens powerful telescopes show us star-like objects which are not, like the other stars, brilliant luminous points, but extended bodies of comparatively little lustre. These are called *nebulæ*, and manifestly appear to be in various stages of *condensation*, from great diffuseness up to actual stars, and many of them having within them points of greater brightness. La Place perceived an analogy between these and the solar system: he conceived that our whole system was once in the state of a nebula; that it has undergone gradual condensation, the sun being the central star; and that in this process each of the planets also formed a distinct centre of condensation, while in and by the process their respective motions were communicated to them, supposing the whole mass to have had originally impressed upon it a general rotatory motion, without which, and the centrifugal force resulting, all its particles must at once have been attracted together into one central mass. Thus other planetary masses would be found revolving round that centre at different distances. As the cooling and consequent condensation advanced, similar effects on a smaller scale would take place in each of those planetary masses, until they formed solid planets accompanied by rings or satellites. The resulting motions would be orbits not much differing from circles, and in planes not greatly inclined to each other, which accords generally well enough with the actual constitution of the solar system.

All this was (as we have said) thrown out merely as a mechanical hypothesis: it does *not* (as has been sometimes represented) account for the *creation* of the solar system; but merely shows how, on mechanical suppositions, we may explain its possible formation, in conformity with more general pre-existent laws. So far then as the evidence of Creation is concerned, it amounts to this, that the same evidence which we have of infinite power and wisdom in the actual adjustment of the *existing* system, by certain fixed laws of inimitable unity and simplicity, is by *probability* carried a step further back into past time; and the sufficiency of the same unvarying principles not only to the *preservation* but to the original arrangement of the system, may yet more widely extend and enlarge our notions of the same sublime inferences, which the contemplation of the system, in its existing relations, is so transcendently calculated to teach.

While speaking of astronomical evidence we must not omit to notice an idea, which often prevails, of some connection between astronomical epochs and events on our globe; or, at least, a disposition to attach importance to coincidences of this kind. Thus some have dwelt upon the circumstance that by calculation of the motion of apsides of the earth's orbit, La Place found that the major axis of the orbit coincided with the line of the equinoxes in the year 4004 B.C. [*Mec. Cel.* iii. 113], which, according to Archbishop Usher's system, is the date assigned to the Mosaic Creation. But it is difficult to see any physical reason why the globe should be more likely to be brought into its present state, or man placed upon it, under that particular combination of circumstances rather than any other.

There is, however, another branch of science from which information of a more positive kind may be extracted.

In referring to the evidence which GEOLOGY may give on the subject of the *origin* of the world we must premise, 1st. That the *object* of this science is not that of attempting any such discovery: the testimony which it may afford is but incidental. 2nd. The science itself is but of very modern origin, and its researches have as yet been carried but a little way, compared with what we must reasonably expect they will be: yet to that small extent its foundations have been laid in absolutely determined facts, and general results, which are real, settled, inductive truths, which no subsequent investigations can overthrow; which, in fact, can only be called in question on grounds which, if true, must overthrow not only geology, but all inductive science whatever, that is, the whole extent of human knowledge, and render our reasoning faculties useless, and all philosophy a mere illusion. 3rd. The evidence to which alone we can look on such a question as the present must be restricted to those portions of the subject which are of this strictly inductive character, and we must not mix up with them those conjectural hypotheses (however just and valuable for their proper purposes) in which geologists of all schools occasionally indulge.

In very briefly stating the general results of this evidence, which, little as it is, is yet undeniably certain, we shall, of course, not attempt any thing like geological *discussion*, or elementary explanation: we shall presume that the reader is either moderately acquainted with the elements of the science, or at least can have recourse to the works of the most eminent geologists, in which he will find ample proof of the assertions we bring forward, which in our narrow limits, of course, pretend to be no more than a recapitulation or summary of the evidence. For our facts then we simply refer the reader to Mr. Lyell's *Principles of Geology*, 4 vols.; his *Elements of Geology*, 1 vol.; Professor Phillip's *Treatise on Geology* (extracted from the *Encyclopædia Britannica*); Sir H. De la Beche's *Geological Manual*; Dr. Buckland's *Bridgewater Treatise*; and, for more general discussion, to Dr. J. Pye Smith's work before named, and to Professor Powell's *Connexion of Natural and Divine Truth*.

The pursuit of geological inquiry discloses the evidence and monuments of successive changes which have occurred in the state of the earth's surface (including under that term the solid portion extending to some depth below). In the attempt to trace these to their causes, sound induction recognises the one grand principle of referring to those which are both 'true' and 'sufficient' to explain the phenomena. We cannot find true causes except in such as are really proved to exist, and are found by experience to be in operation. The action of the waters on the land (whether the continual action of the rivers and the ocean, or the occasional force of inundations and torrents), the subterranean force of earthquakes, and the external operations of volcanoes; the contractions and expansions which must accompany changes in the temperature of any considerable thickness of the earth's crust; the fractures, flexures, and varieties of form which must arise from subterranean upheaving forces;—these and the like

are the *real* causes to which alone the sound geologist refers.

The accumulation of soil at the bottom of the waters, the imbedding of animal and vegetable remains in those depositions, the elevations of portions of the land out of the sea, are operations really and continually going on. When therefore we find fossil remains of organized beings imbedded in rocks, bearing also marks of a similar mode of deposition, we refer to such operations as those just mentioned as true causes to explain the phenomena: and numerous series and successions of such depositions, containing the remains of species now extinct, and successively, in the order of deposition, containing fewer of recent and more of extinct kinds, even to whole general classes and orders of being, call for the like reference to the continued action of similar causes through periods of countless duration.

Numerous large districts of the earth contain immense deposits of marine shells, which must therefore once have formed the bed of the ocean above which they are now elevated; and as they exhibit an unbroken level, we infer that they were gradually elevated without disturbance by similar slowly-acting subterranean causes, such as have been shown to produce elevating forces now gradually raising parts of existing continents.

Again; in other districts we trace the marks of sudden and violent local inundations at remote epochs: precisely such inundations have been known to be produced by submarine volcanic action. Such effects may clearly be supposed to have taken place upon a larger scale where the phenomena indicate it, but we are still not departing from just analogies.

All the changes of which we have evidence in past epochs have been manifestly *local;* just as the operation of existing causes is confined to a series of the like partial and local alterations. Thus no sound inductive geologist at the present day can admit anything like a universal simultaneous formation, or sudden action, applying at once to the entire surface of the present dry land. One small portion after another has been successively deposited, elevated, peopled with animal and vegetable life, again in the course of profoundly-adjusted changes to be obliterated and overwhelmed, while another has been in progressive advance.

Just and sober inductive science, applied to the examination of the actual structure of the earth's crust, enables us with satisfaction and certainty to trace the changes which have taken place on the surface of a globe possessing the same general nature as the existing earth, and in the structure and habits of organized beings *analogous* to those now inhabiting the world. It investigates the alterations which have been effected by physical agents resembling those now in operation, and in accordance with general laws the same as those now recognised in the economy of nature. But it does not and cannot rise to the disclosure of what might have occurred under a different state of things, or owing to the action of causes of a different order from those now discovered by physical research. It cannot show a *chaos,* or trace the evolution of a world out of it. It cannot reason upon a supposed state of universal confusion and ruin, and the immediate reduction of it into order and arrangement. It can investigate the changes of things, but not their origin. In a word, sound *geology* will never aspire to the character of *cosmogony.* Yet geology is peculiarly distinguished from other branches of physical science, in this, that, while they teach us only the *existing* order of nature, it carries us back in time, and shows a period when the present races of organized beings did *not* exist, and by consequence establishes *the fact of their having in some way received a commencement of being,* and in truth the occurrence of *many such events;* and these not brought about at any one marked period, or extending to all animated nature at once, but by the slow and gradual introduction of each new species while yet the older partially remained; and each in turn thus progressively yielding its place to be filled up with fresh forms of organization. All that geology establishes in respect to organized life is the *fact* of the gradual origination of new species, but by no means the *particular method* or *process* by which it was brought about.

It is true there have not been wanting theories to explain these processes on supposed natural principles: yet these have not been altogether satisfactory or free from material objections. Physical research, indeed, in its nature, cannot bring us to any distinct conception of what we term an act of creation. If we consider the simple case of the introduction of a single species, or even an individual of a new species, there is an obvious limit imposed on our speculations. On the other hand, it is certainly quite open to the physiological inquirer to trace, as closely as he can, the secondary means, if any, as far as the nature of the case admits, by which it is conceivable that such changes may have been brought about or modified. Such inquiries may produce no satisfactory results, but certainly it is the *only legitimate channel* open to the inductive inquirer, to examine carefully all the possible effects which different combinations of natural conditions, as temperature, domestication, crossing of breeds, and the like, may produce. Theories, indeed, of this kind have been proposed and carried out by some to a most singular and preposterous extent, and a series of transmutations of species imagined which seem more like the hallucinations of insanity than the sober deductions of science. Yet the broad question respecting the immutability of species, and the abstract possibility of a transition from one into another, of the modifications of intermediate races being perpetuated, of new species being thus eventually introduced, have fairly formed subjects of debate among physiologists. At all events, if natural science ever should be able to conduct us to any satisfactory knowledge on such a subject, it can only be by some such route as this. But in comparing what may have occurred in remote epochs with the analogous facts of modern observation on the modifications of species, there is one point most carefully to be remembered—the *limited time* during which existing operations have been contemplated—from which it would be unsafe to argue what may have taken place in the vast and almost unlimited periods of past duration.

In those rocks, of whatever date, which are of igneous origin, or show marks of having undergone fusion, if organic remains ever existed, it is clear they must have been destroyed, so

that we can argue nothing from their non-appearance.

With reference to the present question, it will be readily apparent that our knowledge of the subject can go no higher than the evidence of fossil remains carries us.

In the earliest rock in which any organic remains have *yet been found*, these remains are *not* those of *plants*, but of *animals*, and these not absolutely of the *lowest* kind; and from this first *observed* origin of organic life there is no break in the vast chain of organic development till we reach the existing order of things —no one geological period, long or short—no one series of stratified rocks everywhere devoid of traces of life: the world, once inhabited, has apparently never, for any ascertainable period, been totally despoiled of its living wonders; but there have been many changes in individual forms, great alterations in generic assemblages, entire revolutions in the relative number and development of the several classes. The systems of life have been varied from time to time, to suit the altered condition of the globe, but never extinguished.

The proportionate *number* of species has gone on increasing in the successive generations up to the multitudes of existing species. The change in organic *structure* also has been in some degree proportioned to the time elapsed; but we cannot lay down any distinct principle as to the law by which its progression, its greater or less complexity or perfection in the scale of existence, can be decided; though *generally* we may say that the higher forms of life are not found till we come to the more recent strata.

Throughout the whole we trace one unbroken continuity of plan and design: different races of animals and plants have successively arisen as others disappeared, the disappearance of the one and the introduction of the other being each coincident with changes in the state of the globe.

The existing forms of life *resemble* those of times gone by, as the general aspect of the physical conditions of the world has always been analogous; and they *differ* from them as the co-relations of life and physical conditions are strict and necessary: so that all the variations of these conditions are represented in the phases of organic structure, while all their general agreements are also represented by the conformity of the great principles of structure in the creatures of every geological age, and the often-repeated analogies and parallelisms of series of forms between different geological periods, which we find as a law of nature, when comparing the most distant regions with each other. We are not then in a *different* system of nature, properly so called, from those which have been created and have been suffered to pass away before the origin of the human race; but in an *advanced part* of the *same* system, whose law of progression is fixed, though from time to time the signification of the term varies. The full and complete system of organic life now on the globe includes all the effects of sea and land, warmth and cold, divided regions, and all other things which are the diversifying causes of nature; and it is no wonder if, before the present land was raised from the deep, and the present distinction of natural regions was produced, there was not the same extreme variety of natural productions which we now witness, and which is not without its end in rendering the globe a more fitting residence for intellectual beings.

Looking to the very latest periods to which Geology refers, we find detached portions of the surface composed of beds containing remains of species nearly the same as those now existing; and every indication presented by the nature, form, structure and obvious mode of formation, deposition, and elevation of these beds, is precisely similar to what is now found actually going on, and especially to the results of exactly similar modes of action which we trace in operations which have gone on within the period of the existing order of things. The imbedding of existing races of animals and plants in ancient peat bogs, in dried-up lakes, in new-formed deltas and shoals, and the destruction of other portions of the actual surface and its productions, by the action of the sea, landslips, and submergencies; as well as, above all, the exact identity of the action of modern earthquakes and volcanoes with those of old formations—all attest the unbroken uniformity of the chain of causation which unites the present state of things with all those varying conditions which we trace in earlier epochs, and which have only appeared to some to present so much more strongly-marked vicissitudes, because we are apt to crowd those events together in the perspective, and measure them too much according to our narrow ideas of duration. Thus, whether we look at these changes in time or in space, we find in the one no definite assignable period at which we can fix any one grand revolution or distinct era—no one portion of the earth's surface which we can say was all produced, with its organized inhabitants, at one time. All the epochs of change were gradual; the different orders of things passed by insensible gradations from one into another; all parts of the globe were brought into their present state by small local instalments.

In the tertiary strata (and to some extent in the older also) it must be borne in mind that the precise line of demarcation is by no means so absolute as is often imagined. The broad classification into different periods, according as a majority or a minority of existing species may appear in the several beds, is, in a great degree, conventional: *e. g.*, we cannot positively fix on any one epoch when the meiocene period ended and the pleiocene began; and as those changes or modes of physical action which produced the tertiary beds were manifestly of exactly the same nature as those now going on upon the earth's surface, and as those changes were at least the accompanying conditions of the extinction of some species and the introduction or creation of others, so we can by no means infer that we have now arrived at a stationary or permanent condition, whether of unorganized or of organized existence.

The more the details of the *latest* geological phenomena are studied, the less shall we be able to imagine that there has been, at any comparatively recent period, a *clearly defined epoch* at which what we call the present order of things was completely and at once established, and a *cessation of all change* has occurred; or that further examples of creative power may not again take place by the same slow and gradual process

by which they probably were carried on in past eras. The more the examination of the most superficial parts of the earth's surface is extended, the more evidence is accumulated of partial and local changes exactly similar to those which distinguish the tertiary functions, going on uninterruptedly up to the present time; and it is clearly contradictory to all principles of inductive analogy to assert that in the progress of these changes new modifications of local temperature, moisture, and other physical conditions, will not occur, and that their occurrence will not be accompanied by the extinction of races of beings to which the localities will then be unsuited, and that fresh instances of providential adaptation, in the creation of new species, fitted to supply their places, will not be displayed. With regard to the most material point, *the origin of the human race*, the evidence is *chiefly negative*. It is *positive* only thus far: that in the earlier formation the physical conditions of the globe, and the nature of the animals which did exist on it, concur in showing that it would have been impossible for the human race to have been sustained in life or well-being. In the latter stages of things there is no such reason why man might not have existed. But the fact is, no human remains *have been found*. In the tertiary strata the nearest approach has been the distinct discovery of remains of the monkey tribe. It is clearly impossible, then, on geological grounds, to affirm that human remains may not be discovered in the latest tertiary beds, or to place any such positive limit of antiquity to the *possible* existence of the human species. It can only be asserted, *at present*, that, *as far as research has yet gone* (1843), *it has detected no human remains* older than those deposits which are probably within the period of history.

As bearing, then, on the subject of *creation*, or the origin of life and organized structures, the whole evidence which geology furnishes is certainly irreconcilable with the idea of *one* simultaneous *general* development of organized existence. It points, indeed, to a *commencement* of organized life; but shows that as successive forms and species of organization from time to time disappeared, NEW *forms* and NEW *species* WERE PRODUCED to supply their places; that these changes corresponded to others in the physical conditions of the globe; but that none of them were at once universal in extent and simultaneous in time; lastly, that the human race (*probably*) did not come into existence till the period to which the present state of things belongs.

In offering this imperfect summary of the general results derivable from *geology* which bear upon the subject of *creation*, we conceive enough may have been stated to enable the discerning reader at once to perceive the nature and extent of the discrepancy which exists between the changes, thus incontestably disclosed to us by the existing monuments of past ages of terrestrial existence, and the entire character and scope of the descriptive narrative of the Creation in the Hebrew Scriptures. We referred to certain interpretations of that narrative which have, in truth, been framed expressly with the view of attempting to reconcile the contradiction. After all we have before said, we shall not think it necessary here to press the matter much further on the notice of our readers: they have before them the materials for forming their own judgment. We will merely say for our own parts that we fail to perceive how those interpretations can be supported on any rational basis so as really to explain the discrepancy, or effectually to defend the cause to whose aid they are summoned, since the main points of the discrepancy still remain untouched, viz., that there are no traces of any such catastrophe as must be supposed, even over a limited portion of the earth's surface, subsequent to the latest tertiary formation; and any of the other interpretations are absolutely contradicted by the whole tenor of the facts in reference to the suddenness and universality implied in the description, if natural days are maintained, and in long periods the total want of correspondence between those periods and any order of succession which can be made out from geological evidence.

With regard to the nature and extent of the discrepancy thus disclosed, we would observe, that it is not a case merely involving the question of the literal acceptation of a word or a phrase—it is *not* a parallel case (*e. g.*) with that of the incidental scriptural expressions, implying, in their letter, the motion of the sun, or the existence of a solid firmament—nor is the difficulty of the same nature with any sceptical objections to a supernatural narration: but it is the contradiction of existing monuments of past events with the *obvious* sense of what is recorded as a part of Divine revelation, in the form of a circumstantial narrative of the same events. And the discrepancy is not one with any theory, or partial discovery of science, which is not yet thoroughly made out, and which future investigations may modify or set aside; but with broad primary facts which involve nothing hypothetical, and which are in reality identified with the first principles of all inductive truth. It is also a circumstance which, taken any way, involves a train of consequences. It is not an isolated difficulty like that attaching to some single detached point, which we can pass over and not allow to weigh against the evidence preponderating on the other side; but it essentially involves a broad principle, and must affect, in its consequences, the entire view we take of the authority and application of the Old Testament.

That the existence of a discrepancy or difficulty of this kind, especially at the first announcement of those discoveries which disclosed it, should have been viewed by many with astonishment and alarm, is no more than might have been expected. That in the first instance the whole weight of censure should have been directed against the science of geology, is what numerous and somewhat parallel cases in former times would have led us to anticipate. It would be improper in this place to advert even remotely to topics of dispute or irritation. We shall merely observe that, at the present day, a happier spirit seems beginning to prevail. There are few now who venture upon open expressions of hostility; and this is no doubt from the simple cause that earnest attention and diligent examination have been called forth: the subject is beginning to be generally understood; misconception and acrimony, alarm and suspicion, have been gradually set to rest; and those who feel most forcibly the amount and nature of the contradiction are most

ready to confess the unsatisfactory character of those solutions of it to which we have adverted, and which rather gloss over and elude the real difficulty than fairly meet it. The main source of objection and offence has doubtless been the prevalence of certain views of the tenor and design of the Old Testament, which have by long custom passed current, among certain classes of Christians more especially, and in virtue of which the particular points involved in the narrative of the creation have come to bear a meaning and application connected directly with the existing institutions of religion. On the other hand, a more careful view of the actual design of the Hebrew Scriptures may do much towards removing this source of embarrassment.

In speaking of the Scripture narrative we have already remarked its striking characteristics as a *composition*—this of course applies in detail to the narrative in Genesis; but the brief statement in the Decalogue preserves also, as far as it goes, the same features. No reader of the Scriptures, especially of the Old Testament, can be otherwise than aware of the entire system which pervades all its representations, more or less, of *adaptation* in the manner of expression, form of imagery, and the like, to the apprehensions, the prejudices, and previous belief of the Jewish people; nay, the whole dispensation, in all its parts and institutions, is but one grand exemplification of the same thing. And this character in it we find expressly recognised and dwelt upon by our Lord and his apostles, in addressing that people, as the very ground of argument for introducing to those who were then living under the law a better and more spiritual religion: 'Moses, because of the hardness of your hearts,' gave you this precept (Matt. xix. 8); 'The law was a schoolmaster to bring them to Christ' (Gal. iii. 24)—a scheme of instruction and education (as it were) suited to their capacities and accommodated to their apprehensions. And not to dwell on instances which can only be accounted for as *adaptations* of this kind, such as the various sanguinary enactments, the visitation of sin on the posterity of the offender, the toleration of polygamy, the extreme facility of divorce, and the like, we cannot but recognise a similar object, as well in the general anthropopathism of the Old Testament, as in more special instances of many parts of those compositions in which poetic imagery, parable, and apologue were employed; and it is therefore nothing at variance with the nature or design of that revelation, but rather eminently conformable to it, to suppose that in other instances similar forms of narrative may have been adopted in like manner as the vehicles of religious instruction; still less to admit that they may have long been mistaken for historical matter-of-fact statements.

In the present instance the adaptation to the people of Israel was manifestly of the greatest importance, in order to secure their attention to points of vital moment in connection with the worship of the one true God, and their renunciation of idolatrous superstition. With this end, the first great truth with which they were to be impressed was the unity, omnipotence, and beneficence of the Creator: but these great doctrines were not put before them as abstract philosophical propositions, which their narrow and uncultivated minds would have been wholly incapable of comprehending: they were therefore embodied and illustrated in a narrative, proceeding step by step, in a minute detail, to assert, in each individual instance, the power and goodness which they were thus led to recognise in every familiar detail of the natural world, and which could thus alone be effectually impressed upon their minds.

Another very material object was to remind them, in like manner, that those very beings, the animals which formed the objects of the idolatry of the Egyptians, to which they were so prone, were in truth but the creatures of the true God: hence the importance of dwelling, with minute particularity, on their creation and subordination to man; as well as the express prohibition of worshipping even the images of them, or so much as making such images. In all this we cannot but trace the same wise system of exact accommodation to the peculiar capacity and condition of this people, so little advanced at that time in moral or intellectual cultivation, and even exhibiting at all times a considerable national and constitutional incapacity for higher views, as the tenor of their after-history abundantly testifies. To this 'hard-hearted and stiff-necked generation,' then, so necessary was the utmost condescension and adaptation of all institutions (especially of a religious nature), and of the language and illustrations in which the communication of religious truths and precepts was to be made, that we find a reference to this principle perpetually pressed upon us to interpret much which otherwise seems singular in their sacred books, and which, unless so considered, is almost inevitably liable to be greatly misunderstood; and which from want of attention to this distinction has been, and continually is, misapplied, and even made a ground of sceptical objection.

These remarks refer yet more directly to what doubtless was the third and chief object in this representation of the creation—the institution of the Sabbath. This remarkable observance—the peculiar badge of the chosen people, to distinguish them from all other nations (Exod. xxxi. 13; Ezek. xx. 12)—was appointed them before the delivery of the rest of the law (Exod. xvi. 25); and as the work of creation, with reference to the different classes of beings, was associated in their minds with each of the six days, so the Seventh was identified, in the order of the narrative, with the entire completion of the work, the Divine rest and cessation from it, and the solemn sanctification of it pronounced, to consist in a precise abstinence from any kind of labour by themselves, their household, and even cattle. They were thus led to adhere to this duty by reflections connected with the highest truths impressed under the most awful sanctions; and the wisdom of the injunction, not less than the means thus taken to promote and secure its fulfilment, cannot but the more fully appear the more we examine the character and genius of this singular people, for whom it was ordained, and to whose peculiar condition it was in every way so remarkably adapted.

The narrative, then, of six periods of creation, followed by a seventh similar period of rest and blessing, was clearly designed, by adaptation to their conceptions, to enforce upon the Israelites the institution of the Sabbath: and in whatever way its details may be interpreted, it clearly can-

not be regarded as an *historical* statement of a *primeval* institution of a sabbath: a supposition which is, indeed, on other grounds, sufficiently improbable, though often adopted. But on this subject we refer the reader to our article 'SABBATH.'

If, then, we would avoid the alternative (otherwise inevitable) of being compelled to admit what must amount to impugning the truth of these portions, at least, of the Old Testament, we surely are bound to give fair consideration to the only suggestion which can set us entirely free from all the difficulties arising from the geological contradiction which does and must exist against any conceivable interpretation which retains the assertion of the *historical* character of the details of the narrative, as referring to the distinct transactions of each of the seven periods.

The one grand fact, couched in the general assertion that all things were created by the sole power of one Supreme Being, is the whole of the representation to which an historical character can be assigned. As to the particular form in which the descriptive narrative is conveyed, we merely affirm that it *cannot* be *history*—it *may* be *poetry*.

But there is one consideration further, to which we must advert in connection with this topic, viz. that in the repetition which Moses gives of the Decalogue (Deut. v. 14, 15), the latter part of the fourth commandment relative to the Creation is omitted, and a different reason for the observance of the sabbath inserted. This has led some commentators to suppose that in *neither* case is that latter clause to be considered as having really formed a portion of the commandment as delivered from Mount Sinai; but that it was in both cases added as a sort of comment by Moses himself. This, if it be so, will manifestly on reflection be seen to remove some portion of the difficulty of conceiving the *poetical* nature of the description. The Divine command may have been given *simply* to the Israelites; and Moses may have been authorized to recommend and impress it further by the addition of such topics as would best coincide with the preconceptions of popular belief, where it was not at variance with any real truth of religion.

In regard both to this and many other difficulties of the Old Testament, there has been too great a proneness to overlook the consideration of its original exclusive design of adaptation to the purposes of a limited dispensation addressed to one people only. When we bear this more distinctly in mind, many of those difficulties are in a very great degree removed. And this is surely the true view to be taken of it by *Gentile* Christians, to whom it is *only* a guide and instructor *second* and *subordinate* to the *New Testament*—a dead letter without it; but 'able to make us wise unto salvation "ONLY" through faith which is in Christ Jesus' (2 Tim. iii. 15).

Another objection of a very different kind has been started with reference to this subject, which it certainly would not have occurred to us to notice, had it not really been entertained as a serious difficulty by many; and so much so as to have called forth a printed discourse from so distinguished a person as Dr. Buckland—the alleged objection, that the existence of *death* in the animal world (of which certainly the whole series of organic remains furnishes uninterrupted evidence through all epochs) is at variance with the Scripture doctrine that death was first introduced as the penalty attached to sin in the instance of Adam's transgression. We can only say that to us it was a new idea that the inferior animals were in any way involved in the consequences of man's obedience or disobedience. To those who really feel any degree of difficulty on the subject we can only recommend a perusal of what Dr. Pye Smith has remarked upon it in his work before referred to (p. 286, &c.).

We must also add a brief remark on one further point which has sometimes formed a topic of controversy, closely connected with the subject of *Creation*—the origin of the human race from a single primeval pair.

Viewed as a question of natural history simply, all the different races of men are but *varieties* of one *species;* since the physiological distinction of a *species* is that any of its *varieties* are capable of producing a *mixed* offspring which shall be itself *prolific;* with the mixture of *species* it is not so. A *species*, therefore, however widely spread, and however distinct its subordinate varieties, may *in theory* have originated from a single pair. Physiology, then, thus far shows nothing at variance with the belief that the human species *did* thus derive its origin.

There may, however, obviously be questions of another kind, such as the existence of local obstacles, the probable rate of increase, and the like, which must influence our belief as to the *fact.* These apparent difficulties, such as the peopling of America, and of the multitudes of islands especially in the midst of the Pacific Ocean, together with the length of time necessary for the spread and growth of such immense populations as even at very remote epochs must have inhabited many large districts, where we trace remains of high civilization of unknown antiquity, have induced many to adopt the idea that there must have been original creations of man in many different parts of the globe; and this, too, subsequently to the Mosaic deluge, if we are to understand it in a strictly universal sense [DELUGE].

It seems also incumbent on those who adhere so strictly to the letter of the Scriptural narrative to bear in mind that the existence of other races besides the family of Adam seems to be almost unavoidably implied in several particulars of that narrative. Thus in Gen. iv. 14, Cain complains that when he wanders forth on the earth, 'every one that findeth me shall slay me,' and accordingly a mark is set upon him, 'lest any finding him should kill him.' Again (ver. 17), Cain, going forth with his wife and child only, built *a city*, which at least must imply some collected number of persons. When Cain's wife is mentioned (ver. 17), it is without the slightest allusion to her origin; and the extraordinary nature of the vulgar belief on that subject ought certainly (on all grounds) to be fairly balanced along with the alleged religious necessity for imagining only one descent for the human race. To these may be added the consideration of the very obscure passage (Gen. vi. 2, 4) respecting the progeny of 'the sons of God' and 'the daughters of men.'

These and other topics, though we can do no more than thus briefly allude to them, must

nevertheless be carefully taken into consideration in whatever opinion we form on the subject. It is doubtless a question of great difficulty, in whatever light we view it; but more particularly so from the connection which it holds in the minds of many with the doctrine of original sin as connected with the fall of Adam. But for a discussion of so very wide and important a point we must refer the reader to other heads.—B. P.

CRESCENS (Κρήσκης), an assistant of St. Paul's, and generally supposed to have been one of the seventy disciples of Christ. It is alleged in the *Apostolical Constitutions* (vii. 46), and by the fathers of the church, that he preached the Gospel in Galatia, a fact probably deduced conjecturally from the only text (2 Tim. iv. 10) in which his name occurs. There is a less ancient tradition (in Sophronius), according to which Crescens preached, went into Gaul, and became the founder of the church in Vienne; but it deserves no notice, having probably no other foundation than the resemblance of the names Galatia and Gallia.

CRETE (Κρήτη), one of the largest islands in the Mediterranean, now called Candia, and by the Turks, Kirid. It is 160 miles long, but of very unequal width—varying from thirty-five to six miles. It is situated at the entrance of the Archipelago, having the coast of the Morea to the south-west, that of Asia Minor to the north-east, and that of Libya to the south. Great antiquity was affected by the inhabitants, and it has been supposed by some that the island was originally peopled from Egypt; but this is founded on the conclusion that Crete was the Caphthor of Deut. ii. 23, &c., and the country of the Philistines, which seems more than doubtful [CAPHTHOR]. Surrounded on all sides by the sea, the Cretans were excellent sailors, and their vessels visited all the neighbouring coasts. The island was highly prosperous and full of people in very ancient times: this is indicated by its 'hundred cities' alluded to in the epithet ἑκατόμπολις, applied to it by Homer (*Il.* ii. 649). The chief glory of the island, however, lay in its having produced the legislator Minos, whose institutions had such important influence in softening the manners of a barbarous age, not in Crete only, but also in Greece, where these institutions were imitated. The natives were celebrated as archers. Their character was not of the most favourable description; the Cretans or Kretans being, in fact, one of the three K's against whose unfaithfulness the Greek proverb was intended as a caution—Kappadokia, Krete, and Kilikia (*τρία κάππα κάκιστα, Καππαδοκία, καὶ Κρήτη, καὶ Κιλικία*). In short, the ancient notices of their character fully agree with the quotation which St. Paul produces from 'one of their own poets,' in his Epistle to Titus (i. 12), who had been left in charge of the Christian church in the island:—'The Cretans are always liars (ψεῦσται, eternal liars), evil beasts (κακὰ θηρία, Angl. 'brutes'), slow bellies' (γαστέρες ἀργαί, gorbellies, bellies which take long to fill). The quotation is usually supposed to have been from Callimachus's *Hymn on Jove*, 8; but Callimachus was not a Cretan, and he has only the first words of the verse, which Jerome says he borrowed from Epimenides, who was of Crete. Ample corroboration of the description which it gives may be seen in the commentators.

Crete is named in 1 Macc. x. 67. But it derives its strongest scriptural interest from the circumstances connected with St. Paul's voyage to Italy. The vessel in which he sailed, being forced out of her course by contrary winds, was driven round the island, instead of keeping the direct course to the north of it. In doing this, the ship first made the promontory of Salmone on the eastern side of the island, which they passed with difficulty, and took shelter at a place called Fair-Havens, near to which was the city Lasea. But after spending some time at this place, and not finding it, as they supposed, sufficiently secure to winter in, they resolved, contrary to the advice of St. Paul (the season being far advanced), to make for Phœnice, a more commodious harbour on the western part of the island; in attempting which they were driven far out of their course by a furious east wind called Euroclydon, and wrecked on the island of Melita (Acts xxvii.).

CRIMSON. [PURPLE; SCARLET.]

CRISPUS (Κρίσπος), chief of the Jewish Synagogue at Corinth (Acts xviii. 8), converted by St. Paul (1 Cor. i. 14). According to tradition (*Constitut. Apost.* vii. 46) he was afterwards bishop of Ægina.

CRITICISM, BIBLICAL. This phrase is employed in two senses. Some take it to signify not only the restoration of the text of Scripture to its original state, but the principles of interpretation. This is an extensive and improper application. The science is strictly occupied with the *text* of the Bible. It is limited to those principles and operations which enable the reader to detect and remove corruptions, to decide upon the genuineness of disputed readings, and to obtain as nearly as possible the original words of inspiration. Its legitimate object is to ascertain the purity or corruption of the text. It judges whether an alteration has been made in a passage; and when it discovers any change, it labours to restore the primitive readings that have been displaced. There are *three* sources from which Biblical criticism derives all its aid, both in detecting the changes made upon the original text, and in restoring genuine readings.

1st. MSS. or written copies of the Bible.

2nd. Ancient translations into various languages.

3rd. The writings and remains of those early ecclesiastical writers who have quoted the Scriptures.

Some add a *fourth*, viz., *critical conjecture*, but the authority of this we are disinclined for the most part to allow.

Criticism employs the ample materials furnished by these sources. To attain its end it must work upon them with skill and discrimination. They afford wide scope for acuteness, sobriety, and learning; and long experience is necessary in order that they may be used with efficiency and success.

The present article will contain a brief historical sketch of Biblical criticism, or a history of the texts of the Old and New Testaments; the condition in which they have been at different periods; the evidences on which our knowledge of their purity or corruption rests, and the

chief attempts that have been made to rectify or amend them. A history of criticism must describe the various stages and forms through which the texts have passed. It will be expedient to reserve an enumeration of the *causes* which gave rise to various readings to a future article [VARIOUS READINGS], and, on the present occasion, to detail the phases which the Hebrew and Greek texts of the Old and New Testaments have presented both in their unprinted and printed state, in connection with the labours of scholars to whom such texts presented an object of interesting attention and diligent inquiry.

We shall commence with the text of the Old Testament. There are four marked periods in the history of the Hebrew text.

1. *That period in the history of the unprinted text which preceded the closing of the canon.*—Of this we know nothing except what is contained in Scripture itself. The Jews bestowed much care on their sacred books. They were accustomed to hold them in great veneration even in the darkest times of national apostacy from Jehovah. How often the separate books were transcribed, or with what degree of correctness, it is impossible to tell. Many German critics suppose that the Hebrew text met with very unfavourable treatment; that it was early subjected to the carelessness of transcribers and officious critics. Hence they assume that it suffered great alteration and corruption. Differences, however, between parallel sections do not prove what Neologists adduce them to demonstrate. They show rather the genuineness and integrity of the books in which they occur. Had such paragraphs *exactly harmonized*, we might have suspected design or collusion; but their variations discover the artlessness of the writers. We disagree with Eichhorn, Bauer, Gesenius, De Wette, and others, who have given lists of parallel passages in some books in order to show that the text was early exposed to extensive alterations.

The most important particular in this part of the history is the Samaritan recension of the Pentateuch [PENTATEUCH]. This *edition* (if so it may be called) of the Pentateuch is indeed uncritical in its character. While we freely acquit the *Jews* of tampering with the text of the Mosaic books, the *Samaritans* cannot be so readily exonerated from the imputation. As far as the *latter* are concerned, we are compelled to believe, that the words of the Most High were not always treated by them with sacred respect. Additions, alterations, and transpositions, are quite apparent in *their* copy of the Pentateuch. A close alliance between the text which lies at the basis of the Septuagint Version and that of the Samaritan Pentateuch has been always noticed. Hence some think that they flowed from a common *recension*. One thing is certain, that the Seventy agree with the Samaritan in about 2000 places in opposition to the Jewish text. In other books, too, of the Old Testament, besides the five books of Moses, the Seventy follow a recension of the text considerably different from the Jewish. Thus in Jeremiah and Daniel we find a different arrangement of sections, as well as a diversity in single passages. The books of Job and Proverbs present a similar disarrangement and alteration, which must be put down to the account of the Alexandrian Jews and Greek translators. Far different was the conduct of the *Palestinian* Jews in the treatment of the sacred books. They were very scrupulous in guarding the text from innovation, although it is impossible that they could have preserved it from *all* corruption. But whatever errors or mistakes had crept into different copies were rendered apparent at the time when the canon was formed. We believe with Hävernick (*Einleitung in das Alte Testament*, p. 49) that 'Ezra, in unison with other distinguished men of his time, completed the collection of the sacred writings.' He revised the various books, corrected inaccuracies that had crept into them, and rendered the Old Testament text perfectly free from error. Thus a correct and genuine copy was furnished under the sanction of Heaven. Ezra, Nehemiah, and those with whom he was associated, were infallibly guided in the work of completing the canon.

2. *From the establishment of the canon to the completion of the Talmud, i. e.* the commencement of the sixth century after Christ.—The Targumists Onkelos and Jonathan closely agree with the *Masoretic* text. The Greek translations of Aquila, Symmachus, and Theodotion, belonging to the second century, deviate from the form of the text afterwards called the Masoretic much less than the Seventy. The Hebrew column of Origen's Hexapla presents a text allied to the Masoretic recension. Jerome's Latin version, made in the fourth century, is conformed to the same Hebrew original. In the two Gemaras, viz. the Jerusalem and the Babylonian, belonging to the fourth and sixth centuries respectively, we discern many traces of critical skill applied to the preservation of a pure text. Different readings in MSS. are mentioned, precepts are given respecting Biblical calligraphy, and true readings are restored. By far the most important fact which they present is the adducement of *classes* of critical corrections made at an earlier period, and which Morinus (*Exercitationes Biblicæ*, p. 408) justly calls the *fragments* or *vestiges* of recensions. These are—(1) עטור סופרים *Ablatio scribarum.* (2) תיקון סופרים *Correctio scribarum.* (3) *Puncta extraordinaria.* (4) קרי ולא כתיב *K'ri v'lo K'thib.* (5) כתיב ולא קרי *K'thib v'lo K'ri.* (6) The Talmud also mentions different readings which the Masoretes call קרי וכתיב *K'ri uk'thib.*

The writings of Jerome afford evidence, that, in the fourth century, the Hebrew text was without the vowel-points, and even the *diacritic* signs.

3. *From the sixth century, in which the Talmud was completed, to the invention of printing.*—The learned Jews, especially those at Tiberias, where there was a famous school till the eleventh century, continued to occupy themselves with the Hebrew language and the criticism of the Old Testament. The observations of preceding Rabbis were enlarged, new remarks were made, and the vowel-system was invented, the origin of which can hardly be placed earlier than the sixth century. The name Masora has usually been applied to that grammatico-historical tradition, which, having been handed down orally for some centuries, became afterwards so extensive as to demand its committal to writing.

Much of what is contained in the Masora exists also in the Talmud. Part of it, however, is older than the Talmud, though not reduced to its present form till a much later period. The various observations comprised in the Masora were at first written in separate books, of which there are MSS extant. Afterwards they were put in the margin of the Bible MSS.

When we speak of the *Masoretic recension* of the text, it is not meant that the Masoretes gave a certain form to the text itself, or that they undertook and executed a new revision. They made the *textus receptus* of that day the basis of their remarks, and gave their sentiments concerning it. Had the text been altered in every case where they recommend; had it been made conformable to their ideas of what it should be, it would have been appropriate to have called it the *Masoretic recension*. The designation, however, though not applicable in strictness, is customary.

The most important part of the Masora consists of the marginal readings or *K'ris*, which the Masoretes always preferred to the textual, and which the later Jews have adopted. The *K'ris* are *critical*, *grammatical*, *orthographical*, *explanatory*, and *euphemistic*. It has been a subject of dispute among scholars from what source the Masoretes derived the K'ris. It is highly probable, that they were generally taken from *MSS.* and *tradition*, though they may have been in part the offspring of conjecture. It is but reasonable to suppose that these scholars *sometimes* gave the result of their own judgment. In addition to the *K'ris* the Masora contains an enlargement of critical remarks found in the Talmud. Besides, the verses, words, and consonants of the different books of the Bible are counted, a task unparalleled in point of minute labour, though comparatively unprofitable.

The application of the Masora in the criticism of the Old Testament is difficult, because its text has fallen into great disorder. It was printed for the first time in the first Rabbinical Bible of Bomberg, superintended by Felix Pratensis. In the second Rabbinical Bible of Bomberg, R. Jacob Ben Chayim bestowed considerable care upon the printing of the Masora. At the end of this second Rabbinical Bible there is a collection of *oriental* and *western* readings, or, in other words, *Babylonian* and *Palestinian*, communicated by the editor, and the result of an ancient revision of the text. The number is about 216. Of the sources from which the collection was drawn we are entirely ignorant. Judging by the contents, it must be older than many observations made by the Masoretes. It should probably be referred to a period anterior to the introduction of the vowel system, as it contains no allusion to the vowels. It is certainly of considerable value, and proves that the *oriental* no less than the *western* Jews had always attended to the state of the sacred text.

In addition to this list, we meet with another in the Rabbinical Bibles of Bomberg and Buxtorf, and in the sixth volume of the London Polyglott, belonging to the eleventh century. It owes its origin to the labours of Ben Asher and Ben Naphtali, the respective presidents of academies in Palestine and Babylon. These readings, with a single exception, refer to the vowels and accents. The vowel system had, therefore, been completed when this collection was made.

Here the history of the unprinted text may be said to close. The old unvowelled copies perished. New ones furnished with points and accents came into use. But although the ancient copies are now irrecoverably lost, there is no reason for supposing that their preservation to the present time would have had any essential influence in altering the form of the text. The text appears to have been established and settled when the punctuation-system was completed. The labours of the Masoretic doctors have been of substantial benefit in maintaining its integrity.

4. *From the invention of printing to the present time.*—There are three early editions from which all others have been taken. 1. That published at Soncino, A.D. 1488, which was the first entire copy of the Hebrew Scriptures ever printed. The text is furnished with the points and accents, but we are ignorant of the MSS. employed by the editor. 2. The second great edition was that in the Complutensian Polyglott, 1514-17, taken from seven MSS. 3. The third was the second Rabbinical Bible of Bomberg, superintended by R. Jacob Ben Chayim, Venice, 1525, 6 vols. fol. The text is formed chiefly after the Masora, but Spanish MSS. were used. Almost all modern printed copies have been taken from it.

The Antwerp Polyglott has a text compounded of those in the second and third recensions just mentioned.

Among the editions furnished with a critical apparatus, that of Buxtorf, published at Basel, 1619, occupies a high place. It contains the commentaries of the Jewish Rabbis, Jarchi, Abenesra, Kimchi, Levi Ben Gerson, and Saadias Haggaon. The appendix is occupied with the Jerusalem Targum, the great Masora corrected and amended, with the various readings of Ben Asher and Ben Naphtali.

The principal editions with various readings are those of Seb. Münster, Jablonski, Van der Hooght, J. H. Michaelis, C. F. Houbigant, and Benjamin Kennicott.

Münster's edition appeared at Basel in 1536, 2 vols. 4to. The text is supposed to be founded upon that of Brescia, 1494, 4to., which resolves itself into the Soncino edition of 1488.

Jablonski's edition was published at Berlin in 1699, 8vo., and again at the same place in 1712, 12mo. It is founded upon the best preceding editions, but chiefly the second edition of Leusden (1667). The editor also collated various MSS. The text is remarkably accurate.

Van der Hooght's edition appeared at Amsterdam, 1705. The text is taken from Athias' (1661 and 1667). The Masoretic readings are given in the margin; and at the end are collected the various readings of the editions of Bomberg, Plantin, Athias, and others.

The edition published by J. H. Michaelis in 1720, is accompanied with the readings of twenty-four editions which the editor examined, besides those of five MSS. in the library at Erfurdt. There is a want of accuracy in his collations.

In 1753, C. F. Houbigant published a new edition in folio. The text is that of Van der Hooght, without the points. In the margin of the Pentateuch, the Samaritan readings are added. For it he collated, but hastily, twelve MSS. He

has been justly blamed for his rash indulgence in conjectural emendation.

Dr. Kennicott's edition, which is the most important hitherto published, appeared at Oxford —the first volume in 1776, the second in 1780. The number of MSS. collated by himself and his associates, the chief of whom was Professor Bruns of Helmstadt, amounted to 694. In addition to his collation of MSS. and printed editions, he followed the example of various editors of the Greek Testament in having recourse to Rabbinical writings, especially the Talmud. He has given quotations from Jewish writers. The immense mass of various readings here collected is unimportant. It serves, however, to show that, under the influence of the Masora, the Hebrew text has attained a considerable degree of uniformity in all existing MSS.

In 1784-88, John Bernard de Rossi published at Parma, in 4 vols. 4to., an important supplement to Kennicott's collection. These various readings were taken from 88 MSS. used by Kennicott, and collated anew by De Rossi, from 479 in his own possession and 110 in other hands, from many editions and Samaritan MSS., and also from ancient versions.

In 1793, Doederlein and Meisner published at Leipzig an edition intended in some measure to supply the want of the extensive collations of Kennicott and De Rossi. It contains the most important readings. The edition of Jahn, published at Vienna in 1806, is very valuable and convenient.

The most accurate edition of the Masoretic text is that of Van der Hooght as lately edited by Hahn at Leipzig, and stereotyped. The text of Van der Hooght may now be reckoned the *textus receptus*. (For accurate and complete lists of the printed editions of the Hebrew Bible, the reader is referred to Le Long's *Bibliotheca*, edited by Masch; and to Rosenmüller's *Handbuch für die Literatur der biblischen Kritik und Exegese*, i. pp. 189-277.)

Notwithstanding all these editions, something is still wanted. In the best of them there are passages requiring emendation. It is curious to observe how contradictions are allowed to remain on the face of the Old Testament history. It may be that the Masora has produced so great uniformity, as that extant MSS. do not sanction any departure from the present text; but where passages are manifestly corrupt, it is time that they should be rectified. The criticism of the Hebrew Bible is still behind that of the Greek Testament. The latter was earlier begun, and has been more vigorously prosecuted. We remain nearly in the same state with regard to the Old Testament text in which Kennicott and De Rossi left us, and it is time that some advance should be made in this department.

We shall now give a brief history of the New Testament text in its *unprinted* and *printed* form. The criticism of the New Testament is rich in materials, especially in ancient MSS. But, although the history of New Testament criticism records the industrious collection of a large amount of materials, it is not equally abundant in *well-accredited facts*, such as might be of essential benefit in enabling us to judge of the changes made in the text. History is silent respecting the period when the two parts of the New Testament, viz. the εὐαγγέλιον and ἀπόστολος, or, in other words, the four Gospels and the Pauline and remaining epistles, were put together, so as to form *one whole*. About the beginning of the third century, it is certain that all the books of the New Testament which we now possess were acknowledged to be divine, and regarded as canonical.

In the middle of the same century, Hesychius and Lucian undertook to amend the MSS. of the New Testament. Of their critical labours Jerome seems not to have entertained a high opinion. The MSS. they revised did not meet with general approval, and Pope Gelasius issued a decree against them. It is highly probable that they were not the authors of recensions which were widely circulated, or generally adopted. Origen did not revise the text of the New Testament.

At a comparatively recent period, certain internal marks were observed to belong to documents containing the same text. A similarity in characteristic readings was noticed. Bengel appears to have been the first to whom the idea suggested itself of dividing the materials according to the peculiarities which he faintly perceived. It was afterwards taken up by Semler, and highly elaborated by Griesbach. Later editors and citics have endeavoured to improve upon Griesbach's system. The different forms of text observed by Semler and Griesbach they called *recensions*, although the appellation of *family* is more appropriate. Perhaps the data that have been so much regarded in classifying the documents containing the New Testament text are insufficient to establish any system. The subject of recensions, though frequently discussed, is not yet settled. In the history of the *unprinted* text it is the chief topic which comes before the inquirer. Reserving it for future notice [RECENSIONS], we pass to the history of the *printed* text, and the efforts made to emend it.

The *whole* of the New Testament was first printed in the Complutensian Polyglott, 1514 though not published till 1517. The first published was that of Erasmus, at Basel, in 1516. Both were issued independently of one another, and constitute the basis of the *received text*. Yet the best materials were not employed in preparing them, and on both the Vulgate was allowed to exert an undue influence. Even critical conjecture was resorted to by Erasmus. No less than five impressions were published by Erasmus, into the *third* of which 1 John v. 7 was first put. In the last two he made great use of the Complutensian Polyglott.

The third place among the early editors of the Greek Testament has been assigned to Robert Stephens, whose first edition was printed at Paris, 1546, 12mo., chiefly taken from the Complutensian, and generally styled the *Mirifica* edition, from the commencement of the preface. His second edition was published in 1549; the third in 1550, in folio. In this last he followed the fifth of Erasmus, with which he compared fifteen MSS., and the Complutensian Polyglott. In 1551 appeared another edition, accompanied by the Vulgate and the translation of Erasmus. It is remarkable for being the first into which the division of verses was introduced.

The next person that contributed to the criti-

cism of the Greek Testament was Theodore Beza. The text of his first edition, 1565, folio, was the same as that of the third of Stephens, altered in about fifty places, accompanied with the Vulgate, a Latin version of his own, and exegetical remarks. In his second edition, 1582, he had the benefit of the Syriac version and two ancient codices. A third impression appeared in 1589, and a fourth in 1598. The *Elzevir* editions exhibit partly the text of the third of Stephens, and partly that of Beza. The first appeared at Leyden in 1624. The second edition of 1633 proclaims its text to be the *textus receptus*, which it afterwards became. Subsequently three other editions issued from the same press. The editor does not appear to have consulted any Greek MSS. All his readings are either in Beza or Stephens.

Brian Walton, the learned editor of the London Polyglott, gave a more copious collection of various readings in the sixth volume of that work than had before appeared; which was further enlarged by Dr. Fell, in his edition, published at Oxford in 1675, and reprinted by Gregory in 1703, folio.

Dr. John Mill, encouraged and supported by Fell, gave to the world a new edition in 1707, folio. The text is that of Stephens' third edition. In it the editor exhibited, from Gregory's MSS., a much greater number of readings than is to be found in any former edition. He revised and increased the extracts formerly made from ancient versions. Nor did he neglect quotations from the fathers. It is said that the work contains thirty thousand various readings. This important edition, so far superior to every preceding one, cost the laborious editor the toilsome study of thirty years, and excited the prejudices of many who were unable to appreciate its excellence. It commenced a new era in the criticism of the New Testament. Ludolph Kuster reprinted Mill's Greek Testament at Amsterdam, in 1710, enriching it with the readings of twelve additional MSS. The first attempt to emend the *textus receptus* was made by John Albert Bengel, abbot of Alpirspach. His edition appeared at Tübingen, quarto, 1734, to which was prefixed his "Introductio in crisin Novi Testamenti." Subjoined is an *apparatus criticus*, containing his collection of various reading, chiefly taken from Mill, but with important additions.

Dr. John James Wetstein contributed, in no small degree, to the advancement of sacred criticism, by his large edition of the Greek Testament, published at Amsterdam in 1751–2, 2 vols. folio. In 1730 he had published *prolegomena*. It was his desire to give a new and corrected text, but he was compelled by circumstances to exhibit the *textus receptus*. Yet he noted, partly in the text itself, partly in the inner margin, such readings as he preferred. His collection of various readings, with their respective authorities, far exceeds all former works of the same kind in copiousness and value. He collated anew many important MSS. that had been superficially examined, gave extracts from many for the first time, and made use of the Harclean (improperly called the Philoxenian) version, hitherto uncollated. For convenience he marked the *uncial* MSS. with the letters of the alphabet, and the *cursive* with numerical letters. His exegetical notes are chiefly extracts from Greek, Latin, and Jewish writers. The edition of the Greek Testament, under consideration, is indispensable to every critic, and will always be reckoned a marvellous monument of indomitable energy and unwearied diligence. The *Prolegomena* contain a treasure of sacred learning that will always be prized by the scholar. They were republished, with valuable notes, by Semler, in 1774, 8vo.

The scholar who is pre-eminently distinguished in the history of New Testament criticism, is Dr. John James Griesbach. He enriched the materials collected by Wetstein with new and important additions, by collating MSS., versions, and early ecclesiastical writers, particularly Origen, with great labour. The idea of *recensions*, recommended by Bengel and Semler, he adopted, and carried out with much acuteness and sagacity. His first edition appeared at Halle, in 2 vols., 1774-5. The first three gospels were synoptically arranged, but in 1777 he published them in their natural order. The text is founded on a comparison of the copious materials which he possessed. Nothing was adopted from conjecture, and nothing received which had not the sanction of codices as well as versions. A select number of readings is placed beneath the text. In his *Symbolæ Criticæ*, he gave an account of his critical labours, and of the collations of new authorities he had made. Such was the *commencement* of Griesbach's literary labours.

Between the years 1782-88, C. F. Matthaei published a new edition of the Greek Testament in 12 vols. His text was founded on a collation of more than 100 Moscow MSS., which he first examined. It is accompanied with the Vulgate, *scholia*, and *excursus*. He avowed himself an enemy to the idea of *recensions*, despised the ancient MSS. (especially cod. Bezæ), and the quotations of the fathers, while he unduly exalted his Moscow MSS. His chief merit lies in the careful collation he made of a number of MSS. hitherto unknown.

Before the completion of Matthaei's edition, appeared that of Alter, 1786-7, 2 vols. The text is that of the Vienna MS., with which he collated 22 others in the Imperial library. To these he added readings from the Coptic, Slavonian, and Latin versions.

In 1788, Professor Birch of Copenhagen enlarged the province of sacred criticism by his splendid edition of the four Gospels in folio and quarto. The text is a reprint of Stephens' third, but the materials appended to it are highly valuable. They consist of extracts taken by himself and Moldenhauer, in their travels, from many MSS. not examined by Wetstein, and of Alter's selections from the Jerusalem-Syriac version discovered in the Vatican. Birch was the first who carefully collated the *Codex Vaticanus*. The publication of the second volume was prevented by a fire that destroyed many of the materials. In 1798, he published his various readings on the remainder of the New Testament, except the Apocalypse. In 1800 he published those relating to this book also.

In 1796 appeared the first volume of a new and greatly-improved edition of Griesbach's New Testament. For it he made extracts from the Armenian, Slavonic, Latin, Sahidic, Coptic, and other versions, besides incorporating into his collection the results of the labours of Matthaei, Alter, and Birch. The second volume

appeared in 1806, both published at Halle. At the end of the second volume is a dissertation on 1 John v. 7. The work was reprinted at London in 1809, and again in 1818. The prolegomena are exceedingly valuable. This edition cannot be too highly rated. It is indispensable to every critic and intelligent theologian.

In 1827, many new materials having been procured since the date of Griesbach's last edition, it was thought necessary to publish a third. It appeared accordingly, under the superintendence of Dr. Scholz. The first volume contains the prolegomena, and the Gospels. It exhibits various readings from about 20 new sources, many corrections of Griesbach's references and citations, besides considerable improvements in other respects. The second volume has not yet been published (1843).

The editions of Knapp, Schott, Tittmann, Vater, Naebe, and Goeschen, are chiefly founded upon that of Griesbach. Of these the most esteemed is that of Knapp, which has passed through five editions, and is characterized by sound judgment, especially in the punctuation and accents.

In 1830 appeared the first volume of a large critical edition, superintended by Dr. J. Martin Augustus Scholz, professor at Bonn, containing the Gospels. The second volume, in 1836, completed the work. Both are in quarto. The editor spent twelve years of incessant labour in collecting materials for the work, and travelled into many countries for the purpose of collating MSS. The prolegomena prefixed to the first volume occupy 172 pages, and contain ample information respecting all the codices, versions, fathers, acts of councils, &c. &c., which are used as authorities, together with a history of the text, and an exposition of his classification system. In the inner margin are given the general readings characteristic of the three great families. The total number of MSS. which he has added to those previously collated is 606. Little reliance, however, can be placed on the accuracy of the extracts which he has given for the first time. His researches have tended to raise the *textus receptus* higher than Griesbach placed it. In consequence of his preferring the *Constantinopolitan* family, his text comes nearer the Elzevir edition than that of Griesbach. The merits of this laborious editor are considerable. He has greatly enlarged our critical apparatus. Yet in acuteness, sagacity, and scholarship he is far inferior to Griesbach. His collations appear to have been superficial. They are not to be depended on. Hence the text cannot command the confidence of Protestant critics. We cannot believe, with the editor, that the Byzantine family is equal in value or authority to the Alexandrine which is confessedly more ancient, nor can we put his junior codices on a level with the very valuable documents of the Oriental recension. His text is, *on the whole*, inferior to that of Griesbach. In a few important passages alone it is superior.

The edition of Lachmann, though small in compass, deserves to be mentioned. It was published in 1831, 12mo. The editor says that he has nowhere followed his own judgment, but *the usage of the Oriental churches*. The text of Lachmann has been well received in Germany, and much importance has been attached to it. From the authority it has obtained, it would appear that the Constantinopolitan text of Scholz is not very favourably regarded. De Wette, in his *Introduction to the Bible*, shows a leaning towards the views of Lachmann. Rinck coincides, on the whole, with the same. The last named scholar has enlarged the critical apparatus of the New Testament, by collating and describing several MSS. (*Lucubratio Critica in Acta Apost. epp. Cath. et Paulin., &c. &c.*, Basel, 1830, 8vo.)

Since the appearance of Lachmann's edition, another has been published in Germany by Dr. Tischendorf, which requires some notice. It exhibits a corrected text, taken from the most ancient and best MSS., with the principal various readings, together with the readings of the Elzevir, Knapp, Scholz, and Lachmann editions. Great pains have manifestly been bestowed on the text and the critical apparatus subjoined to it. The prolegomena, consisting of 85 pages, are exceedingly valuable. They treat of *recensions*, with an especial reference to Scholz's system; enumerate the readings peculiar to the third edition of Stephens and that of Mill, to the editions of Matthaei and Griesbach; and specify the critical materials employed in the elaboration of a pure text. The work under consideration appeared in 1841, 8vo., Leipzig. A careful perusal of the editor's able preface, and a collation of his text and critical apparatus beneath it, have convinced us of the sound judgment, minute diligence, extreme accuracy, and admirable skill by which this edition of the Greek Testament is characterized.

Very recently we have been favoured with the first volume of a large edition by Lachmann (*Novum Testamentum, Græce et Latine. Carolus Lachmannus recensuit. Philippus Buttmannus Ph. F. Græcæ lectionis auctoritates apposuit.* Tomus prior. Berolini, 1842, 8vo.).

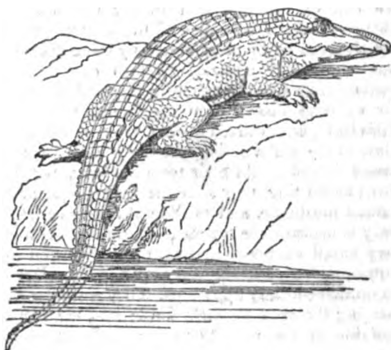
This is by far the most important edition that has appeared since the days of Griesbach, and must produce results highly favourable to the advancement of New Testament criticism. The principles on which Lachmann proceeds were expounded in the *Theolog. Studien und Kritiken* for 1830, pp. 817-845, and again in 1835, p. 570, sq. The path which he first pursued in his smaller edition was indicated by Bentley, who purposed to publish the Greek Testament on similar principles.*

In order to discover his *Oriental* text (a text which is substantially the same as the *Alexandrian*), Lachmann makes use of the following authorities:—1. A. B. C. D., as also P. Q. T. Z., in the Gospels, and in the Pauline epistles, H. in addition. 2. *Latin interpretations, viz.* in the Gospels the Vercellian, Veronian, Colbertine, Cambridge; in the Acts the Cambridge and Laudian; in the Pauline epistles the Clermont, St. Germains, Boernerian; in the Apocalypse the Primasian. In addition to these, the Vulgate,

* Hare wrote thus concerning Bentley, in 1724:—'Ad novum Fœdus ex antiquissimis edd. pristino nitori restituendum animum adjecit, ut Græcum textum ab insanâ variarum lectionum mole quam recentiores edd. invexerunt liberaret, et Hieronymi versionem ab erroribus purgatam talem daret, qualis e doctissimi patris manu exiit; opus profecto grande, et tanti viri diligentia, acumine, iudicio imprimis dignum.'

as edited by Jerome, is everywhere employed. Of the fathers he consults Irenæus, Origen, Cyprian, Hilary, and Lucifer. The immense mass of later MSS. and fathers is entirely overlooked as useless.

The authorities for the Greek readings are given below the text; and, when it is considered how few materials are employed, it will be readily supposed that the various readings noted are not numerous. They are, however, most valuable and important.



In addition to the Greek text and critical apparatus, the Hieronymian Vulgate is given, in the same form, as nearly as possible, in which it proceeded from Jerome, with important readings extracted from the Fuldensian codex, from the same corrected by Victor bishop of Capua, and from the Laurentian codex. The great aim of the editor has been to exhibit a text in which the most ancient authorities are entirely agreed. Wherever this cannot be done with certainty, his critical apparatus shows the degree of probability attached to the text as given by him. To the volume is prefixed a preface of 55 pages (a few of them from Buttmann), in which the learned editor expounds his mode of procedure, and the authorities consulted. Respecting the opponents of his system, he does not speak in the most courteous or becoming language, nor is his Latinity the purest. Yet the preface is instructive withal, and must *be studied* by him who uses Lachmann's text.

We are inclined to attach primary importance to this edition, the remaining volume of which we shall look for with anxiety. Were we disposed to follow the text of any *one* editor *absolutely*, we should follow Lachmann's. But it may be doubted whether he has not confined himself to a range of authorities too circumscribed. By keeping within the *fourth* century, he has been occasionally compelled to rest upon *one* or *two* testimonies. We should therefore like to see more authorities consulted. We are persuaded, however, that this author has entered upon a right path of investigation which will lead to results both permanently useful and unusually successful.

The operations of sacred criticism have established the genuineness of the Old and New Testament texts in every matter of importance. All the doctrines and duties remain unaffected by its investigations. It has proved that there is no material corruption in the inspired records. It has shown that during the lapse of many centuries the Holy Scriptures have been preserved in a surprising degree of purity. The text is substantially in the same condition as that in which it was found seventeen hundred years ago. Let the plain reader take comfort to himself when he reflects that the received text which he is accustomed to read is *substantially* the same as that which men of the greatest learning and the most unwearied diligence have elicited from an immense heap of documents.

For a copious account of the various editions of the Greek Testament the reader is referred to Le Long's *Bibliotheca*, edited by Masch; or to Rosenmüller's *Handbuch für die Literatur der biblischen Kritik und Exegese*, i. pp. 278-422. See also an article on the 'Manuscripts and Editions of the New Testament,' by Moses Stuart, in Robinson's *Bibliotheca Sacra*, No. 2, May, 1843. For an account of the principal authors on Biblical criticism, see Davidson's *Lectures on Biblical Criticism*, from which chiefly this article is abridged and condensed.—S. D.

CROCODILE. Although the term κροκόδειλος occurs in the Greek version, there is no specific word in the Hebrew of which it is the acknowledged representative. Reserving, however, our remarks on this subject for the articles Dragon, Leviathan, and Whale, we shall in this place confine ourselves to some notice of crocodiles strictly so called, and, while we shall endeavour to simplify the discussion as much as possible, we shall point out some leading characters in the animal coinciding with allusions to it in the Scriptures, which could not be properly noticed elsewhere.

238.

The crocodiles which we have to notice at present consist of three varieties, or perhaps species, all natives of the Nile, distinguishable by the different arrangement of the scutæ or bony studs on the neck, and the number of rows of the same processes along the back. Their general lizard form is too well known to need particular description; but it may be remarked that of the whole family of crocodiles, comprehending the sharp-beaked gavials of India, the alligators of the west, and the crocodiles properly so called, the last are supplied with the most vigorous instruments for swimming, both from the strength and vertical breadth of their tails, and from the fingers of their paws having deeper webs. Although all have from thirty to forty teeth in each jaw, shaped like spikes, without breadth so as to cut, or surface so as to admit of grinding, the true crocodile alone has one or more teeth on each side in both jaws, exserted, that is, not closing within but outside the jaw. They have no external ear beyond a follicle of skin, and the eyes have a position above the plane of the head, the pupils being contractile, like those of a cat, and in some having a luminous greenish tinge, which may have suggested the allusion to 'the lids of the morning' (Job xli. 18). The upper jaw is not movable, but, as well as the forehead, is extremely dense and bony; the rest of the upper surface being covered with several rows of bosses, or plated ridges, which on the tail are at last reduced from two to one, each scale having a high horny crest, which acts as part of a great fin. Although destitute of a real voice, crocodiles when

angry produce a snorting sound, something like a deep growl; and occasionally they open the mouth very wide, remain for a time thus exposed facing the breeze, and, closing the jaws with a sudden snap, cause a report like the fall of a trap-door. It is an awful sound, which we have heard more than once in the stillness of the night in tropical South America; and we are informed that the same phenomenon occurs on the Ganges, and on the west coast of Africa. The gullet of the crocodile is very wide, the tongue being completely tied to the lower jaw; and beneath it are glands exuding a musky substance. On land the crocodile, next to the gavial, is the most active, and in the water it is also the species that most readily frequents the open sea. Of the immense number of genera which we have seen or examined, none reached to 25 feet in length, and we believe the specimen in the vaults of the British Museum to be one of the largest. Sheep are observed to be unmolested by these animals; but where they abound, no pigs can be kept, perhaps from their frequenting the muddy shores; for we have known only one instance of crocodiles being encountered in woods not immediately close to the water's side: usually they bask on sandy islands. As their teeth are long, but not fitted for cutting, they seize their prey, which they cannot masticate, and swallow it nearly entire, or bury it beneath the waves to macerate. Having very small excretory organs, their digestion requires, and accordingly they are found to possess, an immense biliary apparatus. They are oviparous, burying the eggs in their sand; and the female remains in the vicinity to dig them out on the day the young have broken the shell. What is said in ancient history of the ear-rings fastened to crocodiles must be understood of ornaments fixed to follicles of the skin; the Sudara-oron, or man-crocodile of the Malays, and the sacred otter of the ancient Irish, are described with similar ornaments. Crocodiles are caught with hooks, and they seldom succeed in cutting the rope when properly prepared. Though a ball fired point blank will penetrate between the scales which cover the body, the invulnerability of these great Saurians is sufficiently exemplified by the following occurrence. One being brought well bound to the bazaar at Cawnpore on the Ganges, it was purchased by the British officers on the spot, and carried farther inland, for the purpose of being baited. Accordingly, the ligatures, excepting those which secured the muzzle, being cut asunder, the monster, though it had been many hours exposed to the heat, and was almost suffocated with dust, fought its way through an immense crowd of assailants, soldiers and natives, armed with staves, lances, swords, and stones, and worried by numerous terriers, hounds, and curs; overturning all in its way, till, scenting the river, it escaped to the water at a distance of two miles, in spite of the most strenuous opposition!

According to Strabo, the crocodiles of Egypt were known by the name of Suchus (Σοῦχος), from an Egyptian word supposed to have been Souch or Soucha, perhaps applied solely to the sacred animals of the species. Spanheim, in his remarks on the life of Isidorus by Damascius, thinks that Σοῦχος may be referred to the monitor lizard known by the name of Waran; and it is not improbable that the same laxity in the application of proper names which is traceable in the Oriental languages, and in the Greek, where the original meaning of κροκόδειλος, in the Ionic, is 'lizard,' and even in modern tongues, has allowed the word to be vaguely employed to denote Saurians. Herodotus says that the Egyptians called crocodiles Χάμψαι, which, according to Sir J. G. Wilkinson, is a corruption of *Msah*, or *Emsooh*. The Arabic retains *Temsah*, and a similar name, *Temsche* or *Temesche*, was anciently applied on the Danube and the Scheldt to the sturgeon. Kimsak is the Turkish; Kimbuta the Ceylonese; but the Leng of the Malays, still venerated by them, is of the gavial subdivision of the genus: it is the horned crocodile, or Makaira of Budha lore; it figures in the zodiac of the utmost east, and there becomes confounded with the dragon—an emblem assumed by all the nations of Mongolic origin. During the Roman sway in Egypt, crocodiles had not disappeared in the lower Nile, for Seneca and others allude to a great battle fought by them and a shoal of dolphins in the Heracleotic branch of the Delta. During the decline of the state even the hippopotamus re-appeared about Pelusium, and was shot at in the seventeenth century (Radzivil). In the time of the Crusades crocodiles were found in the Crocodilon river of early writers, and in the Crocodilorum lacus, still called Moiat al Temsah, which appear to be the Kerseos river and marsh, three miles south of Cæsarea, though the nature of the locality is most appropriate at Nahr-el Arsoof or el-Haddar.

The exploit of Dieudonné de Bozon, knight of St. John, who, when a young man, slew the dragon of Rhodes, must be regarded as a combat with a crocodile, which had probably been carried northward by the regular current of the eastern Mediterranean; for so the picture still extant in the harem of a Turkish inhabitant represents the Hawan Kebir or Great Beast—a picture necessarily painted anterior to the expulsion of the knights in 1480. As De Bozon died Grand Master of the Order at Rhodes in 1353, and the spoils of the animal long remained hung up in a church, there is not, we think, any reason to doubt the fact, though most of the recorded circumstances may be fabulous.*

That crocodiles and alligators take the sea, and are found on islands many leagues distant from other land, we have ourselves witnessed; and the fact is particularly notorious at the Grand Caymanas in the sea of Mexico, which is almost destitute of fresh water. It is indeed owing to this circumstance that the same species may frequent all the rivers of a great extent of coast, as is the case with some found in Africa, whence they spread to India and the Malayan islands. We have been thus explicit on the natural history of these formidable Saurians, in order that we may have less occasion to notice the mis-statements of the ancients when we shall have to

* Other paintings by the same artist, said to have been Sebast. de Firenze, pupil of Cimabue, show that he did not represent grand masters later than Gio de Lartin, who was elected 1437, and died 1454. All the ancient Greek and the later Mediterranean dragons, as those of Naples, Arles, &c., where they are not allegorical, are no doubt derived from crocodiles.

comment on the Hebrew words which are assumed to indicate them. We omit for the present all particulars respecting the crocodile divinities, their worship and preservation in the mummy state, which Sir J. G. Wilkinson's interesting works have lately made known to all readers.—C. H. S.

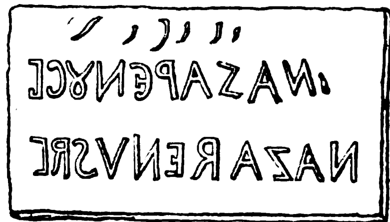
CROSS. This word is derived from the Latin *crux*. Respecting the origin of its Greek representative there is some diversity of opinion. According to Eustathius and Hesychius, the Greek *σταυρός* is so called *παρὰ τὴν εἰς ἀέρα στάσιν, ἢ παρὰ τὸ εἰς εὖρος ἵστασθαι*, from its *standing* erect, or from its standing with its arms horizontal. Latin etymologists also derive the word from *ἵστημι*, to place. In its general acceptation the cross is an instrument of punishment, and, metaphorically, punishment itself, as well as the pain which it inflicts, and generally any severe suffering or heavy trial. Instead of *σταυρός* the Greek word *σκόλοψ* is sometimes found as equivalent to the Latin *crux*. Both are in frequent use on the part of the writers who transferred the events of Roman history into the Greek tongue.

In its simplest form, consisting of two pieces of wood, one standing erect, the other *crossing* it at right angles, the cross was known at an early age in the history of the world. Its use as an instrument of punishment was probably suggested by the shape so often taken by branches of trees, which seem to have been the first crosses that were employed. It was certainly customary to hang criminals on trees—arbor infelix; Cicero (*Pro Rabir.* 3) appears to consider hanging on a tree and crucifixion as of the same import, and Seneca (*Ep.* 101) names the cross *infelix lignum*, which may with no undue liberty be rendered 'the accursed tree.' Trees are known to have been used as crosses (Tertull. *Ap.* viii. 16), and to every kind of hanging which bore a resemblance to crucifixion, such as that of Prometheus, Andromeda, &c., the name was commonly applied. Among the Scythians, Persians, Carthaginians, Greeks, Romans, and the ancient Germans, traces are found of the cross as an instrument of punishment. The sign of the cross is found as a holy symbol among several ancient nations, who may accordingly be named, in the language of Tertullian, crucis religiosos, devotees of the cross. Among the Indians and Egyptians the cross often appears in their ceremonies, sometimes in the shape of the letter T, at others in this shape +. At Susa, Ker Porter saw a stone cut with hieroglyphics and cuneiform inscriptions, on which in one corner was a figure of a cross, thus ⊢+⊣. The cross, he says, is generally understood to be symbolical of the divinity or eternal life, and certainly a cross was to be seen in the temple of Serapis as the Egyptian emblem of the future life, as may be learnt in Sozomen and Rufinus. Porter also states that the Egyptian priests urged its being found on the walls of their temple of Serapis, as an argument with the victorious army of Theodosius to save it from destruction. From the numerous writings on this subject by La Croze, Jablonski, Zoega, Visconti, Pococke, Pluche, Petit Radel, and others, the symbol of the cross appears to have been most various in its significations. Sometimes it is the Phallus, sometimes the planet Venus, or the Nilometer, or an emblem of the four elements, or the seasons (Creuzer's *Symbolik*, pp. 168-9). It is not therefore surprising that ancient and even modern Christian writers should on this subject have indulged in some degree of refinement and mysticism. Justin Martyr (*Apol.* i. § 72) says: 'The sign of the cross is impressed upon the whole of nature. There is hardly a handicraftsman but uses the figure of it among the implements of his industry. It forms a part of man himself, as may be seen when he raises his hands in prayer.' In like manner Minutius Felix (c. 29): 'Even nature itself seems to have formed this figure for us. We have a natural cross on every ship whose sails are spread, in every yoke that man forms, in every outspreading of his arms in prayer. Thus is the cross found both in the arrangements of nature, and among the heathen.'

According to Lipsius (*De Cruce*, i. 5-9) and Gretser (*De Cruce Christi*, vol. i. c. 1) there were in general two kinds of crosses;—1, crux simplex; 2, crux composita or compacta. The first consisted of a stake on which the criminal was fastened or by which he was impaled. For the first kind of punishment a tree or a specially prepared stake was used, on which the criminal was bound, and either left to perish, or immediately put to death. For *impaling* (infixio) a long and sharpened piece of wood (*pale*) was employed, on which the criminal was put as on a spit. Seneca describes this kind of execution (*Consolat. ad Marc.* c. 20): 'I behold these crosses, not of one kind, but made differently by different people. Some suspended the criminal with his head turned towards the earth; others drove a stake through his body.' This cruel mode of execution was formerly very customary in Russia, China, Turkey, and other countries, and is not yet universally abolished by law.

Of the crux composita or compound cross there were three sorts: 1, crux decussata; 2, crux commissa; 3, crux immissa. The crux decussata is also called Andrew's cross, because tradition reports that on a cross of this kind the Apostle Andrew suffered death. Jerome (*Comment. on Jerem.* c. 31) describes this cross in the following terms:—Decussare est per medium secare velut si duæ regulæ concurrant ad speciem literæ X quæ figura est crucis: saying in effect that the name indicates two lines cutting each other after the manner of the letter X. So Isidorus Hisp. (*Orig.* 1. 1. 3) says that the letter X denotes a cross and the number ten (in Roman numerals).

The crux commissa, Lipsius states, was formed by putting a cross piece of wood on a perpendicular one, so that no part of the latter may stand above the former. This form is found in the figure T. Of the crux immissa, or, as others prefer to term it, crux capitata, the following is given as the description:—'a cross in which the longer piece of wood or pale stands above the shorter piece which runs across it near the top.' It is distinguished from the preceding by the part of the longer beam which is above the shorter or transverse, thus †. This form is found in paintings more frequently than any other, and on a cross of this kind our Saviour is believed to have suffered death.



Of the nature of the cross on which Jesus was crucified, and of every particular connected with

it, exact information ought to be accessible, since four ecclesiastical historians (Socrates, i. 13, Sozomen, ii. 1, Rufinus, i. 7, Theodoret, i. 18) concur in stating that it was found by the Empress Helena, mother of Constantine the Great. This event is assigned to the year of our Lord 326. Eusebius alone is silent on the discovery. The other writers state that Helena, when seventy-nine years of age, was induced by the warmth of her piety to visit the places which the Saviour had rendered sacred by his presence and sufferings. The hatred of the heathen had led them to obliterate as much as possible all traces of the memorable events which the life and death of Jesus had hallowed; and to cover Mount Calvary with stones and earth and raise thereon a temple to the goddess Venus. A Jew, however, had treasured up what traditions he could gather, and was thus enabled to point out to Helena the spot where our Lord had been buried. The place being excavated three crosses were found, and the title which that of Jesus bore was also found lying apart by itself. The question arose how the cross of Christ was to be distinguished from the other two. Macarius, bishop of Jerusalem, suggested that their respective efficacy should be tried as to the working of miracles. Sick persons were brought forward and touched by each separately. One only wrought the desired cures, and was accordingly acknowledged to be the true cross. A full view of all the authorities on this matter may be seen in Tillemont (*Mem. Eccles.* chapter on Helena).

Having built a church over the sacred spot, Helena deposited within it the chief part of the real cross. The remainder she conveyed to Constantinople, a part of which Constantine inserted in the head of a statue of himself, and the other part was sent to Rome, and placed in the church of Sta. Croce in Gerusalemme, which was built expressly to receive the precious relic. When subsequently a festival to commemorate the discovery had been established, the Bishop of Jerusalem, on Easter Sunday, exhibited to the grateful eyes of eager pilgrims the object to see which they had travelled so far, and endured so much. Those who were persons of substance were further gratified by obtaining, at their full price, small pieces of the cross set in gold and gems; and that wonder might not pass into incredulity, the proper authorities gave the world an assurance that the holy wood possessed the power of self-multiplication, and, notwithstanding the innumerable pieces which had been taken from it for the pleasure and service of the faithful, remained intact and entire as at the first—ut detrimenta non sentiret, et quasi intacta permaneret. (Paulinus, *Ep.* xi. *ad Sev.*)

The capture of Jerusalem by the Persians, A.D. 614, placed the remains of the cross in the hands of Chosroes II., who mockingly conveyed them to his capital. Fourteen years afterwards, Heraclius recovered them, and had them carried first to Constantinople, and then to Jerusalem, in such pomp, that on his arrival before the latter city, he found the gate barred, and entrance forbidden. Instructed as to the cause of this hinderance, the Emperor laid aside the trappings of his greatness, and, barefooted, bore on his own shoulders the sacred relic up to the gate, which then opened of itself, and allowed him to enter, and thus place his charge beneath the dome of the sepulchre.

From this time no more is heard of the true cross, which may have been destroyed by the Saracens on their conquest of Jerusalem, A.D. 637. The wooden title, however, is said to be still preserved in Rome, not entire, indeed, for only diminutive fragments remain of the Hebrew letters, so that no one can say what in reality the characters are. The Greek and Latin, excepting the letter Z, are both written after the Eastern manner, from right to left. This is said to have happened either because they were written by a Jew, following a national custom, or from a desire on the part of the writer, if a Roman, to accommodate himself to what was usual among the Jews. Nicetus (*Titulus Sanct. Crucis*) holds that it is not all the work of one hand, since the Roman letters are firmly and distinctly cut, but the Greek letters, very badly. He thinks that a Jew cut the Hebrew (or Aramæan) and Greek, and a Roman the Latin. All that remains of the Greek is Ναζαρενους β, of the Latin, Nazarenus. It is somewhat extraordinary that there should appear in the sole Greek word, what some have thought two mistakes, namely, ε for η, a short for a long e; and the termination ους for ος. The history of the discovery of this title

239.

is worthy of a brief notice. When sent by Constantine to Rome, it was deposited in a leaden chest, above the vaulted roof of the Church Sta. Croce, in a little window, and then bricked into the wall; its position being recorded in a Mosaic inscription without. Time rendered the inscription almost illegible; and the window, owing to the carelessness of workmen engaged in repairing the church, was accidentally broken open, when the holy relic was discovered. This discovery, and the genuineness of the title, Alexander III. authenticated by a bull. The letters found on the title, if taken according to their numerical value, make 1532, a circumstance which led Stifelius to fix that as the year for the termination of the world.

Jortin has, in his own manner (*Remarks*, vol. iii.), discussed the evidence which bears on the discovery and genuineness of the cross, to which discussion those who desire satisfaction may refer. One or two remarks seem required in this place. None of the authorities give a close description of the three crosses said to have been found in the rubbish under the temple of Venus, which is the less surprising, since they were not eye-witnesses. The three crosses, it appears, were very much alike, and nothing short of miracles could distinguish and mark that of the Saviour (σωτήριον ξύλον). That the crosses were of wood, all declare, but no one states the peculiar kind of wood; nor is any

mention found in the four historians of the tradition, which may be traced back to the days of Chrysostom, that the true cross consisted of three kinds, cypress, pine, and cedar, or of four kinds, cedar, cypress, palm, and olive.

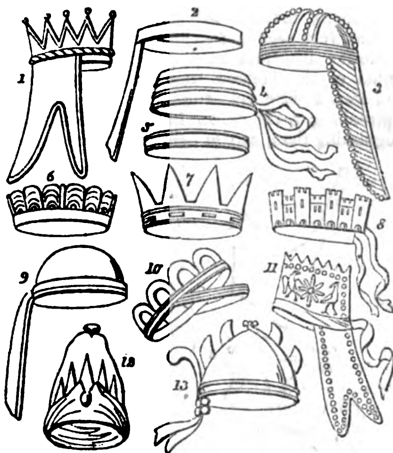
Quatuor ex lignis Domini crux dicitur esse;—
Pes crucis est cedrus; corpus tenet alta cupressus;
Palma manus retinet; titulo lætatur oliva.

Lipsius (*De Cruce*) supposes that the cross was made of oak, since it is likely it would be constructed of such wood as was most abundant, and therefore probably nearest at hand, and oak grew plentifully in Judæa: the relics too are said to resemble oak.

According to Ambrosius (*Oratio de Obitu Theodor.* p. 498), the piece which bore the title stood on the top of the cross of our Lord (John xix. 19-22, ἐπὶ τοῦ σταυροῦ; comp. Matt. xxvii. 37; Mark xv. 26; Luke xviii. 18): the form then would be somewhat thus ✝. This fact would lead to the expectation of more accurate information from those who are said to have found the cross. The language of the scriptural writers seems to imply that it was only on the cross of Jesus that a title was placed; and it does not therefore appear to be a case in which human sagacity could have been so wholly at a loss as the accounts imply; yet Rufinus says, *Hic jam humanæ ambiguitatis incertum, divinum flagitat testimonium.* Probably a divine testimony was required by other considerations than such as arose from the essential ambiguity of the case. But the conduct of Helena in dividing the cross, setting aside one part for Jerusalem, another for Constantinople, and another as a phylacterion for her son, and the subdivisions thereof, which subsequently took place, rendered it impossible to ascertain in any satisfactory manner, not only whether the alleged was the real cross, but also of what wood and in what shape it had been made.

This only then as to the shape of the Saviour's cross can be determined, that the prevalent form was that of the crux capitata, and that this form is generally found on coins and in the so-called monogram (Munter's *Sinnbilder*, 1. iv).

Much time and trouble have been wasted in disputing as to whether three or four nails were used in fastening the Lord to his cross. Nonnus affirms that three only were used, in which he is followed by Gregory Nazianzen. The more general belief gives four nails, an opinion which is supported at much length and by curious arguments by Curtius, an Augustine friar, who wrote a treatise *De Clavis Dominicis*, in the beginning of the seventeenth century. Others have carried the number of nails so high as fourteen. Of the four original nails, the Empress Helena is reported to have thrown one into the Adriatic, when furiously raging, thereby producing an instant calm. The second is said to have been put by Constantine into either his helmet or crown. This nail, however, was afterwards to be found in a mutilated state in the church of Sta. Croce. In the Duomo of Milan is a third nail, which Eutropius affirms was driven through one of Jesus' hands, and which Constantine used as a bit, intending thereby to verify the prophecy of Zechariah (xiv. 20): 'In that day shall be upon the bells (margin, *bridles*) of the horses, *Holiness unto the Lord*.' Treves possesses the fourth nail, which is alleged to have been driven through the sufferer's right foot. Those who maintain the number of nails to have been more than four have had no difficulty in finding as many nails as their hypothesis in each case needed, and as many sacred places for their safe keeping.



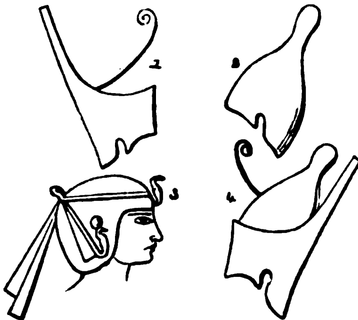
Another dispute has been agitated relative to the existence of a *hypopodium* or tablet whereon the feet were supported. Gregory of Tours, who had seen the alleged true cross, affirms that it had such a footstool; but his dictum has been called in question. It is, however, doubted whether the hands alone, without a prop beneath, could sustain the weight of the body, and some have supposed that a kind of seat was placed, on which the sufferer may be said to have in some way sat. The controversy is treated at length in the first of the four *Hypomnemata de Cruce* of Bartholinus.

J. R. B.

CROW. [RAVEN.]

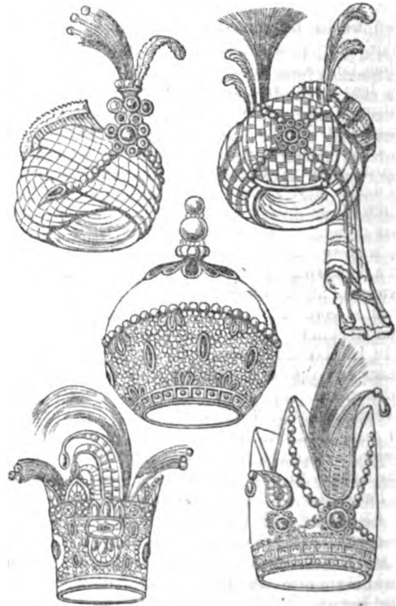
CROWNS are often mentioned in Scripture, and in such a manner as in most cases to indicate the circumstances under which, and the persons by whom, they were worn; for crowns were less exclusively worn by sovereigns than among modern nations. Perhaps it would be better to say that the term 'crowns' was applied to other ornaments for the head than those exclusively worn by royal personages, and to which modern usage would give such distinctive names as coronet, band, mitre, tiara, garland, &c.

The royal crown originated in the diadem, which was a simple fillet fastened round the head, and tied behind. This obviously took its rise among a people who wore long hair, and used a band to prevent it from falling over the face. The idea occurred of distinguishing kings by a fillet of different colour from that usually worn; and being thus established as a regal distinction, it continued to be used as such even among nations who did not wear the hair long, or was employed to confine the head-dress. We sometimes see



240. [Ancient Asiatic Crowns.]

this diadem as a simple fillet, about two inches broad, fastened round the otherwise bare head; we then find it as a band of gold (No. 240, figs. 2, 5). In this shape it sometimes forms



the basis of raised ornamental work (figs. 6, 7, 8, 10), in which case it becomes what we should consider a crown; and indeed the original diadem may be traced in most ancient crowns. Fig. 10 is curious, not only from the simplicity of its form, but on account of the metallic loop to be passed under the chin—a mode of securing the crown probably adopted in war or in the chace. Then we find the diadem surrounding the head-dress or cap (figs. 3, 9, 13), and when this also is ornamented, the diadem may be considered as having become a crown. The word נזר *nezer* is supposed to denote a diadem. It is applied to the inscribed plate of gold in front of the high-priest's mitre, which was tied behind by a ribbon (Exod. xxix. 6; xxxix. 30), and which was doubtless something of the same kind that we see in figs. 8, 11. This word is also employed to denote the diadem which Saul wore in battle, and which was brought to David (2 Sam. i. 10), and also that which was used at the coronation of the young Joash (2 Kings xi. 12): and, as another word is applied elsewhere to the crown used in this ceremonial, the probability is that the Hebrew kings wore sometimes a diadem and sometimes a crown, and that the diadem only was accessible to the high-priest, by whom Joash was crowned, the crown itself being most likely in the possession of Athaliah. As Psalm lxxxix. was certainly composed by David, the regal use of the diadem is further indicated in verse 39.

The more general word for a crown is עטרה *atarah;* and it is applied to crowns and head ornaments of different sorts, including those used by the kings. When applied to their crowns, it appears to denote the state crown as distinguished from the diadem. This, the Rabbins allege, was of gold set with jewels; such was the crown which David took from the king of the Amorites (2 Sam. xii. 30), and afterwards wore himself, as did probably his successors. Of its shape it is impossible to form any notion, unless by reference to the examples of ancient crowns contained in the preceding cut. These figures, however, being taken mostly from coins, are not of that very remote antiquity which we should desire to illustrate matters pertaining to the period of the Hebrew monarchies. In Egypt and Persia there are sculptures of earlier date, representing royal crowns in the shape of a distinguishing tiara, cap, or helmet, of metal, and of

241. [Ancient Egyptian Crowns.]

cloth, or partly cloth and partly metal. Such are the Egyptian crowns as represented in the above engraving (No. 241). Fig. 1 is the crown of Lower, and fig. 2 that of Upper Egypt; and when both kingdoms were under one sovereign, the two crowns were united, as in fig. 3. Such union of the crowns of different countries upon one head is matter of historical record. Thus when Ptolemy Philometer entered Antioch as a conqueror, he placed on his head the crowns of Egypt and of Asia. This would, in fact, form *three* crowns, as his previous one was doubtless the double crown of Upper and Lower Egypt. The diadem of two or three fillets (figs. 3, 4, No. 240) may have been similarly significant of dominion over two or three countries. There are allusions to this custom in Scripture (Rev. xii. 3; xix. 12). These Egyptian tiaras were worn in war, and on occasions of state; but on ordinary occasions a fillet or diadem was used, affording corroboration of a previous remark.

242. [Modern Asiatic Crowns.]

It is important to observe that the mitre of the high-priest, which is also called a crown (Exod. xxxix. 30), was of similar construction, if not shape, with the addition of the golden fillet or diadem. Similar also in construction and material, though not in form, was the ancient Persian crown, for which there is a distinct name in the book of Esther (i. 2; ii. 17; vi. 8), viz. כתר *ceter*, which was doubtless the *cidaris* or *citaris* (κίδαρις or κίταρις), the high cap or tiara, so often mentioned by the Greek historians. From the descriptions given of it, this seems to have been a somewhat conical cap, surrounded by a wreath or fold; and this would suggest a resemblance to fig. 12, No. 240; which is in fact copied from a Parthian or later Persian coin. This one is worthy of very particular attention, because it forms a connecting link between the ancient and modern Oriental crowns, the latter consisting either of a cap, with a fold or turban, variously enriched with aigrettes, as

this is; or of a stiff cap of cloth, studded with precious stones. It must often occur to the student of Biblical antiquities that the modern usages of the East have more resemblance to the most ancient, than have those which prevailed during that intermediate or classical period in which its peculiar manners and institutions were subject to much extraneous influence from the domination of the Greeks and Romans. So, in the present instance, we are much impressed with the conviction that such head tires and caps as those represented in Nos. 241 and 242, more correctly represent the regal 'crowns' of the Old Testament, than those figured in No. 240 (with the exception of fig. 12, and the simple diadems); which however may be taken to represent the style of the crowns which prevailed in and before the time of the New Testament.

Crowns were so often used symbolically to express honour and power, that it is not always safe to infer national usages from the passages in which they occur. Hence we would scarcely conclude from Ezek. xxiii. 42, that crowns were worn by Jewish females, although that they wore some ornament which might be so called is probable from other sources. Mr. Lane (*Arabian Nights*, i. 424) mentions that until about two centuries ago a kind of crown was worn by Arabian females of wealth and distinction. It was generally a circle of jewelled gold (the lower edge of which was straight, and the upper fancifully heightened to a mere point), surmounting the lower part of a dome-shaped cap, with a jewel or some other ornament at the summit.

It is certain that 'crowns' of this or some similar kind were worn at marriages (Cant. iii. 11; Isa. lxi. 10); and it would appear that at feasts and public festivals 'crowns of rejoicing' were customary. These were probably garlands (Wisd. ii. 8; iv. 2; Ecclus. i. 11). The 'crowns' or garlands which were given to the victors in the public games are more than once alluded to in the Epistles (1 Cor. ix. 25; 2 Tim. ii. 5; iv. 8; 1 Pet. v. 4).

CROWN OF THORNS [Thorns].

CRUCIFIXION—in Greek *ἀνασταυροῦν*; in Latin *cruci affigere*, *in crucem agere* or *tollere*, in later times *cruci figere*, whence our crucifixion. To describe this punishment the Jews used the general term תלה, for crucifixion is a kind of hanging; whence Christ in the polemical writings of the Jews is designated תלוי, 'the hanged one.' Crucifixion was a most cruel and disgraceful punishment; the terms applied to it by ancient writers are, 'the most cruel and disgraceful' (Cic. *Verr.*; Lactan. *Instit.* iv. 26); 'the worst possible punishment' (Ulpian); 'the worst punishment in the world' (Paull. v. 17). It was the punishment chiefly of slaves: accordingly the word *furcifer*, 'cross-bearer,' was a term of reproach for slaves, and the punishment is termed *servile supplicium*, 'a slave's punishment' (*De Infami quo Chr adfectus est cru. supp.*, in C. H. Lange's *Observatt. Sacr.*). Free-born persons also suffered crucifixion, but only *humiles*, those of low condition and provincials. Citizens could not be crucified (Cic. *Verr.* i. 5; Quintil. viii. 4; Suet. *Galb.*). This punishment was reserved for the greatest crimes, as robbery, piracy (Sen. *Ep.* vii. Cic. *Petron.* 71); assassination, perjury (Firmic. vi. 26); sedition, treason, and (in the case of soldiers) desertion (Dion, v. 52; Joseph. *Antiq.* xiii. 22; Apul. *Asin.* 3). Its origin is ancient. In Thucydides (i. 110) we read of Inarus, an African king, who was crucified by the Egyptians. The similar fate of Polycrates, who suffered under the Persians, is detailed by Herodotus (iii. 125), who adds, in the same book (159), that no less than 300 persons were condemned to the cross by Darius, after his successful siege of Babylon. Valerius Maximus makes crucifixion the common military punishment of the Carthaginians. That the Greeks adopted it is plain from the cruel executions which Alexander ordered after the capture of Tyre, when 2000 captives were nailed to crosses along the sea-shore (Q. Curtius, iv. 4; Justin, xviii. 3). With the Romans it was used under their early monarchical government, and was the death to which Horatius was adjudged for the stern and savage murder of his sister (Liv. i. 26), where the terms employed show that the punishment was not at that time limited to any rank or condition. It appears also from the passage that scourging (*verberato*) then preceded crucifixion, as undoubtedly was customary in later times. The column to which Jesus was fastened during this cruel infliction is stated by Jerome (*Epist. ad Eustach.*) to have existed in his time in the portico of the holy sepulchre, and to have retained marks of his blood. The Jews received the punishment of crucifixion from the Romans (Joseph. *Antiq.* xii. 14, 2; xx. 6. 2; *De Bell. Jud.* ii. 12). Though it has been a matter of debate, yet it appears clear that crucifixion, properly so called, was not originally a Hebrew punishment (Bormitii *de cruce num Ebræor. supp. fuerit*). The condemned, after having been scourged (Liv. xxxvi. 26; Prud. *Enchir.* xli. 1), had to bear their cross, or at least the transverse beam, to the place of execution (Plut. *De Tard. Dei Vind.* 9; Artemid. 11, 41), which was generally in some frequented place without the city (Cic. *Verr.* v. 66). The cross itself, or the upright beam, was fixed in the ground (Cic. *ad Quint. Fr.* i. 2; *Pro Rat.* iv. 2). Arrived at the spot the delinquent was supplied with an intoxicating drink, made of myrrh and other bitter herbs (Pipping, *Exercit. Acad.* lv.), and having been stript of his clothing, was raised and affixed to the cross, by nails driven into his hands, and more rarely into his feet; sometimes the feet were fastened by one nail driven through both (Tertull. *Adv. Jud.* x.; Sen. *De Vita Beat.* 19; Lactan. iv. 13). The feet were occasionally bound to the cross by cords, and Xenophon asserts that it was usual among the Egyptians to bind in this manner not only the feet but the hands. A small tablet (*titulus*), declaring the crime, was placed on the top of the cross (Sueton. *Cal.* 38; *Dom.* 10; Euseb. *Hist. Eccles.* v. 1). The body of the crucified person rested on a sort of seat (πῆγμα) (Iren. *Adv. Her.* ii. 42). The criminal died under the most frightful sufferings—so great that even amid the raging passions of war pity was sometimes excited. Josephus (*De Bell. Jud.* v. xi. 1) narrates of captives taken at the siege of Jerusalem, that 'they were first whipped, and tormented with all sorts of tortures, and then crucified before the walls of the city. The soldiers, out of the wrath and hatred they bore the Jews, nailed those they caught one after one way and another after another, to crosses, by

way of jest, when their multitude was so great that room was wanting for the crosses, and crosses wanting for the bodies. This miserable procedure made Titus greatly pity them.' Sometimes the suffering was shortened and abated by breaking the legs of the criminal—*crura fracta* (Cic. *Phil.* xiii. 12). After death, among the heathens, the bodies commonly remained on the cross till they wasted away, or were devoured by birds of prey (Horat. *Epist.* i. 16, 48; *Non pasces in cruce corvos;* Plaut. *Mil. Glor.* ii. 4, 19; Plin. *Hist. Nat.* xxxvi. 24). A military guard was set near the cross, to prevent the corpse from being taken away for burial (Plut. *Cleomen.* 39; Petron *Satyr.* iii. 6; Sen. *Ep.* 101). But among the Jews the dead body was customarily taken down and buried. Josephus says (*De Bell. Jud.* v. 2), 'the Jews used to take so much care of the burial of men that they took down those that were condemned and crucified, and buried them before the going down of the sun.' In order that death might be hastened, and the law might not be violated, the Jews were accustomed to break the legs (John xix. 21; Deut. xxi. 22; Casaub. *Exerc. Antibaron.* p. 537; Lipsius, *De Cruc.* lib. iii.). There was a bare possibility in some cases of those who had suffered this punishment recovering after being taken down, under medical treatment. Josephus thus writes (*Vit.* 75), 'I saw many captives crucified, and I remembered three of them as my former acquaintance. I was very sorry at this, and went with tears in my eyes to Titus; so he immediately commanded them to be taken down, and to receive the greatest care in order to their recovery; yet two of them died under the physician's hands, while the third recovered.' Compare Bretschneider, in *d. Studien u. Krit.*, 1832, vol. ii. p. 625. The execution took place at the hands of the *carnifex*, or hangman, attended by a band of soldiers, and in Rome, under the supervision of the Triumviri Capitales (Tac. *Ann.* xv. 60; Lactan. iv. 26). The accounts given in the Gospels of the execution of Jesus Christ are in entire agreement with the customs and practices of the Romans in this particular (Tholuck *Glaubwürdigkeit der Evangel. Gesch.* p. 361). The punishment continued in the Roman empire till the time of Constantine, when it was abolished through the influence of the Christian religion. Examples of it are found in the early part of the emperor's reign, but the reverence which, at a later period, he was led to feel for the cross, induced him to put an end to the inhuman practice. (Aur. Vict. *Cæs.* 41; Sozom. i. 8; Niceph. vii. 46; Firmic. viii. 20). There is a classical work on the subject by Lipsius, Antwerp, 1594 and 1637. Other valuable works, besides those which have been named in this and the article Cross, are by Vossius, Gretser, Calixtus, Salmasius, and Kipping. Sagittarius, Binæus, Dilher, &c. have treated specially on the application of this punishment in the case of our Lord. The more ancient literature on the subject is detailed in Fabric. *Bibliogr. Antiquar.* Hamb. 1760, p. 755, sqq.—J. R. B.

CRUCIFIXION, DEATH BY (physically considered), is to be attributed to the sympathetic fever which is excited by the wounds, and aggravated by exposure to the weather, privation of water, and the painfully constrained position of the body. Traumatic fever corresponds, in intensity and in character, to the local inflammation of the wound. In the first stage, while the inflammation of the wound is characterized by heat, swelling, and great pain, the fever is highly inflammatory; and the sufferer complains of heat, throbbing headache, intense thirst, restlessness, and anxiety. As soon as suppuration sets in, the fever somewhat abates, and gradually ceases as suppuration diminishes and the stage of cicatrisation approaches. But if the wound be prevented from healing, and suppuration continue, the fever assumes a hectic character, and will sooner or later exhaust the powers of life. When, however, the inflammation of the wound is so intense as to produce mortification, nervous depression is the immediate consequence; and if the cause of this excessive inflammation of the wound still continues, as is the case in crucifixion, the sufferer rapidly sinks. He is no longer sensible of pain, but his anxiety and sense of prostration are excessive; hiccup supervenes, his skin is moistened with a cold clammy sweat, and death ensues. It is in this manner that death on the cross must have taken place, in an ordinarily healthy constitution. The wounds in themselves were not fatal; but, as long as the nails remained in them, the inflammation must have increased in intensity until it produced gangrene. De la Condamine witnessed the crucifixion of two women of those fanatic Jansenists called Convulsionnaires. One of them, who had been crucified thrice before, remained on the cross for three hours. They suffered most pain from the operation of extracting the nails; and it was not until then that they lost more than a few drops of blood from their wounds. After they were taken down, they seemed to suffer little, and speedily recovered (*Correspond. de Grimm et Diderot*, ii. 75). The probabilities of recovery after crucifixion would of course depend on the degree of constitutional irritation that had been already excited. Josephus (*Vita*, 74) relates that of three of his friends, for whom he had obtained a release from the cross, only one survived. The period at which death occurred was very variable, as it depended on the constitution of the sufferer, as well as on the degree of exposure, and the state of the weather. It may, however, be asserted that death would not take place until the local inflammation had run its course; and though this process may be much hastened by fatigue and the alternate exposure to the rays of the sun and the cold night air, it is not completed before forty-eight hours, under ordinary circumstances, and in healthy constitutions; so that we may consider thirty-six hours to be the earliest period at which crucifixion would occasion death in a healthy adult. Many of the wounded at Waterloo were brought into the hospitals after having lain three days on the field, and even then sometimes recovered from severe operations. It cannot be objected that the heat of an Eastern climate may not have been duly considered in the above estimate; for many cases are recorded of persons having survived a much longer time than is here mentioned, even as long as eight or nine days. Eusebius (*Hist. Eccles.* iii. 8) says that many of the martyrs in Egypt, who were crucified with their heads downwards, perished by hunger. This assertion, however, must not be misunderstood. It was very natural to suppose that hunger was the cause of death, when it

was known that no food had been taken, and when, as must have happened in lingering cases of crucifixion, the body was seen to be emaciated. But it has been shown above that the nails in the hands and feet must inevitably have given rise to such a degree of inflammation as to produce mortification, and ultimately death; and it is equally certain that food would not, under such circumstances, have contributed to support life. Moreover, it may be added that after the first few hours, as soon as fever had been fully excited, the sufferer would lose all desire for food. The want of water was a much more important privation. It must have caused the sufferer inexpressible anguish, and have contributed in no slight degree to hasten death. As-Sujuti, a celebrated Arabic writer, gives an interesting account of a young Turk who was crucified at Damascus A.D. 1247. It is particularly mentioned that his hands and feet were nailed, and even his arms (but not as if it was in any way remarkable). He complained of intense thirst on the first day, and his sufferings were greatly increased by his continually seeing before him the waters of the Baradâ, on the banks of which he was crucified. He survived two days, from the noon of Friday to the noon of Sunday (Kosegarten, *Chrestomathia Arabica*, p. 63, sq.).—W. A. N.

CRUSE. Three Hebrew words are thus translated in the Authorized Version (1 Sam. xxvi. 11; 1 Kings xiv. 3; 2 Kings ii. 20). This now obsolete English word denotes a small vessel for holding water or other liquids. Such are noticed under BOTTLE, DISH, PITCHER.

CRYSTAL (קֶרַח *kerach*, and גָּבִישׁ *gabish*, both rendered in the Sept. by κρύσταλλος, which also occurs in Rev. xxi. 11). There seems to be no doubt that crystal is intended by the Greek word in Rev. xxi. 11, as indeed the phrase of comparison 'clear as crystal' would seem naturally to suggest. It is not very certain, nor very likely, that the Hebrew word *gabish* (Job xxviii. 18) means crystal; but as the other word so rendered (*kerach*) denotes ice, to which crystal bears so much external resemblance; and as in Ezek. i. 22 it occurs with an application so similar to the κρύσταλλος of Rev. xxi. 11, we may with much confidence take this to be its meaning. Indeed, this is the more apparent when we recollect that crystal was anciently held to be only pure water, congealed by great length of time into ice harder than the common (Diod. Sic. ii. 52; Plin. *Hist. Nat.* xxxvii. 2), and hence the Greek word for it, in its more proper signification, also signifies ice. From this it necessarily followed that crystal could only be produced in the regions of perpetual ice; and this was accordingly the ancient belief; but we now know that it is found in the warmest regions. Theophrastus (54) reckons crystal among the pellucid stones used for engraved seals. In common parlance we apply the term *crystal* (as the ancients apparently did) to a glass-like transparent stone, commonly of a hexagonal form, which, from being found in rocks, is called by mineralogists rock-crystal. It is a stone of the flint family, the most refined kind of quartz.

CUBIT is a word derived immediately from the Latin *cubitus*, the lower arm. The length of the cubit has varied in different nations, and at different times. Derived as the measure is from a part of the human body, and as the human stature has been of very dissimilar length, the cubit must of necessity have been various. The lower arm, moreover, may take in the entire length from the elbow to the tip of the third or longest finger, or it may be considered as extending from the elbow merely to the root of the hand at the wrist, omitting the whole length of the hand itself. If the definition of Celsus (viii. 1) is taken, and the cubit is identified with the Ulna, the under and longer of the two bones of which the arm consists, still a fixed and invariable measure is not gained. That the cubit (אמה) among the Hebrews was derived as a measure from the human body, is clear from Deut. iii. 11—'after the cubit of a man.' But it is difficult to determine whether this cubit was understood as extending to the wrist or the end of the third finger. As however the latter seems most natural, since men, when ignorant of anatomy, and seeking in their own frames standards of measure, were likely to take both the entire foot and the entire fore-arm, the probability is that the longer was the original cubit, namely, the length from the elbow to the extremity of the longest finger. To this opinion Winer (*Handwörterbuch*, art. 'Elle') inclines, and he denies that they are right who make the cubit merely four hand-breadths. He mentions in corroboration that the Egyptian cubit, which it is likely the Hebrews would adopt, consisting of six hand-breadths, is found on the ruins of Memphis (*Journal des Savans*, 1822, *Nov. Dec.* comp. Herod. ii. 149). The Rabbins also (*Mischn. Chelim.* xvii. 9) assign six hand-breadths to the Mosaic cubit. By comparing Josephus (*Antiq.* iii. 6. 5) with Exod. xxv. 10, it will, moreover, be found that the weight of his authority is in the same scale. According to him, a cubit is equal to two spans. Now, a span is equal to three hand-breadths (Schmidt, *Bibl. Mathemat.* p. 117; Eisen-Schmidt. *De Ponderibus*, p. 110); a cubit therefore is equal to six hand-breadths.

The hand-breadth (טפח) is found as a measure in 1 Kings vii. 26, comp. Jer. lii. 21. In the latter passage, the finger-breadth (אצבע) is another measure. The span (זרת) also occurs Exod. xxviii. 16. So that, it appears, measures of length were, for the most part, borrowed by the Hebrews from members of the human body. Still no absolute and invariable standard presents itself. If the question, What is a hand or a finger-breadth? be asked, the answer can be only an approximation to fact. If, however, the palm or hand-breadth is taken at 3½ inches, then the cubit will amount to 21 inches.

In addition to the common cubit, the Egyptians had a longer one of 6 palms 4 inches. The Hebrews also have been thought to have had a longer cubit; for, in Ezek. xl. 5, we read of a cubit which seems to be an ordinary 'cubit and an hand-breadth;' see also Ezek. xliii. 13, where it is expressly said 'the cubit is a cubit and an hand-breadth.' The prophet has been supposed to refer here to the then current Babylonian cubit —a measure which it is thought the Jews borrowed during the period of their captivity. The Rabbins make a distinction between the common cubit of 5 hand-breadths, and the sacred cubit of 6 handbreadths, a distinction which is held to be insufficiently supported both by Winer (*Hand.* in

voc.) and De Wette (*Archäologie*, p. 178). Consult Lamy, *De Tabernaculo*, c. 8; Carpzov, *Apparat.* p. 676. In the New Testament, our Lord characteristically employs the term cubit (Matt. xxvii. 6; Luke xii. 25) for the enforcement of a moral and spiritual lesson. The term also occurs in John xxi. 8, and in Rev. xxi. 17. In Lev. xix. 35, justice in measures, as well as in weights, is strictly enjoined.—J. R. B.

CUCKOW. שחף *shachaph*, occurs only in Lev. xi. 16, among birds of prey not clearly identified, but declared to be unclean. Our version and others have rendered it 'cuckow,' which, if correct, stands certainly out of the order of all affinity with the other species enumerated; and although the cuckow is a winter and spring bird, distinctly heard, it appears, by Mr. Buckingham, early in April, while crossing the mountains between Damascus and Sidon, at that time covered with snow, it could scarcely deserve to be included in the prohibited list—for the species is every where scarce. Shachaph may be an imitation of its voice, since the Arabs call it *Teer-el-Yakoub*, or the bird of Jacob, because in its song it seems to repeat the patriarch's name. Bochart and Dr. A. Clarke derive Shachaph from *Sachepeth*, 'a wasting,' and thence apply it to the sea-gull or sea-mew, a bird pretended to be incapable of becoming plump or fleshy. Etymology thus applied cannot fail to lead to error; for the gull tribe, so far from being lean, are usually very fat, but exceedingly oily and redolent of fish.

With regard to Dr. Shaw's proposed identification of Shachaph with his *Zaf Zaf* or *Rhaad*, it may be observed that hard-billed species feeding on grain, like all gallinacea, are also very prone to devour reptiles, and therefore are not necessarily clean birds; but, unfortunately, what the Rhaad may be is a question which the characters assigned to both the species leave undetermined. The black tuft of feathers beneath the throat, the white belly, and bulk of body, seem to imply that he alluded to two species of smaller Bustards or Pterocles, such as the *Otis Torquata*, *Otis Kuba*, *Otis Hobara*, *Tetrix Campestris*, or the Katta, *Pterocles Alchata*, all of which reside in or near Palestine, or make their passage through that country in the proper season (Kitto's *Pictorial Palestine*, i. 406); have a low flight with beating wings, and voices which may have suggested the name Rhaad. And as for 'Zaf Zaf,' Hasselquist notices a Salix, to which he has given the local name of 'Saf Saf,' proving that the same dissyllable by which Shaw designates a bird is likewise applied to a tree of the willow genus, and that perhaps some mistake has been made in referring it to the Rhaad.

Upon the whole, while so much obscurity still remains on the subject, the interpretation of Shachaph by Cuckow should, we think, remain undisturbed.—C. H. S.

CUCUMBERS. [Kishuim.]

CUMMIN (כַּמֹּן; N. T. κύμινον), or Kammon, is an umbelliferous plant, mentioned both in the Old and New Testaments, and which, like the dill and the coriander, continues to be cultivated in modern, as it was in ancient times, in Eastern countries. These are similar to, and used for many of the same purposes as the anise and caraway, which supply their place, and are more common in Europe. All these plants produce fruits, commonly called seeds, which abound in essential oil of a more or less grateful flavour, and warm stimulating nature; hence they were employed in ancient as in modern times, both as condiments and as medicines. So we find the Cummin mentioned by Hippocrates, and also by Dioscorides, under the name of κύμινον. The latter writer distinguishes several varieties, but the principal is called ἥμερον, or sativum, which the Arabs, following Dioscorides, describe under the name of *kumoon baghee*, a garden that cultivated cummin. The Arabic name كمون kumon, is too similar to the Hebrew Kammon to allow us to doubt their identity, especially as we find it, in the Greek form of κύμινον, employed as early as the time of Hippocrates.

243.

Cummin is first mentioned in Isaiah (xxviii. 25): 'When he (the ploughman) hath made plain the face thereof, doth he not cast abroad the fitches, and scatter the cummin;' showing that it was extensively cultivated, as it is in the present day, in Eastern countries, as far even as India. In the south of Europe it is also cultivated to some extent. England is chiefly supplied from Malta and Sicily; 53 cwt. having been imported in the year 1839 from these islands. In the above chapter of Isaiah (ver. 27) cummin is again mentioned: 'For the fitches are not threshed with a threshing instrument, neither is a cart-wheel turned about upon the cummin; but the fitches are beaten out with a staff, and the cummin with a rod.' This is most applicable to the fruit of the common cummin, which, when ripe, may be separated from the stalk with the slightest stroke, and would be completely destroyed by the turning round of a wheel, which, bruising the seed, would press out the oil on which its virtues depend.

In the New Testament, cummin is mentioned in Matt. xxiii. 23, where our Saviour denounces the scribes and Pharisees, who paid their 'tithe of mint, and anise, and cummin,' but neglected the weighter matters of the law. In the Talmudical tract *Demai*, quoted by Celsius (i. p. 519), cummin is mentioned as one of the things regularly tithed: 'Res istæ decimantur dubiæ omni loco:

palatha, dactyli, siliquæ, oryza et cuminum.' Notwithstanding the numerous distinct notices of cummin, and its difference from caraway, it is curious how Celsius (*l. c.* p. 516) could have adduced the *carum* of Theophrastus and Dioscorides as identical with the *cuminum*. So in the translation of Rosenmüller (*Bibl. Bot.* p. 99) we have *carum Carvi* given as the systematic name of cuminum, making the latter the caraway plant, which it is not.—J. F. R.

CUSH (כּוּשׁ; Χοὺς), the eldest son of Ham (Gen. x. 6; 1 Chron. i. 8), from whom seems to have been derived the name of the *land* of Cush, which is commonly rendered by the Sept., Αἰθιοπία, and by the Vulgate, *Æthiopia;* in which they have been followed by almost all other versions, ancient and modern. The German translation of Luther has *Mohrenland*, which is equivalent to Negroland, or the Country of the Blacks. A native was called *Cushi*, כּוּשִׁי, Αἰθίοψ, Æthiops (Jer. xiii. 23), the feminine of which was *Cushith*, כּוּשִׁית. Αἰθιόπισσα, Æthiopissa (Num. xii. 1), and the plural *Cushiim*, כּוּשִׁיִּים. Αἰθίοπες, Æthiopes (Amos ix. 7).

The locality of the land of Cush is a question upon which eminent authorities have been divided; for while Bochart (*Phaleg*, iv. 2) maintained that it was exclusively in Arabia, Gesenius (*Lex.* in voce) held with no less pertinacity that it is to be sought for no where but in Africa. In this opinion he is supported by Schulthess of Zurich, in his '*Paradies*' (p. 11, 101). Others again, such as Michaelis (*Spicileg. Geogr. Heb. Ext.* cap. 2, p. 237), and Rosenmüller (*Bibl. Geogr.* by Morren, vol. i. p. 80; vol. iii. p. 280), have supposed that the name Cush was applied to tracts of country both in Arabia and Africa—a circumstance which would easily be accounted for, on the very probable supposition, that the descendants of the primitive Cushite tribes, who had settled in the former country, emigrated across the Red Sea to the latter region of the earth, carrying with them the name of Cush, their remote progenitor. This idea had been developed by Eichhorn, in his Dissertation entitled *Verosimilia de Cuschæis*, 1774.

The existence of an *African* Cush cannot reasonably be questioned, though the term is employed in Scripture with great latitude, sometimes denoting an extensive but undefined country (Ethiopia), and at other times one particular kingdom (Meroë). It is expressly described by Ezekiel as lying to the south of Egypt beyond Syene (xxix. 10; comp. xxx. 4-6.—Strabo, xvii. p. 817; Pliny, *Hist. Nat.* vi. 35; Joseph. *De Bell. Jud.* iv. 10, 5). Hence we find Mizraim and Cush (*i. e.* Egypt and Ethiopia) so often classed together by the prophets, *e. g.* Ps. lxviii. 31; Isa. xi. 11; xx. 4; xliii. 3; xlv. 14; Nahum iii. 9. The inhabitants are elsewhere spoken of in connection with the Lubim and Sukkiim (2 Chron. xii. 3; xvi. 8; Jer. xlvi. 7; Dan. xi. 43), supposed to be the Libyans and Ethiopic Troglodytes, and certainly nations of Africa, for they belonged to the vast army with which Shishak, king of Egypt, 'came out' of that country, against Rehoboam, king of Judah. In these, and indeed in most other passages where 'Cush' occurs, Arabia is not to be thought of; the Ethiopia of Africa is beyond all doubt exclusively intended, and to the article 'Ethiopia' we refer the reader for the Scriptural notices regarding it.

That some of the posterity of Cush settled in the south of *Arabia* may readily be granted; but that he gave a permanent name to any portion either of the country or people, is by no means so evident: it is, at least, more a matter of inferential conjecture than of historical certainty. Almost all the passages usually cited in support of the averment are susceptible of a different interpretation. For example, in Num. i. 21, Miriam and Aaron are said to have taken offence at Moses for having married 'a Cushitess;' and upon the presumption that this was the same person as Zipporah, daughter of the priest of Midian (Exod. ii. 16, 21), it is inferred that Midian was in Cush. But to say nothing of Zipporah's high rank, or of the services of her family to Israel, there would have been something so grossly incongruous and absurd in Moses' brother and sister complaining for the first time of his selection of a wife, after the marriage had subsisted for more than forty years, that it is evident Zipporah was now dead, and this second wife, though doubtless a proselyte to Judaism, was (whether born in Asia or Africa) a descendant of Cush, and therefore a *Hamite*, and not one of the Midianites, who were of *Shemitic* origin, being the children of Abraham by Keturah. Others discover a supposed connection between Cush and Midian, because in Hab. iii. 7, the clause, 'I saw the tents of Cushan in affliction,' finds a parallelism in 'the curtains of the land of Midian did tremble'—Cushan being held to be the poetical and high-sounding form of Cush. But this idea is merely conjectural; and while it is acknowledged that part of the sublime description in that chapter refers to the Exodus and the transactions at Sinai, other portions (such as the passage of the Jordan, verse 8, and the standing still of the sun, verse 11) have plainly a reference to incidents in the books of Joshua and Judges. Now in the latter book (iii. 10; viii. 12) we find a record of signal victories successively obtained by Othniel over *Cushan* Rishathaim, king of Mesopotamia, and by Gideon over the princes of *Midian*. Again, it has been rashly concluded that Zerah, the Cushite, who attacked Asa, king of Judah, with so immense a host (2 Chron. xiv. 9), could not have been an Ethiopian of Africa, and yet the fact of his army having included Libyans (xvi. 8) as well as Ethiopians, seems decisive of the fact, that the latter were of African origin. Their ancestors may have belonged to the 'people without number,' whom Shishak had led forth against Asa's grandfather, Rehoboam (xii. 3), and these, their descendants, may have retained possession of the north of Arabia Petræa, between Palestine and Egypt (see Bruce's *Travels*, vol. i. p. 30).

Yet, though there is a great lack of evidence to show that the name of Cush was ever applied to any part of Arabia, there seems no reason to doubt that a portion of the Cushite race did early settle there. According to the ethnographic table in the 10th chapter of Genesis, Cush was the father of Seba, Havilah, Sabta, Raamah (whose sons were Sheba and Dedan), Sabthecah, and also of Nimrod (Gen. x. 7, 8; 1 Chron. i. 9, 10). The last mentioned appears to have moved northward, first into Babylonia, and then into Assyria, but the others seem to have migrated to the south, though it is impossible accurately to trace out their settle-

ments. Yet, even if we give Seba to Africa, and pass over as doubtful the names of Havilah, Sheba, and Dedan (for these were also the names of Shemitic tribes, Gen. x. 28, 29; xxv. 3) still, in Ezek. xxvii. 22, Raamah is plainly classed with the tribes of Arabia, and nowhere are any traces of Sabtah and Sabthecah to be found but in the same country. By referring, however, to the relative geographical positions of the south-west coast of Arabia and the east coast of Africa, it will be seen that nothing separates them but the Red Sea, and it is not unlikely that while a part of the Cushite population immigrated to Africa, others remained behind, and were occasionally called by the same name. Thus in 2 Chron. xxi. 16, among those who were stirred up against the Hebrews are mentioned the Philistines, and 'the Arabs that were near the Cushites,' and the expression 'near' (עַל יַד) in this connection, can scarcely apply to any but dwellers in the Arabian peninsula. In the fifth century of our era the Himaryites, in the south of Arabia, were styled by Syrian writers Cushæans and Ethiopians (Assemanni, *Bibl. Orient.* i. 360; iii. 568). The Chaldee Paraphrast Jonathan, at Gen. x. 6, and another paraphrast at 1 Chron. i. 8, explain 'Cush' by Arabia. Niebuhr found in Yemen a tribe called Beni Chusi. The book of Job (xxviii. 19) speaks of the topaz (*pitdah*) of Cush, and there was a Topaz Island in the Red Sea (Diod. Sic. iii. 39; Pliny, *Hist. Nat.* xxxvii. 8; Strabo, xvi. 4. 6). Yet most of these are circumstances upon which we can lay but little stress; and the passage in 2 Chron xxi. 16 is the only direct evidence we possess of the name 'Cush' being applied in Scripture to any part of Arabia, and even that does not amount to absolute demonstration.

Some have sought for another Cush in more northerly regions of Asia, as in the Persian province of Chusistan or Susiana, in Cuthah, a district of Babylonia, &c.; and as Nimrod, the youngest son of Cush, spread his conquests in that direction, it is, no doubt, possible that his father's name might be preserved in the designation of some part of the territory or people. But here again the data are very unsatisfactory; and, indeed, the chief thing which led to the supposition is the mention in the description of the site of Paradise (Gen. ii. 13), of a land of Cush, compassed by the river Gihon [Eden]. But even though the name of Cush were more variously applied in Scripture than it really is, it would not be more so than was the corresponding term Ethiopia, among the Greeks and Romans, which comprised a great many nations far distant, as well as wholly distinct from each other, and having nothing in common but their swarthy, sun-burnt complexion—*Αἰθίοψ q. d. αἴθω τὴν ὄψιν, i. e.* 'burnt-black in the face.' Homer (*Odyss.* i. 22) speaks of them as 'a divided race—the last of men—some of them at the extreme west, and others at the extreme east.' Strabo (i. p. 60) describes them as a 'two-fold people, lying extended in a long tract from the rising to the setting sun.' Herodotus (vii. 69,70) distinguishes the eastern Ethiopians in Asia from the western Ethiopians in Africa, by the straight hair of the former, and the curly hair of the latter. The ancients, in short, with the usual looseness of their geographical definitions, understood by Ethiopia *the extreme south* in all the earth's longitude' and which, lying, as they thought, close upon the fiery zone, exposed the inhabitants to the sun's scorching rays, which burnt them black. It is the mistaken idea of the Scriptural term 'Cush' being used in the same vague and indeterminate manner, that has led to so much confusion on this subject; and one writer (Buttmann, *Alt. Erdk. d. Morgenl.* p. 40 note), in his desire to carry out the parallel between Ethiopia and Cush, derives the latter word from the root כוה (*kava, kau, ku*) 'to burn;' but that is opposed to all the rules of etymological analogy in the formation of Hebrew proper names (comp. Ritter's *Erdkunde* Th. i. p. 222; Heeren's *African Nations*, Engl. Transl. vol. i. p. 289).—N. M.

CUTHAH, (כּוּתָה; Sept. Χουθά), a district in Asia, whence Shalmaneser transplanted certain colonists into the land of Israel, which he had desolated (2 Kings xvii. 24-30). From the intermixture of these colonists with the remaining natives sprung the Samaritans, who are called Cuthites (כּוּתִים) in the Chaldee and the Talmud, and for the same reason a number of non-Semitic words which occur in the Samaritan dialect are called Cuthian. The situation of the Cuthah from which these colonists came is altogether unknown. Josephus places it in central Persia, and finds there a river of the same name (*Antiq.* ix. 14. 3; x. 9, 7). Rosenmüller and others incline to seek it in the Arabian Irak, where Abulfeda and other Arabic and Persian writers place a town of this name, in the tract near the Nahr-Malca, or royal canal, which connected the Euphrates and Tigris to the south of the present Bagdad. Winer seems to prefer the conjecture of Stephen Morin and Le Clerc, which identifies the Cuthites with the Cossæi in Susiana (Arrian, *Indic.* xl.; Plin. *Hist. Nat.* vi. 31; Diod. Sic. xvii. 111; Mannert, ii. 493). All these conjectures refer essentially to the same quarter, and any of them is preferable to the one suggested by Michaelis, that the Cuthites were Phœnicians from the neighbourhood of Sidon, founding it upon reasons which no one regards as satisfactory, and which it is therefore unnecessary to re-produce.

CUTHITES. [Samaritans.]

CUTTINGS IN THE FLESH. Amongst the prohibitory laws which God gave the Israelites there was one that expressly forbad the practice embraced in those words, *viz.* 'Ye shall not make any cuttings in your flesh for the dead' (Lev. xix. 28). It is evident from this law that such a species of *self-inflicted* torture obtained amongst the nations of Canaan; and it was, doubtless, to guard His people against the adoption of so barbarous a habit, in its idolatrous form, that God led Moses to *reiterate* the prohibition: 'They shall not make baldness upon their heads, neither shall they shave off the corner of their beards, nor make any cuttings in their flesh' (Lev. xxi. 5; Deut. xiv. 1).

Investing his imaginary deities with the attributes of *cruelty*, man has, at all times and in all countries, instituted a form of religion consisting in cruel rites and bloody ceremonies. If then we look to the practices of the heathen world, whether of ancient or modern times, we shall find that almost the entire of their religion consisted of rites of *deprecation*. *Fear* of the Divine dis-

pleasure would seem to have been the leading feature in their religious impressions. The universal prevalence of *human* sacrifices throughout the Gentile world is, in itself, a decisive proof of the light in which the human mind, unaided by revelation, is disposed to view the Divinity.

It was doubtless such *mistaken* views of the character of God that led the prophets of Baal (1 Kings xviii. 28) to cut their bodies with lancets, supposing that, by mingling their own blood with that of the offered sacrifice, their god must become more attentive to the voice of entreaty. Agreeably to the inference which all this furnishes, we find Tacitus declare (*Hist.* i. 4), 'Non esse curæ Diis securitatem nostram, *sed ultionem*.' In fact it was a current opinion amongst the ancient heathen that the gods were *jealous* of human happiness; and in no part of the heathen world did this opinion more prevail, according to Sanchoniathon's account, than amongst the inhabitants of those very countries which surrounded that land where God designed to place his people Israel. Hence we see why God would lay them under the wholesome influence of such a prohibitory law as that under consideration: 'Ye shall not make any cutting in your flesh for the dead.' The ancients were very violent in their expression of sorrow. Virgil represents the sister of Dido as tearing her face with her nails, and beating her breast with her fists:—

'Unguibus ora soror fœdans et pectora pugnis.'
Æn. iv. 672.

The present writer has seen in India the same wild exhibition of grief for the departed relative or friend. Some of the learned think that that law of Solon's, which was transferred by the Romans into the Twelve Tables, *that women in mourning should not scratch their cheeks*, derived its origin from this law of Moses (Lev. xix. 28). But, however this opinion may be questioned, it would appear that the simple tearing of their flesh out of grief and anguish of spirit is taken, in other parts of Scripture, *as a mark of affection:* thus (Jer. xlviii. 37), 'Every head shall be bald, every beard clipped, and upon all *cuttings*.' Again (ch. xvi. 6): 'Both the great and the small shall die in the land: they shall not be buried, neither shall men lament for them, *nor cut themselves*.' So (ch. xli. 5): 'There came from Samaria fourscore men having their beads shaven and their clothes rent, and having cut themselves, with offerings to the house of the Lord.'

The spirit of Islam is less favourable than that of heathenism to displays of this kind: yet examples of them are not of rare occurrence even in the Moslem countries of Western Asia, including Palestine itself. The annexed figure is copied from one which is represented in many of the books of travel in Egypt and Palestine which were printed in the seventeenth century. It is described by the missionary Eugene Roger (*La Terre Saincte*, &c. 1646, p. 252) as representing 'one of those calenders or devotees whom the Arabs name Balhouua,' and whom the simple people honour as holy martyrs. He appears in public with a scimitar stuck through the fleshy part of his side, with three heavy iron spikes thrust through the muscles of his arm, and with a feather inserted into a cut in his forehead. He moves about with great composure, and endures all these sufferings, hoping for recompense in the Paradise of Mohammed—'Aveuglement digne de larmes (adds the monk), que ces misérables commencent ici une vie pleine de souffrance, pour la continuer éternellement dedans les gehennes de l'Enfer!' Add to this, the common

244.

accounts of the gashes which the Persian devotees inflict upon themselves, in the frenzy of their love and grief, during the annual mourning for Hassan and Hossein (Morier, Malcolm, &c.), and the curious particulars in Aaron Hill's *Account of the Ottoman Empire* (ch. 13), respecting the proceedings of young Turks in love:—'The most ridiculous and senseless method of expressing their affection is their singing certain amorous and whining songs, composed on purpose for such mad occasions, between every line whereof they cut and slash their naked arms with daggers, each endeavouring in this emulative madness to exceed the other by the depth and number of the wounds he gives himself.'

From the examples which have been produced, we may very safely conclude that the expression '*cuttings in the flesh*,' in these passages of Scripture, was designed, as already intimated, to declare the feeling of *strong* affection; as though the living would say, 'See how little we regard the pleasures of life, since now the object of our affection is removed from us!' We must therefore come back to our former position, that it was against those self-inflicted tortures, by which the unhappy devotees vainly thought to deprecate the wrath of their angry gods towards their deceased relatives and friends, this law of Moses *was especially aimed*.—J. W. D.

CYMBALS. [MUSIC.]

CYPRESS. [BEROSH.]

CYPRUS (Κύπρος), the modern *Kebris*, one of the largest islands in the Mediterranean, and next to Sicily in importance. It is about 140 miles in length, and varies in breadth from 50 to 5 miles. From its numerous headlands and promontories, it was called Κεραστίς, *Kerastis*, or *the Horned;* and from its exuberant fertility, Μακαρία, *Macaria*, or *the blessed* (*beatam Cyprum:* Hor. Carm. iii. 26. 9). Its proximity to Asia Minor, Phœnicia, and Egypt, and its numerous havens, made it a general rendezvous for merchants. 'Corn, wine, and oil,' which are so often mentioned in the Old Testament as the choicest productions of Palestine (Deut. xii. 17; 1 Chron. ix. 29; Neh. x. 39; Jer. xxxi. 12), were found here in the highest perfection. The forests also furnished large supplies of timber for ship-building, which rendered the conquest of the island a favourite project of the Egyptian kings. It was

the boast of the Cyprians that they could build and complete their vessels without any aid from foreign countries (Ammian. Marcell. xiv. 8, § 14). Among the mineral products were diamonds, emeralds, and other precious stones, alum, and asbestos; besides iron, lead, zinc, with a portion of silver, and, above all, copper, the far-famed *æs Cyprium*. The principal mines were in the neighbourhood of Tamassus (Strabo, xiv. 6, vol. iii. p. 245, ed. Tauchn.). 'In Cyproubi prima fuit æris inventio' (Plin. *Nat. Hist.* xxxiv. 2).

Cyprus was originally peopled from Phœnicia [CHITTIM]. Amasis I., king of Egypt, subdued the whole island (Herod. ii. 182). In the time of Herodotus the population consisted of Athenians, Arcadians, Phœnicians, and Ethiopians (vii. 90). Under the Persians and Macedonians the whole island was divided into nine petty sovereignties. After the death of Alexander the Great it fell to the share of Ptolemy, the son of Lagus. It was brought under the Roman dominion by Cato. Under the Emperor Augustus it was at first an imperial province, and afterwards, with Gallia Narbonensis, made over to the senate (Dion Cass. liv. iv.). When the empire was divided it fell to the share of the Byzantine emperors. Richard I. of England conquered it in 1191, and gave it to Guy Lusignan, by whose family it was retained for nearly three centuries. In 1473 the republic of Venice obtained possession of it; but in 1571 it was taken by Selim II., and ever since has been under the dominion of the Turks. The majority of the population belong to the Greek church; the archbishop resides at Leikosia. Cyprus was one of the first places out of Palestine in which Christianity was promulgated, though at first to Jews only (Acts xi. 19), by 'those who were scattered abroad' after Stephen's martyrdom. It was visited by Barnabas and Paul on their first missionary tour (Acts xiii. 4), and subsequently by Barnabas and John Mark (Acts xv. 39). Paul sailed to the south of the island on his voyage to Rome (Acts xxvii. 4). [ELYMAS; PAPHOS; SERGIUS PAULUS; SALAMIS.] (Mannert, *Geographie der Griechen und Römer*, vi. 2, pp. 422-454; *Penny Cyclopædia*, art. 'Cyprus;' Dr. R. Pococke's *Description of the East*, &c. Lond. 1745, vol. ii. book iii. ch. i. pp. 210-235; Wilson's *Travels in the Holy Land, Egypt*, &c. Lond. 1831, vol. ii. ch. xii. pp. 174-197).—J. E. R.

CYRENE. (Κυρήνη; *Ghrenna*, in modern Arabic), a city in Upper Libya, founded about the year B.C. 632, by a colony of Greeks from Thera (Santorini), a small island in the Ægean sea (Thirlwall's *History of Greece*, vol. ii. ch. 12). Its name is generally supposed to be derived from a fountain (but according to Justin, *Hist.* xiii., a mountain), called Κυρή, Cyre, near its site. It was built on a table-land, 1800 feet above the level of the sea, in a region of extraordinary fertility and beauty. It was the capital of a district, called from it Cyrenaica (Barca), which extended from the Gulf of Platea (Bomba) to the Great Syrtis (Gulf of Sidra). With its port Apollonia (Musa Soosa), about 10 miles distant, and the cities Barca, Teuchira, and Hesperis, which at a later period were named Ptolemais, Arsinoe, and Berenice (Strabo, xvii. vol. iii. p. 496, ed. Tauchn.), it formed the Cyrenaic Pentapolis. For above 180 years the form of government was monarchical; it then became republican; and at last, the country became tributary to Egypt, under Ptolemy Soter. It was bequeathed to the Romans by Apion, the natural son of Ptolemy Physcon, about 97 B.C. (Tacitus, *Annal.* xiv. 18; Cicero, *De leg. Agrar.* ii. 19), and was then formed into a province with Crete (Strabo, xvii. 3). Strabo (quoted by Josephus, *Antiq.* xiv. 7) says, that in Cyrene there were four classes of persons, namely citizens, husbandmen, foreigners, and Jews, and that the latter enjoyed their own customs and laws. At the commencement of the Christian era, the Jews of Cyrene were so numerous in Jerusalem that they had a synagogue of their own (Acts ii. 10; vi. 9). Some of the first Christian teachers were natives of Cyrene (Acts xi. 20; xiii. 1). Simeon, who was compelled to assist in bearing the cross of the Saviour, was a Cyrenian (Matt. xxvii. 32; Mark xv. 21; Luke xxiii. 26).

The ruins of Cyrene and the surrounding country have been diligently explored within the last few years; in 1817 by Dr. Della Cella, in 1821-22 by Capt. Beechey, and in 1826 by M. Pacho, a French traveller. A very interesting account of the results of their investigations is given in the Penny Cyclopædia, under the article *Cyrenaica*.
J. E. R.

CYRENIUS (Κυρήνιος, or, according to his Latin appellation, P. SULPITIUS QUIRINIUS), governor of Syria (Luke ii. 1, 2). The mention of his name in connection with the census which was in progress at the time of our Lord's birth, presents very serious difficulties, of which, from the want of adequate data, historical and critical inquiry has not yet attained a satisfactory solution. The passage is as follows: αὕτη ἡ ἀπογραφὴ πρώτη ἐγένετο ἡγεμονεύοντος τῆς Συρίας Κυρηνίου, translated in the Authorized Version thus: 'Now this taxing was first made when Cyrenius was governor of Syria.' Instead of 'taxing' it is now agreed that the rendering should be 'enrolment,' or 'registration' (of which use of the word ἀπογράφεσθαι many examples are adduced by Wetstein), as it is clear from Josephus that no taxing did take place till many years after this period. The whole passage, as it now stands, may be properly read, 'This enrolment was the first while Cyrenius was governor of Syria.'

This appears very plain, and would suggest no difficulty, were it not for the knowledge which we obtain from other quarters, which is to the effect, 1. that there is no historical notice of any enrolment at or near the time of our Lord's birth; and, 2. that the enrolment which actually did take place under Cyrenius was not until ten years after that event.

The difficulty begins somewhat before the text now cited; for it is said that, 'in those days there went out a decree from Cæsar Augustus that the whole world should be taxed' (enrolled). But since no historian mentions any such general enrolment of the whole empire, and since, if it had taken place, it is not likely to have been mentioned in connection with the governor of Syria, it is now usually admitted that Judæa only is meant by the phrase rendered 'the whole earth' (but more properly 'the whole land'), as in Luke xxi. 26; Acts xi. 28; and perhaps in xxi. 20. The real difficulties are thus reduced to the two now stated. With regard to the enrolment, it may be said that it was probably not deemed of sufficient importance by the Roman historians to deserve

mention, being confined to a remote and comparatively unimportant province. Nor was it perhaps of such a nature as would lead even Josephus to take notice of it, if it should appear, as usually supposed, that no trace of it can be found in his writings.

Of the remaining difficulties various solutions have been offered; and some, despairing of any satisfactory solution, have supposed the verse in question to have been a marginal gloss which has crept into the text; while others have even ventured to suggest that St. Luke must have been mistaken. The following explanations are, however, those which are the most generally received.—

I. Assuming, on the authority of Luke, that an enrolment actually did take place at the time of our Lord's birth, the hypothesis proceeds to make out a probability that Cyrenius was then joint-governor of Syria along with Saturninus. It is known that a few years previous to this date, Volumnius had been joined with Saturninus as the procurator of that province; and the two, Saturninus and Volumnius, are repeatedly spoken of together by Josephus, who styles them equally governors of Syria (*Antiq.* xvi. 9, 1; xvi. 9, 8). Josephus does not mention the recall of Volumnius; but there is certainly a possibility that this had taken place before the birth of Christ, and that Cyrenius, who had already distinguished himself, had been sent in his place. He would then have been under Saturninus, a ἡγεμών, 'governor,' of Syria, just as Volumnius had been before, and as Pilate was afterwards, of Judæa. That he should here be mentioned as such by Luke, rather than Saturninus, is very naturally accounted for by the fact, that he returned, ten years afterwards, as procurator or chief governor, and then held a second and more important census for the purpose of registration and taxation, when Archelaus was deposed, and Judæa annexed to the Roman province of Syria. The only real objection to this solution is the silence of all other history. But although profane history does not affirm the fact of Cyrenius having formerly been procurator of Syria, yet it does not in any way deny it; and we may therefore safely rest upon the authority of the sacred writer for the truth of this fact, just as we do for the fact of the existence of the first enrolment itself.

2. Another explanation would read the passage thus:—'This enrolment was made *before* Cyrenius was governor of Syria.' The advocates of this view suppose that Luke inserted this verse as a sort of parenthesis, to prevent his readers from confounding this enrolment with the subsequent census made by Cyrenius. The positive, or rather the superlative, πρώτη, is thus understood in the sense of the comparative προτέρα, and is made to govern the following genitive. That both the positive and superlative are sometimes used in place of the comparative is doubtlessly true; but such a construction would in the present case be very harsh, and very foreign to the usual simplicity of Luke.

3. Another mode of getting over the difficulty is sanctioned by the names of Calvin, Valesius, Wetstein, Hales, and others. First, changing αὕτη into αὐτή they obtain the sense:—'In those days there went forth a decree from Augustus, that the whole land should be enrolled; but the *enrolment itself* was first made when Cyrenius was governor of Syria.' The supposition here is, that the census was commenced under Saturninus, but was not completed till two years after, under Quirinus. Dr. Robinson (*Addit. to Calmet*, in 'Cyrenius') objects to this view the entire absence of any historical basis for it. But he must at the time have been unmindful of Hales, who, in his *Chronology*, has worked out this explanation with more than his usual care and success.

Hales reminds us that a little before the birth of Christ, Herod had marched an army into Arabia to redress certain wrongs which he had received; and this proceeding had been so misrepresented to Augustus that he wrote a very harsh letter to Herod, the substance of which was, that '*having hitherto treated him as a friend, he would now treat him as a subject.*' And when Herod sent an embassy to clear himself, the emperor repeatedly refused to hear them, and so Herod was forced to submit to all the *injuries* (παρανομίας) offered to him (Joseph. *Antiq.* xvi. 9). Now it may be collected that the chief of these injuries was the performance of his threat of treating him as a subject, by the degradation of his kingdom to a Roman province. For soon after Josephus incidentally mentions that 'the whole nation of the Jews took an oath of fidelity to Cæsar and the king jointly, except 6000 of the Pharisees, who, through their hostility to the regal government, refused to take it.' The date of this transaction is determined by its having been shortly before the death of Pheroras, and coincides with the time of this decree of enrolment and of the birth of Christ. The oath which Josephus mentions would be administered at the same time, according to the usage of the Roman census, in which a return of persons, ages, and properties, was required to be made upon oath, under penalty of confiscation of goods, as we learn from Ulpian. That Cyrenius, a Roman senator and procurator, was employed to make this enrolment, we learn not only from St. Luke, but by the joint testimony of Justin Martyr, Julian the Apostate, and Eusebius; and it was made while Saturninus was president of Syria (to whom it was attributed by Tertullian) in the thirty-third year of Herod's reign, corresponding to the date of Christ's birth. Cyrenius, who is described by Tacitus as 'impiger militiæ et acribus ministeriis,' 'an active soldier and rigid commissioner,' was well qualified for an employment so odious to Herod and his subjects; and probably came to execute the decree with an armed force. The enrolment of the inhabitants, 'each in his own city,' was in conformity with the wary policy of the Roman jurisprudence, to prevent insurrections and to expedite the business; and if this precaution was judged prudent even in Italy, much more must it have appeared necessary in turbulent provinces like Judæa and Galilee.

At the present juncture, however, it appears that the census proceeded no further than the first act, namely, of the enrolment of persons in the Roman register. For Herod sent his trusty minister, Nicolas of Damascus, to Rome; who, by his address and presents, found means to mollify and undeceive the emperor, so that he proceeded no further in the design which he had entertained. The census was consequently at this time suspended; but it was afterwards carried into effect

upon the deposal and banishment of Archelaus, and the settlement of Judæa as a Roman province. On this occasion the trusty Cyrenius was sent again, as president of Syria, with an armed force, to confiscate the property of Archelaus, and to complete the census for the purposes of taxation. This taxation was a poll tax of two drachmæ a-head upon males from fourteen, and females from twelve to sixty-five years of age—equal to about fifteen pence of our money. This was the 'tribute money' mentioned in Matt. xvii. 24-27. The payment of it became very obnoxious to the Jews, and the imposition of it occasioned the insurrection under Judas of Galilee, which Luke himself describes as having occurred 'in the days of the taxing' (Acts v. 37).

By this statement, connected with the slight emendation of the text already indicated, Hales considers that 'the Evangelist is critically reconciled with the varying accounts of Josephus, Justin Martyr, and Tertullian; and an historical difficulty satisfactorily solved, which has hitherto set criticism at defiance.' This is perhaps saying too much; but the explanation is undoubtedly one of the best that has yet been given (*Analysis of Chronology*, iii. 48-53; Lardner's *Credibility*, i. 248-329; Robinson, *Addit. to Calmet*, in 'Cyrenius'; Wetstein, Kuinoel, and Campbell, on Luke ii. 2, &c.).

CYRUS (כורש *Khoresh*, Κῦρος), the celebrated Persian conqueror of Babylon, who promulgated the first edict for the restoration of the Jews to their own land (Ezra i. 1, &c.). We are informed by Strabo that his original name was Agradates (xv. 3, p. 320, ed. Tauchn.); but he assumed that of Kouros, or Khouresh (whichever was the most accurate Persian form) doubtless on ascending the throne. For Ctesias tells us (Photius, *Epit. Ctes.* ch. xlix.) that the word means *the Sun*. We may perhaps compare it with the Hebrew חרס *kheres*, which bears the same sense; and with the name of the Egyptian deity *Horus*, or Apollo.

The authorities on which we have to rest for our knowledge of the life of Cyrus are chiefly three. *First*, Herodotus, who reported the tales concerning him current in Asia a century later; but selected from them with the taste of a Greek epic or romance writer. *Secondly*, Xenophon, who has made the life of Cyrus the foundation of a philosophical novel, written in a moral spirit, as unhistorical as that of Fenelon's Télémaque. *Thirdly*, the epitome of Ctesias, preserved for us by the patriarch Photius. Ctesias was a Greek physician, who stayed seventeen years at the Persian court towards the end of the reign of Darius Nothus, about B.C. 416-400. (See Bähr's *Ctesias*, p. 15.) According to Diodorus, he drew his histories from the royal archives; and, in part, that may be true. But a large number of the facts recorded by him would certainly never have been allowed a place in them; and several great *anachronisms* which he commits are mistakes of a kind which can scarcely ever occur in books written in the form of annals. It would seem then that his sources of knowledge were not much better than those of Herodotus; but his lengthened stay in Persia so familiarized him with Persian institutions, and multiplied his opportunities of access to those sources, that, *cæteris paribus*, he appears to be a better authority. Unfortunately, nothing remains to us but a mere epitome of his work.

From these and a few subordinate authorities, we must endeavour to give as good a reply as we can to the chief problems concerning the life of Cyrus.

On the parentage of Cyrus.—Herodotus and Xenophon agree that he was son of Cambyses prince of Persia, and of Mandane daughter of Astyages, king of the Median empire. Ctesias denies that there was any relationship at all between Cyrus and Astyages. According to him, when Cyrus had defeated and captured Astyages, he *adopted* him as a grandfather, and invested Amytis, or Amyntis, the daughter of Astyages (whose name is in all probability only another form of Mandane), with all the honours of queen dowager. His object in so doing was to facilitate the submission of the more distant parts of the empire, which were not yet conquered; and he reaped excellent fruit of his policy in winning the homage of the ancient, rich, and remote province of Bactria. Ctesias adds, that Cyrus afterwards married Amytis. It is easy to see that the latter account is by far the more historical, and that the story followed by Herodotus and Xenophon is that which the courtiers published in aid of the Persian prince's designs. Yet there is no reason for doubting that, on the father's side, Cyrus belonged to the Achæmenidæ, the royal clan of the military tribe of the Persians.

On the elevation of Cyrus.—It was the frequent practice of the Persian monarchs, and probably therefore of the Medes before them, to choose the provincial viceroys from the royal families of the subject nations, and thereby to leave to the vanquished much both of the semblance and of the reality of freedom. This will be sufficient to account for the first steps of Cyrus towards eminence. But as the Persian armies were at that time composed of ruder and braver men than the Medes—(indeed, to this day, the men of Shirâz are proverbially braver than those of Isfahân)—the account of Xenophon is credible, that in the general wars of the empire Cyrus won the attachment of the whole army by his bravery; while, as Herodotus tells, the atrocious cruelties of Astyages may have revolted the hearts of the Median nobility.

On the transition of the empire from the Medes to the Persians.—Xenophon's romance omits the fact that the transference of the empire was effected by a civil war; nevertheless, the same writer in his *Anabasis* confesses it (iii. 4, 7, 12). Herodotus, Ctesias, Isocrates, Strabo, and, in fact, all who allude to the matter at all, agree that it was so. In Xenophon (*l. c.*) we find the Upper Tigris to have been the seat of one campaign, where the cities of Larissa and Mespila were besieged and taken by Cyrus. From Strabo we learn that the decisive battle was fought on the spot where Cyrus afterwards built Pasargadæ, in Persis, for his native capital. This agrees with Herodotus's account of two armies being successively lost, which may mean that the war was ended in two campaigns. Yet Ctesias represents Astyages as finally captured in the palace of Ecbatana. Cyrus (says Herodotus) did Astyages no harm, but kept him by his side to the end of his life. This is like the generosity of the Persian kings to vanquished foreigners, but

very unlike the conduct of fortunate usurpers, east or west, towards a fallen superior. The tale in Ctesias is more like the current imperial craft. There we read that Cyrus at first made Astyages ruler of the Barcanians (see Tzetzes, in Bähr's *Ctes.* p. 222), and afterwards sent for him by the eunuch Petisacas to visit his daughter and son-in-law, who were longing to see him. The eunuch, however, put him to death on the road; and Cyrus, indignant at the deed, gave up the murderer to the cruel vengeance of the queen. Astyages had certainly lived long enough for the policy of Cyrus; who, by the Roman Cassius's test of *Cui bono?* 'Who gained by it?' cannot be accounted innocent.

The Medes were by no means made subject to the Persians at first. It is highly probable that, as Herodotus and Xenophon represent, many of the noblest Medes sided with Cyrus, and during his reign the most trusted generals of the armies were Medes. Yet even this hardly explains the phenomenon of a Darius the Mede, who, in the book of Daniel, for two years holds the government in Babylon, after the capture of the city by the Medes and Persians. Indeed, the language used concerning the kingdom of Darius might be explained as Oriental hyperbole, and Darius be supposed a mere satrap of Babylon, only that Cyrus is clearly put forward as a *successor* to Darius the Mede. Many have been the attempts to reconcile this with the current Grecian accounts; but there is one only that has the least plausibility, viz., that which, with Xenophon, teaches that Astyages had a son still living (whom Xenophon calls Cyaxares), and that this son is no other than Darius the Mede; to whom Cyrus, by a sort of nephew's piety, conceded a nominal supremacy at Babylon. Objections to this likewise are evident, but they must be discussed under 'Darius the Mede,' or the book of 'Daniel.'

In the reign of the son of Cyrus the depression of the Medes probably commenced. At his death the Magian conspiracy took place; after the defeat of which the Medes doubtless sunk lower still. At a later time they made a general insurrection against the Persian power, and its suppression seems to have brought them to a level with Hyrcanians, Bactrians, and other vassal nations which spoke the tongue of Persia; for the nations of the poetical *Irân* had only dialectual variations of language (Strabo, xv. 2, p. 311).

Conquests and Wars of Cyrus.—The descriptions given us in Ctesias, and in Plutarch's Artaxerxes (which probably are taken from Ctesias), concerning the Persian mode of fighting, are quite *Homeric* in their character. No skill seems to be needed by the general; no tactics are thought of: he does his duty best by behaving as the bravest of common soldiers, and by acting the part of champion, like a knight in the days of chivalry. We cannot suppose that there was any *greater* advance of the military art in the days of Cyrus. It is agreed by all that he subdued the Lydians, the Greeks of Asia Minor, and the Babylonians: we may doubtless add Susiana, which must have been incorporated with his empire before he commenced his war with Babylon; where also he fixed his military capital (Susa, or Shushan), as more central for the necessities of his administration than Pasargadæ. Yet the latter city continued to be the more sacred and beloved home of the Persian court, the place of coronation and of sepulture (Strabo, xv. 3, p. 318; and Plut. *Artax.* init.). All Syria and Phœnicia appear to have come over to Cyrus peaceably.

In regard to the Persian wars, the few facts from Ctesias, which the epitomator has extracted as differing from Herodotus, carry with them high probability. He states that, after receiving the submission of the Bactrians, Cyrus made war on the Sacians, a Scythian (*i. e.* a Sclavonic) people, who seem to have dwelt, or perhaps rather roved, along the Oxus, from Bokhara to Khiva; and, that, after alternate successes in battle, he attached the whole nation to himself in faithful allegiance. Their king is called Amorges by Ctesias. They are undoubtedly the same people that Herodotus (vii. 64) calls *Amyrgian* Sacians; and it is highly probable that they gave to the district of Margiana its name. Their women fought in ranks, as systematically as the men. Strabo has cursorily told us of a tradition (xv. 2, p. 307) that Cyrus escaped with but seven men through the deserts of Gedrosia, fleeing from the 'Indians'—which might denote an unsuccessful war against Candahar, &c., a country which certainly was not reduced to the Persian empire until the reign of Darius Hystaspis.

The closing scene of the career of Cyrus was in battle with a people living on one or both banks of the river Iaxartes, now the Syr-deria. Herodotus calls the enemy the Massagetans, who roamed along the north bank of the river: according to Ctesias it was the Derbices, who seem to have been on the south. Both may in fact have combined in the war. In other respects the narrative of Ctesias is beyond comparison more credible, and more agreeable with other known facts, except that he introduces the fiction of Indians *with elephants* aiding the enemy. Two battles were fought on successive days, in the former of which Cyrus was mortally wounded, but was carried off by his people. In the next, the Sacian cavalry and the faithful Amorges came to support him, and the Derbices sustained a total and bloody defeat. Cyrus died the third day after his wound: his body was conveyed to Pasargadæ, and buried in the celebrated monument, which was broken open by the Macedonians two centuries afterwards (Strabo, xv. 3; Arrian, vi. 29). The inscription, reported by Aristobulus, an eye-witness, is this:—'O man, I am Cyrus, who acquired the empire for the Persians, and was king of Asia. Grudge me not then this monument.'

Behaviour of Cyrus to the Jews.—The kings of Assyria and Babylon had carried the Jews into captivity, both to remove a disaffected nation from the frontier, and to people their new cities. By *undoing* this work, Cyrus attached the Jews to himself, as a garrison at an important post. But we may believe that a nobler motive conspired with this. The Persian religion was primitively monotheistic, and strikingly free from idolatry; so little *Pagan* in its spirit, that, whatever of the mystical and obscure it may contain, not a single impure, cruel, or otherwise immoral practice was united to any of its ceremonies. It is credible, therefore, that a sincere admiration of the Jewish faith actuated the noble Persian when he exclaimed, in the words of the book of

Ezra, 'Go ye up, and build in Jerusalem the house of Jehovah, God of Israel; *He is God!*'—and forced the Babylonian temples to disgorge their ill-gotten spoil. It is the more remarkable, since the Persians disapproved the confinement of temples. Nevertheless, impediments to the fortification of Jerusalem afterwards arose, even during the reign of Cyrus (Ezra iv. 5).

Perhaps no great conqueror ever left behind him a fairer fame than Cyrus the Great. His mighty achievements have been borne down to us on the voice of the nation which he elevated; his evil deeds had no historian to record them. What is more, it was his singular honour and privilege to be the first Gentile friend to the people of Jehovah in the time of their sorest trouble, and to restore them to the land whence light was to break forth for the illumination of all nations. To this high duty he is called by the prophet (Isa. xliv. 28; xlv. 1), and for performing it he seems to be entitled 'The righteous man' (xli. 2; xlv. 13).—F. W. N.

D.

DABERATH (דָּבְרַת; Sept. Δαβιρὰθ and Δεββά), a town in the tribe of Issachar, assigned to the Levites (Josh. xix. 12; xxi. 28; 1 Chron. vi. 72). It is probably the same as the Dabaritta, in the great plain, of Josephus (*Vita*, 62; *De Bell Jud.* ii. 21. 3); and the Dabira, which Eusebius and Jerome place by Mount Tabor, in the region of Dio-Cæsarea. It is recognised in the present Debûrieh, a small village lying on the side of a ledge of rocks, just at the base of Taboon on the north-west (Robinson's *Researches*, iii. 210).

DAGAN. [CORN.]

DAGON (דָּגוֹן; Sept. Δαγών) is the name of a national god of the Philistines at Gaza and Ashdod (Judg. xvi. 21, 23; 1 Sam. v. 1 sq.; 1 Chron. x. 10). As to the meaning of the name, the expressions of Philo Byblius, Δαγών, ὅς ἐστι Σίτων, and Δαγὼν ἐπειδὴ εὗρε σῖτον καὶ ἄροτρον, ἐκλήθη Ζεὺς 'Αρότριος (*Sanchoniathon*, ed. Orelli, p. 26, 32), show that he assumed the word to be derived from דָּגָן, *corn*. This derivation is admitted by Bochart, who argues that the fields of the Philistines were laid waste by mice, in order to show that Dagon was not the true god of agriculture, as he was thought to be (*Hieroz.* ed. Rosenm. i. 381); and by Beyer, who makes the extraordinary assertion that we may conclude, from the sending of the five golden mice (to the God of Israel! 1 Sam. vi. 4), that golden mice were offered to *Dagon* as an acknowledgment of his care in freeing their fields from mice (*Additamenta ad Selden.* p. 285). Each of these arguments is open to the objection that the five golden piles—which were sent at the same time, and which, if they bore any reference to Dagon, would possibly not be reconcilable with his character as the god of agriculture—are here altogether disregarded; when yet it is evident that no conclusions can be legitimately drawn from the one unless they apply with equal force to the other. There are much better arguments, however, for the other etymology, which deduces the name from דָּג, *fish*, with the ending *ôn* (Ewald, *Hebr. Gram.* § 341). This derivation is not only more in accordance with the principles of formation (for if Dagon comes from the root דָּגָן, it must belong to the adjective formation in § 322, *c*, which does not appear so suitable for the force of a proper name), but it is most decisively established by the terms employed in 1 Sam. v. 4. It is there said that Dagon fell to the earth before the ark, that his head and the palms of his hands were broken off, and that '*only Dagon was left on him.*' If Dagon is derived from דָּג, *fish*, and if the idol, as there is every reason to believe, had the body of a fish with the head and hands of a man, it is easy to understand why a *part* of the statue is there called *Dagon* in contradistinction to the head and hands; but not otherwise. That such was the figure of the idol is asserted by Kimchi, and is admitted by most modern scholars. It is also supported by the analogies of other fish deities among the Syro-Arabians. Besides the ATERGATIS of the Syrians, the Babylonians had a tradition, according to Berosus (*Berosi Quæ supersunt*, ed. Richter, p. 48. 54), that at the very beginning of their history an extraordinary being, called Oannes, having the entire body of a fish, but the head, hands, feet, and voice of a man, emerged from the Erythræan sea, appeared in Babylonia, and taught the rude inhabitants the use of letters, arts, religion, law, and agriculture; that, after long intervals between, other similar beings appeared and communicated the same precious lore in detail, and that the last of these was called Odakon ('Ωδάκων). Selden is persuaded that this Odakon is the Philistine god Dagon (*De Diis Syris*, p. 265). The resemblance between Dagon and Atergatis, or Derketo, is so great in other respects, that Selden accounts for the only important difference between them—that of sex—by referring to the androgynous nature of many heathen gods. It is certain, however, that the Hebrew text, the Sept., and Philo Byblius, make Dagon masculine. The temple of Dagon at Ashdod was destroyed by Jonathan the brother of Judas the Maccabee, about the year B.C. 148 (1 Mac. x. 84).—J. N.

DALMANUTHA (Δαλμανουθά), a village near Magdala (Mark viii. 10; comp. Matt. xv. 39); probably on the western shore of the lake of Gennesareth, a little to the north of Tiberias.

DALMATIA (Δαλματία), a province of Europe on the east of the Adriatic Sea, forming part of Illyricum, and contiguous to Macedonia. Titus was sent into this region by Paul to spread the knowledge of the Gospel.

DAMARIS (Δάμαρις), a woman of Athens, who was led to embrace Christianity by the preaching of St. Paul (Acts xvii. 34). Some suppose she was the wife of Dionysius the Areopagite, who is mentioned before her; but the construction in the Greek will not sanction this conclusion. The name Damaris does not occur elsewhere, whence some suppose it a corruption of Damalis (Δάμαλις), which was not an uncommon name; but the *r* and *l* are in Greek so constantly interchanged as to render this emendation superfluous.

DAMASCUS (דַּמֶּשֶׂק; Δαμασκός), called by the natives Es-Sham, a city of Syria, capital of an important pashalic of the same name, and indeed the chief or capital city of Syria, lies in a

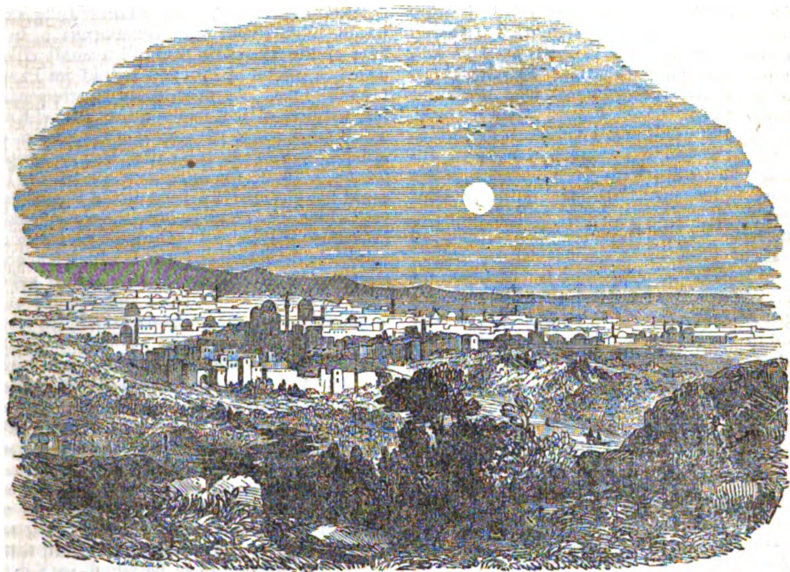
plain at the eastern foot of Anti-Libanus. It was sometimes spoken of by the ancients as an Arabian city, but in reality it belongs to Syria. In 2 Sam. viii. 5, 6, 'the Syrians of Damascus' are spoken of, and the words, 'Syria of Damascus' are found in Isa. vii. 8. It is expressly said, 'the head of Syria is Damascus;' also, Isa. xvii. 3, 'the kingdom' is to cease 'from Damascus.' So that this place was obviously the metropolis of a Syrian empire. It gave name (Syria Damascena, Plin. *Hist. Nat.* v. 13) to a district of Syria, which, in 1 Chron. xix. 6, is distinguished as מעכה, rendered 'Syria-Maachah,' in the Common English Version. The plain is about 400 stadia from the Mediterranean, and from six to eight days' journey from Jerusalem. It lies on the Chrysorrhoas (Barrada), by which, and its off-shoots, it is, with the aid of canals, abundantly watered. Its celebrity is of early date. Strabo (xvi. p. 756) speaks of it in eulogistic terms. In a religious point of view also its repute was great. Julian (*Ep.* 24.) terms it 'the great and sacred Damascus, surpassing every city both in the beauty of its temples and the magnitude of its shrines, as well as the timeliness of its seasons, the limpidness of its fountains, the volume of its waters, and the richness of its soil.' The locality would seem to have been expressly created for a large, flourishing, and durable city.

Damascus—by some held to be the most ancient city in the world—is called by the Orientals, 'a pearl surrounded by emeralds.' Nothing can be more beautiful than its position, whether approached from the side of Mount Lebanon, from the Desert to the east, or by the high-road from the north from Aleppo and Hamah. For many miles the city is girdled by fertile fields, or gardens, as they are called, which, being watered by rivers and sparkling streams, give to the vegetation, consisting principally of olive-trees, a remarkable freshness and beauty. Of all the cities of the East, Damascus is probably the most oriental.

The plain of Damascus owes its fertility and loveliness to the river Barrada, which is supposed to be either the Abana or Pharpar of 2 Kings v., and has been noticed under another head [ABANA]

The view of Damascus, when the traveller emerges from Anti-Libanus, is of the most enchanting kind. 'One of the most magnificent prospects in the world,' says Addison (*Damascus and Palmyra*, vol. ii. p. 92), 'burst upon my sight: like the first view of Constantinople, it is unique. We were looking down from an elevation of a thousand feet upon a vast plain, bordered in the distance by blue mountains, and occupied by a rich, luxuriant forest of the walnut, the fig, the pomegranate, the plum, the apricot, the citron, the locust, the pear, and the apple, forming a waving grove of more than fifty miles in circuit; possessing a vast variety of tint, a peculiar density and luxuriance of foliage, and a wildly-picturesque form, from the branches of the loftier trees throwing themselves up above a rich underwood of pomegranates, citrons, and oranges, with their yellow, green, and brown leaves; and then conceive our sensations, to see grandly rising in the distance, above this vast superficies of rich luxuriant foliage, the swelling leaden domes, the gilded crescents, and the marble minarets of Damascus; while in the centre of all, winding towards the city, ran the main stream of the river Barrada. As we descended, here and there the openings in the trees displayed little patches of green verdure or a glimpse of richly-cultivated gardens: the whole of the rich tract was surrounded by a mud-wall, beyond which all was arid and desert.' A more ample description to the same effect is given by Lamartine (*Travels in the East*).

The interior of the city does not correspond with the exquisite beauty of its environs. In the Armenian quarter the houses are built with mud, and pierced towards the street by a very few small grated windows with red painted shutters. They are low, and the flat arched doors resemble those of stables. A filthy dunghill and a pool of stinking water are almost invariably before the doors. In some of these dwellings, belonging to the principal Armenian merchants, there is great internal richness and elegance. The furniture consists of magnificent Persian or Bagdad carpets, which entirely cover the marble or cedar floor, and of numerous cushions and mattresses, spread in the middle of the saloon, for the members of the family to sit or lean against. There is a fine wide street, formed by the palaces of the agas of Damascus, who are the nobility of the land. The fronts of these palaces, however, towards the street, are like long prison or hospital walls, mere grey mud walls, with few or no windows, whilst at intervals is a great gate opening on a court. But the interior is magnificent. The ornaments of many of their saloons alone cost upwards of 1000*l.* sterling. The bazaars are very striking. The great bazaar is about half a league long. They are long streets covered in with high wood-work, and lined with shops, stalls, magazines, and cafés. The shops are narrow, and go only a short way back. The merchant is seated in front, with his legs doubled up below him, and the pipe in his mouth. The magazines are stored with merchandise of all sorts, and particularly with Indian manufactures, which are brought in great profusion by the caravans from Bagdad. In the midst of the bazaars stands the finest khan in the East, that of Hassan Pasha. It is an immense cupola, whose bold springing arch recalls that of St. Peter at Rome; it is in like manner borne on granite pillars. The gate of this khan is a piece of Moorish architecture, the richest in detail and most imposing in effect that can be seen in the world. The khan has been built only about fifty years. Not far distant is the principal mosque, formerly a church consecrated to St. John, whose skull and sepulchre, found in this holy place, give it such a sanctity that it is death for even a Mohammedan to enter the room where the relics are kept. Situated at the edge of the desert, at the mouth of the plains of Cœle-Syria and the valleys of Galilee, of Idumæa, and of the coasts of the Sea of Syria, Damascus was needed as a resting-place for the caravans to India. It is essentially a commercial town. Two hundred merchants are permanently settled in it. Foreign trade is carried on by the Great Mecca caravan, the Bagdad caravan, the Aleppo, and by several small ones to Beirout (its sea-port), Tripoli, Acre, &c. Lamartine makes its population to be some 300,000, of whom 30,000 are Christians. Another estimate (M'Culloch, *Geograph. Dict.*) gives only from 120,000 to 150,000 inhabitants, comprising 12,000



Christians and as many Jews. Damascus is an eminently interesting town. It is thoroughly Oriental, though now representatives, in person and costume, of most other distinguished countries of the world may be seen in its streets. Its proximity to Baalbec and Palmyra, which are mere ruins, and its still highly flourishing condition, after having existed for perhaps a longer period than any other city on the face of the earth, combine, with many facts connected with its history, to throw around it a calm and attractive, not to say sacred, light.

Political changes and social influences have lessened and mitigated the proverbial bigotry of the Damascenes. The lower classes, indeed, are still fanatical, but a better feeling on religion prevails in the higher. All Christians in Damascus were, when Lamartine visited the city, compelled to wear black turbans. He states that on his last day's journey towards Damascus he and his companions assumed the complete Turkish costume, to escape being recognised as Franks, adding, 'the fanatical population of Damascus and the surrounding country render these precautions necessary. The Damascenes nourish hatred of the European name and costume. They alone amongst the Orientals have refused to admit consuls or even consular agents for Christian powers. Damascus is a holy, fanatical, and free city—nothing must pollute it.' Till within the last few years the appearance in the city of a Frank costume was a signal for a riot. Christians and Jews were alike forbidden to ride any beast but an ass. Addison, however (in 1835), found a greatly improved state of feeling. The insolence of the Damascenes was curbed. He and his companions used horses, and saw Christians in great numbers mixing with others, and pursuing their business or taking recreation in their own garb unmolested. 'Here and there,' he says, 'a scowling look or a smothered cry of *Yavor*, or "infidel," after we had passed, were all the tokens of discontent we perceived.' The improvement Addison ascribes in part to the residence in the place of a British consul. He adds:—'As "the gate of Mecca," the place of rendezvous for the great caravan of pilgrims, Damascus has always been considered one of the most sacred of the Moslem cities; and, being annually filled with a vast crowd of religious fanatics, hurrying on to the tomb of the prophet, it is not strange that the population has always been so remarkable for its fanaticism and bigotry towards Christians. Even now, at the period of the assembling of the great caravan, it would hardly be prudent for Franks to exhibit themselves in their hats and coats before the crowd of bald-headed wretches which then throng all the thoroughfares, burning with religious zeal' (vol. ii. p. 449).

Mr. Addison was conducted to the spot where, according to tradition among the Christians, Saul saw the light from heaven. Winding round the walls on the outskirts of the city, he and his companions came to a point where they were broken at the top, at which Paul is said to have been let down in a basket, to escape the indignation of the Jews, when (Acts ix.) 'the disciples took him by night, and let him down by the wall in a basket.' From hence, passing on through some pretty lanes, they came to an open green spot, surrounded by trees, over the tops of which were seen the distant summits of Mount Hermon. At this place they were 'informed Saul had arrived when (Acts ix. 3) as he journeyed he came near Damascus, and suddenly there shined round about him a great light from heaven.' These localities are pointed out with the greatest confidence by the Damascene Christians of all sects, and are held in great veneration; nor is it difficult to suppose that the true spots have been handed down by tradition among the followers of the cross. 'The street which is called Straight' (Acts ix. 11) is still found in Damascus, or at any rate a street bearing that name. Addison says it is 'a mile in length,' and 'so called because it leads direct from the gate to the castle or palace of the Pasha.' The house of Judas, also, to which Ananias went, is still pointed out, as well as that of Ananias himself. How much credulity may have had to do in fixing on and perpetuating the recollection of these localities, it is probably easier to suspect than to ascertain.

Of the origin of Damascus nothing certain is known. The building of it has been ascribed both to Abraham and to his 'steward, Eliezer of Damascus.' That the city existed as early as the days of Abraham is clear from Gen. xiv. 15; xv. 2; but the way in which it is spoken of in these passages shows that even at the time to which they refer it was not a new nor an unknown place; for Abraham's steward is characterized as being of Damascus, and the locality of another town (Hobah) is fixed by stating that it lay 'on the left hand of Damascus.' L. Müller (*Ad Orig. Reg. Damas.*) has undertaken to show that it was even then governed by its own rulers. How long it may have retained its independence cannot be determined; but it appears (2 Sam. viii. 5, 6; 1 Chron. xix. 4) that its monarch having unadvisedly attacked the victorious David, the Hebrew sovereign defeated the Syrians, making a great slaughter of them, and, in his turn, subdued Damascus, and exacted tribute from its inhabitants. This subjection was not of long duration, for under his successor (1 Kings xi. 24) one Rezon, a servant of Hadadezer, king of Zobah, made himself master of Damascus, and, ruling over Syria, 'was an adversary to Israel all the days of Solomon.' After Rezon, Hezion occupied the throne; he was succeeded by his son Tabrimon (1 Kings xv. 18, 19), who was in alliance with Asa, king of Judah. Preserving the same direct line, the crown then fell to Benhadad, who, having been in a league with Baasha, king of Israel, was bribed by Asa to desert his ally, and join himself in attacking Baasha, on whom the united forces inflicted great injury (1 Kings xv. 19, 20). In the time of Benhadad, son of the preceding monarch, Damascus was the head of a very powerful empire, since it appears (1 Kings xx. 1) that 'thirty and two kings' (doubtless petty princes or pashas, governors of provinces) accompanied him in a campaign which he undertook against Samaria. Of Ahab, its king, he insolently demanded, 'thy silver and thy gold, thy wives also and thy children, even the goodliest.' The Israelitish monarch saw no alternative but obedience:—'I am thine, and all that I have.' This yieldingness sharpened the rapacity of Benhadad, who proceeded to take the most offensive measures, which had their natural effect in rousing

Ahab. The king of Israel therefore took counsel of 'all the elders of the land,' and, being advised to resist, met the threats of Benhadad with these famous words:—'Let not him that girdeth on his harness boast himself as he that putteth it off.' The Damascene king, undismayed, gave himself up to drinking and revelry. Ahab was under religious influences. The battle took place; the Syrians were defeated, and their king effected his retreat with difficulty. The subsequent operations of the Damascenes, under their king, have already been stated [BENHADAD]. Hazael, the successor of Benhadad, unwilling to give up hope of being master of Ramoth-Gilead, was attacked by the united forces of Judah and Israel, whom he vanquished, wounding Joram (2 Kings viii. 28); and, at a later period, under Jehu (2 Kings x. 32), laid waste a large portion of the Israelitish kingdom, and 'threshed Gilead with threshing instruments of iron' (Amos i. 3). Determined on revenge (2 Kings xii. 17), Hazael marched to Jerusalem, and was bought off by king Jehoash by a most costly sacrifice. He, however, took the kingdom of Israel (2 Kings xiii. 3), and, though he treated the people oppressively, he was able to hand them over in subjection to his son, Benhadad III., who was thrice beaten (2 Kings xiii. 24) by the Israelitish king Jehoash, and deprived of all his conquests. Jeroboam II. (2 Kings xiv. 28) pursued these advantages, and captured Damascus itself. Subsequently a junction took place between Israel and Damascus, when (2 Kings xv. 37) Rezin, king of the latter, and Pekah, king of the former, entered into a confederacy, and undertook an expedition against Ahaz, king of Judah (Isa. vii. 1). They succeeded in 'recovering Elath to Syria,' but could not prevail against Jerusalem (2 Kings xvi. 6). Ahaz, how-

245. [Damascus.]

ever, urged by necessity, applied for aid to Tiglath-pileser, king of Assyria, who, being bribed by a munificent present, fell on Damascus, took it, carried the people of it captive to Kir (on the river Kur), slew Rezin, and united the Damascene territory with his own kingdom (2 Kings xvi. 9; Isa. viii. 4; x. 9; xvii. 1). Damascus after this fell under the power of the Babylonians and Persians, from whom it was taken by Alexander the Great, as one consequence of his victory at Issus (Arrian, *Exped. Alex.* ii. 11, 15; Curt. iii. 12). Then it made a part of the kingdom of the Seleucidæ, from whom it passed into the hands of the Romans (Flor. iii. 5; Diod. Sic. xxxix. 30). In the time of the Apostle Paul it belonged to the dependent kingdom of the Arabian prince Aretas. At a later period it was reckoned among the cities of Decapolis (Plin. *Hist. Nat.* v. 16); then it was added to the province of Phœnice (Amm. Marc. xiv. 8; Tertull. *Contra Marc.* iii. 13); and at last made a part of the province of Phœnicia Libanesia (Hierocles, *Synec.*). From the time of Hadrian it bore the honorary title of Metropolis, without enjoying the rights of a metropolis (Wesseling, *ad Hierocl.* p. 717). Under the Greek emperors of Constantinople Damascus was the most celebrated city of the East, remarkable for its wealth, luxury, magnificence, and its numerous Christian population. A great era in its history is its conquest by the Saracens, of which an account may be found in the Arabic historian Alwakidi (Ockley's *Hist. of the Saracens*). The war was begun about A.D. 633, by the celebrated Abubeker, the successor of Mohammed; and ended in the capture of the city, and the substitution of Islamism for Christianity. It then became the capital of the whole Mussulman world, till the Caliphate was removed from it to Bagdad. The city continued under the sway of the caliphs of Bagdad, till it came into the hands of the Turks, and was held and rendered famous by Noureddin and Saladin. In 1301 Timour the Tartar captured the city and

barbarously treated its inhabitants. From Josephus (*De Bell. Jud.* i. 2; xxv. 2; xx. 2; comp. Acts ix. 2) it appears that its population contained great numbers of Jews.

Damascus is famous in the first age of Christianity for the conversion and first preaching of the Apostle Paul (Acts ix. 3, 20; Gal. i. 12). The consequences might have been fatal to the Apostle, for his life was endangered in this fanatical city. 'In Damascus the governor under Aretas, the king, kept the city of the Damascenes with a garrison, desirous to apprehend me; and through a window in a basket was I let down by the wall, and escaped his hands' (2 Cor. xi. 32-3). (Walch, *Antiquitates Damas. illustratæ*, 1757; Phot. *Bib.* p. 348; Burckhardt, *Arabia*, p. 194; Lamartine, *Travels in the East;* Addison's *Damascus and Palmyra*, ii. 100; Bowring's *Report on Syria.*)—J. R. B.

DAN (דָּן, *a judge;* Sept. Δάν), son of Jacob by the concubine Bilhah (Gen. xxx. 3; xxxv. 25), and founder of one of the tribes of Israel. Dan had but one son, called Hushim (Gen. xlvi. 23): notwithstanding which, when the Israelites came out of Egypt, this tribe contained 62,700 adult males (Num. i. 39), which made it the second of the tribes in number, Judah only being above it. Its numbers were less affected in the desert than those of many other tribes; for at the census, before entering Canaan, it mustered 64,400 (Num. xxvi. 43), being an increase of 1700, which gave it still the second rank in population. But there is nothing in the history of the tribe corresponding to this eminence in population: the most remarkable circumstance in its history, however, is connected with this fact. The original settlement assigned to the tribe in south-western Palestine being too small for its large population, a body of them went forth to seek a settlement in the remote north, and seized and remained in permanent occupation of the town and district of Laish, the inhabitants of which dwelt in greater security and were more easily conquered than the neighbours of the tribe in its own proper territory (Josh. xix. 47; Judg. i. 34; xviii.). The district regularly allotted to the tribe, although contracted, was very fertile. It had the country of the Philistines on the west, part of Judah with Benjamin on the east, Ephraim on the north, and Simeon on the south. The territory proved inadequate chiefly from the inability of the Danites to expel the Philistines and Amorites, who occupied parts of the land assigned to them. There is no doubt that the territory as allotted, but not possessed, extended to the Mediterranean through the country of the Philistines. Samson was of this tribe, and its proximity to the Philistines explains many circumstances in the history of that hero. It appears from that history that there was an under-current of private and social intercourse between the Philistines and the Danites, notwithstanding the public enmity between Israel and the former (Judg. xiii.—xvi.).

DAN, the town, anciently called LAISH, or LESHEM, mentioned in the preceding article as having been conquered by a warlike colony of Danites, who named it after their tribe. The terms in which the condition of Laish is described, previously to the conquest, indicate that the place belonged to the Sidonians, and that the inhabitants lived quiet and secure, 'after the manner of the Sidonians,' enjoying abundance of all things (Judg. xviii. 7). They seem to have derived their security from the absence of any adverse powers in their neighbourhood, and from confidence in the protection of Sidon, which was, however, too far off to render aid in the case of such a sudden assault as that by which they were overpowered. This distance of Sidon was carefully noted by the Danite spies as a circumstance favourable to the enterprise; and it does not appear that Sidon ever made any effort to dispossess the intruders. Dan afterwards became a chief seat of Jeroboam's idolatry, and one of the golden calves was set up there (1 Kings xii. 28, 29). It was conquered, along with other towns, by the Syrians (1 Kings xv. 20); and the name is familiar from the recurrence of the proverbial expression, 'from Dan to Beersheba,' to denote the extent of the Promised Land (Judg. xx. 1; 1 Sam. iii. 20; xvii. 11). [BEERSHEBA.] In the days of Eusebius, Dan was still a small village, which is placed by him four miles from Paneas, towards Tyre. As this distance corresponds to the position of the fountain at Tel el-Kady, which forms one of the sources of the Jordan, and is doubtless that which is called Dan by Josephus (*Antiq.* i. 10. 2), the situation of the city of Dan could not therefore have been that of Paneas itself, with which it has been in later times confounded. [CÆSAREA PHILIPPI.] There are no longer any ruins near the spring at Tel el-Kady, but at about a quarter of an hour north, Burckhardt noticed ruins of ancient habitations; and the hill which overhangs the fountains appears to have been built upon, though nothing is now visible (Burckhardt, *Syria*, p. 42; Robinson, *Researches*, iii. 351-358).

DANCE. The words in the original, rendered in our translation by this term, denote, properly, to *leap for joy;* and this radical signification, suggesting the idea of abrupt and boisterous gesticulations rather than a series of regular and tasteful movements, seems well to comport with what we may suppose to have been the primitive character of the dance. On the other hand, some writers of great erudition have maintained that no allusions whatever are to be found in the Old Testament history to this kind of bodily exercise; and that in most, if not in all the passages, where, in our version, dancing is mentioned, the etymology of the Hebrew, supported in some places by the strain of the context, seems to point to some kind of musical instrument as being intended by the inspired penmen. Thus, in Exod. xv. 20, where the first notice is taken of dancing, מחלה, coming as it does from חלל, 'to pierce' or 'perforate,' and applied naturally enough as the name of any tube that may be blown by the breath, is, according to them, used to describe some instrument of the pipe or flute class, as conjoined with timbrels; and in this interpretation they are supported by the Arabic and Persian versions. But this word, or some derivatives from the same root, occurs in Exod. xxxii. 19; Judg. xvi. 21, 23; 1 Sam. xviii. 5; Jer. xxxi. 4, 13; where dancing alone can be intended. Moreover, in the Septuagint χορὸς, a dance, is employed in all the passages of the Old Testament just referred to, and in several others; and it is no small collateral proof that

this is the right interpretation, that people in eastern countries are accustomed to mingle the dance with tabrets to this day.

The character of the ancient dance was very different from that of ours, as appears from the conduct of Miriam, who 'took a timbrel in her hand, and all the women went out after her with timbrels and with dances.' Precisely similar is the Oriental dance of the present day, which, accompanied of course with music, is led by the principal person of the company, the rest imitating the steps. The evolutions, as well as the songs, are extemporaneous—not confined to a fixed rule, but varied at the pleasure of the leading dancer; and yet they are generally executed with so much grace, and the time so well kept with the simple notes of the music, that the group of attendants show wonderful address and propriety in following the variations of the leader's feet. The missionary Wolff describes a festival of some Eastern Christians, where one eminent individual, who led the song as well as the dance, conducted through the streets of the city a numerous band of people, who leaped and danced in imitation of the gestures used by him. When the late deputation of the Church of Scotland were on their way through Palestine, their young Arab guides, to relieve the tedium of the journey, sometimes 'commenced a native song and dance; one of them advancing a little before the rest, began the song, dancing forward as he repeated the words; when the rest, following him in regular order, joined in the chorus, keeping time by a simultaneous clapping of hands. They sang several Arabian songs, responding to one another, dancing and clapping their hands.'

At a very early period, dancing was enlisted into the service of religion among the heathen; the dance, enlivened by vocal and instrumental music, was a usual accompaniment in all the processions and festivals of the gods (Strabo, x.); and, indeed, so indispensable was this species of violent merriment, that no ceremonial was considered duly accomplished—no triumph rightly celebrated, without the aid of dancing. The Hebrews, in common with other nations, had their sacred dances, which were performed on their solemn anniversaries, and other occasions of commemorating some special token of the divine goodness and favour, as means of drawing forth, in the liveliest manner, their expressions of joy and thanksgiving. The performers were usually a band of females, who, in cases of public rejoicing, volunteered their services (Exod. xv. 20; Sam. xviii. 6), and who, in the case of religious observances, composed the regular chorus of the temple (Ps. cxlix. 3; cl. 4), although there are not wanting instances of men also joining in the dance on these seasons of religious festivity. Thus David deemed it no way derogatory to his royal dignity to *dance* on the auspicious occasion of the ark being brought up to Jerusalem. The word used to describe his attitude is כרכר, in the reduplicate form, intimating violent efforts of leaping; and, from the apparent impropriety and indecency of a man advanced in life, above all a king, exhibiting such freaks, with no other covering than a linen ephod, many learned men have declared themselves at a loss to account for so strange a spectacle. It was, unquestionably, done as an act of religious homage: and when it is remembered that the ancient Asiatics were accustomed, in many of their religious festivals, to throw off their garments even to perfect nudity, as a symbol sometimes of penitence, sometimes of joy, and that this, together with many other observances that bear the stamp of a remote antiquity, was adopted by Mahomet, who has enjoined the pilgrims of Mecca to encompass the Kaaba, clothed only with the *ihram*, we may perhaps consider the linen *ephod*, which David put on when he threw off his garments and danced before the ark, to be symbolic of the same objects as the *ihram* of the Mahommedans (see Foster's *Mahommedanism Unveiled*). The conduct of David was imitated by the later Jews, and the dance incorporated among their favourite usages as an appropriate close of the joyous occasion of the feast of Tabernacles. 'The members of the Sanhedrim, the rulers of the synagogues, doctors of schools, and all who were eminent for rank or piety, accompanied the sacred music with their voices: and leaped and danced with torches in their hands, for a great part of the night; while the women and common people looked on.' This strange and riotous kind of festivity was kept up till exhaustion and sleep dismissed them to their homes (Buxtorf, *De Synag. Jud.* cap. 21).

From being exclusively, or at least principally, reserved for occasions of religious worship and festivity, dancing came gradually to be practised in common life on any remarkable seasons of mirth and rejoicing (Jer. xxxi. 4; Ps. xxx. 11). In early times, indeed, those who perverted the exercise from a sacred use to purposes of amusement were considered profane and infamous; and hence Job introduces it as a distinguishing feature in the character of the ungodly rich, that they encouraged a taste for dancing in their families (Job xxi. 11). During the classic ages of Greece and Rome society underwent a complete revolution of sentiment on this subject; insomuch that the Grecian poets represent the gods themselves as passionately fond of the diversion (Potter's *Grec. Antiq.* ii. 400), and that not only at Rome, but through all the provinces of the empire, it was a favourite pastime, resorted to not only to enliven feasts, but in the celebration of domestic joy (Luke xv. 25; Matt. xiv. 6). Notwithstanding, however, the strong partiality cherished for this inspiriting amusement, it was considered beneath the dignity of persons of rank and character to practise it. The well-known words of Cicero, that 'no one dances unless he is either drunk or mad,' express the prevailing sense as to the impropriety of respectable individuals taking part in it; and hence the gay circles of Rome and its provinces derived all their entertainment, as is done in the East to this day, from the exhibitions of professional dancers. Under the patronage of the emperors, and of their luxurious tributaries, like Herod, the art was carried to the utmost perfection, the favourite mode being pantomime, which, like that of the modern Almehs, was often of the most licentious description. A story of love was chosen—generally an adventure of the gods—as the plan of the dance, and the address of the performer consisted in representing, by the waving of his hands, the agility of his limbs, and the innumerable attitudes into which he threw himself, all the various passions of love

jealousy, disgust, that sway the human breast. (See at large Lucian's *Treatise on Dancing.*)

Amateur dancing in high life was, as that writer informs us, by no means uncommon in the voluptuous times of the later emperors. But in the age of Herod it was exceedingly rare and almost unheard of; and therefore the condescension of Salome, who volunteered, in honour of the anniversary of that monarch's birthday, to exhibit her handsome person as she led the mazy dance in the saloons of Machærus—for though she was a child at this time, as some suppose (Michaelis, *Introd.*), she was still a princess—was felt to be a compliment that merited the highest reward. The folly and rashness of Herod in giving her an unlimited promise, great as they were, have been equalled and even surpassed by the munificence which many other Eastern monarchs have lavished upon favourite dancers. Shah Abbas (to mention only one anecdote of the kind), having been on a particular occasion extremely gratified with a woman who danced before him, and being at the time much intoxicated, made her a present of a magnificent khan that yielded him a considerable revenue. Next morning his minister reminded him of his extravagant liberality, whereupon, being now cool and ashamed of his folly, he sent for the dancer, and obliged her to be contented with a sum of money (Thevenot's *Trav. in Persia*, p. 100). It is by no means improbable that Herod, too, was flushed with wine; and that it was from fear he should retract his promise, if she delayed till the morning, that Herodias sent *immediately* for the head of the Baptist.

It remains to notice further that the Jewish dance was performed by the sexes separately. There is no evidence from sacred history that the diversion was promiscuously enjoyed, except it might be at the erection of the deified calf, when, in imitation of the Egyptian festival of Apis, all classes of the Hebrews intermingled in the frantic revelry. In the sacred dances, although both sexes seem to have frequently borne a part in the procession or chorus, they remained in distinct and separate companies (Ps. lxviii. 25; Jerem. xxxi. 13)—R. J.

DANIEL (דָּנִיֵּאל, i. e. *God is my judge*), a celebrated prophet in the Chaldæan and Persian period. There are in the Bible two other persons of the same name: a son of David (1 Chron. iii. 1), and a Levite of the race of Ithamar (Ezra viii. 2; Neh. x. 6). The latter has been confounded with the prophet in the apocryphal Addenda to the Septuagint (Dan. xiv. 1, Sept.), where he is called *ἱερεὺς ὄνομα Δανιὴλ υἱὸς* 'Αβδὰ (Hieronym. *Præfat. in Daniel.*).

Daniel was descended from one of the highest families in Judah, if not even of royal blood (Dan. i. 3; comp. Joseph. *Antiq.* x. 10. 1). Jerusalem was thus probably his birth-place, though the passage (Dan. ix. 24) quoted in favour of that opinion, is considered by many commentators as not at all conclusive.

We find the lad Daniel, at the age of twelve or sixteen years, already in Babylon, whither he had been carried together with three other Hebrew youths of rank, Ananiah, Mishael, and Azariah, at the first deportation of the people of Judah in the fourth year of Jehoiakim. He and his companions were obliged to enter the service of the royal court of Babylon, on which occasion he received the Chaldæan name of *Belshatzar* (i. e. *Beli princeps, princeps cui Belus favet*), according to eastern custom when a change takes place in one's condition of life, and more especially if his personal liberty is thereby affected (comp. 2 Kings xxiii. 34; xxiv. 17; Esth. ii. 7; Ezra v. 14).

In this his new career, Daniel received that thorough polish of education which Oriental etiquette renders indispensable in a courtier (comp. iii. 6; Plat. *Alcib.* § 37), and was more especially instructed 'in the writing and speaking Chaldæan' (Dan. i. 4), that is, in the dialect peculiar to the Chaldæans [Chaldee Language]. In this dialect were composed all the writings of the ecclesiastical order, containing the substance of all the wisdom and learning of the time, and in the knowledge of which certainly but few favoured laymen were initiated. That Daniel had distinguished himself, and already at an early period acquired renown for high wisdom, piety, and strict observance of the Mosaic law (comp. Ezek. xiv. 14, 20; xxviii. 3; Dan. i. 8-16), is too evident from passages in the truly authentic Scriptures to require any additional support from the ill-warranted Apocryphal stories concerning the delivery of Susannah by the wisdom of the lad Daniel, etc. A proper opportunity of evincing both the acuteness of his mind, and his religious notions, soon presented itself in the custom of the Eastern courts to entertain the officers attached to them from the royal table (Athenæus, iv. 10. p. 145, ed. Casaub.). Daniel was thus exposed to the temptation of partaking of unclean food, and of participating in the idolatrous ceremonies attendant on heathen banquets. His prudent proceedings, wise bearing, and absolute refusal to comply with such customs, were crowned with the Divine blessing, and had the most splendid results.

After the lapse of the three years fixed for his education, Daniel was attached to the court of Nebuchadnezzar, where, by the Divine aid, he succeeded in interpreting a dream of that prince to his satisfaction, by which means—as Joseph of old in Egypt—he rose into high favour with the king, and was entrusted with two important offices—the governorship of the province of Babylon, and the head-inspectorship of the sacerdotal caste (Dan. ii.).

Considerably later in the reign of Nebuchadnezzar, we find Daniel interpreting another dream of the king's, to the effect that, in punishment of his pride, he was to lose, for a time, his throne, but to be again restored to it after his humiliation had been completed (Dan. iv.). Here he displays not only the most touching anxiety, love, loyalty, and concern for his princely benefactor, but also the energy and solemnity becoming his position, pointing out with vigour and power the only course left for the monarch to pursue for his peace and welfare.

Under the unworthy successors of Nebuchadnezzar, Daniel and his deservings seem to have been forgotten, and he was removed from his high posts. His situation at court appears to have been confined to a very inferior office (comp. Dan. viii. 27); neither is it likely that he should have retained his rank as head inspector of the *order of the magians* in a country where these

were the principal actors in effecting changes in the administration whenever a new succession to the throne took place.

We thus lose sight of Daniel until the first and third year of king Belshazzar (Dan. v. 7, 8), generally understood to have been the last king of Babylon (called by profane writers Nabonnedus), but who—to judge from Dan. v. 11, 13, 18, 22—was, more probably, the son and successor of Nebuchadnezzar, usually called Evil-Merodach, though passing in Daniel by his Chaldæan title and rank. After a reign of two years, this monarch was assassinated by his brother-in-law Neriglissar (Berosus in Joseph. *contra Apion.* i. 20). Shortly before this event Daniel was again restored to the royal favour, and became moral preacher to the king, who overwhelmed him with honours and titles in consequence of his being able to read and solve the meaning of a sentence miraculously displayed, which tended to rouse the conscience of the wicked prince.

Under the same king we see Daniel both alarmed and comforted by two remarkable visions (Dan. vii., viii.), which disclosed to him the future course of events, and the ultimate fate of the most powerful empires of the world, but in particular their relations to the kingdom of God, and its development to the great consummation.

After the conquest of Babylon by the united powers of Media and Persia, Daniel seriously busied himself under the short reign (two years) of Darius the Mede or Cyaxares II. with the affairs of his people and their possible return from exile, the term of which was fast approaching, according to the prophecies of Jeremiah. In deep humility and prostration of spirit, he then prayed to the Almighty, in the name of his people, for forgiveness of their sins, and for the Divine mercy in their behalf: and the answering promises he received far exceeded the tenor of his prayer, for the visions of the Seer were extended to the end of time (Dan. ix.).

In a practical point of view also Daniel appeared at that time a highly-favoured instrument of Jehovah. Occupying, as he did, one of the highest posts of honour in the state, the strictness and scrupulousness with which he fulfilled his official duties could not fail to rouse envy and jealousy in the breasts of his colleagues, who well knew how to win the weak monarch, whom they at last induced to issue a decree imposing certain acts, the performance of which, they well knew, was altogether at variance with the creed of which Daniel was a zealous professor. For his disobedience the prophet suffered the penalty specified in the decree: he was thrown into a den of lions, but was miraculously saved by the mercy of God—a circumstance which enhanced his reputation, and again raised him to the highest posts of honour under Darius and Cyrus (Dan. vi.).

He had, at last, the happiness to see his most ardent wishes accomplished—to behold his people restored to their own land. Though his advanced age would not allow him to be among those who returned to Palestine, yet did he never for a moment cease to occupy his mind and heart with his people and their concerns (Dan. x. 12).

In the third year of Cyrus, he had a series of visions, in which he was informed of the minutest details respecting the future history and sufferings of his nation, to the period of their true redemption through Christ, as also a consolatory notice to himself to proceed calmly and peaceably to the end of his days, and then await patiently the resurrection of the dead at the end of time.

From that period the accounts respecting him are vague, sometimes confused, and even strange; and we hardly need mention the various fables which report his death to have taken place in Palestine, Babylon, or Susa.—H. A. C. H.

DANIEL, BOOK OF. This important and in many respects remarkable book takes its name not only from the principal person in it, but also and chiefly from him as its real author; there being no doubt whatever that, as the book itself testifies, it was composed by Daniel (comp. vii. 1, 28; viii. 2; ix. 2). It occupies, however, but a third rank in the Hebrew canon; not among the *Prophets*, but in the *Hagiographa*, owing, no doubt, to the correct view of the composers of the canon, that Daniel did not exercise his prophetic office in the more restricted and proper sense of the term 'prophecy;' but stood to the theocracy in a different relation from those real prophets whose calling and profession consisted exclusively in declaring the messages they received, and in the communion which they held with God. These latter are termed, in the ancient Hebrew idiom, נביאים, *prophets*, in contradistinction to חוזים, *seers*, who, though they were equally favoured with divine revelations, were nevertheless not prophets by *profession*, a calling that claimed the entire service of a man's whole life.

The book of Daniel divides itself into two parts, *historical* (ch. i.-vi.) and *prophetic* (ch. vii.-xii.), arranged respectively in chronological order. Its object is by no means to give a summary historical account of the period of the exile, or of the life of Daniel himself, since it contains only a few isolated points both as to historical facts and prophetic revelations. But the plan or tendency which so consistently runs through the whole book, is of a far different character; it is to show the extraordinary and wonderful means which the Lord made use of, in a period of the deepest misery, when the theocracy *seemed* dissolved and fast approaching its extinction, to afford assistance to his people, proving to them that he had not entirely forsaken them, and making them sensible of the fact, that His merciful presence still continued to dwell with them, even without the Temple and beyond the Land of Promise. In this way alone was it possible to render the time of punishment also a period of rich blessing. The manifestations of the Lord to that effect consisted, among others, of the wonders recorded in this book, and the glorious prophecies of the seer. The book thus sets forth a series of miraculous tokens, by which God proclaimed amidst the heathen world, and in a period of abject degradation, that Israel was still his people, the nation of his covenant, still marching steadily onward to the goal marked out for them by the Lord.

The wonders related in Daniel (ch. i.-vi.) are thus mostly of a peculiar, prominent, and striking character, and resemble in many respects those performed of old time in Egypt. Their divine tendency was, on the one hand, to lead the heathen power, which proudly fancied itself to be the conqueror of the theocracy, to the acknowledgment that there was an essential difference between the

world and the *kingdom of God*; and, on the other, to impress degenerate and callous Israel with the full conviction, that the power of God was still the same as it was of old in Egypt.

Neither do the prophecies contained in the book (ch. vii.-xii.) bear a less peculiar and striking character. We cannot, indeed, fail to discover in the writer, to a very great extent, a person of vast information, and well-versed in the management of political affairs, these prophecies having for their object—more than any other in the Old Testament—the political vicissitudes of the empires of the world. Nor are we less reminded of Daniel's domicile in Chaldæa, by the colouring imparted to his visions, by their symbols, and more especially by those drawn from beasts (Dan. vii. 8), the grotesque manner in which the figures are put together, and the colossal majesty imprinted on those sketches. All these peculiarities belong to the *individuality* of the prophet himself, which is conspicuous even in the accounts he gives of the revelations imparted to him, though that individuality is then greatly modified by the sanctified, exalted, and glorified state of his mind.

The language of the book is partly Chaldæan (ii. 4; vii. 28) and partly Hebrew. The latter is not unlike that of Ezekiel, though less impure and corrupt, and not so replete with anomalous grammatical forms. The Chaldæan is noways that of the Chaldæans *proper*, but a corrupt vernacular dialect, a mixture of Hebrew and Aramaic, formed during the period of the exile. It resembles mostly the Chaldæan pieces in Ezra, but differs greatly from the dialect of the later Targums.

The style is, even in the prophetic parts, more prosaic than poetical, as Lowth has already observed: 'Totum Danielis Librum e Poeticorum censu excludo.' The historical descriptions are usually very broad and prolix in details; but the prophecies have a more rhetorical character, and their delivery is frequently somewhat abrupt; their style is descriptive, painting with the most lively colours the still fresh impression which the vision has made on the mental eye.

The following are the essential features of the prophetic tenor of the book of Daniel, while the visions in ch. ii. and vii., together with their different symbols, may be considered as embodying the leading notion of the whole. The development of the whole of the heathen power, until the completion and glorification of the kingdom of God, appeared to the prophet in the shape of four powers of the world, each successive power always surpassing the preceding in might and strength, namely, the Babylonian, Medo-Persian, Greek, and Roman. The kingdom of God proves itself conqueror of them all; a power which alone is everlasting, and showing itself in its utmost glorification in the appearance of the Messiah, as Judge and Lord of the world. Until the coming of the Messiah, the people of God have yet to go through a period of heavy trials. That period is particularly described, ch. viii. and xi., in the struggles of the Maccabæan time, illustrative of the last and heaviest combats which the kingdom of God would have to endure. The period until the appearance of the Messiah is a fixed and sacred number: seventy weeks of years (ch. ix.). After the lapse of that period ensues the death of the Messiah; the expiation of the people is realised; true justice is revealed, but Jerusalem and the Temple are in punishment given up to destruction. The true rise from this fall and corruption ensues only at the end of time, in the general resurrection (ch. xii.).

The *unity* of the book has been disputed by several critics, and more especially by Eichhorn and Bertholdt, who conceived it to have been written by more than one author, on account of some contradictions which they thought they had discovered in it, such as in i. 21, compared with x. 1; and in i. 5-18, compared with ii. 1. With regard to the first supposed contradiction, we consider the meaning of i. 21 to be, that Daniel had lived to see the first year of the reign of Cyrus, as a particularly memorable, and, for the exiled people, a very important year. This does by no means exclude the possibility of his having lived still longer than up to that period.

Respecting the second presumed contradiction, the matter in ch. i. 5-18 belongs properly to the *co*-regency of Nebuchadnezzar, which term is there added to his period of government, while in ch. ii. 1 his reign is counted only from the year of his actual accession to the throne. These attempts to disturb the harmony of the work are also discountenanced by the connecting thread which evidently runs through the whole of the book, setting the single parts continually in mutual relation to each other. Indeed, most critics have now given up that hypothesis, and look at the book as a closely connected and complete work in itself.

Much greater is the difference of opinion respecting the *authenticity* of the book. The oldest known opponent of it is the heathen philosopher Porphyry, in the third century of the Christian era. The greater the authority in which the book of Daniel was held at that time by both Jews and Christians in their various controversies, the more was he anxious to dispute that authority, and he did not disdain to devote one whole book (the twelfth)—out of the fifteen which he had composed against the Christians—to that subject alone. He there maintains that the author of the book of Daniel was a Palestine Jew of the time of Antiochus Epiphanes, that he wrote it in Greek, and fraudulently gave to *past* events the form of prophecies. Porphyry has been answered by Eusebius of Cæsarea, Methodius of Tyre, and Apollinaris of Laodicea. But their works, as well as that of Porphyry himself, are lost: and we know the latter only from the numerous quotations and refutations in the Commentary of Jerome.

Porphyry found no successor in his views until the time of the English deists, when Collins attempted to attack the authenticity of Daniel, as was done by Semler in Germany. After this a few critics, such as J. D. Michaelis and Eichhorn, disputed the authenticity of the six first chapters. The learned Swiss, Corrodi, went still farther, and, reviving the views of Porphyry, questioned the genuineness of the *whole* book. The strongest, most elaborate, and erudite attacks against the book, came from the pens of Bertholdt, Bleek, De Wette, Lengerke, and others. But there have also not been wanting voices in its defence, such as those of Lüderwald, Staüdlin, Jahn, Lack, Steudel, Hengstenberg, Hävernick, and others.

The arguments advanced against the genuine character of Daniel are more directed against the *internal* than *external* evidence of the work.

The wonders and prophecies recorded in it are always the foremost stumbling-block, and much objection is made to them. The contents of the historical part is declared to be fictitious and replete with improbabilities—nay, even with historical inaccuracies; such as the sketches regarding the relations of the sacerdotal order, the sages and astrologers (ii. 2; iv. 7; v. 7-15), the mention of Darius the Mede (vi. 1; ix. 1; xi. 1), and the regulations concerning the satraps (iii. 3; vi. 2, &c.).

In the prophetic part, particular objection is taken to the apocalyptic character of the book, by which it differs from all the other books of the Prophets. Not less suspicious, in their eyes, is the circumstance that all the accounts in it relating to very remote future events, and the fate of empires which had not then yet risen into existence, are described in so positive and exact a manner, and with so much circumstantial detail, even to the very *date* of their occurrence. Yet, as this does not extend farther than the time of Antiochus Epiphanes, it will naturally lead to the conclusion of 'vaticinia post eventum.' Other objections against the genuineness of the book are, that Daniel is frequently spoken of in it in high terms of respect and honour (i. 17, 19, sq.; v. 11, sq.; vi. 4; ix. 23; x. 11, &c.); that the language, both Hebrew and Chaldæan, is very corrupt, and that the Greek words occurring in them (iii. 5, 7, 10) naturally betray the book to have been written in a later age, at least the Alexandrian, when Greek words began to be introduced into Asia; that the doctrines in the book, the Angelology (iv. 14; ix. 21; x. 13, 21), Christology (vii. 13, sq.; xii. 1, sq.), the ascetic discipline (i. 8, sq.), also betray a later age; that the book stands in the canon in the Hagiographa, a proof that it had become known only *after* the collection of the Prophets had been completed; a suspicion which is still more strengthened by the circumstance that the name of Daniel is wanting in the book of Sirach, ch. xlix., probably because the book of Daniel did not then exist.

These few objections have been variously met and confuted. They rest, to a great extent, partly on historical errors, partly on the want of a sound exegesis, and, lastly, on the perversion of a few passages in the text. Thus it has turned out that several of the arguments have led to a far different and even opposite result from what was originally meant, namely, to the *defence* of the authenticity of the book. The existence, *ex. gr.*, of a king Darius of the Medians, mentioned in ch. vi., is a thorough historical fact; and the very circumstance that such an insignificant prince, eclipsed as his name was by the splendour of Cyrus, and therefore unnoticed in the fabulous and historical chronicles of Persia, should be known and mentioned in this book, is in itself a proof of the high historical authority of Daniel. Nor does the whole dogmatic tenor of the book speak less in favour of its genuineness, since the dogmatic spirit of the Maccabæan period is essentially different from that which it exhibits, as, *ex. gr.*, in the Christology, which forms the substance and basis of Daniel.

The following are the more important of the arguments which evidence the genuineness of the book.

1. The existence and authority of the book are most decidedly testified by the New Testament. Christ himself refers to it (Matt. xxiv. 15), and gives himself (in virtue of the expression in Dan. vii. 13) the name of *Son of Man;* while the Apostles repeatedly appeal to it as an authority (*ex. gr.*, 1 Cor. vi. 2; 2 Thess. ii. 3; Heb. xi. 33, sq.) To the objection that Christ and the writers of the New Testament are here no *real* authority, inasmuch as they accommodate themselves to the Jewish notions and views, we reply that the genuineness of the book of Daniel is so closely connected with the truth of its contents—in other words, that the *authenticity* of the book is so immediately connected with its *authority*—that it is impossible to doubt the *genuineness*, without suspecting at the same time a wilful fraud and cheat in its contents; so that the *accommodation* in this case to national views would be tantamount to wilfully confirming and sanctioning an unpardonable fraud.

2. The period of the exile would be altogether incomprehensible without the existence of a man like Daniel, exercising great influence upon his own people, and whose return to Palestine was effected by means of his high station in the state, as well as through the peculiar assistance of God with which he was favoured. Without this assumption, it is impossible to explain the continued state of independence of the people of God during that period, or to account for the interest which Cyrus took in their affairs. The exile and its termination are indicative of uncommon acts of God towards highly-gifted and favoured men; and the appearance of such a man as Daniel is described in that book to have been, is an indispensable requisite for the right understanding of this portion of the Jewish history.

3. An important hint of the existence of the book in the time of Alexander is found in Josephus, *Antiq.*, xi. 8, 4, according to which the prophecies of Daniel had been pointed out to that king on his entrance into Jerusalem. It is true that the fact may have been somewhat embellished in its details by Josephus; yet is it historically undeniable that Alexander did bestow great favours on the Jews, a circumstance which is not easily explained without granting the fact recorded by Josephus to be true in the main.

4. The first book of the Maccabees, which is almost contemporary with the events related in it, not only pre-supposes the existence of the book of Daniel, but actually betrays acquaintance with the Alexandrian version of the same (1 Macc. i. 54; comp. Dan. ix. 27; ii. 59; comp. Dan. iii.)—a proof that the book must have been written long before that period.

5. If the book had been written in the Maccabæan period, there would probably have been produced in that period some similar prophetic and apocalyptic productions, composed by Palestine Jews. Of such, however, not the slightest notice can anywhere be found; so that our book—if of the Maccabæan time—thus forms an isolated enigmatic phenomenon in the later Jewish literature.

6. The reception of the book into the canon is also an evidence of its authenticity. In the Maccabæan age the canon had long been completed and closed; but even doubting that point, it is not likely that, at a time when so much scrupulous adherence was shown towards all that was hallowed by time and *old* usage, and when Scriptural literature was already flourishing—it is not probable, we say, that a production then recent should have been raised to the rank of a canonical book.

7. We have an important testimony for the authenticity of the book in Ezekiel xiv. 14, 20; xxviii. 3. Daniel is there represented as an unusual character, as a model of justice and wisdom, to whom had been allotted superior divine insight and revelation. This sketch perfectly agrees with that contained in our book.

8. The book betrays such an intimate acquaintance with Chaldæan manners, customs, history, and religion, as none but a contemporary writer could fairly be supposed to possess. Thus, *ex. gr.*, the description of the Chaldæan magians and their regulations perfectly agrees with the accounts of the classics respecting them. The account of the illness and insanity of Nebuchadnezzar is confirmed by Berosus (in Joseph. *c. Apion.* i. 20). The edict of Darius the Mede (Dan. v.) may be satisfactorily explained from the notions peculiar to the Medo-Persian religion, and the importance attached in it to the king, who was considered as a sort of incarnate deity.

9. The religious views, the ardent belief in the Messiah, the purity of that belief, the absence of all the notions and ceremonial practices of later Judaism, &c., the agreement of the book in these respects with the genuine prophetic books, and more especially with the prophets in and after the exile,—all this testifies to the genuineness of Daniel.

10. The linguistic character of the book is most decisive for its authenticity. In the first instance, the language in it, by turns Hebrew and Aramæan, is particularly remarkable. In that respect, the book bears a close analogy to that of Ezra. The author must certainly have been equally conversant with both languages—an attainment exactly suited to a Hebrew living in the exile, but not in the least so to an author in the Maccabæan age, when the Hebrew had long since ceased to be a living language, and had been supplanted by the Aramæan vernacular dialect. The Hebrew in Daniel bears, moreover, a very great affinity to that in the other later books of the Old Testament; and has, in particular, idioms in common with Ezekiel. The Aramaic, also, in the book differs materially from the prevailing dialect of the later Chaldæan paraphrastic versions of the Old Testament, and has much more relation to the idiom of the book of Ezra.

With regard to the Old Versions of the book of Daniel, we must in the first place observe that there is not extant, or even known ever to have existed, any Chaldæan paraphrase (Targum) of Daniel, any more than of Ezra. The reason of this lies, no doubt, in the scrupulosity of the later Jews, who believed that the Chaldæan version of the two books might afterwards easily be confounded with the original texts, and thus prove injurious to the pure preservation of the latter. There is something peculiar and remarkable in the Alexandrian version of the canonical book of Daniel. Not only has it taken liberties with regard to single expressions and sentences, but has actually dared to re-model the text altogether in ch. iii-vi., either by numerous additions (as iii. 24, sq., the prayer of Azariah; iii. 51, sq., the song of the Three Children), or by omissions and deviations. There are, besides, two great supplements to that version—the story of Susannah (xiii.), and of Bel and the Dragon in Babel (xiv.). Both apocryphal stories were originally written in Greek; a conclusion drawn already by Porphyry from the quibbles in xiii. 54, 55, 58, 59, who at the same time derided the Christians for considering those stories as genuine writings of Daniel. The authenticity of the two stories was, however, already before him questioned by the fathers of the church; and a very interesting discussion took place between Origen and Julius Africanus regarding the authenticity of the story of Susannah. Jerome condemns the two stories in plain terms as fables, and as additions not belonging to the Hebrew text. Some erroneously assume that, besides our canonical text, there also existed a sort of critical revision of the former in the Chaldæan language, which the Seventy had consulted in their translation. But the mistakes in the translation, which are brought forward in favour of that view, cannot stand a strict criticism, while the above-named peculiarities may be satisfactorily explained from the character of that translation itself. It plainly shows that the writers had endeavoured themselves to furnish a collection of legends, and a peculiar re-cast of the book, in accordance with the spirit of the age and the taste of Judaism then prevailing at Alexandria. The wonderful character of the book, and the many obscure and enigmatic accounts in it, were the rocks on which the fanciful, speculative, and refining minds of the Alexandrians ran foul. No book was ever more favourable to the intermixture of legends, disfigurations, and misconceptions of all sorts, than Daniel; while the period of the exile was generally a favourite topic for the fantastical embellishments of the Alexandrian Jews. In like manner may also be explained the mutilations which the books of Esther and Jeremiah have received at the hands of the Alexandrians, to whom hermeneutic scruples were of but little moment. The more important the book of Daniel was to the Christian church, and the more arbitrary the re-modelled Sept. version of it was, the more conceivable is it why in the old church the version of Theodotion became more general than that of the Sept. It is true that some of the fathers still made use of the Alexandrine version; but, in the time of Jerome, Theodotion was already read in nearly all the churches; and that this custom had been introduced long before him is evident from the circumstance that Jerome was ignorant of the historical principles by which the church was guided in adopting that version. For a long time it was believed that the version of the Seventy had been lost, until it was discovered at Rome, in the latter half of the last century, in the codex Chisianus. It was published at Rome, 1772, in folio, from the MS. copy of Blanchini, with a translation by P. de Magistris, which edition is, however, very defective and incorrect, though it was afterwards repeatedly republished. The version of Theodotion, generally

published together with that of the Septuagint, of which it is a revision, is upon the whole literal and correct. In the present copies of Theodotion, however, are already found the apocryphal interpolations and additions of the Sept. This is owing to the fact that Theodotion's version has in later times been re-modelled, interpolated, and falsified after that of the Seventy, so that it would now be altogether an idle task to attempt to restore the original text of Theodotion. A very useful guide for the criticism of the Greek versions, is the Syriac Hexaplarian version, published by Buggati, at Milan, in 1788. The Arabic Polyglott version is an offspring of Theodotion's, which it follows with literal exactness.

The Syriac version in the Peschito does some good service in explaining the words in Daniel, but is, nevertheless, not free from gross mistakes. The apocryphal parts it has copied from the later interpolated Theodotion. The Vulgate also has these additions translated after Theodotion.

The most important commentators on Daniel are, among the fathers, Ephræm Syrus, Jerome, Theodoret; among the rabbins, Jarchi, Kimchi, Abenezra, Joseph Jacchiades; among the Protestant theologians, Melancthon, Calvin, Martin Geier, de Dieu, Venema, Chr. Bened. Michaelis, J. D. Michaelis. In more recent times, critical works on Daniel have appeared by Bertholdt (1806), Rosenmüller (1832), Hävernick (1832), Lengerke (1835), Maurer (1836). In English there are many works on the prophecies and visions of Daniel, but those which take the character of commentaries are, the *Six-fold Commentary* by Willet (1610); the *Translation and Commentary* by Hugh Broughton (1611); the *Improved Version* by Wintle (1807).—H. A. C. H.

DANIEL, Apocryphal Addenda to [Deutero-Canonical]. In the version of the Seventy, and that of Theodotion, are found some considerable additions to the book of Daniel which are wanting in the Hebrew canon. These are,

1. The Prayer of Azarias, &c. (Dan. iii. 24-51);
2. The Song of the Three Children (Dan. iii. 52-90, *i. e.* according to Robert Stephen's division into verses, which has been adopted into the Latin Vulgate). [Verses].
3. The History of Susanna (Dan. xiii.).
4. The Narrative of Bel and the Dragon (Dan. xiv.).

These are in our Authorized English Bible printed separately, and numbered accordingly, the Prayer of Azarias and the Song of the Three Children making sixty-eight verses.

St. Jerome, who translated these together with the canonical parts of the book of Daniel from the Greek version of Theodotion, observes: 'Daniel, as received among the Hebrews, contains neither the History of Susanna, nor the Hymn of the Three Children, nor the Fables of Bel and the Dragon, all of which, as they are dispersed throughout the world, we have added, lest to the ignorant we should seem to have cut off a considerable part of the book, transfixing them at the same time with a dagger (veru anteposito, easque jugulante).'*

Jerome gives us the following account of these additions to the Hebrew text:—'We ought to know that Porphyry, attacking the authenticity of the book of Daniel, maintains that it is a forgery unknown to the Hebrews, and entirely of Greek origin, inasmuch as in the story of Susannah (fabulâ Susannæ), Daniel says to the elders, in allusion to the word σχῖνος (*lentiscus* or a mastich tree), σχίσει σε, &c., and to the word πρῖνον (*ilex*, a holm), πρίσαι σε, which etymological allusion is Greek and not Hebrew. To whom both Eusebius and Apollinarius, with one voice, replied, that the fables of Bel and the Dragon are not contained in the Hebrew, but that they are part of the prophecy of Habakkuk, son of Joshua, of the tribe of Levi, as is stated in the Septuagint Version in the title to this same fable of Bel.' . . . 'Therefore, when I translated Daniel many years ago, I marked these visions with an obelus, in order to intimate that they are not in the Hebrew, and I am not a little surprised that certain fault-finders are offended with me, as if I had curtailed the book, for both Origen, Eusebius, Apollinarius, and other churchmen and Greek doctors, confess, as I have said, that these visions are not in the Hebrew.' And again—'I heard one of the Jewish teachers, deriding the history of Susannah, and asserting it to be the fable of some Greek, make the same objection which was made to Origen by Africanus, namely, that the etymological paronomasia between σχῖνος and σχίσαι, πρῖνος and πρίσαι, was derived from the Greek language. The objection may be rendered intelligible to those acquainted only with the Latin language, by supposing that from the answer of one elder *under an ilex tree* (sub *ilice*), Daniel had taken occasion to say to him, *illico* pereas, and that to the answer of the others *under a lentisk-tree* (sub *lentisco*), the reply had been, *in lente* te comminuat angelus, or, non *lente* pereas, or *lentus*, id est flexibilis, ducaris ad mortem.'

Eusebius and the others who replied to Porphyry, maintained that Daniel the prophet was a different person from the Daniel of the Seventy, which commences with the words, 'There was a certain priest, named Daniel, son of Abdias, who ate at the table of the king of Babylon.'

The other objections made by the Jewish teacher to St. Jerome consisted in his ridiculing the idea of the three youths in the fiery furnace having leisure to compose a metrical hymn; in asking what miracle or mark of inspiration it was in Daniel to kill a serpent with a cake of pitch, or to detect the frauds of the priests of Bel, such sagacity being rather the effect of common prudence than of a prophetic spirit. But his chief objection referred to the idea of Habakkuk (ver. 36) being carried by an angel through the air to Babylon, with regard to which he challenged him to show a similar miracle recorded in the Scriptures; and when a young man present adduced the case of Ezekiel, he at once pointed out that this is said to have taken place in the *spirit;* and Jerome observes that he did not venture to refer to St. Paul, who would not say of himself whether he was rapt up in the spirit or in the body. This Jew endeavoured to maintain by such arguments the apocryphal character of these portions of Daniel. Jerome further observes that the history of Susannah is considered

* This Latin phrase is translated by the American editors of Jahn's *Introduction* thus: 'but we have given the precedence in order, to that part which is true, and evinces the falsity of these.' They evidently mistook the word *veru*, an obelisk or dagger, [†] for *vero*.

by nearly all the Hebrews as a fable; and that it is not read in the synagogues: for who, say they, could believe that captives had the power of starving their princes and judges? (*Præf. ad Danielem*).

The subject of the Prayer of Azarias, and of the Song of the three youths, Azarias, Ananias, and Misael (the Hebrew names of Shadrach, Meshach, and Abed-nego), consists in a petition for deliverance from the furnace, and a hymn of thanksgiving, on the part of the young men, for their preservation in the midst of the flames. De Wette (*Lehrbuch*) conceives that the Prayer and the Hymn betray marks of two different authors (Dan. iii. 38; comp. with 53, 55, 84, 85, Stephen's *Division*), and that the latter has the appearance of being written with a liturgical object. Certain it is that, from a very early period, it formed part of the church service (see Rufinus, *in Symbol. Apost.*, who observes that this hymn was then sung throughout the whole church); and Athanasius (*De virginitate*); it is one of the canticles still sung on all festivals in the Roman, and retained in the daily service of the Anglican church. In its metrical arrangement it resembles some of the ancient Hebrew compositions. De Wette adduces (loc. cit.) several proofs from the style to show that it had a Chaldee original, and had undergone the labours of various hands. It is maintained by those who contend for the divine authority of this Hymn that the context requires its insertion, as without it there would be an evident hiatus in the narrative (Dan. iii. 23). 'Then these men, Shadrach, Meshach, and Abed-nego, fell down bound into the midst of the burning fiery furnace,' after which, we find immediately (ver. 24, Heb.) 'then Nebuchadnezzar was astonished,' &c. The cause of this astonishment is said to be supplied by the Greek translation,—'And they walked in the midst of the fire praising God, and blessing the Lord (ver. 1, Auth. Vers. Apocr.) . . . but the angel of the Lord came down into the oven,' &c. (ver. 27). But this addition seems by no means necessary in order to account for Nebuchadnezzar's astonishment, as the cause of it is given in Daniel, ver. 92 (ver. 25 in the Heb. and Auth. Vers.).

The *History of Susanna* is probably a moral parable, founded perhaps on some fact, and affording a beautiful lesson of chastity.

The object of the Jewish author of the history of the destruction of *Bel and the Dragon* was, according to Jahn, 'to warn against the sin of idolatry some of his brethren, who had embraced Egyptian superstitions. The book was, therefore, well adapted to the time, and shows that philosophy was not sufficient to keep men from apostatising into the most absurd and degrading superstitions.' The time of the writing Jahn ascribes to the age of the Ptolemies, when serpents were still worshipped at Thebes.

Among the difficulties attending these Deutero-canonical portions of Daniel, Jahn enumerates the denominating Daniel a priest (xiv. 1), which he conceives to be a confounding of Daniel the prophet with Daniel the priest (Ezra viii. 2; Neh. x. 7); the order of the king to destroy the idol of Bel, and the assertion that serpents were worshipped at Babylon; but he conceives all these difficulties to be removed by regarding the whole as a parable, pointing out the vanity of idols, and the impostures of the priests. We are informed by Herodotus that the temple of Bel was destroyed by Xerxes.

De Wette (*Lehrbuch*), while he points out some Hebraisms in Susannah, considers the etymological allusions already noticed as decisive of its having been originally written in Greek. Bel and the Dragon has no marks whatever of any other than a Greek original. It is no doubt remarkable that we should have a version of the deutero-canonical as well as of the canonical portions of Daniel, from Theodotion as well as from the Seventy. This is accounted for by supposing that Theodotion only altered and corrected the version of the Seventy in these parts. The discrepancies are very great between these two versions, so much so, as almost in some instances to give the appearance of a different narration. It is well known that so early as the second century the Septuagint version of Daniel was superseded by that of Theodotion, and that it was supposed the former had been lost, until it was discovered in Rome, and published in 1772. De Wette considers the deutero-canonical portions to be interpolations in Theodotion's translation. These additions are also found in the Syriac and old Latin versions.

Professor Alber of Pesth (who contends against Jahn for the historic truth of these narratives), in reference to the term *fables* bestowed by Jerome on some of the deutero-canonical portions of the book of Daniel, endeavours to maintain, from the fact of Jerome having used the word *fabula* (*a fando*) of a true narrative, 'Tibi fabulam referam, quæ infantiæ meæ temporibus accidit;' that he employs it here in the same sense; but it is evident from the whole context (in which he had been already speaking of *apocryphal fables*), that Jerome, who also applies these Greek additions to the book of Daniel, contrasts them with the authority of the canonical Scriptures, 'nec se debere respondere Porphyrio, pro his quæ nullam Scripturæ sacræ auctoritatem habeant.' (*Præf. ad Danielem.*) Jerome, however, observes, that with a due regard to the order of time, Theodotion had placed the history of Susannah at the head of the book of Daniel, and it is thus placed in the *Cod. Alex.*, &c.

Bel and the Dragon is read in the Roman office on Ash-Wednesday, and in the Church of England on the 23rd of November. Susanna is read in the Anglican Church on the 22nd of November, and in the Roman on the vigil of the fourth Sunday in Lent.

We shall conclude with the following observation of Erasmus. 'It is astonishing that what Jerome stabbed with his dagger is now everywhere read and sung in the churches; nay, we read, without any mark of distinction, what Jerome did not fear to call a fable, the history of Bel and the Dragon, and which he would not have added, had he not been apprehensive of seeming to have cut off a considerable portion of the sacred volume. But to whom did he fear to seem to do so? To *the ignorant*, as he himself observes. Of so much more weight to the ignorant multitude is custom, than the judgment of the learned!' (*Schol. super Præf. Hieron. in Daniel.*) And again, 'Whether the church receives these books

with the same authority as the others, the spirit of the church knoweth.' (*De Symbol. et Decalog.*) W. W.

DAR (דַּר). This word occurs in Esth. i. 6, as the name of one of the stones in the pavement of the magnificent hall in which Ahasuerus feasted the princes of his empire. This would suggest that it must have denoted a kind of marble. Some take it to signify Parian marble, others white marble; but nothing certain is known about it. In Arabic, the word *dar* signifies a large pearl. Now pearls were certainly employed by the ancients in decorating the walls of apartments in royal palaces; but that pearls were also used in the pavements of even regal dining-rooms is improbable in itself, and unsupported by any known example. The Septuagint refers the Hebrew word to a stone resembling pearls (πιννίνου λίθου); by which, as J. D. Michaelis conjectures, it intends to denote the *Alabastrites* of Pliny (*Hist. Nat.* xxxvi. 7, 8), which is a kind of alabaster with the gloss of mother-of-pearl [ALABASTER].

DARCMONIM. [ADARCONIM.]

DARICS. [ADARCONIM.]

DARIUS, or rather DARJAVESH (דָּרְיָוֶשׁ), is the name under which three Medo-Persian kings are mentioned in the Old Testament. The original form of the name, to which the Hebrew and Greek words are only approximations, has been read by Grotefend, in the cuneiform inscriptions of Persepolis, as Darheush, or Darjeush (Heeren's *Ideen*, i. 2. p. 350). Herodotus assigns to the name the sense of ἐρξίης, or, according to another reading, ἐρξείης (vi. 98); the former meaning *coercitor*, the latter *man of great achievements*. The former accords with *holding fast*, which is the sense of Dārā, the modern Persian name of Darius.

The first Darius is 'Darjavesh, the son of Achashverosh, of the seed of the Medes,' in the book of Daniel (ix. 1). Much difference of opinion has prevailed as to the person here intended; but a strict attention to what is either actually expressed in, or fairly deduced from, the terms used in that prophet, tends to narrow the field for conjecture very considerably, if it does not decide the question. It appears, namely, from the passages in ch. v. 30, 31; vi. 28, that Darjavesh, the Mede, obtained the dominion over Babylon on the death of Belshazzar, who was the last Chaldæan king, and that he was the immediate predecessor of Koresh (Cyrus) in the sovereignty. The historical juncture here defined belongs, therefore, to the period when the Medo-Persian army, led by Cyrus, took Babylon (A.D. 538); and Darjavesh, the Mede, must denote the first king of a foreign dynasty, who assumed the dominion over the Babylonian empire, before Cyrus. These indications all concur in the person of Cyaxares the Second, the son and successor of Astyages [AHASUERUS], and the immediate predecessor of Cyrus. It may be objected to this view that Herodotus, Ctesias, and other pagan historians who perhaps chiefly rely on their authority, make no mention of any such person. But, it may be answered, Xenophon states that Astyages did have a son of that name who succeeded him; by describing him as a prince given up to sensuality, he explains how he came to surrender all authority so entirely into the hands of his enterprising son-in-law and nephew Cyrus, that his reign was naturally sunk in that of his distinguished successor; and he dates the commencement of the reign of Cyrus from the death of this Cyaxares (*Cyrop.* i. 5; viii, 7). Moreover, a passage in Æschylus (*Persæ*, 763-5), seems to bear an obscure but intelligible testimony to the same account. Josephus also, when speaking of the same person, whom he calls Darius, adds, 'He was the son of Astyages, but was known to the Greeks by another name' (*Antiq.* x. 11). Lastly, an important chronological difficulty is best adjusted by assuming the existence and reign of this Cyaxares, as is shown in Clinton's *Fasti Hellenici*, p. 301, sq. Bertholdt has written a satisfactory 'Excurs über den Darius Medus' in his *Commentary on Daniel*.

The second 'Darjavesh king of Persia' is mentioned in the book of Ezra (iv.-vii.) in Haggai, and in Zechariah, as the king who, in the second year of his reign, effected the execution of those decrees of Cyrus which granted the Jews the liberty to rebuild the temple, the fulfilment of which had been obstructed by the malicious representations which their enemies had made to the immediate successors of Cyrus. It is agreed that this prince was Darius Hystaspis, who succeeded the usurper Smerdis B.C. 521, and reigned thirty-six years. For some arguments to show that he is not mentioned in the Old Testament by any other name than that of Darjavesh, see the article AHASUERUS.

The third, 'Darjavesh the Persian,' occurs in Neh. xii. 22, in a passage which merely states that the succession of priests was registered up to his reign. The question as to the person here intended bears chiefly on the authorship of the passage. It may be briefly stated thus:—If, as is more commonly believed, this king be Darius Nothus, who came to the throne (B.C. 423), and reigned nineteen years, we must (assuming that the Jaddua here mentioned is the high-priest who went out to meet Alexander the Great on his entry into Jerusalem; Josephus, *Antiq.* xi. 8) conceive, either that Jaddua reached an age exceeding a century—for so long he must have lived, if he was already high-priest in the reign of Darius Nothus, and saw Alexander's entry; or that the Jaddua of Nehemiah and of Josephus are not the same person. Carpzov has tried to show, from this very chapter, that the Jaddua of ver. 22 was a Levite, and not the high-priest (*Introduct. ad Libr. Vet. Test.* p. 347). If, on the other hand, this king be Darius Codomannus, who came to the throne B.C. 336, and reigned four years, then we must either assume that Nehemiah himself attained the age of 130 years at least, or that this passage is an interpolation by a later hand (Bertholdt, *Einleit.* iii. 1031).

Darius Codomannus is evidently the Persian king alluded to in 1 Macc. i. 1.—J. N.

DARKNESS. In the Gospels of Matthew (xxvii. 45) and Luke (xxiii. 44) we read that, while Jesus hung upon the cross, "from the sixth hour there was darkness over all the land unto the ninth hour." Most of the ancient commentators believed that this darkness extended to the whole world. But their arguments are now seldom regarded as satisfactory, and their proofs

even less so. Of the latter the strongest is the mention of an eclipse of the sun, which is referred to this time by Phlegon Trallianus, and, after him, by Thallus, ap. Africanum. But even an eclipse of the sun could not be visible to the whole world; and neither of these writers names the place of the eclipse. Some think it was Rome; but it is impossible that an eclipse could have happened from the sixth to the ninth hour *both* at Rome and Jerusalem. It is, therefore, highly probable that the statement of Phlegon, which in the course of time has come to be quoted as independent authority, was taken from the relation of the Christians or from the Scriptures. That the darkness could not have proceeded from an eclipse of the sun is further placed beyond all doubt by the fact that, it being then the time of the Passover, the moon was at the full. This darkness may therefore be ascribed to an extraordinary and preternatural obscuration of the solar light, which might precede and accompany the earthquake which took place on the same occasion. For it has been noticed that often before an earthquake such a mist arises from sulphureous vapours as to occasion a darkness almost nocturnal (see the authors cited in Kuinoel *ad Matt.* xxiv. 29, and compare Joel iii. 3; Rev. vi. 12, sq.). Such a darkness might extend over Judæa, or that division of Palestine in which Jerusalem stood, to which the best authorities agree that here, as in some other places, it is necessary to limit the phrase *πᾶσαν τὴν γῆν*, rendered 'all the land.'

Darkness is often used symbolically in the Scriptures as opposed to light, which is the symbol of joy and safety, to express misery and adversity (Job xviii. 6; Ps. cvii. 10; cxliii. 3; Isa. viii. 22; ix. 1; lix. 9, 10; Ezek. xxx. 18; xxxii. 7, 8; xxxiv. 12). 'He . . that maketh the morning darkness,' in Amos iv. 13, is supposed to be an allusion to the dense black clouds and mists attending earthquakes. 'The day of darkness,' in Joel ii. 2, alludes to the obscurity occasioned by the flight of locusts in compact masses [Locust]. In Ezek. viii. 12, darkness is described as the accompaniment of idolatrous rites. Darkness of the sun, moon, and stars is used figuratively to denote a general darkness or deficiency in the government or body politic (Isa. xiii. 10; Ezek. xxxii. 7; Joel ii. 10-31). In Eph. v. 11, the expression 'works of darkness' is applied to the heathen mysteries, on account of the impure actions which the initiated performed in them. 'Outer darkness' in Matt. viii. 12, and elsewhere, refers to the darkness outside, in the streets or open country, as contrasted with the blaze of cheerful light in the house, especially when a convivial party is held in the night time. And it may be observed that the streets in the East are utterly dark after nightfall, there being no shops with lighted windows, nor even public or private lamps to impart to them the light and cheerfulness to which we are accustomed. This gives the more force to the contrast of the 'outer darkness' with the inner light.

Darkness is used to represent the state of the dead (Job x. 21; xvii. 13). It is also employed as the proper and significant emblem of ignorance (Isa. ix. 2; lx. 2; Matt. vi. 23; John iii. 9; 2 Cor. iv. 1-6).

DAROM (דָּרוֹם). This word means 'the south,' and as a proper name is usually understood to be applied to the southernmost part of Judæa, in Job xxxvii. 17; Deut. xxxiii. 23; Eccles. i. 6; Ezek. xxi. 2; xl. 24. Hence the name of 'Daroma' is given by Eusebius and Jerome to the region which they describe as extending about twenty miles from Eleutheropolis on the way towards Arabia Petræa, and from east to west as far as from the Dead Sea to Gerara and Beersheba. A little to the south of Gaza there is now a spot called Babed-Darom, a name probably derived from the fortress Darom, celebrated in the time of the Crusades. That fortress was built on the ruins of a Greek convent of the same name, which, being traced so far back, may well be identified with Darom as the ancient name of this territory.

DATES. [Palm Tree.]

DATHAN (דָּתָן, *fontanus;* Sept. Δαθάν), one of the chiefs of Reuben who joined Korah in the revolt against the authority of Moses and Aaron (Num. xvi. 1) [Aaron].

DAUGHTER. In the Scriptures the word daughter is used in a variety of senses, some of which are unknown to our own language, or have only become known through familiarity with Scriptural forms of speech. This amounts to saying that the Hebrew word בת *bath*, has more extended applications than our word *daughter*. Besides its usual and proper sense of—1. A daughter sent or adopted, we find it used to designate—2. A uterine sister, niece, or *any* female descendant (Gen. xx. 12; xxiv. 48; xxviii. 6; xxxvi. 2. Num. xxv. 1; Deut. xxiii. 17).—3. Women, as natives, residents, or professing the religion of certain places, as 'the daughter of Zion' (Isa. iii. 16); 'daughters of the Philistines' (2 Sam. i. 20); 'daughter of a strange God' (Mal. ii. 11); 'daughters of men,' *i. e.* carnal women (Gen. vi. 2); &c.—4. Metaphorically, small towns are called daughters of neighbouring large cities—metropoles, or mother cities—to which they belonged, or from which they were derived, as 'Heshbon and all the daughters [Auth. Vers. *villages*] thereof' (Num. xxi. 25); so Tyre is called the daughter of Sidon (Isa. xxii. 12), as having been originally a colony from thence; and hence also the town of Abel is called 'a mother in Israel' (2 Sam. xx. 19); and Gath is in one place (comp. 2 Sam. vii. 1; 1 Chron. xviii. 1) called Gath-Ammah, or Gath the *mother* town, to distinguish it from its own dependencies, or from another place called Gath. See other instances in Num. xxi. 32; Judg. xi. 26; Josh. xv. 45, &c.—5. The people collectively of any place, the name of which is given; as 'the daughter (*i. e.* the people) of Jerusalem hath shaken her head at thee' (Isa. xxxvii. 22; see also Ps. xlv. 13; cxxxvii. 8; Isa. x. 30; Jer. xlvi. 19; Lam. iv. 22; Zech. ix. 9). This metaphor is illustrated by the almost universal custom of representing towns under the figure of a woman.—6. The word 'daughter' followed by a numeral, indicates a woman of the age indicated by the numeral, as when Sarah (in the original) is called 'the daughter of ninety years' (Gen. xvii. 17).—7. The word 'daughter' is also applied to the *produce* of animals, trees, or plants. Thus, 'daughter of the she-ostrich' (supposed) for, 'female ostrich'

(Lev. xi. 16); Joseph is called 'a fruitful bough whose daughters (branches) run over the wall,' (Gen. xlix. 22).

The significations of the word 'daughter' in its scriptural use might be more minutely distinguished; but they may all be referred to one or other of these heads.

Respecting the condition of daughters in families, see art. WOMEN and MARRIAGE.

DAVID (דָּוִד; Chron. דָּוִיד; Sept. Δαυίδ; New Test. Δαβίδ. The word probably means *beloved:* Gesenius). The reign of David is the great critical era in the history of the Hebrews. It decided that they were to have for nearly five centuries a national monarchy, a fixed line of priesthood, and a solemn religious worship by music and psalms of exquisite beauty; it finally separated Israel from the surrounding heathen, and gave room for producing those noble monuments of sacred writ, to the influence of which over the whole world no end can be seen. His predecessor, Saul, had many successes against the Philistines, but it is clear that he made little impression on their real power; for he died fighting against them, not on their own border, but at the opposite side of his kingdom, in Mount Gilboa. As for all the other 'enemies on every side'—Moabites, Ammonites, Edomites, and the kings of Zobah,—however much he may have 'vexed them' (1 Sam. xiv. 47), they, as well as the Amalekites, remained unsubdued, if weakened. The real work of establishing Israel as lord over the whole soil of Canaan was left for David.

Ample as are at first sight the materials for his history, a closer examination shows that great judgment and caution are needed in the use of them. His battle with Goliath, it is well known, involves difficulties of an embarrassing kind. In fact, it represents Saul and Abner as unacquainted with the person of David (1 Sam. xvii. 55-58), while the preceding chapter makes David the favourite attendant and musician of Saul. The Vatican Sept. employs the bold remedy of cutting out from ch. xvii. the twenty verses, 12-31, and the last four, 55-58, as well as the five first verses of the next chapter. But even so, David's unacquaintance with arms and preference of the sling to the sword and spear, which remains in vers. 33-40, is in conflict with ch. xvi. 18, which represents him as 'a mighty valiant man, and a man of war,' and Saul's 'armour-bearer' (ver. 21). It is, moreover, morally impossible that the verses wanting in the Vatican Sept. can have been added to the Hebrew text *after* its first translation into Greek. The same codex has extirpated vers. 9-11 of ch. xviii., and has re-modelled ver. 28, obviously in order to give continuity and consistency to the narrative. We must, then, look on the text here contained in our common version as having neither more nor less *external* authority than all the rest of the first book of Samuel. As a softer remedy, mere transposition may be attempted; but it will not succeed. The jealousy instantly kindled in Saul's bosom by the songs of the women when David was returning from slaying the Philistines, is inconsistent with the unsuspecting affection felt by Saul towards the simple shepherd in ch. xvi. 19-22. It has been argued from ch. xvii. 12-14, where David is introduced to us as if anew, that the original writer of these words did not also pen the preceding chapter. There is some weight in this; yet it is not so decisive as the contradictory representation of David above alluded to. On the other hand, ch. xvii. 15 was written by one who had ch. xvi. before his eyes, and wished to account for David's not being with Saul, though he was his armour-bearer. So, indeed, Josephus distinctly perceived. 'Saul,' says he, '*sent* David to his father Jesse; *being satisfied with* his three sons,' &c. &c. (Joseph. *Antiq.* vi. 9, 2). Once more, even the Vatican codex of the Sept. leaves, in xvii. 54, the startling statement that David brought the head of the Philistine *to Jerusalem*. At that time not Jerusalem only, but its suburbs also, were in the power of the Jebusites, who, in 1 Chron. xi. 4, are called 'the inhabitants of the *land*.' Now, even allowing that in time of peace Israelites were admissible into Jerusalem, there is no conceivable reason why David should have carried his trophy thither, while it was a foreign and heathenish city. On the other hand, a late writer who was accustomed to think of Jerusalem as the metropolis of Judæa, might easily introduce such a statement. These difficulties, collectively, have induced some to regard the whole seventeenth chapter as from a later hand than the rest; but it is evident that if we omit it, we lose the clue to the rapid elevation of David and the jealousy of Saul, to say nothing of ch. xix. 5 and xxi. 9. Every theory, in short, is intrinsically unphilosophical, which fancies that it may cut out what it finds to be inconsistent, and then imagines that the authority of what is left is unimpaired; for the same hand which has introduced the passages which we reject, may have taken many liberties with that which we receive.

We learn from 1 Chron. xxix. 29 that the life of David was written by Samuel, Nathan, and Gad; also, from 2 Sam. i. 18 it may be probably inferred that other information concerning him was contained in the poems of Jasher. None of these works are before us in their original form. Materials from them have, however, been worked up by a later hand, which, it would seem, has sometimes adopted whole passages from them, sometimes has modified them and added connecting parts and explanations. Such, at least, is the conclusion to which every one will find himself strongly pressed by a close criticism of the whole narrative. The change of name from *Ishui* to *Ishbosheth* (1 Sam. xiv. 49 and 2 Sam. ii. 8, &c.) appears to indicate that compositions by different hands have been put together. That a duplicate account is found of the origin of the proverb, 'Is Saul also among the prophets?' seems undeniable (ch. x. 1-12 and xix. 20-24); and if a single clear case of this sort is admitted to exist, various others must probably fall under the same head. On this ground, doubtless, it is, that the Vatican Sept. has omitted ch. xviii. 10-11, since this attack of Saul on David's life 'on the morrow' is hard to reconcile with all that follows, and the verses appear to be a duplicate of ch. xix. 9, 10. Less certain duplicates, and yet not free from difficulty, are the following. The men of Ziph twice betray David to Saul (ch. xxiii. 19 and xxvi. 1); David twice spares Saul's life under circumstances highly unlikely to recur (ch. xxiv. and xxvi.), and on each occasion Saul is melted into tenderness. The former event ends with an

oath of David to Saul, which appears like a final termination of hostility; while the opening of ch. xxvii. embarrasses us by its extreme abruptness, when the very opposite result might have been expected from that which immediately precedes. Comparing also ch. xxi. 10-15 with ch. xxvii., it may seem that David's sojourn at Gath has been told twice over; for though each pair of events separately might, without physical impossibility, happen twice, yet, viewed collectively, the repetition of so many pairs surpasses all human probabilities. It has been necessary to premise so much, to show why we are disposed to be satisfied with rough results from the accounts of David's earlier life; which, as happens with all celebrated men who rise from a humble station, can hardly have been chronicled with the same precautions as those of his reign.

Even in regard to matters properly public, obscurity attaches both to the *numbers* which we read in our text, and occasionally to the *order* of events. On the difficulties found in the chronology of this period some remarks will be needed under the article SAUL. It more properly belongs to this place to observe that David is made thirty years old, and Ishbosheth forty, when Jonathan, elder brother of Ishbosheth, dies (2 Sam. ii. 10, 11); which appears to make too great a disparity of age between Jonathan and David. A sort of fatality seems attached to the number forty, which constantly occurs very inopportunely. In 2 Sam. xv. 7 this number is extravagantly erroneous; yet the reading is at least older than the Sept. version, and Van der Hooght gives no various reading of the Hebrew. We seem justified in doubting whether forty years can have been the real age of Ishbosheth: twenty would agree better with the probabilities of the case. Again, Ishbosheth reigned two years, though David reigned over the tribe of Judah alone in Hebron for seven years and a half; where is the interval of five years and a half to be placed? Since it is certain that *a part* of David's reign over all Israel was spent by him at Hebron (for Jerusalem was not conquered by him till after all the tribes had joined him, 1 Chron. xi. 4). The easiest and perhaps a necessary solution is this, that the words in 2 Sam. ii. 11 and v. 5 are lax, and ought to be re-written thus: 'In Hebron he reigned seven years and six months, *at first over the tribe of Judah only* [viz. for two or three years], *and afterwards over all Israel*.'

Three chapters in the second book of Samuel chiefly contain the military successes of David: but there is some reason to believe that we cannot adhere to the order of the events there given. The mention of the Ammonites in ch. viii. 12 seems to be by anticipation; for in the opening of ch. x. we find that relations of personal friendship still subsisted between David and the king of the Ammonites. Reasons will shortly be stated for thinking that his first campaign against the king of Zobah has been placed too early; and the numbers of the chariots and horsemen engaged in the war can scarcely be defended. Of this further notice will be taken. Again, when the tribes of Israel came to Hebron to welcome David to the kingdom, his own tribe of Judah, in the midst of which Hebron lay, brought only 6800 men, less than those of the insignificant tribe of Simeon, who are reckoned there at 7100 (1 Chron. xii. 24, 25), while of the equally petty tribe of Dan there are 28,600. It has been said in defence of these numbers that Judah had been miserably reduced by the proximity of the Philistines; but why should Simeon and Dan have suffered less? Nor would that account for the fact, that in the celebrated numbering of the people by Joab (2 Sam. xxiv. 9) there are 800,000 warriors in Israel, and 500,000 in Judah alone; or, according to 1 Chron. xxi. 5, in Israel 1,100,000, and in Judah 470,000. The two results in Kings and in Chronicles are here inconsistent; in both also we see the marks of a later narrator, who is accustomed to use the words Israel and Judah to mean *the ten* and *the two* tribes. Abundant illustration might be accumulated to the same effect, if this were the proper place for it.

The life of David naturally divides itself into three portions:—I. The time which he lived under Saul. II. His reign over Judah in Hebron. III. His reign over all Israel.

I. In the first period we may trace the origin of all his greatness. His susceptible temperament, joined to his devotional tendencies, must, at a very early age, have made him a favourite pupil of the prophets, whose peculiar mark was the harp and the psalm (1 Sam. x. 1-12 and xix. 20-24; see also 2 Kings iii. 15). His hospitable reception, when in distress, by Ahimelech the priest, and the atrocious massacre innocently brought by him on Nob, the city of the priests (1 Sam. xxi. and xxii. 9-19), must have deeply affected his generous nature, and laid the foundation of his cordial affection for the whole priestly order, whose ministrations he himself helped to elevate by his devotional melodies. At an early period he attracted the notice of Samuel; and if we are to arrange events according to their probable connection, we may believe that *after* David had been driven away from Saul and his life several times attempted, Samuel ventured on the solemn step of anointing him king. Whenever this took place, it must have produced on David a profound impression, and prepared him to do that in which Saul had so eminently failed, viz. to reconcile his own military government with a filial respect for the prophets and an honourable patronage of the priesthood. Besides this, he became knit into a bond of brotherhood with his heroic comrades, to whom he was eminently endeared by his personal self-denial and liberality (1 Sam. xxx. 21-31; 1 Chron. xi. 18). This, indeed, drew after it one most painful result, viz. the necessity of enduring the turbulence of his violent but able nephew Joab; nor could we expect that of a band of freebooters many should be like David. Again, during his outlawry David became acquainted in turn not only with all the wild country in the land, but with the strongholds of the enemy all round. By his residence among the Philistines he must have learned all their arts and weapons of war, in which it is reasonable to believe the Israelites previously inferior (1 Sam. xiii. 19-23). With Nahash the Ammonite he was in intimate friendship (2 Sam. x. 2); to the king of Moab he entrusted the care of his parents (1 Sam. xxii. 3); from Achish of Gath he received the important present of the town of Ziklag (1 Sam. xxvii. 6). It must, however, be confessed that the details of the last passage, without professing to be miraculous, go beyond the limits of probability; for if we even suppose that David could

commit the massacres there described, merely in order to hide his own perfidy, it is still incredible that the secret could have been kept and Achish continue to trust him (xxviii. 2, and xxix. 3). That Ziklag was a strong place may be inferred from 1 Chron. xii. 1, 20. The celebrity acquired in successful guerilla warfare, even in modern days, turns the eyes of whole nations on a chieftain; and in an age which regarded personal heroism as the first qualification of a general (1 Chron. xi. 6) and of a king, to triumph over the persecutions of Saul gave David the fairest prospects of a kingdom. That he was able to escape the malice of his enemy was due *in part* to the direct help given him by the nations round, who were glad to keep a thorn rankling in Saul's side; *in part* also to the indirect results of their invasions (1 Sam. xxiii. 27).

The account transmitted to us of David's dangers and escapes in this first period is too fragmentary to work up into a history: nevertheless, it seems to be divisible into two parts, differing in character. During the former he is a fugitive and outlaw in the land of Saul, hiding in caves, pitching in the wilderness, or occasionally with great risk entering walled cities (1 Sam. xxiii. 7): in the latter he abandons his native soil entirely, and lives among the Philistines as one of their chieftains (xxvii. 1). While a rover in the land of Judah, his position (to our eyes) is anything but honourable; being a focus, to which 'all who were in distress, in debt, or discontented gathered themselves' (xxii. 2). Yet as the number of his followers became large (six hundred, we read, xxiii. 13), and David knew how to conciliate the neighbouring sheep-masters by his urbanity and kind services, he gradually felt himself to be their protector and to have a right of maintenance and tribute from them. Hence he resents the refusal of Nabal to supply his demands, as a clear injustice; and, after David's anger has been turned away by the prudent policy of Abigail, in blessing her for saving him from slaying Nabal and every male of his family, the thought seems not to have entered his mind that the intention of such a massacre was more guilty than Nabal's refusal to pay him tribute (xxv. 34). This whole narrative is characteristic and instructive. By his marriage with Abigail he afterwards probably became rich (for she seems to have been a widow at her own disposal), and on passing immediately after into the land of the Philistines, he was enabled to assume a more dignified place. Becoming possessed of the stronghold of Ziklag, he now appeared like a legitimate chieftain with fixed possessions, and no longer a mere vagabond and freebooter. This was accordingly a transition-state in which David was prepared for assuming the kingdom over Judah. In Ziklag he was joined, not, as before, by mere outcasts from Israelitish life, but by men of consideration and tried warriors (1 Chron. xii. 1-22), not only of the tribe of Judah, but from Gad, Manasseh, and even 'from Saul's brethren of Benjamin.' Respecting the arms of these some remarks will be made at the close of this article.

II. Immediately upon the death of Saul the tribe of Judah invited David to become their prince. Internal probabilities lead us to believe that this was acceptable to the Philistines, who, it would seem, must have had the means of hindering it, if they had been disposed. We are not informed why they neglected to improve the decisive victory which they had gained in Mount Gilboa. They vanish from the scene, and Abner quietly hands over the kingdom of the eleven tribes to Ishbosheth, son of Saul. Among many conjectures which may be made, one is that they despaired of keeping the whole land under subjection, since their numbers were too few to keep up all their garrisons; and their superiority must have been that of weapons and discipline only. They may, therefore, have gladly acquiesced in a partition of the monarchy, foreseeing that the fame and popularity of David would soon bring on a civil war between him and the house of Saul; and as he was on excellent terms with Achish, and had long been ostensibly an adherent of the Philistine cause, it is not wonderful that during his early reign David was able to maintain peace with his most dangerous neighbours.

His first step, after his election, was to fix on Hebron as the centre of his administration—an ancient city, honourable by its association with the name of Abraham, and in the middle of his own tribe. He then strengthened himself by a marriage with Maacah, daughter of Talmai, king of Geshur (2 Sam. iii. 3); a petty monarch whose dominions were near the sources of the Jordan, and whose influence at the opposite end of the land must have added a great weight into David's scale. From Abigail, widow of the churlish Nabal, David, as we have already observed, seems to have received a large private fortune. Concerning his other wives we know nothing in particular; only it is mentioned that he had six sons by six different mothers in Hebron. The chief jealousy was between the two tribes of Benjamin and Judah, as Saul had belonged to the former; and a tournament was turned by mutual ill-will into a battle, in which Abner unwillingly slew young Asahel, brother of Joab. (On the synchronism of Abner and Asahel, see SAUL.) 'Long war,' after this, was carried on between 'the house of Saul and the house of David.' We may infer that the rest of Israel took little part in the contest; and although the nominal possession of the kingdom enabled the little tribe of Benjamin to struggle for some time against Judah, the skill and age of Abner could not prevail against the vigour and popular fame of David. A quarrel between Abner and Ishbosheth decided the former to bring the kingdom over to David. The latter refused to treat unless, as a preliminary proof of Abner's sincerity, Michal, daughter of Saul, was restored to David. The possession of such a wife was valuable to one who was aspiring to the kingdom. Accordingly, the unhappy Michal was torn away from a most affectionate husband, and passed over into the increasing harem of the man to whom in his earliest youth she had been a virgin bride; but who now cared not for *her*, but for her name and its political uses. It is not wonderful that she could not adapt herself to her new lord, and that as soon as he was firm in the kingdom he disgraced her. After giving her back, Abner proceeded to win the elders of Israel over to David; but Joab discerned that if this should be so brought about, Abner of necessity would displace him from his post of chief captain. He, therefore, seized the opportunity of murdering him when he was come on a peaceful embassy,

and covered the atrocity by pleading the duty of revenging his brother's blood. This deed was perhaps David's first taste of the miseries of royal power. He dared not proceed actively against his ruthless nephew, but he vented his abhorrence in a solemn curse on Joab and his posterity, and followed Abner to the grave with weeping. Anxious to purge himself of the guilt, he ordered a public wearing of sackcloth, and refused to touch food all the day. His sincere yet ostentatious grief won the heart of all Israel. The feeble Ishbosheth, left alone, was unequal to the government, and shortly suffered the same fate of assassination. David, following the universal policy of sovereigns (Tac. *Hist.* i. 44), and his own profound sense of the sacredness of royalty, took vengeance on the murderers, and buried Ishbosheth in Abner's tomb at Hebron. During this period, it is not stated against what people his marauding excursions were directed. It is distinctly alleged (2 Sam. iii. 22) that his men brought in a great spoil at the very time at which he had a truce with Abner; possibly it may have been won from his old enemies the Amalekites (1 Sam. xxx.).

3. The death of Ishbosheth gave to David supremacy over all Israel. The kingdom was not at first a despotic, but a constitutional one; for it is stated, 'David made *a league* with the elders of Israel in Hebron before Jehovah; and they anointed David king over Israel' (2 Sam. v. 3). This is marked out as the era which determined the Philistines to hostility (ver. 17), and may confirm our idea, that their policy was to hinder Israel from becoming united under a single king. Two victories of David over them follow, both near the valley of Rephaim: and these were probably the first battles fought by David after becoming king of all Israel.

Perceiving that Hebron was no longer a suitable capital, he resolved to fix his residence farther to the north. On the very border of the tribes of Judah and Benjamin lay the town of Jebus, which with its neighbourhood was occupied by Jebusites, a remnant of the old Canaanitish nation so called. In spite of the great strength of the fort of Zion, it was captured, and the Jebusites were entirely expelled or subdued; after which David adopted the city as his new capital, greatly enlarged the fortifications, and gave or restored the name of Jerusalem [JERUSALEM]. In the account of this siege, some have imagined the Chronicles to contradict the book of Samuel, but there is no real incompatibility in the two narratives. Joab was, it is true, *already* David's chief captain; but David was heartily disgusted with him, and may have sought a pretence for superseding him, by offering the post to the man who should first scale the wall. Joab would be animated by the desire to retain his office, at least as keenly as others by the desire to get it; and it is credible that he may actually have been the successful hero of that siege also. If this was the case, it will further explain why David, even in the fulness of power, made no further effort to expel him until he had slaughtered Absalom. After becoming master of Jerusalem, David made a league with Hiram, king of Tyre, who supplied him with skilful artificers to build a splendid palace at the new capital. That the mechanical arts should have been in a very low state among the Israelites, was to be expected; since, before the reign of Saul even smiths' forges were not allowed among them by the Philistines. Nothing, however, could have been more profitable for the Phœnicians than the security of cultivation enjoyed by the Israelites in the reigns of David and Solomon. The trade between Tyre and Israel became at once extremely lucrative to both, and the league between the two states was quickly very intimate.

Once settled in Jerusalem, David proceeded to increase the number of his wives, perhaps in part from the same political motive that actuates other Oriental monarchs, viz. in order to take *hostages* from the chieftains round in the least offensive mode. This explanation will not apply to the concubines. We know nothing further concerning David's family relations, than the names of eleven sons born in Jerusalem (2 Sam. v. 14, 15), of whom four were children of Bathsheba (1 Chron. iii. 5), and therefore much younger than the elder sons.

Jerusalem, now become the civil metropolis of the nation, was next to be made its religious centre; and the king applied himself to elevate the priestly order, to swell the ranks of attending Levites and singers, and to bring the ark to Jerusalem. The priests or Aaronites must, for a long time, have had little occupation in their sacred office; for the ark was at Kirjath-jearim, under the care of a private family. Indeed, during the reign of Saul, we find shewbread to have been set forth at Nob (1 Sam. xxi. 4-6), by Ahimelech the priest; and it is possible that many other ceremonies were performed by them, in spite of the absence of the ark. But after the dreadful massacre perpetrated on the priestly order by Saul, few Aaronites are likely to have felt at ease in their vocation. To wear an ephod—the mark of a priest who is asking counsel of Jehovah—had almost become a crime: and even after the death of Saul, it may seem that the Aaronites, like the other Israelites, remained organized as bands of soldiers. At least Jehoiada (who, according to 1 Chron. xxvii. 5, was high-priest at this time, and joined David at Hebron with 3700 Aaronites) was father of the celebrated warrior Benaiah, afterwards captain of David's body-guard; a man whose qualities were anything but priest-like: and Zadok, afterwards high-priest, who joined David 'with twenty-two captains of his father's house' at the same time as Jehoida, is described as 'a young man mighty of valour' (1 Chron. xii. 27, 28). How long Jehoiada retained the place of high-priest is uncertain. It is probable that no definite conception then existed of the need of having *one* high-priest; and it is certain that David's affection for Abiathar, because of his father's fate, maintained him in chief place through the greater part of his reign. Not until a later time, it would seem, was Zadok elevated to a co-ordinate position. (A difficulty, indeed, exists about Abiathar, which can hardly be removed, except by supposing that 'Ahimelech, son of Abiathar,' has several times been inadvertently written for 'Abiathar, son of Ahimelech;' viz. in 2 Sam. viii. 17; 1 Chron. xxiv. 3, 6, 31. A similar error of 'Jehoiada, the son of Benaiah,' we shall afterwards have to remark on, in 1 Chron. xxvii. 34. We find Abiathar in the place of chief-priest in 1 Kings i. 7, &c., without any notice of his having

a son called Ahimelech.) Any further remarks concerning the orders and courses of the PRIESTS will be better reserved for the article on that subject. It is enough here to add, that the slaughter suffered from Saul by the Aaronites of the line of Ithamar, whom Abiathar now represented, naturally gave a great preponderance of numbers and power to the line of Eleazar, to which Zadok belonged. We must also refer to the article LEVITES for further information concerning them. The bringing of the ark from Kirjath-jearim to Jerusalem established the line of high-priests in direct service before it; and from this time we may presume that the ceremonies of the great day of Atonement began to be observed. Previously, it would appear, the connection between the priesthood and the tabernacle had been very loose. The priests fixed their abode at Nob, when the ark was at Kirjath-jearim, a very short distance; yet there is nothing to denote that they at all interfered with Abinadab in his exclusive care of the sacred deposit. (Concerning the chronological difficulties involved in the stay of the ark at Kirjath-jearim, see the article SAUL.)

When the ark entered Jerusalem in triumph, David put on a priest's ephod and danced before it. This proved the occasion of the rupture between him and his royal spouse, Michal, which sooner or later was inevitable. Accustomed to see in her father's court a haughty pre-eminence of the monarch over the priest, she could not sympathize with the deeper piety which led the royal Psalmist to forget his dignity in presence of the ark. The words of David to her, 'Jehovah chose me *before thy father* and *before all his house*' (2 Sam. vi. 21), sufficiently show Michal to have felt that she had been taken from her husband Phaltiel, merely to give colour to David's claim to the kingdom, and that David scorned to allow that he was in any way indebted to her for it. After this event, the king, contrasting his cedar palace with the curtains of the tabernacle, was desirous of building a temple for the ark; such a step, moreover, was likely to prevent any future change of its abode. The prophet Nathan, however, forbade it, on pious and intelligible grounds. The prohibition has been ascribed by some learned men to a cunning policy in Nathan: but it is not clear how the building of a temple would have injured the interest of the prophets. There are no indications that the prophets as yet regarded the priests with jealousy, nor that it was likely to increase the king's power over both. Great as might appear the advantage of establishing the same city as the religious and civil metropolis, the effect was, in one respect, most unfortunate: it offended the powerful and central tribe of Ephraim. They had been accustomed to regard Shiloh as the rightful abode of the ark. Against Kirjath-jearim no envy was felt, especially while the ark and its priests were in obscurity. But when so much honour attended it; when it became a peculiar glory to Judah and Benjamin—tribes already too much favoured; when a magnificent edifice was erected to receive it; the seeds were sown of that disaffection which ended in a rending of the tribes apart. Nor was the argument unreasonable, that a more central spot was needed for Israel to assemble at year by year.

David's further victories are narrated in the following order—Philistines, Moab, Zobah, Edom, Northern League stirred up by the Ammonites, Ammon. 1. The short and dry notice concerning the Philistines just gives us to understand that this is the era of their decisive, though not final, subjugation. Their towns were despoiled of their wealth (2 Sam. viii., xii.), and doubtless all their arms and munitions of war passed over into the service of the conqueror. 2. The Moabites were a pastoral people, whose general relations with Israel appear to have been peaceful. The slight notice of Saul's hostilities with them (1 Sam. xiv. 47) is the only breach recorded since the time of Eglon and Ehud. In the book of Ruth we see them as friendly neighbours, and much more recently (1 Sam. xxii. 3, 4) David committed his parents to the care of the king of Moab. We know no cause, except David's strength, which now drew his arms upon them. A people long accustomed to peace, in conflict with a veteran army, was struck down at once, but the fierceness of his triumph may surprise us. Two-thirds of the population (if we rightly interpret the words, 2 Sam. viii. 2) were put to the sword; the rest became tributary. 3. Who are meant by the Syrians of Zobah, is still a problem [ZOBAH]. We here follow the belief that it was a power of northern Syria, then aiming at extensive empire, which had not only defeated and humbled the king of Hamath, but had obtained homage beyond the Euphrates. The trans-Jordanic tribes in the time of Saul had founded a little empire for themselves by conquering their eastern neighbours, the Hagarenes; and, perhaps, occasionally overran the district on the side of the Euphrates, which Hadadezer, king of Zobah, considered as his own. His efforts 'to recover his border at the river Euphrates' first brought him into collision with David, perhaps by an attack which he made on the roaming Eastern tribes. David defeated not merely his army, but those of Damascus too, which came, too late, with succour; and put Israelite garrisons into the towns of the Damascenes. In this career of success, we see, for the first time in history, the uniform superiority over raw troops of a power which is always fighting; whose standing army is ever gaining experience and mutual confidence. Nevertheless, the details of this victory over Hadadezer exceed all ordinary possibilities. It is not easy even to form a conception of the nature of the war. As the Eastern tribes of Israel had camels in abundance (for they are said to have taken 50,000 from the Hagarenes, 1 Chron. v. 21), David did not want the means of transporting an army of infantry and its baggage (see 1 Sam. xxx. 17). But with what troops are we to suppose him to fight against the powerful cavalry of the enemy? We may imagine horsemen to have been *repulsed* either by archers or by a phalanx of spearmen; of which, however, no mention is made, nor does it appear probable that the Israelites fought in phalanx. But neither by these nor by a squadron of camels —if any one supposes David to have used such a force, as Cyrus against Crœsus—can 1000 chariots and 700 horsemen (which the Chronicler makes 7000, 1 Chron. xviii. 4) have been defeated and *captured;* to say nothing of the 20,000 captive footmen, or of the 22,000 Damascenes slain immediately after. 4. Another victory, gained 'in the valley of salt,' ought, perhaps, to be read, as in 1 Chron. xviii. 12, and in the superscription of Ps. lx., 'over the *Edomites*,' not 'over the

Syrians.' The difference of the Hebrew textual letters is very slight, ארם and אדם. The verse which follows (2 Sam. viii. 14) seems to tell the result of this victory, viz. the complete subjugation and garrisoning of Edom, which, like Moab, was incorporated with David's empire. Immediately before this last conquest, as would appear, he wrote the 60th Psalm; and as that Psalm gives no hint of his achievements against the king of Zobah and the Damascenes, this is a strong ground for believing that those successes were not gained till somewhat later in time. 5. After David had become master of all Israel, of the Philistine towns, of Edom, and of Moab, while the Eastern tribes, having conquered the Hagarenes, threatened the Ammonites on the north, as did Moab on the south, the Ammonites were naturally alarmed, and called in the powers of Syria to their help against a foe who was growing dangerous even to them. The coalition against David is described as consisting of the Syrians of Bethrehob and of Maacah, of Zobah and of Tob. The last country appears to have been in the district of Trachonitis, the two first immediately on the north of Israel. In this war, we may believe that David enjoyed the important alliance of Toi, king of Hamath, who, having suffered from Hadadezer's hostility, courted the friendship of the Israelitish monarch (2 Sam. viii. 9, 10). We are barely informed that one division of the Israelites under Abishai was posted against the Ammonites; a second under Joab met the confederates from the north, 30,000 strong, and prevented their junction with the Ammonites. In both places the enemy was repelled, though, it would seem, with no decisive result. The spirit of exaggeration is certainly displayed in the statement—whoever is answerable for it—(1 Chron. xix. 7), that the Syrian confederates brought with them 32,000 chariots, which are not noticed in the parallel place of 2 Sam. Perhaps the text is corrupt; for 1000 talents of silver (ver. 6) appears a small sum to hire such a force with. A second campaign took place. The king of Zobah brought in an army of Mesopotamians, in addition to his former troops, and David found it necessary to make a levy of all Israel to meet the pressing danger. A pitched battle on a great scale was then fought at Helam—far beyond the limits of the twelve tribes—in which David was victorious. He is said to have slain, according to 2 Sam. x. 18, the men of 700 chariots, and 40,000 horsemen; or, according to 1 Chron. xix. 18, the men of 7000 chariots, and 40,000 footmen. Here, as on the former occasion, the Chronicler multiplies by 10 the number found in the older book. If we had access to the court-records of Hamath, we should probably find that Toi had assembled his whole cavalry to assist David, and that to him was due the important service of disabling or destroying the enemy's horse. Such foreign aid may explain the general result, without our obtruding a miracle, for which the narrative gives us not the least warrant. The Syrians henceforth left the Ammonites to their fate, and the petty chiefs who had been in allegiance to Hadadezer hastened to do homage to David. 6. Early in the next season Joab was sent to take vengeance on the Ammonites in their own home, by attacking their chief city, or Rabbah of Ammon. The natural strength of their border could not keep out veteran troops and an experienced leader; and though the siege of the city occupied many months (if, indeed, it was not prolonged into the next year), it was at last taken. It is characteristic of Oriental despotism, that Joab, when the city was nearly reduced, sent to invite David to command the final assault in person. David gathered a large force, easily captured the royal town, and despoiled it of all its wealth. His vengeance was as much more dreadful on the unfortunate inhabitants than formerly on the Moabites, as the danger in which the Ammonites had involved Israel had been more imminent. The persons captured in the city were put to death by torture; some of them being sawed in pieces, others chopped up with axes or mangled with harrows, while some were smothered in brick-kilns (2 Sam. xii. 31; 1 Chron. xx. 3). This cruelty was perhaps effectual in quelling future movements of revolt or war; for, until insurrections in Israel embolden them, foreign foes after this remain quiet.

During the campaign against Rabbah of Ammon the painful and never-to-be-forgotten outrage of David against Bathsheba and her husband Uriah the Hittite took place. It is principally through this narrative that we know the tediousness of that siege; since the adultery with Bathsheba and the birth of at least one child took place during the course of it.

The latter years of David's reign were afflicted by the inevitable results of polygamy and despotism, viz. the quarrels of the sons of different mothers, and their eagerness to seize the kingdom before their father's death. Of all his sons, Absalom had naturally the greatest pretensions, being, by his mother's side, grandson of Talmai, king of Geshur; while through his personal beauty and winning manners he was high in popular favour. It is evident, moreover, that he was the darling son of his father. When his own sister Tamar had been dishonoured by her half-brother Amnon, the eldest son of David, Absalom slew him in vengeance, but, in fear of his father, then fled to his grandfather at Geshur. Joab, discerning David's longings for his son, effected his return after three years; but the conflict in the king's mind is strikingly shown by his allowing Absalom to dwell two full years in Jerusalem before he would see his face.

The insurrection of Absalom against the king was the next important event; in the course of which there was shown the general tendency of men to look favourably on young and untried princes, rather than on those whom they know for better and for worse. Absalom erected his royal standard at Hebron first, and was fully prepared to slay his father outright, which might probably have been done, if the energetic advice of Ahithophel had been followed. While they delayed, David escaped beyond the Jordan, and with all his troop met a most friendly reception, not only from Barzillai and Machir, wealthy chiefs of pastoral Gilead, but from Shobi, the son of the Ammonite king Nahash, whose power he had destroyed, and whose people he had hewed in pieces. We likewise learn on this occasion that the fortunes of David had been all along attended by 600 men of Gath, who now, under the command of Ittai the Gittite, crossed the Jordan with all their households, in spite of David's generous advice that they would return to their

own country. Strengthened by the warlike eastern tribes, and surrounded by his experienced captains, the king no longer hesitated to meet Absalom in the field. A decisive victory was won at the wood of Ephraim, and Absalom was slain by Joab in the retreat. The old king was heart-stricken at this result, and, ignorant of his own weakness, superseded Joab in the command of the host by Amasa, Absalom's captain. Perhaps Joab on the former occasion, when he murdered Abner, had blinded the king by pleading revenge for the blood of Asahel; but no such pretence could here avail. The king was now probably brought to his determination, partly by his disgust at Joab, partly by his desire to give the insurgents confidence in his amnesty. If Amasa is the same as Amasai, David may likewise have retained a grateful remembrance of the cordial greeting with which he had led a strong band to his assistance at the critical period of his abode in Ziklag (1 Chron. xii. 18); moreover, Amasa, equally with Joab, was David's nephew, their two mothers, Abigail and Zeruiah, being sisters to David by at least one parent (2 Sam. xvii. 25; 1 Chron. ii. 13, 16). The unscrupulous Joab, however, was not so to be set aside. Before long, catching an opportunity, he assassinated his unsuspecting cousin with his own hand; and David, who had used the instrumentality of Joab to murder Uriah, did not dare to resent the deed.

A quarrel which took place between the men of Judah and those of the other tribes in bringing the king back, had encouraged a Benjamite named Sheba to raise a new insurrection, which spread with wonderful rapidity. 'Every man of Israel,' are the strong words of the text, 'went up from after David, and followed Sheba, the son of Bichri,' a man of whom nothing besides is known. This strikingly shows that the later despotism of David had already exhausted the enthusiasm once kindled by his devotion and chivalry, and that his throne now rested on the rotten foundation of mere military superiority. Amasa was collecting troops as David's general at the time when he was treacherously assassinated by his cousin, who then, with his usual energy, pursued Sheba, and blockaded him in Beth-maachah before he could collect his partisans. Sheba's head was cut off, and thrown over the wall; and so ended the new rising. Yet this was not the end of trouble; for the intestine war seems to have inspired the Philistines with the hope of throwing off the yoke. Four successive battles are recorded (2 Sam. xxi. 15-22), in the first of which the aged David was nigh to being slain. His faithful officers kept him away from all future risks, and Philistia was once more, and finally, subdued.

The last commotion recorded took place when David's end seemed nigh, and Adonijah, one of his elder sons, feared that the influence of Bathsheba might gain the kingdom for her own son Solomon. Adonijah's conspiracy was joined by Abiathar, one of the two chief priests, and by the redoubted Joab; upon which David took the decisive measure of raising Solomon at once to the throne. Of two young monarchs, the younger and the less known was easily preferred, when the sanction of the existing government was thrown into his scale; and the cause of Adonijah immediately fell to the ground. Amnesty was promised to the conspirators, yet it was not very faithfully observed [SOLOMON].

Numerous indications remain to us that, however eminently David was imbued with faith in Jehovah as the national God of Israel, and however he strove to unite all Israel in common worship, he still had no sympathy with the later spirit which repelled all foreigners from co-operation with Jews. In his early years necessity made him intimate with Philistines, Moabites, and Ammonites: policy led him into league with the Tyrians. He himself took in marriage a daughter of the king of Geshur: it is the less wonderful that we find Uriah the Hittite (2 Sam. xi.), Gether the Ishmaelite (1 Chron. ii. 17), and others, married to Israelitish wives. The fidelity of Ittai the Gittite, and his six hundred men, has been already alluded to. It would appear, on the whole, that in tolerating foreigners Solomon did not go beyond the principles established by his father, though circumstances gave them a fuller development.

It has been seen that the reign of David began, as that of a constitutional monarch, with a league between him and his people: it ends as a pure despotism, in which the monarch gives his kingdom away to whomsoever he pleases, and his nominee steps at once into power without entering into any public engagements. The intensity of the despotism is strikingly shown in the indirect and cautious device by which alone Joab dared to hint to the king the suitableness of recalling Absalom from banishment, though he believed the king himself to desire it (2 Sam. xiv.). All rose necessarily out of the standing army which David kept up as an instrument of conquest and of power, by the side of which constitutional liberty could not stand. The maintenance of this large force perhaps was not oppressive, since rich tributes were received from the surrounding nations, and the civil government was not yet become very expensive [SOLOMON]. We nevertheless need not wonder that those who joyfully welcomed David as their heroic deliverer were sick of heart when forced to address him with unmanly adulation.

One more dreadful tragedy is recorded in this reign—the immolation of seven sons of Saul (2 Sam. xxi.), on the occurrence of three years' bad harvests. A priestly response imputed the famine to Saul's violation of the oath of Joshua with the Gibeonites, and used the name and authority of Jehovah in proof. It has been suspected that the whole was contrived by the revenge of the priesthood for the barbarous massacre perpetrated by Saul on the priestly city of Nob; and that David the more easily acquiesced, since it was desirable, for the peace of his successors, that the house of Saul should be exterminated. Both suspicions are too probable to be easily set aside; and the latter receives painful confirmation from the cold injustice of David towards Mephibosheth, son of Jonathan, whom he first stripped of his whole patrimony, on a false and most improbable accusation, and afterwards, instead of honourably redressing the injury, restored to him the half only of his estate (2 Sam. xvi. 3; xix. 24-30). Such conduct proves that he was conscious of his own wrong, but was too desirous of weakening the house of Saul to renounce entirely the opportunity of damaging it, at

which he had snapt. That David did not give up Mephibosheth to be hanged by the Gibeonites is imputed to the oath between him and Jonathan; but it does not appear that their covenant was or could be more binding than his most explicit oath to Saul on the very same matter (1 Sam. xxiv. 21, 22). Five of the innocent men thus 'hanged up before Jehovah' as if he had been a Moloch, are stated in the common Hebrew and Greek text, and in our received version, to be children of Michal, David's youthful spouse; and Josephus imagines that they were born of her after a second divorce from David. But it is certain, from 1 Sam. xviii. 19, that *Michal* is here a mistake for *Merab;* which name De Wette has introduced into his version. The touching description of the other bereaved mother, Rizpah, the daughter of Aiah, is in refreshing contrast to the rest of the history, and shows the sympathy of the narrator's heart, while he had evidently no suspicion that the name of Jehovah could have been wrongly used to command the deed. Even after this atonement, it was thought that a thorough cleansing of the land was not yet effected. The bones of Saul and his three sons were disinterred from Jabesh-Gilead, and were buried in the sepulchre of Kish, in Benjamin; as if to obliterate every monument that Saul and his sons had ever been leaders of the hosts of Israel. After this the famine was removed.

It has been seen that, on one occasion (2 Sam. viii. 3), David fought against Hadadezer about a district on the river Euphrates. Yet it is not to be imagined that he had any fixed possession of territory so distant, which indeed could have had no value to him. A warrior from his youth, he seems to have had little perception of the advantages of commerce; and although the land of Edom was long under his power, he made no effort to use its ports of Eziongeber and Elath for maritime traffic. Much less was he likely to value the trade of the Euphrates, from which river he was separated by a tedious distance of desert land, over which, without the possession of superior cavalry, he could not maintain a permanent sovereignty. No attempt seems to have been made in David's reign to maintain horses or chariots for military purposes. Even chieftains in battle, as Absalom on his fatal day, appear mounted only on mules. Yet horses were already used in state equipages, apparently as a symbol of royalty (2 Sam. xv. 1).

That in the opening of Saul's reign the Philistines had deprived the Israelites of all the most formidable arms, is well known. It is probable that this may have led to a more careful practice of the sling and of the bow, especially among the southern tribes, who were more immediately pressed by the power of the Philistines. Such weapons cannot be kept out of the hands of rustics, and must have been essential against wild beasts. But, from causes unknown, the Benjamites were peculiarly celebrated as archers and slingers (Judg. xx. 16; 1 Chron. viii. 40; xii. 2; 2 Chron. xiv. 8; xvii. 17), while the pastoral tribes beyond the Jordan were naturally able to escape all attempts of the Philistines to deprive them of shield, spear, and sword. Hence the Gadites, who came to David at Ziklag, are described as formidable and full-armed warriors, 'with faces like lions, and swift as mountain roes' (1 Chron. xii. 8).

The standing army which Saul had begun to maintain was greatly enlarged by David. An account of this is given in 1 Chron. xxvii.; from which it would seem that 24,000 men were constantly maintained on service, though there was a relieving of guard every month. Hence, twelve times this number, or 288,000, were under a permanent military organization, with a general for each division in his month. Besides this host, the register proceeds to recount twelve princes over the tribes of Israel, who may perhaps be compared to the lord-lieutenants of English counties. The enumeration of these great officers is remarkable, being as follows:—1, of the Reubenites; 2, of the Simeonites; 3, of the Levites; 4, of the Aaronites; 5, of Judah; 6, of Issachar; 7, of Zebulon; 8, of Naphthali; 9, of Ephraim; 10, of Manasseh; 11, of Manasseh beyond the Jordan; 12, of Benjamin; 13, of Dan. Here the names of Gad and Asher are omitted, without explanation. On the other hand, the Levites and Aaronites are recounted as though they were tribes coordinate to the rest, and Zadok is named as prince of the Aaronites. It is not to be supposed that the Levites or Aaronites were wholly forbidden from civil and military duties. It has been already remarked that Zadok (here chief of the Aaronites) was described, in the beginning of David's reign, as 'a mighty man of valour' (1 Chron. xii. 28), and the same appellation is given to the sons of Shemaiah, a Levite (xxvi. 6). Benaiah also, now captain of David's body-guard, was son of the late high-priest Jehoiada (xxvii. 5, and xii. 27).

The body-guard of David, to which allusion has just been made, was an important appendage to his state, and a formidable exhibition of the actual despotism under which, in fulfilment of the warning of Samuel, Israel had now fallen. [CHERETHITES and PELETHITES.]

The *cabinet* of David (if we may use a modern name) is thus given (1 Chron. xxvii. 32-34) with reference to a time which preceded Absalom's revolt:—1, Jonathan, David's uncle, a counsellor, wise man, and scribe; 2, Jehiel, son of Hachmoni, tutor (?) to the king's sons; 3, Ahithophel, the king's counsellor; 4, Hushai, the king's companion; 5, after Ahithophel, *Jehoiada, the son of Benaiah;* 6, Abiathar the priest. It is added, 'and the general of the king's army was Joab.' At this period Benaiah was in the early prime of his military prowess; and it is incredible that he can have had a son, Jehoiada, old enough to be the second counsellor of the king, next to the celebrated Ahithophel. If the text is here corrupt, the corruption is older than the time of the Sept. However, De Wette has introduced, *Benaiah the son of Jehoiada.* We cannot look on this as certain; for Benaiah may have been the name of the father as well as of the son of Jehoiada the high-priest. Yet as it was very rare with the Hebrews for names to recur in alternate generations, De Wette's reading is at least highly probable. If so, it is striking to observe that Benaiah, as captain of the life-guards, is reckoned next to Ahithophel in rank as a counsellor; while Joab, general of the army, scarcely seems to have been a member of the cabinet. Zadok was above named as prince of the Aaronites; but was not yet so closely connected with the administration as Abiathar.

Twelve royal bailiffs are recited as a part of David's establishment (1 Chron. xxvii. 25, 31), having the following departments under their charge: 1, The treasures of gold, silver, &c.; 2, the magazines; 3, the tillage (wheat, &c.?); 4, the vineyards; 5, the wine-cellars; 6, the olive and sycamore trees; 7, the oil-cellars; 8, the herds in Sharon; 9, the herds in the valleys; 10, the camels; 11, the asses; 12, the flocks. The eminently prosperous state in which David left his kingdom to Solomon appears to prove that he was on the whole faithfully served, and that his own excellent intentions, patriotic spirit, and devout piety (measured, as it must be measured, by the standard of those ages), really made his reign beneficial to his subjects. If it reduced them under despotism, yet it freed them from a foreign yoke and from intestine anarchy; if it involved them in severe wars, if it failed of uniting them permanently as a single people, in neither of these points did it make their state worse than it found them. We must not exact of David either to reign like a constitutional monarch, to uphold civil liberty, or by any personal piety to extract from despotism its sting. Even his most reprobate offence has no small palliation in the far worse excesses of other Oriental sovereigns; and his great superiority to his successors justifies the high esteem in which his memory was held. Concerning the closing scenes of David's life no more need here be said: the celebrated enumeration of the people by Joab, will be noticed under the article POPULATION.—F. W. N.

DAY. The earliest measure of time on record is the day:—'The *evening* and the *morning* were the first *day*' (Gen. i. 5). Here the word 'day' denotes the civil or calendar day of twenty-four hours, including 'the evening,' or natural night, and 'the morning,' or natural day. It is remarkable that in this account 'the evening,' or natural night, precedes 'the morning,' or natural day. Hence the Hebrew compound ערב־בקר, 'evening-morning,' which is used by Daniel (viii. 14) to denote a civil day. In fact, the Jewish civil day began, as it still does, not with the morning, but the evening—thus the Sabbath commences with the sunset of Friday, and ends with the sunset of Saturday. Indications of this primeval order exist among many nations, and even we have 'seven-night,' 'fortnight,' to signify seven days and fourteen days. Under this arrangement the night seems to have been regarded not as belonging to and terminating the preceding day, but as belonging to and ushering in the day that follows—Nox ducere diem videtur (Tacit. *Germ.* ii.).

The inconveniences resulting from a variable commencement of the civil day, earlier or later, according to the different seasons of the year, as well as the equally varying duration of the natural day and night, must have been very considerable, and are sensibly felt by Europeans when travelling in the East, where the ancient custom in this matter is still observed. These inconveniences must be less obvious to the people themselves, who know no better system; yet they were apparent to several ancient nations—the Egyptians (Plin. *Hist. Nat.* ii. 77), the Ausonians, and others—and induced them to reckon their civil day from midnight to midnight, as from a fixed invariable point; and this usage has been adopted by most of the modern nations of Europe. We thus realize the advantage of having our divisions of the day, the hours, of equal duration, day and night, at all times of the year; whereas among the Orientals the hours, and all other divisions of the natural day and night, are of constantly varying duration, and the divisions of the day vary from those of the night, excepting at the equinoxes.

The natural day was at first divided into three parts, morning, noon, and evening, which are mentioned by David as hours or times of prayer (Ps. lv. 17).

The natural night was also originally divided into three parts, or watches (Ps. lxiii. 6; xc. 4). The *first*, or *beginning of the watches*, is mentioned in Lam. ii. 19; the *middle watch*, in Judg. vii. 19; and the *morning watch*, in Exod. xiv. 24. Afterwards the strictness of military discipline among the Greeks and Romans introduced an additional night-watch. The *second* and *third watches of the night* are mentioned in Luke xii. 38, and the *fourth* in Matt. xiv. 25. The four are mentioned together by our Lord, in Mark xiii. 35, and described by the terms *ὀψέ*, '*the late* watch;' *μεσονυκτίου*, '*the midnight;*' *ἀλεκτοροφωνίας*, '*the cock-crowing;*' and *πρωΐ*, '*the morning*.' The precise beginning and ending of each of the four watches is thus determined:

1. Ὀψέ, *the late*, began at sunset and ended with the third hour of the night, including the evening dawn, or twilight. It was also called *ὀψία ὥρα*, 'even-tide' (Mark xi. 11), or simply *ὀψία* 'evening' (John xx. 19.)

2. Μεσονυκτίου, '*the midnight*,' lasted from the third hour till midnight.

3. Ἀλεκτοροφωνίας, '*the cock-crowing*,' lasted from midnight till the third hour after, or to the ninth hour of the night. It included the two cock-crowings, with the second of which it ended.

4. Πρωΐ, '*early*,' lasted from the ninth to the twelfth hour of the night, or sunrise, including the morning dawn, or twilight. It was also called *πρωΐα*,* '*morning*,' or 'morning-tide,' ὥρα being understood (John xviii. 28).

The division of the day into twelve hours was common among the Jews after the captivity in Babylon. The word hour first occurs in the book of Daniel (iv. 19); and it is admitted by the Jewish writers that this division of the day was borrowed by them from the Babylonians. Our Lord appeals to this ancient, and then long-established, division, as a matter of public notoriety: 'Are there not twelve hours in the day?' (John xi. 9).

This, however, was the division of the natural day into twelve hours, which were therefore variable according to the seasons of the year, at all places except the equator; and equal, or of the mean length, only at the vernal and autumnal equinoxes; being longer in the summer half-year, and shorter in the winter. The inconvenience of this has already been intimated.

The *first hour* of the day began at sunrise; the *sixth hour* ended at mid-day, or noon; the *seventh hour* began at noon; and the *twelfth hour* ended at sunset.

The days of the week had no proper names among the Hebrews, but were distinguished only by their numeral order [WEEK].

DEACON. This word is derived from the Greek term *Διάκονος*, and in its more extended

sense is used, both in Scripture and in ecclesiastical writers, to designate *any person who ministers in God's service.* In 2 Cor. vi. 4, the Apostle says, 'But in all things approving ourselves as the ministers (διάκονοι, deacons) of God.' Again, Eph. iii. 7, 'Whereof I was made a minister (διάκονος, deacon); and in Col. i. 2, 3, he employs the same epithet to express the character of his office. In Rom. xv. 8, St. Paul calls our Lord διάκονον περιτομῆς—*i. e.* deacon of the circumcision; and, in his Epistle to the Philippians, he addresses himself to the *bishops* and *deacons* (Phil. i. 1).

Chrysostom, in commenting upon these words of the Apostle, exclaims, 'What! has a city more bishops than one? By no means; but when the Apostle wrote, the terms deacon and bishop were used indifferently the one for the other.' 'Hence,' he adds, 'the Apostle Paul, writing to Timothy, who yet was a bishop, says, "Fulfil thy ministry (διακονία)."' Theophylact, writing upon the same subject (p. 577), calls the bishops *presbyters;* not, however, that there were in one city *many* bishops, but because bishops were *indiscriminately* called deacons and presbyters.

But it is in its more confined sense, as it expresses the *third* order of the ministry of the primitive Church, that we are to examine the meaning of the word *Deacon.*

Some suppose that the office of deacon had an existence before the election of the seven persons of whom we read in Acts vi. The words Νεώτεροι and Νεανίσκοι are sometimes used to designate the function as well as the age of man, by the same rule of interpretation which diversifies the sense of the word Πρεσβύτερος. As, therefore, by the title Presbyter, the head or ruler of a society is meant, without regard to his age; so, by the term young man, we are often to understand *Minister,* or servant, because such persons are usually in the flower of youth. Christ himself seems to attribute this sense to the word Νεώτερος, Luke xxii. 26: 'ὁ μείζων ἐν ὑμῖν, γενέσθω ὡς ὁ νεώτερος.' Our Lord explains the word μείζων by the word ἡγούμενος, which signifies a *Presbyter* or ruler. He also substitutes, a little after, ὁ διακονῶν in place of νεώτερος, which confirms our interpretation; so that μείζων and νεώτερος refer *not* to age, *but to office.* 1 Pet. v. 5 confirms this view very remarkably: 'Ὁμοίως νεώτεροι ὑποτάγητε πρεσβυτέροις—'Likewise, young men, be ye subject to the elder;' or, ye *Deacons,* be subject to the Presbyters. Now the νεώτεροι, or young men (who, we are told in Acts v. 6, carried out and buried the dead bodies of Ananias and Sapphira), are supposed to have been the very persons against whose partial distribution of the Church's bounty the complaint was made to the Apostles. To avoid even the appearance of *partiality* in a matter of this kind, six of the seven newly-elected deacons were taken from amongst the complaining Grecians. This would seem to be sufficiently indicated by their names.

That the duties of the seven deacons were not of an exclusively secular character is clear from the fact that both Philip and Stephen preached, and that one of them also *baptized.* It is strange, therefore, that the 18th Canon of the Council of Constantinople, in 'Trullo,' should declare, referring to Acts vi., that the seven deacons had *no* spiritual function assigned them. Œcumenius (a celebrated Greek writer of the tenth century) gives his testimony to the same effect (*In Act. Ap.* vi. p. 433). But opposed to this opinion is that of some of the Fathers of the Christian Church. Ignatius, a martyr-disciple of St. John, and bishop of Antioch, A.D. 68, styles them at once 'ministers of the mysteries of Christ;' adding, that they are not ministers of meats and drinks, but of the Church of God (Ignat. *Ep. ad Trall.* n. 2). Again, he says (*Ep. ad Trall.* n. 3), 'Study to do all things in Divine concord, under your bishop presiding in the place of God, and the presbyters in the place of the apostolic senate, and the deacons most dear to me, as those to whom is committed the ministry of Jesus Christ.'

Cyprian, bishop of Carthage, A.D. 250 (whilst referring their origin to Acts vi.), styles them ministers of episcopacy and of the Church (Cypr. *Ep.* 65, al. 3, *ad Rogat.*): at the same time he asserts that they were called *ad altaris ministerium*—to the ministry of the altar.

Tertullian, a celebrated Father of the second century, classes them with bishops and presbyters as guides and leaders to the laity. He asks (Tertull. *De Fuga,* c. ii.): 'Quum ipsi auctores, id est, ipsi Diaconi, Presbyteri, et Episcopi fugiunt, quomodo Laicus intelligere poterit?—Cum Duces fugiunt quis de gregario numero sustinebit?'

Though Jerome in one place speaks of them (*Ep. ad Evang. et Com. Ezek.* c. 48) as servants of tables and widows; yet, again, he ranks them amongst the guides of the people: still he distinguishes them from the priests of the second order, that is, from the presbyters, by the title of *Servitos.* And so, frequently, in the Councils, the names *Sacerdos* and *Levita* are used as the distinguishing titles of presbyter and deacon. The fourth Council of Carthage expressly forbids the deacon to assume any one function peculiar to the priesthood, by declaring, 'Diaconus non ad sacerdotium, sed ad ministerium consecratus.' (See also 18th Can. Con. Nic.)

His ordination, moreover, differed from that of presbyter both in its form and in the powers which it conferred. For in the ordination of a presbyter, the presbyters who were present were required to join in the imposition of hands with the bishop; but the ordination of a deacon might be performed by the bishop alone, because, as the 4th Can. of the 4th Council of Carthage declares, he was ordained not to the priesthood, but to the inferior services of the Church. We now proceed to notice what these services specifically were.

1. The deacon's more ordinary duty was to assist the bishop and presbyter in the service of the sanctuary; especially was he charged with the care of the utensils and ornaments appertaining to the holy table (Isidorus, *Epistola ad Landefredum*).

2. In the administration of the Eucharist, that it was theirs to hand the consecrated elements to the people, is evident from Justin Martyr (*Apol.* ii. p. 152), and from Cyprian (*Serm.* v. '*De Lapsis*'). Not, however, that the deacon had any authority or power to *consecrate* the elements; for the 15th Can. of the Council of Arles, A.D. 312, forbids this. And the 18th Can. of the Council of Nice orders the deacons not even to administer the Eucharist to priests, because of their inferiority.

3. Deacons had power to administer the sacrament of baptism (Tertull. *De Bapt.* c. 17; also Hieron. *Dial. contr. Lucif.* c. 4, p. 139). The Council of Eliberis, Can. 77, plainly acknowledges this right, although the author of the *Apost. Constitutions*, and Epiphanius also, would seem to deny it.

4. The office of the deacon was not to preach, so much as to instruct and catechise the catechumens. His part was, when the bishop or presbyter did not preach, to read a homily from one of the Fathers. St. Ambrose, Bishop of Milan, A.D. 380, says expressly, that deacons, in his time, did not preach, though he thinks that they were all originally Evangelists, as were Philip and Stephen.

5. It was the deacon's business to receive the offerings of the people; and having presented them to the bishop or presbyter, to give expression in a *loud voice* to the names of the offerers (see Cypr. *Ep.* 10, al. 16, p. 37 (Hieron. *Com. in Ezek.* xviii. p. 537).

6. Deacons were sometimes authorized, as the bishops' special delegates, to give to penitents the solemn imposition of hands, which was the sign of reconciliation (Cypr. *Ep.* 13, al. 18, *ad Eter.*).

7. Deacons had power to suspend the inferior clergy; this, however, was done only when the bishop and presbyter were absent, and the case urgent (*Constit. Apost.* viii. 28).

8. The ordinary duty of deacons, with regard to general Councils, was to act as scribes and disputants according as they were directed by their bishops. In some instances they voted as proxies for bishops who could not attend in person; but in no instance do we find them voting in a general Council by virtue of their office. But in provincial synods the deacons were sometimes allowed to give their voice, as well as the presbyters, in their own name.

9. The author of *Apostol. Constitut.* (ii. 57, p. 875) informs us that one of the subordinate duties of the deacon was to provide places in the church for persons as they entered—to rebuke any that might either whisper, talk, laugh, &c. during divine service. This was a duty which, however, usually devolved upon the sub-deacon.

10. But, besides the above, there were some other offices which the deacon was called upon to fill abroad. One of these was to take care of the necessitous, orphans, widows, martyrs in prison, and all the poor and sick who had any claim upon the public resources of the church. It was also his especial duty to notice the spiritual, as well as the bodily, wants of the people; and wherever he detected evils which he could not by his own power and authority cure, it was for him to refer them for redress to the bishop.

In general the number of deacons varied with the wants of a particular church. Sozomen (vii. 19, p. 100) informs us that the church of Rome, after the apostolic model, never had more than seven deacons.

It was not till the close of the third century that deacons were forbidden to marry. The Council of Ancyra, A.D. 344, in its 10th Can., ordains that if a deacon declared at the time of his ordination that he would marry, he should not be deprived of his function if he did marry; but that if he married without having made such a declaration, 'he must fall into the rank of laicks!'

The *qualifications* required in deacons by the primitive church were the same that were required in bishops and presbyters; and the characteristics of a deacon, given by St. Paul in his Second Epistle to Timothy, were the rule by which a candidate was judged fit for such an office. The second Council of Carthage, 4th Can., forbids the ordination of a deacon before the age of twenty-five; and both the Civil and Canon Law, as may be seen in Justinian's *Novels*, 123, c. 14, fixed his age to the same period.

The Council of Laodicea, A.D. 381, forbids a deacon to sit in the presence of a presbyter, and the 11th Can. of the first Council of Carthage regulates the number of judges to sit upon a clergyman—three bishops upon a deacon, six upon a presbyter, and twelve upon a bishop. This would mark the rank of each of the parties.

The primitive church had its archdeacon, though when the office was first instituted is a matter of dispute with learned men. He was not in priest's orders; but was selected from the deacons by the bishop, and had considerable authority over the other deacons and inferior orders.—J. W. D.

DEACONESS. This word is derived from Διακόνισσα, or ἡ Διάκονος. That the order of Deaconess existed in the Christian church, *even in Apostolic days*, is evident from Rom. xvi. 1: 'I commend unto you Phebe, our sister, which is a servant (οὖσαν διάκονον, a deaconess) of the church which is at Cenchrea.'

The *earliest* Fathers of the church, moreover, speak of the same order of persons. Ignatius, writing to the church at Antioch—of which he himself was bishop—says, 'Salute the *deaconesses* in Christ Jesus.' Some suppose that it is to such offices of the church that the younger Pliny refers when he thus expresses himself in his letter to the emperor Trajan: 'Qui magis necessarium credidi ex duabus ancillis quæ ministræ dicebantur, quid esset veri et per tormenta quærere.'

Theodoret (*Eccles. Hist.* iii. 14, p. 652) calls Publia, who lived at the time of Julian, ἡ Διάκονος—*deaconess*. Again, we find Sozomen (iv. 14, p. 59) speaking of a certain deaconess who had been excluded church fellowship because of having broken her vows. Theophylact informs us that some supposed that the Πρεσβύτιδας of Tit. ii. 3 meant the *deaconesses*. But however this may be, we do know that the eleventh Can. of the Council of Laodicea calls the deaconesses of the church by the very term Πρεσβύτιδας, intimating that none but *elderly* persons were admitted to this office.

Certain qualifications were necessary in those who were taken into this order.

1. It was necessary that she should be a *widow*. On this Tertullian (*Ad Uxorem*, i. 7, p. 275) thus expresses himself: 'The discipline of the church and apostolical usage (alluding to 1 Tim. v. 9) forbid that any widow be elected unless she have married but *one* husband.' Virgins, it is true, were sometimes admitted into the order of deaconesses; but this was the exception, and not the rule.

2. No widow, unless she had borne children, could become a *deaconess*. This rule arose out of a belief that no person but a mother can possess those sympathizing and tender feelings which ought to animate the deaconess in the discharge of her *peculiar* duties.

3. The early church was very strict in exacting the rule which prohibits the election of any to be deaconesses who had been twice married, though lawfully, and successively to two husbands, one after the other. Thus Tertullian (*Ad Uxorem*, iv. 7) says, 'The apostle requires them (deaconesses) to be *univiræ*—'the wives of one man.' Others, however, give to these words of the apostle another sense. They suppose the apostle to exclude only those widows who, having divorced themselves from their former husbands, had married again (See Suicer's *Thesaurus*, tom. i. p. 866).

It is a disputed point with some learned men whether deaconesses were ordained by imposition of hands. However, the fifteenth Can. of the Council of Chalcedon expressly declares that deaconesses were so ordained, and this is fully confirmed by the author of the *Apost. Constitutions*, viii. 19. Still, deaconesses were not consecrated to any *priestly* function. Some heretics, indeed, allowed women to teach, exorcise, and to administer baptism; but all this he sharply rebukes as being contrary to the apostolic rule (Tertullian, *De Præscript.* 41).

5. One of the peculiar duties, then, of the deaconesses was at the baptism of *women*. The custom of the early church being to baptize all adult persons by immersion (see Suicer's *Thesaur.* tom. i. p. 634), it was necessary to have the assistance of this order of persons. Epiphanius speaks of this practice in his *Exp. Fid.* xxi.; also Justin. *Novel.* vi. p. 6.

6. Another duty the deaconesses had to perform was to instruct and prepare the catechumens for baptism.

7. In times of danger and persecution it was the duty of the deaconesses to visit the martyrs in prison, because they could more easily gain access to them, and with less suspicion and hazard than the deacons.

8. The deaconesses stood at the entrance of the church in order to direct the women as to the place each one should occupy during divine service. Hence Ignatius calls them φρουροὺς τῶν ἁγίων πυλώνων (*Epist. ad Antiochenas*, p. 96).

How long this order continued in the Christian church is not quite certain (Suicer's *Thesaurus*, tom. i. p. 69). It was not however discontinued everywhere at once. In the Greek church, up to the time of Balsamon, *i. e.* to the close of the twelfth century, deaconesses were found to minister in Constantinople (See Balsam. *Resp. ad Interrog. Marci, Patriarchæ Alexandrini*; Suicer, *Thesaur.* tom. i. p. 869.) In the Latin churches, as early as the middle of the fourth century, we find some Councils setting the order aside. But it was not till the tenth century that it was wholly abrogated (See Bona, *Rep. Liturg.* i. 25, 15).—J. W. D.

DEAD SEA. [SEA.]

DEATH. No logical definition of death has been generally agreed upon. This point was much contested in the seventeenth century by the Cartesian and other theologians and philosophers. Since death can be regarded in various points of view, the descriptions of it must necessarily vary. If we consider the state of a dead man, as it strikes the senses, death is the cessation of natural life. If we consider the cause of death, we may place it in that permanent and entire cessation of the feeling and motion of the body which results from the destruction of the body. Among theologians, death is commonly said to consist in the separation of soul and body, implying that the soul still exists when the body perishes. Among the ecclesiastical fathers, Tertullian (*De Anima*, c. 27) gives this definition: *Mors—disjunctio corporis animæque; vita—conjunctio corporis animæque.* Cicero (*Tusc. Dis.* i.) defines death, *discessus animi a corpore.* The passage Heb. iv. 12, is sometimes cited on this subject, but has nothing to do with it. Death does not consist in this separation, but this separation is the consequence of death. As soon as the body loses feeling and motion, it is henceforth useless to the soul, which is therefore separated from it.

Scriptural representations, names, and modes of speech respecting death:—

(*a*). One of the most common in the Old Testament is, *to return to the dust*, or *to the earth*, Hence the phrase, *the dust of death*. It is founded on the description Gen ii. 7, and iii. 19, and denotes the dissolution and destruction of the *body*. Hence the sentiment in Eccles. xii. 7,—'The dust shall return to the earth as it was, the spirit unto God, who gave it.'

(*b*). A withdrawing, exhalation, or removal of the breath of life (Ps. civ. 29). Hence the common terms ἀφῆκε, παρέδωκε τὸ πνεῦμα, *reddidit animam*, ἐξέπνευσε, *exspiravit*, &c.

(*c*). A removal from the body, a being absent from the body, a departure from it, &c. This description is founded on the comparison of the body with a tent or lodgment in which the soul dwells during this life. Death destroys this tent or house, and commands us to travel on (Job iv. 21; Isa. xxxviii. 12; Ps. liii. 7). Whence Paul says (2 Cor. v. 1) 'our earthly house of this tabernacle' will be destroyed; and Peter calls death a 'putting off of this tabernacle' (2 Peter i. 13, 14). Classical writers speak of the soul in the same manner, as κατασκηνοῦν ἐν τῷ σώματι. They call the body σκῆνος. So Hippocrates and Æschines. Compare 2 Cor. v. 8, 9—ἐκδημῆσαι ἐκ τοῦ σώματος.

(*d*). Paul likewise uses the term ἐκδύεσθαι, in reference to death (2 Cor. v. 3, 4); because the body is represented as the garment of the soul, as Plato calls it. The soul, therefore, as long as it is in the body, is clothed; and as soon as it is disembodied, is naked.

(*e*). The terms which denote *sleep* are applied frequently in the Bible, as everywhere else, to death (Ps. lxxvi. 5; Jer. li. 39; John xi. 13, sqq.). Nor is this language used exclusively for the death of the pious, as some pretend, though this is its prevailing use. Homer calls *sleep* and *death* twin-brothers (*Iliad*, xvi. 672). The terms also which signify to lie down, to rest (*e. g.* שָׁכַב, *occumbere*), also denote death.

(*f*). Death is frequently compared with and named from *a departure, a going away*. Hence the verbs *eundi, abeundi, discedendi*, signify to die (Job x. 21; Ps. xxxix. 4). The case is the same with ὑπάγω and πορεύομαι in the New Testament (Matt. xxvi. 24), and even among the classics. In this connection we may mention the terms ἀναλύειν and ἀνάλυσις (Phil. i. 23; 2 Tim. iv. 6), which do not mean *dissolution*, but *discessus* (cf. Luke xii. 36). Vid. Wetstein on Phil. i.

Death, when personified, is described as a ruler

and tyrant, having vast power and a great kingdom, over which he reigns. 'But the ancients also represented it under some figures which are not common among us. We represent it as a man with a scythe, or as a skeleton, &c.; but the Jews, before the exile, frequently represented death as a hunter, who lays *snares* for men (Ps. xviii. 5, 6; xci. 3). After the exile, they represented him as a man, or sometimes as an angel (the angel of Death), with a cup of poison, which he reaches to men. From this representation appears to have arisen the phrase, which occurs in the New Testament, to *taste death* (Matt. xvi. 28; Heb. ii. 9), which, however, in common speech, signifies merely to *die*, without reminding one of the origin of the phrase. The case is the same with the phrase to *see death* (Ps. lxxxix. 48; Luke ii. 26). See Knapp's *Christian Theology*, by Dr. Leonard Wood.

DEBIR (דְּבִיר; Sept. Δαβίρ), a city in the tribe of Judah, about thirty miles south-west from Jerusalem, and ten miles west of Hebron. It was also called Kirjath-sepher (Josh. xv. 15), and Kirjath-sannah (xv. 49). The name Debir means 'a word' or 'oracle,' and is applied to that most secret and separated part of the Temple, or of the most holy place, in which the ark of the covenant was placed, and in which responses were given from above the cherubim. From this, coupled with the fact that Kirjath-sepher means 'book-city,' it has been conjectured that Debir was some particularly sacred place or seat of learning among the Canaanites, and a repository of their records. 'It is not indeed probable,' as Professor Bush remarks, 'that writing and books, in our sense of the words, were very common among the Canaanites; but some method of recording events, and a sort of learning was, doubtless, cultivated in those regions.' Debir was taken by Joshua (xi. 38); but it being afterwards retaken by the Canaanites, Caleb, to whom it was assigned, gave his daughter Achsah in marriage to his nephew Othniel for his bravery in carrying it by storm (Josh. xv. 16). The town was afterwards given to the priests (xxi. 15). No trace of it is to be found at the present time.

There were two other places called Debir: one belonging to Gad, beyond Jordan (Josh. xiii. 26); the other to Benjamin, though originally in Judah.

DEBORAH (דְּבֹרָה, *a bee*; Sept. Δεββώρα), a prophetess, wife of Lapidoth. She dwelt, probably, in a tent, under a well-known palm-tree between Ramah and Bethel, where she judged Israel (Judg. iv. 4, 5). This probably means that she was the organ of communication between God and his people, and probably, on account of the influence and authority of her character, was accounted in some sort as the head of the nation, to whom questions of doubt and difficulty were referred for decision. In her triumphal song she says—

'In the days of Shamgar, son of Anath,
In the days of Jael, the ways lay desert,
And high-way travellers went in winding by-paths.
Leaders failed in Israel, they failed,
Until that I Deborah arose,
That I arose, a mother in Israel.'

From the further intimations which that song contains, and from other circumstances, the people would appear to have sunk into a state of total discouragement under the oppression of the Canaanites; so that it was difficult to rouse them from their despondency and to induce them to make any exertion to burst the fetters of their bondage. From the gratitude which Deborah expresses towards the people for the effort which they finally made, we are warranted in drawing the conclusion that she had long endeavoured to instigate them to this step in vain. At length she summoned Barak, the son of Abinoam, from Kedesh, a city of Naphtali, on a mountain not far from Hazor, and made known to him the will of God that he should undertake an enterprise for the deliverance of his country. But such was his disheartened state of feeling, and at the same time such his confidence in the superior character and authority of Deborah, that he assented to go only on the condition that she would accompany him. To this she at length consented. They then repaired together to Kedesh, and collected there—in the immediate vicinity of Hazor, the capital of the dominant power—ten thousand men, with whom they marched southward, and encamped on Mount Tabor. Sisera, the general of Jabin, king of Hazor, who was at the head of the Canaanitish confederacy, immediately collected an army, pursued them, and encamped in face of them in the great plain of Esdraelon. Encouraged by Deborah, Barak boldly descended from Tabor into the plain with his ten thousand men to give battle to the far superior host of Sisera, which was rendered the more formidable to the Israelites by nine hundred chariots of iron. The Canaanites were beaten; and Barak pursued them northward to Harosheth. Sisera himself, being hotly pursued, alighted from his chariot and escaped on foot to the tent of Heber the Kenite, by whose wife he was slain. This great victory (dated about B.C. 1296), which seems to have been followed up, broke the power of the native princes, and secured to the Israelites a repose of forty years' duration. During part of this time Deborah probably continued to exercise her former authority: but nothing more of her history is known.

The song of triumph, which was composed in consequence of the great victory over Sisera, is said to have been 'sung by Deborah and Barak.' It is usually regarded as the composition of Deborah; and was probably indited by her to be sung on the return of Barak and his warriors from the pursuit. Of this peculiarly fine specimen of the earlier Hebrew poetry, there is an excellent translation by Dr. Robinson in the 1st vol. of the *American Biblical Repository*, from the introductory matter to which this notice of Deborah is chiefly taken.

2. DEBORAH. The nurse of Rebekah, whom she accompanied to the land of Canaan; she died near Bethel, and was buried under an oak, which for that reason was thenceforth called Allon-bachuth—'the oak of weeping' (Gen. xxxv. 8).

DECALOGUE (עֲשֶׂרֶת הַדְּבָרִים; Sept. οἱ δέκα λόγοι and τὰ δέκα ῥήματα; Vulg. *decem verba*, the ten words. Exod. xxxiv. 28; Deut. iv. 13; x. 4). This (Δεκαλογος) is the name most usually given by the Greek Fathers to the law of the two tables, given by God to Moses on Mount Sinai. The decalogue was written on two stone slabs (Exod. xxxi. 18), which, having

been broken by Moses (xxxii. 19), were renewed by God (xxxiv. 1, &c.). They are said (Deut. ix. 10) to have been written by the finger of God, an expression which always implies an immediate act of the Deity. The decalogue is five times alluded to in the New Testament, there called εντολαι, *commandments*, but only the latter precepts are specifically cited, which refer to our duties to each other (Matt. xvii. 18, 19, &c.; Mark x. 19; Luke xviii. 20; Rom. xiii. 9; vii. 7, 8; Matt. v.; 1 Tim. i. 9, 10). Those which refer to God are supposed by some to be omitted from the circumstance of their containing precepts for ceremonial observances (Jeremy Taylor's *Life of Christ*, and *Ductor Dubitan.*; Rosenmüller's *Scholia in Exod.*) [Law].

The circumstance of these precepts being called *the ten words* has doubtless led to the belief that the two tables contained ten distinct precepts, five in each table; while some have supposed that they were called by this name to denote their perfection, *ten* being considered the most perfect of numbers (Philo-Judæus *de decalogo*). This distinguished philosopher divides them into two pentads, the first pentad ending with Exod. xx. 12, 'Honour thy father and thy mother,' &c., or the *fifth* commandment of the Greek, Reformed, and Anglican churches; while the more general opinion among Christians is that the first table contained our duty to God, ending with the law to keep the sabbath holy, and the second, our duty to our neighbour. As they are not numerically divided in the Scriptures, so that we cannot positively say which is the first, which the second, &c., it may not prove uninteresting to the student in Biblical literature, if we here give a brief account of the different modes of dividing them which have prevailed among Jews and Christians. These may be classed as the Talmudical, the Origenian, and the two Masoretic divisions.

The case cannot be more clearly stated than in the words of St. Augustin: 'It is inquired how the ten commandments are to be divided? whether there are four which relate to God, ending with the precept concerning the sabbath,—and the other six, commencing with "Honour thy father and thy mother," appertaining to man,—or whether the former are *three* only, and the latter *seven*. Those who say that the first table contains *four*, separate the command "Thou shalt have no other Gods but me" (Exod. xx. 3; Deut. v. 7), so as to make another precept of "Thou shalt not make to thyself an idol" (Exod. xx. 4; Deut. v. 8); in which images are forbidden to be worshipped. But they wish "Thou shalt not covet thy neighbour's house" (Exod. xx. 17; Deut. v. 21), and "Thou shalt not covet thy neighbour's wife" (Exod. xx. 17; Deut. v. 21), and so on to the end, to be one. But those who say that there are three only in the first table, and seven in the second, make one commandment of the precept of the worship of one God, and nothing beside him (Exod. xx. 3; Deut. v. 7), but divide these last into two, so that one of them is "Thou shalt not covet thy neighbour's wife," and the other "Thou shalt not covet thy neighbour's house." There is no question among either about the correctness of the number ten, as for this there is the testimony of Scripture' (*Questions on Exodus*, qu. 71, *Works*, vol. iii., Paris, 1679, p. 443). We shall hereafter give Augustin's own view of the subject, but here we shall commence with the division contained in the Talmud (*Makkoth*, xxiv. a), which is also that of the modern Jews.

According to this division the first commandment consists of the words 'I am the Lord thy God, who brought thee out of the land of Egypt, out of the house of bondage' (Exod. xx. 2; Deut. v. 6); the second (Exod. iii. 4), 'Thou shalt have none other Gods beside me; thou shalt not make to thyself any graven image,' &c. to ver. 6; the third, 'Thou shalt not take God's name in vain,' &c.; the fourth, 'Remember to keep holy the sabbath day,' &c.; the fifth, 'Honour thy father and thy mother,' &c.; the sixth, 'Thou shalt not kill;' the seventh, 'Thou shalt not commit adultery;' the eighth, 'Thou shalt not steal;' the ninth, 'Thou shalt not bear false witness,' &c.; and the tenth, 'Thou shalt not covet,' &c. to the end. This division is also supported by the Targum of the Pseudo-Jonathan, a work of the sixth century, by Aben Ezra, in his *Commentary*, and by Maimonides (*Sepher Hammizvoth*). It has been also maintained by the learned Lutheran, Peter Martyr (*Loci Communes*, Basle, 1580, loc. 14, p. 684). That this was a very early mode of dividing the decalogue is further evident from a passage in Cyril of Jerusalem's treatise against Julian, from whom he quotes the following invective: 'That decalogue, the law of Moses, is a wonderful thing; thou shalt not steal; thou shalt not kill; thou shalt not bear false witness. But let each of the precepts which he asserts to have been given by God himself be written down in the identical words, "I am the Lord thy God, who brought thee out of the land of Egypt;" the second follows, "Thou shalt have no strange gods beside me; thou shalt not make to thyself an idol." He adds the reason, "for I, the Lord thy God, am a jealous God, visiting the sins of the fathers upon the children." "Thou shalt not take the name of the Lord thy God in vain. Remember the sabbath day. Honour thy father and thy mother. Thou shalt not commit adultery. Thou shalt not steal. Thou shalt not bear false witness. Thou shalt not covet thy neighbour's goods." What nation is there, by the gods, if you take away these two, "Thou shalt not adore other Gods," and "Remember the sabbath," which does not think all the others are to be kept, and which does not punish more or less severely those who violate them?'

The next division is the *Origenian*, or that approved by Origen, and is that in use in the Greek and in all the Reformed Churches, except the Lutheran.

Although Origen was acquainted with the differing opinions which existed in his time in regard to this subject, it is evident from his own words that he knew nothing of that division by which the number *ten* is completed by making the prohibition against coveting either the house or the wife a distinct commandment. In his eighth *Homily on Genesis*, after citing the words, 'I am the Lord thy God, who brought thee out of the land of Egypt,' he adds, 'this is not a part of the commandment.' The first commandment is, 'Thou shalt have no other Gods but me,' and then follows, 'Thou shalt not make an idol.' These together are thought by some to make one commandment; but in this case the number ten

will not be complete—where then will be the truth of the decalogue? But if it be divided as we have done in the last sentence, the full number will be evident. The first commandment therefore is, 'Thou shalt have no other Gods but me,' and the second, 'Thou shalt not make to thyself an idol, nor a likeness,' &c. Origen proceeds to make a distinction between Gods, idols, and likenesses. Of Gods, he says, 'it is written, there are gods many and lords many' (1 Cor. viii. 5); but of idols, 'an idol is nothing;' an image, he says, of a quadruped, serpent, or bird, in metal, wood, or stone, set up to be worshipped, is not an *idol*, but a *likeness*. A picture made with the same view comes under the same denomination. But an idol is a representation of what does not exist; such as the figure of a man with two faces, or with the head of a dog, &c. The likeness must be of something existing in heaven, or in earth, or in the water. It is not easy to decide on the meaning of 'things in heaven,' unless it refers to the sun, moon, or stars. The design of Moses he conceives to have been to forbid Egyptian idolatry, such as that of Hecate, or other fancied demons.—*Opera*, vol. ii. p. 156, De la Rue's ed.

The Pseudo-Athanasius, or the author of the *Synopsis Scripturæ*, who is the oracle of the Greek church, divides the commandments in the same manner. 'This book [Exodus] contains these ten commandments, on two tables: first, I am the Lord thy God. Second, Thou shalt not make to thyself an idol, nor any likeness...... Ninth, Thou shalt not bear false witness against thy neighbour. Tenth, Thou shalt not covet thy neighbour's wife, nor any thing that is thy neighbour's.'—Athanasii *Opera*, fol. Paris, 1698.

Gregory Nazianzen, in one of his poems, inscribed 'The Decalogue of Moses,' gives the following division:

These ten laws Moses formerly engraved on tables
Of stone; but do thou engrave them on thy heart.
Thou shalt not know another God, since worship belongs to me.
Thou shalt not make a vain statue, a lifeless image.
Thou shalt not call on the great God in vain.
Keep all sabbaths, the sublime and the shadowy.
Happy he who renders to his parents due honour.
Flee the crime of murder, and of a foreign
Bed; evil-minded theft and witness
False, and the desire of another's, the seed of death.

Opera, ed. Caillaud, Paris, 1840.

Jerome took the same view with Origen. In his commentary on Ephesians vi. he thus writes: 'Honour thy father and thy mother,' &c. is the *fifth* commandment in the decalogue. How then are we to understand the Apostle's meaning in calling it the first, when the first commandment is 'Thou shalt have no Gods but me,' where some read thus, 'which is the first commandment with promise,' as if the *four* previous commandments had no promise annexed, &c. . . . . 'But they do not seem to me to have observed with sufficient accuracy that in the *second* commandment there is also a promise: 'Thou shalt not make to thyself an idol, nor the likeness of any thing in heaven above, or in the earth beneath, or in the water under the earth; thou shalt not adore them, nor sacrifice to them; for I the Lord thy God am a jealous God, visiting the sins . . but shewing mercy unto thousands . .' (observe these words of promise—shewing mercy unto thousands, &c.)—Hieronymi *Opera*, vol. iv. Paris, 1693.

The Pseudo-Ambrose also writes to the same effect in his *Commentary on Ephesians*: 'How is this the first commandment, when the first commandment says, Thou shalt have no other gods but me? Then, Thou shalt not make a likeness of any thing in heaven above, or in the earth beneath, &c. The *third*, Thou shalt not take the name of the Lord thy God in vain; the *fourth*, Keep my sabbaths; the *fifth*, Honour thy father and thy mother. As the first four appertain to God, they are contained in the first table: the others, appertaining to men, are contained in the second, such as that of honouring parents, not committing murder, adultery, theft, false witness, or concupiscence. These six seem to be written in the second table, the first of which is called the first with promise' (Ambrosii *Opera*, vol. ii. Paris edition; Append. pp. 248, 249).

To these testimonies from the fathers may be added that of Clemens Alexandrinus (*Stromata*, vi. p. 809); but this writer is so confused and contradictory in reference to the subject, that some have supposed the text to have been corrupted. 'The first precept of the decalogue,' he observes, 'shows that one God only is to be worshipped, who brought his people out of Egypt . . . . . . and that men ought to abstain from the idolatry of the creature. The second, that we ought not to transfer his name to creatures; the *third* signifies that the world was made by God, who has given us the seventh day to rest; the *fifth* follows, which commands us to honour our parents: then follows the precept about adultery, after this that concerning theft; but the tenth is concerning coveting.'

But the strongest evidence in favour of the Origenian division is that of the learned Jews Philo and Josephus, who speak of it as the received division of the Jewish Church. Philo, after mentioning the division into two pentads already referred to, proceeds: 'The first pentad is of a higher character than the second; it treats of the monarchy whereby the whole world is governed, of statues and images (ξοάνων καὶ ἀγαλμάτων), and of all corrupt representations in general (ἀφιδρυμάτων); of not taking the name of God in vain; of the religious observance of the seventh day as a day of holy rest; of honouring both parents. So that one table begins with God the father and ruler of all things, and ends with parents who emulate him in perpetuating the human race. But the other pentad contains those commandments which forbid adultery, murder, theft, false-witness, concupiscence' (*De Decalogo*, lib. i.). The *first* precept, he afterwards observes, enjoins the belief and reverent worship of one supreme God, in opposition to those who worship the sun and moon, &c. And after condemning the arts of sculpture and painting, as taking off the mind from admiring the natural beauty of the universe, he adds: 'As I have said a good deal of the *second* commandment, I shall now proceed to the next, "Thou shalt not take the name of God in vain." . . . . The fourth commandment respects the sabbath day, to be devoted to rest, the study of wisdom, and the contempla-

tion of nature, with a revision of our lives during the past week, in order to the correction of our transgressions: the fifth speaks of honouring parents. Here ends the first, or more divine pentad. The second pentad begins with the precept respecting adultery; its second precept is against murder; its third against stealing, the next against false-witness, the last against coveting' (lib. ii.). This division seems to have been followed by Irenæus: 'In quinque libris, &c., unaquæque tabula quam accepit a Deo præcepta habet quinque.' And Josephus is, if possible, still more clear than Philo. 'The first commandment teaches us that there is but one God, and that we ought to worship him only; the second commands us not to make the image of any living creature, to worship it; the third, that we must not swear by God in a false matter; the fourth, that we must keep the seventh day, by resting from all sorts of work; the fifth, that we must honour our parents; the sixth, that we must abstain from murder; the seventh, that we must not commit adultery; the eighth, that we must not be guilty of theft; the ninth, that we must not bear false-witness; the tenth, that we must not admit the desire of that which is another's' (*Antiq.*, iii. 5. 5, Whiston's translation).

This division, which appears to have been forgotten in the Western Church, was revived by Calvin in 1536, and is also received by that section of the Lutherans who followed Bucer, called the Tetrapolitans. It is adopted by Calmet (*Dictionary of the Bible*, French ed., art. Loi.) It is supported by Zonaras, Nicephorus, and Petrus Mogislaus among the Greeks, and is that followed in the present Russian Church, as well as by the Greeks in general (see the catechism published by order of Peter the Great, by Archbishop Resensky, London, 1753). It is at the same time maintained in this catechism that it is not forbidden to bow before the representations of the saints. This division, which appeared in the Bishops' Book in 1537, was adopted by the Anglican Church at the Reformation (1548), substituting *seventh* for sabbath-day in her formularies. The same division was published with approbation by Bonner in his *Homilies* in 1555.

We shall next proceed to describe the two Masoretic divisions. The first is that in Exodus. We call it the Masoretic division, inasmuch as the commandments in the greater number of manuscripts and printed editions are separated by a ם or ס, which mark the divisions between the smaller sections in the Hebrew. According to this arrangement, the two first commandments (according to the Origenian or Greek division), that is, the commandment concerning the worship of one God, and that concerning images, make but one; the second is, 'Thou shalt not take the name of the Lord thy God in vain,' and so on until we arrive at the two last, the former of which is, 'Thou shalt not covet thy neighbour's house,' and the last or tenth, 'Thou shalt not covet thy neighbour's wife, nor his servant,' &c., to the end. This was the division approved by Luther, and it has been ever since his time received by the Lutheran Church. The correctness of this division has been at all times maintained by the most learned Lutherans, not only from its agreement with the Hebrew Bibles, but from the internal structure of the commandments, especially from the fact of the two first commandments (according to Origen's division) forming but one subject. If these form but one commandment, the necessity of dividing the precept, 'thou shalt not covet,' &c., into two is obvious. (For a learned defence of this division, see Pfeiffer's *Opera*, vol. i. loc. 96, p. 125.) Pfeiffer considers the accentuation also of the Hebrew as equally decisive in favour of this division, notwithstanding the opposite view is taken by many others, including the learned Buxtorf. This division is also followed in the Trent catechism, and may therefore be called the Roman Catholic division. The churches of this communion have not, however, been consistent in following uniformly the Tridentine division, having revived, as in this country, the second Masoretic division, to which we shall presently allude. In the Trent catechism the first commandment is, 'Ego sum Dominus Deus tuus, qui eduxi te de terra Ægypti, de domo servitutis; non habebis Deos alienos coram me. Non facies tibi sculptile, &c.' 'Ego sum Dominus Deus tuus, fortis, zelotes,' &c., to 'præcepta mea.' The two last commandments (according to the Roman division) are, however, in the same catechism, combined in one, thus: 'Non concupisces domum proximi tui; nec desiderabis uxorem ejus, non servum, non ancillam, non bovem, non asinum, nec omnia quæ illius sunt. In his duobus præceptis,' &c. It had appeared in the same form in England, in Marshall's and Bishop Hilsey's *Primers*, 1534, and 1539.

Those who follow this division have been accustomed to give the decalogue very generally in an abridged form: thus the first commandment in the Lutheran shorter catechism is simply, 'Thou shalt have no other gods but me;' the second, 'Thou shalt not take the name of thy God in vain;' the third, 'Thou shalt sanctify the sabbath-day' (*Feyertag*). A similar practice is followed by the Roman Catholics, although they, as well as the Lutherans, in their larger catechisms (as the Douay) give them at full length. This practice has given rise to the charge made against those denominations of leaving out the second commandment, whereas it would have been more correct to say that they had mutilated the first, or at least that the form in which they give it has the effect of concealing a most important part of it from such as had only access to their shorter catechisms.

The last division is the *second Masoretic*, or that of Deuteronomy, sometimes called the Augustinian. This division differs from the former simply in placing the precept 'Thou shalt not covet thy neighbour's wife' before 'Thou shalt not covet thy neighbour's house,' &c.; and for this transposition it has the authority of Deut. v. 21. The authority of the Masorites cannot, however, be of sufficient force to supersede the earlier traditions of Philo and Josephus.

This division was that approved by Augustin, who thus expresses himself on the subject,—'Following up what he had said (*supra*, p. 538), he observes, 'but to me it seems more congruous to divide them into three and seven, inasmuch as to those who diligently look into the matter, those which appertain to God seem to insinuate the Trinity. And, indeed, the command, 'Thou shalt have no other gods but me' is more perfectly explained when images are forbidden to be wor-

slipped. Besides, the sin of coveting another man's wife differs so much from coveting his house, that to the house was joined his field, his servant, his maid, his ox, his ass, his cattle, and all that is his. But it seems to divide the coveting of the house from the coveting of the wife, when each begins thus: '*thou shalt not covet* thy neighbour's wife, *thou shalt not covet* thy neighbour's house,' to which it then begins to add the rest. For, when he had said, 'thou shalt not covet thy neighbour's wife, he did not add the rest to this, saying, nor his house, nor his field, nor his servant, &c., but these seem plainly to be united, which appear to be contained in one precept, and distinct from that wherein the wife is named. But when it is said, 'thou shalt have no other gods but me,' there appears a more diligent following up of this in what is subjoined. For to what pertains, 'thou shalt not make an idol, nor a likeness: thou shalt not adore nor serve them,' unless to that which had been said, 'thou shalt have none other gods but me.' The division of Augustin was followed by Bede and Peter Lombard.

The learned Sonntag has entirely followed Augustin's view of this subject, and has written a dissertation in vindication of this division in the *Theologische Studien und Kritiken*, Hamburg, 1836-7; to which there has been a reply in the same miscellany from Züllg, in vindication of what he terms the *Calvinistic division*, or that of Origen, which is followed by a rejoinder from Sonntag. Sonntag is so convinced of the necessity of that order of the words, according to which the precept against coveting the wife precedes (as in Deuteronomy) that against coveting the house, &c., that he puts down the order of the words in Exodus as an oversight. The order in the Septuagint version in Exodus agrees with that in Deuteronomy. The Greek church follows this order. Sonntag conceives that the Mosaic division of the decalogue was lost in the period between the exile and the birth of Christ.
W. W.

DECAPOLIS (ἡ Δεκάπολις, αἱ δέκα πόλεις). This appears to denote not, as is frequently stated, a particular province or district, but certain *Ten Cities*, including the adjacent villages (τὰς κώμας αὐτῶν, Joseph. *Vit.* § 65), which resembled each other in being inhabited mostly by Gentiles, and in their civic institutions and privileges. In Matt. iv. 25, it is said 'multitudes followed Jesus from Galilee, and from Decapolis, and from Jerusalem, and from Judea, and from beyond Jordan.' This must be considered as a popular mode of expression, just as, in describing a public meeting in this country, it might be said, 'numbers attended it from Kent and Sussex, and from the Cinque Ports.' We, therefore, cannot agree with Dr. Lightfoot in thinking it 'absurd to reckon the most famed cities of Galilee for cities of Decapolis, when, both in sacred and profane authors, Galilee is plainly distinguished from Decapolis' (*Chorographical Decad.* ch. vii. § 1; *Works*, x. p. 238). One at least of the Decapolitan towns (Scythopolis, formerly Bethshan) was in Galilee, and several, if not all the rest, were in the country beyond Jordan. Pliny gives the following list, but allows that a difference of opinion existed as to its correctness (— numero oppidorum, in quo non omnes eadem observant, *Nat. Hist.* v. 16, 18): 1. Damascus; 2. Philadelphia; 3. Raphana; 4. Scythopolis; 5. Gadara; 6. Hippos; 7. Dion; 8. Pella; 9. Galasa; 10. Canatha. Josephus speaks of Gadara and Hippos as Grecian cities (Ἑλληνίδες εἰσὶ πόλεις, *Antiq.* xvii. 11. § 4), and calls Scythopolis the greatest city of the Decapolis (*Bell. Jud.* iii. 9. § 7), from which it may be inferred that he excluded Damascus from the number. For Damascus and Raphana, Cellarius substitutes Cæsarea Philippi and Gergesa, and Ptolemy Capitolias (Winer's *Real-wörterbuch*, i. 308). The name Decapolis was in course of time applied to more than *ten* towns, a circumstance which may in part account for the discrepancies in the lists given by various writers. Stephen of Byzantium, for instance, enumerates *fourteen* Decapolitan cities; and thus in our own country, as far back as the reign of Henry III., the *Cinque Ports* included *seven* principal places, besides subordinate towns. The Decapolitan towns referred to in the Gospels were evidently situated not far from the sea of Galilee (Mark v. 20; vii. 31). The name Decapolis does not occur in the Apocrypha, and, according to Mannert, it is only found in writers of the first century; in later times there is scarcely an allusion to it (*Geographie der Griechen und Römer*, vi. 1, p. 244).—J. E. R.

DEDAN (דְּדָן; Sept. Δαιδάν). Two persons of this name are mentioned in Scripture; one the son of Cush (Gen. x. 7), and the other the second son of Jokshan, Abraham's son by Keturah (Gen. xxv. 3). Both were founders of tribes, afterwards repeatedly named in Scripture; and Gesenius, Winer, and others, are of opinion that these were not really different tribes, but the same tribe derived, according to different traditions, from different progenitors. It seems better, however, to adhere to the usual view, by which they are distinguished from each other.

Of the descendants of the Cushite Dedan, very little is known. It is supposed that they settled in southern Arabia, near the Persian Gulf; but the existence in this quarter of a place called Dadan or Dadena, is the chief ground for this conclusion.

The descendants of the Abrahamite Jokshan seem to have lived in the neighbourhood of Idumæa; for the prophet Jeremiah (xlix. 8) calls on them to consult their safety, because the calamity of the sons of Esau, *i. e.* the Idumæans, was at hand. The same prophet (xxv. 23) connects them with Thema and Buz, two other tribes of Arabia Petræa, or Arabia Deserta, as does Ezekiel (xxv. 13) with Theman, a district of Edom. It is not always clear when the name occurs which of the two Dedans is intended; but it is probably the Cushite tribe, which is described as addicted to commerce, or rather, perhaps, engaged in the carrying-trade. Its 'travelling companies,' or caravans, are mentioned by Isaiah (xxi. 13); in Ezekiel (xxvii. 20), the Dedanites are described as supplying the markets of Tyre with flowing riding-cloths: and elsewhere (xxxviii. 13) the same prophet names them along with the merchants of Tarshish.

DEDICATION, a religious ceremony, whereby anything is dedicated or consecrated to the service of God; and it appears to have originated in the desire *to commence*, with peculiar solemnity,

the practical use and application of whatever had been set apart to the divine service. Thus Moses dedicated the Tabernacle in the Wilderness (Exod. xl.; Num. vii.); Solomon his temple (1 Kings viii.); the returned exiles theirs (Ezra vi. 16, 17); Herod his (Joseph. *Antiq*. xv. 11. 6). The Maccabees having cleansed the temple from its pollutions under Antiochus Epiphanes, again dedicated the altar (1 Macc. iv. 52-9), and an annual festival was established in commemoration of the event. This feast was celebrated not only at Jerusalem, but everywhere throughout the country; in which respect it differed from the feasts of the Passover, Pentecost, and Tabernacles, which could only be observed at Jerusalem.

In John x. 22, 23, we are told that Jesus was at Jerusalem, walking in Solomon's porch at the time of 'the feast of the dedication, and it was winter.' This is usually supposed to have been the feast commemorating the dedication by Judas Maccabæus, which was celebrated in the month Cislev, about the winter solstice (answering to the 15th of December). There seems no reason to disturb this conclusion; for the dedication of Solomon's temple was in the seventh month, or autumn; that of Zerubbabel's temple in the month Adar, in the spring; and, although that of Herod's temple was in the winter, we know not that it was celebrated by an annual feast, while the Maccabæan dedication was a festival much observed in the time of Christ (Joseph. *Antiq*. xii. 7, 7) In Josephus, this feast is called φῶτα, since, for eight days, lanterns and torches were lighted up in the houses in token of joy. Many commentators of reputation take χειμών to signify, like the Latin *hiems*, not merely winter, but inclement, rainy, wintry weather. In this latter sense it would supply a reason why Jesus was walking in the porch; but as the time of the year would equally account for the fact, and as, moreover, there is at Jerusalem no wintry weather except in winter, it is better to take the word in its usual sense, and to understand the clause 'it was winter' to have been inserted for the information of those who might not know at what season the Jewish feast was celebrated.

Not only were sacred places thus dedicated; but some kind of dedicatory solemnity was observed with respect to cities, walls, gates, and even private houses (Deut. xx. 5; Ps. xxx. title; Neh. xii. 27). We may trace the continuance of these usages in the custom of consecrating or dedicating churches and chapels; and in the ceremonies connected with the 'opening' of roads, markets, bridges, &c., and with the launching of ships.

DEFILEMENT. [Pollution.]

DEGREES, PSALMS OF. [Psalms.]

DELILA, the woman whom Samson loved, and who betrayed him to his enemies (Judg. xvi.) [Samson].

DELUGE. The narrative of a flood, given in the book of Genesis (vii. and viii.), by which, according to the literal sense of the description, the whole world was overwhelmed and every terrestrial creature destroyed, with the exception of one human family and the representatives of each species of animal, supernaturally preserved in an ark, constructed by divine appointment for the purpose, need not here be followed in detail. The account furnished by the sacred historian is circumstantially distinct; and the whole is expressly ascribed to divine agency: but, in several of the lesser particulars, secondary causes, as rain, 'the opening of the windows of Heaven' (vii. 11), and the 'breaking up of the fountains of the great deep,' are mentioned, and again the effect of wind in drying up the waters (viii. 1). It is chiefly to be remarked that the whole event is represented as both commencing and terminating in the most gradual and quiet manner, without anything at all resembling the catastrophes and convulsions often pictured in vulgar imagination as accompanying it. When the waters subsided, so little was the surface of the earth changed that the *vegetation* continued *uninjured*: the olive-trees remained from which the dove brought its token.

We allude particularly to these circumstances in the narrative as being those which bear most upon the probable *nature* and extent of the event, which it is our main object in the present article to examine, according to the tenor of what little evidence can be collected on the subject, whether from the terms of the narrative or from other sources of information which may be opened to us by the researches of science.*

Much, indeed, might be said on the subject in other points of view; and especially in a more properly theological sense, it may be dwelt upon as a part of the great series of divine interpositions and dispensations which the sacred history discloses. But our present object, as well as limits, will restrict us from enlarging on these topics; or, again, upon the various ideas which have prevailed on the subject apart from Scripture on the one hand, or science on the other. Thus, we need merely allude to the fact that in almost all nations, from the remotest periods, there have prevailed certain mythological narratives and legendary tales of similar catastrophes. Such narratives have formed a part of the rude belief of the Egyptians, Chaldæans, Greeks, Scythians, and Celtic tribes. They have also been discovered among the Peruvians and Mexicans, and the South Sea Islanders. For details on these points we refer our readers to the work of Bryant (*Ancient Mythology*), and more especially to the treatise of the Rev. L. V. Harcourt on the Deluge, who appears to have collected everything of this kind bearing on the subject.

With reference to our present design the most material question is that of the existence of those traces which it might be supposed would be discovered of the action of such a deluge on the existing surface of the globe; and the consequent views which we must adopt according to the degree of accordance or discordance which such evidences may offer, as compared with the written narrative. Even in this point of view much speculation of a very vague and unsatisfactory nature has been occasionally indulged in; indeed, the most purely gratuitous speculations were, for a long time, the only attempts towards any inquiry into the subject; nor can we say that the spirit of following them is even yet extinct.

It will, however, be little to our purpose to enlarge upon the crude conceptions and over-hasty generalizations of the earlier cosmogonists and geologists, as, besides the visionary character attaching to the theories of the former, several of the most eminent of the latter class have, with the

ingenuousness of true philosophers, candidly acknowledged the errors into which they had once been led, at periods when the correct nature of inductive reasoning in geology was less attended to than it has been of late; when the science having settled into a more firm and compact structure, and a more rigid scrutiny having been applied to all its defective parts, its real conclusions have been fixed upon an enduring foundation, and visionary speculation from henceforth banished from its precincts.

The evidence which geology may disclose, and which can in any degree bear on our present subject must, from the nature of the case, be confined to indications of superficial action attributable to the agency of water, subsequent to the latest period of the regular geological formations, and corresponding in character to a temporary inundation of a *quiet* and tranquil nature, of a depth sufficient to cover the highest mountains, and, lastly (as indeed this condition implies), extending over the whole globe; or, if these conditions should not be fulfilled, then, indications of at least something approaching to this, or with which the terms of the description may be fairly understood and interpreted to correspond.

Our object, then, will be to present, in as brief a summary as possible, what and how much of evidence of the kind here described geological research does really put before us; and then to offer some remarks on the reference it may bear to the terms in which the sacred narrative is conveyed.

Of those geological facts which seem to bear at all upon such an inquiry, the first, perhaps, which strikes us is the occurrence of what was formerly all included under the common name of *diluvium*, but which more modern research has separated into many distinct classes. The general term may, however, not inaptly describe superficial accumulations whether of soil, sand, gravel, or loose aggregations of larger blocks, which are found to prevail over large tracts of the earth's surface, and are manifestly superinduced over the deposits of different ages, with which they have no connection.

An examination of the contents of this accumulated detritus soon showed the diversified nature of the fragments of which it is composed in different localities. Investigations were made by comparing the transported fragments with the nearest rocks from which they could have been derived. Hence was inferred the *direction* of the current which transported them, and the degree of force necessary for such transport, according to their size and nature and the character of the intervening ground. Hence the conclusion was inevitable that many such currents in different directions and acting with different degrees of force must have occurred to produce the observed results. It was soon found from the like infallible indications that these different instances of diluvial action were of very *different ages*, and none of more than *local* extent, though some must have acted over considerable tracts of country. In some instances the most palpable evidence has been furnished in one such stratum crossing and overlying another.

In other instances (perhaps the greater number) there is equal evidence of the operation having gone on at the bottom of deep water, as it does at present, by currents, eddies, tides, &c. Again, in some cases, masses of what had once formed a diluvium have themselves been cleared off by some new current, and heaped up, leaving the substratum bare. In a word, with reference to cases of this kind, the most recent researches simply point to a continuation of the same great series of long-sustained natural action in the deposition of detritus and the gradual elevation of coasts, covered with the ordinary accumulations of mud, sand, and shingle, which have been referred to as the analogous causes of the earlier formations.

Geologists have collected numerous instances in which such currents are shown to have acted on the surface of many parts of Europe, in different directions; and other results, such as the transportation of blocks over intervening high ridges, have been referred to the floating of ice; while other similar results have been traced up to the action of glaciers in many instances, whatever may be the probability of such action in others.

We will very briefly allude to another branch of the evidence. The extinct volcanoes in the south of France show no indications of having been active at any period of which we can obtain an idea from the surrounding state of things. In several instances rivers have cut their channels through the solid masses of lava of 100 feet in thickness; the time requisite for this is hardly calculable. Other portions of these mountains consist of light pumice and aggregations of cinders which have nevertheless remained wholly undisturbed. The arguments for the antiquity of Etna are of the same kind: the succession of eruptions which have contributed to form the flanks of the mountain by accumulations of lava must have been carried on through an almost immeasurable antiquity. The different numerous extinct craters on its sides present masses of loose scoriæ and ashes. Precisely the same description is found to apply to extinct volcanoes in Asia Minor and other regions. For authorities and details we refer our readers generally to Mr. Lyell's *Principles of Geology*, and the abstracts of Proceedings of the Geological Society, especially those relating to the researches of Messrs. Hamilton and Strickland, in Asia Minor; also to Sir H. de la Beche's *Geological Manual* (especially p. 172, 3rd edit.).

The general result, as bearing on our present subject, is obviously this: the traces of currents, and the like, which the surface of the earth does exhibit, and which *might* be ascribed to diluvial action of some kind, are certainly not the results of *one universal* simultaneous submergence, but of *many, distinct*, local, aqueous forces, for the most part continued in action for long periods, and of a kind precisely analogous to such agency as is now at work. While, further, many parts of the existing surface show no traces of such operations; and the phenomena of the volcanic districts prove distinctly that during the enormous periods which have elapsed since the craters were active, no deluge could possibly have passed over them without removing all those lighter portions of their exuviæ which have evidently remained wholly untouched since they were ejected.

Upon the whole it is thus apparent, that we have no evidence whatever of any great aqueous revolution at any comparatively recent period

having affected the earth's surface over any considerable tract: changes, doubtless, may have been produced on a small scale in isolated districts. The phenomena presented by caves containing bones, as at Kirkdale and other localities, are not of a kind forming any breach in the continuity of the analogies by which all the changes in the surface are more and more seen to have been carried on. But a recent simultaneous influx of water covering the globe, and ascending above the level of the mountains, must have left indisputable traces of its influence, which not only is *not* the case, but *against* which we have seen *positive* facts standing out. Apart from the testimonies of geology there are other sciences which must be interrogated on such a subject. These are, chiefly, terrestrial physics, to assign the possibility of a supply of water to stand all over the globe five miles in depth *above* the level of the ordinary sea;—natural history, to count the myriads of species of living creatures to be preserved and continued in the ark;—mechanics, to construct such a vessel; with some others not less necessary to the case. But we have no disposition to enter more minutely on such points: the reader will find them most clearly and candidly stated in Dr. Pye Smith's *Geology and Scripture*, &c. p. 130, 2nd edit.

Let us now glance at the nature and possible solutions of the difficulty thus presented. We believe only two main solutions have been attempted. One is that proposed by Dr. Pye Smith (ib. p. 294), who expressly contends that there is no real contradiction between these facts and the description in the Mosaic record, *when the latter is correctly interpreted.* This more correct interpretation then refers, in the first instance, to the proper import of the Scripture terms commonly taken to imply the *universality* of the deluge. These the author shows, by a large comparison of similar passages, are only to be understood as expressing *a great extent;* often, indeed, the very same phrase is applied to a very limited region or country, as in Gen. xli. 56; Deut. ii. 25; Acts ii. 5, &c. Thus, so far as these expressions are concerned, the description may apply to a local deluge.

Next, the destruction of the whole existing human race does not by any means imply this universality, since, by ingenious considerations as to the multiplication of mankind at the alleged era of the deluge, the author has shown that they probably had not extended beyond a comparatively limited district of the East.

A local destruction of animal life would also allow of such a reduction of the numbers to be included in the ark, as might obviate objections on that score; and here again the Oriental idiom may save the necessity of the *literal* supposition of every actual species being included.

Again, certain peculiar difficulties connected with the resting of the ark on Mount Ararat are combated by supposing the name incorrectly applied to the mountain now so designated, and really to belong to one of much lower elevation.

Lastly, this author suggests considerations tending to fix the region which may have been the scene of the actual inundation described by Moses, in about that part of Western Asia where there is a large district now considerably depressed below the level of the sea: this might have been submerged by the joint action of rain, and an elevation of the bed of the Persian and Indian Seas. And, finally, he quotes the opinions of several approved divines in confirmation of such a view, especially as bearing upon all the essential religious instruction which the narrative is calculated to convey.

Other attempts have been made with more or less probability to assign particular localities as the scene of the Mosaic deluge, if understood to have been partial. Some diluvial beds posterior to the tertiary formations have been occasionally pointed out as offering some probability of such an origin. Thus, *e. g.* Mr. W. J. Hamilton, secretary to the Geological Society, in his *Tour in Asia Minor* (vol. ii. p. 386), found in the plains of Armenia, especially in some localities near Khorassan and on the banks of the Arpachai or Araxes, a remarkable thin bed of marl containing shells of tertiary (*qu.* recent?) species: these he attributes to a local deluge occurring (as the position of the bed indicates) after the cessation of the volcanic action which has taken place in that district. He expressly adds that he regards this deluge as probably coincident with the Mosaic; understanding the latter in a restricted or partial sense, and imagining it explained by physical causes which might have followed the volcanic action.

How far this or any such phenomenon is reconcilable with the terms of the Mosaic narrative, we leave our readers to decide for themselves; for our own part, we can see but little probability in such suppositions.

Again, with respect to any hypothesis of *local* action, we may observe that the Scripture narrative dwells emphatically on the destruction of the *whole existing human race.* Wherever, therefore, we look for the evidences of a *local* deluge, it must be shown to extend to all the then inhabited part of the world. This might, certainly, be of contracted extent: but the more contracted it might be, in proportion the more full *must* it have been, of *human remains.* Now it is quite notorious that no bed attributable to diluvial action has ever been found containing a single bone or tooth of the human species. We must therefore contend that *no evidence has yet been adduced* of any deposit which can be identified with the Noachian deluge.

The only other mode of viewing the subject is that which, accepting the letter of the Scriptural narrative, makes the deluge strictly universal; and allowing (as they *must* be allowed) all the difficulties, not to say contradictions, in a natural sense, involved in it, accounts for them all by *supernatural* agency. In fact, the terms of the narrative, strictly taken, may perhaps be understood throughout as representing the whole event, from beginning to end, as entirely of a miraculous nature. If so, it may be said, there is an end to all difficulties or question, since there are no limits to omnipotence; and one miracle is not greater than another. Thus, Mr. Lyell (*Principles of Geol.* iv. 219. 4th ed.), after ably recapitulating the main points of evidence, as far as physical causes are concerned, remarks, 'If we believe the flood to have been a temporary suspension of the ordinary laws of the natural world, requiring a miraculous intervention of the divine power, then it is evident that the credibility

of such an event cannot be enhanced by any series of inundations, however analogous, of which the geologist may imagine he has discovered the proofs. For my own part, I have always considered the flood, when its universality, in the strictest sense of the term, is insisted on, as a preternatural event far beyond the reach of philosophical inquiry, whether as to the causes employed to produce it, or the effects most likely to result from it.'

In a word, if we suppose the flood to have been miraculously produced, and all the difficulties thus overcome, we must also suppose that it was not only miraculously terminated also, but every trace and mark of it supernaturally effaced and destroyed.

Now, considering the immense amount of supernatural agency thus rendered necessary, this hypothesis has appeared to some quite untenable. Dr. Pye Smith, in particular (whom no one will suspect of any leaning to scepticism), enlarges on the difficulty (p. 157, and note), and offers some excellent remarks on the general question of miracles (p. 84-89); and there can be no doubt that, however plausible may be the assertion that all miracles are alike, yet the idea of supernatural agency to so enormous an amount as in the present instance, is, to many minds at least, very staggering, if not wholly inadmissible. In fact, in stretching the argument to such an extent, it must be borne in mind, that we may be trenching upon difficulties in another quarter, and not sufficiently regarding the force of the evidence on which *any* miracles are supported [MIRACLE].

In any such discussion with regard to the deluge, we cannot avoid taking into account its bearing upon the early history of mankind, the propagation of the race, and the progress of arts and civilization, coupled with the comparatively recent date commonly assigned to this event, viz. about 2400 B.C. On such a subject we can only be guided by the testimony of universal history and experience as to the rapidity of the spread of population, and the probable causes which could lead to advance in civilization among some tribes, and the deterioration, or even total loss of it (as originally possessed by Noah) among others. If, then, we are to date from the Noachian deluge, it is evident that such considerations with regard to the antiquity of the human race must at least claim our serious attention, in connection with the Scripture narrative.

As to the *date* simply, the great discrepancy in the chronology of the patriarchs, between the existing Hebrew, the Samaritan, and the Septuagint versions, has, with many, tended to throw doubts upon all the computations alike, as more or less corrupted or interpolated.

Again, there are circumstances connected with the early history of several nations, which have appeared to some writers to demand a still greater extension of the time. The Jesuit missionaries in China were so strongly impressed with the proofs of high antiquity evinced in the records of that people, that they applied to the Pope for a dispensation to adopt the Septuagint chronology instead of that of the Vulgate; and even confessed that this would not be sufficiently consistent with the antiquity they felt obliged to assign to the Chinese history. The Jesuit Mailla enters most into detail on the subject, especially as connected with their early inventions in the arts (see *Mélanges Asiatiques*, tom. i.).

Other writers have dwelt upon the various remains indicating a spread of population and a degree of civilization at periods too early to be consistent with *any received* chronology among the Egyptians, Mexicans, Hindoos, and other nations; and the probability of many of those arts, of which they exhibit traces, having been originally derived from a still more ancient, widely spread, and highly civilized people in Central Asia. Some interesting remarks on this subject will be found in a paper 'On the History of Magnetical Discovery, by T. S. Davies, Esq. F.R.S.' inserted in the British Annual for 1827, p. 246. This able writer argues much from the unequal progress made in civilization and the arts of life under different conditions of national existence, and contends that, in the earlier stages, that progress must have been incalculably slow, and the chronology, consequently, must be almost indefinitely enlarged. Indeed, in a more general point of view, to such an extent is this the case, if we follow it out in imagination to the circumstances of the lowest state of savage life, that others have felt obliged to adopt the supposition of a direct divine interposition to communicate certain first elements of civilization, without which no race ever rises above the savage condition (see Archbp. Whately's *Political Economy*, lect. v. p. 133).

Upon the whole, the discerning inquirer will, on such a subject as the present, more especially, admit the reasonableness of an increasing attention to that important branch of criticism which teaches us to view the composition of the different portions of the sacred writings as of a kind specially adapted to the wants and ideas of the ages to which they respectively belong; and not to overstretch the literal interpretation of them to meet the conceptions of other ages and other stages of the intellectual and moral advancement of mankind; or, in the judicious language of the learned Semler—'Jam si argumentum atque ingenium librorum V. T. intueamur propius, facile patebit hoc, genti Israelitarum præcipue istos libros fuisse destinatos, et ad eorum tempora varia et varios status maxime respicere; minime autem librorum istorum cunctas partes hominibus omnium temporum idem atque æquale præstare beneficium' (*Instit. Brev.* § xxxii.).

In any point of view, it must be admitted that the subject involves difficulties of no inconsiderable amount; and if, after due consideration of the suggestions offered for their solution, we should still feel it necessary to retain a cautious suspense of judgment on the subject, it may be also borne in mind that such hesitation will not involve the dereliction of any material religious doctrine.

If we look to the actual tenor of the whole narrative as delivered by Moses (Gen. viii. and ix.), we shall observe that the manifest *immediate* purport of it is the same as that of the rest of the early portion of his history, viz. as forming part of the *introduction* TO THE LAW. Thus we find in the first instance, the narrative dwelling on the distinction of clean and unclean beasts (vii. 2); afterwards on the covenant with Noah; the promise of future enjoyment of the earth and its fruits; the prohibition of eating

blood; the punishment of murder (ix. 4, &c.); all constituting, in fact, some of the *rudiments* out of which the Mosaic law was framed, and which were thus brought before the Israelites as forming an anticipatory sanction for it.

If we look to any further applications of the narrative, we must, of course, be guided by the express representations of the sacred writers in regard to the tenor of such references as they may make to it. Now the only such applications are purely of a practical nature, in which certain points in the narrative are introduced by way of *adaptation* to the subject in hand, as belonging to a history familiarly known, and thus made to furnish topics of argument or admonition to those who had always acknowledged it. Regarded in a Christian light, the narrative is important solely in respect to the applications made of it in the New Testament, and these are only of the following kind: it is referred to as a warning of Christ's coming (Matt. xxiv. 38); Luke xvii. 27); as an assurance of judgment on sin (2 Pet. ii. 5); and of God's long-suffering; while the ark is made a type of baptism and Christian salvation (1 Pet. iii. 20); and lastly, Noah is set forth as an example of faith (Heb. xi. 7).

In these applications no reference is made to the physical nature of the event, nor even to its literal universality. They are all allusions, not to the event abstractedly, but only in the way of *argument with the parties addressed*, in support of *other* truths: an appeal to the Old Testament addressed to those who already believed in it—in the first of the instances cited, to the Jews—in the others to *Jewish* converts to Christianity (compare 1 Pet. i. 1 and 2 Pet. iii. 1).—B. P.

DEMAS (Δῆμας), a Thessalonian Christian, who was for a time associated with St. Paul, but who afterwards abandoned him at Rome, either from being discouraged by the hardships and perils of the service, or in pursuit of temporal advantages (Col. iv. 14; Philem. xxiv.; 2 Tim. iv. 10). The usual unfavourable sense attached to the last text seems the just one.

DEMETRIUS (Δημήτριος), a man's name, denoting *a votary of Ceres*, and very common among the Greeks. The persons of this name mentioned in the history of the Maccabees, and in the New Testament, are—

1. DEMETRIUS SOTER, king of Syria. He was son of Seleucus IV., surnamed Philopator; but, being an hostage at Rome at the time of his father's death, his uncle, the notorious Antiochus Epiphanes, assumed the crown of Syria, and retained it eleven years. After him it was held two years by his son Antiochus Eupator, who was put to death in B.C. 162 by Demetrius, who then arrived in Syria and secured the royal heritage from which he had so long been excluded. He reigned twelve years, B.C. 162-150. The points in which his history connects him with the Jews are alone of interest in this work, and these points belong to the history of the Maccabees [see art. MACCABEES]. To his time belong the latter end of the government of Judas in Israel and the beginning of that of Jonathan. He acted oppressively and unjustly towards them; but, when a rival arose in the person of Alexander Balas, he bade so high for the support of Jonathan as to create a doubt of his sincerity; for which cause, as well as from resentment at the injuries he had inflicted on them, the Jews espoused the cause of Balas, to whose success they in no slight degree contributed [ALEXANDER BALAS].

2. DEMETRIUS NICATOR, or NICANOR, son of the preceding, but who was excluded from the throne till B.C. 146, by the success of Alexander Balas, and then recovered it chiefly by the assistance of his father-in-law Ptolemy Philometor. He at first treated the Jews well, but eventually gave them so much cause for dissatisfaction that they readily espoused the cause of Antiochus Theos, son of Alexander Balas. Demetrius underwent many vicissitudes, and passed several years (B.C. 141-135) in captivity among the Parthians, from which he eventually returned and recovered his throne, which he continued to occupy till B.C. 126, when he was defeated in battle by the pretender Alexander Zebina, and afterwards slain at Tyre, whither he had fled [MACCABEES].

3. DEMETRIUS, a silversmith at Ephesus, who, being alarmed at the progress of the Gospel under the preaching of Paul, assembled his fellow-craftsmen, and excited a tumult by haranguing them on the danger that threatened the worship of the great goddess Diana, and consequently their own craft as silversmiths. Their employment was to make 'silver shrines for Diana' (Acts xix. 24); and it is now generally agreed that these 'shrines' (ναοὺς) were silver models of the temple, or of its adytum or chapel, in which perhaps a little image of the goddess was placed. These, it seems, were purchased by foreigners, who either could not perform their devotions at the temple itself, or who, after having done so, carried them away as memorials or for purposes of worship. The continual resort of foreigners to Ephesus from all parts, on account of the singular veneration in which the image of the goddess was held [ARTEMIS], must have rendered this manufacture very profitable, and sufficiently explains the anxiety of Demetrius and his fellow-craftsmen.

4. DEMETRIUS, a Christian, mentioned with commendation in 3 John 12. From the connection of St. John with Ephesus at the time the Epistle was written, some have supposed that this Demetrius is the same as the preceding, and that he had been converted to Christianity. But this is a mere conjecture, rendered the more uncertain by the commonness of the name.

DEMON. The words δαίμων and δαιμόνιον are used as synonymous both by profane and sacred writers. The etymologies they respectively assign to them, all point to some supposed characteristic of those *intelligent beings* to whom the words are applied. For example, Plato, in his *Cratylus* (vol. i. p. 398, ed. Serran.), derives the word from δαήμων, 'knowing,' in allusion to the superior intelligence, and consequent efficiency, ascribed to demons; Eusebius (*Prep. Evang.* iv. 5), from δειμαίνω, 'to be terrified;' others, as Proclus (*in Hesiod.*), from δαίω, 'to distribute,' because demons were supposed to assign the lots or destinies of mankind. The words in question are used by heathen writers with great latitude, being applied by them, 1. to every order of beings superior to man, including even the Highest. Aristotle applies δαιμόνιον to the Divinity, Providence (*Rhet.* 2. 23). 2. It is applied to any particular divinity; by Homer

to Venus (*Iliad*, iii.); and in *Il.* xvii. 98, 99, compared with 104, *δαίμων* and *θεός* are used as interchangeable words; 3. to the inferior divinities, as in the phrase *θεοὶ καὶ δαίμονες*; 4. to a class of beings between gods and men: minores diis et majores hominibus (Liv. viii. 20; Adam, *Rom. Antiq.* p. 287). Of these latter some were *habitually* benevolent, and others malignant. The word demon, by itself, occurs usually in a good sense in heathen writers; the evil are distinguished as *δαίμονες κακοὶ* or *πονηροί*. To the former class belong the tutelary genii of cities, and the guardian spirits of individuals, as the demon of Socrates. 5. By an easy metonymy it is used to denote fortune, chance, fate. In the Septuagint the word, though comparatively of rare occurrence, is used in a very diversified and indefinite manner: Deut. xxxii. 17, שד, *δαιμόνιον*; Ps. xc. 6, קטב, *δαιμόνιον*, where it seems to mean a pestilential blast (comp. Isa. xxviii. 2, Heb.); Ps. xcv. 5, אלילים, *δαιμόνιον*, which Symmachus renders *ἀνύπαρκτοι*, and Aquila, *ἐπίπλαστοι*; Isa. xiii. 21, שעיר, *δαιμόνιον*, Aquila, *τριχιῶντας*; Isa. xxxiv. 14, ציים, *δαιμόνιον*; Isa. lxv. 10, גד, *δαιμόνιον*, which seems explained by *τύχη* in the latter part of the verse; Vulg. *fortuna*. In the book of Tobit (iii. 8), we meet with *πονηρὸν δαιμόνιον*. Since no distinct ideas of the ancient Jewish doctrines concerning demons can be obtained from the Septuagint, we next have recourse to the heathens, and from their writings, owing to the universal prevalence of belief in demons, ample information may be obtained. The following is offered as a summary of their opinions.

1. Demons, in the theology of the Gentiles, are middle beings, between gods and mortals. This is the judgment of Plato, which will be considered decisive—*πᾶν τὸ δαιμόνιον μεταξύ ἐστι Θεοῦ τε καὶ θνητοῦ*: '*Every* demon is a middle being between God and mortal.' He thus explains what he means by a middle being—*Θεὸς ἀνθρώπῳ οὐ μίγνυται, ἀλλὰ διὰ δαιμονίων πᾶσά ἐστιν ἡ ὁμιλία καὶ ἡ διάλεκτος θεοῖς πρὸς ἀνθρώπους*: 'God is not approached immediately by man, but all the commerce and intercourse between gods and men are performed by the mediation of demons.' He enters into further particulars—*Τὸ δαιμόνιόν ἐστιν ἑρμηνεῦον καὶ διαπορθμεῦον θεοῖς τὰ παρ' ἀνθρώπων, καὶ ἀνθρώποις τὰ παρὰ θεῶν, τῶν μὲν τὰς δεήσεις καὶ θυσίας, τῶν δὲ τὰς ἐπιτάξεις σε καὶ ἀμοιβὰς τῶν θυσιῶν*: 'Demons are reporters and carriers from men to the gods, and again from the gods to men, of the supplications and prayers of the one, and of the injunctions and rewards of devotion from the other' (Plato, *Sympos.* pp. 202, 203, tom. iii. ed. Serran.). 'And this,' says the learned Mede, 'was the *œcumenical* philosophy of the apostles' times, and of the times long before them.'

2. Demons were of two kinds; the one were the souls of good men, which upon their departure from the body were called heroes, were afterwards raised to the dignity of demons, and subsequently to that of gods (Plutarch, *De Defect. Orac.*). Plato (*Cratylus*, p. 398, tom. i. edit. Serran.), says, 'the poets speak excellently who affirm that when good men die they attain great honour and dignity, and become demons.' It is also admitted that Jamblichus, Hierocles, and Simplicius use the words angels and demons indiscriminately. Philo (*De Gigantibus*) says that souls, demons, and angels, are only different names that imply one and the same substance; and he affirms (*De Somn.*) that Moses calls those angels whom the philosophers call demons. It was also believed that the souls of *bad* men became evil demons (Chalcid. *in Platon. Tim.* cap. 135, p. 330). Accordingly *δαιμόνιος* often occurs in ancient authors as a term of reproach. The *other* kind of demons were of more noble origin than the human race, having never inhabited human bodies (Plato, *Tim.* pp. 41, 42, 69, 71, 75); Apuleius, *De Deo Socratis*, p. 690).

3. Those demons who had once been souls of men were the objects of *immediate worship* among the heathens (Deut. xxvi. 14; Ps. cvi. 28; Isa. viii. 19), and it is in contradistinction to these that Jehovah is so frequently called 'the *living* God' (Deut. v. 6, &c. &c.; Farmer's *Essay on the Demoniacs*, passim).

4. The heathens held that some demons were malignant by *nature*, and not merely so when provoked and offended. Plutarch says, 'it is a very ancient opinion that there are certain *wicked* and *malignant* demons, who envy good men, and endeavour to hinder them in the pursuit of virtue, lest they should be partakers of greater happiness than they enjoy' (Plut. *Dion.* p. 958, tom. i. edit. Paris, 1624). On this passage Bishop Newton remarks, 'This was the opinion of all the later philosophers, and Plutarch undeniably affirms it of the very ancient ones' (*Dissert. on the Proph.*, Lond. 1826, p. 476). Pythagoras held that certain demons sent *diseases* to men and cattle (Diog. Laert. *Vit. Pythag.* p. 514, ed. Amstel.). Zaleucus, in his preface to his Laws (*apud Stobæum*, Serm. xlii.), supposes that an evil demon might be present with a witness to influence him to injustice.

In later times Josephus uses the word demon always in a bad sense, as do the writers of the New Testament, when using it as *from themselves*, and in their *own sense* of it (*De Bell. Jud.* vii. 6, § 3). 'Demons are no other than the spirits of the wicked, that enter into men and kill them, unless they can obtain some help against them.' For proof of the latter assertion we must refer the reader to the contents of the New Testament, and if necessary for a reconciliation of the apparent exceptions, to *Farmer's Essay;* and as the next stage of the inquiry will usher us into the arena of controversy, the opportunity is embraced of announcing that it is not our intention to exhibit ourselves as partizans of either side of any question which may be hereafter introduced, but simply to present an impartial view of the *literature* it may involve.

It is frequently supposed that the demons of the New Testament are fallen angels: on the contrary it is maintained by Farmer, that the word is never applied to the Devil and his angels, and that there is no sufficient reason for restricting the term to spirits of a higher order than mankind. They who uphold the former opinion urge that our Lord, when accused of casting out demons by Beelzebub, the prince of demons, replies, How can Satan cast out Satan (Mark iii. 23, &c.)? There is no doubt but that *ὁ Σατανᾶς* and *ὁ διάβολος* are the same, and hence Beelzebub and *ὁ διάβολος* are evidently the same being.

Doddridge calls this a demonstration of the point, and consequently maintains, that 'Satan was considered as the prince of the demons who were cast out by Christ, and who are elsewhere represented as his angels (*Family Expositor*, i. 337, Lond. 1799). It is replied, that if this argument proves anything, it proves that the word Satan is equivalent to δαιμόνιον, and that Satan is here only introduced as an *illustration*, as are the discords of kingdoms and families (Campbell's *Prelim. Dissert.* p. 190). It must be allowed that so important a conclusion should not be rested on a deduction from precarious principles. It is further urged, that it is but fair and natural to suppose that the writers of the New Testament use the word demons in the same sense in which it was understood by their contemporaries, which, as it appears from Josephus and other authorities, was, that of the spirits of the wicked; and that if these writers had meant anything else they would have given notice of so wide a deviation from popular usage. The writings of the Fathers show that they sometimes understood the demons to be fallen angels; at other times they use the word in the same sense as the ancient philosophers. Justin Martyr affirms (*Apol.* i. 2, p. 65) that 'those persons who are seized and thrown down by the souls of the deceased are such as all men agree in calling demoniacs, or mad.'—J. F. D.

DEMONIACS (δαιμονιζόμενοι), demonized persons, in the New Testament, are those who were supposed to have a demon or demons occupying them, suspending the faculties of their minds, and governing the members of their bodies, so that what was said and done by the demoniacs was ascribed to the in-dwelling demon. Plato (*apud Clem. Alex. Strom.* i. 405, Oxon.) affirms that 'demoniacs do not use their own dialect or tongue, but that of the demons who have entered into them.' Lucian says, 'the patient is silent; the demon returns the answer to the question asked.' Apollonius thus addresses a youth supposed to be possessed: 'I am treated contumeliously by the demon, and not by thee' (comp. Matt. viii. 28 and 31; Mark v. 2; ix. 12; Luke viii. 27, 32).

The correctness of the opinion respecting those who are called δαιμονιζόμενοι in the New Testament which prevailed among the Jews and other nations in the time of our Lord and his Apostles, has been called in question. On the one hand it is urged that the details of the evangelical history afford decisive evidence of the truth and reality of demoniacal possessions in the sense already explained, at least during the commencement of Christianity; on the other hand it is contended that the accounts in question may all be understood as the phenomena of certain diseases, particularly hypochondria, insanity, and epilepsy; that the sacred writers used the *popular language* in reference to the subject, but that they themselves understood no more than that the persons were the subjects of ordinary diseases. Here issue is joined—and it is to the evidence in this cause that our attention will now be directed.

Those who contend that the demoniacs were really possessed by an evil spirit, urge the following considerations:

1. The demoniacs express themselves in a way unusual for hypochondriacal, insane, or epileptic persons (Matt. viii. 29; Mark i. 24); they possessed supernatural strength (Mark v. 4); they adjure Jesus not to torment them; they answer the questions proposed to them in a rational manner; they are distinctly said to have 'come out of' men and to have 'entered into swine,' and that consequently the whole herd, amounting to about two thousand, ran violently down a precipice into the sea (Matt. viii. 32; Mark v. 13). The supposition which has been maintained by Lardner among others, that the swine were *driven into* the sea by the *demoniacs*, is irreconcilable with the language of the narrative, being also highly improbable in itself: madmen do not act in concert, and rarely pursue the same train of maniacal reasoning.

2. No mental diseases are predicated of the dumb (Matt. ix. 32), or of the blind and dumb (Matt. xii. 22). Do such diseases ever produce blindness?

3. It is admitted that the symptoms of the youth described Matt. xvii. 15; Mark ix. 17; Luke ix. 39, coincide precisely with those of epilepsy, but they are attributed to the agency of the demon in that very account.

4. The damsel at Philippi is said to have been possessed with a spirit of *divination*, which was the means of obtaining much gain to her masters, and to have understood the divine commission of Paul and his companions (Acts xvi. 17). Is this to be ascribed merely to an aberration of mind?

5. The demoniacs themselves confess that they were possessed with demons (Mark v. 9): the same is asserted of them by their relatives (Matt. xv. 22). The Apostles and Evangelists assert that persons possessed with demons were brought unto Jesus (Matt. iv. 24; Mark i. 32), or met him (Luke viii. 27). Jesus commands them not to make him known as the Messiah (Mark i. 34, margin); rebuked them (Matt. xvii. 18). The Evangelists declare that the demons departed from their victims at his command (Matt. xvii. 18; Mark ix. 25, 26; Luke iv. 35; xi. 14); and Jesus himself asserts it (Luke xiii. 32).

6. The writers of the New Testament make distinctions between the diseased and the demoniacs (Mark i. 32; Luke vi. 17, 18); and Jesus himself does so (Matt. x. 8, &c.).

7. The demoniacs knew Jesus to be the Son of God (Matt. viii. 29; Mark i. 24; v. 7), and the Christ (Luke iv. 41).

8. Jesus addresses the demons (Matt. viii. 32; Mark v. 18; ix. 25; Luke iv. 35): so does Paul (Acts xvi. 18). Jesus bids them be silent (Mark i. 25); to depart, and enter no more into the person (Mark ix. 25).

9. In Luke x. the seventy are related to have returned to Jesus, saying, 'Lord, even the demons are subject to us through thy name;' and Jesus replies, ver. 18, 'I beheld Satan, as lightning, fall from heaven.'

10. When Jesus was accused by the Pharisees of casting out demons by Beelzebub, the prince of the demons, he argued that there could be no discord among demoniacal beings (Matt. xii. 25, &c.).

11. Jesus makes certain *gratuitous* observations respecting demons (see Matt. xii. 43, 44); which seem like facts in their natural history. In regard to the demon cast out of the youth, which the disciples could not cast out, he says, 'this *kind*

(*i. e.* of demons) goeth not out but by prayer and fasting.' Can these words be understood otherwise than as revealing a real and particular fact respecting the nature of demons (Matt. xvii. 21)?

12. The woman which had a spirit of infirmity, and was bowed together (Luke xiii. 11), is, by our Lord himself, said to have been bound by Satan (v. 16). In the same way St. Peter speaks of all the persons who were healed by Jesus, as being 'oppressed of the devil' (Acts x. 38).

13. It is further pleaded, that it sinks the importance and dignity of our Saviour's miracles, to suppose that when he is said to have cast out devils, all that is meant is, that he healed diseases.

To these arguments the opponents of the theory of real demoniacal possessions reply, generally, that there can be no doubt that it was the *general belief* of the Jewish nation, with the exception of the Sadducees, and of most other nations, that the spirits of dead men, especially of those who had lived evil lives, and died by violent deaths, were permitted to enter the bodies of men, and to produce the effects ascribed to them in the *popular* creed; but the *fact* and real state of the case was, that those who were considered to be *possessed* were afflicted with some peculiar diseases of mind or body, which, their true *causes* not being generally understood, were, as is usual in such cases, ascribed to supernatural powers; and that Jesus and his apostles, wishing of course to be understood by their contemporaries, and owing to other reasons which can be pointed out, were under the *necessity* of expressing themselves in popular language, and of seeming to admit, or at least of not denying, its correctness. They further plead that the fact, admitted on all hands, that the demon so actuated the possessed, as that whatever *they* did, was not to be distinguished from *his* agency, reduces the question, so far as *phenomena* are concerned, to one simple inquiry, namely, whether these phenomena are such as can be accounted for without resorting to supernatural agency. They assert that the symptoms predicated of demoniacs correspond with the ordinary symptoms of disease, and especially of hypochondria, insanity, and epilepsy; that the sacred writers themselves give intimations, as plain as could be expected under their circumstances, that they employed popular language; that consequently they are not to be considered as teaching doctrines or asserting facts when they use such language; and that the doctrine of the agency of departed spirits on the bodies of men is inconsistent with certain peculiar and express doctrines of Christ and his apostles.

With regard to the *symptoms* related of the demoniacs, it is urged that such persons as were called demoniacs in other countries, and who seem to have laboured under precisely the same symptoms, are recorded to have been cured by the use of *medicines*. Helleboro quoque purgatur *lymphaticus* error (Seren. Sammon. c. 27. v. 507), 'Insane delusion is remedied by hellebore.' Josephus and the Jewish physicians speak of medicines composed of stones, roots, and herbs, being useful to demoniacs (*Gittei*, f. 67). The cure of *diseases* by such methods is intelligible; but is it rational to believe that the spirits of dead men were dislodged from human bodies by medical prescriptions? Maimonides (in *Sabat.* ii. 5) says, 'all kinds of diseases which are called melancholy, they call an evil spirit' (comp. Matt. xi. 18; John vii. 20; x. 20).

1. With regard to the two demoniacs at Gadara (or *one*, according to Mark and Luke), it is concluded that they were madmen, who fancied that there were within them innumerable spirits of dead men. Accordingly they dwelt among the *tombs*, about which the souls of the dead were believed to hover, went naked, were ungovernable, cried aloud, attacked passengers, beat themselves, and had in their phrensy broken every chain by which they had been bound. Strength almost superhuman is a common attendant on insanity. The subject is illustrated by Wetstein, in extracts from Greek medical writers. P. Ægineta, Actuarius, Cælius Aurelianus, also tell that such persons fancied themselves to be gods, demons, wolves, dogs, &c.; hence the disorder was sometimes called λυκανθρωπία, or κυνανθρωπία. Their question, 'Art thou come to torment us?' refers to the cruel treatment of the insane in those times, and which they had no doubt shared, in the endeavours of men to 'tame' them. Both Mark and Luke the *physician* describe the demoniac as σωφρονοῦντα, in 'his *right mind*,' when healed, which implies previous *insanity* (see also Matt. xii. 22; xv. 28; xvii. 18; Luke vii. 21; viii. 2; ix. 42). It is true that these demoniacs address Jesus as the Son of God, but they might have heard in their lucid intervals that Jesus, whose fame was already diffused throughout Syria, was regarded by the people as the Messiah. They show their insanity, 'their *shaping* fancies,' by imagining they were demons without number, and by requesting permission to enter the swine. Would actual demons choose such an habitation? They speak and answer, indeed, in a rational manner, but agreeably to Locke's definition of madmen, 'they reason right on false principles, and, taking their fancies for realities, make right deductions from them. Thus you shall find a distracted man fancying himself a king, and with a right inference require suitable attendance. Others, who have thought themselves glass, take the needful care to preserve such brittle bodies' (*Essay on Human Understanding*, vol. i. ch. 11, § 12). It is true that Jesus commands the *unclean* spirit (so called because believed to be the spirit of a *dead* man), but he does this merely to excite the attention of the people, and to give them full opportunity to observe the miracle. It is not necessary to suppose that the madmen drove the swine, but merely that, *in keeping with all the circumstances*, the *insanity* of the demoniacs was transferred to them, as the leprosy of Naaman was transferred to Gehazi, for the purpose of illustrating the miraculous power of Christ; and though this was a *punitive* miracle, it might serve the good purpose of discouraging the expectation of temporal benefits from him. If the demoniac is represented as worshipping Jesus, it should be remembered that the insane often show great respect to particular persons.

2. The men who were dumb, and both blind and dumb, are not said to have been disordered in their intellects, any more than the blind man in John v. The disease in their organs was *popularly ascribed* to the influence of demons. It is observable that

in the parallel passage (Matt. ix. 32), the evangelist says the *man* was dumb.

3. The symptoms of epilepsy in the youth described Matt. xvii. 15, are too evident not to be acknowledged. If the opinion of relatives is to be pressed, it should be noticed that in this case the father says his 'son is lunatic.' It was most probably a case of combined epilepsy and lunacy, which has been common in all ages. Epilepsy was ascribed to the influence of the moon in those times. The literal interpretation of popular language would therefore require us to believe that he was 'moonstruck,' as well as a demoniac. A curious instance of the influence of popular modes of speech, even on those who are conscious of its incorrectness, is offered in the case of Hippocrates, who, though he wrote a book to prove that epilepsy is *not* a sacred malady, *i. e.* influenced by some divinity, is nevertheless in the habit of applying to it that very appellation. In the same way a learned physician still speaks of lunacy, St. Anthony's fire; and persons of education speak of the rising and setting of the sun, falling stars, as we all use phrases derived from the rites and religion of the Gentiles.

4. The damsel at Philippi is said by Luke to have been possessed with a πνεῦμα Πύθωνος, a spirit of *Apollo*. It was *her* fixed idea. The gift of divination is said by Cicero to have been ascribed to Apollo (*De Divinat.* i. 5). Insane persons, pretending to prophesy under the influence of Apollo, would be likely to gain money from the *credulous*. A belief among the common people that the ravings of insanity were sacred, was not confined to Egypt. The larvati, the lymphatici, the cerriti of the Romans signify possessed persons. The apostle, who taught that an 'idol is nothing in the world,' did not believe in the reality of her soothsaying. Many demoniacs are mentioned, the peculiar symptoms of whose diseases are not stated, as Mary Magdalene (Mark xvi. 9), out of whom Jesus cast seven demons, *i. e.* restored from an inveterate insanity (seven being the Jewish number of perfection), supposed to be caused by the united agency of seven spirits of the dead. Yet she is said to have been *healed* (Luke viii. 2).

5. If Jesus forbade the demoniacs to say he was the Christ, it was because the declaration of such persons on the subject would do more harm than good. If he *rebuked* them he also rebuked the wind (Matt. viii. 26), and the fever (Luke iv. 39). If it be said of them, they departed, so it is also said of the leprosy (Mark i. 42).

6. It may be questioned whether the writers of the New Testament make a distinction between the diseased and those possessed of demons, or whether they specify the demoniacs by themselves, as they specify the lunatics (Matt. iv. 24), merely as a distinct and *peculiar class* of the *sick*. It is, however, most important to observe that St. Peter includes 'all' who were healed by Jesus, under the phrase καταδυναστευομένους ὑπὸ τοῦ διαβόλου, many of whom were not described by the Evangelists as subjects of demoniacal possession, which is urged as a striking instance of the *usus loquendi*. Sometimes the specification of the demoniacs is omitted in the general recitals of miraculous cures (Matt. xi. 5), and this, too, on the important occasion of our Lord sending to John the Baptist an account of the miraculous evidence attending his preaching (Matt. xi. 5). Does not this look as if they were considered as included under the sick?

7. It cannot be proved that *all* the demoniacs knew Jesus to be the Messiah.

8. It is admitted that Jesus addresses the demons, but then it may be said that his doing so has reference partly to the *persons themselves* in whom demons were supposed to be, and partly to the bystanders; for the same reason that he rebuked the winds in an audible voice, as also the fever. It is also remarkable that in the case of the demoniac (Mark v. 8), it is said—*καὶ ἐπηρώτα αὐτόν*, the man, *τί σοι ὄνομα*, not *αὐτὸ*, the *δαιμόνιον*. The same words occur in Luke viii. 30.

9. With regard to our Lord's reply to the seventy, it will not be urged that it was intended of a local fall of Satan from heaven, unless it may be supposed to allude to his primeval expulsion; but this sense is scarcely relevant to the occasion. If, then, the literal sense be necessarily departed from, a choice must be made out of the various figurative interpretations of which the words admit; and taking the word Satan here in its generic sense, of *whatever* is inimical or opposed to the Gospel, Jesus may be understood to say, I foresaw the glorious results of your mission in the triumphs which would attend it over the most formidable obstacles. Heaven is often used in the sense of political horizon (Isa. xiv. 12, 13; Matt. xxiv. 29). To be cast from heaven to hell is a phrase for total downfall (Luke x. 15; Rev. xii. 7-9). Cicero says to Mark Antony, You have hurled your colleagues down from heaven. Satan is here used tropically. Our Lord does not, therefore, assert the real operation of demons.

10. In the refutation of the charge that he cast out demons by Beelzebub, the prince of the demons, he simply argues with the Pharisees upon their *own principles*, and 'judges them out of their own mouth,' without assuming the *truth* of those principles.

11. The facts he seems to assert respecting the wandering of demons through dry places (Matt. xii. 45), were already admitted in the popular creed of the Jews. They believed that demons wandered in desolate places (Baruch iv. 35). Upon these ideas he founds a parable or similitude, without involving an opinion of their accuracy, to describe 'the end of this generation. The observations respecting prayer and fasting seem to have relation to that faith in God which he exhorts his apostles to obtain. Prayer and fasting would serve to enable them to perceive the divine suggestion which accompanied every miracle, and which the apostles had not *perceived* upon this occasion, though given them, because their animal nature had not been sufficiently subdued.

12. The application of the term Satan to the case of the woman who had a spirit of infirmity, is plainly an *argumentum ad hominem*. It is intended to heighten the antithesis between the *loosing* of an ox from his stall, and *loosing* the daughter of Abraham whom *Satan*, as *they believed*, had *bound* eighteen years.

13. The objection taken from the supposed consequence of explaining the casting out of demons to signify no more than the cure of dis-

cases, that it tends to lower the dignity of the Saviour's miracles, depends upon the reader's complexion of mind, our prior knowledge of the relative dignity of miracles, and some other things, perhaps, of which we are not competent judges.

It remains to be observed, that the theory of demoniacal possessions is opposed to the known and express doctrines of Christ and his Apostles. They teach us that the spirits of the dead enter a state corresponding to their character, no more to return to this world (Luke xvi. 22, &c.; xxiii. 43; 2 Cor. v. 1; Phil. i. 21). With regard to the fallen angels, the representations of their *confinement* are totally opposed to the notion of their wandering about the world and tormenting its inhabitants (2 Pet. ii. 4; Jude, ver. 6). If it be said that Jesus did not correct the popular opinion, still he nowhere denies that the phenomena in question arose from diseases only. He took no side; it was not his province. It was not necessary to attack the misconception in a formal manner; it would be supplanted whenever his doctrine respecting the state of the dead was embraced. To have done so would have engaged our Lord in prolix arguments with a people in whom the notion was so deeply rooted, and have led him away too much from the purposes of his ministry. 'It was one of the many things he had to say, but they could not then bear them.' It is finally urged that the antidemoniacal theory does not detract from the divine authority of the Saviour, the reality of his miracles, or the integrity of the historians. *Sub judice lis est.* (Jahn's *Biblisches Archäologie;* Winer's *Biblisches Realwörterbuch*, art. 'Besessene;' Moses Stuart's *Sketches of Angelology* in *Bibliotheca Sacra*, London and New York, 1843).—J. F. D.

DENARIUS (δηνάριον), the principal silver coin of the Romans, which took its name from having been originally equal to *ten* ases. It was in later times (after B.C. 217) current also among the Jews, and is the coin which is called 'a penny' in the Auth. Vers. The denarii were first coined in B.C. 269, or four years after the first Punic war, and the more ancient specimens are much heavier than those of later date. Those coined in the early period of the commonwealth have the average weight of 60 grains, and those coined under the empire of 52·5 grains. With some allowance for alloy, the former would be worth 8·6245 pence, or 8½*d.*, and the latter, 7·5 pence, or 7½*d.* It has been supposed, how-

246.

ever, that the reduction of weight did not take place till the time of Nero; and in that case the denarii mentioned in the Gospels must have been of the former weight and value, although 7½*d.* is the usual computation. A denarius was the day-wages of a labourer in Palestine (Matt. xx. 2, 9, 13); and the daily pay of a Roman soldier was less (Tacit. *Ann.* i. 17). In the time of Christ the denarius bore the image of the emperor (Matt. xxii. 19; Mark xii. 16), but formerly it was impressed with the symbols of the republic.

DERBE (Δέρβη), a small town of Lycaonia, in Asia Minor, at the foot of the Taurian mountains, 60 miles south by east from Iconium, and 18 miles east of Lystra. It was the birth-place of Gaius, the friend and fellow-traveller of Paul (Acts xx. 4); and it was to this place that Paul and Barnabas fled when expelled from Iconium, A.D. 41 (Acts xiv. 6).

DESERTS. In the East, wide, extended plains are usually liable to drought, and consequently to barrenness. Hence the Hebrew language describes *a plain*, *a desert*, and *an unfruitful waste*, by the same word, ערבה *arabah.* The term which is in general rendered 'wilderness,' מדבר *midbar*, means, properly, *a grazing tract*, uncultivated and destitute of wood, but fit for pasture—a heath or steppe. The *pastures of the wilderness* are mentioned in Ps. lxv. 13; Joel i. 19; Luke xv. 4; and may be very well explained by reference to the fact, that even the Desert of Arabia, which is utterly burnt up with excessive drought in summer, is in winter and spring covered with rich and tender herbage. Whence it is that the Arabian tribes retreat into their deserts on the approach of the autumnal rains, and when spring has ended and the droughts commence, return to the lands of rivers and mountains, in search of the pastures which the deserts no longer afford. The same word may therefore denote a region which is desert, and also one which, at stated seasons, contains rich and abundant pastures. But in fact the word translated in our Bibles by 'desert' or 'wilderness' often means no more than the common, uncultivated grounds in the neighbourhood of towns on which the inhabitants grazed their domestic cattle.

A great desert or wilderness is generally expressed by the word ישימון *yeshimon*, from ישם *yasham*, 'to be waste' or 'desolate' (1 Sam. xxiii. 19, 24; Isa. xliii. 19, 20). This word is especially applied to that desert of Stony Arabia in which the Israelites sojourned under Moses (Num. xxi. 20; xxiii. 28; Ps. lxviii. 7, lxxviii. 40, &c.). This was the most terrible of the deserts with which the Israelites were acquainted, and the only *real* desert in their immediate neighbourhood. It is described under ARABIA; as is also that Eastern desert extending from the eastern border of the country beyond Judæa to the Euphrates. It is emphatically called 'the Desert,' without any proper name, in Exod. xxiii. 31; Deut. xi. 24.

The several deserts or wildernesses mentioned in Scripture are the following, which will be found under their respective names: the deserts of Edom, Etham, Judah, Kadesh, Maon, Paran, Shur, Sin, Sinai.

DEVIL. [DEMON; SATAN.]

DEUTERO-CANONICAL BOOKS, a term applied in modern times to denote those sacred books which, originally denominated *ecclesiastical* and *apocryphal*, were not in the Jewish or Hebrew Canon, but, as being contained in the old Greek versions, were publicly read in the early Christian Church [CANON, APOCRYPHA].

It is acknowledged by all that these books never had a place in the Jewish Canon. The Roman Catholic Professor Alber, of Pesth (who considers them as of equal authority with the received

books of the Hebrew Canon), observes:—'The Deutero-canonical books are those which the Jews had not in their Canon, but are notwithstanding received by the Christian Church, concerning which, on this very account of their not having been in the Jewish Canon, there has existed some doubt even in the Church' (*Institut. Hermeneut.* vol. i. ch. viii. ix.). Josephus, a contemporary of the apostles, after describing the Jewish Canon (*Contr. Ap.* i. 8), which he says consists of 22 books, remarks: 'but from the reign of Artaxerxes to within our memory there have been several things committed to writing, which, however, *have not acquired the same degree of credit and authority* as the former books, inasmuch as the tradition and succession of the prophets were less certain.' It has been shown by Hornemann (*Observat. ad illust. doctr. de Canon. V. T. ex Philone*) that, although Philo was acquainted with the books in question, he has not cited any one of them, at least with the view of establishing any proposition.

Among the early Christian writers, Jerome, in his Prefaces, gives us the most complete information that we possess regarding the authority of these books in his time. After enumerating the 22 books of the Hebrew Canon, consisting of the Law, the Prophets, and the Hagiographa, he adds: 'This prologue I write as a preface to the books to be translated by us from the Hebrew into Latin, that we may know that all the books which are not of this number are *apocryphal;* therefore Wisdom, which is commonly ascribed to Solomon as its author, and the book of Jesus the son of Sirach, Judith, Tobit, and the Shepherd, *are not in the Canon.*' Again, in the preface to his translation of the books of Solomon from the Hebrew, he observes:—'These three books (Proverbs, Ecclesiastes, and Canticles) only are Solomon's. There is also the *Book of Jesus the son of Sirach*, and another pseud-epigraphal book, called the *Wisdom of Solomon;* the former of which I have seen in Hebrew, called not Ecclesiasticus, as among the Latins, but the Parables; with which likewise have been joined Ecclesiastes and the Song of Songs, that the collection might the better resemble the books of Solomon both in matter and design. The second is not to be found at all among the Hebrews, and the style plainly evinces its Greek original: some ancient writers say it is a work of Philo the Jew. As, therefore, the Church reads Judith and Tobit, and the books of Maccabees, but does not receive them among the Canonical Scriptures; so likewise it may read these two books for the edification of the people, but not as of authority for proving any doctrines of religion (*ad ædificationem plebis, non ad auctoritatem ecclesiasticorum dogmatum confirmandam*).' Of Baruch he says, that he does 'not translate it, because it was not in Hebrew, nor received by the Jews.' He never translated Wisdom, Ecclesiasticus, or either of the books of Maccabees, and observes, that 'such books as are not of the twenty-four* letters are to be utterly rejected' (*Pref. to Ezra*). In his *Preface to Judith* he says, in like manner, 'Among the Hebrews this book is read among the *hagiographa* (or, according to some manuscripts, *apocrypha*), whose authority is not judged sufficient to support disputed matters.' He adds, at the same time, that 'the Council of Nice is said to have included it in the catalogue of the holy Scriptures.' We have, however, no authority for supposing that the Council of Nice ever formed such a catalogue. There is no account of the matter in any of its acts which have reached us. There is, indeed, a catalogue, as is observed by Mr. Jones, attributed by Pappus, in his *Synodicon*, to this Council, with this relation—'That the bishops there assembled were, by a very extraordinary miracle, convinced which were inspired and which were apocryphal books, after this manner:—Having put all the books that laid claim to inspiration under the communion-table (τῇ θείᾳ τραπέζῃ) in a church, they prayed to God that those which were of divine inspiration might be found above, or upon, the table, and those which were apocryphal might be found under; and accordingly, as they prayed, it came to pass.' This is universally acknowledged to be a fable, and Cardinal Bellarmine (*De Verbo Dei*) admits that there could have been no canon determined on by the Nicene Council, as in that case none would have ventured to have rejected it; but he supposes that Jerome may have found in some of its acts, now lost, some citation from the book of Judith. Bellarmine further admits that in Jerome's time the ecclesiastical books, although read in the churches, were neither in the *Jewish nor Christian Canons*, inasmuch as no General Council had yet determined anything concerning them.

We have already noticed Jerome's remarks respecting the additions to the book of Daniel [DANIEL, *Apocryphal Additions to*]. In reference to these it was that Jerome's contemporary Rufinus, once his familiar friend, but now his bitter enemy, remarked in his second invective against him—'Who, in that host of learned men, presumed to *compile* the divine instrument which the Apostles delivered to the churches, and the deposit of the Holy Spirit? Is it not a *compilation*, when certain parts are altered, and an error said to be corrected? for the whole history of Susanna, which afforded such an example of chastity to the Church of God, has been cut off. Is the authority of one man now to supersede the whole of the Seventy translators, who, shut up in separate cells, translated the whole Bible without differing in a single word? [Alluding to a fable now long exploded]. Peter governed the Roman Church for twenty-four years. It is not to be doubted that he gave the Church the Scriptures, which were recited while he sat and taught. What! did Peter deceive the Church, and give false books, ... knowing that the true ones were acknowledged by the Jews? But he will perhaps say, Peter was an unlettered man. What, then, will he say of Paul? . . . . . I will receive no truth which Peter and Paul did not teach. The following are your own words:—"After four hundred years the simple ears of the Latins are not to be offended with new doctrine;" but now you say—"Every one who believes that Susanna, married or unmarried, afforded no example of chastity, has erred." It is not true. And—

* The variations in the numerical divisions of these books, many of which are extremely fanciful, do not affect the identity of the canon itself.

"Every one who thought that the boy Daniel was filled with the Holy Spirit, and convicted the elders, has erred." It is not true. "The Church Universal throughout the world, consisting either of those who are in the body or those who are in the Lord, whether holy confessors or holy martyrs, who have sung the Hymn of the Children, have all erred, and sung falsely!" Therefore, after four hundred years, the truth of the law, bought at a price, proceeds from the Synagogue.'

To this angry invective Jerome replied—'I only state what the Hebrews are accustomed to say against the history of Susanna, and the Song of the Children, and the fable of Bel and the Dragon, which are not found in the Hebrew volume. My accuser shows himself to be a silly sycophant. I did not give my own opinion, but what they are accustomed to say against us.' For his own views on this subject, none of which he retracts, he refers Rufinus to his Preface.

It will be observed that these invectives of Rufinus have no reference to any other writings than the history of Susanna and the Song of the Three Children. In fact, Rufinus himself made the same distinction in regard to the books of Scripture that Jerome did. After enumerating the books of the Old and New Testament exactly according to the Jewish canon, saying, 'These are the volumes which the Fathers have included in the canon, and out of which they would have us prove the doctrines of our faith;' he adds—'however, it ought to be observed, that there are also other books which are not *canonical*, but have been called by our forefathers *ecclesiastical;* as the Wisdom of Solomon, and another called the Wisdom of the Son of Sirach, which among the Latins is called by the general name of Ecclesiasticus, by which title is denoted not the author of the book, but the quality of the writing. Of the same order is the book of Tobit, Judith, and the books of the Maccabees. In the New Testament is the book of the Shepherd of Hermas, which is called the 'Two Ways, or the Judgment of Peter;' all which they would have to be read in the churches, but not alleged by way of authority for proving articles of faith. Other Scriptures they call *apocryphal*, which they would not have to be read in churches' (*In Symb. Apost.*).

There have thus been three divisions made by the ancients, viz. the Canonical Scriptures, the Ecclesiastical, and the Apocryphal, or otherwise, the Canonical and the Apocryphal, of which latter there are two kinds, viz. those which, having nothing contrary to the faith, may be profitably read, although not authentic, and those which are injurious and contrary to the faith. It is, however, maintained by Professor Alber that, when Jerome and Rufinus said the Ecclesiastical books were read for edification, but not for confirming articles of faith, they only meant that they were not to be employed in controversies with the Jews, who did not acknowledge their authority. These Fathers, however, certainly put them into the same rank with the Shepherd of Hermas.

The earliest catalogue which we possess of the books of Scripture is that of Melito, Bishop of Sardis, preserved by Eusebius. From his statement, written in the year 170, it seems evident that there had been then no catalogue authorized by the Church or any public body. He enumerates the books of the Jewish Canon only, from which, however, he omits the book of Esther [ESTHER].

The first catalogue of the Holy Scriptures, *drawn up by any public body in the Christian church*, which has come down to us, is that of the Council of Laodicea, in Phrygia, supposed to be held about the year 365. In the two last canons of this Council, as we now have them, there is an enumeration of the books of Scripture nearly conformable, in the Old Testament, to the Jewish canon. The canons are in these words,—

'That private Psalms ought not to be said in the church, nor any books not canonical, but only the canonical books of the Old and New Testament. The books of the Old Testament, which ought to be read, are these—1. Genesis; 2. Exodus; 3. Leviticus; 4. Numbers; 5. Deuteronomy; 6. Joshua, son of Nun; 7. Judges, with Ruth; 8. Esther; 9. 1 and 2 Kingdoms; 10. 3 and 4 Kingdoms; 11. 1 and 2 Remains; 12. 1 and 2 Esdras; 13. the book of 150 Psalms; 14. Proverbs; 15. Ecclesiastes; 16. Canticles; 17. Job; 18. the Twelve Prophets; 19. Isaiah; 20. Jeremiah and *Baruch*, the Lamentations and the Epistles; 21. Ezekiel; 22. Daniel.' We have already given the books of the New Testament as enumerated by this Council (see ANTILEGOMENA).

This catalogue is not, however, universally acknowledged to be genuine. 'Possibly learned men,' says Lardner, 'according to the different notions of the party they have been engaged in, have been led to disregard the last canon; some because of its omitting the Apocryphal books of the Old Testament, and others because it has not the book of Revelation.' Basnage, in his *History of the Church*, observes that 'Protestants and Catholics have equally disparaged this synod.' 'It is said,' remarks Lardner, 'that the canons of this Council were received and adopted by some General Councils in after times; nevertheless perhaps it would be difficult to show that those General Councils received the last canon, and exactly approved the catalogue of said books therein contained, without any addition or diminution, as we now have it' (see Mansi's *Concilia*, ii. 574).

But, besides the Hebrew canon, the reader will have observed that there were certain other books publicly read in the primitive church, and treated with a high degree of respect, although not considered by the Hebrews, from whom they were derived (see the passage above cited from Josephus) as of equal authority with the former. These books seem to have been included in the copies of the Septuagint, which was generally made use of by the sacred writers of the New Testament. It does not appear whether the Apostles gave any cautions against the reading of these books; and it has been even supposed that they have referred to them. Others, however, have maintained that the principal passages to which they have referred (for it is not pretended that they have cited them) are from the canonical books. The following are the passages here alluded to:— (*See next page.*)

Some of the uncanonical books, however, had not been extant more than a hundred and thirty years at most at the Christian era, and could only have obtained a place in the Greek Scrip-

tures a short time before this period; but the only copies of the Scriptures in existence for the first three hundred years after Christ, either among the Jews or Christians of Greece, Italy, or Africa, contained these books without any mark of distinction that we know of. The Hebrew Bible and language were quite unknown to them during this period, and the most learned were, probably, but ill-informed on the subject, at least before Jerome's translation of the Scriptures from the original Hebrew. The Latin versions before his time were all made from the Septuagint. We do not, indeed, find any catalogue of these writings before the Council of Hippo, but only individual notices of separate books. Thus Clement of Alexandria (*Stromata*, A.D. 211), cites the Wisdom of Solomon and Ecclesiasticus, and Origen refers to several of these books, treating them with a high degree of veneration. 'There is,' says Eusebius, 'an epistle of Africanus, addressed to Origen, in which he intimates his doubt on the history of Susannah in Daniel, as if it were a spurious and fictitious composition; to which Origen wrote a very full answer.' These epistles are both extant. Origen, at great length, vindicates these parts of the Greek version—for he acknowledges that they were not in the Hebrew—from the objections of Africanus, asserting that they were true and genuine, and made use of in Greek among all the churches of the Gentiles, and that we should not attend to the fraudulent comments of the Jews, but take that only for true in the holy Scriptures which the Seventy had translated, for that this only was confirmed by Apostolic authority. In the same letter he cites the book of Tobit, and in his second book *De Pricipiis*, he even speaks of the Shepherd of Hermas as divinely inspired. Origen, however, uses very different language in regard to the book of Enoch, the Testament of the Twelve Patriarchs, and the Assumption of Moses.

The local Council of Hippo, held in the year of Christ 393, at which the celebrated Augustine, afterwards Bishop of Hippo, was present, formed a catalogue of the sacred books of the Old and New Testament, in which the *ecclesiastical books* were all included. They are inserted in the following order in its 36th canon, viz.:—

'That nothing be read in the church besides the Canonical Scriptures. Under the name of Canonical Scriptures are reckoned Genesis, Exodus, Leviticus, Numbers, Deuteronomy, Joshua, Judges, Ruth, 4 books of Kings, Remains, Job, Psalms of David, 5 books of Solomon, 12 books of the Prophets, Isaiah, Jeremiah, Daniel, Ezekiel, Tobit, Judith, Hesther, Esdras, 2 books, Maccabees, 2 books.' [For the books of the New Testament see *supra*, ANTILEGOMENA.] 'But for the confirmation of this canon the churches beyond the seas are to be consulted.' The passions of the martyrs were also permitted to be read on their anniversaries.

The third Council of Carthage, generally believed to have been held in 397, at which Aurelius, bishop of Carthage, presided, and at which Augustine was present, consisting in all of forty-four bishops, adopted the same catalogue, which was confirmed at the fourth Council of Carthage, held in the year 419. The reference said to have been made from the *third* Council of Carthage, held in 397, to Pope Boniface [ANTILEGOMENA], is a manifest anachronism in the copies of the acts of this council (see L'Abbe's *Concilia*), as the pontificate of Boniface did not commence before 417. It has been, therefore, conjectured that this reference belongs to the fourth council.

As St. Augustine had great influence at these Councils, it must be of importance to ascertain his private sentiments on this subject. This eminent man, who was born in 354, consecrated bishop of Hippo (the present Bona) in 395, and died in 430, in the seventy-sixth year of his age, writes as follows in the year 397:—'The entire Canon of Scripture is comprised in these books. There are 5 of Moses, viz. Genesis, Exodus, Leviticus, Numbers, Deuteronomy; 1 of Joshua, 1 of Judges, 1 small book called Ruth, which seems rather to belong to the beginning of the Kingdoms, the 4 books of the Kingdoms, and 2 of the Remains, not following one another, but parallel to each other. These are historical books which contain a succession of times in the order of events. There are others which do not observe the order of time, and are unconnected together, as Job, Tobit, Esther, and Judith, the 2 books of Maccabees, and the 2 books of Esra, which last do more observe the order of a regular succession of events, after that contained in the Kingdoms and Remains. Next are the Prophets, among which is 1 book of the Psalms of David, and 3

of Solomon, viz. Proverbs, Canticles, and Ecclesiastes; for these 2 books, Wisdom and Ecclesiasticus, are called Solomon's for no other reason than because they have a resemblance to his writings: for it is a very general opinion that they were written by Jesus the son of Sirach, which books, however, since they are admitted into authority, are to be reckoned among prophetical books. The rest are the books of those who are properly called prophets, as the several books of the 12 Prophets, which being found together, and never separated, are reckoned 1 book. The names of which prophets are these: Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi. After these the four Prophets of large volumes, Isaiah, Jeremiah, Daniel, Ezekiel. In these 44 books is comprised all the authority of the Old Testament' (*De Doctr. Christ.*). [For the New, see ANTILEGOMENA: they are the same with those now received.]

It has been, indeed, maintained that Augustine altered his opinion on the subject of the deutero-canonical books in his Retractations (see Henderson *On Inspiration*, p. 495); but the only passage in this work bearing on the subject, which we can discover, is that wherein he confesses his mistake in terming Ecclesiasticus a *prophetical* book.

Augustine has been also supposed to have testified to the inferior authority of these books, from his saying that one of them was read from the *reader's* place. 'The sentiment of the book of Wisdom is not to be rejected, which has deserved to be recited for such a long course of years from the *step of the readers* of the church of Christ, and to be heard with the veneration of divine authority from the bishop to the humblest of the laics, faithful, penitents, and catechumens' [MACCABEES].

What the result of the reference from Africa to the 'churches beyond the seas' may have been, we can only judge from the letter which is said to have been written on the subject by Innocent I., bishop of Rome, to St. Exupere, bishop of Toulouse, in the year 405. In this letter, which, although disputed, is most probably genuine, Innocent gives the same catalogue of the books of the Old and New Testaments as those of the councils of Hippo and Carthage, omitting only the book of Esther.

The next catalogue is that of the Roman Council, drawn up by Pope Gelasius and seventy bishops. The genuineness of the acts of this council has been questioned by Pearson, Cave, and the two Basnages, but vindicated by Pagi and Jeremiah Jones. The catalogue is identical with the preceding, except in the order of the books.

Some of the most important manuscripts of the Holy Scriptures which have descended to us were written soon after this period. The very ancient Alexandrian MS. now in the British Museum contains the following books in the order which we here give them, together with the annexed catalogue:—

'Genesis, Exodus, Leviticus, Numbers, Deuteronomy, Joshua, Judges, Ruth; 8 books.—Kingdoms, 4; Remains, 2; 6 books.—16 Prophets, viz., Hosea, 1; Amos, 2; Micah, 3; Joel, 4; Obadiah, 5; Jonah, 6; Nahum, 7; Ambacum, 8; Zephaniah, 9; Haggai, 10; Zechariah, 11; Malachi, 12; Isaiah, 13; Jeremiah, 14; Ezekiel, 15; Daniel, 16; Esther; Tobit; Judith; Ezra, 2; Maccabees, 4; Psalter and Hymns; Job; Proverbs; Ecclesiastes; Canticles; Wisdom; Wisdom of Jesus Sirach; 4 Gospels; Acts, 1; 7 Catholic Epistles; 14 Epistles of Paul; Revelation; 2 Epistles of Clement; together * * * * books; Psalms of Solomon.' These books are equally incorporated in all the manuscripts of the Latin Vulgate (which was originally translated from the Septuagint). Those which Jerome did not translate from the Hebrew or Greek, as Wisdom and Ecclesiasticus, were adopted from the older Latin version.

Although the Canon of Scripture seemed now to be so far settled by the decrees of these Councils, all did not conceive themselves bound by them; and it is observed by Jahn (*Introd.*) that they were not otherwise to be understood than 'that the ecclesiastical books enumerated in this catalogue were to be held as useful for the edification of the people, but not to be applied to the confirmation of doctrines of faith.' Such appears at least to have been the sentiment of many eminent divines between this period and the sixteenth century.

Bishop Cosin, in his excellent *Scholastic History of the Canon*, furnishes to this effect a host of quotations from writers of the middle ages, including Ven. Bede, John of Damascus, Alcuin, Peter Mauritius, Hugh de St. Victor, Cardinal Hugo de St. Cher, the author of the ordinary *Gloss*, and Nicholas Lyranus. Of these some call the Deutero-canonical books 'excellent and useful, but not in the canon;' others speak of them as 'apocryphal, that is, doubtful Scriptures,' as not having been 'written in the time of the prophets, but in that of the priests, under Ptolemy,' &c., as not 'equalling the sublime dignity of the other books, yet deserving reception for their laudable instruction,' classing them with the writings of Jerome, Augustine, Ambrose, and Bede, and making a marked distinction not only between the Jewish and Christian Canons, but even between parts of the Deutero-canonical writings. Mr. Archibald Alexander also (*Canon of the Old and New Testament ascertained*) cites several of the same authorities: he has, however, in one instance, evidently mistaken Peter Lombard for Peter Comestor, the author of the *Scholastic History*. At the era of the Reformation, we find James Faber of Etaples and Cardinal Cajetan expressing themselves to the same effect, and the learned Sanctes Pagnini, in his translation of the Bible from the original languages, published at Lyons in 1528 (the first Bible that contained the division into verses with the present figures), dedicated to Pope Clement VII., distinguished the ecclesiastical books, which he says were not in the canon, by the term *Hagiographa*. For a description of this rare work, see *Christian Remembrancer*, vol. iv. p. 419, in a treatise '*On the division of verses in the Bible*,' by the author of the present article.

We are now arrived at the period of the Reformation, when the question of the Canon of Scripture was warmly discussed. Long before this period (viz. in 1380), Wicliff had published his translation of the Bible, in which he substituted another prologue for Jerome's; wherein, after enumerating the 'twenty-five' books of the

Hebrew Canon, he adds—'Whatever book is in the Old Testament, besides these twenty-five, shall be set among the Apocrypha, that is, without authority of belief.' He also, in order to distinguish the Hebrew text from the Greek interpolations, inserted Jerome's notes, *rubricated*, into the body of the text.

Although Martin Luther commenced the publication of his translation of the Bible in 1523, yet, as it was published in parts, he had not yet made any distinction between the two classes of books, when Lonicer published his edition of the Greek Septuagint at Strasburg in 1526, in which he separated the Deutero-canonical, or Apocryphal, books, from those of the Jewish Canon; for which he was severely castigated by Morinus (see Masch's edition of Le Long's *Bibliotheca Biblica*, vol. ii. p. 268). Arias Montanus went still further, and rejected them altogether. In 1534 the complete edition of Luther's Bible appeared, wherein those books which Jerome had placed *inter apocrypha* were separated, and placed by themselves between the Old and New Testament, under the title 'Apocrypha; that is, Books which are not to be considered as equal to holy Scripture, and yet are useful and good to read.'

A few years after, the divines of the Council of Trent assembled; and among the earliest subjects of their deliberation was the Canon of Scripture. 'The Canon of Augustine,' says bishop Marsh, 'continued to be the Canon of the ruling party. But as there were not wanting persons, especially among the learned, who from time to time recommended the Canon of Jerome, it was necessary for the Council of Trent to decide between the contending parties' (*Comparative View*, p. 97). The Tridentine Fathers had consequently a nice and difficult question to determine.

On the 8th April, 1546, all who were present at the fourth session of the Council of Trent adopted the canon of Augustine, declaring, 'He is also to be anathema who does not receive these entire books, with all their parts, as they have been accustomed to be read in the Catholic Church, and are found in the ancient editions of the Latin Vulgate, as sacred and canonical, and who knowingly and wilfully despises the aforesaid traditions. . . . .'

We are informed by Jahn (*Introduction*), that this decree did not affect the distinction which the learned had always made between the canonical and deutero-canonical books, in proof of which he refers to the various opinions which still prevail in his church on the subject, Bernard Lamy (*Apparatus Biblicus*, ii. 5) denying, and Du Pin (*Prolegomena*) asserting, that the books of the second Canon are of equal authority with those of the first. Those who desire further information will find it in the two accounts of the controversies which took place at the council on this subject; one from the pen of Cardinal Pallavicini, the other by Father Paul Sarpi, the two eminent historians of the Council. Professor Alber, to whom we have already referred, having denied that any such distinction as that maintained by his brother Professor, Jahn, can lawfully exist among Roman Catholic divines, insists that both canons possess one and the same authority. The words of Bernard Lamy, however, cited by Jahn are—'The books of the *second* Canon, although united with the *first*, are not, however, of the same authority' (*Apparat. Bibl.* ii. 5, p. 333). Alber endeavours to explain this as meaning only that these books had not the same authority before the Canon of the Council of Trent, and cites a passage from Pallavicini to prove that the anathema was 'directed against those *Catholics* who adopted the views of Cardinal Cajetan' (vol. ii. p. 105). But, however this may be, among other opinions of Luther condemned by the Council was the following:—'That no books should be admitted into the Canon of the Old Testament but those received by the Jews; and that from the new should be excluded—the Epistle to the Hebrews, those of James, 2 Peter, 2 and 3 John, Jude and the Apocalypse.'

The whole of the books in debate, with the exception of 3rd and 4th Esdras, and the Prayer of Manasses, are considered as canonical by the Council of Trent. But it must be recollected, that the decision of the Council of Trent is one by no means peculiar to this council. The third Council of Carthage had considered the same books canonical. 'The Council of Trent,' says bishop Marsh, 'declared no other books to be sacred and canonical than such as had existed from the earliest ages of Christianity, not only in the Latin version of the Old Testament, but even in the ancient Greek version, which is known by the name of the Septuagint . . . In the manuscripts of the Septuagint, there is the same intermixture of canonical and apocryphal books, as in the manuscripts of the Latin version' [although there are in different manuscripts variations in the particular arrangement of single books]. The Hebrew was inaccessible to the Latin translators in Europe and Africa during the three first centuries.'

The ecclesiastical books were generally written within a period which could not have extended to more than two centuries before the birth of Christ. In the choice of the places which were assigned them by the Greek Jews resident in Alexandria and other parts of Egypt, who probably added these books to the Septuagint version according as they became gradually approved of, they were directed 'partly by the subjects, partly by their relation to other writings, and partly by the periods in which the recorded transactions are supposed to have happened.' Their insertion shows how highly they were esteemed by the Greek Jews of Egypt; but whether even the Egyptian Jews ascribed to them canonical and divine authority, it would not be easy to prove (Marsh's *Comparative View*).

The following were the proceedings of the Anglican Church in reference to this subject:—

In Coverdale's English translation of the Bible, printed in 1535, the deutero-canonical books were divided from the others and printed separately, with the exception of the book of Baruch, which was not separated from the others in this version until the edition of 1550. They had however been separated in Matthew's Bible in 1537, prefaced with the words, 'the volume of the book called *Hagiographa*.' This Bible contained Olivetan's preface, in which these books were spoken of in somewhat disparaging terms. In Cranmer's Bible, published in 1539, the same words and preface were continued; but, in the edition of 1549, the word *Hagiographa* was

changed into *Apocrypha*, which passed through the succeeding editions into King James's Bible. Olivetan's preface was omitted in the Bishop's Bible in 1568, after the framing of the canon in the Thirty-nine Articles in 1562.

In the Geneva Bible, which was the popular English translation before the present authorized version, and which was published in 1559, these books are printed separately with a preface, in which, although not considered of themselves as sufficient to prove any point of Christian doctrine, they are yet treated with a high degree of veneration. In the parallel passages in the margin of this translation, references are made to the deutero-canonical books.

In the first edition of the Articles of the Church of England, 1552, no catalogue of the 'Holy Scripture' had yet appeared, but in the Articles of 1562, the canon of St. Jerome was finally adopted in the following order: 5 books of Moses, Joshua, Judges, Ruth, 1 and 2 Samuel; 1 and 2 Kings, 1 and 2 Chronicles, 1 and 2 Esdras, Esther, Job, Psalms, Proverbs, Ecclesiastes, Cantica, four Prophets the Greater, twelve Prophets the Less. In the 6th article it is declared that, 'In the name of the Holy Scripture we do understand those canonical books of the Old and New Testament, of whose authority was never any doubt in the Church,' and that 'the other books (as Jerome saith) the Church doth read for example of life and instruction of manners, but yet it doth not apply them to establish any doctrine.' The books which the article then enumerates are 1 and 2 [3 and 4] Esdras, Tobias, Judith, the rest of the book of Esther, Wisdom, Jesus the son of Sirach, Baruch the Prophet, the Song of the Children, the Story of Susanna, Bel and the Dragon, the Prayer of Manasses, and 1 and 2 Maccabees. It is not, however, altogether correct, in point of fact, in including in the number of books thus referred to by Jerome as read by the Church for edification the third and fourth books of Esdras. These books were equally rejected by the Church of Rome and by Luther, who did not translate them. The Church of England further declares, that 'all the books of the New Testament, *as they are commonly received*, we do receive and account them canonical.' The Church of England has herein followed the Councils of Hippo and Carthage. The phrase 'of whose authority was never any doubt in the Church,' refers therefore more strictly to the books of the Old Testament than the New, for we have already seen that doubts *did* exist respecting the ANTILEGOMENA of the New Testament. In the first book of Homilies, published in 1547, and the second in 1560, both confirmed by the Thirty-fifth Article of 1562, the deutero-canonical books are cited as 'Scripture,' and treated with the same reverence as the other books in the Bible; and in the preface to the book of Common Prayer, they are alluded to as being 'agreeable to' the Holy Scriptures.

The Helvetic Confession, dated 1st March, 1566, has the following expression respecting the apocryphal books:—'We do not deny that certain books of the Old Testament were named by the ancients apocryphal, by others ecclesiastical, as being read in the churches, but not adduced for authority in matters of belief: as Augustine, in the 18th book of the *City of God*, ch. 38, relates, that the names and books of certain prophets were adduced in the books of Kings, but adds that these were not in the Canon, and that those we have were sufficient for piety.' The Confession of the Dutch Churches (dated the same year) is more full. After recounting the canonical books, 'respecting which no controversy existed,' it adds, 'We make a distinction between those and such as are called Apocryphal, which may indeed be read in the Church, and proofs adduced from them, so far as they agree with the canonical books; but their authority and force are by no means such that any article of faith may be certainly declared from their testimony alone, still less that they can impugn or detract from the authority of the others.' They add, as their reason for receiving the canonical books, that 'it is not so much because the Church receives them, as that the Holy Spirit testifies to our consciences that they have come from God; and chiefly on this account, because they of themselves bear testimony to their own authority and sanctity, so that even the blind may see the fulfilment of all things predicted in them, as it were with the senses.'

The Westminster Confession proceeded on the same principle, but treated the books of the second Canon with less ceremony. After enumerating the canonical books (ascribing thirteen epistles only to Paul), they proceed to say, that 'the books called Apocrypha, not being of Divine confirmation, are no part of the Canon of Scripture; and therefore are of no authority in the Church of God; nor to be any otherwise approved, or made use of, than other human writings.' And again: 'The authority of Holy Scripture, for which it ought to be believed and obeyed, depended not on the testimony of any man or church, but wholly upon God, the author thereof: and therefore it is to be received, because it is the word of God. We may be moved and induced by the Church to a high and reverent esteem of the Holy Scriptures; and the heavenliness of the matter, the efficacy of the doctrine, the majesty of the style, &c. &c., are arguments whereby it doth abundantly evidence itself to be the word of God: yet, notwithstanding, our full persuasion and assurance of the infallible truth and Divine authority thereof is from the inward work of the Holy Spirit, being witness by and with the word in our hearts.'

Luther (on 1 Cor. iii. 9, 10) had declared that the *touchstone* by which certain Scriptures should be acknowledged as divine or not was the following:—'Do they preach Jesus Christ or not?' And, among the moderns, Dr. Twesten (*Vorlesungen über die Dogmatik*, 1829, vol. i. p. 421, sqq.) has maintained a somewhat similar principle (see Gaussen's *Theopneustia*). The Confession of Augsburg, dated in 1531, contains no article whatever on the Canon of Scripture; nor do the Lutherans appear to have any other canon than Luther's Bible. For the sentiments of the GREEK CHURCH, see ESDRAS; ESTHER; MACCABEES.

We shall add a few words on the grounds and authorities adopted by different parties for deciding whether a work is canonical or not. Mr. Jeremiah Jones furnishes us with three different views on this subject. 'The first,' he says, 'is the opinion of the Papists, who have generally affirmed, in their controversies with the Protestants,

that the authority of the Scriptures depends upon, or is derived from, the power of their Church. By the authority of the Church, those authors plainly mean a power lodged in the Church of Rome, and her synods, of determination, what books are the word of God; than which nothing can be more absurd or contrary to common sense: for if so, it is possible, nay, it is easy for them, to make a book which is not Divine to be so.' And he maintains that 'it is possible, on this principle, that Æsop's fables, or the infidel books of Celsus, Julian, and Porphyry might become a part of the New Testament.' But the fact must not be lost sight of, that the Church has never pretended to exercise a power of this description. Bishop Marsh, referring to this subject, observes: 'That the Council of Trent assumed the privilege of raising to the rank of canonical authority what was generally acknowledged to have no such authority, is a charge which cannot be made without injustice: the power of declaring canonical a book, which has never laid claim to that title, is a power not exercised even by the Church of Rome. In this respect it acts like other churches: it sits in judgment on existing claims, and determines whether they are valid or not.' From certain expressions of divines, who have asserted that the Scriptures would have no authority whatever without the testimony of the Church, it has been supposed that they ascribed to the Church an arbitrary power over these Divine books: Bellarmine, therefore, has drawn a distinction between the objective and subjective authority of the Scriptures, their authority in themselves, and that which they have in respect to us. Thus, Augustine said that he would not believe the Gospel, but for the authority of the Church; adding, however, that the invitation of the Church was but the first step to his complete illumination by the Spirit of God (*Confessions*, ii. 8).

Another principle was that adopted by all the reformed communions (except the Anglican Church), viz. to use Mr. Jones's words, that '*there are inward or innate evidences in the Scriptures, which, applied by the illumination or testimony of the Holy Spirit, are the only true proofs of their being the Word of God;*' or, to use the words of the French reformed communion in its Confession, which harmonize with the methods adopted by the Scotch and Belgian communions, that upon the internal persuasion of the Spirit *they knew the Canonical from Ecclesiastical*, i. e. *Apocryphal, books*. This method Mr. Jones thinks to be of a very extraordinary nature. 'Can it be supposed,' he asks, 'that out of ten thousand books, private Christians, or even our most learned reformers, should by any internal evidence agree precisely on the number of twenty-seven, which are now esteemed canonical, induced thereto by some characters those books contain, of their being written by the inspiration of the Holy Ghost?' This he conceives to be folly and madness, and an assumption of 'immediate inspiration.' 'It first supposes the books are inspired, and then proves that they are so because they are so.' This is only an argument, says bishop Burnet, to him that feels it, if it be one at all. 'For my part,' said the celebrated Richard Baxter, 'I confess I could never boast of any such testimony or light of the Spirit, nor reason neither, which, without human testimony, would have made me believe that the book of Canticles is canonical and written by Solomon, and the book of Wisdom apocryphal and written by Philo. Nor could I have known any historical books, such as Joshua, Judges, Ruth, Samuel, Kings, Chronicles, Ezra, Nehemiah, &c. to be written by divine inspiration, but by tradition,' &c. The third method is that approved of by Mr. Jones, viz. that tradition, or the testimony of the ancient Christians, preserved in their writings, is the best method of determining this subject. 'This,' adds Mr. Jones, 'is the method the first Christians constantly made use of to prove, against the heretics, the truth of the sacred books, viz. by appealing to that certain and undoubted tradition which assured them they were the writings of the persons whose names they bear. Thus we know that Ovid, Virgil, or Livy wrote the books under their names.' To this, we think, might have been added internal evidence and the application of critical skill. The chief objection which has been urged against this method is, that it leaves the canonicity of each book to the decision cf every private individual, which is inconsistent with the idea of a *canon*. Certain it is that the ancient church, in deciding on the present Canon, exhibited a wonderful theological tact, as the books which it has handed down as canonical, and these alone, are generally the same which, after having undergone the strictest ordeal that the learning and acumen of modern times have been enabled to apply to them, are acknowledged by the best critics to be authentic. In fact the Church has adopted the same methods for this purpose which Mr. Jones has considered to be the only ones satisfactory to private individuals. Christians are thus in possession of the highest degree of satisfaction. Mr. Gaussen (*Theopneustia*, p. 340), admits that the principle laid down by the reformed churches is untenable, and he substitutes for it 'for the Old Testament, the Testimony of the Jews; and for the New, the Testimony of the Catholic Church; by which he understands, the general consent, in regard to the former, of all Jews, Egyptians and Syrians, Asiatics and Europeans, ancient and modern, good and bad;' and by the testimony of the Catholic Church he understands, 'the universal consent of ancient and modern churches, Asiatic and European, good and bad: that is, not only the sections which have adhered to the Reformation, but the Greek section, the Armenian section, the Syrian section, the Roman section, and the Unitarian section.' And in pp. 342, 345, he ascribes entire infallibility to both Jewish and Christian churches, in respect to the Canons of Scripture. 'The Jews *could not* introduce a human book into the Old Testament, and neither the Council of Trent, nor even the most corrupt and idolatrous churches, *could* add a single Apocryphal book to the New. . . . . . It was *not in their power* not to transmit them intact and complete. In *spite of themselves* it was so ordered,' &c.

The question, however, in dispute is not so much with regard to the Jewish Canon, regarding which no controversy exists, as whether there is or is not sufficient testimony to the fact, how far our Saviour and his Apostles gave the stamp of their authority to any books not contained in this canon. We have no certain evidence as to the authority on which, or the time when, the Jewish Canon

was collected, or of the cause of its closing, and our best evidence in favour of the canonicity of the Hebrew Scriptures rests on the authority of Christ, as contained in the Scriptures of the New Testamen..

We shall conclude with the following metrical catalogue from the pen of Cardinal Hugo:—

Quinque libros Moysi, Josue, Judicum, Samuelem,
Et Melachim, tres præcipuos bis sexque Prophetas
Hebræus reliquis censet præcellere libris.
Quinque vocat legem, reliquos vult esse Prophetas.
Post Agiographa, sunt Daniel, David, Esther, et Esdras;
Job, Paralipomenon, et tres libri Salomonis.
Lex vetus his libris perfectè tota tenetur.
Restant Apocrypha, Jesus, Sapientia, Pastor,
Et Machabæorum libri, Judith atque Tobias.

See, in addition to the works already cited, Vicenzi's *Introductio in Scrip. Deutero-canon.* Rome, 1842, which we had not the advantage of seeing until this article had gone to press.—W. W.

DEUTERONOMY (Δευτερονόμιον), the Greek name given by the Alexandrian Jews to the fifth book of Moses (a corresponding name, משנה התורה, is, however, also found with the Rabbins), by which the general tenor of the book is very well characterized. It comprises that series of addresses which the Lawgiver delivered (orally and by writing, i. 5; xxviii. 58, etc.) to assembled Israel in the second month of the fortieth year of their wandering through the desert, when the second generation was about to cross the Jordan, and when the parting-hour of Moses had nearly arrived. The book of Deuteronomy contains an account of the sublime and dignified manner in which Moses terminated that work, the accomplishment of which was his peculiar mission. It forms a sacred legacy which he here bequeathed to his people; and very different from those laws which he had announced to them at Sinai. The tone of the *law* falls here considerably in the background, and the *subjectivity* (individuality) of the *Lawgiver*, and his peculiar relation to his people, stands out more prominently. A thoroughly sublime and prophetic spirit pervades all these speeches from beginning to end. The thoughts of the man of God are entirely taken up with the inward concerns of his people, their relations, future fate, and eventful vicissitudes. The Lawgiver here stands amidst Israel, warning and consoling, commanding and exhorting, surveying and proclaiming the future with marvellous discernment.

The speeches begin with the enumeration of the wonderful dealings of God with the chosen people in the early period of their existence. Moses clearly proves to them the punishment of unbelief, the obduracy of Israel, and the faithfulness of Jehovah with regard to his promises, which were now on the point of being accomplished. Fully aware of the tendencies of the people, and foreseeing their alienations, Moses conjures them most impressively to hold fast the commands of the Lord, and not to forget his revelations, lest curses should befall them instead of blessings (ch. i.-iv.). The Lawgiver then expatiates on the spirit of the law, and its reception into the hearts of men, both in a positive and negative way. *Fear*, he says, is the primary *effect* of the law, as also its *aim*. As Israel had once listened to the announcement of the fundamental laws of the theocracy with a sacred *fear*, in like manner should man also receive, through the whole system of the law, a lively and awful impression of the holiness and majesty of God (ch. v.). But as the essence and sum of the law is *love* to Jehovah, the only and true God, man shall by the law be reminded of the Divine mercy, so variously manifested in deeds; and this reflection is calculated to rouse in man's heart *love* for God. This love is the only and true source from which proper respect and obedience to the law can proceed (ch. vi.).

There were, however, two tempting deviations, in following which the people were sure to be led astray. The law, in its strict rigour, was but too apt to tempt them to desert Jehovah, and to yield to idolatry (the very approval of which even in thought polluted the heart), by discontinuing to bear the heavy yoke of the law. Hence the most impressive warnings against Canaan's inhabitants and idols; and hence the declarations that Israel, in placing themselves on a par with the heathens, should have to endure an equal fate with them, and be repulsed from the presence of Jehovah (ch. vii. viii.).

The other, not less dangerous, deviation is that of self-justification—the proud fancy that all the favours Jehovah had shown to his people were merely in consequence of their own deservings. Therefore Jehovah tells them that it was not through their own worthiness and purity of heart that they inherited the land of the heathens. It was only through his free favour; for their sins bore too strong and constant testimony how little they ought to take credit to themselves for it (ch. ix.).

The history of the people, before and after the exile, shows these two deviations in their fullest bearings. Idolatry we find to have been the besetting sin *before* that period, and presumptuous pride of heart *after* it; a proof how intimately acquainted the Lawgiver was with the character and disposition of his people, and how necessary therefore those warnings had been.

Therefore, adds Moses, turn to that which Jehovah, in giving you the tables of the law, and establishing the Tabernacle and priesthood, has intimated as a significant symbol, 'to circumcise the foreskin of your heart,' and to cherish love in your inward soul. Think of Jehovah, the just and merciful, whose blessings and curses shall be set before your eyes as a lasting monument upon the mounts Ebal and Gerizim (ch. x., xi.).

The mention of that fact leads the Lawgiver to the domestic and practical life of the people when domesticated in their true home, the Land of Promise; which he further regulates by a fixed and solid rule, by new laws, which for this, their new design and purport, form a sort of complement to the laws already given. There, in the land of their forefathers, Jehovah will appoint *one* fixed place for his lasting sanctuary, when every other place dedicated to the worship of idols is to be destroyed. At that chosen spot alone are the sacrifices to be killed, while cattle in general, which are not destined for sacred purposes, but merely for food, may be slaughtered

at all places according to convenience—a regulation which still leaves in full force the previous laws concerning the eating of blood, and the share of Jehovah in slaughtered cattle. This sanctuary was to be considered as the central point for all sacred objects. The whole land was, by means of the sanctuary established in the midst of it, consecrated and dedicated to Jehovah. This consecration was incompatible with any defilement whatsoever. On that account the Canaanites must be exterminated, and all idolatrous abominations destroyed, since nothing ought to be added to or taken from the laws of God (ch. xii.). For the same reason (*i. e.* for the sake of the holiness of the land, diffused from the sacred centre), no false prophets or soothsayers are to be tolerated, as they may turn the minds of the people from *the* law, by establishing a different one, and therefore even a whole town given to the worship of idols must be demolished by force of arms (ch. xiii.). Neither, in like manner, must the heathen customs of mourning be imitated, or unclean beasts eaten; but the people must always remain true to the *previous* laws concerning food, &c., and show their real attachment to Jehovah and his religion by willingly paying the *tithe*, as ordained by the law (ch. xiv.). To the same end likewise shall the regulations concerning the years of release and the festivals of Jehovah (to be solemnized in the place of the new-chosen Sanctuary) be most scrupulously observed (ch. xv., xvi.). Only *unblemished* sacrifices shall be offered, for all idolworshippers must irrevocably be put to death by stoning. For the execution of due punishment, honest judges must govern the nation, while the highest tribunal shall exist in the place chosen for the Sanctuary, consisting of the priests and judges of the land. If a king be given by God to the people, he shall first of all accommodate himself to the laws of God, and not lead a heathen life. Next to the regal and judicial dignities, the ecclesiastical power shall exist in its full right; and again, next to it, the prophetic order (ch. xvii. xviii.). Of all these institutions, the duties of the judicial power are most clearly defined; for Jehovah does as little suffer that in his land the right of the innocent shall be turned aside, as that indulgence shall be shown to the evil-doer (ch. xix.). The exposition of the civil law is followed by that of the martial law, which has some bearing upon the then impending war with Canaan, as the most important war and representing that with the heathen nations in general (ch. xx.). These are again followed by a series of laws in reference to the preceding, and referring chiefly to hard cases in the judicial courts, by which Moses obviously designed to exhibit the whole of the civil life of his people in its strict application to the theocratic system of law and right. Therefore the form of prayer to be spoken at the offering up of the firstlings and tithe—the theocratic *confession of faith*—by which every Israelite acknowledges in person that he is what God has enjoined and called him to be, forms a beautiful conclusion of the whole legislation (ch. xxi.-xxvi.).

The blessings and curses of Jehovah, the two opposite extremes which were to be impressed upon the minds of the people at their entrance into Canaan, and which have hitherto been spoken of only in general terms, are now set forth in their fullest detail, picturing in the most lively colours the delightful abundance of rich blessings on the one hand, and the awful visitations of Heaven's wrath on the other. The prophetic speeches visibly and gradually increase in energy and enthusiasm, until the perspective of the remotest future of the people of God lies open to the eye of the inspired Lawgiver in all its chequered details, when his words resolve themselves into a flight of poetical extacy, into the strains of a splendid triumphal song in which the tone of grief and lamentation is as heart-rending as the announcement of divine salvation therein is jubilant (ch. xxvii. xxviii.). The history of the law concludes with a supplement concerning him who was deemed worthy by the Lord to transmit his law to Israel (ch. xxxiv.).

Thus much regarding the contents and connection of the book of Deuteronomy.

The critics who have tried to show that the Pentateuch is composed of miscellaneous documents and by various authors, have more difficulty in applying their theory to this book than to any other of the series [PENTATEUCH]. Indeed the most sceptical critics admit that, with the exception of a few interpolations (comp. for instance, De Wette, *Introd.* § 154, sq.), the whole of this book was moulded, as it were, in one single cast.

The *date*, however, of the composition of Deuteronomy, as well as its *authenticity*, has given rise to a far greater variety of opinion, more especially among those who are opposed to the authorship of Moses. The older critics, such as De Wette, Gesenius, &c., considered Deuteronomy as the *latest* production of all the books of the Pentateuch; while the more recent critics, such as Von Bohlen, Vatke, George, &c., have come to just the contrary opinion, and declare it to be the *earliest* of the Mosaic writings. The whole of their disputes on this head turn chiefly on the prophetic character of Deuteronomy. Some find that this peculiar feature characterizes the book as contemporary with the later prophets, and that it contains reflections on the law, as on a thing long in existence: others, however, are of a quite contrary opinion, and discover in this *subjective* character, so predominant in Deuteronomy, the very proof of its prior and early composition; and they consider, moreover, that the prophetic enunciations contained in it were afterwards developed into *objective*, rigid, and matter-of-fact *laws*, such as we find them in Exodus and Numbers. For this reason, they add, is the legislative tone in Deuteronomy more simple than in the other books, embracing merely the incipient elements and suggestive notes of a complete code of law.

A very strong proof of the genuineness of the book lies in its relation to the later writings of the prophets. Of all the books of the Pentateuch, Deuteronomy has been made most use of by the prophets, simply because it is best calculated to serve as a model for prophetic declarations, as also because of the inward harmony that exists between the *prophecies* and the *laws* upon which they are based.

Deuteronomy exercised a most decisive and remarkable influence more especially on Jeremiah, owing not only to his priestly character, but also and chiefly to the peculiar circumstances of his

time, so admirably suited to illustrate the threats and warnings contained in that book, in the strongest light of sacred and immutable truth. Deuteronomy was a book altogether written for the times of Jeremiah, who could therefore do nothing better than resume the old text, and bring it home impressively to the people. The influence which the spirit of Deuteronomy thus exercised on that prophet, extended even to the adoption, on his part, of a considerable number of its expressions and phraseological terms. These linguistical coincidences have been most erroneously accounted for by some, by assuming the contemporary origin of both books, while others (Von Bohlen) have gone so far in their speculations as even to allot to Jeremiah a share in the composition, or rather interpolation, of Deuteronomy. Such views betray total ignorance of the peculiar and strictly defined character of Deuteronomy, so different in many respects, even as regards the style and language, from the book of Jeremiah, though it cannot be denied that no prophet ever adhered more closely to the prototypes of the earlier periods, or ever repeated more frequently the earlier enunciations, than did Jeremiah.

Among the arguments advanced against the authenticity of Deuteronomy, are:

1. The *contradictions* said to exist between this and the other books of Moses;

2. Certain *anachronisms* committed by the author.

These contradictions are more especially alleged to exist in the festival laws, where but arbitrary and unwarranted views are mostly entertained by such critics with regard to the nature and original meaning of the festivals, which they identify altogether with *natural* or *season* festivals, and without lending to them a more spiritual character and signification.

3. That the *Sinai* of the other books is always called *Horeb* in Deuteronomy.—They forget, however, that *Horeb* is the general name of the whole mountain, while *Sinai* is the special name of a particular part of it. This distinction is, indeed, most scrupulously observed everywhere in the Pentateuch.

4. That *Priests* and *Levites* are used as synonymous terms in Deuteronomy (on account of the expression הכהנים הלוים); while, in the other books of the Pentateuch, they are used as terms distinct from each another.—By that expression, however, can only be meant the *Levitical* priests, *i. e.* the only legitimate priests; this meaning is borne out by Deuteronomy xviii. 3-8, where a clear distinction is made between *Priests* and *Levites*.

5. That in Deuteronomy i. 44, are mentioned the *Amorites* instead of the *Amalekites* as in Num. xiv. 45.—Here also they have forgotten to notice that, in the sequel of the very passage alluded to in Deuteronomy, both the *Amorites* and *Amalekites* are mentioned.

6. That the cause of the punishment of Moses is differently stated in Num. xxvii. 14, and Deuteronomy iii. 26.—To this objection we reply, that both the guilt and punishment of Moses are described in both books as originating with the people; comp. also Deut. xxxii. 51, etc.

Among the anachronisms in Deuteronomy are reckoned the allusions made in it to the Temple (xii. xvi. 1, sqq.), to the royal and prophetic powers (xiii. xviii. xviii), to the different modes of idol-worship (iv. 19; xvii. 3), and to the exile (xxviii. sq.). In suggesting these critical points, however, they do not consider that all these subjects are most closely and intimately connected with the spirit and principles of the law itself, and that all these regulations and prophecies appear here in Deuteronomy, as necessary finishing-points to the Law, so indispensable for the better consolidation of the subsequent and later relations of the theocracy.

More *anachronisms* are said to be

1. The sixty dwelling-places of Jair mentioned Deut. iii. 14, sq. (comp. Judg. x. 3, sq.) We consider, however, that the men mentioned in the two passages are evidently different persons, though of the same name. Nor is it difficult to prove from other sources, that there really existed at the time of Moses a man by name Jair.

2. The notice (iii. 11) concerning king Og, which looks more like a note of a subsequent writer in corroboration of the story told in the chapter. But this hypothesis falls to the ground when we consider that Moses did not write for his contemporaries merely, but also for late posterity.

The book contains, moreover, not a small number of plain, though indirect traces, indicative of its Mosaic origin. We thus find in it:

1. Numerous notices concerning nations with whom the Israelites had then come in contact, but who, after the Mosaic period, entirely disappeared from the pages of history: such are the accounts of the residences of the kings of Bashan (i. 4).

2. The appellation of 'mountain of the Amorites,' used throughout the whole book (i. 7, 19, 20, 44), while even in the book Joshua, soon after the conquest of the land, the name is already exchanged for 'mountains of Judah' (Josh. xi. 16, 21).

3. The observation (ii. 10), that the *Emim* had formerly dwelt in the plain of Moab: they were a great people, equal to the *Anakim*. This observation quite accords with Genesis xiv. 5.

4. A detailed account (ii. 11) concerning the Horim and their relations to the Edomites.

5. An account of the Zamzummim (ii. 20, 21), one of the earliest races of Canaan, though mentioned nowhere else.

6. A very circumstantial account of the Rephaïm (iii. 3, sq.), with whose concerns the author seems to have been well acquainted.

The standing-point also of the author of Deuteronomy is altogether in the Mosaic time, and had it been assumed and fictitious, there must necessarily have been moments when the spurious author would have been off his guard, and unmindful of the part he had to play. But no discrepancies of this kind can be traced; and this is in itself an evidence of the genuineness of the book.

A great number of other passages force us likewise to the conclusion, that the whole of Deuteronomy originated in the time of Moses. Such are the passages where

1. A comparison is drawn between Canaan and Egypt (xi. 10, sq.), with the latter of which the author seems thoroughly acquainted.

2. Detailed descriptions are given of the fertility and productions of Egypt (viii. 7, sq.).

3. Regulations are given relating to the con-

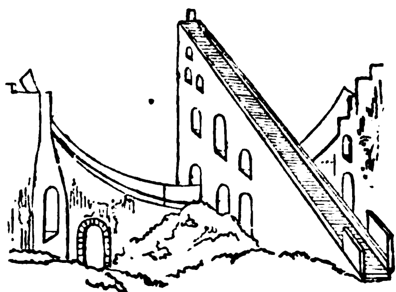
quest of Canaan (xii. 1, sq.; xx. 1, sq.), which cannot be understood otherwise than by assuming that they had been framed in the Mosaic time, since they could be of no use after that period.

Besides, whole pieces and chapters in Deuteronomy, such as xxxii., xxxiii., betray in form, language, and tenor, a very early period in Hebrew literature. Nor are the laws and regulations in Deuteronomy less decisive of the authenticity of the book. We are struck with the most remarkable phenomenon, that many laws from the previous books are here partly repeated and impressed with more energy, partly modified, and partly altogether abolished, according to the contingencies of the time, or as the new aspect of circumstances among the Jews rendered such steps necessary (comp. *e. g.* Deut. xv. 17 with Exod. xxi. 7; Deut. xii. with Lev. xvii). Such pretensions to raise, or even to oppose his own private opinions to the authority of divine law, are found in no author of the subsequent periods, since the whole of the sacred literature of the later times is, on the contrary, rather the echo than otherwise of the Pentateuch, and is altogether founded on it. Add to this the fact, that the law itself forbids most impressively to add to, or take anything from it, a prohibition which is repeated even in Deuteronomy (comp. iv. 2; xiii. 1); and it is but too evident, that, if the opinion of the critics be correct, that this book contains nothing more than a gradual development of the law—it clashes too often with its own principles, and pronounces thus its own sentence of condemnation.

The part of Deuteronomy (xxxiv.) respecting the death of Moses requires a particular explanation. That the whole of this section is to be regarded as a piece altogether apart from what precedes it, or as a supplement from another writer, has already been maintained by the older theologians (comp. *ex. gr.* Carpzov, *Introd. in libr. V. T.* i. p. 137); and this opinion is confirmed not only by the contents of the chapter, but also by the express declaration of the book itself on that event and its relations; for chapter xxxi. contains the conclusion of the work, where Moses describes himself as the author of the previous contents, as also of the Song (ch. xxxii.), and the blessings (ch. xxxiii.) belonging to it. All that follows is, consequently, not from Moses, the work being completed and concluded with chapter xxxiii. There is another circumstance which favours this opinion, namely, the close connection that exists between the last section of Deuteronomy and the beginning of Joshua (comp. Deut. xxxiv. 9 with Josh. i. 1, where also the term יְהִי, in the latter passage, must not be overlooked) plainly shows that ch. xxxiv. of Deuteronomy is intended to serve as a *point of transition* to the book of Joshua, and that it was written by the same author as the latter.

The correct view of this chapter, therefore, is to consider it as a *real supplement*, but by no means as an *interpolation* (such as some critics erroneously suppose to exist in the Pentateuch in general). To apply to it the term interpolation would be as wrong as to give that appellation *ex. gr.* to the 8th book of Cæsar's work, '*De bello Gallico*,' simply because it was equally written by an unknown author, for the very purpose of serving as a *supplement* to the previous books.

On the literature of Deuteronomy, compare the article PENTATEUCH.—H. A. C. H.



DEW. The various passages of Scripture in which dew is mentioned, as well as the statements of travellers, might, unless carefully considered, convey the impression that in Palestine the dews fall copiously at night during the height of summer, and supply in some degree the lack of rain. But we find that those who mention dews travelled in spring and autumn, while those who travelled in summer make no mention of them. In fact, scarcely any dew does fall during the summer months—from the middle of May to the middle of August; but as it continues to fall for some time after the rains of spring have ceased, and begins to fall before the rains of autumn commence, we may from this gather the sense in which the Scriptural references to dew are to be understood. Without the dews continuing to fall after the rains have ceased, and commencing before the rains return, the season of actual drought, and the parched appearance of the country, would be of much longer duration than they really are. The partial refreshment thus afforded to the ground at the end of a summer without dews or rains, is of great value in Western Asia, and would alone explain all the Oriental references to the effects of dew. This explanation is of further interest as indicating the times of the year to which the Scriptural notices of dew refer; for as it does not, in any perceptible degree, fall in summer, and as few would think of mentioning it in the season of rain, we may take all such notices to refer to the months of April, May, part of August, and September.

DEXIOLABOS (δεξιολάβος). This is the Greek word rendered 'spearmen' in the Auth. Vers. of Acts xxiii. 23. As it does not occur in the classical writers, and only this once in the Scriptures, it is uncertain what kind of soldiers is denoted by it. It strictly signifies one who covers or guards *the right side* of any one. Hence it has been conjectured that, in the above passage, it denotes officers who performed the same functions in the camp as lictors did in the city—being appointed to apprehend malefactors, and to guard criminals when led to execution, and called δεξιολάβοι, from taking the right hand of the prisoner, who was bound to the left hand of the guard. This explanation is, however, deduced entirely from the etymology of the word, and is open to the objection arising from the improbability that such a number of military lictors would be on duty with the forces of the tribune, as that 200 of them at a time could be ready to depart with one prisoner. It seems preferable, therefore, to understand the word as denoting the guard of the tribune. Nor is this contrary to the etymology, since guarding *the right side* may be taken figuratively to mean guarding the whole person. Nor is it strange that these choice troops should be employed on this duty, since the service was important and delicate. The guarding of prisoners to be tried before Cæsar was often, at Rome, committed to the prætorians. Our version 'spearmen' seems to have been derived from the Vulgate, 'lancearii.'

DIADEM. [CROWN.]

DIAL. The invention of the sun-dial belongs most probably to the Babylonians. Herodotus affirms, that the Greeks derived from them, the pole (supposed to mean the dial-plate), the gnomon,

and the division of day into twelve parts (ii. 109). Vitruvius also ascribes the most ancient form of the dial, called hemicycle, to Berosus the Chaldæan (ix. 9), though he probably means no more than that he *introduced* it into *Greece*. Certainly those *Greeks* to whom Vitruvius ascribes inventions or improvements in dialling, can all be proved to have had communication, more or less remote, with the Chaldæans. The first mention in Scripture of the 'hour,' is made by Daniel, at Babylon (ch. iii. 6). The Greeks used the dial before the Romans; and with regard to the Egyptians, 'there are no indications in the Sculptures to prove the epoch when the dial was first known in Egypt' (Wilkinson, *Anc. Egyptians*, vol. iii. p. 342). The circumstances connected with the dial of Ahaz (2 Kings xx. 11; Isa. xxxviii. 8), which is perhaps the earliest of which we have any clear mention, entirely concur with the derivation of gnomonics from the Babylonians. Ahaz had formed an alliance with Tiglath-pileser, king of Assyria (2 Kings xvi. 7, 9): he was a man of taste, and was ready to adopt foreign improvements, as appears from his admiration of the altar at Damascus, and his introduction of a copy of it into Jerusalem (2 Kings xvi. 10). 'The princes of Babylon sent unto him to inquire of the wonder that was done in the land' (2 Chron. xxxii. 31). Hence the dial also, which was called after his name, was probably an importation from Babylon. Different conjectures have been formed respecting the construction of this instrument. The difficulty is to understand what is meant by the מעלות אחז, 'the degrees or steps of Ahaz.' They *may* mean lines or figures on a dial-plate, or on a pavement, or the steps to the palace of Ahaz, or some steps or staircase he had erected elsewhere (vid. Carpzov, *Apparat. Historic. Crit.* Lips. 1748, p. 352, &c.). The Sept. in Isaiah reads ἀναβαθμοὺς τοῦ οἴκου τοῦ πατρός σου, 'the steps or stairs of the house of thy father.' Josephus also says, 'steps or degrees in his house' (*Antiq.* x. 1, 91). The Chaldee renders the passage in Kings, אבן שעיא, 'hour-stone,' and gives the same meaning to 'the *stairs*' (2 Kings ix. 13), and renders Isa. xxxviii. 8 בצורת אבן שעיא, by 'the shadow of the stone of hours.' Symmachus most certainly understood a sun-dial: στρέψω τὴν σκιὰν τῶν γραμμῶν ἣ κατέβη ἐν ὡρολογίῳ Ἄχαζ, 'I will cause to return the shadow of the degrees which (shadow) is gone down on the dial of Ahaz:' and so Jerome renders it Horologium. On the whole, the dial of Ahaz seems to have been a distinct contrivance, rather than any part of a house. It would also seem probable, from the circumstances, that it was of such a size, and so placed, that Hezekiah, now convalescent (Isa. xxxviii. 21, 22), but not perfectly recovered, could witness the miracle from his chamber or pavilion: 'Shall הצל, *the* or *this* shadow,' &c. May it not have been situate 'in the middle court' mentioned 2 Kings xx. 4? The cut given below (No. 247) presents a dial discovered in Hindostan, near Delhi, the ancient capital of the Mogul empire, whose construction would well suit the circumstances recorded of the dial of Ahaz. It seems to have answered the double purpose of an observatory and a dial—a rectangled hexangle, whose hypothenuse is a staircase, apparently parallel to the axis of the earth, and bisects a zone or coping of a wall, which wall connects the two terminating towers right and left. The coping itself is of a

247.

circular form, and accurately graduated to mark, by the shadow of the gnomon above, the sun's progress before and after noon; for when the sun is in the zenith, he shines directly on the staircase, and the shadow falls beyond the coping. A *flat surface* on *the top of the staircase*, and a gnomon, fitted the building for the purpose of an observatory. According to *the known laws of refraction*, a cloud or body of air of different density from the common atmosphere, interposed between the gnomon and the coping of the dial-plate below, would, if the cloud were denser than the atmosphere, cause the shadow to recede from the perpendicular height of the staircase, and of course to re-ascend the steps on the coping, by which it had before noon gone down; and if the cloud were rarer, a contrary effect would take place. (See Bishop Stock's *Translation of Isaiah*, Bath, 1803, p. 109.) Such a building might also be called 'a house.' It agrees also with Adam Clarke's supposition, that 'the *stairs*' were really '*a dial*,' and probably this very dial, on which, as being in the most public place, or rather on the *platform* on the top of which they set Jehu, while they proclaimed him king by sound of trumpet' (*Commentary on* 2 Kings ix. 13). Bishop Stock's speculation that the retrogression of the shadow *might* be effected by refraction, is supported by a natural phenomenon of the kind on record. On the 27th of March, 1703, P. Romauld, prior of the cloister of Metz, made the observation that, owing to such a refraction of the solar rays in the higher regions of the atmosphere, in connection with the appearance of a cloud, the shadow on his dial deviated an hour and a half (Rosenmüller). The phenomenon on the dial of Ahaz, however, was doubtless of a miraculous nature, even should such a *medium* of the miracle be admitted: nothing less than a divine communication could have enabled Isaiah to predict its occurrence at that time and place: besides, he gave the king his own choice whether the shadow should advance or retire ten degrees. There seems, however, to be no necessity for seeking *any* medium for this miracle, and certainly no necessity for supposing any actual interference with the revolution of the earth, or the position of the sun. In the more distinct and ample account of it in 2 Kings, it is simply said that the Lord, at the prayer of Isaiah, brought the *shadow* ten degrees backward. The words ותשב השמש

עשר מעלות in Isa. xxxviii. 8, 'and the sun went back ten degrees,' are wanting in three of Dr. Kennicott's MSS., and originally in two of De Rossi's; and the words 'the shadow of the degrees which is gone down in the sun-dial of Ahaz' are more correctly rendered on the margin degrees 'by or with the sun,' *i. e.* by means of the progress of the sun. The first ὁ ἥλιος in this verse is omitted in MS. Pachom. of the Sept. Even if the mention of the sun be retained, as in Ecclus. xlviii. 23, it is only fair to understand the words in their popular sense, the solar rays, or such a recession of the shadow as would have been occasioned by an actual recession of the sun. Adopting the present state of the text, it is observable that what is called the sun in one part of the verse is called the shadow in the other. It is certainly as philosophical to speak of the sun returning, as it is of his setting and rising. Thus the miracle, from all the accounts of it, might consist only of the retrogression of the shadow ten degrees, by a simple act of Almighty power, without any medium, or, at most, by that of refracting those rays only which fell upon the dial. It is not said that any time was lost to the inhabitants of the world at large: it was not even observed by the astronomers of Babylon, for the deputation came to inquire concerning the wonder that was done in the *land*. It was temporary, local, and confined to the observation of Hezekiah and his court, being designed chiefly for the satisfaction of that monarch. It is remarkable that no instrument for keeping time is mentioned in the Scripture before the dial of Ahaz, B.C. 700; nor does it appear that the Jews generally, even after this period, divided their day into hours. The dial of Ahaz was probably an object only of curious recreation, or served at most to regulate the occupations of the palace.—J. F. D.

DIAMOND. [YAHALOM; SHAMIR.]

DIBON (דִּיבוֹן; Sept. Δαιβών), or DIMON (דִּימוֹן, Isa. xv. 9), called also Dibon-Gad, from its having been rebuilt by the tribe of that name (Num. xxxii. 34), a city on the northern bank of the Arnon, at the point where the Israelites crossed that river on their journey to the Jordan, and where their first encampment was made after having passed it. In later times we find it, with other towns in this quarter, in the hands of the Moabites (Jer. xlviii. 22), The site has been recognised by Seetzen, Burckhardt, and Irby and Mangles, at a place which bears the name of Diban, in a low tract of the district called the Koura, about three miles north of the Arnon (Modjeb). The ruins are here extensive, but offer nothing of interest. There was another place called Dibon in the tribe of Judah (Neh. xi. 25), perhaps the same that is called Dimonah in Josh. xiii. 26.

DIDRACHMA (δίδραχμον, *a double drachma*), a silver coin equal to two Attic drachmæ, and also to the Jewish half-shekel (Joseph. *Antiq.* iii. 8. 2). It was therefore equivalent to about 1*s.* 4*d.* of our money. By the law every Jew was required to pay half a shekel to the Temple (Exod. xxx. 13, sq.), and this amount is represented by the didrachma in Matt. xvii. 24, where it is used for the 'tribute-money' demanded of Christ. The Septuagint everywhere renders the 'shekel' of the Old Testament by *didrachma*, but as the Attic drachma was equal to only half a shekel, it seems from this probable that the drachma of Alexandria was equal to two Attic drachmæ.

DIDYMUS (Δίδυμος, *a twin*), a surname of the Apostle Thomas, denoting that he was a twin, and if translated, he would be called 'Thomas the Twin' (John xi. 16). [THOMAS.]

DIKE (Δίκη), the heathen Goddess of Justice, described as the daughter of Zeus and Themis (Hesiod, *Op.* 256; *Theog.* 902). The punishment of murderers is particularly ascribed to her; and therefore, besides being the goddess of punishment in a general sense, she is often to be considered the same as Nemesis or Vengeance. The word occurs in Acts xxviii. 4, and is there rendered 'vengeance,' appellatively.

DIKLAH (דִּקְלָה; Sept. Δεκλά); a tribe descended from Joktan (Gen. x. 27). As the name in Aramaic and Arabic means a *palm-tree*, it has been judged necessary to seek the seat of the tribe in some territory rich in palm-trees. Bochart finds it in Southern Arabia, Michaelis in the region of the Tigris (from the analogy of the name Diglath); but where the ground of search is so uncertain, it is impossible to obtain any satisfactory result.

DINAH (דִּינָה; Sept. Δεῖνα), daughter of Jacob by Leah (Gen. xxx. 21), and therefore full sister of Simeon and Levi. While Jacob's camp was in the neighbourhood of Shechem, Dinah was seduced by Shechem, the son of Hamor, the Hivite chief or head-man of the town. Partly from dread of the consequences of his misconduct, and partly, it would seem, out of love for the damsel, he solicited a marriage with her, leaving the 'marriage price' (see MARRIAGE) to be fixed by her family. To this Dinah's brothers would only consent on the further condition that all the inhabitants of the place should be circumcised. Even this was yielded; and Simeon and Levi took a most barbarous advantage of the compliance by falling upon the town on the third day, when the people were disabled by the effects of the operation, and slew them all (Gen. xxxiv). For this act of truly Oriental vindictiveness no excuse can be offered, and Jacob himself repeatedly alludes to it with abhorrence and regret (Gen. xxxiv. 30; xlix. 5-7). To understand the act at all, however, it is necessary to remember, that any stain upon the honour of a sister, and especially of an only sister, is even at this day considered as an insupportable disgrace and inexpiable offence among all the nomade tribes of Western Asia. If the woman be single, her brothers more than her father, if she be married, her brothers more than her husband, are aggrieved, and are considered bound to avenge the wrong. Hence the active vengeance of Dinah's full brothers, and the comparative passiveness of her father in these transactions. Of Dinah's subsequent lot nothing is known.

DIONYSIUS THE AREOPAGITE, and PSEUDO-DIONYSIUS. The name of 'Dionysius the Areopagite' enlivens the scanty account of success which attended the visit of Paul to Athens (Acts xvii. 34). Nothing further is related of him in the New Testament; but ecclesiastical historians record some particulars concerning his career, both before and after his conversion. Suidas recounts that he was an Athenian by birth, and eminent for his literary attainments;

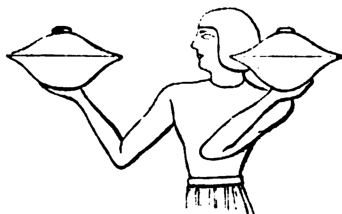
that he studied first at Athens and afterwards at Heliopolis in Egypt; and that, while in the latter city, he beheld that remarkable eclipse of the sun, as he terms it, which took place at the death of Christ, and exclaimed to his friend Apollophanes, ἢ τὸ θεῖον πάσχει, ἢ τῷ πασχόντι συμπάσχει, 'Either the Divinity suffers, or sympathises with some sufferer.' He further details, that after Dionysius returned to Athens, he was admitted into the Areopagus; and, having embraced Christianity about A.D. 50, was constituted Bishop of Athens by the Apostle Paul himself. Syncellus and Nicephorus both record the last particular. Aristides, an Athenian philosopher, asserts that he suffered martyrdom—a fact generally admitted by historians; but the precise period of his death, whether under Trajan or Adrian, or, which is most likely, under Domitian, they do not determine. Whatever credit may be given to these traditions, the name of Dionysius is certainly interesting in a literary point of view, owing to an attempt made by some writer, in after times, to personate the Areopagite; and who contrived to pass his productions on the Christian world as of the apostolic age, and thereby greatly influenced the spirit both of the Eastern and Western Churches. Daillé places this Pseudo-Dionysius A.D. 420 (vid. *Dallæus de Scriptis Dionysii Areopagitæ*, Genevæ, 1666); Pearson, in the latter times of Eusebius Cæsariensis (vid. *Vindic.* par. i. c. 10, in fine). Others have conjectured that these productions were written about A.D. 360, but not compiled till the fifth or nearly the sixth century. They consist of a book called *The Celestial Hierarchy;* another, *Of the Ecclesiastical Hierarchy; A Treatise on the Divine Names;* another, *Of Mystical Divinity;* and *Ten Epistles:* the first four addressed to the monk Caius, the fifth to Dositheus, the sixth to Sosipater, the seventh to Bishop Polycarp—in which the author says he observed the eclipse at Heliopolis; the eighth to the Monk Demophilus—in which the writer blames him for harshness to a priest and a layman, and relates, as if in contrast to his behaviour, that when a zealous pastor, named Carpus, grew weary in his endeavours to convert an obdurate sinner, Christ, in a vision, remonstrated with him, telling him that he was ready to die a second time for sinners; the ninth epistle is addressed to Bishop Titus, and the tenth to St. John. In the book *On the Celestial Hierarchy*, he delivers many subtleties respecting the angels. In the book on the *Ecclesiastical Hierarchy*, he explains the ceremonies of the mass, consecration of the holy chrism, the ordination of a bishop, priest, and deacon, the manner of blessing a monk, and the burial of the dead. In the book *Of Mystical Divinity*, he mingles the notions of the Contemplatives with ideas and terms borrowed from the heathen philosophers. Indeed, so deeply imbued are these productions with philosophical opinions, that Suidas, who takes the author of them to be the genuine Areopagite, conjectures that the philosophers referred to had borrowed from him their notions, and vended them as their own. It is evident that had these writings been genuine, they would have been invaluable, on account of the attestations they would have afforded to the practices and customs of the Christian Church at its very commencement. Still there have been some persons who have contended that they are the real works of the Areopagite. Among these are Claude David, a Maurist monk, in 1702; Bernard of Sept Fonds, under the name of Adrian, in 1708; and F. Honoratus, of St. Mary, a Carmelite friar, in 1720. The first uncontroverted occasion on which these supposititious writings are referred to, is in the conference between the Severians (a sect of Eutychians) and the Catholics, held in the emperor Justinian's palace, A.D. 532, in which they are quoted by the heretical party. Maximus, and other writers in the following ages, refer to them frequently. Different opinions have been held as to the real author of these productions. They were ascribed, at an early period, to Apollinaris, Bishop of Laodicea in the fourth century—an opinion to which the learned Cave inclines, though he thinks that Apollinaris, the son, may have been the author. He remarks that the peculiar acquirements and turn of mind of Apollinaris the father, as described both by Socrates and Sozomen, would have well qualified him to have written the *Areopagitica*. There have not been wanting instances in which supposititious works were fathered upon great names by disciples of the Apollinarian school (Leontius, *Lib. de Sect.* act. viii. p. 527).

The resemblance between the *Areopagitica* and the writings of Proclus and Plotinus is so obvious as to afford great probability that the Pseudo-Dionysius did not write much earlier than the fifth century (Cave's *Hist. Literar.* Coloniæ, 1720, p. 142, 143; Lardner's works, vol. vii. p. 371, ed. 1788; Fabric. *Bib. Bibliog*).—J. F. D.

DIOTREPHES (Διοτρεφής, *Jove-nourished*), a person who seems to have been one of the false teachers condemned by St. John in his third epistle. He appears to have been a presbyter or deacon—probably the former. He refused to receive the letter sent by John, thereby declining to submit to his directions or acknowledge his authority (3 John ix).

DISCERNING OF SPIRITS. This is now usually understood to mean a high faculty, enjoyed by certain persons in the apostolic age, of diving into the heart and discerning the secret dispositions of men. It appears to have been one of the gifts peculiar to that age, and was especially necessary at a time when the standards of doctrine were not well established or generally understood, and when many deceivers were abroad (2 John ii. 7). This faculty seems to have been exercised chiefly upon those who came forward as teachers of others, and whose real designs it was important that the infant churches should know.

DISCIPLE (μαθητής), a scholar or follower of any teacher, in the general sense. It is hence applied in the gospels not only to the followers of Christ, but to those of John the Baptist (Matt. ix. 14, &c.), and of the Pharisees (Matt. xxii. 16). Although used of the followers of Christ generally, it is applied in a special manner to the twelve apostles (Matt. x. 1; xi. 1; xx. 17; Luke ix. 1). After the death of Christ the word took the wider sense of a believer, or Christian; *i. e.* a follower of Jesus Christ.

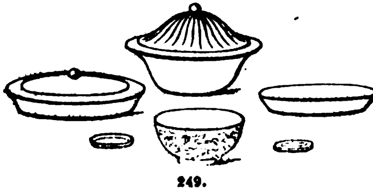


DISEASES OF THE JEWS. The most prevalent diseases of the East are cutaneous diseases, malignant fevers, dysentery, and ophthalmia. Of the first of these the most remarkable are leprosy and elephantiasis [LEPROSY]. To

the same class also belongs the singular disease called the mal d'Aleppo, which is confined to Aleppo, Bagdad, Aintab, and the villages on the Segour and Kowick. It consists in an eruption of one or more small red tubercles, which give no uneasiness at first, but, after a few weeks, become prurient, discharge a little moisture, and sometimes ulcerate. Its duration is from a few months to a year. It does not affect the general health at all, and is only dreaded on account of the scars it leaves. Foreigners who have visited Aleppo have sometimes been affected by it several years after their return to their own country. It is a remarkable fact that dogs and cats are likewise attacked by it (Russell's *Nat. Hist. of Aleppo*, ii. 299). The Egyptians are subject to an eruption of red spots and pimples, which cause a troublesome smarting. The eruption returns every year towards the end of June or beginning of July, and is on that account attributed to the rising of the Nile (Volney, i. 231). Malignant fevers are very frequent, and of this class is the great scourge of the East, the plague, which surpasses all others in virulence and contagiousness [PLAGUE]. The Egyptian ophthalmia is prevalent throughout Egypt and Syria, and is the cause of blindness being so frequent in those countries [BLINDNESS]. Of inflammatory diseases in general, Dr. Russell (*l. c.*) says that at Aleppo he has not found them more frequent, nor more rapid in their course, than in Great Britain. Epilepsy and diseases of the mind are commonly met with. Melancholy monomaniacs are regarded as sacred persons in Egypt, and are held in the highest veneration by all Mahometans (Prosper Alpinus, *De Med. Ægypt.* p. 58).

Diseases are not unfrequently alluded to in the Old Testament; but, as no description is given of them, except in one or two instances, it is for the most part impossible even to hazard a conjecture concerning their nature. The issue mentioned in Lev. xv. 5 cannot refer to gonorrhœa virulenta, as has been supposed by Michaelis and Hebenstreit (Winer, s. v. *Krankheiten*); for the person who exposed himself to infection in the various ways mentioned was only unclean until the evening, which is far too short a time to allow of its being ascertained whether he had escaped contagion or not. Either, then, the law of purification had no reference whatever to the contagiousness of the disease (which is hardly admissible), or the disease alluded to was really not contagious. Joram's disease is probably referable to chronic dysentery, which sometimes occasions an exudation of fibrine from the inner coats of the intestines. The fluid fibrine thus exuded coagulates into a continuous tubular membrane, of the same shape as the intestine itself, and as such is expelled. This form of the disease has been noticed by Dr. Good under the name of diarrhœa tubularis (*Study of Med.* i. 287). A precisely similar formation of false membranes, as they are termed, takes place in the windpipe in severe cases of croup.

Hezekiah suffered, according to our version, from a *boil*. The term here used, שְׁחִין, means literally *inflammation*; but we have no means of identifying it with what we call boil. The same may be said of the plague of boils and blains [BLAINS], and of the names of diseases mentioned in the 28th chapter of Deuteronomy, such as pestilence, consumption, fever, botch of Egypt, itch, scab. The case of Job, in which the term translated *boil* also occurs, demands a separate notice [JOB]. Nebuchadnezzar's disease was a species of melancholy monomania, called by authors zoanthropia, or more commonly lycanthropia, because the transformation into a wolf was the most ordinary illusion. Esquirol considers it to have originated in the ancient custom of sacrificing animals. But, whatever effect this practice might have had at the time, the cases recorded are independent of any such influence; and it really does not seem necessary to trace this particular hallucination to a remote historical cause, when we remember that the imaginary transformations into inanimate objects, such as glass, butter, &c., which are of every-day occurrence, are equally irreconcilable with the natural instincts of the mind. The same author relates that a nobleman of the court of Louis XIV. was in the habit of frequently putting his head out of a window, in order to satisfy the urgent desire he had to bark. Calmet informs us that the nuns of a German convent were transformed into cats, and went mewing over the whole house at a fixed hour of the day (Esquirol, *Maladies Mentales*, i. 522). Antiochus and Herod died, like Sylla, from phthiriasis, a disease which was well known to the ancients. Plutarch, in his *Life of Sylla*, mentions several names of persons who had died from it, amongst whom are Pherecydes the philosopher, Alcman the poet, and Mutius the lawyer. M. Alibert was consulted by a celebrated French academician, who complained that his enemies even pursued him into the academy, and almost carried off his pen (*Dermatoses*, i. 585). Nothing is known respecting the immediate causes of this malady; but there is no doubt that it depends on the general state of the constitution, and must not be attributed to uncleanliness. Alibert mentions the case of a person who, as soon as these animals had been destroyed, fell into a typhoid state, and shortly after died. The question of alleged demoniacal possession, so often mentioned in the New Testament, has been considered under another head [DEMONIACS], and need not be re-opened in this place.—W. A. N.



DISH. Various kinds of dishes are mentioned in Scripture; but it is impossible to form any other idea of their particular forms than may be suggested by those of ancient Egypt and of the modern East, which have much resemblance to each other. The sites of such ancient towns as were built of sun-dried bricks are usually covered with broken potsherds, some of them large enough to indicate the form of the entire vessel.

268.

These are remarkably similar to those in modern use, and are for the most part made of a rather

coarse earthenware, covered with a compact and strong glaze, with bright colours, mostly green, blue, or yellow. Dishes and other vessels of copper, coarsely but thickly tinned, are now much used in the East; but how far this may have been anciently the case we have not the means of knowing. The first cut (No. 248) represents a slave bringing dishes to table; the dishes have covers, and the manner in which they are carried on the reverted hand is the mode still

249.

used by Eastern servants. The specimens in the other cut (No. 249) are modern Oriental, and speak for themselves.

DISPERSION OF NATIONS. [NATIONS, DISPERSION OF.]

DIVINATION is a general term descriptive of the various illusory arts anciently practised for the discovery of things secret or future. The human mind has always shown a strong curiosity to ascertain the course of fortune, and the issue of present or contemplated schemes; and in those countries and ages where ignorance of physical laws has combined with superstition to debase it, it has sought to gratify this innate disposition to pry into futurity, by looking for presages in things between which and the object of its anxiety no connection existed but in the diviner's imagination. Scarcely a single department of nature but was appealed to, as furnishing, on certain conditions, good or bad omens of human destiny; and the aspect of things, which, perhaps by the most casual coincidence, marked some event or crisis in the life of one or two individuals, came to be regarded, by blind credulity, as the fixed and invariable precursor of a similar result in the affairs of mankind in general. By such childish and irrational notions was the conduct of the heathen guided in the most important, no less than in the most ordinary occurrences of life; and hence arose the profession of augurs, soothsayers, *et hoc genus omne* of impostors, who, ingrafting vulgar traditions on a small stock of natural knowledge, established their claims to the possession of an occult science, the importance and influence of which they dexterously increased by associating it with all that was pompous and imposing in the ceremonies of their religion.

This science, if that can be called science which was the product of ignorance and fraud united, was divided into various branches, each of which had its separate professors. In a general view, divination may be considered as either natural or artificial: the first being founded on the notion that the soul possesses, from its spiritual nature, some prescience of futurity, which it exemplifies particularly in dreams, and at the approach of death: the second, resting on a peculiar interpretation of the course of nature, as well as on such arbitrary observations and experiments as superstition introduced. The different systems and methods that were anciently in vogue are almost incredible; as, for instance, Aëromancy, divining by the air; Arithmomancy, by means of numbers; Capnomancy, by the smoke of sacrifices; Chiromancy, by the lines on the palms of the hands; Hydromancy, by water; Pyromancy, by fire, &c. But without attempting an enumeration and explanation of all the arts of divination that were anciently practised, and which the reader, curious in such inquiries, will find detailed at length by Cicero (*De Divinatione*), and Cardan (*De Sapientiâ*), let us confine ourselves to the mention of those which occur in sacred history. 1. חכמים (Exod. vii. 11; Isa. xliv. 25; Jer. l. 35; Dan. ii. 12, &c.), 'wise men,' and חרטמים (derived by Parkhurst from חרט, pen, and תם, to accomplish), 'drawers of astrological figures;' both of these terms were applied generally to magicians, or men who were skilled in natural science. 2. ידעוני, 'wizzards' or wise men, and מכשף, 'a witch,' from an Arabic verb signifying 'to reveal,' both practising divination by the same arts, *i. e.* pretending to reveal secrets, to discover things lost, find hidden treasure, and interpret dreams. 3. קוסם קסמים *kosem kesamin*, one who foretold what was to happen by the flight of birds, or the use of lots [LOTS]. 4. מעונן *meonen*, one who, though rendered by our translators 'an observer of times,' foretold political or physical changes by the motion of the clouds (from ענן, clouds), along with whom Isaiah conjoins the חברי שמים, &c., who made the same predictions from eclipses, and the conjunction of the stars, (xlvii. 13). 5. מנחש, in our version, 'an enchanter,' was, coming as it does from נחש, a serpent, probably one who practised Ophiomancy, or the art of charming serpents, which was, and still is, a favourite trick of jugglery in the East. 6. חובר חבר, 'a charmer,' one who, as the original word implies, placed words and things in a certain arrangement, or muttered them, as a kind of spell. 7. שואל אוב, 'a consulter with familiar spirits,' rendered by the Septuagint ἐγγαστρίμυθος, 'a ventriloquist,' was a wizzard who asked counsel of his familiar, and gave the responses received from him to others—the name אוב being applied in reference to the spirit or demon that animated the person, and inflated the belly, so that it protuberated like the side of a *bottle*. The אוב of the Hebrews was thus precisely the same as the Pytho of the Greeks, and was used not only to designate the performer, but the πνεῦμα Πύθωνος, which possessed him (see Levit. xx. 27, בהם אוב *in eis Pytho;* 1 Sam. xxviii. 8, באוב *per Pythonem;* also Acts xvi. 16). 8. דורש המתים, 'a necromancer,' one who, by frequenting tombs, by inspecting corpses, or more frequently, by help of the אוב, like the witch of Endor, pretended to evoke the dead, and bring secrets from the invisible world (Gen. xli. 8; Exod. vii. 11; Lev. xix. 26; Deut. xviii. 10-12). 9. Belomancy, as it is called, a form of divination by means of arrows (Ezek. xxi. 21; see also 2 Kings xiii. 14-19), a notable example of which occurs in the history of Nebuchadnezzar, who, being undecided whether to march first against Jerusalem or Rabbah, allowed neither his policy nor resentment to decide the course of his expedition, but was determined wholly by the result of superstitious rites. The way of divining

by arrows was, having first made them bright 'in order the better to follow them with the eye,' to shoot them, and to prosecute the march according to the direction in which the greatest number of arrows fell; or, having 'mixed together' some arrows with the names of the devoted cities marked on them, to attack that first which was first drawn out; or to put in a bag three arrows, as is the practice of the Arabs (see D'Herbelot s. v. *Acdah*), one of which is inscribed with the words 'Command me, Lord,' the second with 'Forbid me, Lord,' while the third is left blank; so that if the first is taken out, he was to go; if the second, he was to desist; if the third is drawn, no decision being given, the experiment is to be repeated. 10. Rhabdomancy, or divination by rods (Hos. iv. 12). This has been confounded with the preceding, not only by Jerome, Grotius, and others, but even by the Septuagint, which renders the חצים of Ezekiel by ῥάβδος, 'a rod.' But the instruments of divination which Hosea alludes to are entirely different from those described by Ezekiel, חצים, arrows being used by the latter, whereas the former speaks of מקל, 'staff.' The form of divination by the staff was, after placing it upright, to let it fall, and decide by the direction in which it fell, or, according to others, by measuring the staff with the finger, saying at each span, 'I will go,' or 'I will not go,' and determining the course, according as it happened to be the one or the other at the last measurement. Both of these, as Jerome informs us, were frequently practised by the Assyrians and Babylonians. Herodotus (vi.) describes the Alani women as gathering and searching anxiously for very smooth and straight wands to be used in this superstitious manner. 11. Another way of divining was by 'images,' תרפים (Ezek. xxi. 21), which are generally considered talismans, but which the Persian and other versions render astrological instruments or tables. 12. Another form of divination was, 'by looking into the liver' of a newly killed sacrifice, and by observing its state and colour according to certain rules, to draw a favourable or unfavourable omen. The last form which it is of consequence to notice as alluded to in Scripture was by 'the cup.' But in what manner it was practised; whether it was by observing the appearance of some magical ingredients that were infused into the vessel; or whether allusion is made to a famous cup which the immemorial tradition of the East says has been in the possession of some great personages, and represents the whole world; or, finally, whether the original word נחש, 'divineth,' should be rendered by 'searching' or 'inquiring earnestly,' as many learned writers, anxious to save the character of Joseph from the imputation of sorcery (Gen. xliv. 5), have laboured to prove, it is absolutely impossible, and we shall not attempt to determine.

Egypt, the cradle of arts and sciences, if she did not give it birth, seems to have encouraged the practice of divination at an early age, and whether any of its forms had become objects of popular superstition, or were resorted to for the purposes of gain in the days of Joseph, it is well known that at the time of the Hebrew Exodus there were magicians in that country whose knowledge of the arcana of nature, and whose dexterity in the practice of their art enabled them, to a certain extent, to equal the miracles of Moses. By what extraordinary powers they achieved these feats, how they changed their rods into serpents, the river water into blood, and introduced frogs in unprecedented numbers, is an inquiry that has occasioned great perplexity to many men of learning and piety. Some have imagined that the only way of accounting for the phenomena is to ascribe them to jugglery and legerdemain; the serpents, the frogs, and the other materials requisite having been secretly provided and dexterously produced at the moment their performances were to be exhibited. But the difficulties attending this method of solution are so obvious and manifold, that every reflecting mind must allow it to be far more rational to suppose that these conjurors were aided by familiar spirits or infernal agents, with the Divine permission, in the performance of their wonderful feats. 'Earth, air, and ocean,' says a sensible writer, 'may contain many things of which our philosophy has never dreamt. If this consideration tend to humble the pride of learning, it may remind the Christian that secret things belong not to him, but to a higher power.'

It is reasonable to suppose that as Moses never had been in any other civilized country, all the allusions contained in his writings to the various forms of divination were those which were practised in Egypt; and, indeed, so strong a taste had his countrymen imbibed there for this species of superstition, that throughout the whole course of their history it seems to have infected the national character and habits. The diviners, who abounded both amongst the aborigines of Canaan and their Philistine neighbours (Isa. ii. 6), proved a great snare to the Israelites after their settlement in the promised land; and yet, notwithstanding the stern prohibitions of the law, no vigorous efforts were made to put an end to the crime by extirpating the practitioners of the unhallowed art, until the days of Saul, who himself, however, violated the statute on the night previous to his disastrous fall (1 Sam. xxviii.). But it was Chaldæa to which the distinction belongs of being the mother-country of diviners. Such a degree of power and influence had they attained in that country [CHALDÆA], that they formed the highest caste and enjoyed a place at court; nay, so indispensable were they in Chaldæan society that no step could be taken, not a relation could be formed, a house built, a journey undertaken, a campaign begun, until the diviners had ascertained the lucky day and promised a happy issue. A great influx of these impostors had, at various times, poured from Chaldæa and Arabia into the land of Israel to pursue their gainful occupation, more especially during the reign of the later kings (Isa. viii. 19), and we find Manasseh not only their liberal patron, but zealous to appear as one of their most expert accomplices (2 Kings xxi. 6; 2 Chron. xxxiii. 6). The long captivities in Babylon spread more widely than ever among the Jews a devoted attachment to this superstition; for after their return to their own country, having entirely renounced idolatry, and, at the same time, no longer enjoying the gift of prophecy or access to the sacred oracles, they gradually abandoned themselves, as Lightfoot has satisfactorily shown, before the advent of Christ, to all the

prevailing forms of divination (*Comment. on Matt.*).

Against every species and degree of this superstition the sternest denunciations of the Mosaic law were directed (Exod. xxii. 18; Lev. xix. 26, 31; xx. 27; Deut. xviii. 10, 11), as fostering a love for unlawful knowledge and withdrawing the mind from God only wise; while, at the same time, repeated and distinct promises were given that in place of diviners and all who used enchantments God would send them prophets, messengers of truth, who would declare the divine will, reveal futurity, and afford them all the useful knowledge which was vainly sought for from those pretended oracles of wisdom. Much discussion, however, has been carried on by learned men to determine the question whether the ancient tribe of diviners merely pretended to the powers they exercised, or were actually assisted by demoniacal agency. The latter opinion is embraced by almost all the fathers of the primitive church, who appeal, in support of their views, to the plain language of Scripture; to the achievements of Jannes and Jambres in the days of Moses; to the divine law, which cannot be chargeable with the folly of prohibiting crimes which never existed; and to the strong presumption that pretensions to interpret dreams, to evoke the dead, &c., would never have met with credit during so many ages had there not been some known and authenticated instances of success. On the other hand, it has been, with great ability and erudition, maintained that the whole arts of divination were a system of imposture, and that Scripture itself frequently ridicules those who practised them as utterly helpless and incapable of accomplishing anything beyond the ordinary powers of nature (Isa. xlvii. 11-13; xliv. 25; Jer. xiv. 14; Jonah ii. 8: see Faber's *Origin of Pagan Idolatry;* Farmer's *Dissert. on Miracles;* Lightfoot's *Works;* Potter's *Antiq.* i. 354; Stolberg's *Hist. of Relig.* iii.; Selden, *De diis Syris;* Godwin's *Moses and Aaron*, p. 216; Rosenmüller's *Geog.* vii. 101, 102; Gesenius's *Comment. on Isaiah*, app. xi.; Glanville's *Sadducismus Triumphatus;* Richardson's *Dissertation on the Manners of Eastern Nations*).—R. J.

DIVORCE. [MARRIAGE.]

DODANIM (דֹּדָנִים; Sept. Ῥόδιοι), the descendants of the fourth son of Javan (Gen. x. 4). Bochart and other commentators on the ethnographical sketch in Gen. x. suppose that the first settlements of the Dodanim were in the south-west part of Asia Minor; where the country called by the Greeks Doris, with the neighbouring isle of Rhodes, are conceived to exhibit traces of this origin, the Hebrew letters ד (*d*) and ר (*r*) being, from their similarity, often transposed. In fact, some copies have the ר, and read Rodanim (as in the margin of the Auth. Vers.), and the Septuagint gives the same reading both in Gen. x. 4, and 1 Chron. i. 7, where it has Ῥόδιοι. It is further supposed that settlers of this family may be traced in Thessaly and Epirus, where the name is traced in the city of Dodona and in the country of Doris. But there seems much of uncertainty in all these ingenious speculations.

DOEG (דֹּאֵג; Sept. Δωήκ), an Edomite, and chief overseer of King Saul's flocks, which is an important trust in Oriental courts. At Nob he was witness of the assistance which the high-priest Ahimelech seemed to afford to the fugitive David, by furnishing him with the sword of Goliath, and by supplying him with bread even from the sacred table (1 Sam. xxi. 7). Of this he failed not to inform the king, who, regardless of the explanation offered by Ahimelech, and finding that the chiefs censured him, and hesitated to lay their hands upon a person so sacred, commanded Doeg to slay him and his priests—a task which was executed with equal readiness and cruelty by the Edomite (1 Sam. xxii. 18, sqq.).

DOG (כֶּלֶב *keleb;* Arabic, *kelb*) occurs in many places of Scripture (Exod. xxii. 31; 1 Sam. xvii. 43; xxiv. 14; 2 Sam. ix. 8; 2 Kings viii. 13; Ps. lix. 6, 14, 15; Prov. xxvi. 11, 17, &c.). An animal so well known, whose numerous varieties come under daily observation, requires no detailed description. There is, however, in Asia still extant one, perhaps more than one, species, that never have been the companions of man, and there are races of uncertain origin, that may have been formerly domesticated, but which are now feral, and as fierce as wolves; while, from the particular opinions of Oriental nations, there are others, exceedingly numerous, neither wild nor domesticated, but existing in all the cities and towns of the Levant, without owners; feeding on carrion and offals, and still having the true instinct of protecting property, guarding the inhabitants of the district or quarter where they are tolerated; and so far cherished, that water and some food are not unusually placed within their reach.

280.

The true wild species of Upper and Eastern Asia is a low, sharp-nosed, reddish cur-dog, not unlike a fox, but with less tail. In Persia and Turkey there exists a larger dog resembling a wolf, exceedingly savage. Both are gregarious, hunt in packs, but are occasionally seen alone. They are readily distinguished from a wolf by their shorter unfurnished tails. In the time of the sojourning of Israel in Egypt, there were already in existence domestic dogs of the principal races now extant—the cur-dog or fox-dog, the hound, the greyhound, and even a kind of low-legged turnspit. All the above, both wild and reclaimed, there is every reason to believe, were known to the Hebrews, and, notwithstanding the presumed Mosaic prohibition, anterior habits, and, in some measure, the necessity of their condition, must have caused cattle-dogs to be retained as property (Deut. xxiii. 18); for we find one of that race, or a house-dog, actually attending on travellers (Tobit v. 16; xi. 4). It is to be presumed that practically the street-dogs alone were considered as absolutely unclean; though all, as

is the case among Mohammedans, were excluded from familiarity.

Beside the cattle-dog, the Egyptian hound, and one or two varieties of greyhound were most likely used for hunting—a pastime, however, which the Hebrews mostly pursued on foot.

The street-dog, without master, apparently derived from the rufous-cur, and in Egypt partaking of the mongrel greyhound, often more or less bare, with a mangy unctuous skin, frequently with several teeth wanting, was, as it now is, considered a defiling animal. It is to animals of this class, which no doubt followed the camp of Israel, and hung on its skirts, that allusion is more particularly made in Exod. xxii. 31; for the same custom exists at this day, and the race of street-dogs still retains their ancient habits. A portion of the Cairo packs annually become *hadgis*, and go and return with the caravan to Mecca, while others come from Damascus, acting in the same manner; and it is known that the pilgrims from the banks of the Indus are similarly attended to Kerbela: indeed, every caravan is so, more or less, by these poor animals. But with regard to the dogs that devoured Jezebel, and licked up Ahab's blood (1 Kings xxi. 23), they may have been of the wild races, a species of which is reported to have particularly infested the banks of the Kishon and the district of Jezreel.

The cities of the East are still greatly disturbed in the night by the bowlings of street-dogs, who, it seems, were similarly noisy in ancient times, the fact being noticed in Ps. lix. 6, 14; and dumb or silent dogs are not unfrequently seen, such as Isaiah alludes to (lvi. 10).

In Egypt, anterior to the Christian era, domestic dogs were venerated; they continued to be cherished till the Arabian conquest, when they, like the unowned street-dogs, fell under the imprecation of Mohammed, who with reluctance, though with good policy, modified his denunciations and sentence of destruction in favour of hunting-dogs, and even permitted game killed by them to be eaten under certain conditions. For interesting details on the dogs of the East and their congeners, the wolf, Lyciscus, Thos, and Jackal, reference may be made to Sir William Jardine's *Naturalist's Library*, vols. ix. and x., which contain the Canidæ. We figure a specimen of Feral, or wild dog, copied from a large Persian picture in the library of the Hon. East India Company. In this picture the Shah and his sons are seen killing game, and among the rest the dogs in question.—C. H. S.

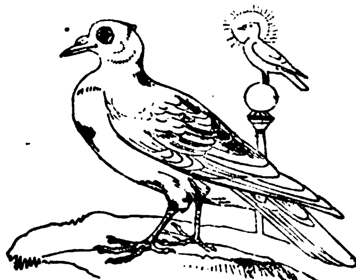
DOKHAN, or DOCHAN (דֹּחַן), occurs in Ezek. iv. 9, where the Prophet is directed to take unto him wheat, and barley, and beans, and lentiles, and millet (*dokhan*) and fitches, and to put them into one vessel, and to make bread thereof for himself. All the grains enumerated in this verse continue to form the chief articles of diet in the East in the present day, as they appear to have done in ancient times. Wheat, barley, and beans are well known in Europe. Lentiles are less so, except in the south, and fitches will be noticed under the head of KUSMETH. The Hebrew word *dokhun* is identical with the Arabic دخن *dukhun*, which is applied in the present day by the Arabs to a small grain cultivated from the middle of Europe to the most southern part of India. This is the common millet, *Panicum miliaceum* of botanists, which is sometimes cultivated in England on account of the seeds being used for feeding birds and poultry. But the

251. [Millet—Panicum miliaceum.]

grain is usually imported into this country from the Mediterranean. In India it is cultivated in the cold weather, that is, in the same season with wheat and barley, and is an article of diet with the inhabitants. The culms are erect, from two to four feet high, the whole plant being very hairy; leaves large, with long sheaths, which involve most part of the culm; panicle, oblong, much branched, bending down with the weight of the grain; glumes cuspidate; corol, three-valved, adventitious valve emarginate; seed, oval and smooth, coloured longitudinally with five streaks. The name, miliaceum, is said to have been applied to this plant from its producing such a quantity of grain, as if one stalk bore a thousand seeds. Having mentioned the extreme points where this grain is cultivated, it is hardly necessary to state that it is produced in the intermediate countries. Tournefort says that in the Isle of Samos the inhabitants, in preparing their bread, knead together one half wheat and the other half barley and millet mixed together. It is also an article of diet both in Persia and India.

Forskål applies the name دخن *dukhun* to another corn-grass, which he first found in a garden at Rosetta, cultivated on account of its seed being given as food to birds. Afterwards he found it commonly cultivated in Arabia. It grows to a great size, being about five cubits in height, with seeds of the size of rice. To it he has given the name of *Holcus dochna*, but the plant is as yet unknown to botanists. There is, however, no doubt that the true *dukhun* of Arab

authors is the above described *panicum miliaceum*. This is so universally cultivated in the East as one of their smaller corn-grasses, that it is most likely to be the kind alluded to in the passage of Ezekiel.—J. F. R.



DOORS. [GATES.]

DOPHKAH, an encampment of the Israelites in the Wilderness [WANDERING, THE].

DOR (דֹּר or דּוֹאר; Sept. Δῶρα, Δῶρ), a town on the border of the Mediterranean, which Jerome places nine Roman miles north of Cæsarea. It was one of the royal towns of the Canaanites (Josh. xi. 2; xii. 23), and was included in the heritage of Manasseh (Josh. xvii. 11). The place, or rather the region to which it gave name, occurs again in 1 Kings iv. 11; and in the Maccabees (1 Macc. xv. 11) and Josephus (*Antiq.* xvi. 4, 4) appears under the name of Dora. A place still exists, at the distance indicated by Jerome, under the name of Tortura, which Buckingham describes as a small village with about forty or fifty houses and five hundred inhabitants. It has a small port, formed by a narrow range of rocky islets, at a short distance from the sandy beach.

DOTHAN (דֹּתַיִן and דֹּתָן; Sept. Δωθαείμ and Δωθαΐμ) or DOTHAIM, the place where Joseph found his brethren, who had wandered thither with their flocks from Shechem, and where he was treacherously sold by them to the Ishmaelites (Gen. xxxvii. 17). It was here also that the Syrians were smitten with blindness at the word of Elisha (2 Kings vi. 13). Dothan is placed by Eusebius and Jerome twelve Roman miles north of Sebaste or Samaria, and it was obviously on the caravan track from Syria to Egypt. The well into which Joseph was cast by his brothers, and consequently the site of Dothan, has, however, been placed by tradition in a very distant quarter, namely, about three miles south-east from Safed, where there is a khan called Khan Jubb Yusuf, the Khan of Jacob's Pit, because the well connected with it has long passed among Christians and Moslems for the well in question. The Bethulia of Judith has long been identified with Safed, and as Dothan (Dothaim) is mentioned as being in the neighbourhood, it became necessary that Dothan should be found in this quarter. But it is clear, from the notices in Judith (iv. 5; vii. 1, 2), that Bethulia was south, and not north, of the plain of Esdraelon; and consequently we are at liberty to seek the site of Dothan also at some point more conformable to the intimation of Eusebius and to the probabilities of the story than that of the alleged Joseph's well.

DOVE (יוֹנָה *yoneh; οἰνὰς* and *περιστερά* in Greek). There are probably several species of doves or pigeons included in the Hebrew name *yoneh*. It may contain all those that inhabit Palestine, exclusive of the turtle-doves properly so called. Thus generalized, the dove is, figuratively, next to man, the most exalted of animals, symbolizing the Holy Spirit, the meekness, purity, and splendour of righteousness. Next, it is by some considered (though in an obscure passage) as an early national standard (Psa. lxviii. 13), being likewise held in pagan Syria and Phœnicia to be an ensign and a divinity, resplendent with silver and gold; and so venerated as to be regarded as holy, and forbidden as an article of food. By the Hebrew law, however, doves and turtle-doves were the only birds that could be offered in sacrifice, and they were usually selected for that purpose by the less wealthy (Gen. xv. 9; Lev. v. 7; xii. 6; Luke ii. 24); and to supply the demand for them, dealers in these birds sat about the precincts of the Temple (Matt. xxi. 12, &c.). The dove is the harbinger of reconciliation with God (Gen. viii. 8, 10, &c.), and, though somewhat questionable, the חריונים *chirionim*, 'dung of doves' (2 Kings vi. 25), seems to be indicated as food in the last degree of human suffering by famine. That this interpretation is not forced, appears from similar passages in Josephus (*De Bell. Jud.* v. 13, 7). See Winer, *Realwörterbuch*, s. v. *Taube*, where other instances are adduced, and among them the famine in England, during the reign of King Edward II. A.D. 1316, when 'pigeons' dung' is mentioned as being eaten by the poor. But we take this to be a mere figure of speech copied from Josephus [DOVES' DUNG].

252.

With regard to the dove as a national ensign, it may be remarked that we have two figures where the symbol occurs: one from a Phœnician coin, where the dove stands on a globe instead of the usual pedestal of ancient signa, with wings closed, and a glory of sunbeams round the head; the other, from a defaced bas-relief observed in the Hauran, where the bird, with wings displayed, is seated also on a globe, and the sunbeams, spreading behind the whole, terminate in a circle of stars; probably representing Assyria, Syria, or perhaps Semiramis (compare several passages in Jeremiah). The brown wood-dove is said to be intended by the Hebrew name; but all the sacred birds, unless expressly mentioned, were pure white, or with some roseate feathers about the wing coverts, such as are still frequently bred from the carrier-pigeon of Scandiroon. It is this kind which Tibullus notices.

'Alba Palæstino sancta Columba Syro.'

The carrier-birds are represented in Egyptian bas-reliefs, where priests are shown letting them fly on a message; and to them also may be referred the black-doves, which typified or gave their name to an order of Gentile priests, both in Egypt and, it would seem, in early Greece, who, under this character, were, in the mysteries, restorers of light. This may have had reference to the return of the dove which caused Noah to uncover the ark. All pigeons in their true wild plumage have iridescent colours about the neck, and often reflected flashes of the same colours on the shoulders, which are the source of the silver and gold feathers ascribed to them in poetical diction: and thence the epithet of purple bestowed upon them all, though

most applicable to the vinous and slaty-coloured species. The coasts and territory of Syria are noted for the great number of doves frequenting them, though they are not so abundant there as in the Coh-i-Suleiman chain near the Indus, which in Sanscrit is named Arga varta, or, as it is interpreted, the 'dove.' Syria possesses several species of pigeon: the *Columba Œnas*, or stock-dove, *C. Palumbus*, or ring-dove, *C. Domestica, Livia*, the common pigeon in several varieties, such as the Barbary, Turkish or Persian carrier, crisp, and shaker. These are still watched in their flight in the same manner as anciently their number, gyrations, and other manœuvres were observed by soothsayers. The wild species, as well as the turtle-doves, migrate from Palestine to the south; but stock and ring-doves are not long absent.

We figure above (No. 252) the more rare species of white and pink carrier, and the Phœnician sacred ensign of the dove.—C. H. S.

DOVES' DUNG. This expression occurs in 2 Kings vi. 25, as a literal translation of חריונים *chirionim* or *charei-yonim*, which in the margin is written דביונים *dib-yonim*, both meaning the same thing: and it is curious that in the Arabic there are two words very similar to these, خرة *khurah*, and زبيل *zabil*, which also signify the same thing, that is, the dung of animals. In the above compounds, *khir* and *dib* being prefixed to *yonim*, the plural form for *doves*, the literal meaning is as above translated. By many the expression is considered to signify literally the dung of pigeons, as in the passage of 2 Kings vi. 25: 'And there was a great famine in Samaria, and behold they besieged it, until an ass's head was sold for threescore pieces of silver, and the fourth part of a cab of *doves' dung* for four pieces of silver.' Different opinions, however, have been entertained respecting the meaning of the words which are the subject of this article, namely, whether they should be taken literally, or as a figurative name of some vegetable substance. The strongest point in favour of the former view is that all ancient Jewish writers have understood the term literally. Taking it, however, in this sense, various explanations have been given of the use to which the doves' dung was applied. Some of the rabbins were of opinion, that the doves' dung was used for fuel, and Josephus, that it was purchased for its salt. Mr. Harmer has suggested that it might have been a valuable article, as being of great use for quickening the growth of esculent plants, particularly melons; and he shows, what is well known, that the Persians live much on melons in the summer months, and use pigeons' dung in raising them. All travellers describe the number of pigeon-houses in Persia. Mr. Edwards, as cited by Dr. Harris, remarks that it is not likely they had much ground to cultivate in so populous a city for gardens; and is disposed therefore to understand it as meaning the offals or refuse of all sorts of grain, which was wont to be given to pigeons, &c. Dr. Harris, however, observes that the stress of the famine might have been so great as to have compelled the poor among the besieged in Samaria to devour either the intestines of the doves, after the more wealthy had eaten the bodies, or, as it might perhaps be rendered, the *crops*; and reference has been made in the *Edinb. Christian Instructor*, No. 122, to an abridged Chronicle of the History of England, in which it is said that in the famine which laid England waste in 1316 the poor ate *pigeons' dung*. But these explanations are not more satisfactory than the older ones.

253. [Ornithogalum umbellatum.]

Bochart, however, has shown (*Hierozoicon*, ii. 37) that the term 'pigeons' dung' was applied by the Arabs to different vegetable substances. He quotes Avicenna as applying the term *stercus columbarum* to two different plants or substances. One of these is described by Avicenna and other Arab authors, under the names *kuz-kundem* and *joug-kundem*, as a light substance like moss. Secondly, this name was given to the *ashnan* or *usnan*, which appears to be a fleshy-leaved plant, that, like the *salsolas, salicornias*, or *mesembryanthemums*, when burnt, yields alkali in its ashes. From this Bochart has been led to consider it as identical with another plant, which occurs under the name of *kali* both in the Hebrew and Arabic languages, and which was one of the pulses used in ancient times, as at the present day, as an article of diet [KALI]. With reference to this grain it has been observed that 'large quantities of it are parched and dried, and stored in magazines at Cairo and Damascus. It is much used during journeys, and particularly by the great pilgrim-caravan to Mecca; and if this conjecture be correct it may be supposed to have been among the provisions stored up in the besieged city, and sold at the extravagant price mentioned in the text' (*Pict. Bible*). The late Lady Callcott, in her *Scripture Herbal*, 1842, adduces the *ornithogalum umbellatum*, or common Star of Bethlehem, as the 'doves' dung' of Scripture, and assigns this, as well as 'birds' milk,' as two of its vernacular names, and infers that the *pigeons' dung* which has been mentioned above as being eaten in England in the famine of 1316 was the roots of this plant. It is a native of this country, and also of Taurus, Caucasus, and Northern Africa. Dioscorides states that its bulbs were sometimes cooked with bread, in the same way as the *melanthium*, and also that it was eaten both raw and roasted. The roots were also commonly eaten in Italy and other southern countries at an early period. Sprengel (*in Dioscor.* ii. 471),

with reference to the above passage of Dioscorides on ὀρνιθόγαλον, says, 'Ebraice dicta fuit planta חרי יונים, *stercus columbinum* (2 Reg. vi. 25), ob floris albidum cum herbaceo mixtum colorem, sicut in stercore plerarumque avium herbivorarum ea mixtio observatur. Est enim *ornithogalum umbellatum*, quod per omnem orientem proveniens, bulbos habet edules, licet a pauperibus duntaxat petantur. Hæc Linnæi expositio biblici loci multi plus valet, quam septem et quod excedit ἐξηγήσεις, quas Bochartus enumerat.'

Having seen that the name of pigeons' dung has been, and probably still is, applied by the Arabs to different vegetable substances, we are not disposed to adopt the literal meaning of the term, as doves' dung, being devoid of nutriment, was not likely to have served as food, even during the famine, especially as we find that an ass's head was sold for sixty pieces of silver. Now if any asses remained for sale, or ass-loads of corn, as the expression has been interpreted, there is no reason for supposing, that other substances may not have remained stored up in secret for those who had money to buy. But it is not easy to say what vegetable substance, serving as an article of diet, is alluded to by the name of 'doves' dung.' If the besieged had communication with the exterior, or even if any of their body could have dug in the neighbourhood of the walls, for the kind of 'earth-nut' offered by the bulbs of the *ornithogalum*, or Star of Bethelem, which is said to be abundant in the neighbourhood of Samaria, there does not appear any good reason why it should not be the substance alluded to. But it does not appear so likely to have been stored up; and we have been unable to discover any reference in the Arab authors to such a plant, under the name of *stercus columbarum*. Pulse was as likely to have been stored up in ancient times as at the present day; and it may, therefore, as shown by Bochart, have been one of the substances to which the name was applied by the Arabs, and have been known to the Hebrews also by a similar name [Kali].—J. F. R.

DRACHMA (δραχμή), a coin of silver, the most common among the Greeks, and which after the Exile became also current among the Jews (2 Macc. iv. 19; x. 20; xii. 43; Luke xv. 8, 9). The earlier Attic drachmæ were of the average weight of 66·5 grains, and in a comparison with the shilling would be equal to 9¾*d*. But the specimens of later times are of the average weight of only 61 grains, and some of less. In this state the drachma was counted equal to the denarius, which was at first worth 8½*d*., and afterwards only 7½*d*. The value of the drachma of the New Testament may therefore have been about 8*d*. The woman's 'ten pieces of silver' (*drachmæ*) in Luke xv. 8, would hence be equal to 6*s*. 8*d*. of our money—that is, in nominal value, for the real value of money was far greater in the time of Christ than at present. That the drachma of Alexandria was equal to two of Greece is inferred from the fact that the Septuagint makes the Jewish shekel equivalent to two drachmæ [Didrachma]; and in fact an Alexandrian drachma weighing 126 grains has been found.

DRAGON, in our version, is used for the Hebrew תן *than*, תנין *thanin*, and תנים *thanim*. It occurs principally in the plural form (Job xxx. 29; Ps. xliv. 19, 20; Isa. xiii. 22; xxxiv. 13; xxxv. 7; Jer. ix. 11; xiv. 6; xlix. 33; and Micah i. 8). These texts, in general, present pictures of ruined cities and of desolation in the wilderness. Where Thanim are associated with birds of the desert, they clearly indicate serpents of various species, both small and large, as already noticed in the article Adder. In Jer. xiv. 6, where wild asses snuffing up the wind are compared to dragons, the image will appear in its full strength, if we understand by dragons, great boas and python-serpents, such as are figured in the Prænestine mosaics. They were common in ancient times, and are still far from rare in the tropics of both continents. Several of the species grow to an enormous size, and, during their periods of activity, are in the habit of raising a considerable portion of their length into a vertical position, like pillars, 10 or 12 feet high, in order to survey the vicinity above the surrounding bushes, while with open jaws they drink in a quantity of the current air. The same character exists in smaller serpents; but it is not obvious, unless when, threatening to strike, they stand on end nearly three-fourths of their length. Most, if not all, of these species are mute, or can utter only a hissing sound; and although the malli-pambu, the great rock-snake of Southern Asia, is said to wail in the night, we have never witnessed such a phenomenon, nor heard it asserted, that any other boa, python, or erpeton had a real voice; but they hiss, and, like crocodiles, may utter sounds somewhat akin to howling.

It is from these giant serpents which, at a remote period, were evidently still more colossal than that which is recorded to have opposed a Roman army, or the skeleton of another above 100 feet in length, found more recently in India, that those vague but universally-spread notions must have arisen in the earliest antiquity, and been perpetuated to our own time, which typified the deluge and all great destructive agents under the form of a dragon or monster serpent. We find them embodied by the ancients in the form of dragon temples (Dracontia), consisting of huge stones set upright in rows, such as that of Colchis, no doubt, was. Such temples existed in Asia Minor, Epirus, Northern Africa, Gaul, and Britain, that at Abury, in Wiltshire, being several miles in length; and where their design can be traced out sufficiently in existing remains, the serpentine figure is ever observed to glide through or sustain a diagram of similar materials—a circumstance which appears best explained by considering them more or less astronomical, but fundamentally reposing upon traditions concerning the Ark, the preserver of animal life, in the act of struggling with the overwhelming element. These structures are ever connected with water, coming, as it were, out of the sea, or at least intersecting a stream or rivulet; thus retaining both the diluvian record and the truth of nature; for all boas and pythons enter the water at certain seasons, pass through rivers as if they were unconscious of the change of medium, swim with great velocity, or sojourn beneath the surface, some for a time, others habitually. Perhaps in conjunction with the existence of real colossal sea-serpents, but not wholly so, nations remote from the ocean, in common with

the rest, have in their cosmogonies their religious dogmas, their legends and records, both malevolent and beneficial, giant-serpents—the Indian nations, their kapila, cuvera, ananta, naga, sesha naga; and the more western nations their paystha, sogne, kater, vidhanger, and finally, the great dragon, sometimes denoting the guide-preserver of the ark, the monster guardian of riches, the *via lactea* among the stars, or abstract powers in Eastern demonology; at other times similar types, but in the West more generally connected with the image of the deluge, and figured by the ancient Helio-Arkite temples of the Celtæ already noticed. But the serpent type is constantly mixed up with another of the lizard form; and as, in every quarter of the globe, the dragon of the deluge assailing the ark is transferred to the skies, and a celestial dragon, in Asia, generally denominated Satan שטן, is believed to attack the moon, the crescent ship, during an eclipse. Wings have been added to the monster of the skies. Comets have been called dragon-stars, and the assumed figure of one has been made a chief ensign of all the equestrian nations of Eastern and Northern Asia. Westward the dragon was the asdehac of Persia, a Roman ensign during the empire, and one common to all the Celtic and Gothic nations. So late as the 11th century, Harold, the last Anglo-Saxon king, perished at Hastings fighting between his two dragon standards; while our Norman sovereigns had a pennon with the dragon painted thereon, in all the great wars, in the crusades, and even down to Henry VIII. In Christian church ceremonies the dragon image, the Σαυρων, was carried about, and fire was sometimes placed in its mouth. It is necessary to bear in mind the general tenour of these remarks, when allusion is made in thes acred volume to the Thanim, and in the Revelations especially, where the dragon is mentioned; for they tend to explain in what manner the existing nations of Western Asia might have viewed the types in question at the beginning of the Christian era.

Reverting from these symbols to the physically existing species whence they may have beeu drawn, it seems that when mentioned in connection with rivers, לויתן, leviathan, generally applies to the crocodile; when in connection with land, and particularly the desert, it appears to designate a waran, a species of monitor, probably the *waran-el-hard* of the Arabs, monitor-arenarius, growing to near six feet in length; or another species of a green shining colour, not as yet completely described, but acquiring the length of 9 feet, while thanim is certainly used for serpents mostly of the larger kind. In the apocryphal history of Bel and the Dragon, where the last-mentioned was a living animal, by some taken for a crocodile, we think it more likely to have been a great snake, such as is still fed and venerated in Cutch, because these reptiles are safely handled when not excited; food may even be thrust into their throats, and the worship of them is not yet extinct in the eastern provinces of Persia. But all these animals are oviparous or ovoviviparous: when, therefore, the same term is used for those that draw the breast and suckle their young, which implies a species of mammalia, they can indicate only cetaceans, unless it were proved that seals had at any time frequented the seas of Palestine or of Arabia. We refer this question to the articles LEVIATHAN and WHALE.—C. H. S.

DREAMS. Of all the subjects upon which the mind of man has speculated, there is perhaps none which has more perplexed than that of dreaming.

Whatever may be the difficulties attending the subject, still we know that it has formed a channel through which Jehovah was pleased in former times to reveal His character and dispensations to His people.

In regard to the immediate cause of dreaming the opinions of the ancients were very various, and some of them striking; but they do not claim notice in the present work. We cannot, however, omit the opinion of Aristotle, who thought that every object of sense produces upon the human soul a certain impression, which remains for some time after the object that made it is removed; and which, being afterwards recognised by the perceptive faculty in sleep, gives rise to the varied images which present themselves.

Amongst English writers on this subject, none have written with more acuteness in support of his theory than Baxter. He supposes that our dreams are prompted by *separate spirits*—an opinion generally entertained by the heathen, and which opinion has given rise, in all ages and in all countries, to *much* superstition and imposture (Baxter's *Essay on the Phenomenon of Dreaming*, vol. ii. 3d edit. 1745).

Professor Dugald Stewart, in endeavouring to reduce the phenomenon of dreaming to *some established principles*, remarks, that in sleep those operations of the mind are suspended which depend on our *volition*. He then says that, if the suspension of our voluntary operations in sleep be admitted as a fact, there are only two suppositions which can be advanced concerning its cause;—the one is, that the power of volition is suspended; the other, that the will loses its influence over those faculties of the mind and those members of the body which, during our waking hours, are subjected to its authority. Now it may be shown that the former is not consistent with fact, whence the latter follows as a necessary consequence. Hence it is inferred that all our mental operations which are independent of our *will* may continue during sleep; and that the phenomenon of dreaming may, perhaps, be produced by these, diversified in their apparent effects in consequence of the suspension of our voluntary powers. Two obvious consequences follow:—1st. That when we are asleep the succession of our thoughts, in so far as it depends on the association, may be carried on by the operation of the same unknown causes by which it is produced while we are awake; and, 2nd. That the order of our thoughts in these two states of our minds must be very different, inasmuch as in the one it depends solely on the laws of association, and in the other, on those laws combined with our own voluntary exertions.

If, then, the succession of our thoughts during sleep is regulated by the same general laws of association to which it is subjected while we are awake, and if the circumstances which discriminate dreaming from our waking thoughts are such as must necessarily arise from the suspension of the *will*, this may account for the inaccu-

rate estimate we form of *time* when dreaming; the rapidity of thought is such that in the twinkling of an eye a crowd of ideas may pass before us, to which it would take a long discourse to give utterance; and transactions may be conceived which it would require *days* to realise. But in sleep the conceptions of the mind are mistaken for realities, and therefore our estimate of time will be found not according to our experience of the rapidity of thought, but according to our experience of the time requisite for realising what we conceive (Stewart's *Elements of the Philosophy of the Human Mind*, pp. 328-348).

There seems a strong analogy between dreaming and insanity. Dr. Abercrombie defines the difference between the two states to be, that in the latter the erroneous impression, being permanent, affects the conduct; whereas, in dreaming, no influence on the conduct is produced, because the vision is dissipated on awaking.

We believe that dreams are ordinarily the re-embodiment of thoughts which have before, in some shape or other, occupied our minds. They are broken fragments of our former conceptions revived, and heterogeneously brought together. If they break off from their connecting chain, and become loosely associated, they exhibit ofttimes absurd combinations, but the *elements still subsist*. If, for instance, any irritation, such as pain, fever, &c., should excite the *perceptive* organs while the reflective ones are under the influence of sleep, we have a consciousness of objects, colours, or sounds being presented to us, just as if the former organs were actually stimulated by having such impressions communicated to them by the external senses; whilst, in consequence of the repose of the reflecting power, we are unable to rectify the illusion, and conceive that the scenes passing before us, or the sounds that we hear, have a real existence. This want of mutual co-operation between the different faculties of the mind may account for the *disjointed* character of dreams. This position might be fully substantiated by an appeal to the evidence of fact. Dr. Beattie speaks of a man who could be made to dream anything by whispering in his ear. Dr. Gregory relates of himself that, having once had occasion to apply a bottle of hot water to his own feet when he retired to bed, he dreamed that he was ascending the side of Mount Ætna, and that he found the heat of the ground almost insufferable. Persons who have had a blister applied to their head have been known to dream of being scalped by a party of North American Indians. Sleeping in a smoky room, we may dream of a house or a city being in flames. The smell of a flower applied to the nostrils may call forth the idea of walking in a garden; and the sound of a flute may excite in us the most pleasurable associations.

Here, then, we discover one great source of that class of dreams of which Solomon speaks in Eccles. v. 7.

The only one of our mental powers which is not suspended while dreaming is fancy, or imagination. We often find *memory* and *judgment* alternately suspended and exercised. Sometimes we fancy ourselves contemporaneous with persons who have lived ages before: here memory is at work, but judgment is set aside. We dream of carrying on a very connected discourse with a deceased friend, and are not conscious that he is no more: here judgment is awake, but memory suspended. These *irregularities*, or want of mutual co-operation in the different faculties of the mind may form, for aught we know, the plan by which God gives health and vigour to the whole soul.

How God revealed himself by dreams, and raised up persons to interpret them, the Scriptures abundantly testify. Under the three successive dispensations we find this channel of communication with man adopted. It was doubtless in this way that God appeared to the father of the faithful, ordering him to forsake country, kindred, and his father's house, and to go into the land that he would show him. To this divine command Abraham paid a ready obedience. It was by a similar prompt obedience to the admonition conveyed to him in a dream that Abimelech (Gen. xx. 3) himself and Abraham, too, were saved from the evil consequences of his meditated act.

When Jacob was, as it were, banished from his father's house, in order to avoid the effects of his brother's implacable rage, he came to a place called Luz (Gen. xxviii. 19), and, whilst there sleeping under the canopy of heaven, he had communication by dream, not only with angels, but with God also:—'He dreamed, and behold a ladder set upon the earth,' &c. This was an encouraging dream to Jacob, for it filled his soul with holy and awful thoughts of God. On awaking we do not find this patriarch dismissing the thought of the dream from his mind; but he exclaims, 'Surely the Lord was in this place, and I knew it not! and he was afraid, and said, How dreadful is this place! This is none other but the house of God, this is the gate of heaven!' He even set up a pillar to perpetuate its memory, and made a solemn vow that Jehovah should be his God. And, moreover, such was the deep impression which this dream made upon his mind, that God, who appeared many years afterwards to him when yet in Padan-aram, and bade him return to his fatherland, urges this as a motive:—'I am the God of Beth-el, where thou anointedst the pillar, and where thou vowedst a vow unto me.' We are informed in the sequel how God did fulfil to him all that he had then promised.

But, though this was the first, it was not the last time God appeared to Jacob in a dream. In Gen. xxxi. 10, Jacob informs his wives that it was God who saw how Laban oppressed him—who had directed him to take the speckled, &c. cattle for his wages, and had ordered him to return home. He obeyed; and when Laban, designing to do Jacob some harm (Gen. xxxi. 24), pursued, and after seven days overtook him, God, by a dream, prevented the meditated evil.

Joseph, whilst yet a child, had dreams *predictive* of his future advancement (Gen. xxxvii. 6-11). These dreams are *one*, and were repeated under different forms, in order, it would seem, to express the certainty of the thing they predicted. How they formed the first link in an extended chain of God's providential dealings the sacred record fully informs us. Jealous not only of the partiality of their father for Joseph, but also of that which God would evince by these dreams for him, his brethren hated him, and sold him to the Midianites. From their hands he was trans-

ferred to Potiphar, captain of Pharaoh's guard, and from him, under the cruel and unjust accusation of his vile wife, was cast into the king's prison—alas! in this position Satan might well tempt Joseph to doubt the kind providence of the God whom he served. But no—he felt assured that the Lord was with him, and that, in His own *time* and *manner*, he would vindicate his innocence, and give him his liberty. Nor was this confidence of Joseph disappointed; for, in the course of time, by being able to give an accurate interpretation of three *predictive* dreams, he was raised from the prison to a participation with King Pharaoh in the government of Egypt! It is true that a daring infidelity has tried to reduce the *first* of this series of dreams to a natural principle—the constitutional vanity of the dreamer's mind—and thus to set aside its divine character and tendency. But, granting for a moment that Joseph vainly read in the partial feelings of his father his own eventual elevation over his brethren, and that by reason of the impression which this flattering prospect made upon his mind he was led to dream as above noticed, still, this could not alter the predictive character of the dream: and in proof of this we appeal to the account of its actual fulfilment. It is quite clear from the inspired history that dreams were looked upon by the earliest nations of antiquity as premonitions from their idol gods of future events. One part of Jehovah's great plan in revealing, through this channel, His designs toward Egypt, Joseph individually, and his brethren generally, was to correct this notion. Hence it was that, on Joseph being brought into the presence of Pharaoh for the purpose of explaining his dreams, he at once says, '*it is not in me;* God shall give Pharaoh an answer of peace.' Such were some of the dreams by which God revealed himself under the patriarchal dispensation, and that the same divine mode of communicating with man was continued under that of Moses is evident from an express word of promise (Num. xii. 6), 'If there be a prophet among you I, the Lord, will make myself known unto him in a vision, and will speak to him in a *dream*.' That dreams were one of the ways whereby God was wont to signify his pleasure to men under this dispensation is evident from the complaint of Saul to the spirit of Samuel (whom the witch pretended to raise up), when he asked him, 'Why hast thou disquieted me to bring me up?' Saul answered, 'I am sore distressed; for the Philistines make war against me, and God is departed from me, and answers me no more; neither by prophets, nor by *dreams:* therefore I have called thee that thou mayest make known to me what I shall do.' And, in order to guard against imposition, Moses pronounced a penalty against dreams which were invented and wickedly made use of, for the promotion of idolatry (Deut. xiii. 1-5). Thus Zechariah (x. 2) complains: 'The idols have spoken vanity, and the diviners have spoken a lie, and have told *false dreams;* they comfort in vain.' And so Jeremiah (xxiii. 25), 'I have heard what the prophets said that prophesy lies in my name, saying, I have dreamed, I have dreamed,' &c. Yet this abuse did not alter God's plan in the right use of them; for in the 28th verse of the same chapter, it is said, 'the prophet that hath a *dream*, and he that hath my word, let him speak my word faithfully. What is the chaff to the wheat? saith the Lord.'

When Gideon warred with the Amalekites, and was alarmed at their vast multitudes, he was encouraged to do God's will by overhearing one of them relate his dream, and another giving the interpretation (Judg. vii.). Again, it was in a dream that God was pleased to grant Solomon a promise of wisdom and understanding (1 Kings iii. 5, &c.). Here we may perceive what converse the Lord was pleased to hold with Solomon in a dream; and the sacred record informs us how punctually everything herein promised was fulfilled.

But, though God speaks frequently by dreams, yet man is often found actually closing his ears against such communications. Thus Job says (xxxiii. 14), 'God speaketh once, yea twice, yet man perceiveth it not. In a dream, in a vision of the night, when deep sleep falleth upon men, in slumbering upon the bed, then he openeth the ears of men and sealeth their instruction.'

Sometimes those dreams and visions are of a *pleasurable* and again of a *frightful* character:—'When I say my bed shall comfort me, my couch shall ease me; then thou scarest me with dreams and terrifiest me with visions' (Job vii. 14).

The knowledge of visions and dreams is reckoned amongst the principal gifts and graces sometimes bestowed by God upon them that fear him; so it is said of Daniel and his companion, that 'God gave them knowledge and skill in all learning and wisdom: and Daniel had understanding in all visions and dreams (Dan. i. 17). And the God who had imparted this spirit unto his servant Daniel soon, in the arrangement of his providence, gave occasion for its exercise. Nebuchadnezzar, king of Babylon, dreamed a dream, and his spirit was troubled because the thing had gone from him. Having, however, a deep impression that the dream was of portentous meaning, he called together his magicians, astrologers, and sorcerers, and commanded them to recall and explain it to him. These reputedly wise men of Babylon at once acknowledged that to meet the king's wishes belonged not to the capacity of man. Disappointed and enraged at this confessed impotency, he ordered all the wise men of his kingdom to be put to death. Daniel being included in this order implored God to reveal to him the dream with its interpretation: his prayer was graciously answered (Dan. ii. 19). Whereupon he acquaints the king, that 'there is a God in Heaven who revealeth secrets, and maketh known to him what shall be in the latter days;' and then proceeds to state the dream together with the interpretation thereof. Satisfied with what Daniel stated, Nebuchadnezzar said unto Daniel, 'Of a truth it is that your God is a God of gods, and a Lord of kings;' and the divine historian states that in consequence of this both the prophet, and Shadrach, Meshach, and Abednego were promoted to the highest offices of the state! In this dream a great variety of ends were attained in reference to *Babylon*, Israel, and indeed the world—all of which were worthy of God's miraculous interference.

That this method of God's revealing himself was not confined to the legal dispensation, but

was to be extended to the Christian, is evident from Joel (ii. 28), 'And afterwards (saith the Lord) I will pour out my spirit upon all flesh; and your sons and your daughters shall prophesy; your young men shall see visions, and your old men shall *dream dreams*.' In Acts ii. 17 we find the Apostle Peter applying this to the illumination of the Holy Ghost. Accordingly, we read that when Joseph designed to put Mary away, because he perceived her to be with child, he was turned from his purpose by a dream, in which an angel made the truth of the matter known to him (Matt. i. 20). And in the following chapter it is stated, that God, in a dream, warned the wise men not to return to Herod. Moreover, in verses 13 and 19, Joseph is instructed to flee into and return from Egypt with the child Jesus.

Whether the dream of Pilate's wife was a divine intimation we cannot tell.

That divine dreams, which actually were imparted to God's servants, should be imitated in fictitious representation by ancient and modern writers, was consistent no less with the general objects of superstition and imposture than with those of literature. Hence divine dreams became the constant appendages of the heathen mythology, and accounts, real and fictitious, of communications in vision, were interwoven in every production. Information which was superior to the vulgar philosophy of the time, intimated its discoveries as suggestions imparted by *inspiration*. If a warning was to be conveyed, what so affecting as the admonition of a departed friend! Such machinery was particularly adapted to works of imagination, and the poems of antiquity, as well as those of modern times, were frequently decorated with its ornaments.

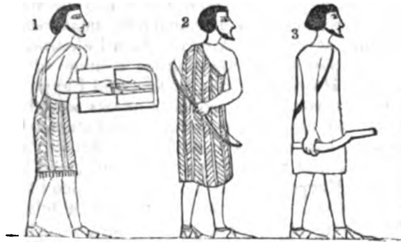
We inquire not *how* far God may have revealed himself to man beyond what Holy Scripture records. Some of the dreams, both of ancient and modern times, which lay claim to a divine character, are certainly striking, and may, for aught we know, have had, and may still have, a collateral bearing on the development of God's purposes.—J. W. D.

DRESS. The subject of the costume of the ancient Hebrews is involved in much obscurity and doubt. Sculptured monuments and coins afford us all needful information respecting the dress of the ancient Egyptians, Babylonians, Persians, Greeks, and Romans; and even the garb worn by the barbarous nations is perpetuated in the monuments of their antagonists and conquerors. But the ancient Hebrews have left no monuments, no figures of themselves; and the few figures which have been supposed to represent Jews in the monuments of Egypt and Persia are so uncertain, that their authority remains to be established before we can rely upon the information which they convey. There are, however, many allusions to dress in the Scriptures, and these form the only source of our positive information. They are often, indeed, obscure, and of uncertain interpretation; but they are invaluable in so far as they enable us to compare and verify the information derivable from other sources. These sources are—

1. The costume of neighbouring ancient nations, as represented in their monuments.

2. The alleged costume of Jews as represented in the same monuments.

3. The present costumes (which are known to be ancient) of Syria and Arabia.

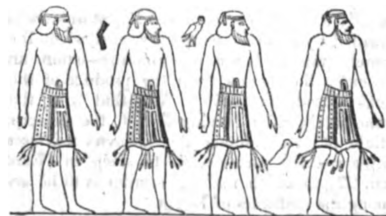


4. Tradition.

1. The range of inquiry into monumental costume is very limited. It is a common mistake to talk of 'Oriental costume,' as if it were a uniform thing, whereas, in fact, the costumes of the Asiatic nations differ far more from one another than do the costumes of the different nations of Europe. And that this was the case anciently, is shown by the monuments, wherein the costumes of Egyptians, Babylonians, Persians, Medes, Syrians, and Greeks, differ as much from one another as do the costumes of the modern Syrians, Egyptians, Arabs, Turks, and Persians. It is therefore useless to examine the monumental costume of any nation, remote from Palestine, for the purpose of ascertaining the costume of the ancient Hebrews. Syria, Arabia, and Egypt, are the only countries where monuments would be likely to afford any useful information: but Arabia has left no monumental figures, and Syria none of sufficiently ancient date; and it is left for Egypt to supply all the information likely to be of use. The extent and value of this information, for the particular purpose, we believe to be far less than is usually represented. That we are not disposed to undervalue the information derivable from the Egyptian monuments for the purpose of illustrating Biblical history and antiquities, the pages of the present work will sufficiently evince; and its editor may indeed claim to have been the first in this country to work this mine of materials for Biblical illustration. But the rage for this kind of illustration has been carried to such preposterous lengths, and is so likely in its further progress to confuse our notions of the real position which the Hebrews occupied, that it may not be an unwholesome caution to remind our readers that the Egyptians and the Hebrews were an exceedingly different people—as different in *every* respect as can well be conceived; and that the climates which they inhabited were so very different as to *necessitate* a greater difference of food and *dress* than might be pre-supposed of countries so near to each other. This consideration appears to us to render of little value the very ingenious illustrations of Jewish costume which have been deduced from this source. It is true that the Jewish nation was cradled in Egypt: and this circumstance may have had some influence on ceremonial dresses, and the ornaments of women; but we do not find that nations circumstanced as the Jews were readily adopt the costumes of other nations, especially when their residence in Egypt was always regarded by them as temporary, and when their raiment was of home manufacture—spun and woven by the women from the produce of their flocks (Exod. xxxv. 25). We find also that, immediately after leaving Egypt, the principal article of dress among the Hebrews was some ample woollen garment, fit to sleep in (Exod. xxii. 27), to which nothing similar is to be seen among the costumes of Egypt.

2. With respect to the supposed representation of Jews in ancient monuments, if any authentic examples could be found, even of a single figure, in the ancient costume, it would afford much as-

tisfaction, as tending to elucidate many passages of Scripture which cannot at present be with certainty explained. The sculptures and paintings supposed to represent ancient Hebrews are contained in—



(*a.*) A painting at Beni Hassan, representing the arrival of some foreigners in Egypt, and supposed to figure the arrival of Joseph's brethren in that country. The accessories of the scene, the physiognomies of the persons, and the time to which the picture relates, are certainly in unison with that event: but other circumstances are against the notion. Sir J. G. Wilkinson speaks hesitatingly on the subject: and, until some greater certainty is obtained, we may admit the possible correctness of the conjecture. The annexed cut

254.

shows the variety of costume which this scene displays. All the men wear sandals. Some of them are clad only in a short tunic or shirt, with close sleeves (fig. 3); others wear over this a kind of sleeveless plaid or mantle, thrown over the left shoulder, and passing under the right arm (fig. 2). It is of a striped and curiously figured pattern, and looks exceedingly like the fine grass woven cloth of the South Sea. Others have, instead of this, a *fringed* skirt of the same material (fig. 1). All the figures are bare-headed, and wear beards, which are circumstances favourable to the identification. The fringed skirt of fig. 1 is certainly a remarkable circumstance. Moses directed that the people should wear a fringe at the hem of their garments (Num. xv. 38); and the probability is that this command merely perpetuated a more ancient usage.

(*b.*) This fringe re-appears, much enlarged, in the other Egyptian sculpture in which Jews are supposed to be represented. These are in a tomb discovered by Belzoni, in the valley of Bab-el Melook, near Thebes. There are captives of different nations, and among them four figures, supposed to represent Jews. The scene is imagined to commemorate the triumphs of Pharaoh-

255.

Necho in that war in which the Jews were defeated at Megiddo, and their king Josiah slain (2 Chron. xxxv. xxxvi.). It will be seen that the dress of these figures differs little, excepting in the length of the fringe, from that of the skirted figure in the earlier painting; and so far this is a corroborative circumstance in favour of both. The band round the head is the other principal difference. These figures are manifestly in what we would call undress, and the comparison being made with the similar undress figures in the earlier scene, the resemblance is greater than might be expected from the distance of time and difference of manners. The internal evidence is so far good; and if the external evidence were equally strong, there would not be much ground for hesitation.

(*c.*) On the face of a rock, at Besitoon, on the Median border of the ancient Assyria, there is a remarkable sculpture representing a number of captives strung together by the neck, brought before the king and conqueror, who seems pronouncing sentence upon them. The venerable antiquity of this sculpture is unquestionable; and Sir R. K. Porter was led to fancy that the sculpture commemorates the subjugation and deportation of the *ten* tribes by Shalmanezer, king of Assyria (2 Kings xvii. 6). The reasons which he assigns for this conclusion are of little weight, and not worth examination. But the single fact that the figures are arrayed in a costume similar to the ancient and present garb of the people of Syria and Lebanon, inclines us to think that the figures really do represent the costume of nations west of the Euphrates, including, probably, that of the Jews and their near neighbours. The dress here

256.

shown is a shirt or tunic confined around the waist by a strap or girdle; while others have a longer and larger robe, furnished with a spacious cape or hood, and, probably, worn over the other.

There is no reason to think that the dress of the Jews was in any important respect different from that of the other inhabitants of the same and immediately bordering countries. It would therefore be satisfactory, and would enable us to judge better of the figures which have been noticed, if we had representations of Canaanites, Phœnicians, Syrians, Moabites, &c., by the Egyptian artists, who were so exact in discriminating, even to caricature, the peculiarities of nations. At p. 226 there is a supposed figure of a Canaanite warrior from this source. The dress being military does not afford much room for comparison in the present instance; but we at once recognise in it most of the articles which formed the military dress of the Hebrews. The following figures (No. 257), however, convey more information, as they appear to represent inhabitants of Syria and Lebanon. The evidence for the last (fig. 2) is as conclusive as can be obtained, for not only is there the name Lemanon (*m* being constantly interchanged with *b*), but the persons thus attired are represented

257.

as inhabitating a mountainous country, and felling *fir*-trees to impede the chariots of the Egyptian invaders. The dresses are similar to each other, and this similarity strengthens the probability that the dress of the Jews was not very different; and it is also observable that it is similar to the full dress of some of the figures in the sculpture at Besitoon: the figures are bearded, and the cap, or head-dress, is bound round with a fillet. The figures are arrayed in a long gown reaching to the ankles, and confined around the waist by a girdle; and the shoulders are covered by a cape which appears to have been common to several nations of Asia. At first view it would seem that this dress is different from those already figured. But in all probability this more spacious robe is merely an outer garment, covering that inner dress which is shown in the figures that seem more scantily arrayed.

Such is the amount of the information to be derived from ancient monuments.

258.

That to be obtained from tradition is embodied —1. In the dresses of monks and pilgrims, which may be traced to an ancient date, and which are an intended imitation of the dresses supposed to have been worn by the first disciples and apostles of Christ. 2. The garb conventionally assigned by painters to Scriptural characters, which were equally intended to embody the dress of the apostolical period, and is corrected in some degree by the notions of Oriental costume which were collected during the Crusades.

To judge of the value of these costumes, we must compare them, first, with the scanty materials already produced, and then with the modern costumes of Syria and Arabia. The result of this examination will probably be that these traditional garbs are by no means bad reminiscences of Hebrew costume; and that the dresses which the painters have introduced into Scriptural subjects are far more near to correctness than it has latterly been the fashion to suppose. It is perhaps as nearly as possible a just medium between the ecclesiastical tradition and the practical observation. No dress more suitable to the dignity of the subjects could possibly be devised; and, sanctioned as it has been by long use, and rendered venerable by Scriptural associations, we should be reluctant to see it exchanged for the existing Oriental costumes, which the French artists have begun to prefer. But this

259.

is only with regard to pictorial associations and effects; for, in an inquiry into the costume *actually* worn by the Israelites, modern sources of illustration must be by no means overlooked. And to that source of illustration we now turn.

The value of the modern Oriental costumes for the purposes of Scriptural illustration arise from the fact that the dress, like the usages, of the people is understood to be the same, or nearly the same, which was used in very ancient times. Of the fact itself, nakedly taken, there is not the least room for doubt. But this must be understood with some limitations. The dress of the Turks is distinctive and peculiar to themselves, and has no connection with the aboriginal costumes of Western Asia. The dress of the Persians has also been changed almost within the memory of man, that of the ruling Tartar tribe having been almost invariably adopted; so that the present costume is altogether different from that which is figured by Sir Thomas Herbert, Chardin, Le Bruyn, Niebuhr, and other travellers of the seventeenth and eighteenth centuries. But with the exceptions of the foreign Turkish costume, and the modifications thereof, and with certain local exceptions, chiefly in mountainous regions, it may be said that there is one prevailing costume in all the countries of Asia between the Tigris and Mediterranean, and throughout Northern Africa, from the Nile to Morocco and the banks of the Senegal. This costume is substantially Arabian, and owes its extension to the wide conquests of the Arabians under the first caliphs; and it is through the Arabians—the least changed of ancient nations, and almost the only one which has remained as a nation from ancient times—that the antiquity of this costume may be proved. This is undoubtedly the most ancient costume of

Western Asia, and while one set of proofs would carry it up to Scriptural times, another set of strong probabilities and satisfactory analogies will take it back to the most remote periods of Scriptural history, and will suggest that the dress of the Jews themselves was very similar, without being strictly identical.

It would be a pleasant task to trace out these lines of proof and analogy. This cannot here be done; but it may be proper to remark—1. That the usages of the Arabians in Syria and Palestine are more in agreement with those of Scripture than those of any other inhabitants of those countries. 2. That their costume throws more light on the Scriptural intimations than any other now existing, while it agrees more than any other with the materials supplied by antiquity and by tradition. 3. That the dress which the Arabian garbs gradually superseded in Syria and Palestine was not the same as that of Scriptural times, excepting, perhaps, among the peasantry, whose dress appears to have then differed little from that of the Arabian conquerors. The Jews had for above five centuries ceased to be inhabitants of Palestine; and it is certain that during the intermediate period the dress of the upper classes—the military and the townspeople—had become assimilated to that of the Greeks of the Eastern empire. Arabia had meanwhile been subjected to no such influences, and the dress which it brought into Syria may be regarded as a restoration of the more ancient costume, rather than (as it was in many countries) the introduction of one previously unknown.

It is to be observed, however, that there are two very different sorts of dresses among the Arabians. One is that of the Bedouin tribes, and the other that of the inhabitants of towns. The distinction between these is seldom clearly understood, or correctly stated; but is of the utmost importance for the purpose of the present notice. Instead therefore of speaking of the Arabian costume as one thing, we must regard it as two things—the desert costume, and the town costume.

If, then, our views of Hebrew costume were based on the actual costume of the Arabians, we should be led to conclude that the desert costume represented that which was worn during the patriarchal period, and until the Israelites had been some time settled in Canaan; and the town costume that which was adopted from their neighbours when they became a settled people.

This is a subject which, more than any other, requires the aid of pictorial illustration to render the details intelligible. Having provided ourselves with these, our further observations will most advantageously take the form of explanations of them, and of comments upon them.

Under the notion that the desert costume belongs to the patriarchal period, the precedence is here given to it. Only the outer articles of dress are *distinctive*, those which are worn underneath being similar to other articles worn by the town and peasant classes, and which as such will be hereafter noticed.

The annexed cut (No. 260) represents, in fig. 2, a Bedouin, or desert Arab, in the dress usually worn in Asia; and fig. 1 represents a townsman in a cloak of the same kind, adopted from the Arabs, and worn very extensively as an outermost covering in all the countries from the Oxus

260.

(for even the Persians use it) to the Mediterranean The distinctive head-dress of the Bedouin, and which has not been adopted by any other nation, or even by the Arabian townsmen, is a kerchief (*keffeh*) folded triangularly, and thrown over the head so as to fall down over the neck and shoulders, and bound to the head by a band of twisted wool or camel's hair. We forbear at the moment from inquiring whether this was or was not in use among the ancient Hebrews. The cloak is called an *abba*. It is made of wool and hair, and of various degrees of fineness. It is sometimes entirely black, or entirely white, but is more usually marked with broad stripes, the colours of which (never more than two, one of which is always white) are distinctive of the tribe by which it is worn. The cloak is altogether shapeless, being like a square sack, with an opening in front, and with slits at the sides to let out the arms. The Arab who wears it by day, sleeps in it by night, as does often the peasant by whom it has been adopted; and in all probability this was the garment similarly used by the ancient Hebrews, and which a benevolent law, delivered while Israel was still in the desert, forbade to be kept in pledge beyond the day, that the poor might not be without a covering at night (Exod. xxii. 27). This article of dress appears to have been little known to Biblical illustrators, although it is the principal and most common outermost garment in Western Asia. This singular neglect has arisen from their information being chiefly derived from Shaw and others, who describe the costume of the Arab tribes or Moors of Northern Africa, where the outer garment is more generally the *bournoos* (No. 260, fig. 3), a woollen cloak, not unlike the *abba*, but furnished with a hood, and which is sometimes strangely confounded even by well informed persons with a totally different outer-garment worn in the same regions, usually called the *hyke*, but which is also, according to its materials, quality, or colour, distinguished by various other names; and writers have produced some confusion by not observing that these names refer to an article of raiment which under all these names is essentially the same. Regardless of these minute distinctions, this part of dress may be described as a large woollen blanket, either white or brown, and in summer a cotton sheet (usually blue or white, or both colours together). Putting one corner before

over the left shoulder, the wearer brings it behind, and then under the right arm, and so over the body, throwing it behind over the left shoulder, and leaving the right arm free for action. This very picturesque mode of wearing the *hyke* is shown in fig. 2 (No. 261). Another mode of wear-

261.

ing it is shown in fig. 3. It is sometimes thrown over the head as a protection from the sun or wind (fig. 1), and calls to mind the various passages of Scripture in which persons are described as covering their heads with their mantles (2 Sam. xv. 30; 1 Kings xix. 13; Esther vi. 12). This article of dress, originally borrowed from the nomades, is known in Arabia, and extends westward to the shores of the Atlantic, being most extensively used by all classes of the population. The seat of this dress, and of the abba respectively, is indicated by the direction of their importation into Egypt. The hykes are imported from the west (*i. e.* from North Africa), and the abbas from Syria. The close resemblance of the above group of real costume to those in which the traditionary ecclesiastical and traditionary artistical costumes are displayed, must be obvious to the most cursory observer. It may also be noticed that the hyke is not without some resemblance, as to the manner in which it was worn, to the outer garment of one of the figures in the Egyptian family, supposed to represent the arrival of Joseph's brethren in Egypt (No. 254, fig. 1).

We now turn to the costumes which are seen in the towns and villages of south-western Asia.

In the Scriptures *drawers* are only mentioned in the injunction that the high-priest should wear them (Exod. xxviii. 42), which seems to show that they were not generally in use; nor have we any evidence that they ever became common. Drawers descending to the middle of the thighs were worn by the ancient Egyptians, and workmen often laid aside all the rest of their dress when occupied in their labours. As far as this part of dress was used at all by the Hebrews, it was doubtless either like this, or similar to those which are now worn in Western Asia by all, except some among the poorer peasantry, and by many of the Bedouin Arabs. They are of linen or cotton, of ample breadth, tied around the body by a running string, or band, and always worn next the skin, not over the shirt as in Europe.

It will be asked, when the poor Israelite had pawned his outer-garment 'wherein he slept,' what dress was left to him? The answer is probably supplied by the annexed engraving (No. 262), which represents slightly different garments of cotton, or woollen frocks or shirts, which often, in warm weather, form the sole dress of the Bedouin peasants, and the lower class of townspeople. To this the abba or hyke is the proper outer robe (as in fig. 1, No. 261), but is usually, in summer, dispensed with in the day-time, and in the ordinary pursuits and occupations of life. It is sometimes (as in No. 262, fig. 2) worn without, but more usually with, a girdle; and it will be seen that the shorter specimens are not unlike the dress of one of the figures (fig. 3, No. 254) in the earliest of the Egyptian subjects which have been produced. The shirt worn by the superior classes is of the same shape, but of finer materials. This is shown in the figure below (No. 263), which represents a gentleman as just risen from bed. If we call this a shirt, the Hebrews doubtless had it—the sole dress (excepting the cloak) of the poor, and the inner robe of the rich. Such, probably, were the

262.

'sheets' (translated 'shirts' in some versions), of which Samson despoiled thirty Philistines to pay the forfeit of his riddle (Judg. xiv. 13, 19). It

263.

is shown from the Talmud, indeed, that the Hebrews of later days had a shirt called חלוק *chaluk*, which it would appear was often of wool (Lightfoot, *Hor. Heb.* on Luke ix. 3), and which is described as the ordinary inner-garment, the outer

being the cloak or mantle. This shows that the shirt or frock was, as in modern usage, the ordinary dress of the Jews, to which a mantle (abba, hyke, or bournoos) was the outer covering.

The Talmud enumerates eighteen several garments which formed the clothing of the Jews from head to foot (T. Hieros. *Sabb.* fol. 15; T. Bab. *Sabb.* fol. 120), mentioning, however, two sandals, two buskins, &c. This shows, at least, one thing, that they were not more sparingly clad than the modern Orientals. This being the case, we may be sure that although persons of the humbler classes were content with the shirt and the mantle, the wealthier people had other robes between these two, and forming a complete dress without the mantle, which with them was probably confined to out-of-door wear, or ceremonial use. It is of course impossible to discriminate these precisely; but in this matter we cannot be far wrong in trusting to the analogy of existing usages.

In all the annexed figures (No. 264) representing persons of the superior class, we observe the shirt

264.

covered by a striped (sometimes figured) gown or caftan, of mingled silk and cotton. It descends to the ankles, with long sleeves, extending a few inches beyond the fingers' ends, but divided from a point a little above the wrist, so that the hand is generally exposed, though it may be concealed by the sleeve when necessary; for it is customary to cover the hands in the presence of a person of high rank. It is very common, especially in winter, for persons to sleep without removing this gown, but only unloosing the girdle by which it is bound. It is not unusual within doors to see persons without any article of dress outside this; but it is considered decidedly as an undress, and no respectable person is beheld out of doors, or receives or pays visits, without an outer covering. Hence persons clad in this alone are said to be 'naked' in Scripture—that is, not in the usual complete dress; for there can be no manner of doubt that this, or something like this, is the כתונת *cetoneth* of the Scripture (Exod. xxviii. 40; Job xxx. 18; Isa. xxii. 21, &c.). A similar robe is worn by the women, as was also the case among the Israelites (2 Sam. xiii. 18, 19; Cant. v. 3). It is in the bosom of this robe that various articles are carried, and hence the Scriptural expression of giving things 'into the bosom.'

The girdle worn over this, around the waist, is usually a coloured shawl, or long piece of figured white muslin. The girdle of the poorer classes is of coarse stuff, and often of leather, with clasps. This leathern girdle is also much used by the Arabs, and by persons of condition when equipped for a journey. It is sometimes ornamented with workings in coloured worsted, or silk, or with metal studs, shells, beads, &c. Both kinds of girdles were certainly in use among the Hebrews (2 Kings i. 8; Matt. iii. 4; Mark i. 6; comp. Jer. xiii. 1). It is known to all readers of Scripture how often the 'girdle' and the act of 'girding the loins' is mentioned. It seems from 2 Sam. xx. 8 (comp. also the Syrian figure, No. 257, fig. 1), that it was usual to wear a knife or poniard in the girdle. This custom is still general, and denotes not any deadly disposition, but the want of clasp-knives. Men of literary vocations replace it by an inkhorn, as was also the case among the Israelites (Ezek. ix. 2).

Over the gown is worn either the short-sleeved *gibbeh* (fig. 3), which is a long coat of woollen cloth; or the long-sleeved *benish* (fig. 2), which is also of woollen cloth, and may be worn either over or instead of the other. The benish is, by reason of its long sleeves (with which the hands may be covered), the robe of ceremony, and is worn in the presence of superiors and persons of rank. Over one or both of these robes may be worn the abba, bournoos, or hyke, in any of the modes already indicated. Aged persons often wrap up the head and shoulders with the latter, in the manner shown in fig 4.

This same hyke or wrapper is usually taken by persons going on a journey, for the purpose of being used in the same manner as a protection from the sun or wind. This is shown in the annexed cut, representing a group of persons equipped for travel. The robe is here more succinct and compact, and the firm manner in which the whole dress is girded up about the loins calls to mind the passages of Scripture in which the action of 'girding up the loins' for a journey is mentioned.

265.

From this it is also seen that travellers usually

wear a sword, and the manner in which it is worn is correctly shown. It would also appear that the Jews had swords for such occasional uses (Matt. xxvi. 51; Luke xxii. 36).

The necessity of baring the arm for any kind of exertion, must be evident from the manner in which it is encumbered in all the dresses we have produced. This action is often mentioned in Scripture, which alone proves that the arm was in ordinary circumstances similarly encumbered by the dress. For ordinary purposes a hasty tucking up of the sleeve of the right arm suffices; but for a continued action special contrivances are necessary. These are curious, as will be seen by the cut (No. 266). The full sleeves of the

266.

shirt are sometimes drawn up by means of cords, which pass round each shoulder, and cross behind, where they are tied in a knot. This custom is particularly affected by servants and workmen, who have constant occasion for baring the arm; but others, whose occasions are more incidental, and who are, therefore, unprovided with the necessary cords, draw up the sleeves and tie them together behind between the shoulders (fig. 2).

For the dress of females we must refer to the article WOMEN. Certain parts of dress, also, admit of separate consideration, such as the head-dress [TURBAN], and the dress of the feet [SANDALS].

DRINK, STRONG. The Hebrew שֵׁכָר seems to demand a more particular elucidation than it has yet received, inasmuch as it had in all probability a much wider signification than is now conveyed by the phrase 'strong drink.' Mr. Mill, in guarding against the common fallacies arising from the changes and corruptions continually going on in the meaning of terms, by which their signification is modified, narrowed, or enlarged, justly observes that 'we continually have cause to give up the opinions of our forefathers; but to tamper with their language, even to the extent of a word, is an operation of much greater responsibility, and implies, as an indispensable requisite, an accurate acquaintance with the history of the particular word, and of the opinions (or objects) which, in different stages of its progress, it served to express. To be qualified to define the name, we must know all that has ever been known of the properties of the class of objects which are, or originally were, denoted by it' (*Logic*, ii. 261). The mischiefs of an opposite course of criticism have been but too evident in biblical literature, but are now beginning to be remedied and corrected. 'Two or three authors,' observes the Abbé Renaudot, 'who but copy from each other, suffice to give birth to a notion which spreads unexamined by those who follow them: this throws a mist over history, and gives an opportunity to confound truth with falsehood'—an observation not inapplicable to the word under discussion. The principle of interpretation laid down above we have endeavoured to keep steadily in view in treating of this and other kindred subjects; and with regard to the particular word before us, it has been our study to acquire an accurate acquaintance with its history, as well as with that of its derivatives, and as perfect a knowledge of the class of products which are, or originally were, denoted by it, as the lapse of time and the obscurity of the inquiry will permit. The sources open for the illustration of the subject appear to be:—the context of the passages in the Hebrew Scriptures where the noun occurs, which it does twenty-three times, twenty-one in conjunction with יין, *wine;* the verbs and secondary nouns formed from the primordial noun, which express or imply the quality of the original object; the affinities of terms supplied by the kindred or derivative languages, Syro-Arabian or Indo-Germanic; and the evidence of travellers and naturalists respecting the *nature* of the class of objects denoted by the original שכר, or by words analogous to it. [In illustration of the philological changes subsequently noticed, we beg to refer to the principles laid down and developed in the articles ALPHABET and ARABIC LANGUAGE.] We shall class the various senses of the word under three heads, in the order in which we conceive them to have been developed.

1. שכר *shechar*, luscious, *saccharine* drink, or SWEET SYRUP, especially sugar or *honey of dates*, or of the palm-tree (דבש *debash*); also, by accommodation, occasionally the sweet fruit itself. Herodotus, Varro, Dioscorides, Ælian, Tertullian, A. Aphrodisæus, and others, speak of *saccharon*, sugar, as 'honey made by men.' By sugar or honey the Jews understood not only honey of bees, but also syrups made from the fruit or juice of the palm and other trees. Hence sugar is expressed by the Rabbins as דבש־קנים (Joseph. *De Bell. Jud.* v. 4; *Mishna*, Tr. *Nedarim*, vi. 8-10; *Talmud*, Tr. *Berachoth*, fol. 38 *a;* Tr. *Chulin*, 120 *b; Terumoth*, xi. 2; Maimonides, *Comment. in Tr. Biccurim*, i. *Mish.* 3; D'Oyly's *Calmet*, art. 'Honey;' Bochart, Celsius). Dr. T. M. Harris says that 'it is probable that they (the Jews) used it (שכר) to SWEETEN their wine, as we [*i. e.* the Americans] put *honey* into cider to encourage people to drink freely'—a singular observation, illustrating how far our conceptions of foreign customs are moulded by those which we witness at home. 'In Solomon's time, and afterwards,' continues Dr. Harris, 'the wine and sweet cordials seem generally to have been used *separately*' (*Nat. Hist. of Bible*). It seems more probable, however, that the *palm syrup* or honey denoted by שכר, was used both as a sweetmeat or article of food, and as a *drink*, like the Hebrew סבא *sobhe* and the Roman *sapa* (boiled wine), diluted with water, as with the modern grape and honey syrups or sherbets (Prov. ix. 2, 5). The

derivatives of *shechar*, expressive of its first signification, are numerous. Eastward and southward, following the Arabian channel and the Saracenic conquests, we meet with the most obvious forms of the Hebrew word still expressive of sugar. Thus we have the Arabic سكر *sakar*; Persic and Bengálí, *shukkur* (whence our word for sugar-candy, *shukur-kund*, 'rock-sugar'); common Indian, *jaggree* or *zhaggery*; Moresque, *sekkour*; Spanish, *asucar*; and Portuguese, *assucar* (molasses being *mel-de-assucar*, 'honey of sugar,' abbreviated). The wave of population has also carried the original sense and form northwards, embodying the word in the Grecian and Teutonic languages. Hence Greek, σάκχαρ; Latin, *saccharum*; Italian, *zucchero*; German, *zucher* and *juderig*; Dutch, *suiker*; Russian, *sachar*; Danish, *sukker*; Swedish, *socker*; Welsh, *siwgwr*; French, *sucre*; and our own common words *sukkar* (sweetmeat), *sugar*, and *saccharine*. 'Sukkarke' is also an old English word clearly traceable in sense and sound to the same origin, and is used by the writers of the middle ages in the sense of dainty, dessert, or sweetmeat.

This view of the objective noun is supported by the primary significations of the verbal noun שכר *shachar*, to *satisfy* or *satiate* (whence the sense of *reward*, *wages*, &c., attached to other forms of it. To satisfy or cloy is the well-known property of sweet and luscious preparations (as honey, Prov. xxv. 16, 27); whereas 'strong-drink,' in the modern sense of intoxicating, is proverbial for creating an appetite which is insatiable. The drinkers of it 'tarry long at the wine;' they 'rise up early in the morning and continue until night, till wine inflames them;' and when, after suffering its evils, they awake, their cry still is, 'I will seek it yet again' (Prov. xxiii. 30-35; Isa. v. 11, 22). It is easy to perceive how the innocent sense of שכר, as to eat or drink to satiety, gradually had the idea of *excess* superadded to it. The Greek μεθύω, frequently used by the Septuagint translators as the representative of שכר, is a case in point. It first signified to drink to fulness—next, to excess—and, lastly, to intoxication. Thus the Latin *glutio*, 'to swallow,' became the parent of *glutton*, 'one who eats or drinks to excess.' So *drunk*, the past tense of the infinitive 'to drink,' in like manner, came to signify *inebriated*; and the verbal noun 'to fill' in North Britain gave rise to *fou'*, meaning not merely full, but intoxicated. An old French word, now obsolete, *sacrè* or *saker*, 'a glutton,' appears to have been derived from the Hebrew word. The Arabic has derivatives corresponding to those of the Hebrew, viz. شكر *merces*, τιμή, شكر *gratias egit*. The following testimonies, explanatory of the primitive sense and nature of שכר, may be selected from a multitude of travellers and authorities, ancient and modern.

'It is usual,' says Dr. Shaw (*Travels*, i. 262), 'with persons of better fashion, upon a marriage, at the birth or circumcision of a child, or upon any other feast or good day, to entertain their guests with the honey, or *dipse*, as they call it, of the palm-tree.' This serves to explain the sense of דבש in Gen. xliii. 11. 'From the fact that Egypt produces an abundance of honey, we may be led to suppose that the *more valuable date honey* is here intended, which is rarely found in Egypt' (De Sola, Lindenthall, and Raphall's note in *New Translation of the Scriptures*). Vegetable honey, or syrup of dates and of grapes (*rob*-el-aneb), is still largely imported into Egypt. 'The extensive importance of the date-tree,' observes Dr. E. Clarke (*Travels*, v. 409), is one of the most curious subjects to which a traveller can direct his attention. A considerable part of the inhabitants of Egypt, of Arabia, and of Persia, subsist almost entirely upon its fruit. They boast also of its *medicinal virtues*.' Pliny (*Hist. Nat.* xxiii. 4) says, 'The ancients gave the juice of them boiled, instead of hydromel, to the sick *to recruit strength* and to allay thirst, for which purpose they preferred those from Thebais.' The cordial properties of שכר are probably referred to in Prov. xxxi. 6. Another passage in the same traveller illustrates the value of *shechar* in the accommodated sense of 'sweet fruit,' when presented as tithe or offering. 'The dates hung from these trees in such large and tempting clusters, although not quite ripe, that we climbed to the tops of some of them, and *bore away with us large branches with their fruit*. In this manner *dates* are sometimes sent with the branches as presents to Constantinople. It suits the Turks, who are fond of *sweetmeats* of all kinds' (*Travels*, v. 408). This reminds one of the statement of Josephus (*Antiq.* xiii. 13. 5), that at the feast of Tabernacles the Jews carried *boughs of the palm-tree* and the citron-tree in their hands, and on one occasion pelted King Alexander Jannæus with citrons. 'By the word *debash*,' says Calmet, 'the rabbins and lexicographers understand not only the honey of bees, but also *honey of dates*, or the *fruits of the palm-tree*, or the *dates* themselves, from which honey is extracted; and when God enjoins the *first fruits* of the honey to be offered to him, the *first fruits of dates seem to be meant*; for generally the produce only of *fruits* was offered.' The Jewish rabbins render דבש in 2 Chron. xxxi. 5, by DATES (vid. Bagster's *Comprehensive Bible*). The Arabs also still apply DIBS both to the dates and the honey of dates. On the same principle of accommodation as the sacred writers occasionally employ *debhash* as a solid, and even יין, *wine*, in the sense of תירש, *vintage-fruit* (Deut. xxviii. 39; Ps. civ. 14-15; Jer. xl. 10-12), it is probable that שכר *shechar* might also include the sense of 'sweet-fruit,' as in Deut. xiv. 26, where it and יין are placed amongst tithe-offerings as solids to be *eaten*. The learned Dr. Willet (1631) on Lev. x. 9, observes that 'this prohibition may also be extended to the eating of such things as may intoxicate the brain, as *dates* and the fruits of the palm-tree of Egypt; and so D. Kimchi' (*Hexapla in Leviticum*). Some sorts of dates, if gathered too early and badly dried, do, as Pliny observes (*Hist. Nat.* xxiii. 4), cause headache and quasi intoxication. It may be remarked that Pliny (xiii. 4) speaks of a species of fine-flavoured dates as being called *dabula*.

Further illustrations of the nature of 'shechar,' as palm honey or debhash. Abu Zeid al Hasan, a traveller of the ninth century, writing of the Isle of Ceylon, says, 'Their drink is made of *palm honey boiled*, and prepared with the *tari*

or juice which runs from the tree' (*Accounts of India and China*, by two Mohammedan Travellers, p. 84). Sir John Maundevile, who went to the east A.D. 1322, says (*Voyage and Travaile*, p. 141) that 'Sarrasines, that be devout, drynken never no wyn; but sūme drynken it prevyly. For gif they dronken it openly, thei scholde ben repreved. But thei drynken gode Beverage and *swete and norisshynge*, that is made of *Galamelle* [calamus meli]; and that is that men maken *sugar* of, that is of righte gode savour; and it is gode for the Breest.' He further narrates (p. 189) that 'there ben other Trees that beren *Hony*, gode and swete; and other Trees that beren Venym; agenst the whiche there is no Medicyne but on; for *Triacle* will not avaylle, ne non other medicyne.' Huighen van Linschoten (1584), in his *Discours of Voyages*, ch. 56, says of the palm-trees of the Canarijns, that 'they farme or hire those trees for two causes, one for the coquos or fruit to eat it, the other to press *wine* out of them, thereof to drink. When they desire to have no cocus or fruite thereof, they cut the blossomes of the cocus away, and bind a round potte with a narrow mouth, by them called callao, fast unto the tree, and stop the same close round about with pot-earth, so that neyther wine nor aire can eyther enter in, or come forth, and in that sort the pot in short space is full of water, which they call *sura*, and is very pleasant to drink, like sweet whay, and somewhat better.' This *sura* is a form of the Arabic and Persic *syra* or *sheer*, signifying sweet liquor, milk, congealed juice, &c. The word (joined to some particle, as Persic *ob*, 'water or drink,' from the Sanscrit अभि *abhi*, 'before,' fig. *first*, *better*; whence the Latin *ob*; or perhaps to उद् *ud*, UP, fig. *noble*, *superior*) is traceable in the Arabic شربة *sherbh*, whence Persian *sherap* and Turkish *sharrap*, applied in both tongues to *wine*; and hence, too, *sherbet*, 'pleasant liquor,' Italian *sorbetto*, and English *shrub*, *sirop*, and *syrup*. Linschoten continues:—'Of the aforesaid *sura* they likewise make *sugar*, which is called JAGRA; they seethe the water, and set it in the sun, whereof it becometh *sugar*. All along the coast of Malabar there are many thick reeds, specially on the coast of Choromandel, which reeds by the Indians are called *Mambu*, and by the Portingales *Bambu*; these Mambus have a certain matter within them, which is (as it were) the pith of it. The Indians call it SACAR *Mambu*, which is as much to say, as sugar of Mambu [Bamboo], and is a very *medicinable thing*, much esteemed and much sought for by the Arabians, Persians, and Moors, that call it *Tabaxiir*'—i.e. *Tab-a-'shir*, the *x* suffering the same corruption as in *Xeres*, whence *sherries* (wine). Major Sir G. T. Temple, Bart. (*Excursions in the Mediterranean, Algiers, and Tunis*, 1835), says that the best species of dates are either preserved in cases or pressed in jars. 'At the bottom of the jar is a cock, from which is drawn the juice in the form of a *thick luscious syrup*' (ii. 155). Thus the two primitive senses of *shechar* would be included in the command 'to offer the first of thy ripe fruits and of thy liquors'—literally *tears* or droppings (Exod. xxii. 29).

2. שכר, Date or PALM WINE in its fresh and unfermented state. Bishop Lowth translates Isa. xxiv. 9 thus:—

'With songs they shall no more drink wine
[*i. e.* of grapes, יין];
The *palm wine* shall be *bitter* to them that
drink it'—

and observes, note *in loc.*, that 'this is the proper meaning of the word שכר, σίκερα. All enjoyment shall cease; the *sweetest wine* shall become *bitter* to their taste.'

Herodotus, in his account of Assyria, remarks that 'the palm is very common in this country,' and that 'it produces them bread, *wine*, and honey' (i. 193).

The Mohammedan traveller (A.D. 850) says that 'palm wine, *if drunk fresh*, is *sweet like honey*; but if kept, it turns to *vinegar*' (p. 9).

Maundevile, who travelled above 500 years ago, says, 'Other trees there ben also, that beren *wyn* of noble sentement.' He then describes the *jaggree* or sugar palm, and adds, 'the *hony* and the *wyn* and the venym ben drawen out of other trees, in the same manere, and put in vessels for to kepe' (p. 189).

Mandelslo (1640), speaking of the village of Damre near Surat, records thus:—'*Terry or Palm Wine*. In this village we found some *terry*, which is a liquor drawn out of the palm-trees, and drank of it in cups made of the leaves of the same tree. To get out the juice, they go up to the top of the tree, where they make an incision in the bark, and fasten under it an earthen pot, which they leave there all night, in which time it is fill'd with a certain *sweet liquor* very pleasant to the taste. They get out some also in the day-time, but that [owing to the great heat] *corrupts immediately*, and is good only for vinegar, which is *all the use they make of it*' (*Ambassador's Travels*, p. 23).

Adam Fabroni, an Italian writer of celebrity, informs us that 'the palm-trees, which particularly abounded in the vicinity of Jericho and Engaddi, also served to make a *very sweet wine*, which is made all over the East, being called palm wine by the Latins, and *syra* in India, from the Persian *shir*, which means luscious liquor or drink' (*On the Husbandry of the Ancient Jews*).

Captain Cook says of the palm, 'A kind of *wine* called *toddy* is procured from this tree; the juice, which is collected morning and evening, is the common drink of every individual.' He informs us also that the natives make a *syrup* from this wine, called *gula*, 'by boiling the liquor down till it is sufficiently inspissated.' This is evidently done as a means of preserving the wine *sweet* and preventing its corruption. Dr. Shaw thus describes the unfermented palm wine:—'This liquor, which has a more luscious sweetness than honey, is of the consistence of a thin syrup, but *quickly grows tart and ropy*, acquiring an intoxicating quality' (*Travels*, i. 262). Sir G. T. Temple says, 'We were daily supplied with the sap of the date-tree, which is a delicious and wholesome beverage *when drunk quite fresh*; but if allowed to remain for some hours, it acquires a sharp taste not unlike cider. It is called *leghma*, and, poetically, the tears of the date'—*leghma* being a corruption of *lachryma*. The Landers inform us that '*Palm*

wine is the common and favourite drink of the natives' of Africa—that 'the *juice* is called wine,' and that 'it is either used in this state, or preserved till it acquires rather a BITTER flavour' (*Expedition to the Niger*, iii. 307-8). With these facts before us, the language employed by the prophet in the sublime chapter from which we quoted above, becomes beautifully apposite. His prediction is that 'the land shall be utterly spoiled,' that the light of joy shall be turned into the gloom of sorrow, even as the *sweet drink* which corrupts, grows *sour* and *bitter* to those who drink it. The passage clearly indicates the nature of the drink to have been *sweet* in what the Jews esteemed its most valuable condition, but *bitter* in its fermented state. Hence the drunkard is represented in ch. v. 20-22, as one who 'puts bitter for sweet, and sweet for bitter.' This palm wine, like the honey of dates and sugar, was much valued as a medicine and cordial. Dr. James (1747), in his *Pharmacopœia*, states that 'the liquor or *wine of suri* is said to be highly beneficial to phthisical patients, &c.' (Art. 'Palma Indica').

3. SAKAR, in its third sense as a noun, denotes, both in the Hebrew and the Arabic, fermented or INTOXICATING PALM WINE. Various forms of the noun in process of time became applied to *other* kinds of intoxicating drink, whether made from fruit or from grain. After the destruction of Jerusalem and of the Jewish polity, almost complete confusion prevailed as to its proper signification. With the ancient Jews it was distinguished from wine; but since the Christian era it has been frequently considered both by Jewish and Christian writers as comprehending *all* intoxicating drink. Thus in Spanish *sacar* signifies to draw wine; and *xicara*, a cup or draught. While, however, some authors, imperfectly acquainted with its history and nature, were unduly enlarging its signification, others, from equal ignorance, were narrowing it. Thus Wyckliffe, in the fourteenth century, in translating Luke i. 15, has, 'He schal not drinke wyn ne *sydyr*.' Phillips, in his *World of Words*, however, shows that formerly *cider* was applied to the fresh expressed juice of apples as well as to the fermented. Todd's *Johnson* gives the following derivatives:—'Cider; *sidre*, Italian; *sicera*, Latin; *σίκερα*, Greek. The word is supposed to be originally of Egypt, and denoting an inebriating liquor. *This* sense is now obsolete. In old French *cisere* is used for ale.' *Cervoise*, a drink made from herbs and grain, is the word employed by the pastors of Geneva in their translation of the Bible. The fermented rice wine of the Chinese is called *cha*, that of the Japanese *sacki;* the palm wine of the Celebes is named *sachwire;* and the beer of the Kalmucks *schara*. Arrack has been commonly, but erroneously, derived from *sakar*, and some, including Dr. Paxton (*Illustrations of Scripture; Nat. Hist.* p. 51), have confounded the *arrack* with the palm wine, forgetting that the original wine existed long prior to the discovery of arrack distillation. The true palm wine also, the שכר of the Bible, is exclusively the juice of the palm-tree or fruit, whereas *arrack* is applied to the spirit obtained from fermented rice and other things, and is, as Dr. Shaw remarks, 'the general name for all hot liquors extracted by the alembick' (*Travels*, i. 202). Such liquors furnish more powerful means of intoxication than the ancients possessed, and derive their name, we apprehend, from a poisonous species of the palm-tribe, the *areca*, or 'drunken date-tree,' the nuts of which are mixed with betel-leaf, datura, and other drugs, and made into a confect or preserve, which the Indians chew, or put into their drink to make it intoxicating (Pomet *On Drugs*).

The Arabic confirms our illustrations of the Hebrew, not only in possessing analogous nouns, but also verbs. Hence we have سكر, *intoxicated*, corresponding to the Hebrew *shachar*.

The palm wine of the East, as we have explained, is made intoxicating either by allowing it to corrupt and ferment, thereby losing the sweet-luscious character for which the Orientals esteem it, and becoming ropy, tart, and bitter; or, in its fresh or boiled state, by an admixture of stimulating or stupefying ingredients, of which there is an abundance (vid. Olearius, Mandelslo, Linschoten, and others). Such a practice seems to have existed amongst the ancient Jews, and to have called down severe reprobation (comp. Prov. xxiii. 30; Isa. i. 22; v. 11, 22, and vid. Lowth *in loc.*).—F. R. L.

DROMEDARY. [CAMEL.]

DRUSILLA (Δρούσιλλα), youngest daughter of Herod Agrippa I. She was much celebrated for her beauty, and was betrothed to Epiphanes, prince of Commagene; but was afterwards married to Azizas, king of Emesa, whom the procurator Felix induced her to abandon, in order to live with him. She is mentioned in Acts xxiv. 24 (comp. Joseph. *Antiq.* xix. 9. 1; xx. 7. 1, 2).

DUDAIM (דּוּדָאִים). This word, in its plural form, only occurs in two places of Scripture: first in Genesis xxx. 14-16; and secondly, in Canticles vii. 13. In the first passage it is mentioned several times: 'Reuben went out in the days of wheat harvest, and found *dudaim* (mandrakes) in the field, and brought them home to his mother Leah. Then Rachel said to Leah, give me of thy son's *dudaim;*' also in ver. 15, and in ver. 16, it is said, 'And Jacob came out of the field in the evening, and Leah went out to meet him, and said, Thou must come in unto me, for surely I have hired thee with my son's *dudaim;* and he lay with her that night.' In the second passage we learn that these *dudaim*, or the plants which yielded them, gave out a peculiar odour: 'The *dudaim* (mandrakes) give a smell, and at our gates are all manner of pleasant plants.' From the above passages it is evident that the *dudaim* were collected in the fields, that they were fit for gathering in the wheat harvest in Mesopotamia, where the first occurrence took place; that they were found in Palestine; that they or the plants which yielded them diffused an odour, which Michaelis paraphrases, 'Jam et somnifero odore, venereus mandragoras;' and that they were supposed to be possessed of aphrodisiac powers, or of assisting in producing conception.

From this it is manifest that there is little to guide us in determining what plant is alluded to at such early periods, especially as no similar name has been recognised in any of the cognate languages. Hence great diversities of opinion

have been entertained respecting the plant and produce intended by the name *dudaim.* These Dr. Harris has thus summed up: 'Interpreters have wasted much time and pains in endeavouring to ascertain what is intended by the Hebrew word *dudaim.* Some translate it by "violet," others

267. [Atropa Mandragora.]

"lilies," "jasmins," "truffles or mushrooms;" and some think that the word means "flowers," or "fine flowers." Bochart, Calmet, and Sir Thomas Browne suppose the *citron* intended; Celsius is persuaded that it is *the fruit of the lote-tree;* Hiller that *cherries* are spoken of; and Ludolf maintains that it is the fruit which the Syrians call "mauz" (that is the plantain), resembling in figure and taste the Indian fig; but the generality of interpreters and commentators understand *mandrakes*, a species of melon, by *dudaim.*' Here, however, the author has confounded the melon '*cucumis dudaim*' with the mandrake or mandragora, adopted by the generality of authors. The grounds upon which the mandragora has been preferred are, first, 'The most ancient Greek translator interprets the Hebrew name in Gen. xxx. 14, by mandrake apples (*μῆλα μανδραγορῶν*); and in the Song of Solomon, by mandrakes, *οἱ μανδραγόραι*. Saadias Onkelos and the Syriac version agree with the Greek translators. The first of these puts لفاح *laffach;* the two latter יברוחין *yabruchin;* which names denote the same plant' (Rosenmüller, *Bib. Bot.* p. 130, and note). The earliest notice of *μανδραγόρας* is by Hippocrates, and the next by Theophrastus (*Hist. Plant.* vi. 2). Both of these C. Sprengel (*Hist. Rei Herb.* i. 38, 82) supposes, intend *atropa mandragora.* Dioscorides notices three kinds: 1. the female, which is supposed to be the *mandragora autumnalis* of Berloton; 2. the male, *mandragora vernalis* of the same botanist (these two are, however, usually accounted varieties of *atropa mandragora*); 3. a kind called *morion.* It has been inferred that this may be the same as the mandragora of Theophrastus, which, by some authors, has been supposed to be *atropa belladonna.* To all of these Dioscorides ascribes narcotic properties and says of the first, that it is also called *Circæa*, because it appears to be a root which promotes venery. Pythagoras named the mandragora *anthropomorphon*, and Theophrastus, among other qualities, mentions its soporific powers, and also its tendency to excite to love. Its fruits were called apples of love, and Venus herself Mandragorites. But it is not easy to decide whether the above all refer to the same plant or plants.

Persian authors on *materia medica* give *mandragoras* as a synonyme for يبروج *yebrookh*, or *yabrooz*, which is said to be the root of a plant of which the fruit is called لفاح *loofah.* This, there is little doubt, must be the above *atropa mandragora*, as the Arabs usually refer only to the plants of Dioscorides, and, on this occasion, they quote him as well as Galen, and ascribe narcotic properties to both the root and the fruit. D'Herbelot, under the article 'Abrousanam,' details some of the superstitious opinions respecting this plant, which originated in the East, but which continued for a long time to be retailed by authors in Europe.

By the Arabs it is said to be called *tufah-al-sheitan*, or devil's apple. If we look to the works of more modern authors, we find a continuance of the same statements. Thus Mariti, in his *Travels*, (vol. ii. p. 195), says that the Arabs called the mandrake plant (*yabrochak*), which is, no doubt, the same name as given above. 'At the village of St. John in the mountains, about 6 miles southwest from Jerusalem, this plant is found at present, as well as in Tuscany. It grows low, like lettuce, to which its leaves have a strong resemblance, except that they have a dark green colour. The flowers are purple, and the root is for the most part forked. The fruit, when ripe, in the beginning of May, is of the size and colour of a small apple, exceedingly ruddy, and of a most agreeable odour; our guide thought us fools for suspecting it to be unwholesome. He ate it freely himself, and it is generally valued by the inhabitants as exhilarating their spirits and a provocative to venery.' Maundrell was informed by the chief priest of the Samaritans that it was still noted for its genial virtue. Hasselquist also seems inclined to consider it the *dudaim*, for, when at Nazareth, he says, 'what I found most remarkable in their villages was the great quantity of mandrakes that grew in a vale below it. The fruit was now (May 16) ripe. From the season in which this mandrake blossoms and ripens its fruit, one might form a conjecture that it is Rachel's *dudaim.* These were brought her in the wheat harvest, which in Galilee is in the month of May, about this time, and the mandrake was now in fruit.'

Considering therefore that the earliest translators have given *mandragora* and *Yabrokhim* as the synonymous names for dudaim, and that the root and fruits of *atropa mandragora* have, from early times, been supposed to be possessed of the same properties which are ascribed to the *dudaim*,

there does not appear to us any other plant, which has been yet adduced, better entitled than it to stand for the dudaim. But there does not exist sufficient collateral proof to confirm the selection by the Greek translator of the mandragora as the *dudaim*, in preference to some other plants, which might be adduced, and to which similar properties have from ancient times been ascribed.—J. F. R.

DUKE. This word is from the Latin *dux*, 'a captain or leader,' from *duco*, 'to lead.' It thus corresponds with tolerable exactness to the Hebrew אַלּוּף *alluph*, from אָלַף *alaph*, to 'lead,' 'guide.' This word, *alluph*, is usually rendered by 'prince' or 'chief;' but by 'duke' in Gen. xxxvi. 15-30, where we find 'dukes of Edom.' The translator was doubtless seduced by the identity of signification into the somewhat improper, although not incorrect, use of a modern title.

DULCIMER. [MUSIC.]

DUMAH (דּוּמָה), a tribe and country of the Ishmaelites in Arabia (Gen. xxv. 14; Isa. xxi. 11). It is doubtless the same that is still called by the Arabs *Duma the Stony*, and *the Syrian Duma*, situated on the confines of the Arabian and Syrian deserts, with a fortress (Niebuhr, *Beschreibung*, p. 344).

DUMAH was also the name of a town in the tribe of Judah (Josh. xv. 52), which Eusebius and Jerome place seventeen R. miles from Eleutheropolis, in Daroma.

DUNG. Among the Israelites, as with the modern Orientals, dung was used both for manure and for fuel. In a district where wood is scarce, dung is so valuable for the latter purpose, that little of it is spared for the former.

The use of dung for manure is indicated in Isa. xxv. 10, from which we also learn that its bulk was increased by the addition of straw, which was of course, as with us, left to rot in the dunghill. Some of the regulations connected with this use of dung we learn from the Talmud. The heaping up of a dunghill in a public place exposed the owner to the repair of any damage it might occasion, and any one was at liberty to take it away (*Bava-kama*, i. 3. 3). Another regulation forbade the accumulation of the dunghill to be removed, in the seventh or sabbatic year, to the vicinity of any ground under culture (*Sabb.* iii. 1), which was equivalent to an interdiction of the use of manure in that year; and this must have occasioned some increase of labour in the year ensuing.

The use of dung for fuel is collected incidentally from the passage in which the prophet Ezekiel, being commanded, as a symbolical action, to bake his bread with human dung, excuses himself from the use of an unclean thing, and is permitted to employ cows' dung instead (Ezek. iv. 12-15). This shows that the dung of animals, at least of clean animals, was usual, and that no ideas of ceremonial uncleanness were attached to its employment for this purpose. The use of cow-dung for fuel is known to our own villagers, who, at least in the west of England, prefer it in baking their bread 'under the crock,' on account of the long-continued and equable heat which it maintains. It is there also not unusual in a summer evening to see aged people traversing the green lanes with baskets to collect the cakes of cow-dung which have dried upon the road. This helps out the ordinary fire of wood, and makes it burn longer. In many thinly-wooded parts of south-western Asia the dung of cows, camels, horses, asses, whichever may happen to be the most common, is collected with great zeal and diligence from the streets and highways, chiefly by young girls. They also hover on the skirts of the encampments of travellers, and there are often amusing scrambles among them for the droppings of the cattle. The dung is mixed up with chopped straw, and made into cakes, which are stuck up by their own adhesiveness against the walls of the cottages, or are laid upon the declivity of a hill, until sufficiently dried. It is not unusual to see a whole village with its walls thus garnished, which has a singular and not very agreeable appearance to a European traveller. Towards the end of autumn, the result of the summer collection of fuel for winter is shown in large conical heaps or stacks of dried dung upon the top of every cottage. The usages of the Jews in this matter were probably similar in *kind*, although the *extent* to which they prevailed cannot now be estimated.

DURA (דּוּרָא), the plain in which Nebuchadnezzar set up his golden image (Dan. iii. 1). Traces of the name have been idly sought in quarters too distant from Babylon to have been historically possible, as it is clear from the context that 'the plain of Dura' could be no other than that plain (or some part of it) in which Babylon itself was situated.

DUST. For storms of dust, &c., see STORM; for throwing dust on the head, see MOURNING.

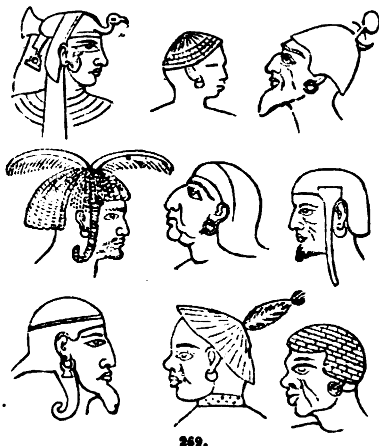
E.

EAGLE (נֶשֶׁר *nisr;* Arab. *nesr;* Chald. *nescher;* Coptic, *akhom;* Exod. xix. 4; Lev. xi. 13, &c.). The Eagle, in zoology, forms a family of several genera of birds of prey, mostly distinguished for their size, courage, powers of flight, and arms for attack. The bill is strong and bent into a plain pointed hook, without the notch in the inner curve which characterizes falcons; the nostrils are covered with a naked cere or skin, of a yellow or a blue colour; the eyes are lateral, sunken, or placed beneath an overhanging brow; the head and neck covered with abundance of longish, narrow-pointed feathers; the chest broad, and the legs and thighs exceedingly stout and sinewy. Eagles, properly so called, constitute the genus *Aquila*, and have the tarsi feathered down to the toes; they are clothed in general with brownish and rust-coloured feathers, and the tail is black, grey, or deep brown. Sea-eagles (genus *Haliætus*) have the tarsi or legs half bare and covered with horny scales; not unusually the head, back, and tail more or less white. The larger species of both measure, from head to tip of tail, 3 feet 6 inches or more, and spread their wings above 7 feet 6 inches; but these are proportionably broad to their length: for it is the third quill feather which is the longest; as if the Creator intended to restrain within bounds their rapidity of flight, while by their breadth the power of continuing on the wing

is little or not at all impeded. The claws of the fore and hind toe are particularly strong and sharp; in the sea-eagles they form more than half a circle, and in length measure from 1½ to 1¾ of an inch. Under the name of *nisr* the Scriptures include species of both the above, and in some cases, also, the larger vultures, or the genus *vultur proper* [VULTURE]. These majestic birds have their abode in Europe, on the shores of the Mediterranean, in Syria and Arabia, wherever there are vast woody mountains and lofty cliffs: they occupy each a single district, always by pairs, excepting on the coasts, where the sea-eagle and the osprey (*Pandion haliætus*) may be found not remote from the region possessed by the rough-legged eagles—the first because it seeks to subsist on the industry of the second, and does not interfere with the prey of the third. It is in this last genus, most generally represented by the golden eagle (*aquila chrysæta*) that the most powerful and largest birds are found. That species in its more juvenile plumage, known as the ring-tailed eagle, the Imperial eagle, or mogilnick (*aq. heliaca*), and the booted eagle (*aq. pinnata*) is found in Syria; and at least one species of the sea-eagles (the *hal. ossifragus*, *albicilla*, or *albicaudus*) frequents the coasts, and is even of

268. [Aquila heliaca.]

stronger wing than the others. These build usually in the cliffs of Phœnicia, while the others are more commonly domiciliated within the mountains. According to their strength and habits the former subsist on antelopes, hares, hyrax, bustard, stork, tortoises, and serpents; and the latter usually on fish; both pursue the catta (*pterocles*), partridge, and lizard. The osprey alone being migratory retires to Southern Arabia in winter. None, excepting the last-mentioned, are so exclusively averse to carrion as is commonly asserted: from choice or necessity they all, but in particular the sea-eagles, occasionally feed upon carcases of horses, &c.; and it is well known in the East that they follow armies for that purpose. Hence the allusions in Job and Matt. xxiv. 28, though vultures may be included, are perfectly correct. So again are those which refer to the eagle's eyrie, fixed in the most elevated cliffs. The swiftness of this bird, stooping among a flock of wild geese, with the rushing sound of a whirlwind, we have witnessed; and all know its towering flight, suspended on its broad wings among the clouds with little motion or effort. Thus the predictions, in which terrible nations coming from afar are assimilated to eagles, have a poetical and absolute truth, since there are species like the golden, which really inhabit the whole circumference of the earth, and the nations alluded to bore eagles' wings for standards, and for ornaments on their shields, helmets, and shoulders. In the northern half of Asia, and among all the Turkish races, this practice is not entirely abandoned at this day, and eagle ensigns were constantly the companions of the dragons. China, India, Bactria, Persia, Egypt, the successors of Alexander, the Etruscans, the Romans, the Celtæ, and the Arabs had eagle signa of carved work, of metal, or the skins of birds stuffed, and set up as if they were living. These, named עיט *ait*, *ἀετός*, aquila, eryx, simurg, humma or humaion, karakoosh (the birds of victory of different nations and periods of antiquity), were always symbolical of rapid irresistible conquest. A black eagle was the ensign of Kalid, general of Mohammed, at the battle of Aisnadin, and the carved eagle still seen on the walls of the citadel of Cairo, set up by Karakoosh, the vizir of Salah-ed-deen, to commemorate his own name and administration, indicates a species not here enumerated. *Aq. heliaca*, here figured, is the species most common in Syria, and is distinguished from the others by a spot of white feathers on each shoulder.—C. H. S.



EARING. This word, which occurs in the Authorized Version (Gen. xlv. 6), is very often supposed to mean 'collecting the *ears* of corn,' which would confound it with harvest, from which it is distinguished in this very passage. But the word is radically the same with *harrow*, and denotes *ploughing*; from the Anglo-Saxon *erian* 'to plough.' It is also traced in *arar* Spanish, *aeron* Dutch, *aeria* Swedish, *er* Icelandic, *oriu* Sclavonic, *orze* Polish, *aráidh* Gaelic, *aredig* Welsh, *aro* Latin, *ἀρόω* Greek, *charath* Arabic, and *charash* (חָרשׁ) Hebrew, which is the original word in this place (*Critica Biblica*, iii. 210).

EARNEST. *Ἀῤῥαβών* is evidently the Hebrew עֵרָבוֹן in Greek characters. With a slight alteration in the letters, but with none whatever in the sense, it becomes the Latin *arrhabo*, contr. *arrha*; French *arres*; English *earles* and *earnest*. These three words occur in the Hebrew, Septuagint, and Vulgate, in Gen. xxxviii. 17, 18, and in ver. 20, with the exception that the Vulgate there changes it to *pignus*. The use of these words in this passage clearly illustrates their general import; which is, that of an earnest or pledge, given and received, to assure the fulfilment of an engagement. Hesychius explains *ἀῤῥαβὼν* by *πρόδομα*, somewhat given beforehand. This idea attaches to all the *particular* applications of the word, as, anything given by way of warrant or security for the performance of a promise; part of a debt paid as an assurance of paying the remainder; part of the price of anything paid beforehand to confirm the bargain between buyer and seller; part of a servant's wages paid

at the time of hiring, for the purpose of ratifying the engagement on both sides. The idea that the earnest is either to be returned upon the fulfilment of the engagement, or to be considered as part of the stipulation, is also included. The word is used three times in the New Testament, but always in a figurative sense: in the first (2 Cor. i. 22), it is applied to the *gifts* of the Holy Spirit, which God bestowed upon the *apostles*, and by which he might be said to have hired them to be the servants of his son; and which were the earnest, assurance, and commencement of those far superior blessings which He would bestow on them in the life to come, as the wages of their *faithful* services:—in the two latter (2 Cor. v. 5; Eph. i. 13, 14), it is applied to the gifts bestowed on *Christians generally* upon whom, after baptism, the Apostles had laid their hands, and which were to them an *earnest* of obtaining an heavenly habitation and inheritance, upon the supposition of their fidelity. This use of the term finely illustrates the augmented powers and additional capacities promised in a future state. Jerome, in his comment on the second passage, exclaims, Si arrhabo tantus, quanta erit possessio: 'If the earnest was so great, how great must be the possession.' See Kypke, Macknight, and Middleton on these passages. Le Moyne, *Not. ad Var. Sacr.* pp. 460-80.—J. F. D.

EAR-RINGS. No custom is more ancient or universal than that of wearing ear-rings, from which it would appear to be a very natural idea to attach such an ornament to the pendulous lobe of the ear. There are two words in Hebrew denoting ear-rings, viz. עָגִיל *agil*, which is applied to any kind of ring, particularly to ear-rings (Num. xxxi. 50; Ezek. xvi. 12). The name implies *roundness*, and it is a fact that nearly all the ancient ear-rings exhibited in the sculptures of Egypt and Persepolis are of a circular shape. The other word is נזם *nezem*, and, as this word is also applied to a nose-jewel, we may suppose that it was a kind of ear-ring, different from the round 'agil,' and more similar to the nose-jewel. It most certainly denotes an ear-ring in Gen. xxxv. 4: but in Gen. xxiv. 47; Prov. xi. 22; Isa. iii. 21; it signifies a nose-jewel; and it is doubtful which of the two is intended in Judg. viii. 24, 25; Job xlii. 11. Ear-rings of certain kinds were anciently, and are still, in the East, instruments or appendages of idolatry and superstition, being regarded as talismans and amulets. Such probably were the ear-rings of Jacob's family, which he buried with the strange gods at Beth-el (Gen. xxxv. 4).

No conclusion can be formed as to the shape of the Hebrew ear-rings except from the signification of the words employed, and from the analogy of similar ornaments in ancient sculpture. Those worn by the Egyptian ladies were large, round, single hoops of gold, from one inch and a half to two inches and one-third in diameter, and frequently of still greater size, or made of six single rings soldered together. Such probably was the round 'agil' of the Hebrews. Among persons of high or royal rank the ornament was sometimes in the shape of an asp, whose body was of gold set with precious stones [AMULETS]. Silver ear-rings have also been found at Thebes, either plain hoops like the ear-rings of gold, or simple studs. The modern Oriental ear-rings are more usually jewelled drops or pendents than circlets of gold. But the writer has seen a small round plate of silver or gold suspended from a small ring inserted into the ear. This circular plate (about the size of a halfpenny) is either marked with fanciful figures or set with small stones. It is the same kind of thing which, in that country (Mesopotamia), is worn as a nose-jewel, and in it we perhaps find the Hebrew ear-ring which is denoted by the same word that describes a nose-jewel.

259.

The use of ear-rings appears to have been confined to the women among the Hebrews. That they were not worn by men is implied in Judg. xiv. 24, where gold ear-rings are mentioned as distinctive of the Ishmaelite tribes. The men of Egypt also abstained from the use of ear-rings; but how extensively they were worn by men in other nations is shown by the annexed group of heads of different foreigners, collected from the Egyptian monuments. By this also the usual forms of the most ancient ornaments of this description are sufficiently displayed.

EARTH. There are two words in Hebrew which are translated sometimes by *earth*, and sometimes by *land*. These are ארץ *eretz*, and אדמה *adamah*, both of which are rendered by γῆ in the Septuagint, and this γῆ is rendered by 'earth,' 'land,' 'ground,' in the New Testament. The word *adamah*, however, is applied chiefly to the very *substance* of the earth, as soil, ground, clay, although sometimes denoting a region, land, or country; whereas *eretz* more generally denotes the *surface* of the earth, and is hence, in the earlier parts of the Bible, opposed to שמים *shamayim*, 'the heavens.'

Besides the ordinary senses of the word or words rendered 'earth' in our translation—namely, as denoting mould, the surface of the earth, and the terrestrial globe—there are others in Scripture which require to be discriminated. 1. 'The earth' denotes '*the inhabitants of the earth*' (Gen. vi. 11; xi. 1). 2. *Heathen countries*, as distinguished from the land of Israel, especially during the theocracy; *i. e.* all the rest of the world excepting Israel (2 Kings xviii. 25; 2 Chron. xiii. 9, &c.). 3. In the New Testament especially, 'the earth' appears in our translation as applied to the land

of Judæa. As in many of these passages it might seem as if the habitable globe were intended, the use of so ambiguous a term as 'the earth' should have been avoided, and the original rendered by 'the land,' as in Lev. xxv. 23; Isa. x. 23, and elsewhere. This is the sense which the original bears in Matt. xxiii. 35; xxvii. 45; Mark xv. 33; Luke iv. 25; xxi. 23; Rom. ix. 28; James v. 17. For the cosmological uses of the term, see GEOGRAPHY.

EARTHENWARE. [POTTERY.]

EARTHQUAKE (רַעַשׁ). The proximate cause of earthquakes, though by no means accurately defined, seems referable to the action of internal heat or fire. That the earth was once subject to the action of a vast internal power springing probably from the development of subterranean or central heat, the elevations and depressions, and the generally scarred and torn character of its exterior make sufficiently evident. A power similar in kind, but more restricted in degree, is still at work in the bowels of the earth, and occasionally breaks down all barriers and devastates certain parts of the world.

There is good reason for holding that earthquakes are closely connected with volcanic agency. Both probably spring from the same cause; and may be regarded as one mighty influence operating to somewhat dissimilar results. Volcanic agency, therefore, is an indication of earthquakes, and traces of the first may be taken as indications of the existence (either present or past, actual or possible) of the latter.

The manifestation of these awful phenomena is restricted in its range. Accordingly geologists have laid down certain volcanic regions or bands within which this manifestation takes place. Over these regions various traces of volcanic agency are found, such as either gaseous vapours or hot springs, or bituminous substances, and in some instances (occasionally) active volcanoes. Several sources of bitumen are found on the Tigris, in the Persian mountains, near the Kharoon, and at Bushire, as well as along the Euphrates. At Hit, especially, on the last-mentioned river, it exists on a very large scale, and, having been much used from the earliest times, seems inexhaustible. Abundant traces of it are also to be seen amid the ruins and over the entire vicinity of Hillah—the ancient Babylon. Syria and Palestine abound in volcanic appearances. Between the river Jordan and Damascus lies a volcanic tract. The entire country about the Dead Sea presents indubitable tokens of volcanic agency.

Accordingly these places come within one of the volcanic regions. The chief of these are—1. that which extends from the Caspian Sea to the Azores; 2. from the Aleutian Isles to the Moluccas; 3. that of the Andes; 4. the African; 5. the Icelandic. Syria and Palestine are embraced within the first band; and these countries have not unfrequently been subject to earthquakes. The first visitation of the kind, recorded to have happened to Palestine, was in the reign of Ahab (B.C. 918-897), when Elijah (1 Kings xix. 11, 12) was directed to go forth and stand upon the mountain before Jehovah: 'and behold Jehovah passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before Jehovah; but Jehovah was not in the wind: and after the wind *an earthquake;* but Jehovah was not in the earthquake: and after the earthquake a fire; but Jehovah was not in the fire: and after the fire a still small voice.' A terrible earthquake took place 'in the days of Uzziah, king of Judah' (B.C. 811-759), which Josephus (*Antiq.* ix. 10. 4) says, 'shook the ground, and a rent was made in the Temple, so that the rays of the sun shone through it, which, falling upon the king's face, struck him with the leprosy,' a punishment which the historian ascribes to the wrath of God consequent on Uzziah's usurpation of the priest's office. That this earthquake was of an awful character, may be learnt from the fact that Zechariah (xiv. 5) thus speaks respecting it—'Ye shall flee as ye fled from before the earthquake in the days of Uzziah, king of Judah:' and also that it appears from Amos (i. 1) that the event was so striking, and left such deep impressions on men's minds, that it became a sort of epoch from which to date and reckon; the prophet's words are, 'two years before the earthquake.'

That earthquakes were among the extraordinary phenomena of Palestine in ancient times is shown in their being an element in the poetical imagery of the Hebrews, and a source of religious admonition and devout emotion. In Psalm xviii. 7, we read, 'Then the earth shook and trembled; the foundations also of the hills moved and were shaken, because he was wroth' (comp. Hab. iii. 6; Nah. i. 5; Isa. v. 25). It was not an unnatural transition that any signal display of the will, sovereignty, or goodness of Providence, should be foretold in connection with, and accompanied as by other signs in the heavens above or on the earth below, so by earthquakes and their fearful concomitants (see Joel ii. 28; Matt. xxiv. 7, 29). The only earthquake mentioned in the New Testament is that which happened at the crucifixion of the Saviour of mankind (Matt. xxvii. 50-1; Luke xxiii. 44-5; Mark xv. 33). This darkness has been misunderstood, and then turned to the prejudice of Christianity [DARKNESS]. The obscuration was obviously an attendant on the earthquake. Earthquakes are not seldom attended by accompaniments which obscure the light of day during (as in this case from the sixth to the ninth hour, that is, from 12 o'clock at noon to 3 o'clock P.M.) several hours. If this is the fact, then the record is consistent with natural phenomena, and the darkness which sceptics have pleaded against speaks actually in favour of the credibility of the Gospel. Now it is well known to naturalists that such obscurations are by no means uncommon. It may be enough to give the following instances. A very remarkable volcanic eruption took place on the 19th of January, 1835, in the volcano of Coseguina, situated in the Bay of Fonseca (usually called the Coast of Conchagua), in Central America. The eruption was preceded by a rumbling noise, accompanied by a column of smoke which issued from the mountain, increasing until it assumed the form and appearance of a large dense cloud, which, when viewed at the distance of thirty miles, appeared like an immense plume of feathers, rising with considerable velocity, and expanding in every direction. In the course of the two following days several shocks of earthquakes were felt; the morning of the 22nd rose fine and clear, but a dense cloud of a pyramidal form was observed in the direction

of the volcano. This gradually ascended, and by 11 o'clock A.M. it had spread over the whole firmament, entirely obscuring the light of day, the darkness equalling in intensity that of the most clouded night: this darkness continued with little intermission for three days; during the whole time a fine black powder continued to fall. This darkness extended over half of Central America. The convulsion was such as to change the outline of the coast, turn the course of a river, and form two new islands. Precisely analogous phenomena were exhibited on occasions of earthquakes that took place at Cartago, in Central America, when there prevailed a dense black fog, which lasted for three days (*Recreations in Physical Geography*, p. 382).

In the case of the volcanic eruption which overwhelmed Herculaneum and Pompeii (A.D. 79), we learn from the younger Pliny that a dense column of vapour was first seen rising vertically from Vesuvius, and then spreading itself out laterally, so that its upper portion resembled the head, and its lower the trunk of a pine. This black cloud was pierced occasionally by flashes of fire as vivid as lightning, succeeded by darkness more profound than night, and ashes fell even at Misenum. These appearances agree perfectly with those witnessed in more recent eruptions, especially those of Monte Nuovo in 1538, and Vesuvius in 1822. Indeed earthquakes appear to exert a very marked influence on our atmosphere: among other effects Lyell (*Principles of Geology*, i. 400) enumerates sudden gusts of wind, interrupted by dead calms, evolution of electric matter, or of inflammable gas, from the soil, with sulphureous and mephitic vapours; a reddening of the sun's disk and a haziness in the air often continued for months (Joel ii. 30, 31).

Earthquakes, together with thunder, lightning, and other fearful phenomena of nature, form no small portion of the stock of materials which the interpreters of the German rationalistic school employ with no less liberality than confidence, in order to explain after their manner events recorded in the Scriptures, which have been commonly referred to the immediate agency of God. Hezel, Paulus, and other miracle-exploders would, but for this resource, find their 'occupation gone.' But, if there is reason for the statement that truth is sometimes stranger than fiction, it may with equal propriety be observed that their 'natural' causes are most unnatural, unlikely, and insufficient.

An earthquake devastated Judæa some years (31) before the birth of our Lord, at the time of the battle of Actium, which Josephus (*Antiq.* xv. 52) reports was such 'as had not happened at any other time, which brought great destruction upon the cattle in that country. About ten thousand men also perished by the fall of houses.' Jerome writes of an earthquake which, in the time of his childhood (about A.D. 315), destroyed Rabbath Moab (Jerome *on Isaiah*, xv.). The writers of the middle ages also speak of earthquakes in Palestine, stating that they were not only formidable, but frequent. In 1834 an earthquake shook Jerusalem, and injured the chapel of the nativity at Bethlehem. As late as the year 1836 (Jan. 1) Jerusalem and its vicinity were visited by severe shocks of earthquake, yet the city remains without serious injury from these subterranean causes.—J. R. B.

EAST. This word, which is used by English writers in only two senses, viz. to denote either the quarter of the heavens where the sun rises, or the regions in the eastern part of the world, has frequently *three* senses in the Authorized Version of the Bible. Thus, it is sometimes used to represent the Hebrew מזרח, which properly means the *sun-rising* (Ps. ciii. 12), 'as far as the east is from the west;' sometimes its derivative, מזרח, when applied to *land* lying in a true easterly direction (Josh. iv. 19); and *very frequently* it corresponds to קדם *kedem*, the name given by the ancient Hebrews to a certain region, without any regard to its relation to the eastern part of the heavens, comprehending not only Arabia Deserta and the lands of Moab and Ammon, which really lay to the east of Palestine, but also Armenia, Assyria, Mesopotamia, Babylonia, and Chaldæa, which were situated rather to the north than the east of Judæa. Its geographical boundaries include Syria, the countries beyond the Tigris and Euphrates, the shores of the Indian ocean and of the Arabian gulf. The name given to this entire region by the Hebrews was ארץ קדם (ἀνατολή), or the land of Kedem or East; by the Babylonians it was called ערב, or Ἀραβία. Its miscellaneous population were called by the former בני קדם, sons of the east, or orientals, and by the latter, ערבים, or the people of the west. The Jews themselves also apply to them the Babylonian name in some of their books written after the captivity (2 Chron. xxii. 1; Neh. ii. 9). The Arabs anciently denominated themselves, and do to this day, by either of these names. To this region belong מלכי קדם, the kings of the east (Isa. xix. 11; Jer. xxv. 19-25, Heb.). The following passages may suffice as instances showing the arbitrary application of the term 'east' to this region. Balaam says that Balak, king of Moab, had brought him from the mountains of the east (Num. xxiii. 7), *i. e.* from Pethor on the Euphrates. Isaiah places Syria in the east (ix. 11) ארם מקדם, 'the Syrians from the east' (Bishop Lowth). The distinction seems evident in Gen. xxix. 1, 'Jacob came unto the land of the children of the east.' It occurs again in Judg. vi. 3, 'Even the children of the east came against them;' Sept. οἱ υἱοὶ ἀνατολῶν; Vulg. *ceteri orientalium nationum*. The preceding facts enable us to account for the prodigious numbers of persons sometimes assembled in war against the Israelites (Judg. vi. 5; vii. 12), 'and the children of the east were like grasshoppers for multitude,' and for the astonishing carnage recorded (Judg. viii. 10), 'there fell an hundred and twenty thousand men that drew the sword.' It seems that the inhabitants of this region were distinguished for their proficiency in the arts and sciences (comp. 1 Kings i. 4, 30), and were addicted in the time of Isaiah to superstition (Isa. xxvi.). The wise men, who came from the east to Jerusalem at the birth of the Saviour, no doubt belonged to this tract of country, 'saying we have seen his star in the east.' Campbell justly remarks that 'to see either star or meteor in the east,' means, in English, to see it in the east-quarter of the heavens, or looking eastward. But this cannot be the evangelist's meaning. The meaning manifestly is, that when the magians themselves were in the east, they saw the star.

So far were they from seeing the star in the east, according to the English acceptation of the phrase, that they must have seen it in the west, as they were by its guidance brought out of the east country westwards to Jerusalem. Thus the plural of the same word, in the preceding verse, signifies 'the countries lying east from Judæa.' See also ver. 9, where ἀνατολῇ means the place where they first saw the star. Luther's translation reads *im morgenlande*. (Campbell's *Four Gospels translated from the Greek*, 1789, vol. ii. p. 353; Rosenmüller *On Job*, i. 3; Wesley's *Dis. Lib. Job*, 1735, p. 214; Winer, *Bibl. Realwörterbuch*, art. 'Morgenland;' Spanheim's *Hist. Jobe*, c. iv. § 6, p. 84; Gesenius, *Handwörterbuch*, &c.; Jahn, *Archäologie Bibl.*)—J. F. D.

EAST WIND. [WIND.]

EBAL and GERIZIM, two mountains of Samaria, forming the opposite sides of the valley which contained the ancient town of Shechem, the present Nabulus. From this connection it is best to notice them together. The valley which these mountains enclose is about 200 or 300 paces wide, by above 3 miles in length; and Mount Ebal rises on the right hand and Gerizim on the left hand of the valley (which extends west-north-west) as a person approaches Shechem from Jerusalem. It was on Mount Ebal that God commanded to be reared up an altar, and a pillar inscribed with the law; and the tribes were to be assembled, half on Ebal and half on Gerizim, to hear the fearful maledictions pronounced by the Levites upon all who should violate the obligations of the sacred code, and the blessings promised to those who should observe them. The tribes which responded with simultaneous 'Amens' to the curses, were to be stationed on Mount Ebal, and those who answered to the blessings, on Mount Gerizim. This grand ceremony—perhaps the most grand in the history of nations—could not have found a more fitting scene; and it was duly performed by Joshua as soon as he gained possession of the Promised Land (Deut. xxvii.; Josh. viii. 30-35). Dr. Robinson (*Bib. Researches*, iii. 96) says—'Mounts Gerizim and Ebal rise in steep, rocky precipices, immediately from the valley on each side, apparently some 800 feet in height. The sides of both these mountains as here seen (*i. e.* from Nabulus) were, to our eyes, equally naked and sterile, although some travellers have chosen to describe Gerizim as fertile, and confine the sterility to Ebal. The only exception in favour of the former, as far as we could perceive, is a small ravine coming down opposite to the west end of the town, which indeed is full of fountains and trees; in other respects both mountains, as here seen, are desolate, except that a few olive-trees are scattered upon them. The side of the northern mountain, Ebal, along the foot, is full of ancient excavated sepulchres. The southern mountain is now called by the inhabitants Jebel-et-Tûr, though the name Gerizim is known, at least, to the Samaritans. The modern appellation of Ebal we did not learn.'

A still more recent American traveller, Dr. Ollin, ascended to the top of Gerizim, which he states to be somewhat higher than that of Ebal. The ascent is by an ancient road excavated in the side of the mountain with much labour, and in the steeper parts of the ascent fashioned into a regular flight of broad stone steps. This was probably the principal ascent to the ancient town and fortress, whose ruins cover the top of the mountain, and that pursued by the religious processions in their way from the valley of Shechem to the temple which the Samaritans built on this mountain in rivalry of the orthodox Temple at Jerusalem [SAMARITAN]. The top of Gerizim affords a commanding view of a considerable region, chiefly occupied with mountains of inferior elevation, but also embracing several fruitful valleys, especially those of Nabulus and of Wady Sahl, through which lies the road to Jerusalem. A great number of villages are seen all along its north-eastern side, upon high and apparently precipitous spurs of the mountain which push out into the valley from (Wady Sahl) the main ridge. Dr. Ollin declares that the region which he overlooked from the top of Gerizim had the appearance of being the most populous as well as the most fruitful which he had seen in Palestine. Cultivation is carried quite to the top of the mountains, which are adorned with plantations of fruit-trees, while every level spot and a vast number of small fields, supported by terraces, were sown in wheat. A considerable portion of the table-land on the summit of Gerizim itself exhibits marks of recent tillage. Mount Ebal, as viewed from Gerizim, spreads out, like the latter, into a table-land, but is apparently rocky and more broken, and less susceptible of cultivation. Dr. Ollin saw, or imagined that he saw, the appearance of ruins upon Mount Ebal, nearly opposite Nabulus, but was unable to satisfy himself by a nearer examination (*Travels in the East*, ii. pp. 340-347). If there appears any contradiction in the accounts of the two American writers, it may be removed by observing that Dr. Ollin's visit was in the vernal month of April; Dr. Robinson's, in the parched month of June; that Dr. Ollin speaks of the view from the top of Gerizim, looking not *into*, but *out of*, the valley of Nabulus, over the opposite slope of the mountain, and the lower heights and the fine plain (Wady Sahl) below, and then turning to view that side of Ebal which is presented to the valley of Nabulus; whereas the description of Dr. Robinson applies to both mountains as seen from that narrow valley. Many of the apparent discrepancies in the accounts of travellers might be removed, and the bearings of the subject enlarged, by attention to such differences in the points of view.

EBEN-BOHAN. [BOHAN.]

EBEN-EZEL (אֶבֶן הָאֶזֶל, *stone of departure*); an old stone of testimonial, mentioned in 1 Sam. xx. 19. The circumstance which it commemorated is not known.

EBEN-EZER (אֶבֶן הָעֵזֶר, *stone of help*), the name given to a stone which Samuel set up between Mizpeh and Shen, in witness of the divine assistance obtained against the Philistines (1 Sam. vii. 12).

EBER [HEBER.]

EBODA, one of the stations of the Israelites in the wilderness. [WANDERING, THE.]

EBONY. [HABENIM.]

ECBATANA. [ACHMETHA.]

ECCLESIASTES (קֹהֶלֶת *Koheleth*). 1. *The Hebrew Name of the Book.*—This book has obtained its Hebrew name from the designa-

tion of the principal person mentioned in it, who is thus self-styled in several passages. The feminine termination of the name has given rise to the opinion that Koheleth means a body or academy of sages, whose dicta are contained in this book; but this opinion is contradicted by the heading of the book itself, which thus commences: *Words of* קהלת*, the son of David, the king in Jerusalem.* Hence it appears that Koheleth is intended for an epithet of Solomon. Compare also ch. i. 12, 'I, Koheleth, was king over Israel in Jerusalem.' With one exception, in ch. vii. 27, the word Koheleth is always construed as a masculine noun.

The various interpreters who consider Koheleth as expressive of a person, differ in their translation of it in different manners. Some follow the Septuagint, in which it is translated Ἐκκλησιαστής, *assembler*. Others interpret it by COLLECTOR; which implies, they state, that the author not merely intended to communicate his own wisdom, but that he had compiled the experience of former sages. The verb קהל, however, does not mean to *compile*, but always to *assemble* or to *convene a meeting*. It hence appears that the Septuagint translation, *assembler, preacher*, or *teacher*, is correct. Still there remains to be explained the feminine form of the word. The only correct explanation of this is, that Solomon was called Koheleth because he was personified Wisdom, החכמה, and that Wisdom spoke through him. St. Augustine says, 'Sapientia per Salomonem cecinit.' So, also, among the moderns, Ewald, *Grammar*, p. 569; and *Die Poëtischen Bücher des Alten Bundes*, th. iv. p. 180. According to this interpretation, the construction of קהלת, both with the masculine and with the feminine, may be equally well explained. If with the masculine, the bearer of the name is considered; but if with the feminine, the חכמה, *wisdom*, which animates him, is kept chiefly in view.

According to the usual opinion, which has again lately been defended by Knobel, the feminine termination is to be explained by the fact that *abstracta* frequently occur *pro concretis;* and that especially abstract names of offices are transferred as titles to the office-bearers. This explanation does not apply here, because Koheleth is not an *abstractum*, like *prædicatio*, describing Solomon as a living preaching, but can only mean something like *concionatrix, prædicatrix*.

The title of the book, however, indicates that the author did not write only for a literary public, but that he had in view the whole congregation of the Lord; and that his doctrine was not confined within the narrow bounds of a school, but belonged to the church in its whole extent. Compare Ps. xlix. 2-4.

II. *The Author of the Book.*—The circumstance that Solomon is introduced as the speaker in this book has induced most of the ancient interpreters to consider him as its author. This opinion was opposed by Grotius, who says, 'Ego tamen Salomonis esse non puto, sed scriptum serius sub illius regis tanquam pœnitentia ducti nomine.' In support of this assertion Grotius appeals to the peculiarities of the language.

The only argument in support of the opinion that Solomon was the author of the book appears quite insufficient, from this single circumstance, that the author also of the book entitled the Wisdom of Solomon, which was written in Greek, introduces Solomon as speaking. Hence the question arises whether it is not merely in form that the author of Ecclesiastes does the same. He certainly seems to indicate this by introducing Solomon not by his proper name, but by the name Koheleth; which signifies that Solomon is not introduced in his individual capacity, but is here rather to be considered as the representative of Wisdom.

But the greatest obstacle in the way of considering Solomon to be the author, is the character of the language. Many opponents of the Solomonic authorship certainly went much too far in their assertions. The Grecisms which Zirkle thought that he had found have now generally been given up. The Rabbinisms likewise could not stand the proof. The words, significations, and forms which seem to appertain to a later period of Hebrew literature, and the Chaldaisms, an abundance of which Knobel gathered, require, as Herzfeld has shown, to be much sifted. (קהלת, *übersetzt und erläutert*, von Dr. L. Herzfeld, Braunschweig, 1838, p. 13, sq.) According to Herzfeld, there are in Koheleth not more than between eleven and fifteen 'young Hebrew' expressions and constructions, and between eight and ten Chaldaisms. Nevertheless, it is certain that the book does not belong to the productions of the first, but rather to the second period of the Hebrew language. This alone would not quite disprove the authorship of Solomon, if we could produce any weighty argument in its favour. We could suppose that Solomon, in a philosophical work, found the pure Hebrew language to be insufficient; and had, therefore, recourse to the Chaldaizing popular dialect, by which, at a later period, the book-language was entirely displaced. This supposition could not be rejected *à priori*, since almost every one of the Hebrew authors before the exile did the same, although in a less degree. There exist, however, no weighty positive reasons for supposing Solomon to be the author; and the striking difference between the language of Koheleth and the language of the Proverbs renders that explanation quite inadmissible. This difference would prove little if the two books belonged to two entirely different classes of literature; that is, if Koheleth bore the same relation to the Proverbs as the Song of Solomon does: but since Koheleth and the Proverbs belong essentially to the same class, the argument taken from the difference of style must be admitted to be perfectly conclusive

Among the other arguments which have been produced against Solomon's authorship, the only one which seems to have some importance, is that the author now and then forgets his fiction; for instance, in ch. i. 12, where he says 'I was king over Israel in Jerusalem.' But such passages are by no means decisive. The arguments taken from the contents, which Knobel at p. 77, sq. has produced, are quite futile. For instance, that Solomon, who was constantly prosperous, could not have written in so melancholy a manner, and could not have complained about the prevalence of injustice without writing a satire against himself; that he would not have written so

unfavourably about women, to whom he was so partial, &c.

Supposing it now proved that Solomon is only introduced as the speaker, the question arises why the author adopted this form. The usual reply is, that Solomon among the Israelites had, as it were, the prerogative of wisdom; and hence the author was induced to put into Solomon's mouth that wisdom which he intended to proclaim, without the slightest intention of forging a supposititious volume. This reply contains some truth; but it does not exhaust the matter.

The chief object of the author was to communicate wisdom in general; but next to this, as appears from ch. i. 12, sq., he intended to inculcate the vanity of human pursuits. Now, from the mouth of no one could more aptly proceed the proclamation of the nothingness of all earthly things than from the mouth of Solomon, who had possessed them in all their fulness; at whose command were wisdom, riches, and pleasures in abundance; and who had therefore full opportunity to experience the nothingness of all that is earthly. What Rambach, in his *Annotationes Uberiores*, th. ii. p. 829, says, presupposing the authorship of Solomon, may with slight alteration be applied to the real author: 'Neque vero sine singulari Dei providentia, ille præ reliquis divinitus excitatus fuit, qui rerum hujus sæculi omnium vanitatem doceret, ut nimirum apud omnes eo majores momenti esset testimonium ejus, cui tantus antea rerum vanarum amor, ut nihil inexpertum reliquerit, tantus opum apparatus fuit, ut voluptates ac delicias omnes gustaturus nulla sumtuum inopia excluderetur.'

III. *Date of the Book.*—The history of the canon fixes the time after which the book cannot have been written. It cannot have been written after the times of Ezra and Nehemiah, under whom the canon was completed. The writers who asserted that Koheleth was written at the conclusion of the Persian and at the beginning of the Macedonian period, or who even make it as late as the time of the Maccabees, are unable to produce any argument capable of standing proof, and can scarcely render their assertions probable.

The style alone furnishes the date BEFORE which the book cannot have been written; that is, not before the time of Aramæan influence. But within these boundaries we are unable to produce any valid reasons for fixing the date more precisely. The language cannot be our guide, because, after the Aramæan dialect had commenced to penetrate into the Hebrew, the degree of its adoption depended henceforth upon the peculiar character of individual authors. The reasons deduced from the contents, by means of which Ewald, p. 179, sq., has endeavoured to prove that the author lived in the later period of the Persian government, the contemporary of Malachi and Nehemiah, are unimportant. A sense of the vanity of earthly things, complaints respecting the perversion of justice, oppression, and arbitrary government; admonitions to obey the magistrates; all this is, according to Ewald, indicative of the later period of the Persian government, which probably became at last oppressive and odious. But to all this there could be produced parallels from the ancient books of Holy Writ, because these are sentiments and facts as old and as lasting as the world. One circumstance alone seems to indicate that Koheleth was not written during the latter period of the first, but rather during the time of the second temple, since idolatry does not occur amongst the deviations combated by the author. The whole book seems to presuppose that the people were externally devoted to the Lord. The admonitions of the author to a serene enjoyment of life, and against murmuring; exhortations to be contented with Divine Providence, and the attacks upon a selfish righteousness of works, may best be explained by supposing the author to have lived in a period like that of Malachi, in which there prevailed a Pharisaical righteousness of works, and melancholy murmurings because God would not recognise the alleged *rights* which they produced before him, and refused to acknowledge the *claims* they made upon him. Whoever will compare Koheleth and Malachi will find a striking similarity.

IV. *Plan.*—The author places the fundamental idea of the nothingness of all earthly things both at the beginning and at the end of his book, and during its course repeatedly returns to the same. This has induced many interpreters to suppose that the purpose of the author was to demonstrate this one idea; an opinion which, down to the most recent times, has been unfavourable to the true interpretation of the book, because every thing, however reluctant, has been forced into an imaginary connection. The following is the correct view. The object of the author is not to teach an especial tendency of wisdom, but wisdom in general. Consequently, it is not at all surprising if the connection suddenly ceases, and a new subject commences. The artificial process by which Ewald, for instance, frequently endeavours to establish a connection, is quite inadmissible. That the idea of the nothingness of earthly matters should strongly predominate may easily be explained, since according to our author it forms a very important part of wisdom. He never, however, intended to confine himself to this one idea, although he likes frequently to point it out in passing, even when he is considering a matter from another point of view. Herder, although he also too much supposes that the author intended to treat of a particular subject, has best explained the plan of Koheleth (*Werke zur Religion und Theologie*, th. xiii. p. 148, 1829): 'The plan of this book has been the subject of much investigation. It is best to consider this plan as free as possible, and to employ its separate parts for its support. The commencement and the conclusion show the unity of the whole. But since King Solomon would not write a *disputatio de vanitate rerum*, the greater part consists of isolated observations concerning the course of the world, and the experience of his life. These are connected with general sentences; and, finally, a very simple conclusion is deduced from the whole. It seems to me that a more artificial texture ought not to be sought for.'

Several interpreters have supposed that Koheleth consists of a dialogue between a considerate sage and a discontented sceptic. Others have thought that not two persons, but two voices, or two moods of the same person, are to be distinguished, whose conflict is at the conclusion terminated in the victory of the better part by faith. This opinion, however, originated from an imperfect understanding, which seemed to discover every where

irreconcilable contradictions. Whoever penetrates deeper will perceive that the author remains unchanged from the beginning to the end.

V. *Contents and Objects of the Book.*—Here we consider only the fundamental idea, omitting isolated sentences of wisdom, and rules for the conduct of life. Nobody can entertain any doubt concerning this fundamental idea. It is contained in the sentence: 'Vanity of vanities; all is vanity.' It is, however, very important that this should be rightly understood. The question is, What is that ALL which is vanity? The author does not mean ALL in general, but only ALL of a certain genus. He himself explains this, by defining this ALL in numerous passages; as, 'all that is under the sun;' that is, earthly things in their separation from the heavenly. To this leads also the enumeration of the ALL, in which occur only those things which belong to the earth—riches, sensual pleasure, honour, sphere of activity, human wisdom apart from God, self-righteousness. From many passages it appears that the author was far from comprehending the fear of God and active obedience to his laws among that ALL which was vanity. This appears most strikingly from the conclusion, which, as such, is of the highest importance, and furnishes the undoubted measure for the correctness of the whole interpretation. 'Let us hear the conclusion of the whole matter: Fear God, and keep his commandments: for this is the whole duty of man [*i. e.* in this consists all that is incumbent upon him; and his whole salvation depends upon it]. For God shall bring every work into judgment, with every secret thing, whether good, or whether evil.' (Compare ch. xii. 1: 'Remember now thy Creator in the days of thy youth;' ch. v. 5-7, 'Fear thou God;' ch. vii. 18, and many other passages.) A deep religious sense pervades the whole book. In reference to the prevailing idea, Ewald strikingly remarks, p. 182, 'There blows throughout this book a piercing chill against every earthly aim, and every vain endeavour; a contempt which changes into a bitter sneer against every thing which in the usual proceedings of men is one-sided and perverse; an indefatigable penetration in the discovery of all human vanities and fooleries. In no earlier writing has all cause of pride and vain imagination so decidedly and so comprehensively been taken from man; and no book is pervaded by such an outcry of noble indignation against all that is vain in this world.'

From the contents of the book results its object. The author had received the mission to treat professedly and in a concentrated manner the highly important sentence, 'Vanitas vanitatum, omniaque vanitas,' which pervades the whole of Holy Writ; but he is not content with the mere theoretical demonstration, so as to leave to another teacher its practical application, but places before us these practical results themselves: What is incumbent upon man, since every thing else is nought? What real good remains for us, after the appearance in every seeming good has been destroyed? The answer is, Man shall not gain by cunning and grasping; shall not consume himself in vain meditations, nor in a hurried activity; he shall not murmur about the loss of that which is naught; he shall not by means of a self-made righteousness constrain God to grant him salvation; but he shall instead fear God (ch. xii. 13; v. 6, 7), and be mindful of his Creator (ch. xii. 1); he shall do good as much as he is able (ch. iii. 12); and in other passages. And all this, as it is constantly inculcated by the author, with a contented and grateful heart, freed from care and avarice; living for the present moment, joyfully taking from the hand of the Lord what he offers in a friendly manner. Man shall not be of a sorrowful countenance, but in quiet serenity enjoy the gifts of God. What would avail him all his cares and all his avarice? By them he cannot turn any-thing aside from him, or obtain any thing, since every thing happens as it shall happen. This aim of the book has been best developed by Ewald among the moderns; but it was already perfectly well understood by Luther, who, in his *Præfatio in Ecclesiasten*, says, 'Est status et consilium hujus libelli erudire nos, ut cum gratiarum actione utamur rebus præsentibus et creaturis Dei, quæ nobis benedictione Dei largiter dantur et donatæ sunt, sine solicitudine futurorum, tantum ut tranquillum et quietum cor habeamus et animum gaudii plenum, contenti scilicet verbo et opera Dei.'

VI. *Misunderstandings of this Book.*—This book has always had many warm friends, even among those who have not been decided believers in revelation. Herder, for instance, p. 146, says, 'I do not know any book in the whole of the Old Testament that describes more fully, more convincingly, or more concisely, the whole sum of human life, with all its changes and vanities, in occupations, plans, speculations, and pleasures; and at the same time that which alone is real, lasting, progressive, and rewarding.'

On the other hand, this book has excited various doubts, and met with opposition. St. Jerome, in his commentary on ch. xii. v. 13, relates that, according to the statement of the Hebrews, they were disinclined to receive it into the canon: 'eo quod vanas assereret Dei creaturas et totum putaret esse pro nihilo, et cibum et potum et delicias transeuntes præferret omnibus;' but that the conclusion of the volume had saved its divine authority. Similar doubts occur in the Talmud and other Jewish writings. These doubts were not, however, allowed to prevail, but were suppressed in deference to the conclusion of Koheleth.

Within the Christian Church the divine inspiration of Koheleth, the Proverbs, and the Song of Solomon was denied by Theodorus of Mopsuestia. In recent times, the accusers of Koheleth have been Augusti, De Wette, and Knobel; but their accusations are based on mere misunderstandings. They are especially as follows:—1. The author is said to incline towards a moral epicurism. All his ethical admonitions and doctrines tend to promote the comforts and enjoyments of life. But let us consider above all what tendency and disposition it is to which the author addresses his admonition, serenely and contentedly to enjoy God's gifts. He addresses this admonition to that speculation which will not rest before it has penetrated the whole depth of the inscrutable councils of God; to that murmuring which bewails the badness of times and quarrels with God about the sufferings of our terrene existence; to that gloomy piety which wearies itself in imaginary good works and external strictness, with a view to wrest salvation from God; to that avarice which gathers, not

knowing for whom; making the means of existence our highest aim; building upon an uncertain futurity which is in the hand of God alone. When the author addresses levity he speaks quite otherwise. For instance, in ch. vii. 2, 4, 'It is better to go to the house of mourning than to the house of feasting; for that is the end of all men; and the living will lay it to his heart. Sorrow is better than laughter; for by the sadness of the countenance the heart is made better. The heart of the wise man is in the house of mourning; but the heart of fools is in the house of mirth.' The nature of the joy recommended by the author is also misunderstood. Unrestrained merriment and giddy sensuality belong to those vanities which our author enumerates. He says to laughter, thou art mad, and to joy, what art thou doing? He says, ch. vii. 5, 6, 'It is better to hear the rebuke of the wise than for a man to hear the song of fools. For as the crackling of thorns under a pot, so is the laughter of a fool; this also is vanity.' That joy which he recommends is joy in God. It is not the opposite, but the fruit of the fear of God. How inseparable these are is shown in passages like ch. v. 6, vii. 18. iii. 12, 'I know that there is no good in them, but for a man to rejoice, and to do good in his life;' and in many similar passages, but especially ch. xi. 9, 10, and xii. 1, 'Remember now thy Creator in the days of thy youth,' &c. In reference to these passages Ewald says, p. 186, 'Finally, in order to remove every doubt, and to speak with perfect clearness, he directs us to the eternal judgment of God, concerning all the doings of man, and inculcates that man, in the midst of momentary enjoyment, should never forget the whole futurity, the account and the consequences of his doings, the Creator and the Judge.' Ewald adds, p. 227, in reference to the conclusion, 'In order to obviate every possible misunderstanding of this writing, there is, ver. 13, once more briefly indicated that its tendency is not, by the condemnation of murmuring, to recommend an unbridled life; but rather to teach, in harmony with the best old books, the fear of God, in which the whole man consists; or that true singleness of life, satisfying the whole man, and which comprehends every thing else that is truly human. It is very necessary to limit the principle of joy which this book recommends again and again in various ways and in the most impressive manner; and to refer this joy to a still higher truth, since it is so liable to be misunderstood. 2. It is objected that in his views concerning the government of the world the author was strongly inclined to fatalism, according to which everything in this world progresses with an eternally unchangeable step; and that he by this fatalism was (3.) misled into a moral scepticism, having attained on his dogmatical basis the conviction of the inability of man, notwithstanding all his efforts, to reach his aim. However, this so-called fatalism of our author is nothing else but what our Lord teaches, Matt. vi. 25: 'Take no thought,' &c. And as for the moral scepticism, our author certainly inculcates that man with all his endeavours can do nothing; but at the same time he recommends the fear of God, as the never-failing means of salvation. Man in himself can do nothing; but in God he can do all. It is quite clear from ch. vii. 16, 18, where both self-righteousness and wisdom, when separated from God, are described as equally destructive, and opposite to them is placed the fear of God, as being their common antithesis, that our author, by pointing to the sovereignty of God, did not mean to undermine morality: 'He that feareth God comes out from them all.' If our author were given to moral scepticism, it would be impossible for him to teach retribution, which he inculcates in numerous passages, and which are not contradicted by others, in which he says that the retribution in individual circumstances is frequently obscure and enigmatical. Where is that advocate for retribution who is not compelled to confess this as well as our author? (4.) This book has given offence also, by ch. iii. 21, and similar passages, concerning immortality. But the assertion that there is expressed here some doubt concerning the immortality of the soul is based on a wrong grammatical perception. The ה cannot, according to its punctuation, be the interrogative, but must be the article; and our author elsewhere asserts positively his belief in the doctrine of immortality (ch. xii. 7). How it happens that he did not give to this doctrine a prevailing influence upon his mode of treating his subject has lately been investigated by Heyder, in his essay entitled *Ecclesiastæ de Immortalitate Animi Sententia*, Erlangen, 1838.—E. ECCLESIASTICUS. [Wisdom of Sirach.]

ECDIPPA. [Achzib.]

EDEN. [Paradise.]

EDOM. [Esau.]

EDOMITES. [Idumæa.]

EDREI (אֶדְרֶעִי; Sept. Ἐδραείν), one of the metropolitan towns (Ashtaroth being the other) of the kingdom of Bashan, beyond the Jordan. It was here that Og, the gigantic king of Bashan, was defeated by the Israelites, and lost his kingdom (Num. xxi. 33-35; Deut. i. 4; iii. 1-3). Edrei afterwards belonged to eastern Manasseh (Josh. xiii. 31). It is mentioned in the Onomasticon as 24-25 R. miles from Ashtaroth. It was the seat of a bishop in the early ages of Christianity, and a bishop of Adraa sat in the council of Seleucia (A.D. 381), and of Chalcedon (A.D. 451). Adraa was the name given to the place by the Greeks: by the Crusaders it was known as Adratum, and also as Civitas Bernardi de Stampis (Will. Tyr. p. 895). Abulfeda calls it Adsraat (*Tab. Syr.* 79). The place now bears the name of Draa, and has been visited in the present century by most of the travellers who have explored the country beyond the Jordan,—Seetzen, Burckhardt, Buckingham, Richter, G. Robinson, &c. It is situated in a deep valley, two hours south-east from Mezareib; and the ruins cover an extent of about two miles in circumference, the principal being an immense rectangular building, with a double covered colonnade all around, and a cistern in the middle. This seems to have been originally a Christian church, and afterwards a mosque. Near the town, in the hollow of the mountains, is a large reservoir cased with stone, near which are the ruins of a large building, with a cupola of light materials.

EGLON (עֶגְלוֹן; Sept. Ἐγλώμ), a king of Moab, who, assisted by the Ammonities and Amalekites, subdued the Israelites beyond the Jordan, and the southern tribes on this side the

river, and made Jericho the seat, or one of the seats, of his government. This subjection to a power always present must have been more galling to the Israelites than any they had previously suffered. It lasted eighteen years, when (B.C. 1428) they were delivered, through the instrumentality of Ehud, who slew the Moabitish king (Judg. iii. 12-33).

EGOZ (אֱגוֹז). This word occurs in the Song of Solomon, vi. 11, 'I went into the garden of *nuts*,' where probably 'walnuts' are intended. The Hebrew name is evidently the same as the Persian گوز *gowz*, which has been converted by the Arabs into جوز *jowz*, by a process common in the case of many other words beginning with the interchangeable letters *gaf* and *jim*. In both languages these words, when they stand alone, signify the walnut, *gouz-bun* being the walnut-tree: when used in composition they may signify the nut of any other tree;—thus *jouz-i-boa* is the nutmeg, *jouz-i-hindi* is the Indian or cocoa-nut, &c. So the Greeks employed κάρυον, and the Romans' *nux* to denote the walnut; which last remains in modern languages, as Ital. *noce*, Fr. *noix*, Span. *nuez*, and Ger. *nusz*. The walnut was, however, also called κάρυον βασιλικόν (Diosc. i. 179), royal nut, and also Περσικόν, or Persian, from having been so highly esteemed, and from having been introduced into Greece from Persia: the name *juglans* has been derived from Jovis glans. That the walnut was highly esteemed in the East we learn from Abulpharagius, who states that Al Mahadi, the third caliph of the Abassides, 'sub juglande sub qua sedere solebat, sepultus est.' That it is found in Syria has been recorded by several travellers. Thevenot found it in the neighbourhood of Mount Sinai, and Belon says of a village not far from Lebanon, that it was

270. [Walnut—Juglans regia.]

'bien ombragé d'ormeaux et de noyers.' That it was planted at an early period is well known, and might be easily proved from a variety of sources.

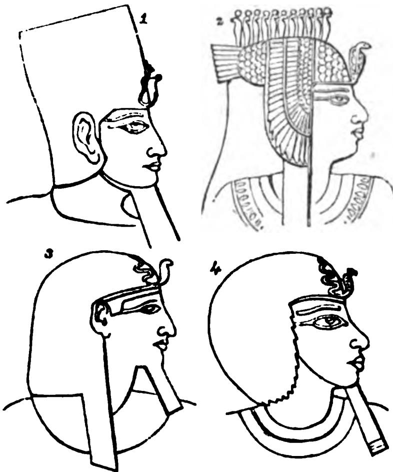
The walnut, or *juglans regia* of botanists, belongs to the natural family of juglandeæ, of which the species are found in North America and in Northern Asia. The walnut itself extends from Greece and Asia Minor over Lebanon and Persia, probably all along the Hindoo Khoosh to the Himalayas, and is abundant in Cashmere (*Him. Bot.* p. 342). The walnut-tree is well known as a lofty, wide spreading tree, affording a grateful shade, and of which the leaves have an agreeable odour when bruised. It seems formerly to have been thought unwholesome to sit under its shade, but this appears to be incorrect. The flowers begin to open in April, and the fruit is ripe in September and October. The tree is much esteemed for the excellence of its wood; and the kernel of the nut is valued not only as an article of diet, but for the oil which it yields. Being thus known to, and highly valued by, the Greeks in early times, it is more than probable that, if not indigenous in Syria, it was introduced there at a still earlier period, and that therefore it may be alluded to in the above passage, more especially as Solomon has said, 'I made me gardens and orchards, and planted trees in them of all kind of fruits' (Eccles. ii. 5).—J. F. R.

EGYPT (מִצְרַיִם, poetically מָצוֹר; in Ps. cv. 23, אֶרֶץ חָם), the land of Ham, a son of Noah, from whom was derived the ancient native appellation of the country, Chemi. From Mizraim, the second son of Ham, comes the ordinary Biblical name, Mizraim, a word which properly denotes Lower Egypt, as being that part of the country with which the Israelites were nearest and best, if not (in the earlier periods of their history) solely, acquainted. This designation, however, is sometimes used for Egypt indiscriminately, and was by the later Arabs extended to the entire country. Josephus (*Antiq.* i. 6, 2) says that all those who inhabit the country call it Mestrém, and the Egýptians, Mestræens. The word Chemi, according to Plutarch, signifies black, in allusion to the dark colour of the water of the Nile. The Greek and European name (ἡ Αἴγυπτος), Egypt, is of uncertain origin and signification (Champollion, *L'Egypte*, i. 77). In Homer, the Nile is called Egypt, Αἴγυπτος.

Egypt is the land of the Nile, the country through which that river flows from the island of Philæ, situated just above the Cataracts of Syene, in lat. 24° 1′ 36″, to Damietta, in 31° 35′ N., where its principal stream pours itself into the Mediterranean Sea. On the east it is bounded by Palestine, Idumæa, Arabia Petræa, and the Arabian Gulf. On the west, the moving sands of the wide Libyan desert obliterate the traces of all political or physical limits. Inhabited Egypt, however, is restricted to the valley of the Nile, which, having a breadth of from two to three miles, is enclosed on both sides by a range of hills: the chain on the eastern side disappears at Mocattam; that on the west extends to the sea. In lat. 30° 15′, the Nile divides into two principal streams, which, in conjunction with a third that springs somewhat higher up, forms the Delta, so called from its resemblance to the Greek letter Δ. These mountains are interesting, if for no other reason than that they served as the bed whence the materials were obtained out of which were constructed the wonderful buildings for

which Egypt is justly distinguished. The superficial extent of Egypt has been estimated at about 11,000 square miles. The soil, which is productive, consists almost exclusively of mud brought down and deposited by the river, whose waters are indispensable every year for the purposes of agriculture to such an extent that the limits of their flow are the limits of vegetation. The Delta owes its very existence to the deposits of the Nile, and but for the waters of this stream, carried over its surface by natural or artificial means, would soon be a desert: it was therefore with propriety, as, indeed, was the entire country, termed 'the gift of the Nile.' The agency of the stream is the more necessary because rain very seldom falls in Lower Egypt. The land, placed as it is on the confines of Africa and Asia, yet so adjacent and accessible to Europe, in itself a garden and a store-house, may well have held an important position in the ancient world, and can hardly fail, unless political influences are very adverse, to rise to a commanding attitude in modern times. As to the number of its inhabitants, nothing very definite is known. Its fertility would doubtless give birth to, and support, a teeming population. In very remote times as many as 8,000,000 of souls are said to have lived on its soil. In the days of Diodorus Siculus they were estimated at 3,000,000. Volney made the number 2,300,000. The present government estimate is 3,200,000, which seems to be somewhat beyond the fact (Bowring's *Report on Egypt and Candia*, p. 4).

Egypt naturally divides itself into two great sections at the apex of the Delta, the country lying south of that point being designated Upper Egypt, that north of it Lower Egypt. Upper Egypt itself was divided into the Thebais and the Heptanomis: the Thebais extended from Philæ to Hermopolis; Heptanomis, from Hermopolis to the point where the Delta begins to form itself. Under the Ptolemies, and probably at a very early period, the whole country was divided into thirty-six cantons or provinces (Diod. Sic. i. 54; Strabo, xvii. 1), which division was maintained till the invasion of the Saracens. It is now composed of 24 departments, which, according to the French system of geographical arrangement, are subdivided into arrondissements and cantons (Bowring's *Report*).



The Nile is never mentioned by name in our translation of the Old Testament: it is always called the river of Egypt, although the word Nile (שחר) occurs in the original (Isa. xxvii. 12; Josh. xv. 4; 2 Kings xxiv. 7). In these places the river of Egypt, literally the Nile of the Egyptians, is spoken of as the boundary of Palestine. The desert appears to have been the natural boundary between Palestine and Egypt; but map-makers, agreeably with their idea of the passages just referred to, have inserted a stream in the desert, and called it Ægyptus. Yet there is no difficulty in understanding the claim of the Jewish writers to extend Palestine, say to the Pelusian mouth of the Nile, when it is remembered that Solomon had ports on the Red Sea.

Till within a few years the sources of the Nile and the termination of the Niger were hid in alike mysterious obscurity. The latter has been discovered, but the former, notwithstanding many strenuous efforts and some pretence, remain to reward the enterprise of some more fortunate traveller. The various branches of the Nile have their rise in the high lands north of the equator. The three principal branches of the Nile are, 1. the Bahr el Abiad, or White River, to the west, which is now known to be the largest and longest; 2. the Bahr el Azrek, or Blue River, in the centre; 3. the Tacazzé, or Abara, which is the eastern branch. The Nile, from its confluence with the Tacazzé (17° 45′ north lat.) down to its entrance into the Mediterranean (1200 geographical miles), receives no permanent streams; but in the rainy season it receives wadys, or torrents, from the mountains. The annual overflow of the river, on which the ancients wrote so obscurely, is known to arise from the periodical rains which fall within the tropics. The rich alluvial deposits which the Nile spreads over Nubia and Egypt are mainly derived through the Blue River; the White River, or longest stream, bringing nothing of the kind. Owing to the yearly deposit of alluvial matter, both the bed of the Nile and the land of Egypt are being gradually raised. The river proceeds in its current uniformly and quietly at the rate of two and a half or three miles an hour, always deep enough for navigation. Its water is usually blue, but it becomes of a deep brick-red during the period of its overflow. It is salubrious when drunk, meriting the encomiums which it has so abundantly received. On the river the land is wholly dependent. If the Nile does not rise a sufficient height, sterility and dearth, if not famine, ensue. An elevation of sixteen fathoms is essential to secure the prosperity of the country. Such, however, is the regularity of nature, and such the faithfulness of God, that for thousands of years, with but few and partial exceptions, these inundations have in essential particulars been the same. The waters of the stream are conveyed over the surface of the country by canals when natural channels fail. During the overflow the land is literally inundated, and has the appearance of a sea dotted with islands. Wherever the waters reach, abundance springs forth. The cultivator has scarcely more to do than to scatter the seed. No wonder that a river whose waters are so grateful, salubrious, and beneficial, should in days of ignorance have been regarded as an object of worship, and that it is still revered and beloved.

Well may Egypt have been visited as a granary by the needy in ancient times (Gen. xii. 10; Exod. xvi. 3; Joseph. *Antiq.* xv. 9, 2). Besides corn, the country produced onions, garlic, beans, pumpkins, cucumbers, melons, flax, cotton and wine. The acacia, sycamore, palm, and fig-tree adorned the land; but there was a want of timber. The Nile produced the useful papyrus, and abounded in fish. On its banks lurked the crocodile and hippopotamus. The Egyptian oxen were celebrated in the ancient world (Aristot. *Hist. Anim.* viii. 28). Horses abounded (1 Kings x. 28); hence the use of war-chariots in fight (Isa. xxxi. 1; Diod. Sic. i. 45), and the celebrity of Egyptian charioteers (Jer. xlvi. 4; Ezek. xvii. 15). The land was not destitute of mineral treasures. Gold mines were wrought in Upper Egypt (Diod. Sic. iii. 12).

The climate is very regular and exceedingly hot; the atmosphere clear and shining; a shade is

not easily found. Though rain falls even in the winter months very rarely, it is not altogether wanting, as was once believed. Thunder and lightning are still more unfrequent, and are so completely divested of their terrific qualities that the Egyptians never associate with them the idea of destructive force. Showers of hail descending from the hills of Syria are sometimes known to reach the confines of Egypt. The formation of ice is very uncommon. Dew is produced in great abundance. The wind blows from the north from May to September, when it veers round to the east, assumes a southerly direction, and fluctuates till the close of April. The southerly vernal winds, traversing the arid sands of Africa, are most changeable as well as most unhealthy. They form the simoom or samiel, and have proved fatal to caravans and even to armies (*View of Ancient and Modern Egypt*, Edin. Cab. Library). Musquitos, locusts, frogs, together with the plague, the small pox, and leprosy, are the great evils of the country.

271. 1. Egypto-Ethiopian (the Tirhake of Scripture); 2, 4. Ethiopian; 3. Egyptian.

The most recent inquiries have shown that the extreme limit at Philæ was only of a political nature; for the natives of the country below it were of the same race as those who lived above that spot—a tribe which passed down into the fertile valley of the Nile from its original abode in the south. These Ethiopians and the Egyptians were not negroes, but a branch of the great Caucasian family. Their colour—at least the colour of the higher castes—was brown; their frame slender, but of great strength. Their speech, now found in the Coptic, is akin to the Shemitic tongues. The women were very fruitful (Strabo, xv. p. 695; Heeren, *Ideen*, xi. 2, 10).

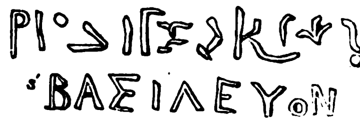
The mode of life of the Egyptians was influenced by their locality: those who dwelt on high lands on the east, as well as those who dwelt on the marshy flat country in the Delta, were shepherds, as their land did not admit cultivation. The people who lived along the Nile became fishermen and sailors. The cultivated part of the natives who lived on the plains and over the surface of the country diligently and most successfully practised all the arts of life, and have left ever-during memorials of their proficiency and skill.

On this natural diversity of pursuits, as well as on a diversity of blood—for besides the master and ruling race of Ethiopians were others who were of nomade origin—was founded the institution of castes, which Egypt had in common with India, and which pervaded the entire life of the nation. These, according to Herodotus (xi. 164), were seven in number (comp. Diod. Sic. i. 73). The priestly caste was the most honoured and influential. It had in every large city a temple dedicated to the deity of the place, together with a high priest, who stood next to the king and restricted his power. The priesthood possessed the finest portions of the country. They were the judges, physicians, astrologers, architects,—in a word, they united in themselves all the highest culture and most distinguished offices of the land, while with them alone lay tradition, literature, and the sacred writings. This class exerted the most decided and extensive influence on the culture not only of their own country, but of the world; for during the brightest periods of Grecian history the love of knowledge carried into Egypt men who have done much to form the character of after ages, such as Solon, Pythagoras, Archytas, Thales, Herodotus, Plato, and others (comp. Gen. xli. 8; Exod. vii. 11; viii. 11; xiii. 7; Joseph. *Antiq*. ii. 9, 2).

The peculiarities of the ancient Egyptians of the lower castes seem to have survived best, and to be represented, at least in some particulars, by the Fellahs of the present day. These Fellahs discharge all the duties of tilling the country and gathering its rich abundance. They are a quiet, contented, submissive race, always living, through an unjust government, on the edge of starvation, yet always happy, with no thought for the morrow, no care for, no interest in, political changes. 'Of the Fellahs it may be said, as was said by Amrou of the ancient Egyptians: "they are bees always toiling, always toiling for others, not themselves." The love of the Fellah for his country and his Nile is an all-absorbing love. Remove him, and he perishes. He cannot live a year away from his village; his grave must be where his cradle was. But he is of all men most submissive: he will rather die than revolt; resignation is his primary virtue; impatience under any yoke is unknown to him; his life, his faith, his law is submission. "Allah Kerim!" is his hourly consolation, his perpetual benediction. He was made for peace, not for war; and, though his patriotism is intense, there is no mingling in it of the love of glory or the passion for conquest. His nationality is in his local affections, and they are most intense. Upon this race, the race of bright eyes and beautiful forms, it is impossible to look without deep interest: of all the gay, the gayest; of all the beings made for happiness, the most excitable. If days of peace and prosperity could be theirs, what songs, what music, what joys' (Bowring's *Report*, p. 7).

The only other tribe we have room to notice is that of the Copts, equally with the preceding, indigenous. They are Christians by hereditary transmission, and have suffered centuries of cruel persecutions and humiliations, though now they seem to be rising in importance, and promise to fill an important page in the future history of

Egypt. In character they are amiable, pacific, and intelligent, having of course the faults and vices of dissimulation, falsehood, and meanness, which slavery never fails to engender. In office they are the scribes, the arithmeticians, the measurers, the clerks,—in a word, the learned men of the country. The language which they use in their religious services is the ancient Egyptian, or Coptic, which, however, is translated into Arabic for the benefit of the laity. The Copts have been under-estimated at 150,000 souls, divided into twelve episcopal districts, the bishops of which unite to elect a patriarch (Bowring's *Report*).

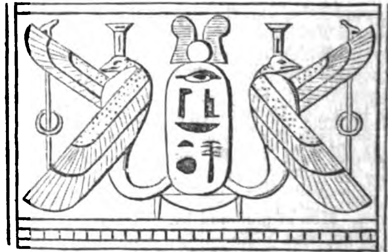


'The wisdom of Egypt' was a phrase which, at an early period, passed into a proverb, so high was the opinion entertained by antiquity of the knowledge and skill of the ancient Egyptians (1 Kings iv. 30; Herod. ii. 160; Joseph. *Antiq.* viii. 25; Acts vii. 22). Nor, as the sequel of this article will show, were there wanting substantial reasons for the current estimate. If, however, antiquity did not on this point exceed the bounds of moderation, very certain is it that men of later ages are chargeable with the utmost extravagance in the terms which they employed when speaking on the subject. It was long thought that the hieroglyphical inscriptions on the monumental remains of Egypt contained treasures of wisdom no less boundless than hidden; and, indeed, hieroglyphics were, in the opinion of some, invented by the priests of the land, if not expressly to conceal their knowledge from the profane vulgar, yet as a safe receptacle and convenient storehouse for their mysterious but invaluable doctrines. Great, consequently, was the expectation of the public when it was announced that a key had been discovered which opened the portal to these long-concealed treasures. The result has not been correspondent. Only partial success has rewarded the labour which has been expended on the attempt to decypher the hieroglyphics; and what little light has been thus obtained is neither very valuable in itself, nor of very high promise in regard to what may yet be kept under clouds and shadows. Men of profound learning, great acuteness of mind, and distinguished reputation have engaged and persevered in the inquiry: it is impossible to study without advantage the writings of such persons as Zoega, Akerblad, Young, Champollion, Spohn, Seyffarth, Kosegarten, Rühle; and equally ungrateful would it be to affirm that no progress has been made in the undertaking; but, after all, the conclusions and positions which have been drawn and set forth are only in a few cases (comparatively) definite and unimpeachable (Heeren, *Ideen*, ii. 2, 4; Quatremère, *Recherches sur la langue et la littérature de l'Egypte*).

The little that was known in classical times on the subject of the hieroglyphics is found in a few passages of a few Greek writers (Herod. ii. 36; Diod. Sic. lxxxi. 3, 4; Clem. Alex. *Strom.* v.), the very import of which was, if at all, very imperfectly understood till recent investigations threw the light of fact upon their words. A brief exposition will put the reader into possession of the most important truths connected with the subject. We premise, however, that unanimity by no means prevails among the writers who have a right to be considered as authorities.

The knowledge of hieroglyphics which we at present possess owes its origin to the Rosetta stone, which is now in the British Museum. This stone was found by the French among the ruins of Fort St. Julien, which is situated near the mouth of the Rosetta branch of the Nile, and was given up to the English in accordance with the terms of the treaty of Alexandria. It is sup-

272. The Rosetta Stone, with specimens of the characters. 1, 1'. Sacred; 2, 2'. Enchorial; 3, 3'. Greek.



posed to have been sculptured about B.C. 195, and contains a decree in honour of Ptolemy V. (Epiphanes) written in three different characters. One of these is Greek, and a part of it has been explained to state that the decree was ordered to be written in Sacred, Enchorial, and Greek writing. Dr. Young was the first that attempted to decipher this inscription; in which he partially succeeded by counting the recurrence of the more marked characters in the hieroglyphics, and comparing them with those that occurred about the same number of times in the Greek. Champollion and Wilkinson have followed up Dr. Young's discoveries with great ingenuity, and we can now partially read inscriptions which before were wholly unintelligible to us. Among other obstacles, however, this remains in the way, viz., that the Rosetta stone was sculptured about 195 B.C. and in Lower Egypt; while the major part of the inscriptions were written during the twelve previous centuries, and are found in Upper Egypt. Hieroglyphics are written either from left to right or right to left; though sometimes the columns are so narrow that they may be almost said to be written from top to bottom. They are partly pictorial; thus 'ox,' 'goose,' 'temple,' are represented by pictures or pictorial symbols of an ox, &c. At other times they are phonetic, and written by an alphabet of about 140 letters, of which many are synonymous; some being adapted for writing, others for sculpture; some in use at

an earlier period, others at a later. The powers of these letters are determined by the names of the kings in which they are found; but as this cannot be done very exactly, they are generally arranged under about twelve of our primary letters. We cannot, however, distinguish accurately between the vowels, or P and PH, and other cognate letters. The names of sovereigns are always written within a ring or cartouche: those of any other person are distinguished by a sitting figure following them: besides these, there is nothing to mark the difference between a letter and a pictorial symbol. In some words the meaning is expressed twice; once by a phonetic combination; and again, by a pictorial symbol; in others the more important part is symbolical, and the grammatical termination is spelt. Sometimes also we find a species of abbreviation; thus the word ox would be expressed by the first letter of the Coptic word signifying ox.

It is manifest that the hieroglyphics which were either purely pictorial or symbolic would be inadequate to express every part of speech. Every language must, except at its very commencement, have some words which. taken alone, are void of meaning; and unless those who speak it are entirely separated from other nations, they must have occasion to express foreign names and terms in their own tongue, and write them in their own character, if they are sufficiently advanced in civilization to possess the art of writing. Now the Egyptians, at the period from which their existing monuments can be dated, were the most civilized nation on earth, and, though debarred from trading with foreigners before the time of Psammeticus, they were often at war with their southern and eastern neighbours. Their language then must have possessed such terms as could be expressed only by characters which stood for sounds, and this necessity may be supposed to have given rise to a third kind of hieroglyphics, called by M. Champollion phonetic. That a certain number were so employed is beyond a doubt, and the principle on which these figures were selected for that purpose has probably been ascertained; it was apparently this, that the names of things (*i. e.* the words) suggested by these hieroglyphics began by the sound or letter which they were taken to represent. Thus an eagle, which in Egyptian or Coptic is *abom*, expressed the letter *a*; a censer, in Egyptian *berbe*, the letter *b*, and so on. This principle being admitted, it follows that the number of figures used to represent one sound might be increased almost without limit, as any hieroglyphic might stand for the first letter of its name; but so copious an alphabet would have been, even to a native, a constant source of error. The characters, therefore, so employed were soon fixed; and, as far as has been hitherto ascertained, eighteen or nineteen was the largest number assigned to any one letter, while some have only one or two. By this variety the Egyptians were able to exercise a faculty held in high esteem among their eastern neighbours—that of conveying a double meaning by the same sign, and of expressing covert allusions not generally comprehensible. Thus the lion is put for the *l* in Ptolemy and Alexander, because they were powerful kings; the ram for the *b* in Anubis, because it was sacred to that god, &c.

But for the purpose of writing, strictly so called, there was a less ornamental and more rapid way of forming the characters, which is always found in the MSS., and which would be the natural consequence of using a pen or stylus. This is called by Strabo and Pliny hieratic writing, the hieroglyphics being, as the name imports, peculiar to sculpture. It is chiefly by means of the hieroglyphics that we are enabled to read the hieratic writing, the latter being, for the most part, an abbreviated way of writing the former. The Rosetta stone contained the inscription in yet another set of characters, the demotic or enchorial. It is to Dr. Young that we owe the greater part of our knowledge on this subject. He was greatly assisted by the discovery of two or three papyri written in this character with Greek translations, the earliest of which dates in the reign of Psammeticus about B.C. 650. An alphabet has been formed from Greek proper names; from which it appears that the few words which we can decipher are Coptic. In this writing the hieroglyphics have almost wholly disappeared, though some still appear scattered here and there.

The last statement worthy of attention which has come under the writer's notice in connection with hieroglyphics is that of Wathen (*Arts, Antiquit. and Chron. of Egypt*, p. 1, sqq.), who thinks he has discovered that the construction of the hieroglyphic 'names and standards' of the ancient monarchs bear a resemblance to the quartering of arms in modern heraldry. Hence

273.

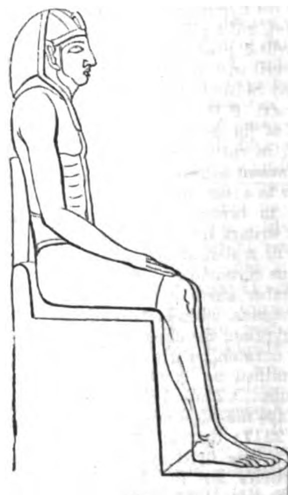
from the names and standards of a king we may often learn his extraction, paternal and maternal, and, when not descended from the reigning family, what his claim was to the throne. This writer also holds that different physiognomies, each characteristic of a different royal family, are distinctly traceable in the portraits of the kings preserved on the walls of the ancient monuments. 'The Egyptian physiognomy, the Ethiopian, and the mixture of the two, may each be plainly recognised. Even the characteristic lineaments of the different families purely Egyptian are accurately given.' 'The facts,' he continues, 'deducible from these two sources confirm and illustrate each other. Together, they throw a new light on the whole period of monumental history, commencing within a few centuries of the flood; render plain and certain what was before doubtful and obscure in notices of ancient Egypt scattered in sacred and profane history, and furnish a clue to the mazes of the Manethonian dynasties.'

The difficulties that oppose the formation of a

satisfactory Egyptian chronology are great and numerous. The most distinguished writers differ egregiously in their statements. Newton places Shishak about the middle of the tenth century before our era; Usher fixes him at B.C. 1489. One chronologer determines the epoch of Menes, first king of Egypt, at about B.C. 2231; Champollion deduces from the same authorities that he lived 6000 years before Mohammed. Every Egyptian monarch had several names. The writings which we possess on Egyptian history are either fragments, or mutually conflicting, or of too late a date to be of great value. The copyists of Manetho give diverse reports of what they profess to quote from his work. Mythology is blended with history, theory with fact, and mere conjectures and plays of the fancy are reported with a gravity of manner which is surpassed only by the credulity to which they owe their birth and their currency.

Various efforts, however, have been made to remove difficulties, reconcile contradictions, and harmonize dissonances. The success has been far from distinguished. Sharpe, in his *Early History of Egypt*, has laboured for this purpose by contracting the ordinary chronological period, and by the hypothesis of several contemporaneous dynasties, ruling in Lower or in Upper Egypt. The earliest event which he seems to admit, as ascertained with exactness, is the capture of Jerusalem by Shishak, in the fifth year of king Rehoboam, B.C. 970. Wathen (*ut supra*), availing himself of the discoveries made by others and by himself, in decyphering the sculptured language of the ancient monuments, has, in his own opinion, gone far to clear away previously existing difficulties, to bring the fragmentary accounts of ancient writers into accordance, and to offer to the world a definite, consistent, and trustworthy Egyptian chronology. The author (p. 75) lays considerable stress on the fact that, in almost every instance, when Hebrew history is interwoven with Egyptian, the chronology which he has developed harmonizes with that of the sacred writers as determined by Archbishop Usher in the English Bible. 'Thus Usher's date for Peleg, in whose days the earth was divided (1 Chron. i. 19) is B.C. 2247; that of Menes, the first king of Egypt, is here fixed at B.C. 2222.' Other correspondencies are the Exodus, English Bible, 1491; Wathen, 1489; Shishak's capture of Jerusalem, 971; his accession, according to Wathen, 990; Pharaoh-Necho slew Josiah, 610; his accession, 618. On which it seems sufficient to remark that, even taking these and the one or two other statements made by the author on the point, to be as he has set them forth, they neither do nor can effect much for fixing with certainty historical events, so long as doubts are entertained whether Usher's chronology itself is correct, and so long as uncertainty prevails generally in relation to the strict chronological period of the Old Testament history [CHRONOLOGY].

What, however, we know to be definite, and believe to be accurate in its disclosures, and what we judge to be far more important in an historical relation, is to be found in the paintings and sculptures with which the Egyptians left the walls of their tombs and temples decorated in forms and colours which have not yet faded from the sight. It is true that these instances of real picture writing may do little for fixing the epoch of the accession of a king or the termination of a dynasty. Yet in this they are not entirely mute. Among



274. [Interior of Pictured Tomb.]

the innumerable mural sculptures in the temple at Karnak, Champollion discovered one in which a king, Sheshonk (Shishak), is presenting captives of various nations to his God as trophies of victory. One of these, distinguished by a long beard and Jewish physiognomy, bears the hieroglyphical title Youdah Malek, king of Judah. But for any practical purpose, the determination of a date, or the identification of an event, is of small comparative moment; and far too much importance has been attached to mere chronological details. To learn when an Egyptian or Chinese king ascended the throne, or departed this life, may gratify the antiquary or even reward much learned toil, but the world at large has an interest in history in the main, if not exclusively, so far as it discloses what men thought, felt, did; what they hoped, feared, and achieved in the days of old; thereby affording to posterity warnings, encouragement, light, and impulse. Now for these highly important purposes the most abundant materials are presented in Egypt, and may be found described in the works of Champollion, Wilkinson, and others. Let any one visit the Egyptian gallery in the British Museum, and he will be surprised and delighted to find Egypt almost resuscitated. The tombs have given up their dead. Buried treasures, over whose silence centuries had rolled before our era began, crowd on the sight and gratify the mind. And paintings, too, strike the eye, which may not indeed conform very exactly to the laws of perspective, but which lay open, and set before the spectator, the Egyptian, as he was in the days of his glory and pride. Indeed, from the paintings and sculptures which have been discovered and described, we are enabled to follow this most singular and deeply interesting people through all the classes of society, through all the operations of science and husbandry, into the transactions of public life, the details of house-keeping, the achievements of war, the amusements of hunting, fishing, feasting, and the solemn rites of a most august and imposing religious ceremonial.

Amid the various profane authors who have written more or less in detail on Egypt (see a list of them in Sharpe's *Early History of Egypt*, London, 1836, p. 3), and after all the labour that has been bestowed on the attempt to decypher the hieroglyphics, the Bible remains our best and fullest authority for the early history of the country. This history, it is true, is not presented in a chronological series of events, nor supplied respecting any period with nice exactitude and minute details. The disclosures made by inscriptions on public buildings, of kings, wars, and

conquests, may, when verified as to age, and placed in their probable order by the aid of learning and criticism, reveal more as to the dynasties and individual sovereigns; but on such information, even when free from doubt, and most accurate, little real value can be set; while the Bible supplies, either by express statement or obvious implication, facts and principles which constitute genuine history, and go far to give the past all the value which it can possess for the men of these times. And what makes these disclosures the more valuable is not only that they wear the character of genuine and uncorrupted history—free from the false, deep, and unnatural colourings of mythology; but that they relate to the earliest forms of civilized life, and to ages over which profane historians have left the thickest darkness. Narrations and implications, such as the Bible affords in regard to the early history of Egypt, want no corroboration; they wear in their naturalness, simplicity, and correspondence with what would be expected in the ages to which they refer, evidence that they represent actual realities, which none can resist who have studied either human nature or human society. Still it may not be supererogatory to remark that the little which learning and industry have succeeded in extracting from the monumental inscriptions, and the very great deal which funereal and religious paintings have of late made known; and, indeed all, from whatever source gathered, that we know of the country and its institutions and usages, are in entire harmony with what the Scriptures directly or indirectly teach respecting Egypt. More than one effort has indeed been made to corroborate the truth of Scriptural history, by setting forth a certain correspondency alleged to exist between the results of modern discovery, and dates and events found in the sacred volume. Nor would we deny that the time may arrive when such a correspondency will appear to rest on the surest vouchers, as in one or two instances it may do even in the actual state of knowledge. But chronology must assume a more definite and certain form before, whatever may be learnt from the monuments of Egypt, any historical relationship between the Bible and other sources of knowledge touching Egypt can be accurately ascertained and satisfactorily established. Meanwhile, by these imperfect attempts, even suspicion may be engendered, and certainly there is a risk lest the mind should be drawn off from a sphere of evidence which is no less striking than it is full and satisfactory. It is, we had almost said, enough, it is certainly a very great point to have ascertained beyond doubt that the Egypt of the Bible is Egypt indeed, not a fiction, nor an imposture, nor a blunder—as writers of the Voltaire school would persuade the world—but a reality, so far as it goes, a picture copied from actual life.

We learn from the Old Testament that while the Jews, the earliest nation that has handed down to us the history of its rise and civilization, were yet a tribe of wandering shepherds, under Abraham, depending solely upon the unbought gifts of nature, who, when they had exhausted one district, instead of cultivating it, drove off their flocks in search of a new pasture-ground, after the manner of the American Indians; the Egyptians were acquainted with agriculture and all those arts of civilization and government which indicate a social existence, extending backwards for at least several ages. This is confirmed in a striking manner by architectural remains that have survived the ravages of above thirty centuries; for while the Israelites, under the immediate successors of Joshua, were still warring with the Canaanites for the possession of the land of promise, or yet earlier, while they were yet slaves in Egypt, that most interesting land was distinguished for palaces, temples, porticos, obelisks, statues, and canals, which declare that they had been preceded by a long period of civilization, and which still remain the admiration of the world. The pyramids of Lower Egypt, requiring for their erection the least quantity of architectural knowledge, no elegance of design, no taste in detail, might possibly have been the work of men driven by task-masters to their daily labour; but that the palaces, tombs, and temples of Upper Egypt, which present to us the earliest known instances of architecture, sculpture, and painting; the colossal statues of Amenoph and Rameses, requiring considerable anatomical knowledge for the original design, and a mechanical

275.

skill in the execution, exceeding perhaps even that of the Greeks themselves; the vast works for irrigation; and the correct division of the calendar, implying great knowledge of mathematics—that these should have been the works of a people suffering under political disadvantages, and not far advanced in all the arts and refinements of social life, would contradict all that observation or history has made known. Some considerable degree therefore of political freedom, as well as a high cultivation, must at an early period have been enjoyed by the Egyptians.

In Gen. x. we find the colonization of Egypt traced up to the immediate children of Noah, for it is there stated that Mizraim was the second son of Ham, who was himself the second son of Noah. Immediately after these genealogical statements the sacred narrative (Gen. xii.) informs us that the patriarch Abraham, pressed by famine, went down (about B.C. 1920) into Egypt, where it appears he

found a monarch, a court, princes and servants, and where he found also those supplies of food which the well-known fertility of the country had led him to seek there; for it is expressly stated that the favour which his wife had won in the reigning Pharaoh's eyes procured him sheep and oxen, as well as he-asses, and men-servants, and maid-servants, and she-asses and camels. In Gen. xxi. 9, mention is made in the case of Ishmael, the son of Hagar the Egyptian, whose mother took him a wife out of the land of Egypt, of a mixed race between the Egyptians and the Chaldæans, a race which in after times became a great nation. From this mixture of races it has been supposed the Arabs (ערב, 'mixed people') had their name (Sharpe's *Early Hist. of Egypt*, p. 11). In Gen. xxxix. begins the interesting story of Joseph's being carried down to Egypt, with all its important consequences for the great-grandchildren of Abraham. The productiveness of the country is the allurement, famine the impulse. Attendant circumstances show that Egypt was then famous also for its commercial pursuits; and the entire narrative gives the idea of a complex system of society (about B.C. 1720), and a well-constituted yet arbitrary form of government. As in eastern courts at later periods of history, elevation to high offices was marked and sudden. The slave Joseph is taken from prison and from impending death, and raised to the dignity of prime vizier, and is entrusted with making provision for an approaching dearth of food, which he had himself foretold, during which he effects in favour of the ruling sovereign one of the greatest revolutions of property which history has recorded. The high consideration in which the priestly caste was held is apparent. Joseph himself marries a daughter of the priest of On. Out of respect towards, as well as by the direct influence of, Joseph, the Hebrews were well treated. The Scriptural record, however, distinctly states (xlvi. 34) that before the descent of Israel and his sons 'every shepherd' was 'an abomination unto the Egyptians.' The Hebrews, whose 'trade had been about cattle,' must have been odious in the eyes of the Egyptians, yet are they expressly permitted to dwell 'in the best of the land' (xlvii. 6), which is identified with the land of Goshen, the place which the Israelites had prayed might be assigned to them, and which they obviously desired on account of the adaptation of its soil to their way of life as herdsmen. Having settled his father and family satisfactorily in the land, Joseph proceeded to supply the urgent wants of a hungry nation, and at the same time converted the tenure of all property from freehold into tenancy-at-will, with a rent charge of one-fifth of the produce, leaving their lands, however, in the hands of the priests; and thus he gave another evidence of the greatness of their power.

The richness of Goshen was favourable, and the Israelites 'grew and multiplied exceedingly,' so that the land was filled with them. But Joseph was now dead; time had passed on, and there rose up a new king (probably one of a new dynasty) which *knew* (Exod. i. 8) not Joseph, having no personal knowledge, and it may be no definite information of his services: who, becoming jealous of the increase of the Hebrews, set about persecuting them with the avowed intention of diminishing their numbers and crippling their power. Severe task-masters are therefore set over them; heavy tasks are imposed; the Hebrews are compelled to build 'treasure cities, Pithom and Raamses.' It is found, however, that they only increase the more. In consequence, their burdens are doubled and their lives made bitter with hard bondage (Exod. i. 14), 'in morter and in brick, and in all manner of service in the field.' Their first-born males, moreover, are doomed to destruction the moment they come into being. The deepest heart-burnings ensue; hatred arises between the oppressor and the oppressed; the Israelites seek revenge in private and by stealth (Exod. ii. 12). At last a higher power interferes, and the afflicted race is permitted to quit Egypt. At this time Egypt appears to have been a well-peopled and well-cultivated country, with numerous cities, under a despotic monarch, surrounded by officers of his court and a life-guard. There was a ceremonial at audience, a distinction of ranks, a state-prison, and a prime minister. Great buildings were carried on. There was set apart from the rest of the people an order of priests who probably filled offices in the civil government; the priest of Midian and the priest of On seem to have ruled over the cities so named. There was in the general class of priests an order —wise men, sorcerers, and magicians—who had charge of a certain secret knowledge; there were physicians or embalmers of the dead; the royal army contained chosen captains and horsemen and chariots. The attention which the people at large paid to agriculture, and the fixed notions of property which they in consequence had, made them hold the shepherd or nomade tribes in abhorrence, as freebooters only less dangerous than hunting tribes.

The ill feelings which the peculiar circumstances connected with the exode from Egypt had occasioned served to keep the Israelites and the Egyptians strangers, if not enemies, one to another during the lapse of centuries, till the days of David and Solomon, when (1 Kings iii., vii., ix., xi.) friendly relations again spring up between the two countries. Solomon marries the daughter of a Pharaoh, who burns the city of Gezer, and who in consequence must have been master of Lower Egypt. 'And Solomon had horses brought out of Egypt, and linen yarn:' six hundred shekels of silver was the price of a chariot, and one hundred and fifty the price of a horse. Jeroboam, however, who 'had lifted up his hand against the king,' and become subsequently monarch of the revolted ten tribes, found refuge and protection in Egypt, which was then (about B.C. 975) governed by *Shishak*. From 2 Chron. xii. it appears that in the fifth year of Solomon's successor, Rehoboam, this same Shishak 'came against Jerusalem' with a very large army, consisting of chariots, horse and foot soldiers, besides auxiliary foreigners, and having captured the fortified cities which lay on his march, he entered and plundered the metropolis. The language which is employed in Joel (iii. 19) shows that, in the ninth century before Christ, Egypt had, in conjunction with Edom, displayed both its power and its cruelty towards the kingdom of Judah. The rise and oppressiveness of the Assyrian power soon, however, inclined the Egyptians and the Israelites, from a sense of common danger, to cultivate friendly relations with one another. In

2 Kings xvii. we find that in the twelfth year of Ahaz king of Judah (B.C. 730) Hoshea king of Israel desisted from paying his usual tribute to the king of Assyria, and courted the alliance of So, king of Egypt, who must have been a very powerful monarch to have been thought able to give assistance in opposition to Assyria. Against this mere human resource the prophet Isaiah (xxxi.) warmly protested, declaring its utter inefficiency, and striving to lead his countrymen to the practice of that righteousness and piety by neglecting which they had been forsaken of God. Upon this act of king Hoshea, however, the Assyrians overran Samaria and carried (2 Kings xvii. 6) Israel away into Assyria. In the reign of Hezekiah (B.C. 726) it appears (2 Kings xviii. 21) that the kingdom of Judah still 'trusted upon the staff of this bruised reed, even Egypt, on which if a man lean, it will go into his hand and pierce it: so is Pharaoh king of Egypt unto all that trust on him.' In the last year of the reign of Josiah (B.C. 609) Egypt seems to have attempted to increase its influence in Palestine, when Pharaoh-Nechoh (2 Kings xxiii. 29) 'went up against the king of Assyria to the river Euphrates,' and Josiah going against him was slain in battle. His successor, Jehoahaz, was dethroned after a brief reign of three months, and imprisoned at Riblah by the Egyptian monarch, who imposed on the country a heavy tribute. Pharaoh-Nechoh then made his elder brother Eliakim king, having changed his name to Jehoiakim. Jehoahaz afterwards died in Egypt. But the Egyptian influence over Judah soon ended; for in the fourth year of Jehoiakim (B.C. 604) Nebuchadnezzar king of Babylon marched against (Jer. xlvi., 2 Kings xxiv.) Judæa and its allies, defeated Pharaoh-Nechoh, and retook from the Egyptians Arabia Petræa and all that belonged to them between the Euphrates and the Nile. Zedekiah, the next king of Judah, rebelling against Nebuchadnezzar, made an alliance with Pharaoh-Hophra (Jer. xliv.); and when Nebuchadnezzar besieged Jerusalem, on the march of the Egyptian army, the Chaldees raised the siege (Jer. xxxvii. 5) and withdrew the army. But this was the last time that the Egyptian power was able to serve the Jews. The Assyrian party in the state, indeed, was in the minority, though assisted by the influence of Jeremiah and Ezekiel (Ezek. xxix., Jer. xxv.): yet it predominated; the Jews were carried captive to Babylon, and in less than a century afterwards Egypt was made a province of the same empire.

After the time of the exile the Egyptian Ptolemies were for a long while (from B.C. 301 to about 180) masters of Palestine, and during this period Egypt became as of old a place of refuge to the Jews, to whom many favours and privileges were conceded. This shelter seems not to have been for ages withdrawn (Matt. ii. 13). Yet it cannot be said that the Jews were held in esteem by the Egyptians (Philo, *c. Apion.* ii. p. 521). Indeed it was from an Egyptian, Manetho (B.C. 300), that the most defamatory misrepresentations of Jewish history were given to the world; and, in the days of Augustus, Chæremon took special pains to make the Jewish people appear despicable (Joseph. *c. Apion.* i. 32; comp. Creuzer, *Com. Herod.* i. 270).

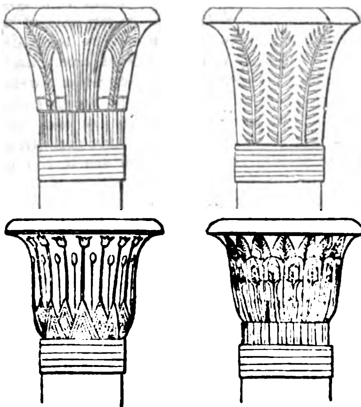
In the reign of Ptolemy Philometor, Onias, whose father, the third high-priest of that name, had been murdered, fled into Egypt, and rose into high favour with the king and Cleopatra his queen. The high-priesthood of the temple of Jerusalem, which belonged of right to his family, having passed from it to the family of the Maccabees, by the nomination of Jonathan to this office (B.C. 153), Onias used his influence with the court to procure the establishment of a temple and ritual in Egypt which should detach the Jews who lived there from their connection with the temple at Jerusalem. The king complied with the request. To reconcile the Egyptian Jews to a second temple, Onias alleged Isa. xix. 18, 19. He chose for the purpose a ruined temple of Bubastis, at Leontopolis, in the Heliopolitan nome, one hundred and fifty stadia from Memphis, which place he converted into a sort of miniature Jerusalem (Joseph. *De Bell. Jud.* i. 1), erecting an altar in imitation of that in the temple, and constituting himself high-priest. The king granted a tract of land around the temple for the maintenance of the worship, and it remained in existence till destroyed by Vespasian (Joseph. *Antiq.* xiii.3; xx. 9; *De Bell. Jud.* vii. 11). The district in which this temple stood appears to have been, after Alexandria, the chief seat of the Jews in Egypt, and which from the name of its founder was called 'Ονίου χώρα (Joseph. *Antiq.* xiv. 8 Helon's *Pilgrim.* p. 328).

If, instead of taking the sacred volume for our guide, we consult profane authors, only a few general conclusions can be given with any degree of historical truth and well-grounded confidence. 'The earliest history,' says Winer, (Bib. *Realwörterb.* in loc.) 'of Egypt is altogether legendary till we come to the age of Sesostris. With this monarch, who was also named Rameses, begins the half-mythical half-historical period of great revolutions and august edifices (Heeren, *Ideen*), and lasts till the time of Psammeticus, about 700 years before Christ. Then, and not before, credible history begins. Originally several sacerdotal governments appear to have co-existed, among which that of Memphis was, though not the oldest, yet the most influential. Then Lower Egypt was invaded by certain nomade hordes from the east, who spread as far as Memphis, of which city they became masters, and founded a dynasty of shepherd kings (Hyksos). The states of Upper Egypt succeeded in driving these foreigners out of the land; that of Diospolis gained the ascendancy, whose king was the celebrated Sesostris—probably B.C. 1500-1400. In the eighth century before Christ the Ethiopians invaded Upper Egypt, and ruled there with mildness and wisdom, whilst two other dynasties, a Saitic and a Tanatic, flourished in Lower Egypt. A civil war converted Egypt into a state under twelve princes. Psammeticus, one of these twelve, supported by foreign mercenaries, succeeded in making himself sole monarch, and opened to strangers the hitherto closed country. The history now becomes clear. From 526 before our Lord Egypt became a Persian province, fell (B.C. 332) into the hands of Alexander the Great, and after his death (B.C. 323) the dynasty of the Ptolemies established itself, which (A.U.C. 723) came to a termination at the battle of Actium.'

The ascertained correspondencies in respect of monarchs found alike in sacred and profane his-

tory are not numerous. The following monarchs have been identified (Sharpe's *Early Egypt*, p. 26), Shishak (2 Chron. xii.) with Sesostris (B.C. 983); Pharaoh-Nechoh (2 Kings xxiii.) with Necho II. (B.C. 616); and Pharaoh-Hophra (Jer. xliv.) with Apries (B.C. 594).

On few historical points have more various or conflicting opinions been held than respecting the Hyksos or shepherd kings. Who were they? When did they rule? When were they expelled? Were they the same as the Israelites? are questions which have received at the hands even of profoundly learned men very different answers. Nor in so debated a case should we here venture an opinion did we not feel that the view we take has an important bearing on the origin of some part of the religion of the Egyptians.



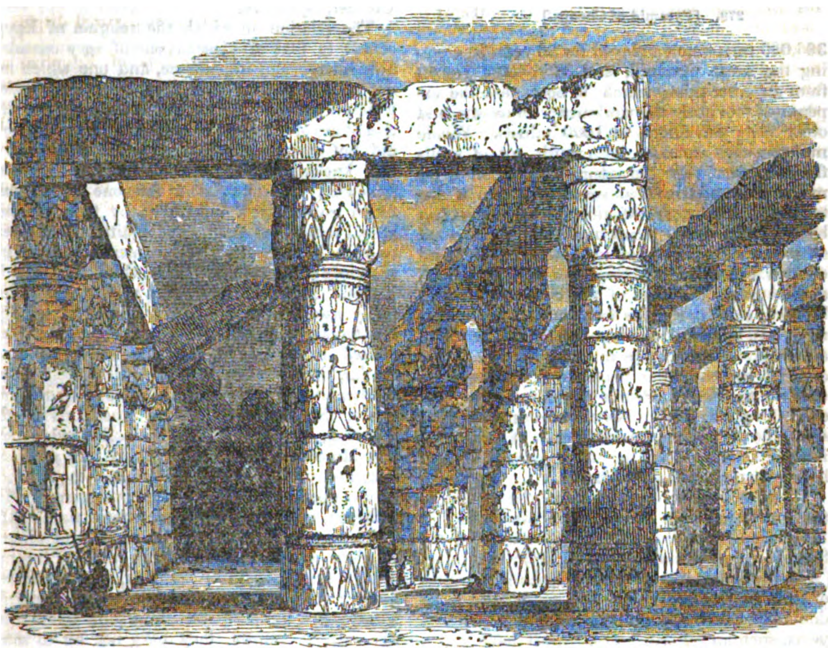
Manetho makes his fifteenth dynasty to consist of the Phœnician shepherd kings. 'In the reign of King Timeus,' he says, 'there came up from the east men of an ignoble race, who had the confidence to invade our country, and easily subdued it without a battle, burning the cities, demolishing the temples, slaying the men, and reducing the women and children to slavery.' They made Salatis, one of themselves, king: he reigned at Memphis, and made the upper and lower region tributary. Of his seventeenth dynasty also were forty-three shepherd kings, called Hycsos, who reigned, perhaps contemporaneously with the preceding, at Diospolis. In the eighteenth dynasty of Diospolis a rising took place, and the shepherd kings were expelled out of the other parts of Egypt into the district of Abaris, which they fortified. Amosis besieged and compelled them to capitulate; on which they left Egypt, in number 240,000, and 'marched through the desert towards Syria, and built the city of Jerusalem.' The last few words seem to render it probable that Manetho confounded the Hyksos with the Israelites, which is the less surprising since the Hyksos were, as he rightly calls them, Phœnicians, of the ancient, if not original, race which inhabited Phœnicia, or Palestine (taken in its widest sense), before the conquest of the country by the Hebrews. Chronological considerations seem to refer the time of the dominion of the Hyksos to the period of Abraham and Joseph (say from B.C. 2000 to 1600). When Joseph went into the land he found the name of shepherd odious—which agrees with the hypothesis that places the irruption of the shepherd kings anterior to his time; and possibly both the ease with which he rose to power, and the fact that Jacob turned towards Egypt for a supply of food when urged by want, may be readily accounted for, on the supposition that a kindred race held dominion in the land, which, though hated by the people, as being foreign in its origin and oppressive in its character, would not be indisposed to show favour to members of the great Shemitic family to which they themselves belonged. The irruption into Egypt, and the conquest of the country on the part of the Phœnician shepherds, seems to have been a consequence of the general pressure of population, from the north-east towards the south-west, which led the nomade Shemitic tribes first to overcome the original inhabitants of Palestine, and, continuing in the same line of advance, then to enter and subdue Egypt. The invasion of the Hyksos is indeed to be regarded as one result of the movement from the Euphrates westward of the most powerful and (comparatively) most civilized people then found in Western Asia, who in their progress subdued or expelled in the countries through which they not improbably were urged by a pressure from other advancing tribes, nation and tribe one after another, driving them down toward the sea, and compelling those who dwelt along the shores of the Mediterranean, to seek shelter and safety in the islands of that sea and other distant parts. To conquerors and aggressors of the character of these shepherd hordes Egypt would offer special attractions. They continued sweeping onwards, and at last entered and conquered Egypt, establishing there a new dynasty, which was hateful, because foreign, and because of a lower degree of culture than the Egyptians themselves had reached. Nor would these shepherds be less odious because, coming from the east and immediately from the deserts of Arabia, they came from the quarter whence the mild and cultivated Egyptians had long been wont to suffer from the predatory incursions of the wild nomade tribes (*Die Phönizier*, von Movers, Bonn, 1841; *Zur Geschichte der Israeliten*, von E. Bertheau, Göttingen, 1842), between whom and the agricultural natives of the country different pursuits, habits, and tastes would naturally engender animosities. This feeling of alienation exists at the present day. The Arab is still a depressed and despised being in Egypt. Bowring, in his valuable Report on the country, remarks, 'It is scarcely allowable even to send a message to a person in authority by an Arab servant.' (p. 7.)

The expulsion of the shepherds was strangely confounded by Josephus or Manetho with the Exodus of the Israelites. The shepherds were conquerors, rulers, and oppressors; the Israelites guests and slaves. The shepherds were expelled, the Israelites were delivered. Josephus (*c. Apion.* i.), however, gives from Manetho a narrative of an event which wears a much nearer likeness to the Exodus, in the case of a King Amenophis, who was ordered by the gods to cleanse Egypt of a multitude of lepers and other unclean persons; many of whom were drowned, and others sent in great numbers to work in the quarries which are on the east side of the Nile. After a time they were permitted to establish themselves in Avaris, which had been abandoned by the shepherds. They then elected a ruler, Osarsiph, whose name was afterwards changed to that of Moses. This chief 'made this law for them, that they should not worship the Egyptian gods, but should kill the animals held sacred by the Egyptians; nor were they to have intercourse with any but such as were members of their own body—in all respects aiming to oppose the customs and influence of the nations. These, sending for aid to the shepherds who had settled in Jerusalem, and having received troops to the number of 200,000 men, were met by Amenophis, the king, with a yet larger force, but not attacked. On a subsequent occasion, however, they were assailed by the Egyptians, beaten, and driven to the confines of Syria.' Lysimachus gives an account not dissimilar to this, adding, that under the leadership of Moses these mixed hordes settled in Judæa (Cory's *Ancient Fragments*). The account which Diodorus gives of the migration of the Israelites from Egypt to Palestine is

of a similar tenor. The deviations from the sacred narrative may be easily accounted for by Egyptian ignorance, vanity, and pride.

Wathen, following his own chronology, refers the great works existing in Egypt to three periods, separated by intervals of several centuries. 'The first includes the two great dynasties of Theban princes who governed Egypt during her "most high and palmy state," when Thebes sent forth her armies to distant conquests. In the second period is comprised the erection of the pyramids. The third includes the reigns of the Ptolemies and earlier Cæsars, under whom Egyptian architecture flourished in a second youth, and almost attained its original splendour.' On the chronology, however, of the fine arts in Egypt, as well as on so many other points, different, not to say opposite, opinions are held; for instance, the erection of the pyramids, which Wathen thus brings down into his second period, others refer back to the early dawn of its history. This is not the place to state, much less discuss, the diversities which present themselves to the student; our purpose will be answered by some general details as to the extent and character of the sublime creations of art in Egypt—of that wonderful country, the most wonderful monuments.

In regard to style, that remained essentially the same, in principles and character, from its first appearance ('in the seventeenth century before our era'—Wathen) to its final downfall, on the introduction of Christianity; though ornamental members were in later times modified, elaborated, and improved, and some entirely new added. Many of its peculiarities may have been borrowed from large architectural excavations. One of the most striking peculiarities of the style is the pyramidal character of the ascending lines. The type of the architecture was the primitive dwelling formed of reeds, which abounded on the banks of the Nile. In one of the orders of the Pharaonic



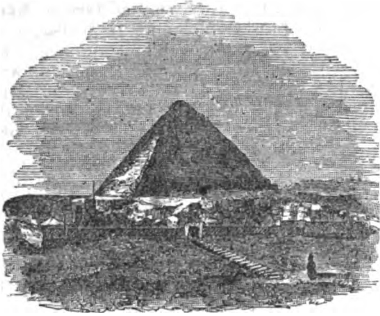
276.

columns, the original post of reeds may be said to have been translated into stone. If the constructions were of any great height, their stability, as being originally built of reeds, would, it is evident, require them to incline one to the other, sloping inwards, thus forming the pyramidal outline to which reference has been made. The plan of the Egyptian temple appears to have originated in the practice of extending the structure by successive additions till the original form became the mere nucleus of the whole. First, a large pylon, consisting of two broad towering masses of masonry, with a doorway in the middle, was erected in advance to give greater dignity to the approach. This was united to the original building by lateral walls, fronted internally by colonnades; and thus the intermediate space was converted into a cloistered court, solemn and secluded, well agreeing with the dark and mysterious character of the national religion. A succeeding monarch would add a grand hall of columns in advance of, and attached to, this court; and a third, not less anxious to honour the gods and immortalize his name, erected a second quadrangle before the hall, terminating the whole range of buildings with a stupendous pylon which bore his inscriptions; and, if he were a warrior, offered a grand field for the sculptured display of his achievements.

The most brilliant periods of Egyptian art were the reigns of the second and third Rameses. Most of the obelisks and colossal statues were wrought before or during the reign of Rameses II., the Sesostris of the Greek writers. Under this enterprising monarch, the ancient Theban empire attained its highest pinnacle of prosperity and power. Rameses III. undertook distant military expeditions, roused the energies of the country, encouraged art, and erected the splendid temple of Medinet Abu. At a later age the sceptre of Egypt was swayed by powerful monarchs, who built on a grand scale; but the seat of the government was then in the Delta, and there remain only a few obelisks.

The valley of the Nile is all along at intervals strewed with wrecks of ancient monumental grandeur; at Thebes, however, they are found on both sides of the river in greatest profusion. Next to the pyramids, the most wonderful relic of Egyptian art is the great hall of the temple of Carnak, on the east bank of the Nile. Its superficial area is 314 feet by 164. The massive stone roof is supported by 134 columns ranged in sixteen rows, most of which are 9 feet in diameter, and nearly 43 feet high: those of the central avenue are not less than 11 feet 6 inches in diameter, and 72 feet high; the diameter of their capitals at their widest spread is 22 feet. The walls, columns, architraves, ceilings, every surface exposed to the eye, is overspread with intaglio sculptures—gods, heroes, and hieroglyphics, painted in once vivid colours. But the hall of columns was but a part of this wonderful fabric. Immense pylons, half-buried quadrangles and halls, granite obelisks, and tremendous piles of fallen masonry once formed a range of buildings upwards of 1200 feet in length. An avenue of colossal sphinxes led from the temple to Luxor, forming a vista which extended nearly a mile and a half, and was admirably adapted for the pageantry of religious processions. All these buildings formed parts of one magnificent whole; all were constructed of gigantic blocks, and most were covered with sculpture. 'Such was the imperial palace of the Pharaohs when Europe was yet in primeval barbarism, ages before Romulus took his omen on the Palatine hill.' Now the ruins are strewed in chaotic confusion over a sandy plain, broken into shapeless mounds.

Among the most remarkable works of the Egyptians must be ranked the vast sepulchres excavated in the seclusion of the Theban mountains to receive their dead monarchs. 'It was,' says Wathen, 'about an hour before sunset one evening that I set out to visit this Necropolis, intending to pass the night in one of the royal sepulchres. On approaching the gorge, the first thing that struck me was the quantity of bones, fragments of mummies, rolls of mummy cloth, and other relics of rifled (Egyptian) tombs that strewed the ground. Princes, priests, and warriors, after reposing thousands of years, are now dragged forth by poor peasants, and their bones lie scattered before the doors of their sepulchres. Candles were lighted: I passed the threshold, and looked round with silent wonder on the scene within. A large corridor or gallery ran back hundreds of feet into the heart of the mountain, divided by lateral projections into lengthening vistas of apartments. The walls were elegantly adorned with columns of blue hieroglyphics on a white ground, 3000 years old, yet retaining almost the freshness of yesterday. In a large chamber at the end of the gallery was a massive sarcophagus. Here once lay the royal mummy, but it had long been open, and was empty. There are eight or nine of these large painted tombs in a group, besides others of less interest. They vary in length from 100 to upwards of 400 feet. In most, you find on entering a long descending corridor or gallery, running off in a straight line into the heart of the mountain. At its farther end the corridor expands into one or more large apartments, whose roofs are supported by massive piers of the living rock. The walls



277. [Great Hall of the Temple of Carnak.]

and piers throughout are generally decorated with paintings still wonderfully retaining their freshness: the subjects are chiefly processions, religious rites, and allegoric and enigmatical devices.' The object seems to have been to enshrine the corpse deep within the earth in a mass of masonry, far from the stir of the living world. For these royal sepulchres of Thebes they first selected the loneliest ravine; for each tomb they carried a gallery deep into the hill, and then placed the corpse in the remotest part. But the tombs of the kings form only a part of this great city of the dead. The sides of the hills overlooking the plain and the ravines intersecting them, contain innumerable sepulchral excavations. One valley was appropriated to the queens, and in a remote corner the apes had a cemetery. The priests seized the best spots.

The purpose for which the pyramids were erected was once as little known as were most other things connected with Egypt. It now appears satisfactorily ascertained that they were designed to be mausoleums; and what an idea does it give us of the grandeur of conception, the splendour in every respect of the monarchs to whom they owe their origin, that they should have devised and executed tombs so stupendous! 'On leaving the village of Gizeh, on the river bank opposite old Cairo (Memphis), the pyramids rise before you glittering white against the blue sky; but the flatness of the plain and the purity of the atmosphere effectually deceive the eye as to their distance and consequently their size: you almost appear at their base while several miles really intervene. As you advance gradually they unfold their gigantic dimensions; but you must have been some time on the spot, your eye must have repeatedly travelled along the great pyramid's 740 feet of base, and up its steep towering angles,

before you can fully understand its immensity, and the actual amount of labour involved in its erection' (Wathen). According to Pliny

278. [Pyramid of Cheops.]

366,000 men were employed for 20 years in erecting the great pyramid, and Herodotus reports from an inscription which it bore, that the expense of providing the workmen with onions and other roots amounted to 1600 talents. Whole mosques have probably been built out of spoils from it alone. Yet the integrity of its form remains substantially unimpaired, and from a distance scarcely a trace of violence or decay can be seen. The existing masonry has been estimated at above six millions of tons, which was raised over an area of thirteen English acres and a half; and, supposing the cost of the structure to have been one shilling a cubic foot, including carriage, materials, and workmanship, the erection required an outlay of nearly five millions sterling. The original perpendicular height was 480 feet, exceeding that of St. Peter's by 43 feet, and that of St. Paul's by 110. The huge mass equalled a solid pile occupying the whole area of Lincoln's-inn-fields, and ascending to a point 100 feet higher than the top of St. Paul's.

If, as we have some reason to believe, and as the reader may see satisfactorily established in Movers and Bertheau (*ut supra*), a race of the Shemitic family, coming down from the upper (Aram) country into the lower (Canaan), in course of time subjugated Egypt and established their dominion, maintaining it for some five hundred years, such an historical event must have had a marked influence on the religion of the land. These invaders are described (Herod. ii. 128) as enemies to the religion of Egypt, who destroyed or closed the temples, broke in pieces the altars and images of the gods, and killed the sacred animals. Their influence on the Egyptian religion was, probably, not unlike that of the Persians on the Grecian, having for its aim and effect to discountenance and destroy a low and degrading system of idolatry; for the worship of the heavenly bodies, to which the Phœnician equally with the Persian invaders were given, was higher in its character and effects than the service of the ordinary gods of Greece, and still more so than the degrading homage paid by the Egyptians to the lowest animals. By this means the Shemitic religion exerted on the native Egyptian religion a decided and improving influence, which may be seen and traced in that element of the religion of Egypt which contains and presents the worship of the heavenly bodies. The two systems, that of the Egyptians before it received inoculation from the East, and that of the Eastern invaders, agreed in this, that they were both the worship of the powers of nature; but they differed in this, and an important difference it was, that the Egyptians adored the brute creation, the Phœnicians, the host of heaven. Our limits forbid details on the subject, which, however, together with proofs and illustrations, may be found in the valuable works before mentioned. On the subject of Egyptian religion, besides the works already referred to, the following may be advantageously consulted. Pauly, *Real-Encylopädie*, *Ægyptische Religion*; Prichard's *Egyptian Mythology*; Jablonski, *Pantheon Ægyptiacum*; *Beiträge zur Kentniss der Lit. Kunst, Mythol. und Geschich. des alten Ægyptens*, von G. Seyffarth; *Untersuchung. über den Mythos der beruh. Völker alter Welt*; Creuzer, *Symbolik*.

The relation in which the religion of Egypt stands to that of Moses is one of very considerable interest and importance, and one which has not yet received the kind and degree of attention which it merits. Michaelis (*Mosaisches Recht*), and others of the same school, have given valuable aid, but they wrote with, compared with what is now known, insufficient knowledge, if not with somewhat too much of a foregone conclusion. Other learned men, influenced by their philosophical notions, or prejudiced against the Hebrew religion, have made Moses a mere copyist of institutions and retailer of ideas which he found in Egypt. As a basis for such a view it was necessarily assumed that a purer system of religion was found in Egypt in the days of Moses than existed in any other part of the world. In particular, the Egyptian mysteries were set forth as the depositaries of high and valuable religious doctrines. Scripture and history (the Acts of the Apostles; Josephus, Philo) were adduced to show that Moses had been instructed in this *priceless lore*, and initiated into these mysteries; whence he was declared to have drawn his system of Monotheism, and even the characteristic name ΙΑΩ, which he gave to the God whom he proclaimed, as alone worthy of the solemn title (Plessing, *Memnonium*, ii. 529; Schiller, *Die Sendung Moses*; Reinhold, *Die Hebräischen Mysterien*). These views, however, rest on no solid foundation whatever, if, indeed, they may not be to some extent considered as the illusory and almost posthumous offspring of the old and exploded notion which ascribed boundless knowledge to the ancient Egyptians. Nor can they for a moment be held in these days, after the light thrown on early Egypt by the monumental disclosures. The brief notion given above of the general characteristics of the earliest religion of the country, shows how utterly baseless such a theory is. In truth, the inhabitants of Palestine, so far back as we have been able to learn anything of them, seem to have possessed far better and purer religious opinions than those of the valley of the Nile, and in all probability did something to improve and elevate the religious system of the latter (Movers, *Phönizier*). The exposure of this sceptical hypothesis, which the Bible enables the scholar to supply, may be found in Vatke, *Die Religion des A. T. nach den Canon. Buchern entwickelt*, and Hengstenberg, *Die Authentie des Pentateuch*.

The subject of circumcision among the Egyptians has already been considered [CIRCUMCISION]. The pages of the present work afford ample evidences of the relation which Egypt bears to the Biblical History, and specimens of the light which the manners, customs, opinions, and buildings of the Egyptian people already throw, and of the fuller and clearer light which, as our knowledge advances, they are likely to throw, on the usages of the chosen people, and the pages of the sacred volume.

It may be proper to add that, since the above was written, we have read *Ancient Egypt, her Monuments*, &c. by George R. Gliddon; a work which gives a much more favourable account of the results of modern research into the Hieroglyphics than this article would seem to justify. The peculiarly advantageous position of the author of *Ancient Egypt*, as having lived above twenty years in the country, and being United States' consul for Cairo, makes his opinions on Egyptian antiquities worthy of great attention. Yet we cannot deny that his work has traces of being written in a partisan spirit. The reader, however, will be rewarded by perusing the production, since it presents (though not in the best style) a rapid sketch of the entire subject of Egyptian antiquities, written by a man intimately and in part personally acquainted with the points in question.

J. R. B.

EHUD (אֵהוּד; Sept. 'Αώδ), of the tribe of Benjamin, one of the 'Judges' of Israel, or rather of that part of Israel which he delivered from the dominion of the Moabities by the assassination of their king Eglon. These were the tribes beyond the Jordan, and the southern tribes on this side the river. Ehud obtained access to Eglon as the bearer of tribute from the subjugated tribes, and being left-handed, or rather ambidextrous, he was enabled to use with a sure and fatal aim a dagger concealed under a part of his dress, where it was unsuspected, because it would there have been useless to a person employing his right hand. The Israelites continued to enjoy for eighty years the independence obtained through this deed of Ehud (Judg. iii. 15-30).

EKRON (עֶקְרוֹן; Sept. 'Ακκαρών), the chief of the five Philistine states (Josh. xiii. 3), and the northernmost of the five. In the general distribution of territory (unconquered as well as conquered) Ekron was assigned to Judah, as being upon its border (Josh. xiii. 3; xv. 11, 45); but was afterwards apparently given to Dan, although conquered by Judah (Josh. xv. 11, 45; xix. 43; Judg. i. 18; comp. Joseph. *Antiq.* v. 1, 22; v. 2, 4). In Scripture Ekron is chiefly remarkable from the ark having been sent home from thence, upon a new cart drawn by two milch kine (1 Sam. v. 10; vi. 1-8). In later days, it is named with the other cities of the Philistines in the denunciations of the prophets against that people (Jer. xxv. 20; Amos i. 8; Zeph. ii. 4; Zech. ix. 5). Eusebius and Jerome describe Ekron as a village of the Jews between Azotus and Jamnia towards the east, or eastward of a line drawn between these two places (*Onomast.* in 'Accaron'). The name of Ekron, or rather Accaron, occurs incidentally in the histories of the Crusades; and it has lately been recognised by Dr. Robinson (*Bib. Researches*, iii. 24) in that of Akri, in a situation corresponding to all we know of Ekron. The radical letters of the Arabic name are the same as those of the Hebrew, and both the Christians and Moslems of the neighbourhood regard the site as that of the ancient Ekron. Akri is a small Moslem village, five miles south of Ramleh. It is built of unburnt bricks, and, as there are no apparent ruins, the ancient town was probably of the same materials. It is alleged, however, that cisterns and the stones of hand-mills are often found at Akri and in the adjacent fields.

ELAH (אֵלָה; Sept. 'Ηλά), son of Baasha king of Israel. After a reign of two years (B.C. 930-929) he was assassinated while drunk, and all his kinsfolk and friends cut off, by Zimri, 'the captain of half his chariots.' He was the last king of Baasha's line, and by this catastrophe the predictions of the prophet Jehu were accomplished (1 Kings xvi. 6-14).

ELAH, a valley in which the Israelites were encamped when David fought Goliah (1 Sam. xvii. 19). It doubtless received this name, which some spell Alah (which see), from the terebinth trees, or from some remarkable terebinth tree, growing in it. Ecclesiastical traditions identify it with the present valley of Beit Hanina, about eight miles north-west from Jerusalem. In this valley olive trees and carob trees now prevail, and terebinth trees are few; but the brook is still indicated whence the youthful champion selected the 'smooth stones' wherewith he smote the Philistine. The brook is dry in summer, but in winter it becomes a mighty torrent, which inundates the vale (*Pictorial Palestine*, p. 121). Dr. Robinson, however, disputes this ancient tradition, and finds that the conditions of the history require him to identify the valley of Elah with the Wady es-Sumt (acacia valley), which he crossed on the road from Jerusalem to Gaza, about eleven miles south-west from the former city. His reasons are given in *Biblical Researches*, iii. 350; and he remarks that the largest specimen of the terebinth tree which he saw in Palestine still stands in the vicinity.

ELAM (עֵילָם; Sept. 'Ελάμ), which is mentioned in Gen. x. 22, as a tribe descended from Shem, is, in ch. xiv. 1, introduced along with the kingdom of Shinar in Babylon, and in Isa. xxi. 2, and Jer. xxv. 25, is connected with Media. In Ezra iv. 9, the Elamites are described among the nations of the Persian empire; and in Dan. viii. 2, Susa is said to lie on the river Ulai (Eulæus or Choaspes) in the province of Elam. These accounts lead to the conclusion that Elam was the same land which was designated by the Greeks and Romans by the name of Elymais, and which formed a part of the ancient Susiana, the modern Khusistan. This Susiana, which may thus be regarded as the Elam of Scripture, was bounded on the east by Persia Proper (ancient Persis, modern Fars), on the west by Babylonia (the Arabian Irak), on the north by Media, and on the south by the Persian Gulf. This country is not unfrequently regarded as a part of Persia Proper; but in the division of the provinces it was considered distinct from it, and constituted a peculiar satrapy, which was about half as large as Persis, and not quite as large as England. Elam was inhabited by various tribes of people. The Elymæi or Elamæi, together with the Kissi,

seem to have been the oldest inhabitants not only of Susiana Proper but also of Persia; whence the sacred writers, under the name of Elam, comprehended the country of the Persians in general. The Elamæi dwelt partly in the north and partly in the south of the country; and as they occupied the greater part of it, they were able to bring into the field a considerable body of troops, who were chiefly archers (Strabo, xv. 3, 10). It was in this capacity, indeed, as archers, that the other inhabiting tribes—the Uxii, the Kissi, the Cossæi—were chiefly celebrated; and hence the historical propriety of the Scriptural allusion to the quiver and the bow of the Elamites (Isa. xxii. 6; Jer. xlix. 34). Indeed, in the latter text the bow is distinctly mentioned as the chief instrument of Elamite power—'I will break the bow of Elam, the chief of his might.'

It would seem that Elam was very early a separate state with its own kings; for in the time of Abraham we find that Chedorlaomer king of Elam extended his conquests west of the Euphrates as far as the Jordan and the Dead Sea (Gen. xiv.); but whether he acted for himself, or only as the viceroy or general of the Assyrians (as Josephus seems to intimate), must remain a matter of doubt. Ezekiel (xxxii. 24) mentions Elam among the mighty uncircumcised nations which had been the terror of the world; and about the same period (B.C. 590) Jeremiah threatened it with conquest and destruction by the Chaldæans (Jer. xlix. 30, 34, sqq.). This was accomplished probably by Nebuchadnezzar, who subjected Western Asia to his dominion; for we find his successor Belshazzar residing at Susa, the capital of Elam, a province then subject to that monarch (Dan. viii. 1, 2; Rosenmüller's *Biblical Geography*, &c.). With this the Scriptural notices of Elam end, unless we add that Elamites are found among those who were at Jerusalem at the feast of Pentecost (Acts ii. 9); which implies that Jews descended from the exiles were settled in that country. Here also they are mentioned next to the 'Medians,' with whom they are also coupled by the prophets (Isa. xxi. 2; Jer. xxv. 25); for which it does not appear necessary to seek any further reason than that, to the Jewish writers, Elam lay next beyond Media.

ELATH (אֵילַת), termed in the Sept. *Αἰλών*; in Joseph. (*Antiq.* viii. 6, 4) *Αἰλανή*; in Jerome, Ailath; by the Greeks and Romans, *Ἐλάνα*. It is now called Ailah. These several names are only variations of the original Hebrew word. It was a city of Idumæa, having a port on the eastern arm or gulf of the Red Sea, which thence received the name of Sinus Elaniticus (Gulf of Akaba). According to Eusebius, it was ten miles east from Petra. It lies at the extremity of the valley of Elghor, which runs at the bottom of two parallel ranges of hills, north and south, through Arabia Petræa, from the Dead Sea to the northern parts of the Elanitic Gulf.

The first time that it is mentioned in the Scriptures is in Deut. ii. 8, where, in speaking of the journey of the Israelites towards the Promised Land, these words occur—'When we passed by from our brethren the children of Esau, which dwelt in Seir, through the way of the plain from Elath, and from Eziongeber.' These two places are mentioned together again in 1 Kings ix. 26, in such a manner as to show that Elath was more ancient than Eziongeber, and was of so much repute as to be used for indicating the locality of other places: the passage also fixes the spot where Elath itself was to be found: 'and King Solomon made a navy of ships in Eziongeber, which is beside Elath, on the shore (Num. xxxiii. 35) of the Red Sea, in the land of Edom.' The use which David made of the vicinity of Elath shows that the country was at that time in his possession. Accordingly, in 2 Sam. viii. 14, we learn that he had previously made himself master of Idumæa, and garrisoned its strong-holds with his own troops. Under his successor, Joram (2 Kings viii. 20), the Idumæans revolted from Judah, and elected a king over themselves. Joram thereupon assembled his forces, 'and all the *chariots* with him,' and, falling on the Idumæans by night, succeeded in defeating and scattering their army. The Hebrews, however, could not prevail, but 'Edom revolted from under the hand of Judah unto this day;' thus exemplifying the striking language employed (Gen. xxvii. 40) by Isaac—'by thy sword shalt thou live, and shalt serve thy brother: and it shall come to pass, when thou shalt have the dominion, that thou shalt break his yoke from off thy neck.' From 2 Kings xiv. 22, however, it appears that Uzziah recovered Elath, and, having so repaired and adorned the city as to be said to have built, that is rebuilt, it, he made it a part of his dominions. This connection was not of long continuance; for in ch. xvi. ver. 6 of the same book, we find the Syrian king Rezin interposing, who captured Elath, drove out the Jews, and annexed the place to his Syrian kingdom, and 'the Syrians came to Elath, and dwelt there unto this day.' At a later period it fell under the power of the Romans, and was for a time guarded by the tenth legion, forming part of Palæstina Tertia (Jerome, *Onom.* s. v. *Ailath*; Strabo, xxi. 4, 4; Reland, p. 556). It subsequently became the residence of a Christian bishop. Bishops of Elath were at the council of Chalcedon (A.D. 451), and that of Constantinople, (A.D. 536). At the council of Chalcedon, Beryllus thus wrote his designation as bishop *Ἀϊλᾶ τῆς Παλαιστίνης τρίτης*. In the days of its prosperity it was much distinguished for commerce, which continued to flourish under the auspices of Christianity. In the sixth century it is spoken of by Procopius as being inhabited by Jews subject to the Roman dominion (*De Bell. Pers.* i. 19). In A.D. 630, the Christian communities of Arabia Petræa found it expedient to submit to Mohammed, when John, the Christian governor of Ailah, became bound to pay an annual tribute of 300 gold-pieces (Abulfeda, *Ann.* i. 171). Henceforward, till the present century, Ailah lay in the darkness of Islamism. It is merely mentioned by the supposed Ibn Haukal, perhaps in the eleventh century; and, after the middle of the twelfth, Edrisi describes it as a small town frequented by the Arabs, who were now its masters, and forming an important point in the route between Cairo and Medina. In A.D. 1116, King Baldwin of Jerusalem took possession of it. Again was it wrested from the hands of the Christians by Saladin I., A.D. 1167, and never again fully recovered by them; although the reckless Rainald of Chatillon, in A.D. 1182, seized, and for a time held, the town. In Abul-

feda's day, and before A.D. 1300, it was already deserted. He says, 'In our day it is a fortress, to which a governor is sent from Egypt. It had a small castle in the sea, but this is now abandoned, and the governor removed to the fortress on the shore.' Such as Ailah was in the days of Abulfeda, is Akaba now. Mounds of rubbish alone mark the site of the town, while a fortress, occupied by a governor and a small garrison under the Pasha of Egypt, serves to keep the neighbouring tribes of the desert in awe, and to minister to the wants and protection of the annual Egyptian Haj, or pilgrim caravan. This place has always been an important station upon the route of the Egyptian Haj. Such is the importance of this caravan of pilgrims from Cairo to Mecca, both in a religious and political point of view, that the rulers of Egypt from the earliest period have given it convoy and protection. For this purpose a line of fortresses similar to that of Akaba has been established at intervals along the route, with wells of water and supplies of provisions (Robinson's *Biblical Researches*, vol. i. p. 250).

The first Frank who visited this place in modern times, was Rüppell, in 1822. Laborde (*Journey through Arabia Petræa*, London, 1836) was well received by the garrison and inhabitants of the castle of Akaba, of which he has given a view (vol. i. p. 116). The fortress, he states, is built on a regular plan, and is in a pretty good condition, though within several good habitations have been suffered to fall to decay. It has only two guns fit for service.—J. R. B.

ELDAD and MEDAD (אֶלְדָּד וְמֵידָד; Sept. Ἐλδάδ καὶ Μωδάδ), two of the seventy elders appointed by Moses to assist him in the government of the people. Although not present with the others at the door of the tabernacle, they were equally filled with the divine spirit and began to 'prophesy' in the camp. Joshua, thinking this irregular, requested Moses to forbid them, and received an answer eminently characteristic of the great lawgiver:—'Enviest thou for my sake? Would to God that all the Lord's people were prophets, and that the Lord would put his spirit upon them' (Num. xi. 24-29).

ELDER (זָקֵן; Sept. πρεσβύτερος), literally, one of the older men, and because, in ancient times, older persons would naturally be selected to hold public offices, out of regard to their presumed superiority in knowledge and experience, the term came to be used as the designation for the office itself, borne by an individual, of whatever age. Such is the origin of the words γερουσία (a council of elders), senatus, alderman, &c. But the term 'elder' appears to be also expressive of respect and reverence in general, as *signore*, *seigneur*, *señor*, &c. The word occurs in this sense in Gen. l. 7, 'Joseph went up to bury his father, and with him went up all the servants of Pharaoh, the elders of his house, and all the elders of the land of Egypt'; Sept. πρεσβύτεροι, Vulg. *senes*. These elders of Egypt were, probably, the various state-officers. The elders of Israel, of whom such frequent mention is made, may have been, in early times, the lineal descendants of the patriarchs (Exod. xii. 21). To the elders Moses was directed to open his commission (Exod. iii. 16), τὴν γερουσίαν τῶν υἱῶν Ἰσραήλ; Aq. reads τοὺς πρεσβύτας. They accompanied Moses in his first interview with Pharaoh, as the representatives of the Hebrew nation (ver. 18); through them Moses issued his communications and commands to the whole people (Exod. xix. 7; Deut. xxxi. 9); they were his immediate attendants in all the great transactions in the wilderness (Exod. xvii. 5); seventy of their number were selected to attend Moses, Aaron, Nadab, and Abihu, at the giving of the law (Exod. xxiv. 1), on which occasion they are called the *nobles* (אֲצִילֵי) of the children of Israel, who did eat and drink before God, in ratification of the covenant, as representatives of the nation. In Num. xi. 16, 17, we meet with the appointment of seventy elders to bear the burden of the people along with Moses; these were selected by Moses out of the whole number of the elders, and are described as being, already, officers over the children of Israel. It is the opinion of Michaelis, that this council, chosen to assist Moses, should not be confounded with the Sanhedrim, which, he thinks, was not instituted till after the return from the Babylonish captivity [SANHEDRIM]. He observes that these seventy elders were not chosen to be *judges* of the people, who had already more than 60,000 judges. He also argues that the election of seventy additional *judges* would have done but little towards suppressing the rebellion which led Moses to adopt this proceeding; but that it seems more likely to have been his intention to form a supreme senate to take a share in the government, consisting of the most respectable persons, either for family or merit, which would materially support his power and influence among the people in general; would unite large and powerful families, and give an air of aristocracy to his government, which had hitherto been deemed too monarchical. He further infers that this council was not permanent, not being once alluded to from the death of Moses till the Babylonish captivity; that Moses did not fill up the vacancies occasioned by deaths, and that it ceased altogether in the wilderness. After the settlement in Canaan the elders seem to have been the administrators of the laws in all the cities (Deut. xix. 12; xxi. 3, 6, 19; xxii. 15, 25). The continuance of the office may be traced during the time of the judges (Judg. ii. 7); during that of Samuel (1 Sam. xvi. 4); under Saul (1 Sam. xxx. 26); and David (1 Chron. xxi. 16). The elders of Israel are mentioned during the captivity (Ezra x. 14), consisting either of those who had sustained that office in their own land, or were permitted by the Babylonians to exercise it still among their countrymen. We meet with them again at the restoration (Ezra v. 5), and by them the Temple was rebuilt (vi. 14). After the restoration and during the time of the Maccabees, the Sanhedrim, according to Michaelis, was instituted, being first mentioned under Hyrcanus II. (Joseph. *Antiq.* 9, 3); but elders are still referred to in 1 Macc. vii. 33. Among the members of the Sanhedrim were the πρεσβύτεροι. Thus we find ὁ ἀρχιερεὺς or more frequently οἱ ἀρχιερεῖς καὶ οἱ γραμματεῖς καὶ οἱ πρεσβύτεροι, also 'chief priests and elders,' 'elders and scribes,' and various other collocations. Like the scribes, they obtained their seat in the Sanhedrim by election, or nomination from the executive authority. The word elder, with many other Jewish terms, was introduced into the Christian

church. In the latter it is the title of inferior ministers, who were appointed overseers *among* not *over* the flock; Gr. ἐν ᾧ, Vulg. 'in quo' (Acts xx. 17, 28; Tit. i. 5, 7; 1 Pet. v. 1-5). The term is applied even to the apostles (2 John; 3 John). So also πρεσβυτέριον certainly includes even St. Paul himself (comp. 1 Tim. iv. 14 and 2 Tim. i. 6). Still the apostles are distinguished from the elders elsewhere (Acts xv. 6). The elder was constituted by an apostle or some one invested with apostolic authority (Acts xiv. 23; see also the epistles to Timothy and John). The elders preached, confuted gainsayers (Tit. i. 9), and visited the sick (James v. 14). The word elders is sometimes used in the sense of ancients, ancestors, predecessors, like the word ἀρχαῖοι (Matt. v. 21; Heb. xi. 2). It is used symbolically (Rev. iv. 4, &c.). The term πρεσβύτερος is plainly the origin of our word '*priest*'; Saxon, *preoster* and *preste*, then *priest*; High and Low Dutch, *priester*; French, *prestre* and *pretre*; Ital., *prete*; Span., *presbytero* (Jahn, *Biblisches Archäol.*, § 244; Mede's *Works*, fol. p. 27; Gesenius, *Wörterbuch*, s. v.).—J. F. D.

ELEALEH (אֶלְעָלֵה; Sept. Ἐλεάλη), a town of the Reubenites east of the Jordan (Num. xxxii. 3, 37); but which is named by the prophets as a city of the Moabites (Isa. xv. 4; xvi. 9; Jer. xlviii. 34). It is usually mentioned along with Heshbon; and accordingly travellers find in the neighbourhood of that city a ruined place, bearing the name of El Aal, which doubtless represents Elealeh. It stands upon the summit of a hill, and takes its name from its situation, Aal meaning 'high.' It commands the whole plain, and the view from it is very extensive. It is about a mile and a quarter north-east of Heshbon. Winer represents Burckhardt as saying that it was 6½ hours from Heshbon; and G. Robinson, copying Burckhardt, as if describing what he himself saw, makes the same mistake (*Travels*, ii. 193). But the 6½ hours of Burckhardt refer to the distance from his starting-point in the morning, which was Szalt. At 5¾ hours he arrived at El Aal, and at 6½ hours at Heshbon, bearing southwest from El Aal (*Syria*, p. 365). This makes the distance between them only half an hour, corresponding with the other accounts.

ELEAZAR (אֶלְעָזָר, *God the Helper*; Sept. Ἐλεάζαρ). This was an exceedingly common name among the Hebrews, being borne by a considerable number of persons in Scripture (as well as in the Apocrypha and Josephus), of whom the principal are the following.

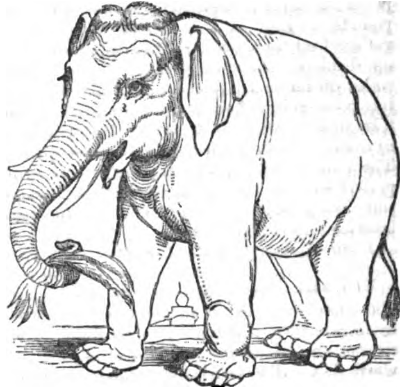
1. ELEAZAR, eldest son of Aaron (Exod. vi. 23, 25), who acted in his father's lifetime as chief of the tribe of Levi (Num. iii. 32), and at his death succeeded him in the high-priesthood (Num. xx. 35, sq.). His pontificate was contemporary with the military government of Joshua, whom he appears to have survived. A perfectly good understanding seems at all times to have subsisted between Eleazar and Joshua, as we constantly trace that co-operation and mutual support which the circumstances of the time and of the nation rendered so necessary. Eleazar is supposed to have lived twenty-five years after the passage of the Jordan, and the book of Joshua concludes with a notice of his death and burial.

2. ELEAZAR, who was set apart to attend upon the ark while it remained under the roof of his father Abinadab (1 Sam. vii. 1).

3. ELEAZAR, one of the three most eminent of David's heroes, who 'fought till his hand was weary' in maintaining with David and the other two a daring stand against the Philistines after 'the men of Israel had gone away.' He was also one of the same three when they broke through the Philistine host, to gratify David's longing for a drink of water from the well of his native Bethlehem (2 Sam. xxiii. 9, 10, 13).

4. ELEAZAR, the fourth of the Maccabaean brothers, sons of the priest Mattathias (1 Macc. ii. 5). He was crushed to death by the fall of an elephant which he stabbed under the belly in the belief that it bore the king, Antiochus Eupator (1 Macc. vi. 43-46).

5. ELEAZAR, an aged and venerable scribe who, 'as became his age, and the excellency of his ancient years, and the honour of his grey head,' chose rather to submit to the most cruel torments than conform to the polluting enactments of Antiochus Epiphanes (2 Macc. vii. 18-31).



ELECTA or ECLECTA (Ἐκλεκτή). According to Grotius, Wetstein, and some other critics, this word is used as a proper name in the address of John's second epistle, 'Ὁ Πρεσβύτερος Ἐκλεκτῇ κυρίᾳ—' *The Presbyter to the Lady Electa*.' This meaning is advocated by Bishop Middleton in his treatise on the *Doctrine of the Greek Article* (2nd ed. Cambridge, 1828, pp. 626-629). He adduces in support of it several epistolary inscriptions from Basil, in which the name precedes, and the rank or condition in life is subjoined, such as Εὐσταθίῳ ἰατρῷ—Λεοντίῳ σοφιστῇ—Βοσπορίῳ ἐπισκόπῳ—Μαγνηνιανῷ κόμητι: none of these, however, are purely honorary titles. To meet the objection that the sister of the person addressed is also called Eclecta in verse 13, he suggests that the words τῆς Ἐκλεκτῆς are a gloss, explanatory of σου. But this is mere conjecture, unsupported by a single manuscript; and such a gloss, if occasioned (as Bishop Middleton supposes) by the return to the singular number, would more naturally have been inserted after σε, in which position, however unnecessary, it would at least produce no ambiguity. Some writers, both ancient and modern, have adopted a mystical interpretation, though contrary to the *usus loquendi*, and to all apostolic usage, and supposed with Jerome that the term ἐκλεκτὴ referred to the church in general, or with Cassiodorus, to some particular congregation. The last named writer (b. A.D. 470, d. 562), in his *Complexiones in Epistolas*, &c. (Lond. 1722, p. 136), says, 'Johannes—electæ dominæ scribit ecclesiæ, filiisque ejus, quas sacro fonte genuerat.' Clemens Alexandrinus, in a fragment of his *Adumbrationes*, attempts to combine the literal and the mystical meanings—'Scripta vero est ad quandam Babyloniam Electam nomine, significat autem electionem ecclesiæ sanctæ.' (*Opera*, ed. Klotz. iv. p. 66). The Authorised Version translates the words in question '*the elect lady*,' an interpretation approved by Castalio, Beza, Mill, Wolf, Le Clerc, and Macknight. Most modern critics, however, Schleusner and Breitschneider in their Lexicons, Bourger (1763), Vater (1824), Goeschen (1832), and Tischendorf (1841), in their editions of the New Testament, Neander (*History of the Planting of the Christian*

Church, vol. ii. p. 71, Eng. transl.), De Wette (*Lehrbuch*, p. 339), and Lücke (*Commentary on the Epistles of St. John*, pp. 314-320, Eng. transl.), agree with the Syriac and Arabic Versions in making Κυρίᾳ a proper name, and render the words '*to the elect Cyria.*' Lardner has given a copious account of critical opinions in his *History of the Apostles and Evangelists*, c. xx. *Works*, vi. 281-288.—J. E. R.

ELEMENTS (στοιχεῖα). The etymon both of the English and Greek word conveys their primary meaning: thus, elements, from elementa, *the alimenta* from which things are made, and στοιχεῖα, from στείχω, 'to go up by steps'—the *first principles* whence the subsequent parts of things (στοιχοῦσι) proceed in order. It seems to have been believed, from a very early period, that all bodies consist of certain first, specific ingredients (στοιχεῖα), into which they are all resolvable, although different opinions prevailed respecting the number and nature of these primary constituents of things. Hesychius explains στοιχεῖα by πῦρ, ὕδωρ, γῆ, καὶ ἀήρ, ἀφ' ὧν τὰ σώματα—fire, water, earth, and air, of which bodies are formed. This, which is the simplest, may be called the primary sense of the word. A secondary use of the word relates to the *organized* parts of which anything is framed, as the letters of the alphabet (Hesychius gives also γράμματα), these being the elements of words; also the elements, rudiments, or first principles of any art or science. The word occurs in its *primary* sense, Wis. vii. 17, σύστασιν κόσμου καὶ ἐνέργειαν στοιχείων, 'the constitution of the world and the operation of the elements;' also xix. 18. It is used in the *same sense*, 2 Pet. iii. 10, στοιχεῖα δὲ καυσούμενα λυθήσονται, and ver. 12, τήκεται, 'the elements burning will be dissolved and melted.' The Jews, in Peter's time, spoke of *four* elements (Joseph. *Antiq.* iii. 7. 7).

The word occurs in a *secondary* sense in Gal. iv. 3-9, τὰ στοιχεῖα τοῦ κόσμου, 'the elements or rudiments of the world,' which the Apostle calls ἀσθενῆ καὶ πτωχὰ στοιχεῖα, 'very weak and poor elements.' He introduces the word to preserve the unity of his comparison of the law to a *pedagogue* (iii. 24), and of persons under it, to children under tutors; and by the elements or *rudiments* of the world he evidently means that state of religious knowledge which had subsisted in the world, among Jews and Gentiles, before Christ; the weakness of which, among the Jews, may be seen in Heb. vii. 18, 19; x. 1, and among the Gentiles, in the epistle to the Romans, *passim*. 'The elements of the world' occurs again, Col. ii. 8-20, in the same sense, as appears from the various allusions both to the terms used in Grecian philosophy, and the dogmas of the Judaizers in the subsequent verses; the phrase being possibly suggested to the Apostle by his previous use of it to the Galatians. The word στοιχεῖα in Heb. v. 12 is restricted, by the addition τῶν λογίων τοῦ Θεοῦ, to the rudiments of Christianity (see Rosenmüller and Benson on the passages).—J. F. D.

ELEPHANT (ἐλέφας) occurs only in 1 Macc. vi. 34. Bochart imagined שנהבים *shenhabbim* to be a contraction of שן־קהבים *shen-kahabbim*, because *alikhaban* is one of the Arabic names of the elephant; and thence inferred that *schin* denoting *tooth*, the remaining part of the word, *habbim* or *habbehim*, was in Hebrew, like *khaban* in Arabic, to be referred to elephant. However this may be, all the nations of the south and west of Asia have for many ages generally used the word *fil*, *feel*, *pheel*, *phil*, פיל; for we find it in the Chaldee, Syriac, Persian, Arabic, and Turkish, extending to the east far beyond the Ganges, where, nevertheless, in the indigenous tongues *anei*, *waranam*, and *hatti* are existing names.

279. [Asiatic Elephant.]

The animals of this genus consist at present of two very distinct species, one a native of Southern Asia, once spread considerably to the westward of the Upper Indus, and the other occupying southern and middle Africa to the edge of the great Sahara. In a fossil state there are besides six more species clearly distinguished. The elephant is the largest of all terrestrial animals, sometimes reaching to above eleven feet of vertical height at the shoulders, and weighing from five to seven thousand pounds: he is of a black or slaty-ash colour, and almost destitute of hair. The head, which is proportionably large, is provided with two broad pendulous ears, particularly in those of the African species, which are occasionally six feet in length. This species has also two molar teeth on each side of the jaw, both above and below, and only three toe-nails on each of the hind-feet; whereas the Asiatic species is provided with only one tooth on each side above and below; and though both have tusks or defences, the last-mentioned has them confined solely to the males: they are never of more than seventy pounds weight, often much less, and in some breeds even totally wanting; while in the African both sexes are armed with tusks, and in the males they have been known seven feet in length, and weighing above 150 pounds each. The forehead of the African is low; that of the Asiatic high; in both the eyes are comparatively small, with a malevolent expression, and on the temples are pores which exude a viscous humour; the tail is long, hanging nearly to the heels, and distichous at the end. But the most remarkable organ of the elephant, that which equally enables the animal to reach the ground and to grasp branches of trees at a considerable height, is the proboscis or trunk; a cylindrical elastic instrument, in ordinary condition reaching nearly down to the ground, but contractile to two-thirds of its usual

length, and extensile to one-third beyond it; provided with nearly 4000 muscles crossing each other in such a manner that the proboscis is flexible in every direction, and so abundantly supplied with nerves as to render the organ one of the most delicate in nature. Within is the double canal of the nostrils, and at the terminal opening a finger-like process, with which the animal can take up very minute objects and grasp others, even to a writing pen, and mark paper with it. By means of the proboscis the elephant has a power of suction capable of raising nearly 200 pounds weight; and with this instrument he gathers food from trees and from the earth, draws up drink to squirt it down his throat, draws corks, unties small knots, and performs numberless other minute operations; and, if necessary, tears down branches of trees more than five inches in diameter with no less dexterity than strength. The gait of an elephant is an enormous stride, performed with his high and ponderous legs, and sufficiently rapid to require smart galloping on horseback to outstrip him.

Elephants are peaceable towards all inoffensive animals; sociable among themselves, and ready to help each other; gregarious in grassy plains: but more inclined to frequent densely-wooded mountain glens: at times not unwilling to visit the more arid wastes, but fond of rivers and pools, where they wallow in mud and water among reeds and under the shade of trees. They are most assuredly more sagacious than observers, who, from a few visits to menageries, compare them with dogs, are able to appreciate, for on this question we must take into account, on the one hand, the physical advantages of the proboscis added to the individual experience gained by an animal slow in growth, and of a longevity exceeding a century; but still placed in contact with man after a birth free in every sense, where his powers expand without human education; while on the other hand dogs are the offspring of an immense number of generations, all fashioned to the will of a master, and consequently with innate dispositions to acquire a certain education. In Griffith's *Cuvier* are found several anecdotes, some of them from the personal observations of the present writer; and referring to them, we shall add only a single one here, related by the late Captain Hobson, R.N., as observed by himself at Travancore, where several of these animals were employed in stacking teak timber balk. They had scarcely any human aid or direction, but each beam being successively noosed and slung, they dragged it to the stack, raised one end up, contrived to shove it forward, nicely watching when, being poised by its own weight, the lower end would rise, and then, placing their foreheads against the butt end, they pushed it even on the stack; the sling they unfastened and carried back to have it fitted again! In a wild state no other animal has the sagacity to break off a leafy branch, hold it as a fan, and use it as a brush to drive away flies.

The Asiatic species, carrying the head higher, has more dignity of appearance, and is believed to have more sagacity and courage than the African; which, however, is not inferior in weight or bulk, and has never been in the hands of such experienced managers as the Indian mohauts are, who have acquired such deep knowledge of the character of these beasts that they make them submit to almost incredible operations; such, for example, as suffering patiently the extraction of a decayed part of a tooth, a kind of chisel and mallet being the instruments used for the purpose. This was witnessed by a medical officer, a near relative of the present writer. Elephants walk under water as long as the end of the proboscis can remain above the surface; but when in greater depth, they float with the head and back only about a foot beneath it. In this manner they swim across the broadest streams, and guide themselves by the sense of smelling till they reach footing to look about them and land. They are steady, assiduous workmen in many laborious tasks, often using discretion when they require some dexterity and attention in the performance. Good will is all man can trust to in directing them, for correction cannot be enforced beyond their patience; but flattery, good treatment, kind words, promises, and rewards, even to the wear of finery, have the desired effect. In history they appear most conspicuous as formidable elements of battle. From the remotest ages they were trained for war by the nations of India, and by their aid they no doubt acquired and long held possession of several regions of High Asia westward of the Indus. They are noticed in the ancient Mahabarata. According to Santi the relative force of elephants in an akshaushini or great army corps was one to each chariot of war, three horsemen, and five foot-soldiers, or rather archers mounted on the animal's back within a defensible houdah —in the west denominated a castle. Thus one armed elephant, one chariot, and three horsemen formed a patti or squad of at most eleven men, and if there were other bodies of infantry in the army they are unnoticed. This enumeration is sufficient to show that in India, which furnished the elephants and the model of arming them, there were only four or five archers with or without the mohaut or driver, and that, consequently, when the successors of Alexander introduced them in their wars in Syria, Greece, and even Italy, they could not be encumbered more than perhaps momentarily with one or two additional persons before a charge; for the weight carried by a war-elephant is less than that of one used for burthen, which seldom equals two thousand pounds. In order to ascend his back when suddenly required, the animal will hold out one of his hind legs horizontally, allowing a person to step upon it until he has grasped the crupper and crept up. In the West, where they were considered for a time of great importance, no doubt the squad or escort of each animal was more considerable than in the East, and may have amounted to thirty-two foot-soldiers; the number given, by some mistake, as if actually mounted, in 1 Macc. vi. 37.

Although red colours are offensive to many animals, it may be observed that the use of mulberry juice or grapes must have been intended as an excitement to their taste, for they are all fond of fruit. Wine, so as to cause an approach to intoxication, would render them ungovernable, and more dangerous than when in a state of fear. They do not require stimulants to urge them on in a modern battle, with all its flashes of fire, smoke, and explosion; and red colours usually employed for their trappings produce more of a satisfactory

feeling than rage. Judicious and long-continued training is the only good remedy against sudden surprises caused by objects not yet examined by their acutely-judging senses, or connected with former scenes of danger, which are alone apt to make them turn. It is likely that the disciplined steadiness of well-armed ranks frightened them by their novelty more than the shouts of Macedonian thousands, which must have been feeble in the ears of elephants accustomed to the roar of hundreds of thousands of Indians. It is probable that the Carthaginians made the experiment of training African elephants in imitation of Ptolemy Philadelphus: they are noticed in their army only in the first Punic war; and, from what appears of the mode of managing them, there is reason to believe, as already noticed, that they were never so thoroughly subdued as the Indian elephants.—C. H. S.

ELEUTHEROPOLIS (Ἐλευθερόπολις), a place not named in Scripture, but which was an episcopal city of such importance in the time of Eusebius and Jerome that they assumed it as the point whence to estimate the distances and positions of other cities in Southern Palestine. It continued to be a great city until the sixth century: but after that we lose sight of it, and all the attempts to recover the knowledge of a position of such topographical importance have proceeded upon critical conjectures and combinations. This process sufficed to show that it lay in the south-western plain of Judæa, between Hebron and Askelon, but not to determine the site with any precision. Professor Robinson, when in that quarter, made this long-lost and important site a subject of particular inquiry; but no traces of the *name* could be found, and Beit-Jibrin was referred to as the only place in the neighbourhood where any ruins of consequence existed. Of these ruins the Arabs spoke in the most extravagant terms, and the travellers were induced to turn their steps in that direction. On approaching Beit-Jibrin they were gratified to find themselves surrounded by several places whose distances from Eleutheropolis are specified by Eusebius and Jerome, and which might serve them as a clew in the search for Eleutheropolis itself.

Beit-Jibrin proved to be a village of moderate size, the capital of a district in the province of Gaza. In and around this village are ruins of different ages, more extensive and massy than any which had been seen in Palestine, excepting the substructions of the ancient temple at Jerusalem and the Haram at Hebron. These ruins consist principally of the remains of a fortress of immense strength, in the midst of an irregular rounded enclosure, encompassed by a very ancient and strong wall. This outer wall is built of large squared stones, uncemented. Along this wall on the inside, towards the west and north-west, is a row of ancient massive vaults with fine round arches, apparently of the same age as the wall itself, and both undoubtedly of Roman origin. In the midst of the area stands an irregular castle, the lower parts of which seem to be as ancient as the exterior wall, but it has obviously been built up again in modern times. An inscription over the gate shows that it was last repaired by the Turks A.H. 958 (A.D. 1551), nearly two years after the present walls of Jerusalem were built. Remains of ancient walls and dwellings extend up the valley; and at the distance of twenty minutes from the present village are the ruins of an ancient church, bearing the name of Santa Hanneh (St. Anne). Only the eastern end is now standing, including the niche of the great altar and that of a side chapel, built of large hewn stones of strong and beautiful masonry.

Ruins thus worthy of the Roman name and indicative of a powerful city, seemed sufficient to warrant the conclusion that the site was that of the ancient Eleutheropolis; especially as it lay within the limits to which a careful estimate of the distances and positions in the *Onomasticon* had satisfied Dr. Robinson that the site must lie. Nevertheless, he had assured himself that this Beit-Jibrin could be no other than the Betogabra of Ptolemy and the Peutinger Tables, and the Beigeberin (an episcopal city) of the ecclesiastical *Notitiæ* of the subsequent centuries: and as he was not prepared to suppose that Eleutheropolis and Beto-gabra could be the same place, he proceeded to look elsewhere for the former city. Failing to discover the slightest trace of it within the quarter in which it must needs have lain, he again visited Beit-Jibrin, and then arrived at the conclusion that Beto-gabra and Eleutheropolis were indeed one and the same, the former represented by the present Beit-Jibrin, being the native name, kept in the background for a time by the Græco-Roman official title of Eleutheropolis, 'free city,' but reappearing as soon as the Romans, who used that name, had withdrawn. This explains satisfactorily the disappearance of the name of so important a place as Eleutheropolis, and affords ground for tracing its continued existence for ages under its native name.

In the twelfth century the Crusaders found on this spot an ancient site in ruins under the name of Beth-Gebrim; and here they reared again a fortress upon the ancient foundations. This place and fortress are often mentioned in the histories of the Crusades, usually under the corrupted name of Gibelin; and it was most erroneously confounded by the Christian writers with Beersheba. By the Arabian authors it is not unfrequently mentioned under the names of Beit-Jibrin and Beit-Jibril. Since the time of the Crusades the place does not appear to have been visited by any Christian traveller until Dr. Robinson explored the neighbourhood on his route from Jerusalem to Gaza.

Beto-Gabra, Beth-Gebrim, and Beit-Jibrin appear to be different forms of the ancient Hebrew name. But the name itself does not occur in Scripture. Josephus indeed mentions a large village, Βήταρις (Betaris), in this region (*De Bell. Jud.* iv. 8, 1), which Rufinus reads Βήγαβρις (Begabris) in his copy; and Reland (p. 626) suggests that this may have been the same place, which is not unlikely.

This short analysis of the extended observations and discussions of Dr. Robinson (*Researches*, ii. 348, 359, 398, 404-420, 642-646) will put the reader in possession of the leading facts of this interesting question. The result seems to be that the identity of Beto-Gabris with Beit-Jibrin is satisfactorily established, and that the identity of Eleutheropolis with the same, although less certain, is rendered more than probable. Beit-Jibrin is twenty miles east of Askelon, and thirteen miles east-north-east from Hebron.

ELI (עֵלִי, *raised up:* Sept. Ἠλί), high-priest of the Jews when the ark was in Shiloh (1 Sam. i. 3, 9). He was the first high-priest of the line of Ithamar, Aaron's youngest son. This is deduced from 1 Chron. xxiv. 3, 6 (comp. Joseph. *Antiq.* v. 9, 1). It also appears from the omission of the names of Eli and his immediate successors in the enumeration of the high-priests of Eleazar's line in 1 Chron. vi. 4-6. What occasioned this remarkable transfer is not known—most probably the incapacity or minority of the then sole representative of the elder line; for it is very evident that it was no unauthorized usurpation on the part of Eli (1 Sam. ii. 27, 28). Eli also acted as regent or civil judge of Israel after the death of Samson. This function, indeed, seems to have been intended, by the theocratical constitution, to devolve upon the high-priest, by virtue of his office, in the absence of any person specially appointed by the Divine King, to deliver and govern Israel. He is said to have judged Israel forty years (1 Sam. iv. 18): the Septuagint makes it twenty; and chronologers are divided on the matter. But the probability seems to be that the forty years comprehend the whole period of his administration as high-priest *and* judge, including, in the first half, the twenty years in which Samson is said to have judged Israel (Judg. xvi. 31), when some of his civil functions in southern Palestine may have been in abeyance. As Eli died at the age of ninety-eight (1 Sam. iv. 15), the forty years must have commenced when he was fifty-eight years old.

Eli seems to have been a religious man; and the only fault recorded of him was an excessive easiness of temper, most unbefitting the high responsibilities of his official character. His sons, Hophni and Phinehas, whom he invested with authority, misconducted themselves so outrageously as to excite deep disgust among the people, and render the services of the tabernacle odious in their eyes. Of this misconduct Eli was aware, but contented himself with mild and ineffectual remonstrances, where his station required severe and vigorous action. For this neglect the judgment of God was at length denounced upon his house, through the young Samuel, who, under peculiar circumstances [SAMUEL], had been attached from childhood to his person (1 Sam. ii. 29; iii. 18). Some years passed without any apparent fulfilment of this denunciation—but it came at length in one terrible crash, by which the old man's heart was broken. The Philistines had gained the upper hand over Israel, and the ark of God was taken to the field, in the confidence of victory and safety from its presence. But in the battle which followed, the ark itself was taken by the Philistines, and the two sons of Eli, who were in attendance upon it, were slain. The high-priest, then blind with age, sat by the way-side at Shiloh, awaiting tidings from the war, 'for his heart trembled for the ark of God.' A man of Benjamin, with his clothes rent, and with earth upon his head, brought the fatal news: and Eli heard that Israel was defeated—that his sons were slain—that the ark of God was taken—at which last word he fell heavily from his seat, and died (1 Sam. iv).

The ultimate doom upon Eli's house was accomplished when Solomon removed Abiathar (the last high-priest of this line) from his office, and restored the line of Eleazer in the person of Zadok [ABIATHAR].

ELIAKIM. [JEHOIAKIM.]

ELIAS. [ELIJAH.]

ELIEZER. This is the same name as Eleazar—whence came the abbreviated Lazar or Lazarus of the New Testament. It is proper to note this here, because the parable which describes Lazarus in Abraham's bosom (Luke xvi. 23) has been supposed to contain a latent allusion to the name of Eliezer, whom, before the birth of Ishmael and Isaac, Abraham regarded as his heir. The passage of Scripture in which the name of Eliezer occurs is one of some difficulty. Abraham, being promised a son, says:—'I go childless, and the steward of my house is this Eliezer of Damascus. . . . . Behold, to me thou hast given no seed: and, lo, one born in mine house is mine heir' (Gen. xv. 2, 3). Part of the difficulty is caused by the translation, and part by the prevalence of notions gathered from external sources, and not warranted by the original text. The common notion is that Eliezer was Abraham's house-born slave, adopted as his heir, and meanwhile his chief and confidential servant, and the same who was afterwards sent into Mesopotamia to seek a wife for Isaac. This last point we may dismiss with the remark, that there is not the least evidence that 'the elder servant of his house' (Gen. xxiv. 2), whom Abraham charged with this mission, was the same as Eliezer: and our attention may therefore be confined to the verses which have been quoted.

It is obvious that the third verse is not properly a sequel to the second, but a repetition of the statement contained in the second; and, being thus regarded as parallel passages, the two may be used to explain each other.

'Eliezer of Damascus,' or 'Damascene-Eliezer,' is the subject of both verses. The obvious meaning is, that Eliezer was born in Damascus: and how is this compatible with the notion of his being Abraham's house-born slave, seeing that Abraham's household never was at Damascus? It is true that there is a tradition, quoted by Josephus from Nicolaus of Damascus (*Antiq.* i. 7. 4.), that Abraham 'reigned in Damascus;' but the tradition was probably founded on this very passage, and has no claim on our belief.

The expression, 'the steward of mine house,' in ver. 2, will explain the sense of 'one born in mine house is mine heir,' in ver. 3. The first phrase, literally translated, is 'the son of possession of my house,' *i. e.* one who shall possess my house, my property, after my death; and is therefore exactly the same as the phrase in the next verse, 'the son of my house (paraphrased by 'one born in mine house') is mine heir.' This removes every objection to Eliezer's being of Damascus, and enables us to dispense with the tradition; for it is no longer necessary to suppose that Eliezer was a house-born slave, or a servant at all; and leaves it more probable that he was some near relative whom Abraham regarded as his heir-at-law. In this case Abraham obviously means to say, 'Behold, to me thou hast given no children, and not the son of my loins, but the son of my house (*i. e.* of my family—the son whom my house gives me—the heir-at-law) is mine heir.' It is by no means certain that 'this Eliezer' was

present in Abraham's camp at all: and we, of course, cannot know in what degree he stood related to Abraham, or under what circumstances he was born at, or belonged to, Damascus. It is possible that he lived there at the very time when Abraham thus spoke of him, and that he is hence called 'Eliezer of Damascus.'

This view, that Eliezer was actually Abraham's near relative and heir-at-law, removes another difficulty, which has always occasioned some embarrassment, and which arises from the fact, that while he speaks of Eliezer as his heir, his nephew Lot was in his neighbourhood, and had been, until lately, the companion of his wanderings. If Eliezer was Abraham's servant, it might well occasion surprise that he should speak of him and not of Lot as his heir: but this surprise ceases when we regard Eliezer as also a relative, and if so, a nearer relative than Lot, although not, like Lot, the companion of his journeys. Some have supposed that Lot and Eliezer were, in fact, the same person; and this would be an excellent explanation if the Scriptures afforded sufficient grounds for it.

2. ELIEZER. The second of the two sons born to Moses while an exile in the land of Midian (Exod. xviii. 4). Eliezer had a son called Rebadiah (1 Chron. viii. 17).

ELIHU (אֱלִיהוּא, *God-Jehovah*; Sept. Ἐλιούς). One of Job's friends, described as 'the son of Barachel, a Buzite, of the kindred of Ram' (Job xxxii. 2). This is usually understood to imply that he was descended from Buz, the son of Abraham's brother Nahor, from whose family the city called Buz (Jer. xxv. 23) also took its name. The Chaldee paraphrase asserts Elihu to have been a relation of Abraham. Elihu's name does not appear among those of the friends who came in the first instance to condole with Job, nor is his presence indicated till the debate between the afflicted man and his three friends had been brought to a conclusion. Then, finding there was no answer to Job's last speech, he comes forward with considerable modesty, which he loses as he proceeds, to remark on the debate, and to deliver his own opinion on the points at issue. The character and scope of his orations are described elsewhere [Job, Book of]. It appears, from the manner in which Elihu introduces himself, that he was by much the youngest of the party; and it is evident that he had been present from the commencement of the discussion, to which he had paid very close attention. This would suggest that the debate between Job and his friends was carried on in the presence of a deeply-interested auditory, among which was this Elihu, who could not forbear from interfering when the controversy appeared to have reached an unsatisfactory conclusion.

ELIJAH (אֵלִיָּה, *God-Jehovah*; Sept. Ἠλιού). This wonder-working prophet is introduced to our notice like another Melchizedek (Gen. x. 4, 18; Heb. vii. 3), without any mention of his father or mother, or of the beginning of his days—as if he had dropt out of that cloudy chariot, which, after his work was done on earth, conveyed him back to heaven. From this silence of Scripture as to his parentage and birth, much vain speculation has arisen. Some of the Rabbins have supposed that he was *Phineas*, the grandson of Aaron; whilst others have thought that he was an *angel*, who, for the purpose of reforming wicked king Ahab and his ungodly subjects, assumed the form of a man. Some suppose that Elijah is called a Tishbite from Tishbeh, a city beyond the Jordan. Others suppose that Tishbite means *converter* or *reformer*, deriving it from the Hebrew radical שׁוּב. The very first sentence that the prophet utters is a direful denunciation against Ahab; and this he supports by a solemn oath, 'As the Lord God of Israel liveth, before whom I stand, there shall not be dew or rain these years (*i. e.* three and a half years, Luke iv. 25; James v. 17), but according to my word' (1 Kings xvii. 1). Before, however, he spoke thus, it would seem that he had been warning this most wicked king as to the fatal consequences which must result both to himself and his people, from the iniquitous course he was then pursuing: and this may account for the apparent abruptness with which he opens his commission.

We can imagine Ahab and Jezebel being greatly incensed against Elijah for having foretold and prayed that such calamities might befall them. For some time they might attribute the drought under which the nation suffered to natural causes, and not to the interposition of the prophet; and, therefore, however they might despise him as a vain enthusiast, they would not proceed immediately to punish him. When, however, they saw the denunciation of Elijah taking effect far more extensively than had been anticipated, they would naturally seek to wreak their vengeance upon him as the cause of their sufferings. But we do not find him taking one step for his own preservation, till the God whom he served said, 'Get thee hence, and turn thee eastward, and hide thyself by the brook Cherith, that is before Jordan: and it shall be that thou shalt drink of the brook; and I have commanded the ravens to feed thee there' (1 Kings xvii. 3, 4). Other and better means of protection from the impending danger might seem open to him; but, regardless of these, he hastened to obey the divine mandate, and 'went and dwelt by the brook Cherith that is before Jordan' (1 Kings xvii. 5) [Cherith].

Some commentators, availing themselves of the fact that ערבים *orebim*, which we translate *ravens*, means, in Ezek. xxvii. 27, *merchants*, have tried to explain away the miraculous character of God's preservation of his servant at Cherith. Others again have thought that the original signifies *Arabians*, as in 2 Chron. xxi. 16; Neh. iv. 7; where the like word is used; or possibly the inhabitants of the city Arabah, near Beth-shan (Josh. xv. 6, and xviii. 18, &c.). In the face of such opinions as these, we still believe that ravens and not men were the instruments which God, on this occasion, employed to carry needful food to his exiled and persecuted servant; and in this he would give us a manifest proof of His sovereignty over all creatures. But, it has been inquired, how could these birds obtain food of a proper kind, and of a sufficient quantity, to supply the daily wants of the prophet? The answer to this inquiry is very simple. We cannot tell. It is enough for us to know that God engaged to make a provision for him, and that He failed not to fulfil his engagement. We need not to speculate, as some have

done, as to whether this supply was taken from Ahab's or Jehoshaphat's table, or from that of one of the seven thousand of Israel who had not bowed the knee to Baal.

A fresh trial now awaits this servant of God (B.C. 909), and in the manner in which he bears it, we see the strength of his faith. For one year, as some suppose, God had miraculously provided for his bodily wants at Cherith; but the brook which, heretofore, had afforded him the needful refreshment there, became dried up. Encouraged by past experience of his heavenly Father's care of him, the prophet still waited patiently till He said, 'Arise (1 Kings xvii. 9), get thee to Zarephath, which belongeth to Zidon, and dwell there: behold, I have commanded a widow woman there to sustain thee.' He then, at once, set out on the journey, and now arrived at Zarephath, he, in the arrangement of God's providence, met, as he entered its gate, the very woman who was deputed to give him immediate support. But his faith is again put to a sore test, for he found her engaged in a way which was well calculated to discourage all his hopes; she was gathering sticks for the purpose, as she assured him, of cooking the last meal, and now that the famine prevailed there, as it did in Israel, she saw nothing before her and her only son but starvation and death. How then could the prophet ask for, and how could she think of giving, a part of her last morsel? The same Divine Spirit inspired him to assure her that she and her child should be even miraculously provided for during the continuance of the famine; and also influenced her heart to receive, without doubting, the assurance! The kindness of this widow in baking the first cake for Elijah was well requited with a prophet's reward (Matt. x. 41, 42); she afforded one meal to him, and God afforded many to her (see 1 Kings xv. 16). But uninterrupted prosperity will not do for even God's most devoted servants. Possibly a feeling of self-righteousness might, through the deceitfulness of sin, have begun to enter their minds, seeing that, whilst millions around them were now suffering and dying from want, they were made the special objects of God's providential care. Accordingly, their heavenly Father saw fit to visit them with a temporary calamity—a calamity as severely felt in some respects by the one as it was by the other. 'And it came to pass that the son of the woman, the mistress of the house, fell sick; and his sickness was so sore that there was no life left in him' (1 Kings xvii. 17). Verse 18 contains the expostulation with the prophet of this bereaved widow; she rashly imputes the death to his presence. She seems to have thought within herself, that, as God had shut up heaven from pouring down refreshing showers upon a guilty nation, in consequence of the prophet's prayer, so she was now suffering from a similar cause. Elijah retaliates not, but calmly takes the dead child out of the mother's bosom, and lays it on his own bed (verse 19), that there he may, in private, pray the more fervently for its restoration. Every epithet that the prophet poured forth on this occasion was big with meaning; his prayer was heard, and answered by the restoration of life to the child, and of gladness to the widow's heart.

Since now, however, the long-protracted famine, with all its attendant horrors, failed to detach Ahab and his guilty people from their abominable idolatries, God mercifully gave them another opportunity of repenting and turning to Himself. For three years and six months (James v. 17) the destructive famine had spread its deadly influence over the whole nation of Israel. During this time the prophet was called upon passively to suffer God's will; now he must once again resume the more active duties of life; he must make one great public effort more to reclaim his country from apostacy and ruin. According to the word of the Lord he returned to Israel; Ahab was yet alive, and unreformed; Jezebel, his impious consort, was still mad upon her idols; in a word, the prophets of Baal *were prophesying lies, the priests were bearing rule by their means, and the people loved to have it so.* Such was the state of things in Israel when Elijah once again stood before Ahab. Wishing not to tempt God by going unnecessarily into danger, he first presented himself to good Obadiah (1 Kings xviii. 7). This principal servant of Ahab was also a true servant of God; and on recognising the prophet he treated him with honour and respect. Elijah requested him to announce to Ahab that he had returned. Obadiah, apparently stung by the unkindness of this request, replied, 'What have I sinned, that thou shouldest thus expose me to Ahab's rage, who will certainly slay me for not apprehending thee, for whom he has so long and so anxiously sought in all lands and in confederate countries, that they should not harbour a traitor whom he looks upon as the author of the famine,' &c. Moreover, he would delicately intimate to Elijah how he had actually jeoparded his own life in securing that of one hundred of the Lord's prophets, and whom he had fed at his own expense. Satisfied with Elijah's reply to this touching appeal, wherein he removed all his fears about the Spirit's carrying himself away (as 2 Kings ii. 11-16; Ezek. iii. 4; Acts viii. 39), he resolves to be the prophet's messenger to Ahab. Intending to be revenged on him, or to inquire when rain might be expected, Ahab now came forth to meet Elijah. He at once charged him with troubling Israel, *i.e.* with being the main cause of all the calamities which he and the nation had suffered. But Elijah flung back the charge upon himself, assigning the real cause to be his own sin of idolatry. Regarding, however, his magisterial position, while he reproved his sin, he requests him to exercise his authority in summoning an assembly to Mount Carmel, that the controversy between them might be decided, whether the king or the prophet was Israel's troubler. Whatever were the secret motives which induced Ahab to comply with this proposal, God directed the result. Elijah offered to decide this controversy between God and Baal, not by Scripture—for an appeal to its authority would have fallen powerless upon their *infidel minds*—but by a miracle from Heaven. As fire was the element over which Baal was supposed to preside, the prophet proposes (wishing to give them every advantage), that, two bullocks being slain, and laid each upon a distinct altar, the one for Baal, the other for Jehovah, whichever should be consumed by fire must proclaim whose the people of Israel were, and whom it was their duty to serve. The people consent to this proposal, because, it may be, they were not altogether ignorant how God had formerly answered by fire (Gen. iv. 4; Lev. ix. 24;

Judg. vi. 21; xiii. 20; 1 Chron. xxi. 26; 2 Chron. vii. 1). Elijah will have summoned not only all the elders of Israel, but also the four hundred priests of Baal belonging to Jezebel's court, and the four hundred and fifty who were dispersed over the kingdom. The former, however, did not attend; being, perhaps, glad to shelter themselves under the plea that Jezebel would not allow them to do so. Confident of success, because doubtless God had revealed the whole matter to him, he enters the lists of contest with the four hundred and fifty priests of Baal. Having reconstructed an altar which had once belonged to God, with twelve stones—as if to declare that the twelve tribes of Israel should again be united in the service of Jehovah—and having laid thereon his bullock, and filled the trench by which it was surrounded with large quantities of water, lest any suspicion of deceit might occur to any mind, the prophet gives place to the Baalites—allows them to make trial first. In vain did these deceived and deceiving men call, from morning till evening, upon Baal—in vain did they now mingle their own blood with that of the sacrifice: no answer was given—no fire descended.

Elijah having rebuked their folly and wickedness with the sharpest irony, and it being at last evident to all that their efforts to obtain the wished-for fire were vain, now, at the time of the evening sacrifice, offered up his prayer. The Baalites' prayer was long, that of the prophet is short—charging God with the care of His covenant, of His truth, and of His glory—when, behold, 'the fire came down, licked up the water, and consumed not only the bullock, but the very stones of the altar also.' The effect of this on the mind of the people was what the prophet desired: acknowledging the awful presence of the Godhead, they exclaim, as with one voice, 'The Lord He is God; the Lord He is God!' Seizing the opportunity whilst the people's hearts were warm with the fresh conviction of this miracle, he bade them take those juggling priests and kill them at Kishon, that their blood might help to fill that river which their idolatry had provoked God to empty by drought. All this Elijah might lawfully do at God's direction, and under the sanction of His law (Deut. xiii. 5; xviii. 20). Ahab having now publicly vindicated God's violated law by giving his royal sanction to the execution of Baal's priests, Elijah informed him that he may go up to his tent on Carmel to take refreshment, for God will send the desired rain. In the mean time he prayed earnestly (James v. 17, 18) for this blessing: God hears and answers: a little cloud arises out of the Mediterranean sea, in sight of which the prophet now was, diffuses itself gradually over the entire face of the heavens, and now empties its refreshing waters upon the whole land of Israel! Here was another proof of the Divine mission of the prophet, from which, we should imagine, the whole nation must have profited; but subsequent events would seem to prove that the impression produced by these dealings of God was of a very partial and temporary character. Impressed with the hope that the report of God's miraculous actings at Carmel might not only reach the ear, but also penetrate, and soften, the hard heart of Jezebel; and anxious that the reformation of his country should spread in and about Jezreel also, Elijah, strengthened, as we are told, from on high, now accompanies Ahab thither on foot. How ill-founded the prophet's expectation was, subsequent events too painfully proved. Jezebel, instead of receiving Elijah obviously as the messenger of God for good to her nation, now secretly conceives and openly declares her fixed purpose to put him to death. The man whose prayer had raised the dead, had shut and opened Heaven, he who had been so wonderfully preserved by God at Cherith and Zarephath, and who dared to tax Ahab to his face with being Israel's troubler, is now so terrified by the knowledge of this vile woman's design that he fled into the wilderness and there longed for death—thus affording a practical evidence of what St. James says of him, that he was a man of like passions with us. His now altered state of mind would seem to have arisen out of an exaggerated expectation of what God designed to effect through the miracles exhibited to, and the judgments poured upon, this guilty nation. He seems to have thought that, as complete success did not crown the last great effort he had made to reform Israel, there could not be the slightest use in labouring for this end any longer. Alas! had he stood his ground at Jezreel, who can tell what effect this might have had even upon the mind of Jezebel, and, through her, upon the whole nation! But no; the great opportunity of usefulness is now lost, and he asks for death: still God will be gracious to him. He now, alone in the wilderness and at Mount Horeb, will at once touch his heart and correct his petulancy by the ministration of His angel, and by a fearful exhibition of His Divine power. And having done this, revealing Himself in the gentle accents of a still voice, He announces to him that he must go and anoint Hazael king over Syria, Jehu king over Israel, and Elisha prophet in his own place, ere death can put a period to his labours. These persons shall revenge God's quarrels; one shall begin, another shall prosecute, and the third shall perfect the vengeance on Israel. When God had comforted His prophet by telling him of these three instruments he had in store to vindicate his own insulted honour, then he convinced him of his mistake in saying 'I only am left alone,' &c., by the assurance that there were seven thousand in Israel who had not bowed the knee to Baal.

Leaving the cave of Horeb (B.C. 906), Elijah now proceeded to the field where he found Elisha in the act of ploughing, and, without uttering a word, he cast his prophet's mantle over him, which was a symbol of his being clothed with God's spirit. The divine impression produced upon the mind of Elisha by this act of Elijah made him willing to leave all things and follow him.

For about six years from this calling of Elisha we find no notice in the sacred history of Elijah, till God sent him once again to pronounce sore judgments upon Ahab and Jezebel for the murder of unoffending Naboth (1 Kings xxi. 17, &c.). How he and his associate in the prophetic office employed themselves during this time we are not told. We may conceive, however, that they were much engaged in prayer for their country, and in imparting knowledge in the schools of the prophets, which were at Jericho and Beth-el. We need not dwell upon the complicated character of Ahab's wickedness (1 Kings xxi.), in winking at the murderous means whereby Jezebel pro-

cured for him the inalienable property of Naboth [AHAB; NABOTH]. When he seemed to be triumphing in the possession of his ill-obtained gain, Elijah stood before him, and threatened him, in the name of the Lord (2 Kings ix. 21-26 inclusive), that God would retaliate blood for blood, and that not on himself only—'his seventy sons shall die, and (2 Kings x. 6) Jezebel shall become meat for dogs.' Fearing that these predictions would prove true, as those about the rain and fire had done, Ahab now assumed the manner of a penitent; and, though subsequent acts proved the insincerity of his repentance, yet God rewards his temporary abasement by a temporary arrest of judgment. We see, however, in after parts of this sacred history, how the judgments denounced against him, his abandoned consort, and children, took effect to the very letter.

Elijah again retires from the history till an act of blasphemy on the part of Ahaziah, the son and successor of Ahab, causes God to call him forth. Ahaziah met with an injury, and, fearing that it might be unto death, he, as if to prove himself worthy of being the son of idolatrous Ahab and Jezebel, sent to consult Baalzebub, the idol-god of Ekron; but the Angel of the Lord tells Elijah to go forth and meet the messengers of the king (2 Kings i. 3, 4), and assure them that he shall not recover. Suddenly re-appearing before their master, he said unto them, 'Why are ye now turned back?' when they answered, 'there came a man up to meet us, and said unto us, Go, turn again unto the king that sent you, and say unto him, thus saith the Lord: is it not because there is no God in Israel that thou sendest to inquire of Baalzebub, the god of Ekron? Wherefore thou shalt not come down from that bed on which thou art gone up, but shalt surely die.' Conscience seems to have at once whispered to him that the man who dared to arrest his messengers with such a communication must be Elijah, the bold but unsuccessful reprover of his parents. Determined to chastise him for such an insult, he sent a captain and fifty armed men to bring him into his presence; but lo! at Elijah's word the fire descends from Heaven and consumes the whole band! Attributing this destruction of his men to some natural cause, he sent forth another company, on whom though the same judgment fell, this impious king is not satisfied till another and a similar effort is made to capture the prophet. The captain of the third band implored mercy at the hands of the prophet, and mercy was granted. Descending at once from Carmel, he accompanies him to Ahaziah. Fearless of his wrath Elijah now repeats to the king himself what he had before said to his messengers, and agreeably thereto, the sacred narrative informs us that Ahaziah died.

The above was the last more public effort which the prophet made to reform Israel. His warfare being now accomplished on earth, God, whom he had so long and so faithfully served, will translate him in a chariot of fire to Heaven. Conscious of this, he determines to spend his last moments in imparting divine instruction to, and pronouncing his last benediction upon, the students in the colleges of Beth-el and Jericho; accordingly, he made a circuit from Gilgal, near the Jordan, to Beth-el, and from thence to Jericho. Wishing either to be alone at the moment of being caught up to Heaven; or, what is more probable, anxious to test the affection of Elisha (as Christ did that of Peter), he delicately intimates to him not to accompany him in this tour. But the faithful Elisha, to whom, as also to the schools of the prophets, God had revealed his purpose to remove Elijah, declares with an oath his fixed determination not to forsake his master now at the close of his earthly pilgrimage. Ere yet, however, the chariot of God descended for him, he asks what he should do for Elisha. The latter, feeling that, as the former's successor, he was, in a sense, his son, and, therefore, entitled to a double portion; or rather, conscious of the complicated and difficult duties which now awaited him, asks for a double portion of Elijah's spirit. Elijah, acknowledging the magnitude of the request, yet promises to grant it on the contingency of Elisha seeing him at the moment of his rapture. Possibly this contingency was placed before him in order to make him more on the watch, that the glorious departure of Elijah should not take place without his actually seeing it. Whilst standing on the other side of the Jordan, whose waters were miraculously parted for them to pass over on dry ground, and possibly engaged in discourse about anointing Hazael king over Syria, angels descended, as in a fiery chariot, and, in the sight of fifty of the sons of the prophets and Elisha, carried Elijah into Heaven. Elisha, at this wonderful sight, cries out, like a bereaved child, 'My Father, my Father, the chariot of Israel and the horsemen thereof;' as if he had said, Alas! the strength and saviour of Israel is now departed! But no; God designed that the mantle which fell from Elijah as he ascended should now remain with Elisha as a pledge that the office and spirit of the former had now fallen upon himself.—J. W. D.

ELIM, one of the stations of the Israelites in the route to Mount Sinai. [EXODUS.]

ELIMELECH (אֱלִימֶלֶךְ, *God the King*; Sept. Ἐλιμέλεχ). A native of Bethlehem, husband of Naomi, and father by her of two sons, Mahlon and Chilion. In a time of scarcity he withdrew with his family into the land of Moab, where he died (Ruth i. 1-3). [NAOMI, RUTH.]

1. ELIPHAZ (אֱלִיפַז, *God the Strong*; Sept. Ἐλιφάς). A son of Esau and Adah (Gen xxxvi. 10).

2. ELIPHAZ, one of the three friends who came to condole with Job in his affliction, and who took part in that remarkable discussion which occupies the book of Job. He was of Teman in Idumæa; and as Eliphaz the son of Esau had a son called Teman, from whom the place took its name, there is reason to conclude that this Eliphaz was a descendant of the former Eliphaz. Some, indeed, even go so far as to suppose that the Eliphaz of Job was no other than the son of Esau. This view is of course confined to those who refer the age of Job to the time of the patriarchs.

Eliphaz is the first of the friends to take up the debate, in reply to Job's passionate complaints. The scope of his argument and the character of his oratory are described under another head [JOB, BOOK OF]. He appears to have been the oldest of the speakers, from which circumstance,

or from natural disposition, his language is more mild and sedate than that of any of the other speakers. He begins his orations with delicacy, and conducts his part of the argument with considerable address. His share in the controversy occupies chapters iv. v. xv. xxii.

ELISABETH (Ἐλισάβετ), wife of Zacharias, and mother of John the Baptist (Luke i. 5). The name in this precise shape does not occur in the Old Testament, where the names of few females are given. But it is a Hebrew name, the same in fact as Elisheba, which see.

ELISHA (אֱלִישָׁע, *God the Deliverer;* Sept. Ἐλισαιέ). The manner, and the circumstances, in which Elisha was called to the prophetic office have been noticed in the article Elijah.

Anxious to enter at once upon the duties of his sacred office, Elisha determined to visit the schools of the prophets which were on the other side of the Jordan. Accordingly, returning to this river, and wishing that sensible evidence should be afforded, both to himself and others, of the spirit and power of his departed master resting upon him, he struck its waters with Elijah's mantle, when they parted asunder and opened a way for him to pass over on dry land. Witnessing this miraculous transaction, the fifty sons of the prophets, who had seen from the opposite side Elijah's ascension, and who were awaiting Elisha's return, now, with becoming reverence, acknowledged him their spiritual head.

These young prophets are not more full of reverence for Elisha than of zeal for Elijah: they saw the latter carried up in the air—they knew that this was not the first time of his miraculous removal. Imagining it therefore possible that the Spirit of God had cast him on some remote mountain or valley, they ask permission to go and seek him. Elisha, though fully aware that he was received up into glory, but yet fearful lest it should be conceived that he, from any unworthy motives, was not anxious to have him brought back, yielded to their request.

The divine authority by which Elisha became the successor of Elijah received further confirmation from the miracle whereby the bitter waters of Jericho were made sweet, and the place thereby rendered fit for the habitation of man (2 Kings ii. 19-22).

As the general visitor of the schools of the prophets, Elisha now passes on from Jericho to the college which was at Beth-el. Ere, however, he entered Beth-el, there met him from thence (2 Kings iii. 23, 24) little children, who no doubt instigated by their idolatrous parents, tauntingly told him to ascend into heaven, as did his master, Elijah! There was in their expressions an admixture of rudeness, infidelity, and impiety. But the inhabitants of Beth-el were to know, from bitter experience, that to dishonour God's prophets was to dishonour Himself; for Elisha was at the moment inspired to pronounce the judgment which at once took effect: God, who never wants for instruments to accomplish his purposes, caused two she-bears to emerge from a neighbouring wood, and destroy the young delinquents.

Jehoram, who reigned over Israel at this time, though not a *Baalite*, was yet addicted to the sin of Jeroboam: still he inherits the friendship of Jehoshaphat, the good King of Judæa, whose counsel, possibly, under God, had detached him from the more *gross idolatry* of his father Ahab. Wishing to see the now (B.C. 895) revolted king of Moab reduced to his wonted allegiance to Israel, Jehoshaphat determined to go up to battle against him, together with Jehoram, and his own tributary the king of Edom. These combined armies met together on the plains of Edom. Confident in their own powers they press onward against the enemy; but, not meeting him, another of a more formidable character started up before them. In the midst of the arid plains of Arabia Petræa they could find no water. Jehoram deplores the calamity into which they had fallen, but Jehoshaphat inquired for a prophet. On this, one of his courtiers said to Jehoram, 'Here is Elisha, the son of Shaphat, who poured water on the hands of Elijah.' No sooner were they made acquainted with the fact that Elisha was at hand than the three kings waited upon him. Elisha, feeling that it was nought but superstitious fear, joined to the influence of Jehoshaphat, which led Jehoram thus to consult him, now indignantly and tauntingly advises him to go for succour to the gods of his father Ahab and of his mother Jezebel. The reproved monarch was then led to acknowledge the impotency of those gods in whom he had trusted, and the power of that God whom he had neglected. Still the man of God, seeing the hollowness of Jehoram's humiliation, continues: 'As the Lord liveth, before whom I stand, surely were it not that I regard the presence of Jehoshaphat, the king of Judah, I would not look toward thee.' Having thus addressed Jehoram, Elisha desired a minstrel to be brought before him; and now when his spirit is calmed by, perhaps, one of the songs of Zion, Jehovah approaches His prophet in the power of inspiration, as it is written, 'The hand of the Lord came upon him.' The minstrel ceases, and Elisha communicates the joyful intelligence that not only should water be miraculously supplied, but also that Moab should be overcome. 'Thus saith the Lord, Make this valley full of ditches; ye shall not see wind, neither shall ye see the rain; yet that valley shall be filled with water that ye may drink.' Accordingly the next morning they realized the truth of this prediction. But the same water which preserves their lives becomes the source of destruction to their enemies. The Moabites, who had received intelligence of the advance of the allied army, were now assembled upon their frontiers. When the sun was up, and its rosy light first fell upon the water, their van-guard, beholding it at a distance, supposed it to be blood. Thus the notion was rapidly spread from one end to another that the kings were surely slain, having fallen out amongst themselves. Hence there was a universal shout, 'Moab, to the spoil!' and they went forward confident of victory. But who can describe their consternation at beholding the Israelitish squadrons advancing to meet them sword in hand! At once they flee in the utmost panic and confusion; but in vain do they seek to defend themselves, God had decreed their punishment by, and subjugation to, Israel (2 Kings iii. 20, &c.).

The war having terminated in the signal overthrow of the revolters, Elisha, who had returned home, is again employed in ministering blessings. Another case arose to declare the peculiar cha-

racter of his mission as messenger of mercy to man. The widow of a pious prophet presents herself before him (2 Kings iv), informs him that her husband having died in debt, his creditors were about to sell her two only sons, which, by an extension of the law (Exod. xxi. 7, and Lev. xxv. 39), and by virtue of another (Exod. xxii. 3), they had the power to do; and against this hard-hearted act she implores the prophet's assistance. God will not, *without a cause*, depart from the general laws of His administration: Elisha therefore inquires how far she herself had the power to avert the threatened calamity. She replies that the only thing of which she was possessed was one pot of oil. By multiplying this, as did his predecessor Elijah in the case of the widow of Zarephath, he enabled her at once to pay off her debts and thereby to preserve the liberty of her children (2 Kings iv. 1-7).

Having thus contemplated Elisha in the act of relieving the wants of a poor widow, we may with the more pleasure observe how, in the arrangement of God's providence, his own necessities were, in turn, supplied. In his visitations to the schools of the prophets it would seem that his journey lay through the city of Shunem, where lived a rich and godly woman. Wishing that he should take up, more than occasionally, his abode under her roof, she proposed to her husband to construct for him a chamber, where, far from the society of man, he might hold solitary and sweet communion with his God. The husband at once consented, and, the apartment being completed and fitted up in a way that showed their proper conception of his feeling, the prophet becomes its occupant. Grateful for such disinterested kindness, Elisha delicately inquired of her if he could prefer her interest before the king or the captain of his host; for he must have had considerable influence at court, from the part he had taken in the late war. But the good woman declined the prophet's offer, by declaring that she would rather 'dwell among her own people,' and in the condition of life to which she had been accustomed. Still, to crown her domestic happiness, she lacked one thing—she had no child; and now, by reason of the age of her husband, she could not expect such a blessing. In answer, however, to the prayer of the prophet, and contrary to all her own conclusions, God causes her to conceive and bring forth a son (B.C. 891). This new pledge of their affection grows up till he is able to visit his fond father in the harvest-field, when all the hopes they had built up in him were overthrown by his being suddenly laid prostrate in death.

The bereaved mother, with exquisite tenderness towards the feelings of the father, concealed the fact that the child was no more till she should see if it might please God, through Elisha, to restore him to life. She therefore hastens to Carmel, where she found the prophet, and informed him what had taken place. Conceiving probably that it was a case of mere suspended animation, or a swoon, the prophet sent Gehazi, his servant, to place his staff on the face of the child, in the hope that it might act as a stimulus to excite the animal motions. But the mother, conscious that he was actually departed, continued to entreat that he himself would come to the chamber of the dead. He did so, and found that the soul of the child had indeed fled from the earthly tenement. Natural means belong to man; those that are supernatural belong to God: we should do our part, and beg of God to do his. On this principle the prophet on this occasion acted. God blesses the means used, and answers the prayer presented by Elisha. The child is raised up and restored to the fond embrace of its grateful and rejoicing parents.

The next remarkable event in the history of Elisha was the miraculous healing of the incurable leprosy of the Syrian general Naaman, whereby the neighbouring nation had the opportunity of learning the beneficence of that God of Israel, whose judgments had often brought them very low. The particulars are given under another head [NAAMAN].

Soon after this transaction we find this man of God in Gilgal, miraculously neutralizing the poison which had, by mistake, been mixed with the food of the prophets, and also feeding one hundred of them with twenty small loaves which had been sent for his own consumption (2 Kings iv. 38, &c.). In his tender regard to the wants of others, and in the miracles he wrought, how like he was to the Saviour of the world!

Notwithstanding the general profligacy of Israel, the schools of the prophets increased, B.C. 89·. This was, doubtless, owing to the influence of Elisha. Accompanied by their master, a party of these young prophets, or theological students, came to the Jordan, and whilst one of them was 'felling a beam (for the purpose of constructing there a house) the axe-head fell into the water.' This accident was the more distressing because the axe was borrowed property. Elisha, however, soon relieved him by causing it miraculously to rise to the surface of the river.

The sacred record again leads us to contemplate the prophet's usefulness, not only in such individual points of view, but also in reference to his country at large. Does the king of Syria devise well-concerted schemes for the destruction of Israel? God inspires Elisha to detect and lay them open to Jehoram. Benhadad, on hearing that it was he that thus caused his hostile movements to be frustrated, sent an armed band to Dothan in order to bring him bound to Damascus. The prophet's servant, on seeing the host of the enemy which invested Dothan, was much alarmed, but by the prayer of Elisha God reveals to him the mighty company of angels which were set for their defence. Regardless of consequences, the prophet went forth to meet the hostile band; and having again prayed, God so blinded them that they could not recognise the object of their search. The prophet then promised to lead them to where they might see him with the natural eye. Trusting to his guidance they followed on till they reached the centre of Samaria, when, the optical illusion being removed, Elisha stands in his recognised form before them! Who can tell their confusion and alarm at this moment? The king is for putting them all to death; but, through the interposition of him whom they had just before sought to destroy, they were honourably dismissed to their own country (B C. 892). But a year had scarcely elapsed from this time when Benhadad, unmindful of Israel's kindness and forbearance, invests Samaria and reduces its inhabitants to such a state of starvation that an *ass's head*, a proscribed animal by the Levitical law, was sold

for fourscore pieces of silver, and the fourth part of a cab—a quart or three pints—of dove's dung for five pieces of silver [DOVE'S DUNG]. But this was not all. Parents were found, if not murdering, actually eating their deceased children. These very calamities Moses had foretold should come upon them if they forsook God (Deut. xxviii. 53-57). Still the king of Israel plunges deeper and deeper into sin, for he orders Elisha to be put to death, conceiving that it was his prayer which brought these sufferings upon himself and nation. But God forewarns him of his danger, and inspires him to predict to the wicked king that by to-morrow 'a measure of fine flour should be sold for a shekel, and two measures of barley for a shekel, in the gate of Samaria.' This assurance was not more comfortable than *incredible;* but when the lord on whose hand the king leaned expressed his disbelief, he was awfully rebuked by the assurance that he should see but not enjoy the benefit. The next night God caused the Syrians to hear the noise of chariots and horses; and conceiving that Jehoram had hired against them the kings of the Hittites and the king of Egypt, they fled from before the walls of Samaria—leaving their tents filled with gold and provisions—in the utmost panic and confusion. In this way did God, according to the word of Elisha, miraculously deliver the inhabitants of Samaria from a deadly enemy without, and from sore famine within its walls: another prediction moreover was accomplished; for the distrustful lord was trampled to death by the famished people in rushing through the gate of the city to the forsaken tents of the Syrians (2 Kings vii.).

We are next led, in the order of the history, though *not in that of time*, to notice God's gracious care of the woman of Shunem. Having followed the advice of her kind friend Elisha, she resided in Philistia during the seven years' famine in Israel. On her return, however, she found that her paternal estate had been seized by others. She at once went to the king, who at the moment of her approach was talking with Gehazi as to Elisha having miraculously raised her son to life. This was a very providential coincidence in behalf of the Shunamite. The relation given by Gehazi was now corroborated by the woman herself. The king was duly affected, and gave immediate orders for the restoration of her land and all that it had yielded during her absence. We next find the prophet in Damascus, but are not told what led him thither (B.C. 885). Benhadad, the king, whose counsels he had so often frustrated, rejoiced to hear of his presence; and now, as if he had forgotten the attempt he once made upon his life, dispatches a noble messenger with a costly present, to consult him concerning his sickness and recovery. The prophet replied that he should then die, though his indisposition was not of a deadly character. Seeing moreover, in prophetic vision, that the man Hazael, who now stood before him, should be king in Benhadad's stead; and that, as such, he would commit unheard-of cruelties upon his country, the prophet was moved to tears. How these painful anticipations of Elisha were realized the subsequent history of this man proved. Some twenty-three years had now elapsed since Elijah had prophesied the destruction of Ahab's guilty consort and family. But God's declared judgments are sure though delayed. Not only Ahab and Jezebel had been bloody and idolatrous, but Israel had become partakers in their crimes, and must share in the judgment. Elijah's complaint in the cave now received this late answer: 'Hazael shall plague Israel: Jehu shall plague the house of Ahab and Jezebel.' How fearfully these declared purposes of God took effect we may read in 2 Kings ix. and x.

For a considerable time after Elisha had sent to anoint Jehu king over Israel we find no mention of him in the sacred record. We have reason to suppose that he was utterly neglected by Jehu, Jehoahaz, and Joash, who reigned in succession. Neither the sanctity of his life nor the stupendous miracles he wrought had the effect of reforming the nation at large: much of the time of his latter years was, doubtless, spent in the schools of the prophets. At length, worn out by his public and private labours, and at the age of 90—during 60 of which he is supposed to have prophesied—he is called into eternity. Nor was the manner of his death inglorious; though he did not enter into rest as did Elijah (2 Kings xiii. 14, &c.). Amongst his weeping attendants was Joash, the king of Israel. He was probably stung with remorse for having so neglected to acknowledge his national worth; yet, though late, God does not suffer this public recognition of his aged and faithful servant to go unrequited. The spirit of prophecy again entering the dying Elisha, he informs Joash that he should prevail against the Syrians. Even after death God would put honour upon Elijah: a dead body having touched his bones came to life again! (2 Kings xiii. 21.)

Elisha was not less eminent than his predecessor Elijah. His miracles are various and stupendous, and, like those which were wrought by Christ, were on the whole of a *merciful* character. In this they were remarkably distinguished, in many instances, from the miracles of Elijah.—

J. W. D.

ELISHAH (אֱלִישָׁה; Sept. Ἐλισά), a son of Javan (Gen. x. 4), who seems to have given name to 'the isles of Elishah,' which are described as exporting fabrics of purple and scarlet to the markets of Tyre (Ezek. xxvii. 7). If the descendants of Javan peopled Greece, we may expect to find Elishah in some province of that country. The circumstance of the purple suits the Peloponnesus; for the fish affording the purple dye was caught at the mouth of the Eurotas, and the purple of Laconia was very celebrated. The name seems kindred to Elis, which, in a wider sense, was applied to the whole Peloponnesus; and some identify *Elishah* with *Hellas.* The uncertainty of all this speculation is most apparent: but it may be added that, if probable thus far, it is equally probable that the general name of 'the isles of Elishah' may also have been extended to the islands of the Ægean sea; a part of which may seem to have derived the name of Hellespont, sea of Hellas, from the same source.

ELISHEBA (אֱלִישֶׁבַע, *covenant-God; Sept.* Ἐλισαβέθ), wife of Aaron, and hence the mother of the priestly family (Exod. vi. 23).

ELKANAH (אֶלְקָנָה, *God the Jealous;* Sept. Ἐλκανά). Several persons of this name are men-

tioned in Scripture, as a son of Korah (Exod. vi. 24; 1 Chron. vi. 23); the father of Samuel (1 Sam. i. 1, seq.; ii. 11-20; 1 Chron. vi. 27); a friend of King Ahab (2 Chron. xxviii. 7); one of David's heroes (1 Chron. xii. 6); Levites (1 Chron. vi. 23, 25, 26, 27; xv. 23).

ELKOSH. The prophet Nahum is called an Elkoshite (אלקשי), that is, a native of some place called Elkosh (Nahum i. 1). There was a village of this name in Galilee in the time of Jerome; but the prophet was more probably born of Jewish exiles at Elkosh or Alkush in Assyria, near Mosul. The Jews themselves believe that he was born and buried there; and Jewish pilgrims from all parts still visit his alleged tomb. On this Mr. Rich remarks, 'The Jews are generally to be trusted for local antiquities. Their pilgrimage to a spot is almost a sufficient test. The unbroken line of tradition which may have been handed down among them, and their pertinacious resistance of all innovation, especially in matters of religious belief, render their testimony very weighty in such matters' (*Residence in Koordistan*, p. 111). Alkosh is thirty-four miles north of Mosul (Nineveh), and is situated a little way up the side of a mountain, in the range to which it gives its name. It is entirely inhabited by Chaldee Christians, who have a convent higher up the mountains.

ELLASAR (אֶלָּסָר; Sept. Ἐλλασάρ), a territory in Asia, whose king, Arioch, was one of the four who invaded Canaan in the time of Abraham (Gen. xiv. 1). The association of this king with those of Elam and Shinar, indicates the region in which the kingdom should be sought; but nothing further is known of it, unless it be the same as Thelassar mentioned in 2 Kings xix. 12 [THELASSAR].

ELM. The Authorized Version has this word in Hosea iv. 13. But the original word there is אלה, which is differently translated in every other place [ALAH].

ELOHIM. [GOD.]

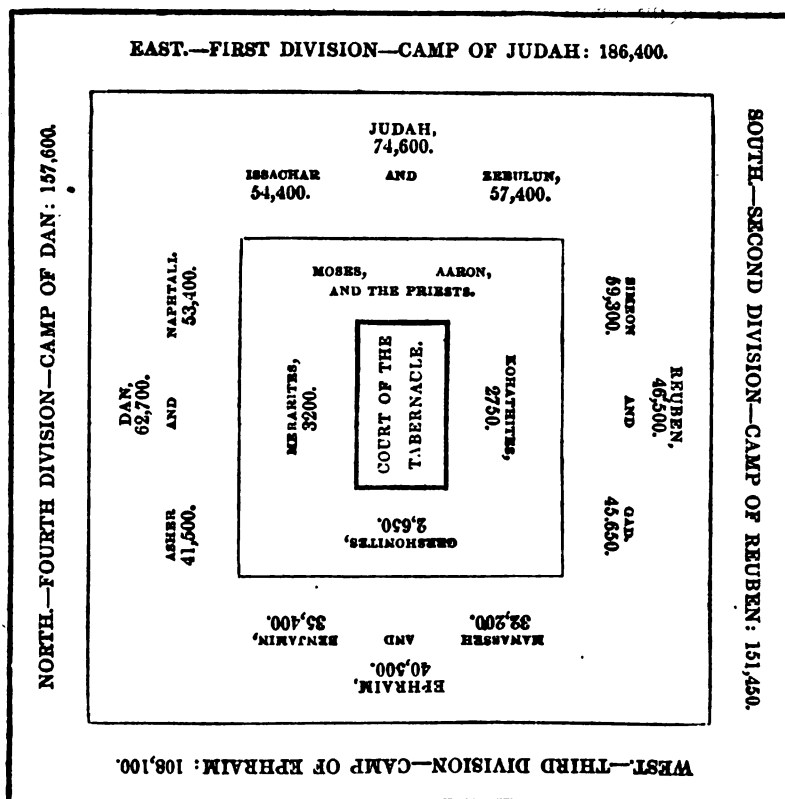
ELON (אֵילוֹן; Sept. Αἰλώμ, Ἐλώμ), of the tribe of Zebulon, who judged Israel ten years. He was preceded by Ibzan of Bethlehem, and succeeded by Abdon of Ephraim. The whole period covered by their administration was twenty-five years (from B.C. 1190 to 1174); but it is probable that they were for a part of this time contemporary, each exercising authority over a few of the tribes. They appear to have overawed the enemies of Israel by their judicious administration; for no war is mentioned in their time (Judg. xii. 8-15).

ELUL (אֱלוּל, Neh. vi. 15; Sept. Ἐλούλ; the Macedonian Γορπιαῖος) is the name of that month which was the sixth of the ecclesiastical, and twelfth of the civil, year of the Jews, and which began with the new moon of our September. Several unsatisfactory attempts have been made to find a Syro-Arabian etymology for the word. The most recent derivation, that of Benfey, deduces it, through many commutations and mutilations, from an original Zend form *haurvatât* (*Monatsnamen*, p. 126). According to the Megillat Taanith, the 17th day of this month was a public fast for the death of the spies who brought back a bad report of the land (Num. xiv. 37).—J. N.

ELYMAS (Ἐλύμας), an appellative commonly derived from the Arabic عليم *Aliman* (*a wise man*), which Luke interprets by ὁ μάγος: it is applied to a Jew named Bar-Jesus, mentioned in Acts xiii. 6-11 (*v.* Neander's *Hist. of first planting of the Christian Church*, i. p. 125, Eng. transl.). A very different but less probable derivation of the word is given by Dr. Lightfoot in his Hebrew and Talmudical Exercitations on the Acts (Works, viii. p. 461), and in his *Sermon on Elymas the Sorcerer* (Works, vii. p. 104). Chrysostom observes, in reference to the blindness inflicted by the Apostle on Bar-Jesus, that the limiting clause '*for a season*,' shows that it was not intended so much for the punishment of the sorcerer as for the conversion of the deputy. Εἰ γὰρ κολάζοντος ἦν, διαπαντὸς ἂν αὐτὸν ἐποίησε τυφλὸν, νῦν δὲ οὐ τοῦτο, ἀλλὰ πρὸς καιρὸν, ἵνα τὸν ἀνθύπατον κερδάνῃ. Chrysost. *in Acta Apost. Homil.* xxviii.; *Opera*, tom. ix. p. 241.—J. E. R.

EMBALMING. [BURIAL.]

EMERALD. [NOPHECH.]



EMERODS, a painful disease with which the Philistines were afflicted (1 Sam. v. 6) [TECHORIM].

EMIM (אֵימִים; Sept., Ὀμμίν), a numerous and gigantic race of people who, in the time of Abraham, occupied the country beyond the Jordan, afterwards possessed by the Moabites (Gen. xiv. 5; Deut. ii. 10).

EMMAUS (Ἐμμαούς, *hot baths*), a village 60 stadia, or 7½ miles, from Jerusalem, noted for our Lord's interview with two disciples on the day of his resurrection (Luke xxiv. 13). The same place is mentioned by Josephus (*De Bell. Jud.* vii. 6, 6), and placed at the same distance from Jerusalem, in stating that Vespasian left 800 soldiers in Judæa, to whom he gave the village of Emmaus. The site is not now known; for Dr. Robinson has shown that El Kubeibeh, which is usually indicated, is too distant from Jerusalem; and that the position of Emmaus, and all correct tradition respecting it, were lost before the time of Eusebius and Jerome; since these writers make it identical with the city of Emmaus, or Nicopolis, which lies not far from 160 stadia from Jerusalem. He adds:—'There never was the slightest ground for connecting El-Kubeibeh in any way with Emmaus; nor is there any trace of its having been so connected before the fourteenth century' (*Bib. Researches*, iii. 65, 66). The other Emmaus, also called Nicopolis, just mentioned, is identified with Lusinn, about midway between Jerusalem and Ramleh. There was another Emmaus, near Tiberias, on the lake of the same name, where the hot baths which gave name to it are still frequented, and have a temperature of 130 Fahrenheit. Here the name Emmaus is merely preserved in that of Hammam, which the Arabs give to hot-baths, whether natural or artificial. Neither of these places is named in Scripture.

EN, properly AIN, a word signifying 'fountain;' and hence entering into the composition of sundry local names, which are explained under AIN.

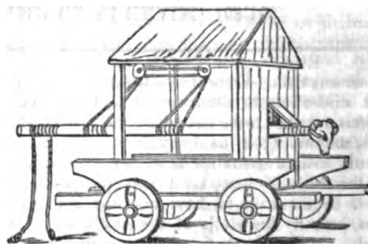
ENCAMPMENTS. Of the Jewish system of encampment the Mosaic books have left a de-

tailed description. From the period of the sojourn in the wilderness to the crossing of the Jordan the twelve tribes were formed into four great armies, encamping in as many fronts, or forming a square, with a great space in the rear, where the tabernacle of the Lord was placed, surrounded by the tribe of Levi and the bodies of carriers, &c., by the stalls of the cattle and the baggage: the four fronts faced the cardinal points while the march was eastward, but as Judah continued to lead the van, it follows that when the Jordan was to be crossed the direction became westward, and therefore the general arrangement, so far as the cardinal points were concerned, was reversed.* It does not appear that, during this time, Israel ever had lines of defence thrown up; but in after ages, when only single armies came into the field, it is probable that the castral disposition was not invariably quadrangular; and, from the many positions indicated on the crests of steep mountains, the fronts were clearly adapted to the ground and to the space which it was necessary to occupy. The rear of such positions, or the square camps in the plain, appear from the marginal reading of 1 Sam. xvii. 20, and xxvi. 5 to have been enclosed with a line of carts or chariots, which, from the remotest period, was a practice among all the nomade nations of the north. The books of Moses are so explicit on the subject of encampment, and the march of the Israelites, that we deem a distinct plan of the numbers and position of the twelve tribes, of the various corps of Levites, &c., with the tents of Moses and Aaron ranged about the tabernacle, and other particulars, sufficient to give a very clear idea of the whole, and to supersede the necessity of further description.—C. H. S.

* If the leading tribes did not thus turn with the direction of the march, Judah and his two wings must have formed the rear in crossing the Jordan.

ENCHANTMENTS. [DIVINATION.]

ENDOR (עֵין דּוֹר, *house-fountain; Sept.* Ἀενδώρ), a town of Galilee, assigned to Manasseh, although lying beyond the limits of that tribe (Josh. xvii. 11). It is mentioned in connection with the victory of Deborah and Barak (Ps. lxxxiii. 10); but is chiefly memorable as the abode of the sorceress whom Saul consulted on the eve of the battle in which he perished (1 Sam. xxviii. 7, sq.) The name is not found in the New Testament; but in the time of Eusebius and Jerome the place still existed as a large village, four miles south of Mount Tabor. At this distance, on the northern slope of the lower ridge of Hermon, a village with this name still exists.



EN-EGLAIM (עֵין עֶגְלַיִם, *calves' fountain;* Sept. Ἐναγαλλείμ), a town of Moab (Ezek. xlvii. 10), which Jerome places at the northern end of the Dead Sea, at the influx of the Jordan.

EN-GANNIM (עֵין גַּנִּים, *gardens' fountain*; Sept. Ἠν-Γαννίμ). 1. A town of Judah (Josh. xv. 34), which Jerome places near Beth-el. 2. A Levitical city in Issachar (Josh. xix. 21; xxi. 29), probably the same as the Ginaen of Josephus (*Antiq.* xx. 6, 1), and which Biddulph (in *Purchas*, vol. ii. p. 135) identifies with the present Jenin, a town 15 miles south of Mount Tabor, and which he and others describe as still a place of gardens and abundant water. He adds that in his whole journey from Damascus to Jerusalem, he nowhere saw so much fruitful ground together, as in riding between this place and Mount Tabor. 3. Jerome mentions another place, called En-gannim, beyond the Jordan, near Geraza; and the name seems, indeed, to have been very common for places where water, and consequently gardens, abounded.

EN-GEDI (עֵין־גֶּדִי, *kids' fountain*; Sept. Ἐνγαδδί), a city of Judah, which gave its name to a part of the desert to which David withdrew for fear of Saul (Josh. xv. 62; 1 Sam. xxiv. 1-4). Its more ancient Hebrew name was Hazezon-tamar; and by that name it is mentioned before the destruction of Sodom, as being inhabited by the Amorites, and near the cities of the plain (Gen. xiv. 7). In 2 Chron. xx. 1, 2, bands of the Moabites and Ammonites are described as coming up against king Jehoshaphat, apparently round the south end of the Dead Sea, as far as En-gedi. And this, as we learn from Dr. Robinson, is the route taken by the Arabs in their marauding expeditions at the present day. According to Josephus, En-gedi lay upon the lake Asphaltites, and was celebrated for its beautiful palm-trees and opobalsum (*Antiq.* ix. 1, 2); while its vineyards are also mentioned in Sol. Song, i. 14. In the time of Eusebius and Jerome, En-gedi was still a large village on the shore of the Dead Sea. Engedi has always, until recently, been sought at the north end of the Dead Sea. But Seetzen recognised the ancient name in the Ain-jidy of the Arabs, and lays it down in his map at a point of the western shore, nearly equidistant from both extremities of the lake. This spot was visited by Dr. Robinson, and he confirms the identification. The site lies among the mountains which here confine the lake, a considerable way down the descent to its shore. Here is the beautiful fountain of Ain-jidy, bursting forth at once in a fine stream upon a sort of narrow terrace or shelf of the mountain, above 400 feet above the level of the lake. The stream rushes down the steep descent of the mountain below; and its course is hidden by a luxuriant thicket of trees and shrubs belonging to a more southern clime. Near this fountain are the remains of several buildings, apparently ancient; although the main site of the town seems to have been farther below. The whole of the descent below appears to have been once terraced for tillage and gardens; and near the foot are the ruins of a town, exhibiting nothing of particular interest, and built mostly of unhewn stones. This we may conclude to have been the town which took its name from the fountain (*Robinson*, ii. 209-216).

THE WILDERNESS OF EN-GEDI is doubtless the immediately neighbouring part of the wild region, west of the Dead Sea, which must be traversed to reach its shores. It was here that David and his men lived among the 'rocks of the wild goats,' and where the former cut off the skirts of Saul's robe in a cave (1 Sam. xxi. 1-4). 'On all sides,' says Dr. Robinson, 'the country is full of caverns, which might then serve as lurking-places for David and his men, as they do for outlaws at the present day.' He adds that as he came in sight of the ravine of the Ghâr, a mountain-goat started up and bounded along the face of the rocks on the opposite side.

ENGINES OF WAR were certainly known much earlier than the Greek writers appear to admit, since figures of them occur in Egyptian monuments, where two kinds of the testudo, or pent-house, used as shelters for the besiegers, are represented, and a colossal lance, worked by men who, under the cover of a testudo, drive the point between the stones of a city wall. The chief projectiles were the catapulta for throwing darts, and the balista for throwing stones. Both these kinds of instruments were prepared by Uzziah for the defence of Jerusalem (2 Chron. xxvi. 15), and battering the wall is mentioned in the reign of King David (2 Sam. xx. 15); but the instrument itself for throwing it down may have been that above-noticed, and not the battering-ram. The ram was, however, a simple machine, and capable of demolishing the strongest walls, provided access to the foot was practicable; for the mass of cast metal which formed the head could be fixed to a beam lengthened sufficiently to require between one and two hundred men to lift and impel it; * and when it was still heavier and hung in the lower floor of a movable tower, or *helipolis*, it became a most formidable engine of war—one used in all great

sieges from the time of Demetrius, about B.C. 306, till long after the invention of gunpowder. Towers of this kind were largely used at the destruction of Jerusalem by the Romans. Of the balistæ and catapultæ it may be proper to add that they were of various powers. For battering walls there were some that threw stones of fifty, others of one hundred, and some of three hundred weight; in the field of battle they were of much inferior strength. Darts varied similarly from small beams to large arrows, and the range they had exceeded a quarter of a mile, or about 450 yards. All these engines were constructed upon the principle of the sling, the bow, or the spring, the last being an elastic bar, bent back by

stroke, or to throw stones from a kind of spoon formed towards the summit of the spring.—C. H. S.

ENGRAVING. [SEALS, WRITING.]

ENOCH (חֲנוֹךְ; Sept. and New Test. Ἐνώχ). Four persons bearing this name are mentioned in the Old Testament, the most distinguished of whom was the son of Jared and father of Methuselah. According to the Old Testament, *he walked with God;* and, after 365 years, *he was not, for God took him* (Gen. v. 24). The inspired writer of the Epistle to the Hebrews says, 'By faith Enoch was translated that he should not see death, and was not found, because God had translated him' (xi. 5.). *Walking with God* implies the closest fellowship with Jehovah which it is possible for a human being to enjoy on earth. As a reward, therefore, of his extraordinary sanctity, he was transported into heaven without the experience of death. Elijah was in like manner translated; and thus was the doctrine of immortality *palpably* taught under the ancient dispensation. The traditions of the Jews have ascribed to Enoch many fabulous qualities. They have invested him with various attributes and excellencies for which the Bible furnishes no foundation. Accordingly, he is represented as the inventor of letters, arithmetic, and astronomy; as the *first author*, from whom several books emanated. Visions and prophecies were commonly ascribed to him, which he is said to have arranged in a book. This book was delivered to his son, and preserved by Noah in the ark. After the flood it was made known to the world, and handed down from one generation to another. Hence the Arabians call him إدريس *Edris*, i. e. *the learned* (Koran, Sur. xix). See Juchasin, f. 134; Eusebius, *Præpar. Evang.* ix. 17, and *Hist. Eccles.* vii. 32; Barhebr. *Chron.* p. 5.—S. D.

ENOCH, BOOK OF. The interest that once attached to the apocryphal book of Enoch has now partly subsided. Yet a document quoted, as is generally believed, by an inspired apostle, can never be wholly devoid of importance or utility in sacred literature. We shall allude to the following particulars relating to it:—

1. The history of the book of Enoch.
2. The language in which it was written.
3. Its form and coherence.
4. Its author, and the time when it was written.
5. The place where it was written.
6. Did Jude really quote it?
7. Its use.

In several of the fathers mention is made of Enoch as the author, not only of a prophetic writing, but of various productions. The book of Enoch is alluded to by Justin Martyr, Irenæus, Clement of Alexandria, Tertullian, Origen, Augustine, Jerome, Hilary, and Eusebius. It is also quoted on various occasions in the *Testament of the Twelve Patriarchs*, a document which Nitzsch has shown to belong to the latter part of the first century or the beginning of the second. The passages in these ancient writings relating to our present purpose have been carefully collected by Fabricius, in his *Codex Pseud-epigraphus* (vol. i. pp. 160-224); to which, and to the first *Excursus* of Hoffmann, we refer our readers. In the eighth century Georgius Syncellus, in a work entitled *Chronographia*, that reaches from Adam to Diocletian, made various extracts from 'the first book of Enoch.' In the ninth century Nicephorus, patriarch of Constantinople, at the conclusion of his *Chronographiæ Compendium*, in his list of *canonical* and *uncanonical* books, refers to the book of Enoch, and assigns 4800 στίχοι as the extent of it. After this time little or no mention appears to have been made of the production until Scaliger printed the fragments of Syncellus regarding it, which he inserted in his notes to the *Chronicus Canon* of Eusebius. In consequence of such extracts the book of Enoch excited much attention and awakened great curiosity. At the beginning of the seventeenth century an idea prevailed that it existed in an Ethiopic translation. A Capuchin monk from Egypt assured Peiresc that he had seen the book in Ethiopic, a circumstance which excited the ardour of the scholar of Pisa so much, that he never rested until he obtained the tract. But when Job Ludolph went afterwards to Paris to the Royal Library, he found it to be a fabulous and silly production. In consequence of this disappointment the idea of recovering it in Ethiopic was abandoned. At length Bruce brought home three copies of the book of Enoch from Abyssinia. 'Amongst the articles,' he states, 'I consigned to the library at Paris, was a very beautiful and magnificent copy of the prophecies of Enoch in large quarto. Another is amongst the books of Scripture which I brought home, standing immediately before the book of Job, which is its proper place in the Abyssinian Canon; and a third copy I have presented to the Bodleian Library at Oxford by the hands of Dr. Douglas, bishop of Carlisle.' As soon as it was known in England that such a present had been made to the Royal Library at Paris, Dr. Woide, librarian of the British Museum, set out for France with letters from the secretary of state to the ambassador at that court, desiring him to assist the learned bearer in procuring access to the work. Dr. Woide accordingly transcribed it, and brought back with him the copy to England. The Parisian MS. was first publicly noticed by the eminent Orientalist De Sacy, who translated into Latin ch. i. ii. iii. iv.-xvi., also xxii. and xxxi. These he also published in the *Magasin Encyclopédique*, an vi. tom. i. p. 382 et seq. Mr. Murray, editor of *Bruce's Travels*, gave some account of

the book from the traveller's own MS. The Bodleian MS. was translated into English by Dr. Laurence, then Professor of Hebrew in Oxford; and thus the public were favoured, for the first time, with the whole book in English, A.D. 1821. In 1833 a second, improved edition of the translation appeared; and, in 1838, the third edition, revised and enlarged. To the translation is prefixed a preliminary dissertation of 59 pages, giving some account of the book, its author, the time and place of its composition, &c. &c. It has also been translated into German by Dr. Hoffmann of Jena. According to Angelo Mai there is a MS. copy of the book of Enoch among the Ethiopic codices of the Vatican, which must have been brought into Europe earlier than Bruce's MSS. In 1834 Dr. Rüppell procured another MS. of Enoch from Abyssinia, from which Hoffmann made the second part of his German version.

There can be no doubt that the Ethiopic translation exhibits the identical book, which, as most believe, Jude quoted, and which is also mentioned or cited by many of the fathers. The fragment preserved by Syncellus (reprinted by Laurence and Hoffmann) is obviously the same as ch. vii., &c., the deviations being of little importance and probably accidental. It is manifest also, to any one who will compare the quotations made by the fathers with the Ethiopic version, that both point to the same original. The extracts in question could not have been interpolations, as they are essential to the connections in which they are found.

The book was never received into the series of *canonical* writings. The *Apostolical Constitutions* expressly style it *apocryphal* (vi. 16), while Origen (*contra Celsum*) affirms that it was not reckoned divine by the churches; although in another place he hints that some of his contemporaries were of a different opinion. In the *Synopsis of Scripture* published with the works of Athanasius, as well as in the writings of Jerome and Augustine, its non-canonicity is distinctly stated. The only ancient writer who reckoned it of divine authority was Tertullian, who undertakes to defend it against the objections by which it was then assailed (see his treatise *De Cultu Fœminarum*). His arguments, however, are exceedingly puerile.

The Greek translation, in which it was known to the fathers, appears to be irrecoverably lost. There is no trace of it after the eighth century. The last remnant of it is preserved by Syncellus.

The leading object of the writer, who was manifestly imbued with deep piety, was to comfort and strengthen his contemporaries. He lived in times of distress and persecution, when the enemies of religion oppressed the righteous. The outward circumstances of the godly were such as to excite doubts of the divine equity in their minds, or at least to prevent it from having that hold on their faith which was necessary to sustain them in the hour of trial. In accordance with this, the writer exhibits the reward of the righteous and the punishment of the wicked. To give greater authority to his affirmations, he puts them into the mouth of Enoch. Thus they have all the weight belonging to the character of an eminent prophet and saint. Various digressions are not without their bearing on the author's main purpose. The narrative of the fallen angels and their punishment, as also of the flood, exemplifies the retributive justice of Jehovah; while the Jewish history, continued down to the Maccabees, exhibits the final triumph of His people, notwithstanding all their vicissitudes. Doubtless the author lived amid fiery trial; and, looking abroad over the desolation, sought to cheer the sufferers by the consideration that they should be recompensed in another life. As for their wicked oppressors, they were to experience terrible judgments. The writer seems to delight in uttering dire anathemas against the wicked. It is plain that the book grew out of the time when the author lived, and the circumstances by which he was surrounded. It gives us a glimpse not only of the religious opinions, but also of the general features that characterized the period.

2. *The language in which it was written.*—Several circumstances render it apparent that the book before us was originally composed in the Hebrew or Chaldee language. This was long since perceived by Joseph Scaliger, although he had before him nothing more than the Greek fragment preserved by Syncellus. The book of Zohar, in which are various allusions to Enoch, seems to speak of it as an important Hebrew production which had been handed down from generation to generation. The Cabbalists, whose opinions are embodied in Zohar, thought that Enoch was really the author, a sentiment quite at variance with any other hypothesis than that of a Hebrew original. The names of the angels (ch. vii. viii. and ix.) also point to a Hebrew origin, and can be most easily derived from Hebrew roots. Thus Tamiel (viii. 7) is compounded of תם and אל, *the upright of God;* Samyaza of שׁם and עזא, *the name of the strong.* The same conclusion follows from the term Ophania (lx. 13), which is evidently identical with the Hebrew אפנין. It is remarkable also, that as Ophanin occurs in connection with the Cherubim, so the Hebrew term אפנין is found in the same association (1 Kings vii. 30; Ezek. i. 15, 16, 19, 20, 21; and x. 2, 6, 9, 10, &c.; Murray's *Enoch Restitutus*, p. 33, sq.). Other particulars corroborate the same inference. Thus in ch. lxxvi. 1, it is written, 'The first wind is called the eastern, because it is the first.' The *first* and the *east* have an affinity in the Hebrew, which explains the phraseology, since קדם, as well as its derivatives, signifies both the *east* and the *first*. But neither in the Ethiopic nor in the Greek is there such affinity. In the same manner may the next sentence be explained. 'The second wind is called the south, because the Most High there descends.' What is said respecting the *western* wind, may be employed in confirmation of the same conclusion. It is highly probable, too, that the names of the conductors of the month (ch. lxxxi. 23) are pure Hebrew (Murray, p. 46; Hoffmann, p. 690). Other presumptive evidences in favour of a Hebrew original may be collected by the attentive reader.

The Ethiopic version was made from the Greek, not the Hebrew.

3. *Its form and coherence.*—In the MSS. the whole is divided into chapters and verses, although they vary in their specification of such compartments. There are 105 chapters of unequal length, and often injudiciously made; while there are 19 sections or larger divisions.

The want of coherence among its several parts

is obvious. Detached portions are put together without regard to their mutual connection. The work seems in fact to be made up of several pieces, which, having been separately composed, were afterwards thrown together without care. Various chapters occupy an unsuitable position in the MSS. Hence Laurence has been obliged in one case to rectify what he justly conceived to be erroneous by transferring to their proper place the verses badly located according to the Bodleian MS.

Laurence remarks, that 'the book may have been composed at different periods; perhaps it might be also added, that there may have been different tracts, as well as tracts composed by different authors.' This idea has been taken up by Murray, and expanded in a treatise of considerable research and great ingenuity. Proceeding upon the hypothesis that the book consists of various tracts on different subjects, he endeavours to disentangle them from one another, and to class them under their appropriate heads. In the prosecution of an extended inquiry he endeavours to show, that the different parts of the present work possess unequal authority, and belong to very different times. He has therefore selected what he conceives to be the ancient book quoted by Jude, and attributes its origin to Enoch himself. The later additions now incorporated with it belong to other writings, and have been mingled together. The ingenious author has been guided by the connection of one part with another, and the similarity or dissimilarity of subject. *The ancient book*, as it is denominated by him, to which he principally confines his attention, is said to consist of the following parts: chapters i. and ii.; xlv. 2-5; xlvii. 1-4; xlviii. 2; l. 5; lvi. 2-5; lx. 7; lxi. 18; lxviii. 34-41. The other parts he has selected and arranged under the heads of a *prophecy*, consisting of the xcii. chapter; *second book*, imitated from that which he has endeavoured to restore; *two books of the angels* or *watchers; two books concerning secret things*, called *visions of wisdom; the vision of Noah and history; vision of Noah;* and *the book of astronomy.* Such is the mode in which the whole document before us is separated and arranged. Yet there is much reason to doubt its correctness and success. If the looseness with which the parts frequently hang together, and the transition from one sort of writing to another, as from the historic to the prophetic, be reckoned a good ground for dismemberment, the book of Daniel presents similar features. It cannot indeed be denied that several chapters, such as xxxvii. sq., lxiv. sq., lxxi. sq., xcii. xciii. sq., cv., do not coincide with the preceding or subsequent portions, or with the manifest object of the writer. Some parts again are very unsuitable, and altogether foreign to their present position. Yet it appears to us much more probable, that a number of tracts embodying different traditions were put together about the same period, and by one person. Much may be done by transposition to restore a measure of unity, although a disunited character will still belong to the whole. Perhaps some parts have been lost, as may be inferred from allusions to Enoch in early writings. The various translations through which it has passed, and the transcribers by whom it has been copied, have doubtless contributed to its dislocation.

The mention of *books* of Enoch in the Testament of Judah, in the Testament of Benjamin, in Origen (*c. Cels.* and *Homil. in Num.*), and of the first book of Enoch in the fragment preserved by Syncellus, is quite consistent with the idea that the whole was then divided into different books. Tertullian leads us to believe that it was of the same extent in the Greek text then existing, as it is in the present Ethiopic. Our limits forbid further examination of this topic. We must refer such as are desirous of prosecuting it to Murray's elaborate treatise, and to Hoffmann's *second Excursus* where *Enoch Restitutus* is reviewed.

4. *Its author, and the time when it was written.*—The two questions respecting the age and authorship of the book of Enoch are so intimately connected that they must be treated together. The opinions entertained in relation to the one necessarily affect our ideas of the other. Accordingly, the same passages have been made to bear more or less directly on both. If the writer was a *Christian Jew*, as Lücke and Stuart are inclined to believe, it will then behove us to bring down the period of composition to the first century of the Christian era; but if he was a Jew, there is no need to bend passages into compliance with the former hypothesis. Rather will the advocates of a purely Jewish authorship be disposed to refer it back with Laurence to the reign of Herod, or still earlier, with Hoffmann. It will not be denied by any reader, that the ideas, imagery, and general complexion of the book, are essentially Jewish. There is so much imitation of Daniel—such an exhibition of Jewish conceptions mixed with superstition, and occasionally with cabbalistic theology or oriental theosophy, that the hand of a Jew cannot be mistaken. But the question is, are there sufficient indications in the work itself to warrant the conclusion that the writer was acquainted with the New Testament; that he derived various passages from the Apocalypse in particular; and that, therefore, he was probably a *Jewish Christian.* There is no good ground for supposing that the passages relating to the Messiah were interpolated by Christians; for, as Hoffmann well remarks, they constitute *essential parts* of the whole, being intimately interwoven with the pieces to which they belong. There is therefore no alternative between the two hypotheses.

There are some data for determining the time when this production first appeared. If Jude quoted it, it must have existed in the first century; and as the writer imitates the language and imagery of Daniel, it must have been written after the composition of that inspired book. Here are two *termini*, within which we are to look. Chapters lxxxiv.—xc.; liv., lv., and xcii. contain chronological marks of a somewhat definite character. In the first of these passages is found an allegorical representation, exhibiting the principal events in Jewish history, from Adam down to seventy kings who ruled over the Israelites. These are divided into three classes. 1. Thirty-seven shepherds (ch. lxxxix. 1). 2. Twenty-three shepherds (ch. lxxxix. 7). 3. Twelve shepherds (ch. lxxxix. 25). The first class consists of the kings of Judah and Israel, twenty of the former, and seventeen of the latter. Dr. Laurence thinks that for thirty-seven we should read thirty-five, because

the sum of the shepherds is said to be seventy, not seventy-two; yet we may rather suppose with Lücke, Hoffmann, and Stuart, that seventy is a round, prophetic number. The writer did not confine himself to minute exactness. Believing therefore that thirty-seven is a correct exhibition of the writer's opinion, Zimri, Shallum, and Tibni are omitted, in consequence of their very short reign. The next twenty-three shepherds were foreigners, who ruled over the Israelites during and after the Babylonish captivity. Their names are, 1. Nebuchadnezzar. 2. Evil-merodach. 3. Neriglissar. 4. Belshazzar. 5. Darius the Mede. 6. Cyrus. 7. Cambyses. 8. Smerdis. 9. Darius Hystaspis. 10. Xerxes. 11. Artaxerxes Longimanus. 12. Xerxes II. 13. Sogdianus. 14. Ochus (Darius Nothus). 15. Artaxerxes Mnemon. 16. Darius Ochus. 17. Arses. 18. Darius Codomannus. 19. Alexander the Great. 20. Antigonus. 21. Ptolemy Lagi. 22. Ptolemy Philadelphus. 23. Ptolemy Euergetes. The third class consists of twelve rulers, who, according to Laurence, were *native* princes. In reckoning them he begins with Mattathias father of Judas Maccabæus, and ends with Herod. Now Herod reigned thirty-four years; and, as the author stops with him, Laurence infers that the book was written during the reign of Herod. Laurence makes the twelve princes to be Mattathias, Judas Maccabæus, Jonathan, Simon, John Hyrcanus, Aristobulus, Alexander Jannæus, Alexandra his widow, Aristobulus, Hyrcanus, Antigonus, and Herod. But there is good ground for questioning this reckoning. It has been pertinently remarked by Stuart, that none of the Asmonæan family were properly kings until Simon. According to this view, the twelve princes are, Simon, John Hyrcanus, Aristobulus I., Alexander Jannæus, Alexandra his widow, Aristobulus II., Alexander, Hyrcanus, Antigonus, and Herod, Archelaus and Agrippa. Such is the computation of Professor Stuart, more probable, as it appears to us, than that of Laurence, but still liable to doubt and serious objection. Alexander was never king of Judæa. Besides, in the book of Enoch it is stated, in relation to the twelve, that they 'destroyed more than those who preceded them;' an assertion manifestly inconsistent with fact. The first three princes, at least, were just and mild in their administration, and several of their successors cannot be equitably characterized as tyrants who shed the blood of the people. Of Herod alone is the statement emphatically true. To this it has been replied, that the writer gives the *general character* of the whole. Yet the expression 'they destroyed more than those who preceded them,' is not the general character of the whole, but only of one in particular. Hence we are inclined to accede to the opinion of Hoffmann, who refers the twelve princes to *foreign*, not *native*, rulers. In that case we must look for these twelve princes in the period of the Jews' oppressors, under the dynasties that arose after the death of Alexander the Great. Their names, according to Hoffmann, are Ptolemy Philopator, Ptolemy Philadelphus, Seleucus III. Philopator, Antiochus IV., Epiphanes, Antiochus V., Eupator, Demetrius Soter son of Seleucus, Alexander Balas son of Antiochus, Demetrius Nicator, Ptolemy Philometor, Demetrius Nicator II., Antiochus Theos, and Tryphon. If this view be correct, we are not bound to conclude from the passage that the book of Enoch, or the historic portion of it, was written during the reign of Herod the Great.

Another passage on which Laurence rests in determining the time when the book was written, is chapter liv. 9, 10, where 'the chiefs of the east among the Parthians and Medes' are represented as about to remove kings, as hurling them from their thrones, 'springing as lions from their dens, and like famished wolves into the midst of the flock. They shall go up and tread upon the land of their elect. The land of their elect shall be before them,' &c., &c. In the year B.C. 41 the Parthians invaded Syria and took possession of the country. In the year B.C. 40 they entered Jerusalem, drove Herod out of the country, and raised Antigonus, the last of the Asmonæan race, to the throne. Herod appears to be alluded to as one in whom was the spirit of perturbation; while the retreat of the Parthians when the Romans interfered on behalf of Herod, seems to be indicated in other language. This brings us down to the year B.C. 40, before which the book of Enoch could not have been written. Perhaps the book *was written* about B.C. 40.

In chap. lv. is another chronological datum. The prophet beholds 'another army of chariots, with men riding in them'. . . . . coming from the east, the west, and the south. 'The sound of the noise of their chariots was heard from the extremities of the earth unto the extremities of heaven at the same time.' In the former chapter the Parthian army is represented as powerful and terrific, while here the Roman seems to be noticed. It is ambiguous whether the language should be referred to the interposition of the Romans on behalf of Herod, or regarded as an expansion of the idea that the Roman name was powerful on every side of Judæa, or assigned, with Lücke and Stuart, to the invasion of Judæa by the Romans under Vespasian and Titus. The language is poetical and glowing. There is, therefore, no necessity to refer it to the Jewish war. It is sufficiently appropriate in relation to the interposition of the Romans on behalf of Herod.

Chap. lxxxix. 29, &c. and chap. xcii. are also rested on by Lücke and Stuart in favour of the opinion that the author was a Jew instructed in Christianity. But their arguments are unsatisfactory, and the construction they put on the passages in question liable to uncertainty. Hoffmann, in his *Commentary*, shows that they are either untenable or exceedingly doubtful. We are inclined to explain them otherwise; so that, in our view, the observations built upon them by Lücke fall to the ground.

Professor Stuart lays considerable weight on the Christology of the book, as indicative of an acquaintance on the author's part with the New Testament, especially the Apocalypse. Yet the *Christological* portions do not possess sufficient *distinctness* to imply a knowledge of the New Testament. The name *Jesus* never occurs; though *Son of man*, so often given to the Messiah in the Gospels, is very frequent. Neither are the appellations *Lord*, *Lord Jesus*, *Jesus Christ*, or even *Christ* employed. Is there not something unaccountable here on the supposition that the writer was instructed in Christianity? After all the considerations that have been adduced by Lücke and

Stuart, and the many coincidences between sentiments advanced in our book and the New Testament, we cannot suppose that it was written in the first century by a Jewish Christian. It seems to us to have been composed a little before Christ's appearance by a Jew who had studied well the book of Daniel. At the same time we freely confess that the Saviour is spoken of in terms expressive of his dignity, character, and acts, surpassing the descriptions which other Jewish books present.

5. *The place where it was written.*—The place where the author lived and wrote is determined by Laurence from the seventy-first chapter, where the length of the days at various periods of the year is given. It must have been between the 45th and 49th degrees of north latitude, in the northern districts of the Caspian and Euxine seas. Perhaps, therefore, the author was one of the Jews who had been carried away by Shalmaneser and did not return from captivity. Yet an examination of chap. xiii. 8-10, points to the northern part of Palestine. Mr. Murray has also shown that one passage favours the idea that the writer of it lived in Abyssinia (p. 63-73). Hence he infers that the work of different authors, living in countries removed from one another, is combined in the book of Enoch. But De Sacy has well remarked, that as the astronomical system of the author appears to be in part imaginary, so his geography may be probably visionary. Neither Egypt, nor Chaldæa, nor Palestine, suits the astronomy contained in the book. It is true that there are allusions to the oriental theosophy and the opinions of Zoroaster which would appear to recommend a *Chaldæan* origin, at least of the astronomical part; but the author's predilection for the images of *fire*, *radiance*, *light*, and other Oriental symbols, may be accounted for on some other supposition than that of his residence in Chaldæa. In what way he became acquainted with the Zend-Avesta, or the sentiments embodied in that book, we are not able to tell, although it is pretty obvious that various portions of his book are tinctured with the Oriental philosophy of Middle Asia.

6. *Did Jude really quote the book of Enoch?*—Some are most unwilling to believe that an inspired writer could cite an Apocryphal production. Such an opinion destroys, in their view, the character of the writing said to be inspired, and reduces it to the level of an ordinary composition. But this is preposterous. The Apostle Paul quotes several of the heathen poets; yet who ever supposed that by such references he sanctions the productions from which his citations are made, or renders them of greater value? All that can be reasonably inferred from such a fact is, that if the inspired writer cites a particular sentiment with approbation, it must be regarded as just and right, irrespective of the remainder of the book in which it is found. The Apostle's sanction extends no farther than the passage to which he alludes. Other portions of the original document may exhibit the most absurd and superstitious notions. It has always been the current opinion that Jude quoted the book of Enoch; and there is nothing to disprove it. It is true that there is some variation between the quotation and its original, but this is quite usual even with the New Testament writers inciting the Old Testament.

Others, as Cave, Simon, Witsius, &c., suppose that Jude quoted a *traditional* prophecy or saying of Enoch, and we see no improbability in the assumption. Others, again, believe that the words apparently cited by Jude were suggested to him by the Holy Spirit. But surely this hypothesis is unnecessary. Until it can be shown that the book of Enoch did not exist in the time of Jude, or that his quoting it is unworthy of an Apostle, or that such knowledge was not handed down traditionally within the Apostle's reach, we abide by the opinion that Jude really quoted the book of Enoch. While there are probable grounds for believing that Jude might have become acquainted with the circumstance independently of inspiration, we ought not to have recourse to the hypothesis of *immediate suggestion*. On the whole, it is most likely that the book of Enoch existed before the time of Jude, and that the latter really quoted it in accordance with the current tradition. If so, the prophecy ascribed to Enoch was *truly* ascribed to him, because it is scarcely credible that Jude writing by inspiration would have sanctioned a false statement.

7. *Its use.*—Presuming that it was written by a Jew, the book before us is an important document in the history of Jewish opinions. It indicates an essential portion of the Jewish creed before the appearance of Christ; and assists us in comparing the theological views of the later with those of the earlier Jews. It also serves to establish the fact that some doctrines of great importance in the eyes of evangelical Christians ought not to be regarded as the growth of an age in which Christianity had been corrupted by the inventions of men. We would not appeal to it as possessing *authority*. The place of *authority* can be assigned to the Bible alone No human composition, be it ever so valuable, is entitled to usurp dominion over the understandings of men. But apart from all ideas of *authority*, it may be fairly regarded as an index of the state of opinion at the time when it was written. Hence it subserves the confirmation of certain opinions, provided they can be shown to have a good foundation in the word of God. If it be conceded that certain doctrines are contained by express declaration or fair inference in the volume of inspiration, it is surely some attestation of their truth that they lie on the surface of this ancient book. Let us briefly allude to several representations which occur in its pages:—

1. Respecting the nature of the Deity.—There are distinct allusions to a plurality in the Godhead. The doctrine of the Trinity seems to have been received by the writer and his contemporaries, as the following quotation will prove: 'He shall call to every power of the heavens, to all the holy above, and to the power of God. The Cherubim, the Seraphim, and the Ophanin, all the angels of power, and all the angels of the Lords, namely, of the Elect One and of the other Power, who was upon earth over the water on that day, shall raise their united voice; shall bless, glorify, praise, and exalt with the spirit of faith, with the spirit of wisdom and patience, with the spirit of patience, &c., &c.' (lx. 13, 14). Here the *Elect One* evidently refers to the Messiah, and the 'other Power who was upon earth over the water on that day' to the Holy Spirit.

In accordance with this passage Christ is represented as (*a*) *existing from eternity*. Thus:

'In that hour was this Son of man invoked before the Lord of Spirits, and his name in presence of the Ancient of days. Before the sun and the signs were created, before the stars of heaven were formed, his name was invoked in the presence of the Lord of Spirits. Therefore the Elect and the Concealed One existed in his presence, before the world was created, and for ever' (xlviii. 2, 3, 5). 'Then shall the kings, the princes, and all who possess the earth, glorify Him who has dominion over all things, Him who was concealed; for, from the beginning, the Son of man existed in secret, whom the Most High preserved in the presence of his power, and revealed to the elect. All the kings, the princes, the exalted, and those who rule over the earth, shall fall down on their faces before Him, and shall worship Him. They shall fix their hopes on this Son of man, shall pray to Him, and petition Him for mercy' (lxi. 10, 12, 13).

(b) As the object of invocation and worship. The last quotation is corroborative of this statement; so also ch. xlviii. 3 and 4, 'Before the sun and the signs were created, before the stars of heaven were formed, his name was invoked in the presence of the Lord of Spirits. All who dwell on earth shall fall down and worship before Him; shall bless and glorify Him, and sing praises to the name of the Lord of Spirits.'

(c) As the supreme Judge of men and angels. 'O ye kings, O ye mighty, who inhabit the world, you shall behold My Elect One sitting upon the throne of My glory. And he shall judge Azazeel. all his associates, and all his hosts, in the name of the Lord of spirits' (liv. 5). 'Then the Lord of Spirits seated upon the throne of His glory the Elect One; who shall judge all the works of the holy in heaven above, and in a balance shall He weigh their actions. And when he shall lift up His countenance to judge their secret ways in the word of the name of the Lord of spirits' &c. &c. (lx. 10, 11). 'They blessed, glorified, and exalted, because the name of the Son of man was revealed to them. He sat upon the throne of His glory; and the principal part of the judgment was assigned to Him, the Son of man' (lxviii. 38, 39).

2. The doctrine of a future state of retribution is implied in many passages. Thus: 'You have committed blasphemy and iniquity; and are destined to the day of the effusion of blood, to the day of darkness, and to the day of the great judgment. This I declare, and point out to you, that He who created you will destroy you' (xciii. 8, 9). 'Who has permitted you to hate and to transgress? Judgment shall overtake you, ye sinners. Wo to you who recompense your neighbour with evil; for you shall be recompensed according to your works' (xciv. 2, 4; comp. also chapters xcv. xcvi. xcix. and ciii.).

3. The *eternity* of future punishment is also contained in the book of Enoch, as the following passages will show:—'Moreover, abundant is their suffering until the time of the great judgment, the castigation, and the torment of those who eternally execrate, whose souls are punished and bound there for ever. A receptacle of this sort has been formed for the souls of unrighteous men, and of sinners; of those who have committed crime, and associated with the impious whom they resemble. Their souls shall not be annihilated in the day of judgment, neither shall they arise from this place' (xxii. 12, 14). 'Never shall they obtain mercy, saith the Lord of spirits' (xxxix. 2). 'The countenances likewise of the mighty shall He cast down, filling them with confusion. Darkness shall be their habitation, and worms shall be their bed; nor from that their bed shall they hope to be again raised, because they exalted not the name of the Lord of spirits' (xlvi. 4). 'But has it not been shown to them, that, when to the receptacle of the dead their souls shall be made to descend, their evil deeds shall become their greatest torment? Into darkness, into the snare, and into the flame which shall burn to the great judgment, shall their spirits enter; and the great judgment shall take effect for ever and for ever' (ciii. 5).

We waive all comment on these passages, because their import is so plain, and bears so directly on the propositions in support of which they have been adduced. Whatever value may be attached to the theological opinions expressed in the book of Enoch, it is apparent from the preceding extracts, that certain sentiments to which evangelical Christians assign a high importance, because, in their view, they are contained in Scripture, appear to have prevailed at the commencement of the Christian era. To the serious inquirer they can never be of trifling interest.

The Book of Enoch the Prophet, by Richard Laurence, LL.D., Archbishop of Cashel, third edition, Oxford, 1838, 8vo. *Das Buch Henoch in vollständiger Uebersetzung mit fortlaufendem Commentar, ausführlicher Einleitung und erläuternden Excursen*, von Andr. G. Hoffmann, Erste Abtheilung, Jena, 1833, 8vo. Zweite Abtheilung, Jena, 1838, 8vo. This is the fullest and best book on the subject. *Enoch Restitutus, or an attempt to separate from the books of Enoch the book quoted by St. Jude*, &c., by the Rev. Ed. Murray, London, 1836, 8vo. *American Biblical Repository for* 1840, in which there are two excellent articles by Professor Stuart on the book of Enoch. *Versuch einer vollständigen Einleitung in die Offenbarung Johannis*, von Dr. F. Lücke, Bonn, 1832, 8vo. § 12, pp. 52-78. A. F. Gfrörer's tract in the *Tübingen* '*Zeitschrift fur Theologie*,' entitled, '*Die Quellen zur Kentniss des Zustandes der judischen Dogmen und der Volksbildung im Zeitalter Jesu Christi*,' 4 Helft. pp. 120, sq. for the year 1837. Silvestre de Sacy's *Notice du livre d'Enoch* in *Magasin Encyclopédique*, an vi. tom. i. p. 382. This dissertation contains a Latin version of several chapters, and was translated into German by F. T. Rink, Koenigsberg, 1801, 8vo. Fabricii *Codex Pseudepigraphus Veteris Testamenti*, vol. i. pp. 160-224. Bruce's *Travels*, vol. ii. 8vo. edition. *The Genuineness of the Book of Enoch Investigated*, by Rev. J. M. Butt, M.A., London, 1827, 8vo. (The older dissertations of Drusius, Hottinger, Pfeiffer, Van Dale, Buddeus, and Heber, are now of little value, because the entire work had not been brought from Abyssinia when they were written. They are founded upon the allusions of the Fathers to the production in question, and upon the fragment of Syncellus).—S. D.

ENON. [Ænon.]

EN-ROGEL (עֵין רֹגֵל; Sept. Ῥωγήλ). The name means *Foot-fountain*, and is construed by the Targum into 'Fuller's Fountain,' because

the fullers trod the clothes there with their feet. It was near Jerusalem, on the boundary-line between the tribes of Judah and Benjamin (Josh. xv. 7; xviii. 6; 2 Sam. xvii. 17; 1 Kings i. 9). It has been usually supposed the same as the Fountain of Siloam. But Dr. Robinson is more inclined to find it in what is called by Frank Christians the Well of Nehemiah, but by the native inhabitants the Well of Job (*Bir Eyúb*). There are only three sources, or rather receptacles of living water, now accessible at Jerusalem, and this is one of them. It is situated just below the junction of the Valley of Hinnom with that of Jehoshaphat. It is a very deep well, of an irregular quadrilateral form, walled up with large squared stones, terminating above in an arch on one side, and apparently of great antiquity. There is a small rude building over it, furnished with one or two large troughs or reservoirs of stone, which are kept partially filled for the convenience of the people. The well measures 125 feet in depth; 50 feet of which were, at the time of Dr. Robinson's visit (in the middle of April), nearly full of water. The water is sweet, but not very cold, and at the present day is drawn up by the hand. In the rainy season the well becomes quite full, and sometimes overflows at the mouth. Usually, however, the water runs off under the surface of the ground, and finds an outlet some forty yards below the well, whence it is said to flow for sixty or seventy days in winter; and the stream is sometimes large.

ENSIGNS. [STANDARDS.]

EPÆNETUS (Ἐπαίνετος), a Christian resident at Rome when Paul wrote his Epistle to the Church in that city, and one of the persons to whom he sent special salutations (Rom. xvi. 5). In the received text he is spoken of as being '*the first fruits of Achaia*' (ἀπαρχὴ τῆς Ἀχαΐας); but 'the first fruits of *Asia*' (τῆς Ἀσίας) is the reading of the best MSS. (A B C D E F G 67) of the Coptic, Armenian, Æthiopic, Vulgate, the Latin Fathers, and Origen (*In Ep. ad Rom. Comment.* lib. x., *Opera*, vii. p. 431; *In Numer. Hom.* xi., *Opera*, x. p. 109). Vater says, 'nisi præferendum certe æquiparandum.' This reading is preferred by Grotius, Mill, Bengel, Whitby, Koppe, Rosenmüller, Rückert, Olshausen, and Tholuck; and admitted into the text by Griesbach, Knapp, Tittmann, Scholz, Lachmann, and Tischendorff; also by Bruder, in his edition of Schmidt's Concordance, Lips. 1842. Dr. Bloomfield, who also adopts it in his Greek Testament (2nd ed. 1836), remarks that 'the very nature of the term ἀπαρχὴ suggests the idea of *one person* only (see 1 Cor. xv. 20), and, as in 1 Cor. xvi. 15, *Stephanas* is called the ἀπαρχὴ τῆς Ἀχαΐας, Epænetus could have no claim to the name.' With respect to the former part of this statement, the learned writer has strangely overlooked such passages as James i. 18, 'that *we* should be a kind of first fruits' (ἀπαρχήν τινα), and Rev. xiv. 4, '*These* were redeemed from among men, being the first fruits' (ἀπαρχή): and as to the latter part, not Stephanas alone, but his *house*, is said to be the first fruits, and to have addicted *themselves* (ἔταξαν ἑαυτοὺς) to the ministry of the saints.' Macknight's remark in favour of the received reading, that if Epænetus was one of that house, he was a part of the first fruits of Achaia, seems somewhat forced.
J. E. R.

EPAPHRAS (Ἐπαφρᾶς), an eminent teacher in the church at Colossæ, denominated by Paul 'his dear fellow-servant,' and 'a faithful minister of Christ' (Coloss. i. 7; iv. 12). From Paul's Epistle to Philemon it appears that he suffered imprisonment with the apostle at Rome. It has been inferred from Coloss. i. 7, that he was the founder of the Colossian Church; and Dr. Neander supposes that the apostle terms him ὑπὲρ ἡμῶν διάκονος τοῦ Χριστοῦ (*a servant of Christ in our stead*), because he committed to him the office of proclaiming the Gospel in the three Phrygian cities Colossæ, Hierapolis, and Laodicea, which he could not visit himself (*Hist. of Planting*, &c. i. pp. 200, 373, Eng. transl.). This language, however, is by no means decisive: yet most probably Epaphras was one of the earliest and most zealous instructors of the Colossian Church. Lardner thinks that the expression respecting Epaphras in Coloss. iv. 12, ὁ ἐξ ὑμῶν, is quite inconsistent with the supposition of his being the founder of the Church, since the same phrase is applied to Onesimus, a recent convert (*Hist. of the Apostles and Evangelists*, c. xiv.; *Works*, vi. 153). But, in both cases, the words in question seem intended simply to identify these individuals as the fellow townsmen of the Colossians, and to distinguish them from others of the same name in Rome (v. Macknight on Coloss. iv. 2).—J. E. R.

EPAPHRODITUS (Ἐπαφρόδιτος), a messenger (ἀπόστολος) of the church at Philippi to the Apostle Paul during his imprisonment at Rome, who was entrusted with their contributions for his support (Phil. ii. 25; iv. 18). Paul's high estimate of his character is shown by an accumulation of honourable epithets (τὸν ἀδελφόν, καὶ συνεργόν, καὶ συστρατιώτην μου), and by fervent expressions of gratitude for his recovery from a dangerous illness brought on in part by a generous disregard of his personal welfare in ministering to the Apostle (Phil. ii. 30). Epaphroditus, on his return to Philippi, was the bearer of the epistle which forms part of the canon. Grotius and some other critics conjecture that Epaphroditus was the same as the Epaphras mentioned in the Epistle to the Colossians. But though the latter name may be a contraction of the former, the fact that Epaphras was most probably in prison at the time sufficiently marks the distinction of the persons. The name Epaphroditus was by no means uncommon, as Wetstein has shown by various quotations from classical authors (*Nov. Test. Gr.* tom. ii. p. 273).—J. E. R.

EPHAH, a dry measure of capacity, equivalent to the bath for liquids. It contained three pecks and three pints. [WEIGHTS AND MEASURES.]

EPHESIANS, EPISTLE TO THE. This Epistle expressly claims to be the production of the Apostle Paul (i. 1; iii. 1); and this claim the writer in the latter of these passages follows up by speaking of himself in language such as that apostle is accustomed to use in describing his own position as an ambassador of Christ (iii. 1, 3, 8, 9). The justice of this claim seems to have been universally admitted by the early Christians, and it is expressly sanctioned by several of the fathers of the second and third centuries (Irenæus, *Adv. Hær.* v. 2. 3; Clemens Alexandr. *Protrept.* ix. p. 69, ed. Potter; *Strom.* iv. 8, p. 592; Origen, *Cont. Cels.* iv. p. 211, ed. Spencer; Tertullian, *Adv. Marc.* v. 11, 17; Cy-

prian, *Testim.* iii. 7, &c.). The Epistle is also cited as part of sacred Scripture by Polycarp (*Ep. ad Philipp.* c. 1; c. 12); and it is probably to it that Ignatius refers when, in writing to the Ephesians, he calls them Παύλου συμμύσται .... ὃς ἐν πάσῃ ἐπιστολῇ μνημονεύει ὑμῶν ἐν Χριστῷ Ἰησοῦ (c. 12, Conf. Cotelerii, *Annot. in loc.*; Pearson, *Vind. Ignatian.* Par. ii. p. 119; Lardner's *Works*, vol. ii. p. 70, 8vo.). De Wette has attempted, from internal evidence, to set aside this external proof of the Pauline origin of this Epistle; but his cavils have been so fully and satisfactorily answered by Schott (*Isag. in N. T.* p. 260), Guerike (*Beiträge zur hist. krit. Einleitung ins N. T.* s. 106), Hemsen (*Der Ap. Paulus*, s. 130), Rückert (*Der Br. Pauli an die Epheser*, u. s. w. s. 289), and others, that even De Wette himself has been constrained to admit, in the second edition of his *Einleitung*, that his objections are without force. The genuineness of this book, therefore, may be regarded as universally admitted by Biblical scholars.

It is much more difficult to determine *to whom* this Epistle was addressed. On this subject two hypotheses have been principally entertained, besides the common opinion which, following the [disputed] reading in ch. i. ver. 1, regards the party to whom it was sent as the church at Ephesus. Grotius, reviving the opinion of the ancient heretic Marcion, maintains that the party addressed in this Epistle was the church at Laodicea, and that we have in this the Epistle to that church which is commonly supposed to have been lost; whilst others contend that this was addressed to no church in particular, but was a sort of circular letter, intended for the use of several churches, of which Ephesus may have been the first or centre.
